

**QUADRAGESIMA** (kwad'ra-jēs'i-ma), the season of Lent, so called because it contains about forty days. Quadragesima Major was at one time the name, because formerly other Lenten seasons of minor importance were annually observed. Quadragesima Sunday is the first in Lent and about the fortieth day before Easter.

**QUADRATUS** (kwad-ra'tus), a bishop of Athens who lived in the early part of the second century. He was the successor of Publius, who was martyred in the persecution under Hadrian; and when that emperor visited Athens, in 126, Quadratus presented to him "An Apology for the Christian Religion," which, Eusebius says, had the effect of occasioning a temporary cessation of the persecution. Of this work only a fragment remains; but it is curious for the testimony it gives to the miracles of Christ and his apostles, asserting that several of the persons were then living in whose favor the miracles were wrought.

**QUÆSTOR** (kways'tor), a Roman magistrate whose office it was to collect the public revenue, whence their name (from *quaero*, *I seek*) was derived. Originally these were appointed by the kings, after the monarchy by the consuls, and eventually by the people. As the empire extended they were associated with the consuls or pretors of each province, and a quæstorship came to be recognized as the first step in promotion which might even elevate a man to the senate.

**QUAIL**, a well-known migratory bird, of which there are several species, widely spread over Europe, Asia and North Africa. The quails that were supernaturally brought to the camp of the Hebrews had deviated, it is probable, from their ordinary course, else they would have been expected, and the supply of food from them relied upon. It was by the Lord's power that at the very time needed they were made to abound in the locality where the tribes had pitched their tents, Ex. xvi. 13; Num. xi. 31, 32; Ps. cv. 40. The two recorded occasions on which quails were sent seem to have been in the springs of successive years, as the flight of the birds was from the sea—that is, from that quarter. They had come probably from Southern Egypt, and were proceeding northward. It may be that, fatigued by being long upon the wing, they flew near the surface of the ground, and were thus the more easily caught, and this may be the explanation of the words "two cubits upon the face of the earth."

**QUAKERS.** See FRIENDS.

**QUARLES** (kwarlz), FRANCIS, was born in 1592, at Steward's near Rumford, in Essex, England. He was educated at Christ's College, Cambridge, whence he passed for the study of law to Lincoln's Inn. He became cup-bearer to Elizabeth, the queen of Bohemia, and afterward secretary to Archbishop Usher in Ireland. He suffered severely on the outbreak of the Civil War because of his attachment to the royal cause. He was an exceedingly prolific writer, but his place in this work arises from his remarkable book, which is sought after, and of which editions in rare type and rich bindings are frequently published, entitled "Emblems." "Quarles' Emblems" is certainly one of the most quaint and curious

books of his age. It has been said of it that Milton had to wait until the world had done admiring Quarles; and Ryland says, "I think Quarles may be called the first, as Herbert was the second, divine poet of the English nation." He had to suffer not only the loss of his property, but of his books, by the turmoils of his day, and he sunk under his trials, dying at London in 1644.

**QUARRIES** (kwar'reez), Jud. iii. 19, 26. The marginal rendering here is "graven images." Possibly the word signifying "images" or "hewn stones" is the proper name of a place, *Pesilim*, not far from Gilgal.

**QUARTODECIMANI** (kwar'to-des-i-ma'-ne) and **QUARTODECIMANS** (kwar'to-des'-e-manz). This name was given to those members of Eastern churches who in the second century and later celebrated Easter on the fourteenth day of the paschal moon, on whichever day of the week it happened, as the Jews do. This question was debated between Polycarp and Anicetus when Polycarp visited Rome, and Polycarp pleaded the authority of the apostle John and the other apostles, while Anicetus rested on the practice of his see; and the custom was condemned at Rome in a council, A. D. 196, and it was also denounced at the Council of Nice, A. D. 325. The churches in Asia Minor and those in the West which derived their faith from missionaries from Lesser Asia held to the "quartodeciman" observance with great tenacity.

**QUARTUS** (kwar'tus), a Christian of Corinth whose salutation St. Paul conveyed to the Romans, Rom. xvi. 23.

**QUATERNION** (kwa-ter'ne-on), Acts xii. 4, a detachment of four men, the usual number of a Roman night-watch. Peter, therefore, was guarded by four soldiers, two within the prison and two outside the doors; and as the watch was usually changed every three hours, it was necessary that the "four quaternions" mentioned in the text should be appointed for the purpose.

**QUEEN.** As the Hebrews practiced polygamy, and the kings heaped together wives and concubines in their harems, there was no lady exactly in the position denoted by our term queen. It is true that we have two instances in the Old Testament of queens regnant, Athaliah, 2 Ki. xi., and the foreign queen of Sheba, 1 Ki. x. 1-10; but, generally speaking, the queen was merely the chief wife, who took precedence in her husband's harem, or who was one of his consorts as distinguished from concubines, compare 1 Ki. xi. 3; 2 Chr. xi. 21. The mother of the reigning sovereign, however, was in dignity and power superior to any of his wives. Thus Bath-sheba received special honor as the king's mother, 1 Ki. ii. 13, 19. And Asa found it necessary to depose a queen-mother because her influence was given to idolatry, 1 Ki. xv. 13. It is perhaps for this reason that the name of the king's mother is usually given when a king of Judah acceded to the throne. Jezebel was a woman of remarkable energy, and her husband conspicuous for his weak-

ness; it is not surprising, therefore, that she stands out an exception to the general rule, 1 Ki. xix., xxi. Yet she is nowhere called queen till after Ahab's death, 2 Ki. x. 13.

**QUEEN OF HEAVEN.** See ASHTORETH.

**QUESNEL** (kwes'nel), PASQUIER, a French Catholic theologian, was born at Paris, in 1634, and became the head of the Jansenists. He wrote a great many books, chiefly of the polemic kind, but gave offence to the court of Rome by his edition of the works of Pope Leo the Great. He had to retire to the Netherlands about 1685, joined the celebrated Arnauld at Brussels, and there completed his work, entitled "Moral Reflections." This was formally condemned by the bull "Uni-

THE KATTA, OR QUAIL OF ASIA.

genitus." After suffering imprisonment at Mechlin he went to Amsterdam, where he died in 1719.

**QUICK, QUICKEN.** "Quick" means living, Num. xvi. 30. To "quicken" is to give life, natural or spiritual, Rom. viii. 11; Eph. ii. 1, 5, also to cheer or excite, Ps. lxxx. 18.

**QUICK, JOHN**, an eminent nonconformist divine, was born at Plymouth, in 1636, and was educated at Exeter College, Oxford. After officiating at various places, he was made minister of Brixton, whence he was ejected in 1662; but he had some valuable preferments offered him, if he would conform, which he refused to do. He continued to preach for some time after his ejection; but being frequently prosecuted, he accepted an invitation to be pastor of the English church at Zealand, but returned to England in 1681, and preached privately during the remainder of the

reign of Charles II. He died in 1706. His principal work is his "History of the Acts, Decisions, Decrees and Laws of the famous National Councils of the Reformed Churches in France."

**QUICKSANDS** (kwik'sandz), two sandbanks on the northern coast of Africa, were well known to the ancients. One of these lay between Cyrene and Leptis, now the gulf of *Sidra*, and is no doubt the "quicksand" alluded to in Acts xxvii. 17. A vessel bound westward, after passing Crete, might easily be driven upon it by a strong north-easterly wind. The other lay more to the west, near Carthage.

**QUIETISM** (kwi'et-izm), a name generally applied to the opinions of those who conceive that the great object of religion is the absorption of all human sentiments and passions into devout contemplation and love of God. Quietism is not peculiar to Christianity, but when defined as the great leaders of the system understood it to be, a resignation of self without thought, hope or wish, so that the soul is brought so immediately into the divine presence as to be merged in it by an essential union, then it is really inconsistent with Chris-

QUAIL OF PALESTINE.—See QUAIL.

tianity, and the nearer that any one approaches this state, the nearer does he approximate to a heathen Quietism. The name was given in the seventeenth century in France to a class of devout persons who aimed at a state of higher devotion than that which was realized by the cold, formal and mechanical moral observances as enforced by the Jesuits. Molinos, a Spanish priest, had published a book (1675), called "The Spiritual Guide," which attracted great attention. It described the happiness of a soul which reposed in *quietude* on God, so as to be conscious only of his presence, and he went so far as to hold that it could even reach a state where it would lose the consciousness of God and be only aware of receiving passively influences which were divine. The Jesuits had this work condemned. Approximating to the views of Molinos were those of Madame de Guyon and Fénelon, in France. She went so far that she was held to be insane, and he was condemned, in 1699, by Innocent II., and the submission of Fénelon has often been referred to as a wonderful instance of the power of genuine piety on the one hand and of wisely exercised authority on the other hand. The conduct of a number of hypocritical priests did more than the condemnation of the pope to bring the views of the French Quietists into disrepute, though it is well known that in private Fé-

lon never fully abandoned all the views which publicly he had disavowed.

**QUINQUAGESIMA** (kwink'wa-jes'e-ma), the "fiftieth." 1. The Sunday next before Lent, there being fifty days between that day and Easter day inclusive. 2. The fifty days between Easter and Pentecost. 3. The feast of Pentecost.

**QUINQUARTICULAR** (kwink'kwart-ik-ular) **CONTROVERSY**, the title of the controversy between the Arminians and Calvinists on the five points—1. Particular election; 2. Particular redemption; 3. Moral inability in a fallen state; 4. Irresistible grace; and 5. Final perseverance.

**QUINTILIANS** (kwint-il'yanz), the name of a sect that appeared in Phrygia about A.D. 189, so called from a leader, Quintilia, who claimed to be a prophetess. They admitted women to perform sacerdotal and episcopal functions. They attributed extraordinary gifts to Eve for having eaten of the tree of knowledge, told great things of Mary the sister of Moses, and they held that Philip the deacon had four daughters who were all of their sect. It was usual for young women to enter their meetings robed in white and personating prophetesses. Tertullian referred to them as existing before his time, and as holding that baptism with water was needless, as men could be saved by faith merely, as Abraham was.

**QUINTUS MEMMIUS**. See MEMMIUS.

**QUIRINI** (kwi're'ne), **ANGELO MARIA**, a Venetian cardinal, was born in 1680. He went early into a convent of Benedictines, where he laid in a vast store of knowledge. He set out on his travels in 1700, and formed acquaintance with nearly every distinguished literary character of his time. Being created a cardinal, he waited on Benedict XIII. to thank him for that distinction. "It is not for you," said the pope, "to thank me for raising you to this elevation; it is rather my part to thank you for having by your merit reduced me to the necessity of making you a cardinal." He died in 1755, regretted by all ranks and sects; for though a zealous champion of the papacy, he wrote with candor and moderation, which gained the applause of the Protestants themselves. He wrote, besides other works, an account of his travels and "A Work on the Lives of certain Bishops of Bresse, Eminent for Sanctity."

**QUITMAN** (kwit'man), **FREDERICK HENRY**, D.D., was an eminent Lutheran minister, born in 1760, in the duchy of Cleves, in Westphalia. He was educated at Halle, under Knapp and Semler. He acted for some time as tutor in the family of the prince of Waldeck. He was ordained with the view of settling as pastor in the island of Curagoa, and he remained fourteen years in that island, leaving it in 1795 because of political convulsions, and settling in New York. At Schoharie, Rhinebeck, Wurttemberg, Germantown and Livingston he labored with great faithfulness until 1828, when his health declined. He

died in 1832, leaving behind him a work on "Magic," an "Evangelical Catechism," a volume of sermons and a "Hymn-Book."

**QUIVER**. See ARMS.

**QUIVIL** (kwiv'il), **PETER**, was one of the celebrated mediæval ecclesiastical builders of England. His name is associated with the cathedral of Exeter, to which he was appointed bishop in 1280. At once he began the work of building; and choosing the second or Decorated Pointed style, he made good progress during the eleven years of his episcopate. His successor, Thomas Bytton, continued the work during all his time; and so did Walter de Stapleton, who was elected in 1307, and for twenty years did much, still leaving the great edifice unfinished. James de Berkeley, who came next, wanted either taste or pride in the edifice, or energy, for it remained for John Grandisson, who was appointed in 1331, and who filled the episcopal chair for nearly forty years, to complete this beautiful edifice as it now appears.

**QUODLIBETUM** (kwod-lib'e-tum), a scholastic discussion on both sides of a question.

**QUOTATIONS** (kwo-ta'sh'anz). Nothing is more common than to find one writer quoting or referring to another. We might naturally expect, therefore, that the sacred penmen would both cite and be cited. And this, accordingly, is the case. In various books of the Bible we have quotations from other books, either as authorities or for illustration, or for the confirmation of some truth. It is of chief importance to examine such as are made from the Old Testament by the writers of the New. The number of those that are direct is very large, and there are, besides, many allusions, or cases in which the phraseology of the earlier sacred penmen is adopted by the apostles and evangelists, without any formal citation. A difficulty has been found in regard to them, both as to the words, which are sometimes different from those of the original passage, and also as to the way in which they are applied. And as these points bear particularly upon the question of inspiration, they are of no slight moment. We must, then, consider both the external and internal forms of Scripture quotation, how they are cited and how applied.

1. Tables have been constructed which exhibit fully the citations of the New Testament writers, with the corresponding passages of the Old Testament, from an inspection of which it is evident that most of the passages are an exact rendering of the original; there are some, however, in which the phraseology is more or less altered. It will be found, also, that the words of the Septuagint translation are often so exactly or nearly repeated as to make it manifest that it was from that translation that the writer quoted. But sometimes the Septuagint is left and the original Hebrew followed, and sometimes a passage is given not precisely accordant with either the original or the current version.

Hypotheses have been framed to account for all this, but it is not possible to assign a general reason for the variations, or to classify with accuracy the different quotations according to their presumed relation to the Hebrew or the Greek text; each case of difficulty must be looked at independently. But we may say that it was very natural that the apostles should use the Septuagint, a translation well known to the Greek-speaking

communities they addressed, nay, very possibly at the time the common Bible of Palestine. It was not, however, likely that they would bind themselves to a translation not always accurate, unless the reason of the ease required it, as in Acts viii. 32, 33, where the eunuch read the passage from the Greek version, and accordingly the evangelist accurately copied it. The sacred writers properly used a freedom of expression. They availed themselves of the Septuagint sometimes, where verbally it differed from the Hebrew, provided by any such difference it more fully brought out the meaning of the original; they, again, translated for themselves where the received translation failed to express the true sense; they sometimes also departed from both the Hebrew and the Septuagint when they wished more thoroughly to develop the idea which lay in the original utterance. It was not misapprehension, it was not caprice, which actuated them. For explanation, for bringing into clearer light that which lay at first in shadow, for definitely pointing that which was general, or for enlarging that which was restricted, the New Testament writers, themselves inspired, have sometimes modified the diction, but they have preserved the spirit of the ancient oracle. There is an eminent example in the way in which St. Paul, Eph. iv. 8, cites Ps. lxxviii. 18. The prophetic word describes the triumph of Him who went up on high, how he was adorned with gifts; the apostle exhibits the better aspect of the same truth; it was not for his own advantage; these gifts with lavish hand he has bestowed on those that need them. The deeper meaning is thus emphatically unfolded. It was so in the earlier revelation. Compare Gen. xxiv. 2-8 with 37-41; Ex. xx. 8 with Deut. v. 12; Lev. x. 3 with Ex. xix. 22; xxix. 43, 44, and see how there can be perfect substantial agreement, accompanied with a variation of expression.

2. We must consider, further, the application of quotations. Here, too, in a vast majority of cases there is no difficulty; the ancient prediction, as of Messiah's birth at Bethlehem, and the event said to fulfill it, fit exactly in together. But, occasionally the words of the elder Scripture are applied in a way which seems foreign to their original purport. We must of course distinguish cases in which language is merely borrowed from those in which a prophecy is said to be accomplished or on which an argument is built. Thus Old Testament phraseology is largely used in the book of Revelation, though there is scarcely a formal citation in it. This is consonant with our own practice. We continually adopt the words of others without meaning to imply that their words had any defined or intended relation to our thoughts. We must see if the same principle holds in formal quotations. Does our Lord, do the sacred writers, mean to accommodate the Old Testament declarations? do they use them apart from their original purpose merely because there is a chance similitude of circumstances? The answer must be, unhesitatingly, no.

The basis from which we must argue is the real connection between the Old Testament and the New, between that dispensation which, besides its present use to the worshippers under it, was to delineate in shadow the features of that better covenant which was one day to be admired in its full proportions and life-giving power. If we admit at all the correspondence of type with anti-type, if we acknowledge prophecy and its fulfillment, if we allow that God was acting on a definite plan, we cannot hesitate also to allow that there must be a comprehensive significance in the

ancient word, a deeper sense to be drawn out at the fitting time. This principle is not to be accused of straining Scripture, of imputing meanings which a man's fancy may suggest. It is not that the obvious signification of the terms may be disregarded, or a discordant sense extracted; it is the same sense they ever bore, but only more profoundly apprehended. For this our Lord opened the understanding of his disciples, Luke xxiv. 45; he showed them what ancient sages had not fully discerned, 1 Pet. i. 10-12. But in this respect there was not, properly speaking, a new revelation; it was a diviner light upon that which had been given before. The truth was there, but the eye must be purged from earthly film to perceive it. It is, then, because Christ by his enlightening Spirit qualified his disciples to discern "the mystery which had been hid from ages and from generations," that they were made adequate expounders of God's will. Had they known but the letter, had they cited the Scriptures as the carnal Jews did, they would have been no fitting ministers of the new dispensation, they would have incurred the censure which their Master pronounced upon those whose earthly minds interpreted Scripture so as to conclude from it that carnal ties and sensual gratifications must be fastened for ever upon risen and glorified saints, Matt. xxii. 23-32.

Critics have professed to discover a difference between the modes in which our Lord and his disciples cited and applied the Scripture, differences too among the disciples, distinguishing, for example, Matthew from Paul, and Paul from Peter. It is very likely each acted according to the talent given him. There was none like the Master, whose mind had devised and whose eye comprehended the whole. Inspiration superseded not a man's natural faculties, and one might still have a higher perceptive faculty than another. But every vessel, though of different capacities, was full. It is in the mode, in the extent, not in the truthfulness of the application of ancient Scripture, that apostles and evangelists vary. The gifts may be of different kinds, "but all these worketh that one and the self-same Spirit, dividing to every man severally as he will," 1 Cor. xii. 11, whether it be Paul or Peter, "according to the wisdom given unto him," 2 Pet. iii. 15, so he writes.

There were certain formulæ adopted by different writers of the New Testament in introducing citations. Many of these formulæ were in common use at the time in which the sacred writers lived; they were employed by the rabbins to introduce their fanciful interpretations. But no exception need be taken to them on that account. The only point of importance is to ascertain whether, by the use of a particular phrase and by the course of the argument, the writer intended a real fulfillment of some earlier utterance, or merely to use the words for illustration. Now, there is one remarkable formula, found specially in St. Matthew, which must not be unnoticed—"that it might be fulfilled." The question is, Does this denote final cause or purpose? or may it not in some cases mean only effect or event? The former has been called the *telic*, the latter the *ecclatice* usage. This has been keenly discussed. And it is the decision of the most competent theological scholars that the phrase has the former meaning, so that the sense of the formula, see Matt. ii. 15; viii. 17; xii. 17; xiii. 35; xxi. 4; xxvi. 56; xxvii. 33, is that there has been a fulfillment in order to display that truth of God which had been announced in the prophecy.

Taking the New Testament as the key to the

Old, we can have no difficulty in accepting this conclusion. There is a continuous organic unity in the system of revealed truth, exhibited by direct prophecy, by typical transactions and by typical representative predictions, which intelligent readers of the Revelation as a whole may observe.

One more remark alone can be appended here. The New Testament writers apply to Christ some of the psalms which seem simply without ulterior reference to detail the circumstances of the psalmist. But as there is a relation between Christ and Israel, so is there a special relation between Christ and the house of David. It is not a mere resemblance, but a defined relation; and the divine Spirit, guiding the utterance of David as to the things which befell him, made that utterance significant for the history of Messiah, who was to be born of David's seed. The New Testament writers open out the relation and the significance of it. With this principle in view, no difficulty need be felt in respect to the citations from such Psalms as xxii., xl., xli., lxix., cix. So the pregnant varia-

INTERIOR OF EXETER CATHEDRAL.—See QUIVIL, PETER.

tion of the Septuagint in Ps. ii. 9 is accepted in Rev. ii. 27; and whereas in the original text God's judgment alone was expressed, in Messiah's pastoral rule that judgment is shown to be tempered with mercy. For the explanation of Matt. ii. 17, 18, see RAMAH.

There are some other quotations in Scripture which may be briefly noticed. St. Paul, 2 Tim. iii. 8, gives the names of Jannes and Jambres as withstanding Moses; and St. Jude, Jude 9, 14, mentions the contention of Michael with the devil and cites a prophecy of Enoch. It has been imagined that the two apostles quoted apocryphal books. They may, however, have borrowed from oral tradition. But if they did quote apocryphal books, such quotation no more authorizes those books than the quoting of classical authors authorizes them. Some of the books which we include under the term "Apocryphal" are possibly alluded to in the New Testament.

**QUOTIDIAN** (kwo-tid'e-an), the daily allowance, whether of food or other things, to the members of a religious community.

R.

**RAAMAH** (ra'a-mah), a son of Cush, Gen. x. 7, and the progenitor of a race which afterward became distinguished for its merchandise in spices, precious stones and gold, in which it traded with Tyre, Ezek. xxvii. 22. In this latter passage it is mentioned along with Sheba, and in the original passage Sheba and Dedan are said to be sons of Raamah. The probability, therefore, is that the settlements of the tribes associated with these names belonged to the same region, namely, in South Arabia.

**RAAMESSES.** See **RAMESES**.

**RABBAH** (rab'bah), **RABBATH** (rab'-bath). 1. The metropolis of Ammon, Deut. iii. 11. It was besieged and taken by David for the ill-treatment of his ambassadors by the Ammonites, Joab having previously after a long siege stormed one of the divisions of it, probably the lower town, in which was the spring whence a stream of water yet existing flowed, 2 Sam. xi. 1;

A GATE AT RABBATH-AMMON.

xii. 26-29. Afterward, however, Ammon regained its independence, Jer. xlix. 2, 3, and Rabbah was a strong place. In later times it received the name Philadelphia from Ptolemy Philadelphus, and by this name it is known in Greek and Roman writers and in Josephus. This was in Christian times the see of a bishop. But the original appellation lingered among the inhabitants, preserved as *Ammān* to the present day; and there are now extensive ruins in an elevated valley on the banks of the stream Moiet Ammān, after a short course flowing into the Jabbok, or Zurka, which divided the Hebrew territory from that of the Ammonites. Ammān is about twenty-two miles from the Jordan. 2. A town in the hill-country of Judah, Josh. xv. 60.

**RABBI** (rab'bi), "master," a title of honor given to Jewish teachers; it was repeatedly applied to our Lord by his disciples and by the people, Matt. xxiii. 7, 8; John i. 38, 49; iii. 2, 26.

**RABBITH** (rab'bith), a city of Issachar, Josh. xix. 20.

**RABBONI** (rab-bo'ne), "my master," John xx. 16. The word is found also in Mark x. 51 in the original; it is said to express greater respect than rabbi.

**RAB-MAG** (rab'mag), "president of the magi," a title given to a great Chaldean officer, Jer. xxxix. 3, 13.

**RABSACES** (rab'sa-seez), Eccl. xlviii. 18, identical with Rab-shakeh.

**RAB-SARIS** (rab-sa'ris), "chief eunuch," the official title of an Assyrian or Babylonian officer, 2 Ki. xviii. 17; Jer. xxxix. 3, 13. Two or three persons would seem to have borne it in the places referred to.

**RAB-SHAKEH** (rab-sha'keh), "chief cup-bearer," one of the principal court-officers of Sennacherib, holding a high command in his army. Some have believed him an apostate Jew, but without sufficient grounds. He was despatched with Tartan and Rab-saris and a strong body of troops from Lachish to Jerusalem to persuade or compel the submission of the city; and his bold blasphemous speech to the Jewish people, in spite of the remonstrances of Hezekiah's officers, is recorded at length, 2 Ki. xviii. 17-37; xix. 4, 8; Isa. xxxvi. 2-22; xxxvii. 4, 8. The word Rab-shakeh is probably the official title and the personal name of this functionary.

**RACA** (ra'ka), an Aramaic term of reproach meaning vain or worthless fellow, Matt. v. 22.

**RACE.** See **GAMES**.

**RACHAB** (ra'kab), Matt. i. 5, a Greek form of Rahab. Another form (Greek) occurs in Heb. xi. 31.

**RACHAL** (ra'kal), a place in Judah to the inhabitants of which David sent a present, 1 Sam. xxx. 29.

**RACHEL** (ra'chel), the most beloved of the two daughters of Laban whom Jacob married, Gen. xxix. 16, and who became the mother of Joseph and Benjamin, in giving birth to the latter of whom she died near Bethlehem, where her sepulchre is shown to this day, Gen. xxx. 22; xxxv. 16. For more minute particulars see *JACOB*, with whose history Rachel's is closely involved.

**RACOVIAN** (ra-ko've-anz). In ecclesiastical history the Unitarians of Poland are so called, from Racow, a small city of that country, where Jacobus à Sienna, the head of the party, erected a public seminary for their Church, in A. D. 1600. Here the "Racovian Catechism," originally composed by Socinus and revised by his most eminent followers, was published. It has served the purpose of a Creed or Confession.

**RADBERTUS PASCHASIUS** (rad-ber'-tus pas-ka'zh'us), the Latinized name of **RADBERT** (rad-bayr'), a French monk of the ninth century, born near Soissons. He wrote on the eucharist, and distinctly taught the doctrine of Transubstantiation. Johannes Scotus Erigena was his great opponent. One of the Irish expositors, commenting on the words of our Lord, "Do this in remembrance of me," observes, "He left a remembrance of himself to us, even as if one that were going a far journey should leave some token with him whom he loved, that as oft as he beheld it he might call to memory his benefits and friendship." Radbert died A. D. 865.

**RADDAI** (rad'di), the fifth son of Jesse, 1 Chr. ii. 14.

**RADULPHUS** (ra-dul'fus), 1, was a distinguished bishop of Chichester who succeeded to the see in A. D. 1089. At the Norman conquest William placed his chaplain, Stigand, in the see, who designed and laid the foundation of a cathedral; but he died before the work had made any progress. Galfredus, his successor, occupied the see only one year; and when Radulphus was appointed, he entered on the great undertaking with the zeal that characterized the great church-builders of his age. When the building was nearly completed, it was destroyed by fire, in the year 1114. Radulphus appealed to Henry I., who rendered great aid, and he lived to see the walls restored before he died, in 1123. Sefrid I. completed the edifice, which again suffered from fire in 1186, and after eleven years of repairs to the cathedral was dedicated again. Later still, the tower, spire and other parts were added, and not until A. D. 1336 did this large church attain to a state of completeness.

Few cathedrals occupy a more unfavorable site. It is placed in the middle of a parish graveyard, in a small area, and it is surrounded by buildings. At a distance it presents an imposing aspect; for although it is plain, it is of good proportions. Like Oxford, Bristol and all the Welsh cathedrals, it is smaller than the other great churches of England; for as Carlisle has lost its nave, it cannot be placed in comparison with any of them. The interior is far more imposing than the exterior. The nave presents the usual appearance of a plain Norman church. On each side are eight circular arches supported by flat piers, flanked by half columns with plain capitals. The choir extends to only three arches beyond the tower, but the effect is good. The presbytery consists of two arcades, and the Lady Chapel, still farther to the east, is now used as a library. The cloisters are of a peculiar form, commencing from the third arch of the nave on the west of the central tower on the south side of the cathedral and extending to the presbytery on the south side, the two angles being obtuse and acute respectively. On the north side of the nave, near the west front, stands a campanile or bell-tower, so usual in Italy; but this is the only instance in England. It is one hundred and twenty feet high, massive and almost without decoration. The dimensions of the cathedral are as follows: Nave, from the west door to the entrance of the choir, one hundred and fifty-six feet long and twenty-six feet wide; original aisles twelve feet, additional fourteen feet; total internal width, ninety-one feet nine inches. Transept one hun-

dred and thirty feet long and thirty-four feet wide. Choir, from entrance to altar-screen, one hundred and five feet long and twenty-six feet wide; aisles twelve feet; total width sixty feet. From the back of choir to the entrance of the Lady Chapel, fifty-six feet two inches. The chapel and ante-room sixty-two feet nine inches and twenty feet seven inches wide. Height of the spire two hundred and seventy-one feet; vaulting of the nave and choir sixty-one feet and fifty-nine feet respectively. The total internal length is thus three hundred and seventy-nine feet eleven inches. A few years ago the tower and spire fell and crushed the roof of the cathedral, but the work of restoration was commenced and carried on very vigorously until it was completed. Chichester has always had a full share of eminent men who have distinguished themselves in theology and literature.

2. Was a bishop of Rochester in the beginning of the twelfth century. In A. D. 1114 he was transferred to Canterbury and made primate of all England. In the same year he dedicated the metropolitan cathedral which had been begun by Lanfranc and carried on by Prior Conrad under the prelate of Anselm. According to William of Malmesbury, who speaks of the edifice, "Nothing similar was to be found in England, either for the brilliancy of the pointed windows, the splendor of the marble pavement or the pictured roof which attracted the eyes of beholders."

**RAFFLES** (raf'fles), THOMAS, an English dissenting minister and philanthropist, was born in 1788. As a preacher he was much esteemed, and was active in all the charities of Liverpool, where he lived and labored. He died in 1863.

**RAGAU** (ra'gow), Luke iii. 35. 1. The same as *Ren*. 2. Judith i. 5, 15. Some place in Media is intended; the word is perhaps identical with—

**RAGES** (ra'jes), Tob. i. 14 and elsewhere, an important city in the north-east of Media. Its ruins, about five or six miles from Teheran, are still called *Rhey*.

**RAGUEL** (ra'gu-el). 1. A Midianite, father of Jethro, the father-in-law of Moses, Num. x. 29. He is called *Renel* (the original word being the same) in our version of Ex. ii. 18. See *JETHRO*. 2. Tob. iii. 7, 17, and elsewhere, the father of Sara, whom Tobias is said to have married.

**RAHAB** (ra'hab), properly **RACHAB**, a woman of Jericho who received into her house the two spies who were sent by Joshua into that city, concealed them under the flax laid out upon the house-top when they were sought after, and having given them important information, which showed that the inhabitants were much disheartened at the miracles which had attended the march of the Israelites, enabled them to escape over the wall of the town, upon which her dwelling was situated. For this important service Rahab and her kindred were saved by the Hebrews from the general massacre which followed the taking of Jericho, Josh. ii. 1-21; vi. 17; compare Heb. xi. 31.

**RAHAB**, a name signifying "sea-monster," which is applied as an appellation to Egypt in Ps. lxxiv. 13, 14; lxxxvii. 4; Isa. li. 9, and sometimes to its king, Ezek. xxix. 3; xxxiii. 3, compare Ps. lxxviii. 31, which metaphorical designation probably involves an allusion to the crocodiles, hippopotami and other aquatic creatures of the Nile.

**RAHAM** (ra'ham), a descendant of Judah, 1 Chr. ii. 44.

**RAHEL** (ra'hel), Jer. xxxi. 15. See **RACHEL**.

**RAIKES** (raikes), ROBERT, one of the founders, if not actually the first promoter, of Sunday-schools, was born in Gloucester, September 14, 1736. Like Howard, he began his career of philanthropy by endeavoring to mitigate the sufferings of the prisoner and captive. While thus employed he became fully convinced that ignorance was one of the main causes of crime, and he therefore resolved to try the experiment of collecting together on the Lord's day the children of the poorest classes. From this little seed sprang the mighty Sunday-school system. From Mr. Raikes' own account of the origin of the scheme we learn that his business led him to observe a group of ragged children playing in the street who were given up to unrestrained riot on the Sabbath day. Four decent women in the neighborhood who kept dames' schools consented to receive these children on the Sunday, whom they were to instruct in reading and the Church catechism. Rev. Thomas Stork, curate of Saint John's, Gloucester, visited the schools on Sunday afternoon and examined the progress that was made. Many of the little ragamuffins not only learned to say their catechism, but voluntarily attended early morning prayers at the cathedral. This latter excited great interest. Applications for further information on the subject poured in from every quarter, and in a short period Sunday-schools were established in most of the manufacturing towns of England. The benevolent man was himself a debtor to his own institution. It is recorded concerning him that he was deeply impressed with the truth and power of the gospel by reading Isa. liii. to one

**RAIN.** It was one of the special promises made to Israel that the Lord would give them rain "in his due season, the first rain and the latter rain," Dent. xi. 14; Joel ii. 23. These two seasons of rain, therefore, they specially looked for, in order to the fertility of their land, James v. 7.

TOMB OF RACHEL.—See **RACHEL**.

Sometimes in punishment for their rebellion rain was withheld, 2 Sam. xxi. 1; 1 Ki. xvii. 1. And it may be that, for the sin of his people, even to the present day, God does not give his land the rains in their season. For the climate of Palestine is now very variable. The former or autumnal rains are said to commence in October or November, and the latter or spring rains in February or March. But there is generally small interval between them. In the rest of the year little falls, just as

TOMB OF RACHEL.—SKETCH SHOWING EXTENSIONS.—See **RACHEL**.

of his scholars. During the last few years of his life his health rapidly declined. On the evening of April 5, 1811, he peacefully expired in his native city. His long career was marked by unvarying simplicity and kindness, and he delighted in associating himself with charitable and benevolent men.

**RAIMENT.** See **DRESS**.

**RAINBOW** (rain'bo). This is mentioned in connection with the covenant which God made

with Noah as the second father of the race after he came out of the ark. God set his bow in the clouds as the token or assurance of that covenant; not that the rainbow then for the first time appeared, but that for the first time this special significance was attached to its appearance. In its symbolical usage the rainbow appears as the symbol of mercy returning after and triumphing over judgment, Ezek. i. 27, 28; Rev. iv. 3.

**RAINBOW, EDWARD**, who rose to be bishop of Carlisle in 1664, was born at Bilton, in Lincolnshire, and was the son of the clergyman of that parish. He was educated at Westminster, and became a scholar of Corpus Christi College, Oxford, whence he went to Cambridge and rose to be a Fellow of Magdalene College, and subsequently master. As he refused to sign a protestation against Charles I., he was deprived. In 1652 he received the living of Chesterfield, in Essex; and in 1659 the earl of Warwick presented him to

last sickness his coadjutors met at his lodging once a week to collate their various renderings, the prophetic books of the Old Testament being their department of learned labor. He died May 21, 1607. He was a man of great piety and very great learning. "His memory," says Fuller, "was little less than miraculous, he himself being the truest table to the multitude of voluminous books he had read over."

**RAISINS** (raiz'ins), 1 Sam. xxv. 18; 2 Sam. xvi. 1. These appear to have been dried grapes in bunches, just what we understand by the term at the present day.

**RAKEM** (ra'kem), one of the descendants of Manasseh, 1 Chr. vii. 16.

**RAKKATH** (rak'kath), a city of Naphtali, Josh. xix. 35. The rabbins say it stood where Tiberias was afterward built.

RAMAH.—See article.

the rectory of Benefield, in Northamptonshire. He was restored to his mastership and made dean of Peterborough soon after the Restoration, and in the year 1662 he served the office of vice-chancellor, his next promotion being to the see of Carlisle. He died in 1684, and was buried in the parish church of Dalston.

**RAINOLDS** (rain'oldz), **JOHN**, a celebrated English divine, was born at Penhoe, near Exeter, in 1549, and was educated at Corpus Christi College, Oxford. During his stay at the university he was selected to encounter Hart, a famous popish controversialist, whom he effectually vanquished. In 1598 he became dean of Lincoln, and in the following year president of Corpus Christi. In 1603 he was chosen one of the Puritan divines to attend the conference at Hampton Court, where he urged the necessity of a new translation of the Scriptures, and on account of his erudition was appointed one of the translators. But he did not survive till the completion of the work. Such, however, was his devotion to the task that in his

**RAKKON** (rak'kon), a city of Dan, Josh. xix. 46.

**RALSTON** (rawls'tun), **SAMUEL**, D.D., was born in Donegal, Ireland, in the year 1756. He was descended from an influential Scotch family that had settled in Ireland, and after a good training he was sent to the university of Glasgow. In 1794, shortly after he had entered the ministry, he removed to America, and settled in Pennsylvania, at Mingo Creek and Williamsport (now Monongahela City), where he remained until his death. He was pastor in one of these places for thirty-five, and in the other for forty, years. He was a man of keen intellect, an excellent preacher and admirably suited by his broad common sense for the sphere which he filled. He wrote on Baptism in reply to Alexander Campbell, his next work being "A Brief Examination of the Principal Prophecies of Daniel and John," in which he has condensed almost all the valuable matter of previous commentators. Washington College, Pennsylvania, honored this excellent divine with

a degree in divinity in 1622, and after an honored and useful life, he died at his residence in Washington county, Pennsylvania, on the 25th of September, 1851, at the age of ninety-five years.

**RAM**. 1. A son of Hezron and descendant of Judah, Ruth iv. 19; called also Aram, Matt. i. 3, 4. 2. Another descendant of Judah, the son of Jerahmeel, 1 Chr. ii. 25, 27. 3. A person of whose kindred Elihu is said to be, Job xxxii. 2. He has been thought to be the same with Aram, Gen. xxii. 21.

**RAM**. See SHEEP.

**RAM, BATTERING**. See ENGINES.

**RAMADAN** (ram'a-dan), the name given to the great fast or Lent of the Mohammedans. It commences with the new moon of the ninth month of the Mohammedan year; and while it continues the day is spent uninterruptedly in prayers and other devotional exercises. Even the night is passed by the more rigid of the faithful in the mosques, which are splendidly illuminated on the occasion; but generally speaking the arrival of sunset is the signal for a more than usually unlimited indulgence in the pleasures of the table; and on the third evening of the fast the grand vizier commences a series of official banquets. The Ramadan ends on the day preceding the only other great festival of the Mohammedans—the *Bairam*—which is equivalent to the Christian Easter.

**RAMAH** (ra'mah), the name of several places which it is not easy to distinguish or identify. 1. A town in the territory of Benjamin, near Gibeath and Geba, Josh. xviii. 25. As after the division of the kingdom there was a continual flow of the more piously-disposed Israelites into Judah, Baasha endeavored to prevent this by fortifying Ramah; Asa in consequence stirred up the Syrian Ben-hadad to invade Israel, and took advantage of his compliance to dismantle Ramah, 1 Ki. xv. 17-22. Ramah is afterward mentioned as in the line of Sennacherib's advance, Isa. x. 29; and it was most probably here that the captives were assembled after the taking of Jerusalem for their melancholy march into exile, in which the prophet introduces Rachel, the ancestral mother of the tribe, as bitterly bewailing her children, Jer. xxxi. 15; xl. 1.

2. A city described as being in Mount Ephraim, the birthplace and residence of the prophet Samuel, erroneously supposed to be Arimathea. It is called more fully Ramathaim-zophim, 1 Sam. i. 1, 19; xix. 18-24.

3. A city on the border of Asher, not far from Tyre, Josh. xix. 29. 4. A town of Naphtali, Josh. xix. 36, perhaps that still called *Rameh* on the slope of a hill a few miles to the east of Safed. 5. 2 Ki. viii. 29. See RAMOTH-GILEAD.

**RAMATH** (ra'math), a city in the extreme South of Palestine belonging to the tribe of Simeon, Josh. xix. 8; also called Ramoth, 1 Sam. xxx. 27.

**RAMATHAIM-ZOPHIM** (ra-ma-tha'im-zo'fim), 1 Sam. i. 1. See RAMAH, 2.

**RAMATHEM** (ra'ma-them), 1 Macc. x. 30, one of the governments added to Judaea from Samaria and Galilee by Demetrius Soter, so confirmed by Demetrius Nicator.

**RAMATHITE** (ra'math-ite), a native or inhabitant of Ramah, perhaps No. 1, 1 Chr. xxvii. 27.

**RAMATH-MIZPEH** (ra'math-miz'peh), a frontier-town of Gad, Josh. xiii. 26, probably the same with MIZPEH, 3, and RAMOTH-GILEAD, which see.

**RAMESES** (ra'me-seez), an Egyptian city in the land of Goshen, built, or at least fortified, by the labor of the Israelites, Gen. xlvii. 11; Ex. i. 11. The name of the city seems to have been sometimes given to the whole province, Gen. xlvii. 11, by which it would appear to have been the chief city of the district. It has been supposed that it was situated on the watershed between the Bitter Lakes and the Valley of the Seven Wells, not far from Heroöpolis, but not identical with that city. This, however, is very doubtful. In Ex. i. 11 the name is spelt Raameses, and in Judith i. 9 it is Ramesse. The name means "son of the sun," and was borne by several of the ancient kings of Egypt, of whom the third of the line began to reign B.C. 1550, and continued on the throne for sixty years. His successor is said by some writers to have been the father of Rameses the Great, who also bears in history the name of Sesostris.

**RAMIAH** (ra-mi'ah), one who married a foreign wife, Ezra x. 25.

**RAMISTS** (ram'ists), or **RAMEANS** (ra'me-anz), were the followers of Pierre Ramé, who was better known by his Latin name RAMUS. He was professor of rhetoric and philosophy at Paris in the reign of Henry II., and he perished in the Massacre of St. Bartholomew. His system of logic was opposed to the Aristotelian, and during the latter half of the sixteenth century a vehement contest was maintained between their respective adherents in France, Germany and other parts of Europe. Hallam says that "he conferred material obligations on science by denying the barbarous method of the schoolmen."

**RAMMATH-LEHI** (ram'math-le'hi), Jud. xv. 17. See LEHI.

**RAM MOHUN ROY** (ram mo'hoon roy), an Indian of the Brahmin caste, and a man of very enlightened mind, was born in 1774, at Burdwar, in Bengal. He drew on himself the enmity of the Brahmins by his opposition to their practices and errors; went to England on a mission from the king of Delhi, and joined the Unitarians. He was an accomplished linguist and a clever diplomatist. He endeavored to establish a sort of eclectic religion, the fundamental principles of which were faith in God and in a future life. He wrote many works in England. His death occurred in 1833.

**RAMOTH** (ra'moth), one who married a foreign wife, Ezra x. 29.

**RAMOTH**. 1. A city frequently called Ramoth-gilead, or Ramoth in Gilead, in the territory of Gad, but allotted to the Levites and appointed one of the cities of refuge, Deut. iv. 43. It was the seat of one of Solomon's commissariat officers, 1 Ki. iv. 13. It was afterward occupied by the king of Syria, and it was in the vain attempt to recover it that Ahab perished, 1 Ki. xxii. 1-36. King Joram was wounded in a battle here, 2 Ki. 173.

viii. 28, yet it seems to have been again in the hands of the Israelites, for Jehu was at Ramoth when he was anointed king, 2 Ki. ix. 1, 4, 14. It is sometimes, 2 Ki. viii. 29, called Ramah, and may possibly be identical with Ramath-mizpeh. It has been thought to be the modern es-Salt, or it may be somewhat more to the north. 2. 1 Sam. xxx. 27. See RAMATH. 3. 1 Chr. vi. 73. See REMETH.

**RAMOTH** (ra'moth), Job xxviii. 18, margin. See CORAL, probably the right rendering.

**RAMSAY** (ram'zay), **ANDREW MICHAEL**, better known as the Chevalier Ramsay, was born at Ayr, in Scotland, in 1686. He was educated at Edinburgh; visited Fénelon at Cambray, and being received into his house as an inmate, was by him converted to the Roman Catholic religion, and received the order of Saint Lazarus. He next went to Rome to educate the children of the Pre-

RUINS AT RABBATH-AMMON.—See article.

tender, and on quitting that situation he returned to Scotland. His principal work is "Philosophical Principles of Religion." He died in 1743.

**RAMSAY, SAMUEL GRAHAM**, who was of Scotch-Irish descent, was born in 1771 at Marsh Creek, in Adams county, Pennsylvania. After a course of training under the Rev. A. Dobbin, he was sent to Liberty Hall, now Washington College, Virginia, then under the presidency of the Rev. William Graham. After a lengthened missionary tour he was led to settle near Knoxville, Tennessee. Here his labors, united to a delicate constitution, soon laid him aside from active life, but his health was mercifully restored, and he preached until 1817, when he was removed by death. He was an eminently pious, earnest and faithful man.

**RAMS' HORNS**, Josh. vi. 4, 5. See MUSICAL INSTRUMENTS.

**RAMS' SKINS**, Ex. xxv. 5. See DYEING.

**RANCE, ARMAND JEAN LE BOUTILLIER DE**, the reformer of La Trappe, was born in 1626, at Paris, and adopted the ecclesiastical profession. He acquired great celebrity as a preacher, and might have risen to the most elevated stations in the Church had he not taken the resolution of retiring from the world. Although he was a man of large fortune and indulged in all the pleasures of the world, he abandoned society and retired to the abbey of La Trappe, where he introduced a reform of the most rigid kind in the monastic discipline. He was the author of several theological works, and died in 1700.

**RANDOLPH** (ran'dolf). The name of two English divines, father and son.

**THOMAS** was born in Canterbury about the commencement of the last century, and was educated at Corpus Christi College, Oxford, of which society he eventually became president. Besides

the valuable benefices of Petham, Waltham and Saltwood, all in the immediate neighborhood of his native city, his distinguished talents as a theologian raised him to the Lady Margaret divinity chair and the archdeaconry of Oxford, to which latter dignity he was elevated in 1768. As a controversialist he acquired considerable reputation by his "Vindication of the Doctrine of the Trinity." He died in 1783.

**JOHN**, the son of the preceding, afterward bishop of London, was born in 1749, and graduated at Christ Church, Oxford, where he became highly distinguished by his industry and talents, and was elected to the Regius professorship of divinity in 1783. In 1799 he was raised to the episcopal bench as bishop of Oxford, from which see he presided seven years, and was then translated to the diocese of Bangor. Two years afterward he was further promoted to the bishopric of London, but enjoyed this accession of dignity not quite four years, being carried off by a fit of apoplexy in 1813. Though austere and even rough in his manners, Bishop Randolph was

equally distinguished by the soundness of his abilities, the benevolence of his disposition and the uncompromising firmness which he displayed in the regulation of his diocese.

**RANKIN** (rang'kin), **JOHN**, was born in 1750, at Newark, in Delaware. He was licensed to preach by the Presbytery of Lewes. He was ordained and installed as pastor of the church at Buckingham, Maryland, on April 20, 1779, and he labored in this charge more than twenty years. He continued to serve his heavenly Master with great zeal and much singleness of heart, until at length, in 1798, worn out with toil, he entered on his eternal rest. He was greatly beloved and much honored as a diligent and successful under-shepherd in the fold of Christ.

**RANKIN, THOMAS**, who labored effectively in the Philadelphia Methodist Conference,

RUINS OF A GATE AT RABBATH-AMMON.—See article.

was born about 1738, at Dunbar, in Scotland. His early years were given to great thoughtlessness, but the preaching of the Rev. Mr. Lindsay, of Leith, awakened him, and he united with the Church. A sermon by George Whitefield which he heard decided his views for life; and as he was thus brought into contact with the Methodists, his future life was no doubt influenced by this association. A commercial offer was made to him which brought him to Charleston, South Carolina, and on his return he began to preach. He was taken to Newcastle-on-Tyne, to London, to Leeds, to Barnsley, and thus he had many opportunities of preaching in the various English conferences, and at length, in 1773, he sailed for Philadelphia. At the first conference held after his arrival he was sent to New York, and thereafter he labored in different parts of New Jersey, and it appears that he had even gone into Virginia. He returned to England during the Revolutionary struggle, and was appointed as a supernumerary in London by Mr. Wesley. He continued with great zeal to

attend to class-meetings and other duties until 1810, when he died, aged about seventy-two years.

**RANSOM** (ran'som), the price paid for the freedom of a captive, or compensation made for the remission of punishment. This idea was familiar to the Hebrews, Ex. xxi. 30; Ps. xlix. 7; see also Num. xxxv. 31, 32, where the same word is found in the original, though our translators have given it as "satisfaction." In all these cases the Septuagint uses that term which has been adopted in the New Testament in connection with our Lord's giving himself to death for mankind, Matt. xx. 28; Mark x. 45; 1 Tim. ii. 6. We learn from these expressions that Christ's death was truly a satisfaction for the sins of the world.

**RANTERS** (rant'erz), or **SWEET SINGERS**. A sect thus named prevailed in England during the Commonwealth. Baxter, writing of

them, says: "I have myself letters written from Abingdon, where among both soldiers and people this contagion did then prevail, full of horrid oaths and curses and blasphemy not fit to be repeated by the tongue and pen of man; and all this uttered as the effect of knowledge, and a part of their religion, in a fanatic strain, and fathered on the Spirit of God." In the early part of Bunyan's life it is stated that, "a very large liberty being given as to the conscience, there started up a sect of loose, profane wretches, afterward called Ranters and Sweet Singers, pretending themselves safe from, or being incapable of, sinning, though indeed they were the debauched and profligate wretches living in their bawdy meetings and revels." In later years, a party of the Methodists in England were called Ranters. They broke off from the main body because, as they affirmed, of a want of zeal; and the ministers of this party went through the streets singing hymns and inviting people to come to their places of worship. The name was applied in a spirit of opprobrium by their enemies.

**RAPHA** (ra'fa). 1. A word rendered "giant" in our version, though it appears as a proper name in 2 Sam. xxi. 16, 18, 20, margin. Rapha was probably the founder of a family of gigantic men. See **GIANT**. 2. A descendant of Benjamin, 1 Chr. viii. 2. 3. One of Saul's posterity, 1 Chr. viii. 37; called also Rephaiah, 1 Chr. ix. 43.

**RAPHAEL** (raf'a-el), Tob. iii. 17, the name given to an angel. He was regarded, according to Jewish tradition, as one of the four great angels who stand around the throne of God, Michael, Gabriel and Uriel being the others.

**RAPHAEL SANTI**. See **ITALIAN ART AND ARTISTS**.

**RAPHAIM** (raf'a'im), Judith viii. 1, one of the alleged ancestors of Judith.

**RAPHELENGIUS** (ra-fel-en'je-us), **FRANCIS**, a Flemish professor of the sixteenth century, and one of the most distinguished Orientalists of his day, was born in 1539, in Lanoy. He received his education at the university of Paris, and afterward went to England, where he supported himself by giving lectures on the Greek language at Cambridge. Returning to Flanders, he settled at Antwerp, where he assisted in the production of the Antwerp Bible, and published "Remarks on the Chaldee Paraphrase." His death took place in 1597, at Leyden, where, in the last twelve years of his life he had filled the chair as professor of Eastern languages.

**RAPHON** (ra'fon), 1 Macc. v. 37, a city of Gilead.

**RAPHU** (ra'fu), the father of the spy selected from Benjamin, Num. xiii. 9.

**RASHI** (ra'shi) is the name of that eminent commentator and Talmudist who was the founder of the Germano-French school of Biblical exegesis, and who is erroneously called Jarchi. He was born, 1040, at Troyes in Champagne. Being the son of a thorough Talmudist, he imbibed from his youth an insatiable desire to become master of all the rabbinic lore, and for this purpose went to the rabbinic school at Mayence. He afterward attended lectures at Worms, as well as at Spire, leaving his home and wife and suffering from want of food and garments in order to acquire divine knowledge. At the age of twenty-five he permanently settled down at Troyes, where he was already recognized as a high authority in rabbinic learning, and was consulted by some of the most distinguished Talmudists about difficult civil and religious questions. He soon after became rabbi of the Jewish community in Troyes, and founded a school to which numerous disciples resorted both from Germany and France. Here he delivered those famous lectures on the Talmud and the Bible which form the substance of his commentary on the Talmud and the Scriptures. With the exception of Chronicles and part of Job, he wrote commentaries on the whole Old Testament. So great was Rashi's piety and learning, and so extraordinary was the influence which his expositions exercised upon the Jewish nation, that his comments are almost looked upon as part of the Bible, and his interpretation is to the present day regarded by most orthodox Jews as the authoritative import of Holy Writ. Yet it greatly redounds to his honor that in after life he frankly confessed that if another opportunity were offered

to him he would make his expositions more literal. Rashi died July 13, 1105.

**RASSES** (ras'ses), Judith ii. 23. The children of Rasses were a nation said to have been destroyed by Holofernes on his march to Judæa.

**RATHLIN** (rath'lin), a small island lying off the north coast of Antrim which had a bishop in the early times of the Irish Church. Other small islands on the Irish coast also had their bishops, and adjoining parishes are recorded as having bishops. Todd, in his life of St. Patrick, has recorded the fact that Bishop Etehen was ploughing when Columbkil visited him to receive ordination; and Reeves, in his "Antiquities of Down, Connor and Dromore," states that A. D. 1179 there was an Irish bishop who had no other revenue than the milk of three cows.

**RATHUMUS** (rath'u-mus), 1 Esd. ii. 16, a form of Rahum, Ezra iv. 8.

**RATIONALISM** (ra'sh'un-al-izm). This name has been used to designate a system which is considered to hold a middle place between pure deism and the rejection of a revelation on the one hand, and the orthodox view which has been generally in the Christian Church entertained respecting the facts contained in revelation and the doctrines connected with them on the other hand. The term "Neology" has also of late years been used in the same sense. It signifies a "new doctrine," and the essential characteristic of Neology lies in the fact that theologians endeavor to explain the miracles of the Old and New Testaments either by attributing them to the misconceptions of a people in a superstitious age, to perverted statements of natural laws or to the trick and cunning manipulation of men who aimed at making an impression on a credulous age. Having thus attempted to get rid of miracles, the next effort has been to get rid of all the fundamental doctrines which are peculiar to revelation, and thus reduce religion to a system of natural moral law. Germany has been the great fountain, or the headquarters, of this system, and the literature of German skeptical divines has made their views well known in other lands.

The German divines themselves speak of naturalism, rationalism and supernaturalism. The term *naturalism* arose first in the sixteenth century, and was spread in the seventeenth. It was understood to be the system of those who allowed nothing in religion except the natural, which man could shape out by his own strength, and consequently excluded all supernatural revelation.

*Rationalists* have been thus defined: "Those who are generally termed rationalists," says Dr. Bretschneider, "admit universally, in Christianity, a divine, benevolent and positive appointment for the good of mankind, and Jesus as a Messenger of divine Providence, believing that the true and everlasting word of God is contained in the Holy Scripture, and that by the same the welfare of mankind will be obtained and extended. But they deny therein a supernatural and miraculous working of God, and consider the object of Christianity to be that of introducing into the world such a religion as reason can comprehend; and they distinguish the essential from the unessential, and what is local and temporary from that which is universal and permanent in Christianity." There is, however, a third class of divines, who, in fact, differ very little from this, though very widely in profession. They affect to allow a re-

vealing operation of God, but establish on internal proofs rather than on miracles the divine nature of Christianity. They allow that revelation may contain much out of the power of reason to explain, but say that it should assert nothing contrary to reason, but rather what may be proved by it. *Supernaturalism* consists in general in the conviction that God has revealed himself supernaturally and immediately. The notion of a miracle cannot well be separated from such a revelation, whether it happens out of, on, or in men. What is revealed may belong to the order of nature, but an order higher and unknown to us, which we could never have known without miracles, and cannot bring under the laws of nature.

The difference between the naturalists and the rationalists is not quite so wide either as it would appear to be at first sight or as one of them assuredly wishes it to appear. For if I receive a system, be it of religion, of morals or of politics, only so far as it approves itself to my reason,

It is easy, then, to anticipate how, with such principles, the Biblical critics of Germany, distinguished as many of them have been for learning, would proceed to interpret the Scriptures. Many of the sacred books and parts of others have, of course, been rejected by them as spurious, the strongest external evidence being thought by them insufficient to prove the truth of what was determined to be contradictory to their reason; and the inspiration of the rest was understood in no higher sense, to use the language of one of their professors, than the expressions of Cicero as to the inspiration of the poets, or those of Quintilian respecting Plato. But where the supernatural and miraculous accounts were not rejected, they were, by many of the most eminent of these writers, explained away by a monstrous ingenuity which, on any other subject, and applied to any ancient classic or other writer, would provoke the most contemptuous ridicule. When Korah, Dathan and Abiram were swallowed up, Moses had previously "secretly

READING ABBEY, NEAR LONDON, ENGLAND.—See MONASTERIES.

whatever be the authority that presents it to me, it is idle to say that I receive the system out of any respect to that authority. I receive it *only* because my reason approves it; and I should, of course, do so if an authority of far inferior value were to present the system to me. This is what that division of rationalists which professes to receive Christianity, and at the same time to make reason the supreme arbiter in matters of faith, has done. Their system, in a word, is this: They assume certain general principles, which they maintain to be the necessary deductions of reason from an extended and unprejudiced contemplation of the natural and moral order of things, and to be in themselves immutable and universal. Consequently, anything which, on however good authority, may be advanced in apparent opposition to them, must either be rejected as unworthy of rational belief, or at least explained away till it is made to accord with the assumed principles; and the truth or falsehood of all doctrines proposed is to be decided according to their agreement or disagreement with those principles.

"undermined the earth." Jacob wrestled with the angel "in a dream," and a rheumatic pain in his thigh during sleep suggested the incident in his dream of the angel touching the sinew of his thigh. In like manner the miracle of feeding the five thousand in the desert is resolved into the opportune passing by of a caravan with provisions, of which the hungry multitude were allowed to partake, according to Eastern hospitality, and the apostles were merely employed in conveying it out in baskets. Christ's walking upon the sea is explained by his walking upon the seashore, and St. Peter's walking on the sea is resolved into swimming. The miracles of healing were the effect of fancy operating favorably upon the disorders, and Ananias and Sapphira died of a fright, with many other absurdities, half dreams and half blasphemies, and of which the above are given but as a specimen.

These principles of unbelief have, under various modifications, been propagated by means of systems of philosophy, new versions of the Scriptures, commentaries, introductions, works on Biblical

criticism and interpretation, grammars, lexicons, lectures, sermons, catechisms, tracts, reviews, newspapers, and, in short, through almost every possible vehicle of communication. Their advocates have been found in the professor at the university, the preacher in the pulpit, the village schoolmaster, and even the mother and the nursery-maid. Sometimes they have been propounded with all the gravity of a philosopher, and at other times taught with all the flippancy and levity of a jester who aimed at witticism in connection with spiritual things.

The vain conceit that the doctrines of religion were capable of philosophic demonstration, which obtained among the followers of Wolf, is considered as having hastened onward the progress of error, and the effect in Germany was speedily developed. By carrying demonstrative evidence beyond its own province, they had nurtured in their followers a vain confidence in human reason; and the next and still more fatal step was, that it was the province of human reason in an enlightened and intellectual age to perfect Christianity, which, it was contended, had hitherto existed in a

to connect the profits of the Christian profession with substantial and almost undisguised deism. Thus the chairs of theology and the very pulpits were turned into "the seats of the scornful;" and where doctrines were at all preached, they were too frequently of this daring and infidel character. It became even, at least, a negative good that the sermons delivered were often discourses on the best modes of cultivating corn and wine, and the preachers employed the Sabbath and the church in instructing their flocks how to choose the best kinds of potatoes, or to enforce upon them the benefits of vaccination. Undisguised infidelity has in no country treated the grand evidences of the truth of Christianity with greater contumely, or been more offensive in its attacks upon the prophets, or more ridiculous in its attempts to account on natural principles for the miracles. Extremes of every kind were produced, philosophic mysticism, pantheism and atheism.

At length, however, a powerful reaction has taken place. The high places of literature and influence are no longer exclusively held by men inimical to the truth as it is in Jesus, but are many of them occupied by individuals of acknowledged literary and scientific merit, who are bending all their energies to undeceive the public with respect to the unsatisfactory, untenable and self-contradictory theories of rationalism, falsely so called. A spirit of piety is rapidly spreading among those who are destined to be the future instructors of the people, the Scriptures and evangelical tracts are being extensively circulated, and many able periodicals have recently been set on foot under the editorial superintendence of men of orthodox principles and high literary attainments.

It has been justly observed that no men ever undertook to deny the divine origin of Christianity, or to explain away its

principal facts and doctrines, under circumstances so favorable for the experiment as those of the neologists of Germany. The hand of power, instead of being against them, was most frequently with them. They had possession of the seats of learning, commanded a vast band of journals which kept anything of the kind in the shape of orthodoxy entirely out of the market. They had all the advantages which facilities in literature could give; they had numbers and wealth and clamor on their side; they had, in a word, ample room and verge enough to work their will, if that will could have been effected. And yet, in spite of all that metaphysical and mythological researches could effect to get rid of the divine authority of the Bible, in spite of all that sophistry and ridicule could effect to introduce the misnamed religion of reason, it remains precisely where it was, and the religion of reason is being overthrown and rejected. The Bible has laughed its enemies and all their efforts to scorn. "The word of God shall stand for ever." As the system of rationalism was soon found to open the door in Germany for irreligion and profanity, and as in that land God soon raised up defenders of the faith once delivered to the saints, so in England and in parts of our own country to

which the neological spirit had spread a race of writers has been called forth to defend the cause of truth. No age of the Church has witnessed a more splendid display of analysis, of triumphant argument, than this controversy has called forth. It is characterized by its exhibition of the nature and value of testimony, of the character of natural law, of the certainty of miraculous interposition by the Creator and Ruler of the universe, who is before and above law, and who for moral uses has shown his presence and his power in the mode of his administration of the affairs of the universe, thus attesting that his servants who have made known his will have held a commission attested and sealed by his own hand.

**RAVEN** (rā'ven). The raven is first mentioned in Scripture as sent by Noah from the ark, to which it did not return, Gen. viii. 7. It was reckoned unclean by the Mosaic law, Lev. xi. 15. It is not, however, quite certain that the raven of Palestine is identical with our common species; and the expression of the Mosaic prohibition, "every raven after his kind," would seem to imply that a class rather than an individual species was meant. Ravens are said to have supplied Elijah with food when he was by the brook Cherith, 1 Ki. xvii. 4, 6. Various hypotheses have been devised to explain away this statement; but as Keil well observes, "whosoever acknowledges the living God will confide in his omnipotence that he can cause his servants to be nourished even by ravens, although . . . they are otherwise the most voracious of birds." Ravens are alluded to as illustrating God's kind providence in Job xxxviii. 41; Ps. cxlvii. 9; Luke xii. 24.

**RAVENS CROFT** (ra'venz-kroft), JOHN STARK, D.D., was born in 1772, near Blandford, Prince George county, Virginia. His parents were of Scottish ancestry. He was removed by his father to Scotland in his childhood, and after some time in a Scottish school he was removed to an academy in the North of England. He reached Virginia in 1789 to look after the property which his father had left behind him, and some time after he entered the College of William and Mary, intending to prepare for the business of a lawyer. After a visit to Scotland he returned to Virginia with an entire change of mind, which resulted in his diligent preparation for the ministry of the Protestant Episcopal Church. In 1816 he became a lay-reader. He was admitted as a deacon in 1817, and next year he was ordained as a priest or presbyter in the Episcopal Church. He was called to Norfolk and to Richmond; but believing that North Carolina was more destitute than Virginia, he decided on laboring in that State. At a convention held at Salisbury, in 1823, he was chosen bishop of North Carolina, and he took charge of the church at Raleigh with a view to receive pecuniary aid, which was not forthcoming owing to the low condition of the Church at that time in the State. When his health failed him, he retired from Raleigh and went to Williamsburg; but he gradually sunk, and passed away on the 5th of March, 1830. His published works consist of sermons and charges, which were published from time to time as they were delivered. He was an exceedingly energetic, earnest man, who labored with great faithfulness in a field which demanded a self-sacrificing spirit.

**RAYMOND** (ray'mund) VI., count of Toulouse, son of Raymond V., was born in 1156, and

succeeded his father in 1194. His reign is memorable for the terrible crusade against the Albigenses and for the heroic part he played as their defender. Charged with favoring the heretics, he was excommunicated by the legates who had been sent by Innocent III. into the South of France to preach and persecute. A crusade was threatened, one of the legates was assassinated, and Raymond was accused of the crime. He made his peace, however, with the pope, and obtained absolution. In 1209 the crusade was undertaken, and Raymond himself was compelled to join it. After the capture of Beziers and Carcassonne, and the slaughter or expulsion of their inhabitants, the chief command of the crusading army was entrusted to Simon de Montfort, earl of Leicester. Raymond was required to deliver up, under pain of excommunication, all the heretics of Toulouse, but he went to Rome, and appealed in January, 1210, to the pope, who acquitted him of the charge of murder and showed him great favor. Continuing to protect the Albigenses, he was again excommunicated by the legates at the Council of Arles, in 1211. Raymond afterward marched against Castelnaudary and Muret, but at both places was defeated, and his power was broken for a long time. By the Council of the Lateran, in 1215, the county of Toulouse and all conquests of the crusaders were assigned to Simon de Montfort, and Raymond became a refugee at the court of Aragon. Two years later the Toulousans rose in arms against the cruelty of their new master, and Raymond, aided by his brave son, recovered almost the whole of his States. Raymond was one of the ablest rulers of his time, and his court the most brilliant. He was the patron and friend of the troubadours, the welcome ally or the formidable foe of the greatest sovereigns, and had the glory of successfully contending for his independence against the most powerful combinations of ecclesiastical and secular forces. He died in 1222. His son, Raymond VII., who succeeded him, was the last count of Toulouse.

**RAYNELM** (ray'nelm), who became bishop of Hereford in 1107, is considered entitled to the credit of having finished the cathedral, though important additions and alterations have been made since his time and that of Lozing. The architectural taste of Raynelm and Lozing is undoubted, for although their cathedral is not so extensive as Lincoln, nor so ornate as York, it displays great purity, and the effect of the interior is exceedingly fine and impressive.

**RAZIS** (raz'is), 2 Macc. xiv. 37-46, a Jewish elder who in the Maccabean wars committed suicide—an act which the writer of the history approves. Such approval is one reason why the book cannot be inspired.

**RAZOR** (ra'zor), Num. vi. 5. See **BEARD**, **HAIR**. The word is also used figuratively with obvious meaning, Ps. lii. 2.

**READ** (reed), THOMAS, D.D., was born in 1746, within the limits of Chester county, Penn-

sylvania, but the place was then reckoned to be in Maryland. His parents were from the North of Ireland, and they trained him in the faith of the Presbyterian Church. He was educated in Philadelphia, and in 1768 was licensed to preach. In 1772 he was installed at Drawyer's Creek, in Delaware, and in 1793 he was removed to the Second Presbyterian Church in Wilmington, Delaware. He rendered very effective service to General Washington before the battle of Brandywine. He held his charge until 1817, but after his resignation he labored with great faithfulness until an accident laid him aside from active life, in 1821. He died in 1823, after a life of earnest zeal and diligence in the service of his heavenly Master.

**REAIA** (re-a'ya), a descendant of Reuben, 1 Chr. v. 5. This name is identical with—

**REIAIAH** (re-a'ya). 1. One of Judah's posterity, 1 Chr. iv. 2. Possibly he may be the same

The most distinguished champions of realism after Anselm were William of Champeaux (A. D. 1070-1121), the opponent of Abelard, and St. Thomas Aquinas (A. D. 1225-1274), the latter, however, holding the realist opinion, in the modified form, that universals have a real existence prior to the individuals to which they relate, through their antecedent existence in the divine mind. The schoolmen in general held realist opinions, ranging between this theory and the extreme form of them held by Anselm. Wiccliffe, also, was on the same side, although the freedom of his theology was more in sympathy with the Nominalist school.

The general tone of realism is that of submission to authority and dogma, especially regarding that truth as most certain which is revealed by the All-Knowing and All-True; consequently regarding revelation as the true foundation of belief, and belief as the entrance-gate to a wide domain of knowledge on which the mind would not otherwise enter. See **SCHOOLMEN**.

REAPING IN PALESTINE.

with Haroch, 1 Chr. ii. 52. 2. One whose children, Nethinim, returned with Zerubbabel, Ezra ii. 47.

**REALISTS** (re'al-ists), a school of mediæval theologians who adopted the doctrine attributed by Aristotle to Plato, that "universals" have an existence prior to, and independent of, the individual objects to which they relate. This theory was brought into prominence by Johannes Scotus Erigena (A. D. 805-877), and was generally held by philosophical theologians until the rise of Nominalism in the eleventh century. Roscellin, the founder of the latter school, was vigorously opposed by Anselm (A. D. 1033-1109), who looked on the application of Nominalist theories to the "doctrine of the Trinity as involving the heresy of Tritheism." Anselm also maintained that the realistic doctrine was the only one reconcilable with the incarnation, for the Deity could not have assumed humanity unless the latter had a real objective existence distinguished from that of individual men, a theory which he set forth in his treatise, entitled "Cus Deus Homo?"—i. e., "Why did God become man?"

**REAP, REAPING.** See **AGRICULTURE**. Some kinds of corn were probably reaped by being plucked up by the roots.

**REBA** (re'bah), one of the kings or chiefs of the Midianites slain by the Israelites, Num. xxxi. 8.

**REBATEMENTS** (re-bāt'ments), 1 Ki. vi. 6, margin, explained as "narrowings;" "narrowed rests" in the text—i. e., ledges, reductions being made in the thickness of the walls.

**REBEKAH**, or **REBECCA** (re-bek'ah), the daughter of Bethuel and sister of Laban. She was a woman of personal attractions and became the wife of Isaac, to whom, after twenty years of barrenness, she bore Esau and Jacob, Gen. xxii. 23. Of her sons, Jacob was Rebekah's favorite; and she persuaded him to obtain his father's blessing by fraud, Gen. xxvi. 7, 8, 35. In consequence Jacob had to flee from his brother's revenge; and it is probable that Rebekah saw her best-loved son no more, Gen. xxviii. 4.

**RECEIPT OF CUSTOM.** See **PUBLICAN**.

THE RAVEN.

low and degraded state; and to perfect that system of which the elements only were contained in the Scriptures. All restraint was broken by this principle. Philosophy, good and bad, was left to build up these "elements" according to its own views; and as, after all, many of these elements were found to be too untractable and too rudely shaped to accord with the plans of these manifold constructions, formed according to every "pattern," except that "in the mount;" when the stone could not be squared and framed by any art which these builders possessed, it was "rejected."

Semler appears to have been the author of that famous theory of accommodation, which, in the hands of his followers, became "the most formidable weapon ever devised for the destruction of Christianity." See **ACCOMMODATION**. As far as Germany is concerned, this language is not too strong; and we may add that it was the most impudent theory ever advocated by men professing still to be Christians, and one the avowal of which can scarcely be accounted for, except on the ground that as, because of their interests, it was not convenient for these teachers of theology and ministers of the German Churches to disavow Christianity altogether, it was devised and maintained in order

**RECESSED** (re'sest) **ARCH**, an arch which recedes behind another in a door or window

**RECESSIONAL** (re-ses'sh'un-al) **HYMN**, a hymn sung in a procession returning from the choir to the sacristy, as a processional hymn is one sung on the entrance to the church.

**RECHAB** (re'kab). 1. One of the captains who assassinated Ish-bosheth, 2 Sam. iv. 2-12. 2. 2 Ki. x. 15, 23. See **RECHABITES**. 3. The father of one who helped to repair the wall of Jerusalem, Neh. iii. 14.

**RECHABITES** (re'kab-ites), a Kenite tribe

**RECLUSORIUM** (re-clu-so're-um), or **ANCHORHOLD** (an'kor-hold), is the name of a cell or small apartment attached to the chapel of a monastery, or to the wall of a church, in which a recluse or hermit might reside. According to Bader, an anchorhold was twelve feet square, with three windows, one toward the choir so as to enable the anchorite to receive the eucharist, one by which he received his food and one to admit light, which was filled up with glass or horn. Remains of these cells may yet be seen in Laindon and Rettenden, in Essex, and elsewhere in many places in England.

**RECONCILIATION** (rek-on-sil-e-a'shun), Lev. viii. 15; Heb. ii. 17. See **ATONEMENT**.

**RECORDER** (re-kord'er), a great officer mentioned after the establishment of royalty in Israel, 2 Sam. viii. 16. He must have been a trusted counselor, and it was his special duty, as the king's historiographer or annalist, to record or to superintend and preserve the records of the events of the reign.

**RECTOR** (rek'tor), the minister of a parish, the governor of a college, and among the Jesuits the superior of a college or seminary. In the Church of England a rector differs from a vicar because he has a right to all the ecclesiastical dues in his parish, whereas the vicar enjoys only a part, as a layman who has been called an "appropriator" has seized on the best part of them.

**RECTORY** (rek'to-re). 1. The official house of the rector. 2. The living assigned to a person who discharges the spiritual duties of a parish, and who enjoys the tithes and dues provided for his support.

**RECUSANTS** (re-ken'zants), a term which came into use in the reign of Queen Elizabeth, and which was applied to Puritans, Romanists and others who refused to attend the services of the Church of England.

**RED**. See **COLORS**.

**REDEEM, REDEEMER, REDEMPTION**. See **ATONEMENT**.

**RED HEIFER**. See **HEIFER**.

**RED-LETTER DAYS**, a title of the greater feasts of the Church, marked in the calendar with red letters.

**REDMAN** (red'man), who rose to be bishop of St. Asaph in the fifteenth century, did much to perfect his cathedral, which had been burned by Owen Glendower in the year 1404. It lay in ruin for nearly eighty years, until Redman began to repair it. He raised the walls to the present height, put on a new roof, erected the east window and the stalls of the choir, and finished much of the internal decorations, making this one of the most attractive of the larger churches of the principality.

**RED SEA**. See **SEA, RED**.

**REDWALD** (red'wald) was the grandson of Uffa, who was the eighth in descent from Woden, and who founded the kingdom of East Anglia about 575. Redwald was persuaded by Ethelbert, king of Kent, to embrace Christianity, and he was baptized A. D. 599, and shortly thereafter he is said to have founded a church at Ely, but it is certain that he did erect one at Rendlesham, in Suffolk. It would appear that after his conversion he relapsed into idolatry, at the instigation of his wife and other advisers. He was evidently but poorly instructed, for in the same structure he had erected an altar to Christ and another to heathen idols. He died A. D. 624, and was succeeded by his son Eorpwald, who was led to embrace Christianity by Edwin, king of Northumberland, and thus the way was rapidly prepared for the permanent conversion of the East Angles.

**REED**. The Hebrew word *kaneh* is applied to a reed or cane growing in marshy ground, 1 Ki. xiv. 15. Such reeds or canes, probably, are those which at the present day are abundant at the upper part of the lake Huleh and on the banks of the Jordan. Dr. Thomson describes the marsh at the extremity of the Huleh as "an impenetrable jungle of ordinary cane, mingled with that peculiar kind called babee, from whose stems the Arabs make coarse mats for the walls and roofs of their huts." A reed was used for writing, 3 John 13—in our version "pen;" just as writing-reeds are still common in the East. A "bruised reed" is figuratively put for a weak and humbled penitent; such a feeble one the merciful Saviour will not break or crush, Matt. xii. 20. "A reed shaken with the wind," Matt. xi. 7, probably alludes to the reeds on the banks of the Jordan, where John had ministered. The paper-reed, or *Papyrus antiquorum*, was formerly abundant in Egypt. Its uses were various. Boats were made of it; the lower part was eaten, stewed in a hot pan, while from the soft cellular substance of the stem the papyrus was made. This plant is not now found in Egypt, but it exists in Syria, by the lake of Tiberias and elsewhere.

**REED, ANDREW, D.D.**, nonconformist divine and a distinguished philanthropist, was born at London, in 1787. After studying four years at Hackney College, he became pastor of the congregation at New Road Chapel, St. George's in the East, in 1811. This post he filled for fifty years, removing in the interval, however, with the congregation to Wycliffe Chapel, in the same neighborhood. In 1819 he created some excitement in the religious world by the publication anonymously of a novel, entitled "No Fiction," which had a great run, partly, perhaps, because of the spice of scandal in it. Dr. Reed was sent in 1834

on a visit to the American churches, as one of a deputation from the Congregational Union of England and Wales. But the name of Andrew Reed will be chiefly remembered in connection with his philanthropic labors. He early conceived the project of an orphan asylum, and in 1813 established the London Orphan Asylum. Soon after, he founded the Infant Orphan Asylum, at Wandstead, to which he gave, besides money, his services for sixteen years. He projected, in 1844, the Asylum for Fatherless Children, established at Coulsden, and to which he contributed both money and his services for eighteen years. The care of idiots next occupied his attention, and after much study, inquiry, correspondence and foreign travel he founded, in 1847, the Asylum for Idiots, at Earlswood, to which he also contributed largely. His last great service of this kind to the world was the establishment, in 1854, of the Hospital for Incurables. Dr. Reed was not only a hearty worker and an able administrator, but he was very successful in soliciting the co-operation of the rich and noble. He died at Hackney, February 25, 1862.

**REED, HENRY, LL.D.**, was born in 1808, at Philadelphia, and educated at the university of Pennsylvania. He was admitted to the bar in 1829, and in 1831 he was made assistant professor of English literature in that university. Shortly afterward he was assigned to the chair of moral philosophy; and in 1835, because of his fine taste and acknowledged qualifications, he was appointed professor of rhetoric and English literature. He was lost in the sinking of the steamship Arctic, A. D. 1854, on his return voyage from England. He was very industrious as an author. Among the chief of his works may be mentioned his Lectures on English Literature, editions of Reid's Dictionary of the English Language, of Graham's English Synonyms, of Arnold's Lectures on Modern History, Lord Mahon's History of England, and of the Poetical Works of Gray. After his death his Lectures on the British Poets were published, and his Prelections on English History and on Shakespeare.

**REED, HOLLIS**, was born in 1802, at Newfane, Vermont, and educated at Williams College. After a course of theology at Princeton, he was ordained at Boston, and in 1830 he went as a missionary to India. On his return he settled, in 1838, at Derby, Connecticut, whence he removed, in 1845, to New Preston. He is the author of "The Christian Brahmin," of "Reed and Ramsay's Journal in India," "God in History," "Memoirs and Sermons of W. J. Armstrong, D.D.," "India and People, Ancient and Modern," "The Palace of the Great King," "Commerce and Christianity," "The Coming Crisis of the World," and a work on the negro race.

**REED, JOHN, D.D.**, was born in 1751, at Framingham, Massachusetts. He served for a short time as a chaplain in the naval service, and in 1780 he was settled at West Bridgewater, Massachusetts, where he remained for fifty-one years. It is worthy of record that his predecessors, Messrs. Perkins and Keith, continued in West Bridgewater for the unwonted period of one hundred and sixteen years. Dr. Reed adopted Unitarian views. He was celebrated for the metaphysical character of his mind and his ability in controversy, with a decidedly legal cast in his handling

of disputed subjects; and on one occasion his view of a controverted case was accepted by the Supreme Court of Massachusetts. He published sermons and a "Treatise on Baptism." He died in 1831, at West Bridgewater.

**REED, JOHN, D.D.**, was born in 1777, at North Kingston, Rhode Island, and educated at Union College, where he graduated in 1805. He became rector of Christ Church of Poughkeepsie, and from a small charge he raised it to be one of marked eminence and efficiency. He was a fine classical scholar, but in the ministry he devoted all his energy to the duties of his sacred office. He died in 1845, in the sixty-eighth year of his age.

**REED, NELSON**, was born in 1751, in Anne Arundel county, Maryland. He entered the ministry in the Methodist Church, and his name first appears among the traveling preachers in 1779. The sphere of his labors was very extensive, embracing Maryland and Virginia. In 1807, 1808, 1809 and 1810 he presided over the Baltimore district, and from 1811 until 1814 he presided over the Georgetown district. After 1815 he again presided for four years over the Baltimore district; but in 1820 he was placed on the superannuated list. He lived until 1840, when he died at Baltimore, amid the sorrow of his friends and the members of the Church, by whom he was extensively known and valued as a pious, earnest and most laborious man.

**REELIAH** (re-el-la'-yah), one who returned with Zerubbabel, Ezra ii. 2. He is the same with Raamah, Neh. vii. 7.

**REELIUS** (re-el'e-us), 1 Esd. v. 28, one of those that returned to Jerusalem.

**REES** (reez), **ABRAHAM, D.D.**, was born in 1743, at Llanbrynmair, in Montgomeryshire, Wales. Being a dissenter, he was educated under the Rev. Dr. Jennings instead of being sent to one of the universities; and in 1768 he was settled as pastor at St. Thomas, in Southwark. From 1783 until 1823 he was minister at the Old Jewry, London. In theology he was a Unitarian, but his fame arises from his high literary standing. He edited the great "Cyclopædia" which is connected with his name, which extended to forty-seven volumes, and which when completed cost subscribers the large sum of eighty-five pounds sterling. Six volumes are given to plates alone; and although much of this great undertaking is now obsolete, still there are many articles in it which were written by men of great eminence, and they still continue to be of rare value. The "Cyclopædia" can now be had for a small sum, and it deserves a place in all public libraries. He published four series of sermons, which display his characteristic theology. He died in 1825.

**REESAIAS** (re-esa'yas), 1 Esd. v. 8, the same as Reelaiah.

**REESE** (rees), **THOMAS, D.D.**, was born in 1742, in Pennsylvania, and educated at Princeton.

He was ordained in 1773, and settled at Salem, in South Carolina. In 1793 he took charge of two churches in the Pendleton district. Dr. Reese was quite eminent as a preacher and a scholar. His chief published work was an "Essay on the Influence of Religion on Civil Society." Several of his sermons were published. He died at Charleston, South Carolina, A. D. 1796.

**REFECTORY** (re-fek'to-re), the dining-hall in a college or convent. In large convents there were four: 1. Summer; 2. Winter; 3. That for conversation; and 4. The misericord, for eating flesh meat.

**REFINE** (re-fine'), **REFINER** (re-fi'ner). Metals were smelted in a furnace to purify and separate the richer substance from that which was inferior and drossy, as silver from lead, Isa. i. 25; Ezek. xxii. 18-22, a crucible or melting-pot and bellows being necessary. The process of refining is figuratively employed to indicate God's method of purifying his people. He casts them into the furnace; he chastens and corrects; but it is to purge away the dross of evil, to bring them deeply penitent to Him from whom they have wandered.

RECLUSORIUM, OR ANCHORHOLD, AT RETTENDEN, ESSEX, ENGLAND.—See RECLUSORIUM AND ANCHORHOLD.

The effect is very blessed: their trials are sanctified for their eventual good, Ps. lxxvi. 10.

**REFORMATION** (ref-or-ma'shun), in general, an act of reforming or correcting an error or abuse, discipline, or the like. By way of eminence, the word is used for that great alteration and reformation in the corrupted system of Christianity begun by Luther in the year 1517.

For several ages the condition of the Church in all nations on the Continent of Europe had been such as to lead pious and earnest-minded men to attempt a reformation. The clergy had become haughty, luxurious, and in many instances it was acknowledged that they had even become profligate. The religious houses had changed their character, and the demand for their suppression or for a decided change had become widespread. The court of Rome had become not only ambitious and political, but so corrupt that leading men who had no desire to break with the Church had long sighed for purer times. In Italy, in France, in Germany and in Britain, among the clergy and men of learning, there was an earnest protest made, and appeals were urged from time to time with a view to lead the authorities at the papal court to use decided measures in removing glaring abuses which ex-

REBEKAH AND ELIEZER AT THE WELL.—See REBEKAH.

descended from Rechab. Jonadab, one of their chiefs—probably on some observed occasion of contamination by intercourse with the luxurious and idolatrous inhabitants of cities—laid an injunction on his posterity to drink no wine, to build no houses, but to dwell in tents. This injunction they obeyed fully for three hundred years, but upon the Chaldean invasion they were forced to quit the open country and live in Jerusalem, Jer. xxxv. Afterward they probably withdrew into the desert. For their obedience a promise was given them that their family should never be extinct. And accordingly at the present day there is an Arabian tribe who claim a descent from Rechab, and profess a modified Judaism.

**RECHAH** (re'kah), a place, as it would seem, in Judah, 1 Chr. iv. 12; but the notice is very obscure.

isted on all hands. These efforts were resisted, and their promoters were either burned or their influence proved ineffective, and matters steadily became still worse, until at length in Germany a movement began which had not been anticipated, and the action of an obscure Augustinian monk not only affected his native land, but even changed the religious condition of several parts of Christendom. The history of this great movement would necessarily include a detail of the public affairs of Great Britain and of the leading European nations for several centuries. Such an article, however, as this work should present, cannot extend beyond a condensed view of the leading events which took place in those lands which

the universities of Cologne and Louvain. Notwithstanding this, the magistrates of Zurich approved of his proceedings; and that whole canton, together with those of Berne, Basle and Schaffhausen, embraced his opinions.

In Germany, Luther continued to make great advances, without being in the least intimidated by the ecclesiastical censures which were thundered against him from all quarters, he being continually protected by the German princes, from either religious or political motives, so that his adversaries could not accomplish his destruction, as they had done that of others. Melancthon, Carlstadt and other men of eminence also greatly forwarded the work of Luther; and

thus intimidated. He published his animadversions on both with as much acrimony as if he had been refuting the meanest adversary; and a controversy managed by such illustrious antagonists drew a general attention, and the Reformers daily gained new converts both in France and England.

But while the efforts of Luther were thus everywhere crowned with success, the divisions began to prevail which have since so much agitated the Reformed churches. The first dispute was between Luther and Zuinglius concerning the manner in which the body and blood of Christ were present in the eucharist. Both parties maintained their tenets with the utmost obstinacy, and by their divisions first gave their adversaries an argument against them which to this day the Catholics urge with great force; namely, that the Protestants are so divided that it is impossible to know what are right or wrong, and that there cannot be a stronger proof than these divisions that the whole doctrine is false. To these intestine divisions were added the horrors of a civil war, occasioned by oppression on the one hand and enthusiasm on the other.

These proceedings, however, were checked. Luther and Melancthon were ordered by the elector of Saxony to draw up a body of laws relating to the form of ecclesiastical government, the method of public worship, etc., which was to be proclaimed by heralds throughout his dominions. He, with Melancthon, had translated part of the New Testament in 1522, on the reading of which the people were astonished to find how different the laws of Christ were to those which had been imposed by the pope, and to which they had been subject. The princes and the people saw that Luther's opinions were founded on truth. They openly renounced the papal supremacy, and the happy morn of the Reformation was welcomed by those who had long sat in superstitious darkness.

This open resolution so exasperated the patrons of popery that they intended to make war on the Lutherans, who prepared for defence. In 1526 a diet was assembled at Spire, when the emperor's ambassadors were desired to use their utmost endeavors to suppress all disputes about religion, and to insist upon the rigorous execution of the sentence which had been pronounced against Luther at Worms. But this opinion was opposed, and the diet proved favorable to the Reformation. But the tranquillity which they in consequence enjoyed did not last long. In 1529 a new diet was formed, and the power which had been granted to princes of managing ecclesiastical affairs till the meeting of a general council was now revoked, and every change declared unlawful that should be introduced into the doctrine, discipline or worship of the established religion, before the determination

MANSLAYER ESCAPING INTO A CITY OF REFUGE.—See REFUGE, CITIES OF.

had lain subject to the supremacy of Rome, but by the influence of the awakening of the sixteenth century had asserted for themselves a religious liberty and a right to mould their faith and their religious ordinances according to their views of the teaching of God's word, instead of a blind submission to the unquestioned dictates of the Romish see.

The Reformation began in Saxony, but was not long confined to that province. In 1520 the Franciscan friars who had the care of promulgating indulgences in Switzerland were opposed by Zuinglius, a man not inferior in understanding and knowledge to Luther himself. He proceeded with the greatest vigor, even at the very beginning, to overturn the whole fabric of popery, but his opinions were declared erroneous by

in all probability the popish hierarchy would have soon come to an end, in the northern parts of Europe at least, had not the emperor Charles V. given a severe check to the progress of reformation in Germany.

During the confinement of Luther in a castle near Warburg, the Reformation advanced rapidly, almost every city in Saxony embracing the Lutheran opinions. At this time an alteration in the established forms of worship was first ventured upon at Wittenberg, by abolishing the celebration of private masses, and by giving the cup, as well as the bread, to the laity in the Lord's Supper. In a short time, however, the new opinions were condemned by the university of Paris, and a refutation of them was attempted by Henry VIII. of England. But Luther was not to be

of the approaching council was known. This decree was considered as iniquitous and intolerable by several members of the diet; and when they found that all their arguments and remonstrances were in vain, they entered a solemn protest against the decree on the 19th of April, and appealed to the emperor and a future council. Hence arose the denomination of *Protestants*, which from that time has been given to those who separate from the Church of Rome.

Charles V. was in Italy, to whom the dissenting princes sent ambassadors to lay their grievances before him; but they met with no encouraging reception from him. The pope and the emperor were in close union at this time, and they had interviews upon the business. The pope thought the emperor to be too clement, and alleged that it was his duty to execute vengeance upon the heretical faction. To this, however, the emperor paid no regard, looking upon it as unjust to condemn unheard a set of men who had always approved themselves good citizens. The emperor, therefore, set out for Germany, having already appointed a diet of the empire to be held at Augsburg, where he arrived, and found there a full assembly of the members of the diet. Here the gentle and pacific Melancthon had been ordered to draw up a confession of their faith, which he did, and expressed his sentiments and doctrine with the greatest elegance and perspicuity; and thus came forth to view the famous Confession of Augsburg.

This was attempted to be refuted by the divines of the Church of Rome, and a controversy took place which the emperor endeavored to reconcile, but without success. The votaries of the Church of Rome, therefore, had recourse to the powerful arguments of imperial edicts and the force of the secular arm; and on the 19th of November a decree was issued by the emperor's orders every way injurious to the Reformers. Upon which they assembled at Smalcald, where they concluded a league of mutual defence against all aggressors, by which they formed the Protestant states into one body, and resolved to apply to the kings of France and England to implore them to patronize their new confederacy. The king of France, being the avowed rival of the emperor, determined secretly to cherish these sparks of political discord, and the king of England, highly incensed against Charles, in compliance to whom the pope had long retarded, and now openly opposed, his long-solicited divorce, was equally disposed to strengthen a league which might be rendered formidable to the emperor. Being, however, so taken up with the scheme of divorce and of abolishing the papal jurisdiction in England, he had but little leisure to attend to them. Meanwhile, Charles was convinced that it was not a time to extirpate heresy by violence, and at last terms of pacification were agreed upon at Nuremberg, and ratified solemnly in the diet at Ratisbon, and affairs so ordered by divine Providence that the Protestants obtained terms which amounted almost to a toleration of their religion.

Soon after the conclusion of the peace at Nuremberg died John, elector of Saxony, who was succeeded by his son, John Frederick, a prince of invincible fortitude and magnanimity, but whose reign was little better than one continued train of disappointments and calamities. The religious truce, however, gave new vigor to the Reformation. Those who had hitherto been only secret enemies to the Roman pontiff now publicly threw off his yoke, and various cities and provinces of Germany enlisted themselves under the religious

standards of Luther. On the other hand, as the emperor had now no other hope of terminating the religious disputes but by the meeting of a general council, he repeated his requests to the pope for that purpose. The pontiff (Clement VII.), whom the history of past councils filled with the greatest uneasiness, endeavored to retard what he could not with decency refuse. At last, in 1533, he made a proposal, by his legate, to assemble a council at Mantua, Placentia or Bologna; but the Protestants refused their consent to the nomination of an Italian council, and insisted that a controversy which had its rise in the heart of Germany should be determined within the limits of the empire. The pope, by his usual artifices, eluded the performance of his own promise, and in 1534 was cut off by death, in the midst of his stratagem. His successor, Paul III., seemed to show less reluctance to the assembling a general council, and in the year 1535 expressed his inclination to convoke one at Mantua; and in the year following

commodation were proposed both by the emperor and the Protestants; but by the artifices of the Church of Rome all of them came to nothing. In 1541 the emperor appointed a meeting at Worms on the subject of religion, between persons of piety and learning, chosen from the contending parties. This conference, however, was for certain reasons removed to the diet that was to be held at Ratisbon the same year, and in which the principal subject of deliberation was a memorial presented by a person unknown, containing a project of peace. But the conference produced no other effect than a mutual agreement of the contending parties to refer their matters to a general council, or, if the meeting of such a council should be prevented, to the next German diet.

At length the pope ordered his legate to declare to the Diet of Spire, assembled in 1542, that he would, according to the promise he had already made, assemble a general council, and that Trent should be the place of its meeting, if the diet had

MAMERTINE PRISON AT ROME.—See RELIGIOUS LIBERTY.

actually sent circular letters for that purpose through all the states and kingdoms under his jurisdiction. This council was summoned by a bull issued on the second day of June, 1536, to meet at Mantua the following year; but several obstacles prevented its meeting. On the other hand, the Protestants were firmly persuaded that, as the council was assembled in Italy and by the authority of the pope alone, the latter must have had an undue influence in that assembly; of consequence, that all things must have been carried by the votaries of Rome. For this reason they assembled at Smalcald in the year 1537, where they solemnly protested against this partial and corrupt council, and at the same time had a new summary of their doctrine drawn up by Luther, in order to present it to the assembled bishops if it should be required of them. This summary, which had the title of "The Articles of Smalcald," is commonly joined with the creeds and confessions of the Lutheran Church.

After the meeting of the general council in Mantua was thus prevented, many schemes of ac-

no objection to that city. Ferdinand and the princes who adhered to the cause of the pope gave their consent to this proposal; but it was vehemently objected to by the Protestants both because the council was summoned by the authority of the pope only, and also because the place was within the jurisdiction of the pope; whereas they desired a free council which should not be biased by the dictates nor awed by the proximity of the pontiff. But this protestation produced no effect. Paul III. persisted in his purpose, and issued his circular letters for the convocation of the council, with the approbation of the emperor. In justice to this pontiff, however, it must be observed that he showed himself not to be averse to every reformation. He appointed four cardinals and three other persons eminent for their learning to draw up a plan for the reformation of the Church in general, and of the Church of Rome in particular. The reformation proposed in this plan was, indeed, extremely superficial and partial, yet it contained some particulars which could scarcely have been expected from those who composed it.

All this time the emperor had been laboring to persuade the Protestants to consent to the meeting of the council at Trent; but when he found them fixed in their opposition to this measure, he began to listen to the sanguinary measures of the pope, and resolved to terminate the dispute by force of arms. The elector of Saxony and landgrave of Hesse, who were the chief supporters of the Protestant cause, upon this took proper measures to prevent their being surprised and overwhelmed by a superior force; but before the horrors of war commenced the great Reformer Luther died in peace at Ayselben, the place of his nativity, in 1546.

The emperor and the pope had mutually re-

Protestants, was persuaded to throw himself on the mercy of the emperor and to implore his pardon. To this he consented, relying on the promise of Charles for obtaining forgiveness and being restored to liberty; but notwithstanding these expectations, he was unjustly detained prisoner by a scandalous violation of the most solemn convention.

The affairs of the Protestants now seemed to be desperate. In the Diet of Augsburg, which was soon after called, the emperor required the Protestants to leave the decision of these religious disputes to the wisdom of the council which was to meet at Trent. The greatest part of the members consented to this proposal, being convinced by the powerful argument of an imperial army, which

pope, and John Agricola, a native of Ayselben, to draw up a formulary which might serve as a rule of faith and worship till the council should be assembled; but as this was only a temporary expedient, and had not the force of a permanent or perpetual institution, it thence obtained the name of the *Interim*.

This project of Charles was formed partly with a design to vent his resentment against the pope and partly to answer other political purposes. It contained all the essential doctrines of the Church of Rome, though considerably softened by the artful terms which were employed, and which were quite different from those employed before and after this period by the Council of Trent. There was even an affected ambiguity in many of the expressions which made them susceptible of different senses and applicable to the sentiments of both communions. The consequence of all this was that the imperial creed was reprobated by both parties. See *INTERIM*. In the year 1542 the pope (Paul III.) died, and was succeeded by Julius III., who, at the repeated solicitations of the emperor, consented to the reassembling of a Council of Trent. A diet was again held at Augsburg, under the cannon of an imperial army, and Charles laid the matter before the princes of the empire. Most of those present gave their consent to it, and amongst the rest Maurice, elector of Saxony, who consented on the following conditions: 1. That the points of doctrine which had already been decided there should be re-examined. 2. That this examination should be made in the presence of the Protestant divines. 3. That the Saxon Protestants should have a liberty of voting as well as of deliberating in the council. 4. That the pope should not pretend to preside in the assembly, either in person or by his legates. This declaration of Maurice was read in the diet, and his deputies insisted upon its being entered into the registers, which the archbishop of Mentz obstinately refused. The diet was concluded in 1551; and at its breaking up the emperor desired the assembled princes and states to prepare all things for the approaching council, and promised to use his utmost endeavors to procure moderation and harmony, impartiality and charity, in the transactions of that assembly.

On the breaking up of the diet the Protestants took such steps as they thought most proper for their own safety. The Saxons employed Melancthon, and the Wirtembergers Brengius, to draw up confessions of faith to be laid before the new council. The Saxon divines, however, proceeded no farther than Nuremberg, having received secret orders from Maurice to stop there, for the elector, perceiving that Charles had formed designs against the liberties of the German princes, resolved to take the most effectual measures for crushing his ambition at once. He therefore entered with the utmost secrecy and expedition into an alliance with the king of France and several of the German princes for the security of the rights and liberties of the empire; after which, assembling a powerful army, in 1552, he marched against the emperor, who lay with a handful of troops at Inspruck, and expected no such thing. By this sudden and unforeseen accident, Charles was so much dispirited that he was willing to make peace almost on any terms. The consequence of this was that he concluded a treaty at Passau which by the Protestants is considered as the basis of their religious liberty. By the first three articles of this treaty it was agreed that Maurice and the confederates should lay down their arms, and lend

was at hand to dispel the darkness from the eyes of such as might otherwise have been blind to the force of Charles' reasoning. However, this general submission did not produce the effect which was expected from it. A plague which broke out, or was said to do so, in the city, caused the greatest part of the bishops to retire to Bologna, by which means the council was in effect dissolved; nor could all the entreaties and remonstrances of the emperor prevail upon the pope to reassemble it without delay. During this interval, therefore, the emperor judged it necessary to fall upon some method of accommodating the religious differences and maintaining peace until the council so long expected should be finally obtained. With this view he ordered Julius Peluginus, bishop of Naumberg, Michael Sidonius, a creature of the

their troops to Ferdinand to assist him against the Turks, and that the landgrave of Hesse should be set at liberty. By the fourth it was agreed that the rule of faith called the *Interim* should be considered as null and void; that the contending parties should enjoy the free and undisturbed exercise of their religion until a diet should be assembled to determine amicably the present disputes (which diet was to meet in the space of six months); and that this religious liberty should continue always, in case it should be found impossible to come to an uniformity in doctrine and worship. It was also determined that all those who had suffered banishment or any other calamity, on account of their having been concerned in the league or war of Smalcald, should be reinstated in their privileges, possessions and employments; that the imperial chamber at Spire should be open to the Protestants as well as to the Catholics; and that there should always be a certain number of Lutherans in that high court. To this peace, Albert, marquis of Brandenburg, refused to subscribe, and continued the war against the Roman Catholics, committing such ravages in the empire that a confederacy was at last formed against him. At the head of this confederacy was Maurice, elector of Saxony, who died of a wound he received in a battle fought on the occasion in 1553.

The assembly of the diet promised by Charles was prevented by various accidents; however, it met at Augsburg in 1555, where it was opened by Ferdinand in the name of the emperor, and terminated those deplorable calamities which had so long desolated the empire. After various debates, the following acts were passed, on the 25th of September: That the Protestants who followed the Confession of Augsburg should be for the future considered as entirely free from the jurisdiction of the Roman pontiff, and from the authority and superintendence of the bishops; that they were left at perfect liberty to enact laws for themselves relating to their religious sentiments, discipline and worship; that all the inhabitants of the German empire should be allowed to judge for themselves in religious matters, and to join themselves to that Church whose doctrine and worship they thought the most pure and consonant to the spirit of true Christianity; and that all those who should injure or prosecute any person under religious pretences and on account of his opinions should be declared and proceeded against as public enemies of the empire, invaders of its liberty and disturbers of its peace.

Thus was the Reformation established in many parts of the German empire, where it continues to this day; nor have the efforts of the popish powers at any time been able to suppress it, or even to prevent its gaining ground. It was not, however, in Germany alone that a reformation of religion took place. Almost all the kingdoms of Europe began to open their eyes to the truth about the same time. The reformed religion was propagated in Sweden, soon after Luther's rupture with the Church of Rome, by one of his disciples, named *Olaus Patri*. The zealous efforts of this missionary were seconded by Gustavus Vasa, whom the Swedes had raised to the throne in the place of Christiern, king of Denmark, whose horrid barbarity lost him the crown. This prince, however, was as prudent as he was zealous; and as the minds of the Swedes were in a fluctuating state, he wisely avoided all kind of vehemence and precipitation in spreading the new doctrine. Accordingly, the first object of his attention was the instruction of his people in the

sacred doctrines of the holy Scriptures; for which purpose he invited into his dominions several learned Germans, and spread abroad through the kingdom the Swedish translation of the Bible that had been made by Olaus Patri. Some time after this, in 1526, he appointed a conference at Upsal, between the Reformer and Peter Gallius, a zealous defender of the ancient superstition, in which each of the champions was to bring forth his arguments, that it might be seen on which side the truth lay. In this dispute Olaus obtained a signal victory, which contributed much to confirm Gustavus in his persuasion of the truth of Luther's doctrine, and to promote its progress in Sweden. The following year another event gave the finishing stroke to its propagation and success. This was the assembly of the states at Westeraas, where Gustavus recommended the doctrine of the Reformers with such zeal that, after warm debates, fomented by the clergy in

at Hasnia; and after his death, which happened in 1521, he invited Carlstadt himself to fill that important place. Carlstadt accepted of this office, indeed, but in a short time returned to Germany; upon which Christiern used his utmost endeavors to engage Luther to visit his dominions, but in vain. However, the progress of Christiern in reforming the religion of his subjects, or rather of advancing his own power above that of the Church, was checked, in the year 1523, by a conspiracy, by which he was deposed and banished, his uncle Frederick, duke of Holstein and Sleswic, being appointed his successor.

Frederick conducted the Reformation with much greater prudence than his predecessor. He permitted the Protestant doctors to preach publicly the sentiments of Luther, but did not venture to change the established government and discipline of the Church. However, he contributed greatly to the progress of the Reformation by his success-

PETER IN PRISON, VISITED BY AN ANGEL.—See RELIGIOUS LIBERTY.

solved on the destruction of all who should dare to oppose the Council of Trent. The meeting of it was to serve as a signal for taking up arms; and accordingly its deliberations were scarcely begun, in 1546, when the Protestants perceived undoubted signs of the approaching storm and a formidable union betwixt the emperor and pope, which threatened to crush and overwhelm them at once.

An appeal to arms by the elector of Saxony and the landgrave of Hesse was unfortunate to the cause of the Protestants, for the two armies met near Muhlberg, on the Elbe, on the 24th of April, 1547, and after a bloody action the elector was entirely defeated, and himself taken prisoner. Maurice, who had so basely betrayed him, was now declared elector of Saxony; and by his entreaties Philip, landgrave of Hesse, the other chief of the

PERSECUTION OF CHRISTIANS.—See RELIGIOUS LIBERTY.

general, it was unanimously resolved that the reformation introduced by Luther should have place in Sweden. This resolution was principally owing to the firmness and magnanimity of Gustavus, who declared publicly that he would lay down the sceptre and retire from the kingdom rather than rule a people enslaved by the orders and authority of the pope and more controlled by the tyranny of their bishop than by the laws of their monarch. From this time the papal empire in Sweden was entirely overthrown, and Gustavus declared head of the Church.

In Denmark the Reformation was introduced as early as the year 1521, in consequence of the ardent desire discovered by Christiern II. of having his subjects instructed in the doctrines of Luther. This monarch, notwithstanding his cruelty, for which his name had been rendered odious, was nevertheless desirous of delivering his dominions from the tyranny of the Church of Rome. For this purpose, in the year 1520 he sent for Martin Reinard, one of the disciples of Carlstadt, out of Saxony, and appointed him professor of divinity

ful attempts in favor of religious liberty in an assembly of the states held at Odensee, in 1527. Here he procured the publication of a famous edict, by which every subject of Denmark was declared free either to adhere to the tenets of the Church of Rome or to the doctrine of Luther. The papal tyranny was totally destroyed by his successor, Christiern III. He began by suppressing the despotic authority of the bishops and restoring to their lawful owners a great part of the wealth and possessions which the Church had acquired by various stratagems. This was followed by a plan of religious doctrine, worship and discipline laid down by Bugenhagius, whom the king had sent for from Wittenberg for that purpose; and in 1539 an assembly of the states at Odensee gave a solemn sanction to all these transactions.

In France, also, the Reformation began to make some progress very early. Margaret, queen of Navarre, sister to Francis I., the perpetual rival of Charles V., was a great friend to the new doctrine; and it appears that as early as the year 1523 there were in several of the provinces of France

great numbers of people who had conceived the greatest aversion both to the doctrine and tyranny of the Church of Rome, among whom were many of the first rank and dignity, and even some of the episcopal order. But as their numbers increased daily, and troubles and commotions were excited in several places on account of religious differences, the authority of the king intervened, and many persons eminent for their virtue and piety were put to death in the most barbarous manner. Indeed, Francis, who had either no religion at all, or, at best, no fixed and consistent system of religious principles, conducted himself toward the Protestants in such a manner as best answered his private views. Sometimes he resolved to invite Melancthon into France, probably with a view to please his sister, the queen of Navarre, whom he loved tenderly, and who had strongly imbibed the Protestant principles. At other times he exercised the most infernal cruelty toward the Reformed, and once made the following mad declaration: that if he thought the blood of his arm was tainted by the Lutheran heresy he would have it

communion with the Church of Geneva. The French Protestants were called Huguenots (see HUGUENOTS) by their adversaries, by way of contempt. Their fate was very severe, being persecuted with unparalleled fury; and though many princes of the blood, and of the first nobility, had embraced their sentiments, yet in no part of the world did the Reformers suffer so much. At last all commotions were quelled by the fortitude and magnanimity of Henry IV., who in the year 1598 granted all his subjects full liberty of conscience by the famous Edict of Nantes, and seemed to have thoroughly established the Reformation throughout his dominions. During the minority of Louis XIV., however, this edict was revoked by Cardinal Mazarin, and forthwith the savage butchery of the French Protestants commenced anew. A tiger-like ferocity characterized the persecutions of the Protestants in the south-eastern parts of the kingdom, quite equal in atrocity to the relentless devastations of the Waldenses in the valleys on the other side of the Alps; and the profession of the Reformed faith has never been so safe in France as in Holland, Germany or Switzerland.

In the other parts of Europe the opposition to the Church of Rome was but faint and ambiguous before the Diet of Augsburg. Before that period, however, it appears, from undoubted testimony, that the doctrine of Luther had made a considerable, though probably secret, progress through Spain, Hungary, Bohemia, Britain, Poland and the Netherlands, and had in all these countries many friends, of whom several repaired to Wittenberg, in order to enlarge their knowledge by means of Luther's conversation. Some of these countries threw off the Romish yoke entirely, and in others a prodigious number of families embraced the principles of the Reformed religion. It is cer-

tain, indeed, and the Roman Catholics themselves acknowledge it without hesitation, that the papal doctrines and authority would have fallen into ruin in all parts of the world at once had not the force of the secular arm been employed to support the tottering edifice. In the Netherlands particularly the most grievous persecutions took place, so that by the emperor Charles V. upward of one hundred thousand were destroyed, while still greater cruelties were exercised upon the people by his son Philip II. The revolt of the United Provinces, however, and motives of real policy, at last put a stop to these furious proceedings; and though, in many provinces of the Netherlands, the establishment of the popish religion was still continued, the Protestants had been long free from the danger of persecution on account of their principles.

The Reformation made a considerable progress in Spain and Italy soon after the rupture between Luther and the Roman pontiff. In all the provinces of Italy, but more especially in the territories of Venice, Tuscany and Naples, the superstition of Rome lost ground, and great numbers of people of all ranks expressed an aversion to the papal yoke. This occasioned violent and dangerous commotions in the kingdom of Naples in the year 1546; which, however, were at last quelled by the united efforts of Charles V. and his viceroy Don Pedro di Toledo. In several places the pope put a stop to the progress of the Reformation by letting loose the inquisitors, who spread dreadful marks of their barbarity through the greater part of Italy. These formidable ministers of superstition put so many to death, and perpetrated such horrid acts of cruelty and oppression, that most of the Reformed consulted their safety by a voluntary exile, while others returned to the religion of Rome, at least in external appearance. But the Inquisition, which frightened into the profession of popery several Protestants in other parts of Italy, could never make its way into the kingdom of Naples; nor could either the authority or entreaties of the pope engage the Neapolitans to admit even visiting inquisitors.

In Spain several people embraced the Protestant religion, not only from the controversies of Luther, but even from those divines whom Charles V. had brought with him into Germany in order to refute the doctrines of Luther; for these doctors imbibed the pretended heresy, instead of refuting it, and propagated it more or less on their return home. But the Inquisition, which could obtain no footing in Naples, reigned triumphant in Spain, and by the most dreadful methods frightened the people back into popery, and suppressed the desire of exchanging their superstition for a more rational plan of religion. It was, indeed, presumed that Charles himself died a Protestant; and it seems to be certain that, when the approach of death had dissipated those schemes of ambition and grandeur which had so long blinded him, his sentiments became much more rational and agreeable to Christianity than they had ever been. All the ecclesiastics who had attended him, as soon as he expired, were sent to the Inquisition, and committed to the flames, or put to death by some other method equally terrible. Such was the fate of Augustine Casal, the emperor's preacher; of Constantine Pontius, his confessor; of Egidius, whom he had named to the bishopric of Tortosa; of Bartholomew de Caranza, a Dominican who had been confessor to King Philip and Queen Mary; with twenty others of less note.

In England the principles of the Reformation began to be adopted as soon as an account of Luther's doctrines could be conveyed thither. In that kingdom there were still great remains of the sect called Lollards, whose doctrine resembled that of Luther, and among whom, of consequence, the sentiments of our Reformer gained great credit. Henry VIII., king of England, at that time was a violent partisan of the Church of Rome, and had a particular veneration for the writings of Thomas Aquinas. Being informed that Luther spoke of his favorite author with contempt, he conceived a violent prejudice against the Reformer, and even wrote against him, as we have already observed. Luther did not hesitate at writing against His Majesty, overcame him in argument and treated him with very little ceremony. The first step toward public reformation, however, was not taken till the year 1529. Great complaints had been made in England, and of a very ancient date, of the usurpations of the clergy; and by the prevalence of the Lutheran opinions, these complaints were now become more general than before. The House of Commons, finding the occasion favorable, passed

several bills restraining the impositions of the clergy; but what threatened the ecclesiastical order with the greatest danger were the severe reproaches thrown out almost without opposition in the House against the dissolute lives, ambition and avarice of the priests and their continual encroachments on the privileges of the laity. The bills for regulating the clergy met with opposition in the House of Lords; and Bishop Fisher imputed them to want of faith in the Commons, and to a formal design, proceeding from heretical and Lutheran principles, of robbing the Church of her patrimony and overturning the national religion. The Commons, however, complained to the king by their speaker Sir Thomas Audley of these reflections thrown out against them, and the bishop was obliged to retract his words.

Though Henry had not the least idea of rejecting any even of the most absurd Romish superstitions, yet, as the oppressions of the clergy suited very ill with the violence of his own temper, he was pleased with every opportunity of lessening their power. In the Parliament of 1531 he showed his design of humbling the clergy in the most effectual manner. An obsolete statute was revived, from which it was pretended that it was criminal to submit to the legatine power which had been exercised by Cardinal Wolsey. By this stroke the whole body of the clergy was declared guilty at once. They were too well acquainted with Henry's disposition, however, to reply that their ruin would have been the certain consequence of their not submitting to Wolsey's commission, which had been given by royal authority. Instead of making any defence of this kind, they chose to throw themselves on the mercy of their sovereign; which, however, it cost them one hundred and eighteen thousand eight hundred and forty pounds to procure. A confession was likewise extorted from them that the king was protector and supreme head of the Church of England, though some of them had the dexterity to get a clause inserted which invalidated the whole submission, viz., *in so far as permitted by the law of Christ*.

The king, having thus begun to reduce the power of the clergy, kept no bounds with them afterward. He did not, indeed, attempt any reformation in religious matters; nay, he persecuted most violently such as did attempt this in the least. Indeed, the most essential article of his creed seems to have been his own supremacy, for whoever denied this was sure to suffer the most severe penalties, whether Protestant or papist; and so far as reformation of doctrine was concerned, Henry was certainly not a Protestant. He opposed the claims of the pope to supremacy in England, but his resistance was in order to the establishment of his own supremacy in England, and whoever resisted him was made to feel the weight of his hand.

He died in 1547, and was succeeded by his only son, Edward VI. This amiable prince, whose early youth was crowned with that wisdom, sagacity and virtue that would have done honor to advanced years, gave new spirit and vigor to the Protestant cause, and was its brightest ornament as well as its most effectual support. He encouraged learned and pious men of foreign countries to settle in England, and addressed a particular invitation to Martin Bucer and Paul Fagius, whose moderation added a lustre to their other virtues, that by the ministry and labors of these eminent men in concert with those of the

friends of the Reformation in England he might purge his dominions from the sordid fictions of popery and establish the pure doctrines of Christianity in their place. For this purpose he issued the wisest orders for the restoration of true religion, but his reign was too short to accomplish fully such a glorious purpose. In the year 1553 he was taken from his loving and afflicted subjects, whose sorrow was inexpressible and suited to their loss. His sister Mary (the daughter of Catherine of Aragon, from whom Henry had been separated by the famous divorce), a furious bigot to the Church of Rome, and a princess whose natural character, like the spirit of her religion, was despotic and cruel, succeeded him on the British throne, and imposed anew the arbitrary laws and the tyrannical yoke of Rome upon the people of England. Nor were the methods which she employed in the cause of superstition better than the cause itself, or tempered by any sentiments of equity or compassion. Barbarous tortures and death in the most shocking forms awaited those who opposed her will or made the least stand against the restoration of popery; and among many other victims the learned and pious Cranmer, archbishop of Canterbury, who had been one of the most illustrious instruments of the Reformation in England, fell a sacrifice to her fury. This odious scene of persecution was happily concluded in the year 1558 by the death of the queen, who left no issue; and as soon as her successor, the lady Elizabeth, ascended the throne, all things assumed a new and pleasing aspect. Under her reign much was done to consolidate the religious affairs of the kingdom. The Protestant Church was firmly established by Parliament, although the Church as settled differs in some respects from the plan that had been formed by those whom Edward VI. had employed for promoting the cause of the Reformation, and approaches nearer to the rites and discipline of former times, though it is widely different, and in the most important points entirely opposite to the principles of the Roman hierarchy.

The cause of the Reformation underwent in Ireland the same vicissitudes and revolutions that had attended it in England. When Henry VIII., after the abolition of the papal authority, was declared supreme head upon earth of the Church of England, George Brown, a native of England and a monk of the Augustine order, whom that monarch had created, in the year 1535, archbishop of Dublin, began to act with the utmost vigor in consequence of this change in the hierarchy. He purged the churches of his diocese from superstition in all its various forms, pulled down images, destroyed relics, abolished absurd and idolatrous rites, and by the influence as well as authority he had in Ireland caused the king's supremacy to be acknowledged in that nation. Henry showed soon after that this supremacy was not a vain title, for he banished the monks out of that kingdom, confiscated

their revenues and destroyed their convents. In the reign of Edward VI. still further progress was made in the removal of popish superstitions by the zealous labors of Bishop Brown and the auspicious encouragement he granted to all who exerted themselves in the Reformation. But the death of this excellent prince and the accession of Queen Mary had like to have changed the face of affairs in Ireland as much as in England. When Elizabeth ascended the throne, however, a change took place. Protestants were placed in authority and bishops were placed in the Irish sees, but little was done to enlighten the great mass of the people. Divine service was not conducted in the language which the people understood, nor were schools established in the country to meet the wants of the population. The Scriptures were not rendered into the vernacular, and thus the people were left to the priesthood which still held to the communion with the see of Rome. When the great rebellion of Hugh O'Neill came to an end, the northern province was gradually

ST. PETER'S CHAPEL, TOWER OF LONDON.—See RELIGIOUS LIBERTY.

cut off; and that he would not even spare his own children if they entertained sentiments contrary to those of the Catholic Church.

About this time the famous Calvin began to draw the attention of the public, but more especially of the queen of Navarre. His zeal exposed him to danger; and the friends of the Reformation, whom Francis was daily committing to the flames, placed him more than once in the most perilous situation, from which he was delivered by the interposition of the queen of Navarre. He therefore retired out of France to Basle, in Switzerland, where he published his "Christian Institutions," and became afterward so famous.

Those among the French who first renounced the jurisdiction of the Romish Church are commonly called Lutherans by the writers of those early times; hence it has been supposed that they had all imbibed the peculiar sentiments of Luther. But this appears by no means to have been the case, for the vicinity of the cities of Geneva, Lausanne, etc., which had adopted the doctrines of Calvin, produced a remarkable effect upon the French Protestant churches, inasmuch that, about the middle of this century, they all entered into

settlement by colonists from England and Scotland, and thus Protestantism was firmly established in the province of Ulster, where it has ever since prevailed, and from which during the last century and a half so many emigrants have come to the United States.

In Scotland the seeds of reformation were very early sown by several noblemen who had resided in Germany during the religious disputes there; but for many years it was suppressed by the power of the pope, seconded by inhuman laws and barbarous executions. The most eminent opposer of the papal jurisdiction was John Knox, a disciple of Calvin, a man of great zeal and invincible fortitude. On all occasions he raised the drooping spirits of the Reformers, and encouraged them to go on with their work, notwithstanding the opposition and treachery of the queen-regent, till at last, in 1561, by the assistance of an English army sent by Elizabeth, popery was in a manner totally extirpated throughout the kingdom. From this period the form of doctrine, worship and discipline established by Calvin at Geneva has had the ascendancy in Scotland.

INTERIOR WHITE CHAPEL, IN THE TOWER.—See RELIGIOUS LIBERTY; also engraving on preceding page.

**REFORMED** (re-form'd) **CHURCH.** This is the name usually given the branches of the Churches of the Reformation which are found in Germany, Switzerland, Holland, Hungary, France and the United States. They are usually classed as Calvinists, except the Lutheran branch, and with certain differences in forms they all belong to the Presbyterian family. There are two branches of the Reformed Church which claim special notice here because of their importance in this country, viz.:

**REFORMED CHURCH IN AMERICA.**—Formerly the title of this body was the Reformed Protestant Dutch Church in North America, and usually it was designated by the brief name, "The Dutch Reformed Church." For several years a feeling existed among the ministers and members that the title suggested the idea that the body existed merely for the reception of those who might emigrate from Holland; and in order to remove the

under the control of the Church in the fatherland; but in the latter year the American branch declared its independence, asserted the right to a perfect autonomy, and the distinct organization of the body was effected with much harmony. In 1764 the use of the English language in preaching was introduced, although decided objection had been made against the innovation.

This branch of the Church extends through several of our States, but it is more largely represented in Eastern New York and New Jersey than in the other States. The "Dutch" Church has always displayed an earnest attention to the education of the ministry, and the college and seminary at New Brunswick, under the control of the body, would do honor to any denomination in our land. For intelligence and piety, for faithful adherence to the standards, for social importance and for every element of religious social worth the members and ministers of this Church have always

Heidelberg Catechism was prepared, and it was adopted as the recognized symbol of the Reformed Church.

The Reformed Church in the United States dates from about the year 1720, although the troubles on the Continent of Europe led several who held the Reformed faith to seek an asylum in America before the close of the seventeenth century. In 1727 the Rev. George M. Weiss was sent to this country from the Palatinate with about four hundred emigrants. He settled with his flock at Skippack, in Montgomery county, Pennsylvania, where they organized a consistory, having Mr. Weiss as the recognized pastor. From this time onward settlers continued to arrive in considerable numbers, and they spread over different regions, and consequently they were unable to enjoy the advantages of ordinances in the language and forms of the fatherland. Much was done in the collecting of these

people into congregations, and in work which tended to the organization of the Church, by the Rev. Michael Schlatter, who was sent as a missionary in 1746, and who gave himself with great wisdom and zeal to this work. Since 1825 the body has grown very rapidly, and the congregations and churches are widely scattered not only over the Eastern but also over the Western and North-Western States. The Heidelberg Catechism constitutes the great Standard of the body; and though Presbyterian in the organization of church courts, this body differs from the Presbyterian Church in the United States in that it recognizes the services of "a Church year, in the admission of a Liturgy, and in the forms used in the administration of the Sacraments." A memorable incident in the history of this Church was the celebration in the city of Philadelphia of the three hundredth anniversary of the formation and adoption of the Heidelberg Catechism. The services began on January 17, 1863, and continued for six days, during which time a vast amount of most valuable matter was produced and discussed on the doctrines, discipline, history, testimony-bearing, difficulties and duties of the Church.

Under the General Synod of this Church there are four synods with subordinate classes, and thus the idea of Presbyterian order and government is maintained. The Theological Seminary at Mercersburg was founded in 1825, and that at Tiffin, Ohio, after several changes, was permanently settled there in 1851. At Tiffin there is also the "Heidelberg College," founded in 1850, and Franklin and Marshall College is established at Lancaster, Pennsylvania. These and several classical and educational institutions mark the diligence of this body in the great work of education, and specially in the desire to secure a learned ministry—a characteristic of all the Churches of the Reformation.

**REFORMED CHURCH IN FRANCE.**—See FRENCH REFORMED CHURCH and HUGUENOTS.

**REFORMED CHURCH IN HUNGARY.**—This Church has passed through a sea of persecutions and troubles that would have sufficed to extinguish the truth among any people who were not holding to it as they valued their lives. As soon as the news reached Hungary that a reformed movement in the Church had commenced in Germany, the Hungarian Diet, in 1528, issued a decree commanding all favorers of Lutheranism to be seized and burned; but the decree was disregarded by many who read and thought for them-

selves, and by others who immediately went to Germany to study the questions which were there discussed by Luther and his associates. The work of reformation spread, and although the parish priest of Libethen suffered for adopting the simple faith which he found in the word of God, still among the nobility and in many of the towns the work of reform went on. Many priests, together with their congregations, came over, and so widespread was the change that the prospect of Hungary adopting the Reformed faith was on the fair way of being realized, when the divisions which broke out among themselves proved the first obstacle, and then came in the power of the Jesuits to foster these divisions and to secure the operation of other influences in stemming the flood that was sweeping over the land. Pazmany was a master-mind among the Jesuits in work, and at length, under Leopold I., the work of bloody persecution began. Massacres, the galleys, imprisonments and fines were the ordinary means used in dealing with the Protestants. At length, in 1681, they were expressly permitted to hold divine service, and in 1781, under Joseph II., this privilege was confirmed. The oppressed Church continued to struggle on, and in 1791, at an important synod held at Pesth, much was done to unite and harmonize the broken and disjointed affairs of the

claiming the simple gospel in opposition to the dogmas of Rome by Ecolampadius and others who also had received the truth. Their preaching produced a widely-spread awakening, but little was done in the ordering and consolidation of churches until the counsel and energy of Calvin came to the aid of the Swiss brethren. They had adopted a theology which is usually called Calvinistic, and under the influence of Calvin they organized the churches on a Presbyterian platform. The inhabitants of five of the Cantons still clung to the Romish communion, and they called in the aid of Austria to suppress the Reformed faith. In the struggle which ensued Zwingle fell at the battle of Cappel, and about the same time Ecolampadius

vitil cities on the east of the river, Deut. iv. 41-43; Josh. xx. 7, 8; xxi. 13, 21, 27, 32, 36, 38.

DUTCH REFORMED CHURCH AT NEW UTRICHT, LONG ISLAND, BUILT IN 1690, OF GRANITE, WITH WALLS FOUR FEET THICK.

OLD DUTCH REFORMED CHURCH AT ALBANY, N. Y., BUILT IN 1656, AND ENLARGED IN 1715.

Church. At length, in 1848, a law was passed giving equal rights to the Protestants; but difficulties were thrown in the way of its being carried out. Later still, the political troubles of the emperor of Austria, who is constitutionally the king of Hungary, have had the effect of leading the authorities to recognize the rights of conscience of his Protestant Hungarian subjects, and now the right of autonomy has been granted to them as well as to the other portion of the population.

As already stated, the Protestantism of Hungary was early divided, and even yet the division continues. There are nearly a million to hold to the Augsburg Confession, while upward of a million and a half hold by the Helvetic Confession, while about one hundred thousand avow themselves to be Unitarians.

**REFORMED CHURCH IN BOHEMIA.**—See BOHEMIANS and UNITED BRETHREN.

**REFORMED CHURCH IN SWITZERLAND.**—The Reformation in Switzerland, so far as doctrine is concerned, was largely owing to the influence of Zwingle, who was to the Cantons what Luther was to Germany, Knox to Scotland and Calvin to Geneva. He was early joined in his work of pro-

duced at Basle. Still, the work was carried on, for the light of the gospel had shined into the minds and stirred up the hearts of Bullinger, Myconius, Farel, Bucer and Capito, who, along with Calvin as an adviser, went forward until the cause of the Reformed faith had triumphed; and as is well known, Geneva became a centre of light and influence whence the truth radiated out over the land.

When the rise of a Neological spirit threatened to sweep away the gospel from Germany, the fell influence reached Geneva, and Rationalism prevailed in the home of Calvin for a time; but a great revival of religion has

About these cities were suburbs, a thousand cubits every way, the length of each side of the square thus formed being two thousand cubits—a result which has startled several of the critics who have forgotten to carry the common principles of arithmetic along with them in their researches, and have hence charged the Scripture record with mistake, Num. xxxv. 3-5. The regulations for those claiming the right of refuge will be found in Ex. xxi. 12-14; Num. xxxv. 9-34; Deut. xix. 1-13. After examination made, if they were pronounced entitled to it, they had protection, but must live within the boundaries of the refuge city till the death of the high-priest, when they might return in safety to their own homes. It is said that direction-posts were set up to guide the fugitive to the asylum, and various additions to the law were imagined or introduced by rabbinical writers.

In this institution there is a beautiful illustration of the way of salvation. The alarmed needy sinner flees to Christ. In the refuge city there was

DUTCH REFORMED CHURCH AT SUNNYSIDE, ON THE HUDSON, NEW YORK, BUILT IN 1699.

**REFUGE** (ref'eu), **CITIES OF.** Among the various provisions of the Hebrew law, there was one for the protection of any one who might kill his neighbor without malice aforethought. Six cities of those assigned to the priests and Levites were invested with the right of asylum. These six were three on each side of the Jordan; Hebron, a city of the priests, Shechem, and Kedesh in Galilee, Levitical cities on the west; Bezer, Ramoth-gilead and Golan in Bashan, Le-

safety to all who fled thereto, and so in Christ there is safety to all who flee to him, Rom. viii. 1.

GATEWAY OF THE BLOODY TOWER.—See RELIGIOUS LIBERTY.

grounds for such a misconception, the change of name was made in 1868. In polity the Church is Presbyterian, and the Doctrinal Standards are the Heidelberg Catechism, the Compendium of the Christian Religion and the Confession and Canons of the Synod of Dort. The colony of New Amsterdam (now New York) was settled in 1612, and it is believed that the Collegiate Church in the city of New York was organized in 1619. The religious system thus inaugurated continued until 1664, when the colony submitted to England, and very shortly thereafter an act of Parliament obliged the colonists to contribute to the support of the Established Church of England. As might have been expected, the change in the political and ecclesiastical state of the colony repressed the flow of emigration from Holland, but for a considerable time the descendants of the early settlers exercised a very decided preponderance in the city and in the regions around in which their churches were established. From 1737 until 1771 a difference of judgment existed in the Church on the propriety of the Church in America being

been pre-eminently distinguished. Though Presbyterian in form, the terms Consistory and Classis are ecclesiastically used, whereas in Churches on the Scottish model the names of the corresponding courts are the Kirk or Church Session and the Presbytery, both being subordinate to the Synod.

**REFORMED CHURCH IN THE UNITED STATES.**—This body was formerly known as the German Reformed Church in the United States, but the designation was viewed as unadvisable, inasmuch as it might be looked on as the name of a body which existed merely for the reception of members from Germany, and accordingly the change was adopted. The German Reformed Church of this country bears the same relation to the Reformed Church in Germany that the Dutch Reformed Church bears to the Church of Holland. In the sixteenth century serious trouble existed in the Palatinate, because of the efforts of the Lutherans to establish their system; and in 1560 the elector Frederic III. conformed to the Reformed Church, and expelled such clergymen and professors as did not follow his example. By his influence the

It would seem that God's altar was held to give some privilege of asylum, 1 Ki. i. 50; ii. 28. The right of sanctuary was possessed by certain Greek and Roman cities, and it was afterward claimed to a great extent for Christian churches.

**REFUGEES** (ref'uj-eez), a term first applied to the French Protestants who, by the revocation of the Edict of Nantes, were constrained to fly from persecution and take refuge in foreign countries. Since that time, however, it has been extended to all such as leave their country in times of distress. See HUGUENOTS.

**REGEM** (re'gein), one of the descendants of Judah, 1 Chr. ii. 47.

**REGEM-MELECH** (-me'lek), a person sent with Sherezer by Bethel—i.e., the Jews dwelling in Bethel—to entreat the face of the Lord and make inquiry concerning fasting and humiliation, Zech. vii. 2.

**REGENERATION** (re-jeen-e-rā'shun), the rendering of a Greek word implying a fresh birth or renewal, a restoration from a degenerate state to a state of pristine excellence. The word occurs but twice in Holy Scripture; first in a declaration of our Lord, "in the regeneration when the Son of man shall sit in the throne of his glory," Matt. xix. 28. The word is found again in reference to baptism, Tit. iii. 5; whereon Dr. Alford says, contrasting the two passages, that in the former "it is the great second birth of heaven and earth in the latter days; here the second birth of the individual man." "The laver of regeneration" and "the renewal of the Holy Spirit" are both mentioned—"that complete baptism by water and the Holy Ghost, whereof the first cleansing by water is indeed the ordinary sign and seal, but whereof the glorious indwelling Spirit of God is the only efficient cause and continuous agent."

**REGENT** (re'jent), a title of a member of one of the houses of the governing body in the university of Cambridge.

**REGIS** (ray-zheez'), **PIERRE SYLVAIN**, an eminent Cartesian philosopher of Agenois, in France, was born in 1632. From the Jesuits' college, at Cahors, he removed to Toulouse, and afterward to Paris, where he attracted considerable notice by the zeal with which he espoused the system then lately broached by Descartes. The popularity which he acquired, and the numerous audiences which attended him, excited the jealousy of his opponents, who prevailed on the king, through the interference of the archbishop of Paris, to put a stop to his proceedings. He continued, however, to promulgate his views through the press with great energy. Regis published a detailed account of his tenets in his "System of Philosophy," and in a work entitled "The Use of Reason and Faith." He died in 1707.

**REGISTER**, Ezra ii. 62. See GENEALOGY.

**REGIUM DONUM** (re'j'um do'num), an annual grant of money in aid of the clergy of the Presbyterian Church in Ireland. Charles II. was the first monarch who made a gift to the ministers in Ulster, but it was not renewed. William III., in 1690, made a present when he reached Hillsborough Castle on his way to the Boyne. From year to year it was continued, and the arrangements connected with it were remodeled in 1790 and afterward, until 1870, when it was terminated

by Parliament commuting the sums given to the ministers, who have used the money thus received to found an endowment.

**REGIUS** (re'j'us), **URBAN**, or **LE ROI**, a learned controversialist, distinguished also as one of the early Reformers, was born at Langenargen, in Germany. He completed his studies at Ingoldstadt; and when the emperor visited that university, he made Regius his poet-laureate and orator. He afterward obtained a professorship; but when the controversy arose between Luther and Eckius, he heartily adopted the Reformed doctrines and sided with the former. In 1530 he accepted an invitation from the duke of Brunswick to settle as pastor of the church of Lüneburg, and died in 1541.

**REHABIAH** (re-hab'yah), a descendant of Moses, 1 Chr. xxiii. 17.

**REHOB** (re'hōb). 1. The father of Hadad-ezar, king of Zobah, 2 Sam. viii. 3, 12. 3. One who sealed the covenant, Neh. x. 11.

**REHOB.** 1, 2. Two towns in the territory of Asher, Josh. xix. 28, 30. One of these is mentioned as being at the extreme north of Palestine, Num. xiii. 21. One, too, was allotted to the Levites, Josh. xxi. 31. Also the original inhabitants retained possession of one after the conquest, Jud. i. 31. 3. 2 Sam. x. 8, for BETH-REHOB, which see.

**REHOBAM** (re-ho-bo'am) was the unwise son of the wise Solomon, forty-one years old when he came to the throne, and therefore born a year before the death of David. By forsaking the counsel of his father's friends for that of his own companions he hurried on the division of the kingdom of Israel, and found himself left with only the tribes of Judah and Benjamin. At first his intention was to bring back the rest by military force; but he desisted on the representation of the prophet Shemaiah, and devoted his strength to the fortification of the cities of his kingdom. A list of these is given, fifteen in number, so far as we know all to the south of the capital, from which the inference has been drawn that he understood that his greatest danger was not on the side of the new kingdom of Israel directly, though there was constant war with it, but on that of Egypt, in which Rehoboam had taken refuge while he was in exile, and to which he seems to have been attached by religious as well as political ties. Accordingly, it was from Egypt that Rehoboam suffered. For after three years of prosperity, during which he and his people "walked in the way of David and Solomon," they "forsook the law of the Lord;" and in the fifth year of his reign, Shishak, king of Egypt, came against him with an army so numerous that resistance was hopeless. Anew Shemaiah came with a message to him and his princes, interpreting this visitation as a chastisement, and they humbled themselves to receive it so, and escaped destruction, though they incurred both disgrace and loss. The latter part of his reign appears to have been comparatively prosperous; it lasted in all seventeen years—B. C. 975-958—according to the common chronology. It is said of him that "he did evil, because he prepared not his heart to seek the Lord." And probably this affected him the more owing to his training in childhood, for his mother Naamah was an Ammonitess. He copied at least one of his father's sins, "for he took eighteen wives and three-score concubines," "and he desired many wives."

**REHOBOTH** (re-ho'both). 1. An Assyrian city, Gen. x. 11, of which nothing definite is known. Kalisch conjectures that the extensive ruins still bearing the name *Rahabeh-malik*, on the east bank of the Euphrates, about four miles southwest of the town of Mayadin, may mark the site. 2. The name given by Isaac to the well in the possession of which he was unmolested, Gen. xxvi. 22. This is possibly *Bir er-Ruheibeh*. 3. The native city of one of the early Edomitish kings, Gen. xxxvi. 37. This probably lay on the west bank of the Euphrates, between Circesium and Anah; it is now called *er-Rahabeh*.

**REHUM** (re'hūm). 1. One who returned from the captivity with Zerubbabel, Ezra ii. 2, called also Nehum, Neh. vii. 7. 2. A Persian governor, or chancellor, who obstructed the Jews in rebuilding their temple and city, Ezra iv. 8, 9, 17, 23. 3. A Levite who helped to repair the wall of Jerusalem, Neh. iii. 17. 4. One who sealed the covenant, Neh. x. 25. 5. A priest who returned from captivity, Neh. xii. 3, called also Harim, Neh. xii. 15; possibly the same with No. 1.

**REI** (re'i), a person who adhered to David when Adonijah made his attempt upon the crown, 1 Ki. i. 8. He is not elsewhere mentioned. Some conjecture him to be Raddai, David's brother.

**REID** (reed), **THOMAS**, a celebrated Scotch divine and metaphysician, was born in 1709 at Strachan, in Kincardineshire, and educated at the Marischal College, Aberdeen. In 1764 he was made professor of moral philosophy at Glasgow, and died in 1796. His principal works are—"An Inquiry into the Human Mind" and "Essays on the Intellectual and Active Powers of Man." Dr. Reid was the first writer in Scotland who attacked the skepticism of Hume, and he endeavored to refute his theory by an appeal to what he called "Common Sense."

**REIMAIRUS** (ri-ma'rus), **HERMANN SAMUEL**, the famous author of the "Wolfenbüttel Fragments," was born at Hamburg, December 22, 1694. After completing his studies at Jena, and traveling through Belgium and England, he was appointed rector of the gymnasium at Wismar, and in 1727 obtained the professorship of Hebrew in the Hamburg gymnasium, the duties of which he honorably discharged till his death, March 1, 1765. He was a man of solid and extensive learning, which he exhibited in his various works on natural religion. His fame, however, chiefly rests on the so-called "Wolfenbüttel Fragments," which by their author were never intended for publication, but only to be circulated in manuscript among his friends. But Lessing, having procured a copy, published it as the work of an unknown writer found in the Wolfenbüttel library. The authorship of Reimarus, however, has been fully established. We need scarcely add that these fragments contain the severest distasteful attacks on revelation, and gave rise to the dispute between Lessing and Johann Melchior Götze.

**REINHARD** (rin'hart), **FRANZ VOLKMAR**, a celebrated Protestant preacher, a native of the duchy of Sulzbach, in Germany. He was educated at the gymnasium of Ratisbon and the university of Wittenberg. The study of sacred eloquence attracted his attention; and his reputation procured him, in 1782, the chair of theology, to which, in 1784, was added the office of preacher

at the university church. In 1792 he was invited to Dresden to become first preacher to the court of Saxony, ecclesiastical counselor and member of the supreme consistory. After filling these stations with high renown for twenty years, he died September 6, 1812. His principal works are "A System of Christian Morality" and "Lectures on Dogmatic Theology."

**REINS**, a name for the kidneys, derived from the Latin *renes*, and in our English Bible employed in those passages of the Old Testament in which the term for kidneys is used metaphorically. The Orientals regarded the kidneys as the seat of the desires and affections, and hence under them spake of the soul in respect to its inmost purposes or cravings, Ps. vii. 10; Job xix. 27; Jer. xi. 20.

**REKEM** (re'kem). 1. One of the kings or chiefs of Midian slain by the Israelites, Num. xxxi. 8. 2. A name in the genealogies of Judah, where it is not clear whether a person or a place is intended, 1 Chr. ii. 43, 44.

**REKEM**, a city of Benjamin, Josh. xviii. 27.

**RELICS** (rel'ix). In the Romish Church remains of the bodies of saints and martyrs are so called. The instruments by which martyrs have been tortured or portions of their raiment are viewed as relics and placed in sacred places where they have been revered. The twenty-second article of the Church of England is directed against this practice, which is called "a fond (foolish) thing, vainly invented and grounded on no warranty of Scripture."

**RELIEF** (re-leef') **SYNOD**. This was the name of the body which separated from the Church of Scotland, in 1752, because of the rigorous exercise of the system of patronage. Six of the ministers of the presbytery of Dunfermline refused to admit a minister to the parish of Inverkeithing contrary to the will of the people, whereupon one of the number was deposed from the ministry and the others were suspended. Mr. Gillespie, the minister of Carnock, who was thus deposed, continued to exercise his ministry, and gradually he was joined by other brethren, and in 1759 a presbytery was formed. After continuing in a separate state for many years the "Relief" and the Secession bodies combined, thus making the "United Presbyterian Church." See PRESBYTERIAN CHURCH.

**RELIGION** (re-lij'un). This word as generally used in our version refers rather to the services or mode of worship than to godliness or piety of the heart, which is the sense it now ordinarily bears. Thus we find "the Jews' religion," Acts xxvi. 5; Gal. i. 13, 14—i.e., the Jewish religious principles and forms. Religious service is meant in James i. 26, 27. So "religious" in the former of these verses indicates the observance of God's external ordinances, the outward manifestation of the principle—i.e., piety—within. The original word rendered "religious" in Acts xiii. 43 is that below translated, perhaps more properly "devout," Acts xiii. 50.

**RELIGIOUS** (re-lij'us) **HOUSES**. In the Romish and other Churches, abbeys, priories, monasteries, convents and nunneries are thus named. The title is generally given to all houses in which persons live together according to certain rules and vows with a view to promote

a religious life. In England such houses were abolished at the Reformation because of the abuses and corruptions which prevailed in them.

**RELIGIOUS LIBERTY**, a term used to express the liberty of adopting or enjoying private opinions on religious subjects, and of being allowed to worship God according to the dictates of conscience, unfettered by external control.

On the subject of liberty very superficial ideas are common, and it may be well in the outset on this question to advert to certain distinctions which are worthy of being noted. Thus "physical" liberty is the power of doing what we please without any natural restraints or impediments. If our actions are not the free result of our choice—that is, if they are directed or impeded by an influence contrary to our will—we are destitute of this liberty. "Moral" liberty is the power of doing what is right, without being impeded by sinful dispositions or passions. A libertine, with all his boasted freedom, is here a perfect slave. "While they promise themselves liberty, they themselves are the servants of corruption; for of whom is a man overcome, of the same he is brought in bondage." "Civil liberty, as it is commonly understood in free countries, is freedom from all fear of punishment, contrary to law, and from subjection to any laws but those to which a man himself by his representatives gives consent." "Religious" liberty is the power of forming our religious sentiments and conducting our religious worship agreeably to the dictates of our consciences, without being liable to civil penalties.

Few portions of history have been more distressing than those which have recorded the sore trials and the savage persecutions through which men have had to pass before even enlightened nations have learned to recognize the rights which are involved in and inseparable from religious liberty. No sooner was Christianity introduced into the world than the ruthless hand of persecution was laid on its ministers and on those who professed to believe on the crucified One. The bigotry of the Jews led them to avail themselves of the state of the Roman law in order to secure their object in repressing a religion which they abhorred. When the senate at Rome recognized the gods of any conquered land, it was lawful for the people to serve them. When such recognition had not been made, as in the case of Christianity, it was easy to bring Christians into evil repute. They could be charged with rebellion, with neglecting and dishonoring the gods which the state had recognized. Their meetings for the worship of God could easily be misrepresented, and the more secretly they assembled in order to save themselves from difficulties, the more likely were they to be held as plotters and promoters of rebellion against authority. Every student of ecclesiastical history is aware that the idea of criminality was associated in the Roman mind with the profession of Christianity. Men and women might be honest, sober and quiet, they might pay their taxes and generally be obedient to the laws, but absence from the public festivals, refusal to do sacrifice to the national deities, and, further still, to lead others away from such observances on the ground that these gods were impure, that they were a folly and no god, it followed that all such were marked as rebels and doomed to death. Want of space forbids an attempt at an analysis of the great persecutions through which the primitive Church passed. They were characterized by a ferocity that could scarcely have been expected to

be witnessed in the bloodiest scenes of civil war, when excited, angry men have met in deadly strife, but not in social life, in calm, undisturbed society, when the slayer has gone from village to village and from home to home to carry on his work of blood amid unresisting victims. The latest of the memorable persecutions has been recognized as the tenth, which occurred about A. D. 270, under Diocletian and Maximian, and which was most wasting in its character. Its professed object was nothing less than the utter extirpation of Christianity. The places for Christian worship were everywhere demolished, Bibles and religious books were destroyed and an immense number of Christians were put to death. Eclard says of these scenes, "It were endless and almost incredible to enumerate the variety of sufferers and torments; they were scourged to death, had their flesh torn off with pincers and mangled with broken pots, were cast to lions and tigers and other wild beasts, were burnt, beheaded, crucified, thrown into the sea, torn in pieces by the distorted boughs of trees, roasted by gentle fires, and holes made in their bodies for melted lead to be poured into their bowels." This persecution lasted ten years under Diocletian and some of his successors, and the number of Christians who suffered death and punishment made them conclude that they had completed their work; and in an ancient inscription they tell the world that they had effaced the name and superstition of the Christians, and had restored and propagated the religion of the gods. They were deceived, for this bloody work only hastened the downfall of paganism. This was the first persecution that reached Britain, then a Roman colony, in which Alban suffered and great numbers after him; and Fox, the martyrologist, referring to the scenes which then occurred, says "that almost all Christianity in the whole island was destroyed, the churches subverted, all books of Scripture burned, and many of the faithful, both men and women, slain." It may appear strange that the folly as well as the sin of such butchery failed to be recognized; for instead of Christianity being abolished and paganism restored, a century did not elapse until the idols were cast aside and Christianity took its seat on the throne of the Cæsars.

It would have been a blessing to the world had the professors of Christianity, as they waded through these scenes of blood, only learned the lessons of liberty of conscience which they had so many opportunities of acquiring; but such was not the case. When the civil power ceased to be heathen, contending parties in the Church were always ready to avail themselves of the power of the civil sword, and emperors and rulers were equally willing to interfere. When the Church of Rome put forth her claim for supremacy and assumed to be the dictator and the judge in matters of faith and discipline, the idea was fostered that all who were not in accordance with the authorized views were criminal, and therefore to be dealt with as offenders and punished, for the safety of society and the good of their own souls. In the hands of the Dominicans this principle was carried out to its fullest extent. A man who did not submit his judgment to Church authority was not only an enemy of the Church and of God, but he was a dangerous element in civil society, and therefore it was the duty of both Church and State to cut him off. Then, again, when the assumption of the ecclesiastical power to dominate over the civil began to prevail, it was an easy thing for spiritual courts, as in the case of the Inquisition, to induce the civil authorities to cut

off all those who had been pronounced worthy of death. The same results followed in the case of condemnations in other ecclesiastical courts; and thus, from age to age, the work of death was carried on in the name of the merciful Saviour. It is worthy of note that, even when civil rulers resisted the claims of the papacy in matters which pertained to sovereignty in civil things, they had little or no reluctance to carry out the sentence of death against a peaceful, honest man who could not find in the Bible the theological doctrines which the Church insisted he should believe. Thus, an English sovereign would resist the right of the pope to decide about the temporalities of an English see, while he would permit civil officers to receive from the hands of ecclesiastics the men whom they had condemned, and then proceed to cut them off by a violent death. It was thus that the Church attempted to avert the charge of savage cruelty when the martyrdoms of holy men were pointed to as the evidences of the apostasy of the Church. "Nay," the answer was, "we did

as "Conventicle Acts," "Six-Mile Acts" and others which in the seventeenth century were so recklessly adopted in England with a view to secure the dominancy of a religious class in the State—acts which, by their enforcement, drove men to Holland, to other places on the Continent of Europe, and which mainly served as the propelling agency to settle the American colonies by the ancestors of our people, who fled across the ocean from a slavery which they could not bear. So also in Scotland, where the power of the civil sword was used until the time of William III., the principle was relied on that external authority should compel the understanding and the conscience to admit as true whatever the party in power desired to establish. The desolations and ravages of years showed the folly of the attempt. Scotland held to her convictions, and at length, when William III. came to the throne, the arm of persecution was restrained and men were permitted to believe according to the light which they enjoyed.

On the Continent of Europe, France stands out with sad distinctness as the great opponent of religious liberty. It is true that in Spain and in Italy the Inquisition did its work without remorse. The Reformed faith was stamped out by men who resolved to do their work effectively; but then in these countries there were not the same numbers of Reformers to be persecuted and murdered as France contained. The men who had embraced the Reformed faith in France belonged to all classes. They were in the nobility and in the court; they belonged to the old families of the kingdom; they were famed for their industry, for their progress in the arts and in every department of trade; they were peaceful, intelligent, loyal and virtuous; and yet the wholesale butchery of these people by the evil authorities, at the hands of ecclesiastical instigators, is one of the most remarkable chapters in the history of our race. Readers of history are generally aware of the atrocities which preceded and accompanied the Massacre of St. Bartholomew, and which continued to the proclamation of the Edict of Nantes. They are aware of the depopulation of the country, of the loss of the most valuable class of citizens, who fled to other lands, to enrich and benefit them by their skill and toil; but the facts in the history of persecution in France, when under Louis XIV. the Edict of Nantes was revoked, have not been kept before the mind of the age as their significance in the history of that country and their place in connection with persecution have deserved. Perhaps no age of the Church has ever witnessed a more relentless effort to exterminate a simple-minded, peaceful people than that which was so heartlessly adopted by Louis XIV. and his agents in the massacres of the population in the Palatinate and in the south-eastern provinces of France; and no more heroic resistance has ever been exhibited by any people than the Protestants displayed who dwelt in the mountain-fastnesses of Dauphiny during years of murder and rapine and treachery.

While many of the settlers of the American colonies had themselves to flee from persecution, they brought indistinct views along with them to their new home. Still, on this continent correct views were speedily promulgated; and among the men who very boldly and distinctly asserted the principles of religious liberty the name of Roger Williams holds an honored place. In Maryland

and in Pennsylvania, also, the principles of liberty which were avowed and acted on tended in a great measure to attract settlers to their bounds, and gradually correct ideas on this subject began to prevail. When the Revolution was complete, and a form of government was adopted which placed no denomination in the seat of power, the principle was recognized that so long as men do not violate law under the name of religion, and so long as they do not attempt to overthrow the constitution of civil society or sap the foundations of the State, they may be left to the worship and faith which their consciences approve, under the responsibility which they bear to the great moral Ruler of the world.

**REMALIAH** (re-mal'yah), the father of Pekah, king of Israel, 2 Ki. xv. 25, 27.

**REMETH** (re'meth), a city of Issachar, Josh. xix. 21. It is possibly the same with Ramoth, 1 Chr. vi. 73.

**REMIGIUS** (re-mij'us) was a monk of Fescamp, in Normandy, and a native of Italy. He followed the fortunes of William, duke of Normandy, to England, who rewarded him for his services with the bishopric of Dorchester, after having deposed Alexander, who then held the see, and who strenuously opposed the innovations of the conqueror. Leicester had been united to Dorchester, which continued to be the seat of this great see till it was transferred to Lincoln, A. D. 1088, by Remigius, who was thus the last bishop of Dorchester and the first of Lincoln. He objected to have his cathedral in an obscure place on the outskirts of a great diocese, and accordingly he had the see removed to Lincoln. He was a man of great natural talent, energy and resolution, as his victory over the archbishop of York demonstrated, the archbishop being violently opposed to the establishment of a bishop's seat at Lincoln, who insisted that he would lose a part of his jurisdiction by the arrangement.

**REMIGIUS**, the name of two ecclesiastics of the ninth century.

1. OF AUXERRE, a learned Benedictine, was educated in the abbey of St. Germain. He taught at Rheims, and attained great celebrity; and at length he went to Paris and opened the first public school in that city after the ravages of the Normans. He wrote "Commentary on the Psalms of David," besides various other works.

2. A Roman saint and Gallic prelate, was a native of Gaul, and was grand-almoner to the emperor Lotharius, who, about 853, promoted him to the archiepiscopal see of Lyons. He was a zealous defender of the opinions of St. Augustine on the subjects of grace and predestination, and condemned the propositions of John Scotus Erigena relating to the same subject. See SCOTUS ERIGENA. He died in 875.

**REMMON** (rem'mon), once so spelled, Josh. xix. 7, but properly RIMMON, which see.

**REMONSTRANTS** (re-mon'strants), the name given to those who, with Arminius, holding the free will of man and universal redemption, protested in 1610 to the states-general of Holland against the doctrines of their opponents. Their chief opponents were those who followed the lead of Gomarus, and they were called Anti-Remonstrants.

**REMPHAN** (rem'fan), or **REPHAN** (re'fan), a name quoted in Acts vii. 43 from Amos v. 26, where the Septuagint has *Raiphon* for the Hebrew *Chium*. It is clear that the Septuagint held the original to be a proper name, in which interpretation our own and most other versions have concurred. But this is by no means clear; for according to the received pointing, it would better read, "Ye bore the tabernacle of your king (idol), and the statue (or statues) of your idols, the star of your god, which ye make to yourselves." According to this reading, the name of the idol so worshiped by the Israelites is in fact not given, although the mention of a star still suggests that some planet is intended. Jerome supposes it may be Lucifer or Venus. But the Syriac renders the Hebrew by "Saturn, your idol," who was worshiped by the Semitic nations along with Mars as an evil demon to be propitiated with sacrifices. This now seems to be the general conclusion.

**REMY** (rā-me'), **SAINT**, or **REMIGIUS** (re-mij'e-us), an eminent archbishop of Rheims, who became celebrated for inducing Clovis, the king of the Salian Franks, to accept the Christian faith. His wife, Clotilda, who was niece of Gundebald, the king of the Burgundians, had sought his conversion in vain; but in a great battle he called on the god of his wife; and being successful, he and three thousand of his warriors adopted the Christian faith. As an evidence of his knowledge, it has been stated that when Remigius narrated to him the history of the crucifixion, the barbarian, who had no conception of its real significance, exclaimed, "Had I been present at the head of my Franks, I would have avenged the wrong!" Remigius died in A. D. 533. The church in Rheims which bears his name is greatly and deservedly admired.

**RENAISSANCE** (re-nas'sance), the name given to that style of architecture which arose on the Continent of Europe on the decline of the Gothic or pointed styles, and which extends into England. It prevails extensively in public buildings and in large edifices. It is characterized by the use of classical details mingled with French Gothic work. It began to prevail on the Continent of Europe at the time when the Tudor appeared in England.

**RENAN**, ERNEST. See STRAUSS, DAVID FRIEDRICH.

**RENNELL** (ren'nel), the name of two English divines, father and son.

THOMAS, D.D., dean of Winchester, and one of the most learned and eloquent preachers of his time, was born in 1753. In 1786 he was inducted to the living of Alton, in Hampshire, and in 1805 he was appointed to the deanery of Winchester. He published a volume of sermons, principally a selection from those which he preached at the Temple church, London, and in the cathedral of Winchester. This volume affords abundant proof that, both as a theologian and a scholar, in the most comprehensive sense of the words, Dr. Rennell was one of the most remarkable and accomplished men of the age. He died in 1840.

THOMAS, son of the preceding, was born in 1787, and was educated at King's College, Cambridge. On taking his first degree he entered into orders, and became assistant preacher to his father at the Temple church; in 1811 he published

"Animadversions on the Unitarian Version of the New Testament." In 1818 he was presented to the vicarage of Kensington, and in the same year he was elected Christian advocate in the university of Cambridge, in which capacity he published two excellent treatises, one entitled "Remarks on Skepticism, especially as connected with the Subjects of Organization and Life;" the other, "Proofs of Inspiration on the Grounds of Distinction between the New Testament and the Apocryphal Volume." In 1823, Mr. Rennell was presented to the mastership of St. Nicholas hospital and a prebend in Salisbury cathedral, but a violent attack of fever, which terminated in a gradual decline, put an end to the hopes of his friends and admirers in the following year. He died at Winchester, June, 1824, just as he had completed his last work, a new translation of Munster's "Narrative of the Conversion of Count Struensee."

**RENWICK** (ren'wik), JAMES, the famous preacher and martyr of the covenant, was born at Minnihi, Dumfriesshire, February 16, 1662. He attended Edinburgh University; but as he would not take the oath of allegiance, he was denied public laureation at the close of his academic career. His sympathies went along with the extreme party of the covenant, as opposed to those who were usually called the indulged; and even among the nonconformist section he began to see many defects and backslidings. At the request of the societies he went to Holland, and was admitted into the university of Groningen. Having been ordained by the classis of Groningen, he set sail for his native land, and in September, 1683, preached his first public sermon at the Moss of Darnead. The privy council of Edinburgh took the alarm and denounced him as a traitor. His life at once became one of incessant work and wandering through South-western Scotland. For about five years he was on the field of action—in perpetual danger, and yet undaunted. The other and larger body of Presbyterians stood aloof from him and denounced him, and their writings cut him to the heart; yet he continued unflinching in his work. At length, after numerous searches had been made for him, his hiding-place was discovered; and having been seized, he was committed to prison, and speedily condemned. On the 17th of February, 1688, he was led to the scaffold, where he died as he had lived. Renwick was the last who was put to death in Scotland for religious opinion; for the prince of Orange came over in November of the year of his martyrdom, and what in spring was punished as treason was welcomed in winter as the glorious Revolution.

**REPENT** (re-pent'), **REPENTANCE** (re-pent'ans). There are different original words rendered thus in our version of the New Testament. The Greek *metamelomai* implies generally the changing of one's mind or purpose after having done or resolved on anything, Matt. xxi. 29, 32; Heb. vii. 21; also with the idea of regret or discomfort superadded, Matt. xxvii. 3; 2 Cor. vii. 8. Another word, *metanoō*, is to have an after-view—that is, to alter one's views or mind, with a feeling of sorrow for them. It is used generally, Luke xvii. 3, and in an evangelical sense to indicate pious sorrow for unbelief and sin, and the turning from these to God and the gospel of Christ, Matt. iii. 2; Acts xxvi. 20. Genuine repentance is attended with external acts, Matt. xi. 21, and evidenced by

suitable fruit, Matt. iii. 8. For this true repentance, wrought in the heart by the divine Spirit, is not mere remorse, or dread of the consequences of transgression, but an ingenuous sense of the error, the shameful guilt, the guilt of sin. It cannot satisfy or expiate evil; but he who truly repents is well disposed to welcome and avail himself of the satisfaction and atonement made by the Lord Jesus Christ. Hence the gospel message is compendiously described as "repentance toward God and faith toward our Lord Jesus Christ," Acts xx. 21.

The Lord is sometimes said to repent, Gen. vi. 6; 1 Sam. xv. 11; not as though he felt regret as if he had taken a false step; he is incapable of any such emotion or alteration of mind, Num. xxiii. 19; but because he appears to change his course of conduct toward those who disobey and are unfaithful to his command.

**REPHAEL** (ref'a-el), one of the Levite porters, 1 Chr. xxvi. 7.

**REPHAH** (re'fah), a descendant of Ephraim, 1 Chr. vii. 25.

TOMB OF ST. REMY.—See Remy, SAINT.

**REPHAIAH** (re-fa'yah). 1. One of David's posterity, 1 Chr. iii. 21. 2. A captain of the Simeonites, 1 Chr. iv. 42. 3. A descendant of Issachar, 1 Chr. vii. 2. 4. See RAPHA, 3. 5. "The ruler of the half part of Jerusalem" who helped to repair the wall, Neh. iii. 9.

**REPHAIM**, **REPHAIMS**. See GIANTS.

**REPHAIM** (re-fa'im), **VALLEY OF**, a valley near Bethlehem where David twice defeated the Philistines, 2 Sam. v. 17-25; xxiii. 13. This valley, noted for its fertility, Isa. xvii. 5, is thought to be the plain a little south-west of Jerusalem. This, however, hardly answers to the word used in the original for valley—*emek*. Yet it must have been in this immediate neighborhood; for the boundary-line of Judah and Benjamin ran by, and it was close upon the valley of Hinnom, Josh. xv. 8; xviii. 16, where "valley of the giants."

**REPHIDIM** (ref'i-dim), a station of the Israelites in their way to Sinai, Ex. xvii. 1, 8; xix. 2. It was here that the people murmured against Moses because there was no water, and Moses was commanded to go with some of the elders and

MINT OF SYRIA.

not burn nor hang nor drown; all that was done by the civil power;" the reply being all the while obvious: "Yes, the State, as your servant and agent, did the work which you pronounced to be a duty; and had the execution which you ordered not been carried out, then the State would have been declared heretical, guilty of neglect and worthy of the condemnation of the Church." So thoroughly implanted in the mind of the age had the idea become that death was the legitimate award for heresy that at the time of the Reformation the influence of the Church on this subject affected many of the Reformers to a great extent. In England and in Scotland, when the supremacy of the pope was denied, the civil power at once grasped at supremacy in civil and ecclesiastical things. Henry VIII. punished men and women who refused to believe as he desired. So did Elizabeth; and though a change was gradually affecting the land, the old, cherished principle was still clung to, that it appertained to the State to dictate and even to control people in the religious doctrines which they should hold and avow. This is fully illustrated in the terrible enactments known

smite the rock that was in Horeb, from which there should then flow waters in abundance. The proximity of Rephidim to Horeb is thus evident. Travelers are not, indeed, agreed as to its exact position, Robinson placing it at some point in the *Wady es-Sheikh*, "not far from the skirts of Horeb, and about a day's march from the particular mountain of Sinai," and Stanley imagining it to have been in the *Wady Feiran*, a valley south-west of the *Wady es-Sheikh*. But if there is a doubt of the exact locality of Rephidim, there is none as to the fact that it was very near the place where soon afterward the law was delivered. The rock that was smitten was some distance from the camp; the miracle was performed in the sight not of all the people, but of chosen elders who went with Moses to the spot. And there is no improbability in supposing that this was higher ground, and that the stream miraculously produced flowed down to the encampment, and along the march, so as for a considerable time to have supplied drink to the tribes. In Rephidim Amalek fought with Israel, not improbably for the water with which the tribes were supplied; and in the battle, as Moses held up

**RESEDOS** (re-se'dos). This word, which is derived from the French "arrièredos," is used to designate a screen or an ornamental wall placed behind altars in cathedrals or large churches. In cathedrals of the first class this screen was of great height and ornamented with lavish taste and splendor, as may still be seen at Winchester, Durham and Exeter. In smaller churches, where the altar stood against the eastern wall, the "resedos" was not used, though an arcade or other ornamental carving was introduced on the wall.

**RESEN** (re'sen), a great Assyrian city between Nineveh and Calah, Gen. x. 12.

**RESERVATION** (rez-er-va'shun), the setting aside some portion of the sacramental elements for the use of the sick or for other purposes of devotion. Against this custom it is emphatically declared in the twenty-eighth article of the Church of England that "the sacrament of the Lord's Supper was not by Christ's ordinance reserved, carried about," etc.

**RESHEPTH** (re'shepth), one of Ephraim's descendants, 1 Chr. vii. 25.

**RESPONDS** (re-spondz'). In the ancient Church, in some places, short hymns or anthems were introduced, and the reading of the Scriptures and the offering of prayer was suspended, so that they might be sung. These were known as "responses." The "long respond" was brought in at the end of the lessons.

**RESPONSE** (re-sponse'). In divine service in the Protestant Episcopal Church and in the Church of England the people, in the reading of the psalms and in certain of the prayers, alternate with the minister, or "respond," so as to join with him in worship. In order that the service may be reverently performed

the Psalms are duly pointed, and the "responses" in the service of prayer are set forth, so that all the worshippers may duly take part and avoid all confusion; and great importance is attached to the fact that by such order the laity are enabled to enter largely into the act of worship instead of being merely auditors or spectators of that which is done by an officiating minister.

**RESTITUTION** (res-te-ten'shun), an act of justice in which that is restored to a man of which he has been unjustly deprived. It was provided in the Mosaic law that for actual theft restitution should be four or five fold; for trespass, carelessness, misadventure the amount was graduated according to the culpability, Ex. xxii. 1-15. Hence the sentence of David against the supposed robber of the poor man's lamb was exactly according to statute, 2 Sam. xii. 6; compare Luke xix. 8.

**RESTORATIONISTS** (res-to-ra'shun-ists), the name by which those are designated who believe that all men shall be eventually saved. Among those who hold this doctrine there are great diversities of details, but generally they hold that the righteous shall be made happy after

death, and that those who have been impenitent and wicked shall be visited with suffering, which nevertheless is of a purifying, humbling character; that the discipline of suffering in eternity shall subdue the will, change the heart, lead to repentance, and eventually prepare the soul for the acceptance of a condition of peace and happiness to which God will ultimately bring all his rational and accountable creatures.

**RESURRECTION** (rez-nr-ek'shun). The rising again of Jesus after he had been crucified and buried is one of the cardinal points of Christian faith, 1 Cor. xv. 14-18. It has been embodied in the standard creeds of the Church and has always been maintained by orthodox believers. Ancient prophecy appeared to foreshadow it, Ps. xvi. 10, and ancient history to typify it, Jon. i. 17; Matt. xii. 40. And our Lord himself in his teaching repeatedly told his disciples that he should be put to death and be raised again the third day, Matt. xvi. 21; xvii. 9. The course of events which led, step by step, to his death and burial, need not here be described.

Never was discomfiture more complete than that of his disciples and followers. There were only a few women left to lament the dead one, while two or three of the better class had the charity to give him burial. There was evidently no thought—in the circumstances there could be none—of taking up the work which Jesus had failed to accomplish; for the strange rumor, three days after, of his having been seen alive was altogether disbelieved by those who had been his disciples, and mocked at as an idle story.

And yet in six or seven weeks these men, of the peasant class for the most part, appear again in public, in the heart of Jerusalem, and in the presence of the multitudes who were thronging to a great national feast begin to preach, not just some fragments of their dead Master's doctrine, but the entire speculations which men devising an imposture generally commence with, but a matured system, complete in all its necessary parts, the Christian religion, in such shape and form and consistency and fullness that the accumulated wisdom of eighteen centuries, the acutest and most subtle minds of the long line of later theologians, have been able only to illustrate that which they received, and have not made any real addition to it. And this system these unlearned men open out and maintain with the most remarkable boldness and the most astonishing skill in applying the ancient and venerated Scriptures of the nation to its support, basing the whole of their doctrine on this great fact, that Jesus, the crucified, was risen again. All in the Scriptures heretofore obscure had now a flood of light on it, testifying the importance of the truth made known to them.

So that this was not merely a tale of wonder which they insisted on for a temporary purpose. They persuaded thousands that they spoke the truth; and Christianity, based upon the fact of the death and resurrection of Jesus, began at once to exercise that extraordinary influence which even its enemies allow it, of refining and purifying those who embraced its doctrines and obeyed its precepts, gaining ground continually, in the face of the most cruel and continued persecutions, till, as our own eyes behold, it is accepted by the most enlightened nations.

Now, let an unbeliever account for these results if he can. Could the fact on which the gospel teaching is based be a mistake? Could it be a concerted lie? We have contemporary evidence.

Setting apart the narrative of the four Evangelists, let us look for a moment at the testimony of St. Paul. His First Epistle to the Corinthians contains deliberate statements of the facts, a narration of Christ's several appearances to Peter, to the twelve, to five hundred brethren, most of whom were still alive, to James, to all the apostles. Let it be remembered that Paul was speaking of what happened in his own lifetime, when he was grown up, that if not at Jerusalem at the juncture he was there soon after, that he was on intimate terms with the rulers, and must have heard from them their explanations, for at first with their authority he violently persecuted Christianity. No delusion could be palmed on such a man; so that there is no fact in history authenticated by better evidence.

But suppose it false, and what follows? Literally that you have the most remarkable results—results lasting to our own days—proceeding from no adequate cause. We shall take the liberty to remind unbelievers that there are certain laws of nature which cannot be transgressed; that causes are related to and commensurate with their effects; that events flow on in definite sequence. If they are credulous enough to suppose that the mighty superstructure is destitute of any foundation, that the whole was the hurried invention of a few enthusiastic men, we shall ask, How came they to be enthusiastic in such a matter? how came they, utterly disheartened, dispersed and ready to return to their former humble occupations, John xxi. 2, 3—how came they after their Master's death to take up the notion which they would not listen to in their Master's life and to propound the gospel system all at once in its breadth and power, when it must have been clear to their minds that, whatever the ultimate success, to them there could be only shame and discredit, a miserable life and a hopeless death? Never was prostration at first so complete; never was confidence afterward so certain and successful. And why? There must have been an adequate cause. Common sense, the ordinary laws of reasoning and of nature, assure us that it could have been only fact, stern fact, neither deliberate fraud nor deluded folly, that compelled them to accept the truth of the miracle of Christ's resurrection. Yes, indeed, "now is Christ risen from the dead, and become the first-fruits of them that slept," 1 Cor. xv. 20. There is no one fact in the history of mankind which is proved by better and fuller evidence of every sort, to the understanding of a fair inquirer, than the great sign which God has given us that Christ died and rose again from the dead.

Of the nature of Christ's resurrection-body we know very little. He took again the flesh that died, and there were still the marks of suffering on it, John xx. 20, 27. But yet there was a change; the mortal had put on immortality. He was sometimes hardly recognized by his friends, till the well-known tones and well-remembered actions assured them that it was the Lord, Luke xxiv. 16, 30, 31, 37; John xx. 15, 16. And he passed strangely in and out among them. It was not, perhaps, till his ascension that his body assumed that glorious port which for a while it had on the mount of transfiguration, Matt. xvii. 2; Mark ix. 2, 3; Luke ix. 29, and which John beheld in Patmos, Rev. i. 13-16. But this it is impossible for us to decide; sufficient that Christ's resurrection put the seal upon his death, and proved that his sacrifice was adequate and accepted. Man's mighty

debt was canceled, and therefore the prison of the grave was opened. So that, as the apostle declares, Christ "was delivered for our offences and was raised again for our justification," Rom. iv. 25.

Scripture always links the resurrection of Christ with that of his believing people: "Christ, the first-fruits; afterward they that are Christ's at his coming," 1 Cor. xv. 23. Indeed, if he is the head and his servants the members of one mystical body, 1 Cor. xii. 27, life cannot reign in the one and corruption in the other. Rather the life from the head will be communicated to all the subordinate parts, and body as well as soul shall be quickened into immortality, John xiv. 19. Nor shall the resurrection comprise only the faithful. Our Lord has told us that "all that are in the graves shall hear his voice and shall come forth," John v. 28, 29. The divine power has heretofore raised men from the dead, for He who could at first create could as easily restore the life that had per-

ago are now dispersed and belong to it no more—nay, may help to constitute the body of some one else. With what body, then, shall the dead come? What particles shall be gathered to form the resurrection-body? The apostle indignantly answers such a question by pointing to the natural growth of the corn: it "is not quickened except it die." And it springs up changed, but yet the same, yielding the counterpart of that which was sown, 1 Cor. xv. 36-38. So shall be the resurrection of the dead; buried in corruption, they rise incorruptible. And just as, though the particles of our living bodies are in perpetual flux, we yet lose not our personal identity, so doubtless, by the mighty power of God, the changed and glorified body will be felt to be the same; with new powers and fresh capabilities, with vigor expanded and shape (it may be, we know not) altered, the development of eternal life shall not affect the man's personal identity.

OBELISK ON NASEBY FIELD.—See MONUMENT, OBELISK and CROMWELL, OLIVER.

his hands Israel prevailed. Hither it was, too, that Jethro came to visit his son-in-law, bringing Zipporah and her two sons.

**REPROBATE** (rep-ro-bate). This word occurs in Jer. vi. 30, where the idea is that of base metal which will not endure the trial of the fire. And so the general meaning, wherever the term is found, is of one who cannot abide the test to which he may be put—that is, worthless, and consequently rejected, Rom. i. 28; 2 Cor. xiii. 5, 6, 7.

The words "reprobate" and "reprobation" have in later theological discussion been taken to imply a condemnatory decree of God against certain persons. But this meaning does not appear in Scripture.

**REQUIEM** (re'kwe-em) is the name of a mass performed in the service of the Romish Church for the repose of the souls of the dead. It is so called from the first word of the "introit": *Requiem eternam dona iis Domine—i. e., "O Lord, grant eternal rest to them."* The word is also applied to musical compositions which are performed at funeral services of an important character. Mozart, Cherubini and others are celebrated for their compositions in this department.

RUINS OF THE CANTERBURY MONASTERY.—See MONASTERY and CANTERBURY.

ished. Some examples we have in the Old Testament, 1 Ki. xvii. 17-23; 2 Ki. iv. 18-37; xiii. 20, 21; and in the New, Christ both raised the dead himself and also gave the same power to his apostles, Matt. ix. 18-26; Acts ix. 36, 41. There can be no doubt that those so raised died again in the course of nature. But it is probable that the saints who came out of their graves after Christ's resurrection received then their incorruptible bodies, a part of the train of the mighty Lord of life and immortality, Matt. xxvii. 52, 53.

To the worldly-wise the doctrine of the resurrection of the dead has always appeared incredible. Our Lord taught it from the Pentateuch to the sneering Sadducees, Matt. xxii. 31, 32; and Paul preached it to the mocking philosophers of Athens, Acts xvii. 18, 32. The special objection was, "How are the dead raised up? and with what body do they come?" 1 Cor. xv. 35. And this is the objection which is still urged. The body of a living man is continually changing, it is said, so that the particles which belonged to it a few years

ago are now dispersed and belong to it no more—nay, may help to constitute the body of some one else. With what body, then, shall the dead come? What particles shall be gathered to form the resurrection-body? The apostle indignantly answers such a question by pointing to the natural growth of the corn: it "is not quickened except it die." And it springs up changed, but yet the same, yielding the counterpart of that which was sown, 1 Cor. xv. 36-38. So shall be the resurrection of the dead; buried in corruption, they rise incorruptible. And just as, though the particles of our living bodies are in perpetual flux, we yet lose not our personal identity, so doubtless, by the mighty power of God, the changed and glorified body will be felt to be the same; with new powers and fresh capabilities, with vigor expanded and shape (it may be, we know not) altered, the development of eternal life shall not affect the man's personal identity.

**RETRO CHOIR**, the alleys at the sides of the choir, behind the stalls or the body of the choir in a cathedral.

**RETZ** (retz), JEAN FRANÇOIS PAUL DE GONDI, a French prelate, was born in 1614. Having entered orders, he combined the ecclesiastical state with a licentious life for several years. Moved by ambition, he then devoted himself to

theology, became an accomplished preacher and was named coadjutor to the archbishop of Paris, his uncle, whom he succeeded. In the discharge of his duties he incurred the enmity of Mazarin, and in opposition to him threw himself into the ranks of the Fronde, and became a leader in the struggle. The pope created him a cardinal; but on the re-establishment of order he was arrested and thrown into prison, but escaped. Being pardoned, he returned to Paris and retired into the abbey of St. Denis, where he compiled his celebrated "Mémoires" of himself, which give a graphic description of his times and contemporaries. He died in 1679.

**REU** (re'u), a descendant of Shem and the son of Peleg, Gen. xi. 18, 19. We only know his place in the genealogy, and the age he attained—namely, two hundred and thirty-nine years.

MOHAMMEDAN MOSQUE.—See MOSQUE.

**REUBEN** (ru'ben), the first-born of Jacob by his wife Leah. The first thing recorded of him, after a notice of his gathering mandrakes for his mother while he was yet a boy, Gen. xxx. 14, is his great sin with Bilhah, of which Jacob heard, Gen. xxxv. 22, and on account of which he transformed his dying blessing into something little better than a curse, Gen. xlix. 3, 4, "Unstable as water, thou shalt not excel." The dying blessing of Moses, too, is at least equivocal, Deut. xxxiii. 6. And in 1 Chr. v. 1, 2, the statement is made very precisely that he lost both the double portion which fell to the first-born and the right to give the supreme ruler to Israel, these two advantages falling to Joseph and Judah respectively. In the arrangements for encamping and for marching through the wilderness, Reuben occupied a place between these two; his tribe was one of the three that pitched on the south side of the tabernacle, and marched in the second of the four divisions; and of these three tribes it was the leader, Num. ii. 10-16; x. 18. According to this order, the prince of the tribe of Reuben was the fourth to

make his offering at the dedication of the tabernacle, Num. vii. 30; although the first place is given to it in the mission of the spies, Num. xiii. 4, as in many other cases where the lists are in the order of the ages of the sons of Jacob.

A certain weakness in Reuben's character may perhaps have had its influence as much as superior principle in leading him to endeavor to save the life of Joseph when the other brothers hardened themselves against the anguish of his soul, Gen. xxxvii. 21, 22, 30; xlii. 22. Certainly, whatever right feeling there was in his offer to make his two sons hostages for the safety of Benjamin in the journey to Egypt, Gen. xlii. 37, his father refused the security, though he afterward accepted the same at the hands of Judah. Reuben had four sons, who became heads of four houses in Israel, Gen. xlv. 9; Ex. vi. 14; Num. xxvi. 5, 6; 1 Chr. v. 3-9, in which last passage some of their genealogies are given. In the first and the second census we find their numbers to have been, Num. i. 20, 21; xxvi. 7:

	Trope.	Division.
First, . . . . .	46,500	151,450
Second, . . . . .	43,730	106,430

Vacillation like Reuben's, as well as ambition, may have led three princes in Reuben to combine with the Levite Korah in that disastrous conspiracy against Moses and Aaron which brought utter and immediate ruin upon themselves and all connected with them except the sons of Korah, Num. xvi.; xxvi. 9-11; Deut. xi. 6. Moses may have had some reason on this account to suspect the rightness of heart in the Reubenites, when they, in company with the Gadites (who stand first always except in the opening statement, as if they were the real leaders whom the Reubenites followed), requested to be spared crossing the Jordan into Canaan, and to have lands assigned to them on the eastern side of the river. On further explanation, that they desired this territory because it was suitable for their flocks and herds, and on their pledging themselves to accompany their brethren and aid them till the conquest was complete, Moses did assign the land which he had conquered from Sihon and Og to the Reubenites, Gadites and half tribe of Manasseh; of these the Reubenites held the portion farthest to the south, Num. xxxii. A fuller account of the cities embraced in their territory is given in Josh. xiii. 15-23.

The tribe of Reuben, like its progenitor, does not appear to have taken a leading position at any time in the history of Israel. In the song of Deborah, Jud. v. 15, 16, it is noticed with disapprobation among the tribes who failed to come to the help of the Lord. The passages at the end of the two verses are obviously intended to resemble each other as closely as possible, the "great thoughts of heart," or resolutions, differing only by a single letter from the "great searchings of heart," rather deliberations or dubitations, which arose in consequence of the failure in carrying out the resolutions. It was an instance of the sentence "unstable as water." On occasion of Ish-bosheth being set up as king in opposition to David, Gilead followed his fortunes, 2 Sam. ii. 9; but on occasion of the tribes gathering to Hebron to make David king of all Israel, the Reubenites were along with the others from the east side of Jordan in very great numbers, 1 Chr. xii. 37. We have one notice of the Reubenites by themselves, in the days of Saul, waging a successful war with the Hagarites, 1 Chr. v. 10; and, ver. 18-22, a notice of another war, in which they acted along with the rest of the east-

ern Israelites against several Arab tribes, but at a time not specified. These two tribes and a half seem to have run the same course of assimilation to their idolatrous neighbors, and they were involved in a common judgment, first by the conquests of Hazael, 2 Ki. x. 32, 33, and finally by the exile into which they were carried by Pul and Tilgath-pilneser, the kings of Assyria, 1 Chr. v. 25, 26. In the description of the restoration of Israel in Messianic times, Ezek. xlvi. 6, 7, 31, Reuben has a portion allotted between Ephraim and Judah, and a gate in Jerusalem beside Judah and Levi on the north.

**REUCHLIN** (renk'lin), JOHANN VON, an eminent German philologist, was born at Pforzheim, in 1454. After serving in different political functions he became, in 1520, professor of Greek and Hebrew at Ingoldstadt, whence he removed to Tübingen, thence to Stuttgart, where he died 28th December, 1521. Besides his memorable services in connection with classical literature and general culture, he may be regarded as the principal promoter of the study of Hebrew in his day. Reuchler is famous as the teacher of Mehlenthon and the compiler of the first Hebrew grammar and lexicon.

**REUEL** (ru'el). 1. One of the sons of Esau, Gen. xxxvi. 4, 10, 13, 17. 2. Ex. ii. 8. See JETHRO, RAGUEL. 3. Num. ii. 14. See DEUEL. 3. A Benjamite chief, 1 Chr. ix. 8.

**REUMAH** (ru'mah), a concubine of Nahor, Abraham's brother, Gen. xxii. 24.

**REVELATION** (rev-e-la'shun). Revelation is the uncovering and displaying of that which before was hidden. In a theological sense it is a disclosure by the Deity to his creatures of truths which they could not have known by the contemplation of his works or the deductions of their natural reason.

The possibility of such a revelation can hardly be denied by those who admit the existence of a God and the formation of the universe by his fiat. He who could create beings with powers of intelligence could surely act upon these powers and make such beings conscious of the communications they were receiving. And if we are to regard God as the moral Governor of the world, there is a high probability that he would make his subjects acquainted with those salutary laws by which he intended to rule. Just reasoning corroborates the fact that man never does "by searching find out God;" and the state of morals in countries, both ancient and modern, where revelation is not known, is proof sufficient that man by himself is unable to apprehend and to attain the chief good.

As to the mode of such communication, or the way in which the eternal Spirit acts upon the human spirit and brings man into a definite conscious relation to himself, nothing need be said here. Neither is it requisite to argue the question whether, the necessity of a revelation being presupposed, it would be more desirable that it should be made to every individual or committed to a few with sufficient credentials to establish it to the satisfaction of the rest. We have at present rather to do with a question of fact. It is alleged that such a revelation has been made, that teachers specially commissioned by the Deity have appeared to make known his will. The matter of chiefest import is to ascertain whether these

teachers have possessed the knowledge and held the commission to which they pretended; or have they been deceivers or self-deceived?

That impostors and fanatics have advanced the largest claims is sufficiently evident. There must, therefore, be some criteria which may distinguish fact from fiction; and it is simply reasonable that if teachers who profess to come from God possess knowledge greater than men can reach, and exercise powers greater than men can wield, they must have received these from above; to such men we may properly conclude that a revelation has been made. This knowledge and this power are evinced by prophecy and by miracles, which have been fairly considered adequate proofs of revelation. They are appealed to in support of the revelation which we maintain. The Deity challenges the world to declare, as he can, the future, Isa. xli. 22, 23, 26; xlii. 9; xlv. 7, 8; and the great Teacher who appeared nearly two thousand years ago in Judea pointed to the mighty works he wrought as evidence sufficient of his divine mission, John x. 37, 38; xiv. 10, 11.

In estimating the truthfulness of alleged revelation we have certain checks. God cannot contradict himself. He lets us draw very plain deductions from what we see in the book of nature; these have sometimes been thought inconsistent with the book of revelation. They may be inconsistent with the glosses put upon that book. But the genuine voice of revelation has nothing to fear from investigations in any other field of knowledge. Sooner or later all that really proceeds from God will be found in admirable harmony. Truth will not suffer by large inquiry.

The preceding observations tend to show the possibility and the necessity of a divine revelation, and point out some of the criteria by which to try the pretensions of that which professes to come from God. To us it presents itself in written form. The communications which are said to have been made by the Deity are embodied for our use in the Bible. Some notice, therefore, must be taken of the shape which, so far as regards ourselves, they have assumed.

The structure of such a record must be looked at. It is reasonable to believe that God would act toward his creatures on an intelligent plan, his object in our world being to manifest his glory in the restoration of those who had wandered from his obedience. This plan would be apparent through all the parts of a revelation proceeding from him. If, then, we can perceive through the Bible, the books of which were composed at widely different periods, the same general plan, we have a strong presumption in favor of its being a revelation from God. Now, a revelation must not only disclose that which could not otherwise be known—such as the doctrines respecting the nature, attributes and character of God, the sin and condemnation of man, the mode of salvation through Christ and the work of the Holy Spirit—but must involve a moral probation. Else men would be treated as machines, and human responsibility would be destroyed. But if the great purpose of probation is to be answered, there must be preparation, a training, so to speak, of individuals and of the world. Revelation could not, in this view, be entire at once. No single period in the world's history could be fixed on in which the whole divine plan might be propounded without violating the condition of moral probation to most of the generations of mankind. There must be a gradual development if the graces of faith and hope are to be exercised with practical effect upon human con-

duct. This is just the nature of the Bible revelation, propounding truth by degrees, human language and human instruments being employed for this, so as to give the probationary purpose its fullest effect, sufficient being made known for the age to which any part of the revelation was made, and further developments coming after, not contrary to but illustrative and confirmatory of that which had preceded, modeled after such a manner that while each, as just said, was thoroughly suitable to its own time, the whole should, when completed, be of perfect consistency, and continue to serve its purpose of probation through the rest of the generations of the earth. The revelation must be coextensive with those who were to be benefited by it, and must therefore travel along the course of man's history; and to answer its end it must be shaped, without derogation from God's holiness, so as to meet man's ignorance, weakness and sin.

Now, the revelation of the Bible, the more closely it is examined, will be more evidently seen to answer to the conditions adverted to. Its forms of history, biography and prophecy, instead of a series of abstract propositions, its divine side and its human side adapting it as the teacher and the touchstone of sinful men; and, above all, the marvelous utility of it, the later portions being the natural full growth of the earlier germ—these considerations, taken together with the evidence and criteria previously noted, may well convince us that the Scripture revelation proceeds from God in mercy to his creatures.

**REVELATION** (rev-e-la'shun), BOOK OF. This book is commonly styled the Apocalypse, or the Revelation—i. e., the revealing or unveiling of that which has been hidden, see Rom. xvi. 25, 26—as consisting of revelations which were made by our Lord Jesus Christ to the apostle John. This took place when he was in the Isle of Patmos, in the *Ægean* Sea, whither he was banished, as is generally supposed, by the emperor Domitian, A. D. 94 or 95. Some, indeed, think that the banishment and the revelation must be placed before the destruction of Jerusalem—i. e., during the persecution of Nero, A. D. 67 or 68—but the arguments adduced to support this opinion are by no means conclusive. The earliest and best informed Christian writers (such as Irenæus, Eusebius and others) expressly ascribe the book to the age of Domitian; and the internal evidence afforded by allusions to the existing state of things in the seven Asiatic churches favors the later date, especially the great declension which appears to have taken place in the Ephesian church, see ch. ii. 4, 5, which Paul, in his Epistle written from Rome as late as A. D. 63, had warmly commended for the fidelity and love of its members.

The scope of this book is indicated in ch. i. 19; it was to make known the existing state of the Asiatic churches, "the things which are," and to reveal the future history of the Christian Church through its long pilgrimage to its eternal resting-place, "the things which shall be hereafter." Hence we may thus distribute the contents:

After the title, ch. i. 1-3, and introduction, ch. i. 4-9, we have—

I. The first vision, in which epistles with suit-

able warnings, exhortations, reproofs and promises are dictated to the seven churches in Asia, ch. i. 10-iii. 22.

II. Other visions, unfolding the mystery of God in the future fortunes of the Church and the downfall of all her enemies, till the final glorious triumph, ch. iv. 1-xxii. 5.

III. In conclusion, there is a solemn asseveration of the truth of what had been spoken, a blessing on those who keep the sayings of this prophecy, corresponding to that in ch. i. 3, and a warning to expect their speedy accomplishment, with a final benediction, ch. xxii. 6-21.

Of course no interpretation of this book can be given here, and the reader must be referred to the works of professed commentators. It can only be said that there have been three main schools of expositors:

1. The historical, who interpret according to

MOHAMMEDAN MOSQUE.—See MOSQUE.

the course of events from the earliest age to the present time, marking fulfillments in the successive facts of history.

2. The preterists, who consider that the whole or nearly all was long ago fulfilled in the victory of Christianity over heathenism and Judaism.

3. The futurists, who believe that, with the exception of the seven epistles, the prophecy refers exclusively to things which have not yet come to pass.

But every devout reader, even though he may be unable fully to unravel the symbolic visions of the book, will find enough in it for profit. He cannot fail to see somewhat of the conflict in which the Christian Church has to contend, and to learn the glorious rewards of victory. He will be stirred up, therefore, to a circumspect and holy walk, and will be encouraged by the gracious invitations and remarkable promises herein to press onward in holy hope toward the blessed end. An historical interpretation by no means excludes a higher spiritual fulfillment.

Although not written in metre, the Apocalypse is as truly a poem as any of the prophetic books of the Old Testament. It is constructed upon a regular plan, which is gradually unfolded through a series of connected parts until the consummation is reached in a highly-wrought description of the New Jerusalem. It is filled with scenes of beauty, sublimity and terror, depicted with a vivid power not inferior to that of Ezekiel. Some of its imagery is original; much, as in the writings of the later Hebrew prophets, is founded

**REYNOLDS** (ren'oldz), **EDWARD**, bishop of Norwich in the seventeenth century, a prelate of considerable talent and polemical ability, was born at Southampton, about 1569, and was educated at Merton College, Oxford, of which society he became a Fellow, and eventually warden. A strong Calvinist in his religious opinions, he entered the ministry, and obtained the living of Braynton, with the parish of Lincoln's Inn; and on the breaking out of the civil commotions distinguished himself by the zeal of his animad-

tion, South Carolina, was born in 1798, near Bardstown, Kentucky, of an old Maryland family. He was educated in Baltimore, and he filled many ecclesiastical positions of importance in his native State. As vicar-general to Bishop Flaget he was well known, and as rector of St. Joseph's College and president of the Nazareth Female Institute of Kentucky he was eminently useful. He was consecrated bishop of Charleston, South Carolina, in 1844, and he died in 1855.

**REZEPH** (re'tsef), a city which occurs among those subdued by the Assyrians, 2 Ki. xix. 12. It is supposed to be the same that Ptolemy mentions, under the name of Resapha, as a city of Palmyrene, nearly a day's journey west of the Euphrates.

**REZIA** (rets'ya), a chieftain of Asher, 1 Chr. vii. 39.

**REZIN** (re'tsin). 1. The last king of Damascus-Syria, slain by Tiglath-pileser, 2 Ki. xv. 37. 2. One of the families of the Nethinim.

**REZON** (re'tson), an officer of Hadadezer, king of Zobah, who established the independence of Damascus, and made it the seat of the kingdom of Damascus-Syria, so often mentioned in the history of the Hebrew kingdom, 1 Ki. xi. 23, 24.

**RHEES** (rees), **MORGAN JOHN**, D.D., was born in Wales, in 1760. In 1794 he came to this country and settled in Pennsylvania, at Beulah, whence he removed to Somerset. He edited "The Welsh Treasury," and published "Welsh Lyrics," and orations and discourses. He died in 1804.

**RHEGIUM** (re'je-um), a city on the coast of Italy, near its south-western extremity, opposite Messina, in Sicily, Acts xxviii. 13. It is now called Reggio, and is the capital of Calabria.

**RHEIMS** (reemz), anciently **DUROCORTORUM**, is one of the most venerable of the archiepiscopal cities in France. Christianity is said to have been established in the city about A. D. 360, and its cathedral, which is one of the most important in Europe, was founded A. D. 400. It met the usual fate of all such structures, but the present cathedral is exceedingly grand and imposing. The church of St. Remy, which originally belonged to a Benedictine monastery, is also equally celebrated. The Porte de Mars, one of the gates, which was built by the Romans as a triumphal arch in honor of Cæsar and Augustus, is now repaired, and it is a truly splendid structure, showing the style of the age.

**RHESA** (re'sa), the father of Joanna in the genealogy of our Lord, Luke iii. 27.

**RHETOR** (ret'or), in the Greek Church—1. A preacher; 2. An interpreter of the patriarchal court; 3. A name applied to St. Paul.

**RHETORII** (re-to're-e), followers of Rhetorins in Egypt, who fell into several heresies, and who perhaps like many in the early centuries of the Church should not be recognized as really holding the Christian faith.

**RHINOCEROS**. See **UNICORN**.

**RHODA** (ro'da), a servant-maid mentioned in Acts xii. 13.

CATHEDRAL OF RHEIMS.

upon the earlier inspired books. But of these it is chiefly the poetical portion which is reproduced.

In the use of symbolic vision and representation this book most closely resembles the writings of Ezekiel, Daniel and Zechariah, of which it may almost be said to be a continuation. It should be studied in connection with those books, and particularly with the prophecies of Daniel; but it is highly probable that the periods spoken of, and the enemies of the Church described, are not the same, just as the Babylon of the Apocalypse is not the Babylon of Isaiah and Jeremiah.

versions against the court party. This procured his election as one of the Westminster Assembly of Divines; and he also assisted at the conference held in the Savoy, which was followed by his advancement to the deanery of Christ Church. From this preferment he was, however, ejected for declining the test in 1651. In 1660, much to the scandal of the Low-Church party, with which he had hitherto acted, he accepted the bishopric of Norwich, which he held till his death, in 1676.

**REYNOLDS**, **IGNATIUS ALOYSIUS**, D.D., who rose to be Roman Catholic bishop of Charles-

**RHODES** (rôdz), **RHODUS** (ro'dus), a well-known island off the coast of Asia Minor, over against Caria. It was in the fifth century before Christ that the city of Rhodes was built. The Rhodians were skillful sailors, and for a long time their fleets ruled the seas. They retained a degree of liberty under Roman supremacy, and it was not till the reign of Vespasian that Rhodes became a Roman province. There was a Jewish population there in Maccabean times, 1 Macc. xv. 23; and the more modern history of Rhodes, as the stronghold of the knights of St. John of Jerusalem, is very interesting. St. Paul touched there on his voyage from Miletus to Palestine, Acts xxi. 1.

**RHODOCUS** (rod'o-kus), 2 Macc. xiii. 21, a Jewish traitor.

**RHOSMARKET** (ros'mar-ket). In South Wales there are many early churches which are of great value, as indicating the rude style of the Norman, before the rich mouldings began to prevail when the taste and wealth of later ages rendered the early cathedrals and great churches of England so imposing. The peculiar situations in which many of them are placed, and the romantic scenery around them, add to their attractiveness. The engraving on this page of Rhosmarket Church, near Milford Haven, is a good example of this early style.

**RIBADENEIRA** (rib-a-de-nai'rah), **PETER**, a celebrated Spanish Jesuit, was born at Toledo, in 1527, and was one of the favorite disciples of Loyola. He studied at Paris, whence he went to Padua, and afterward to Palermo, where he became a teacher of rhetoric. He died at Madrid, in 1611. He is chiefly distinguished for his lives of various saints and Jesuits, particularly that of Loyola, written with much candor and good sense.

**RIBAI** (ri'bi), the father of Ittai the Benjamite, who was one of David's thirty heroes, 2 Sam. xxiii. 29.

**RIBAND** (rib'and), Num. xv. 38. See **HEM OF GARMENT**.

**RIBLAH** (rib'lah), a city on the north-east frontier of Palestine, in the territory of Hamath, on the great line of road which led from Babylon into Judea. It was here that Jehoahaz was put in bonds by Pharaoh-nechoh, and here afterward were the Chaldean headquarters in Nebuchadnezzar's invasion, Num. xxxiv. 11. Traces of this city exist about twenty miles south-west of Hums on the Orontes, still called *Ribleh*.

**RICCI** (rik'che). The name of three noted Italian ecclesiastics.

**LORENZO**, the last general of the Jesuits previous to their suppression by Pope Clement XIV., was born at Florence in 1703; entered into the order of St. Ignatius at the age of fifteen, became successively spiritual director of the Roman college and secretary of his order, and succeeded, in 1758, to the office of general. On the suppression of the Jesuits he was confined in the castle of St. Angelo, and there died, in 1775.

**MATTEO**, a celebrated Jesuit, the founder of Roman Catholic missions in China, was born in 1552. He entered the order of Jesus in 1571, and followed, in 1577, Father Valignan in his voyage to East India. Ricci was appointed by

his superiors missionary to China. He prepared himself for the difficult undertaking by learning the Chinese language, and set out for Canton, where he obtained leave and means from the governor to proceed further into the interior of the country. He acquired through his learning and proficiency in Chinese lore the esteem of several mandarins and of the imperial court itself. Whilst teaching European science and art to Chinese students, he succeeded in converting many of them to the doctrines of Christianity. He was much revered by his proselytes, and on his demise, which occurred in 1610, was buried with great honors in a temple near Peking. He wrote various works in Chinese, among which is a "Treatise on the True Doctrine of God."

**SCIPIONE**, an Italian prelate, was a nephew of the preceding, and born at Florence in 1741. He was raised to the bishopric of Pistoja and Prato in 1786, and distinguished himself by strenuously seconding the grand duke Leopold in the attempt to introduce a reform into the ecclesiastical discipline of the duchy. By doing this he incurred the displeasure of the pope, was obliged to resign his bishopric and subsequently underwent much persecution, though he became reconciled to the holy see, in 1805, by signing a formula of adhesion to the bulls which he had objected to. He died in 1810.

**RICE**, **JOHN HOLT**, D.D., was an eminent Presbyterian minister who held the position of professor in the Union Theological Seminary in Virginia, which was established in the year 1824. He was born in 1777 at New London, in Bedford county, Virginia, and died in Prince Edward county, Virginia, in 1831. He acted as tutor in Hampden Sidney College, and he took a leading part in founding the theological seminary in which he was made a professor. He was exceedingly eminent as a preacher, and in Richmond, where he held a charge, he was greatly admired and loved. He originated and edited the "Evangelical and Literary Magazine," wrote on the history of the Presbyterian Church in his native State, and he published several biographies. He was one of the most influential ministers of the Presbyterian Church in the Southern States.

**RICE**, **LUTHER**, was born at Northborough, Massachusetts, in 1783, and educated at Williams College, whence he went to study theology at Andover. He was one of the first who decided on a missionary life. He was ordained in 1812, at Salem, and at once he left for Calcutta. Adopting Baptist principles, he returned from India to awaken the Baptist churches on the subject of missions, and in this work he labored with much energy for several years. He then settled in Virginia, and lent his aid to the founding of Columbian College, District of Columbia. In this work he served the cause of education very faithfully. He died in Edgefield district, South Carolina, in 1836.

**RICHARD** (rich'ard), commonly called **ARMACHANUS** (ar-ma-ka'nus), an ecclesiastic of the fourteenth century, is said by some to have been a native of Devonshire, and by others of Ireland. He studied at Oxford, and subsequently became dean of Lichfield, and in 1347 was advanced to the Irish see of Armagh. While at Oxford he honorably distinguished himself by his opposition to the mendicant orders, whose affectations of poverty

and other superstitious practices and irregularities he exposed in his lectures. After being raised to the see of Armagh, he also strenuously argued against the encroachments of the friars on the duties of the parish priests, and endeavored to show that although Jesus Christ was poor he never affected mendicancy. Doctrines so opposed to the principles of the mendicant orders were of course forcibly resisted by them, and he was obliged to repair to Avignon to defend himself before Pope Innocent VI., who decided in favor of the friars. This able and sensible prelate died in 1360, at Avignon. He translated the New Testament into Irish, which translation was found in the wall of his cathedral, in 1530.

**RICHARD I.**, king of England, surnamed "Cœur de Lion," was born in 1157. Succeeding his father, Henry II., to the throne, he took steps to carry out the vow which he had made

THE PRIORY CHURCH, RHOSMARKET, WALES.

of taking up arms to rescue the holy sepulchre from Saladin. Arrived in the Holy Land, he twice encountered and defeated the Egyptian sultan. Mounted on a splendid war-horse, mailed and battle-axe in hand, he was always in the foremost fray. The very sight of him caused his enemies to fly. He was full of the utmost ardor in the sacred cause, and kept up the zeal of his followers by sending through the camp every night a man to cry out, "Remember the Holy Sepulchre!" But though Acre yielded to his assault and Ascalon was taken, owing to the dissensions among the crusaders he failed to reach Jerusalem. News of the treasonable plots of his brother John caused him to make a three years' truce with the infidels and return home. Wrecked on the coast of Istria, he endeavored to make his way in disguise through the territories of Leopold of Austria, whom he had mortally offended by striking him in the Holy Land and tearing down his banner from one of the towers of Acre. But he fell into his hands, and Leopold sold him for a large sum to the emperor

of Germany, by whom he was imprisoned. The indefatigable zeal and love of his minstrel discovered his place of confinement, and his mother with difficulty procured his release. The affairs of England, and constant war with France, prevented him returning to the Holy Land; and he was mortally wounded at the siege of one of his own towns in the South of France in 1199. But little of his time had been spent in England—only eight months out of ten years—and in consequence he left the country in a state of great disorder.

**RICHARD OF BEC** was a monk of Bec and chaplain to Anselm, who had been applied to by Earl Hugh of Chester to come over from Normandy and aid in establishing a Benedictine house at that place. Anselm brought Richard with him; and when the enterprise was inaugurated, he appointed him to the new house. The monastery had been commenced by Earl Hugh in the sixth year of William Rufus, and out of the great "Religious House," with the property it

library formed in that university. He died April 24, 1345.

**RICHARDS, JAMES, D.D.**, was born in 1766, at New Canaan, Connecticut, and educated at Yale College. He was settled as pastor of the First Presbyterian Church at Morristown, New Jersey, in 1794, and in 1809 he was removed to Newark, New Jersey, where he continued until 1823, when he accepted a professorship in the theological seminary at Auburn, New York, where he died in 1843. Dr. Richards was descended in the fourth generation from Samuel Richards, who had emigrated from Wales and settled at Stamford, Connecticut. A life of Dr. Richards was published in 1849 by the Rev. Dr. Sprague, and the lectures which he delivered at Auburn, and an excellent collection of his sermons, were also given to the public. He held a high place among his brethren, and was deservedly esteemed as a thoughtful, pious, earnest, painstaking pastor, and a most estimable man.

**RICHELIEU** (rish'e-lew), **ARMAND JEAN DU PLESSIS, CARDINAL, DUKE DE**, first minister of France under Louis XIII., was born at Paris, in 1585. Destined at first for the army, he turned to the Church, studied theology at the college of Navarre, and was consecrated bishop of Luçon in 1607. He occupied himself with his episcopal functions, especially aiming at the conversion of Calvinists, till 1614, when he was chosen deputy to the states-general, and two years later he became secretary of state. He was created cardinal in 1622, and in 1624 took his place in the council of state, as first minister, a post which he held for eighteen years. He made himself absolute master of France, owning neither colleagues nor equals. His history for the rest of his life is the history of France, the government of which he chiefly contributed to make an absolute monarchy. He suppressed the Calvinists as a party in the state by his severe measures, and besieged and took Rochelle in 1628; while at the same time, to humiliate the house of Hapsburg, he aided the Protestants of Germany, Switzerland and the

Netherlands. Richelieu, meanwhile, like some other despotic ministers, distinguished himself by a liberal patronage of letters and the arts. In 1635 he founded the French Academy, and rebuilt on a grander scale the Sorbonne. He died at Paris, December 4, 1642, exhibiting in his last moments calmness and resignation which would have been characteristic of a well-spent life. On receiving the sacrament, he declared that in all his actions he had had in view the welfare of religion and the state.

**RICHER** (re-shay'), **EDMUND**, a learned French divine, was born at Chaource, in 1560, and became grand master of the college of Le Moine, and afterward syndic of the faculty of divinity at Paris, in which situation he strenuously opposed the pope's infallibility in a tract "On the Civil and Ecclesiastical Power." This work caused a great commotion, and was censured by a council of bishops, from which Richer appealed to the parliament, but he was finally proscribed and condemned at Rome. He was deposed from his office and retired into solitude, whence he was dragged and sent to the prisons of Saint Victor. He died in 1631.

**RICHMOND** (rich'mond), **LEGH**, a clergyman of the Established Church, was born at Liverpool, in 1772; became chaplain to the Lock Hospital, London, and afterward rector of Turvey, in Bedfordshire. He was principally known as the author of "Annals of the Poor," containing the "Dairyman's Daughter" and other devotional tales, written with great force, originality and pathos. He also wrote a work entitled "The Fathers of the English Church." He died in 1827.

**RIDDLE** (rid'd'l). The Hebrew word so rendered means properly something intricate—i. e., hard to be disentangled or guessed. There is an instance of a riddle in our sense of the term in Jud. xiv. 12-19. That so called in Ezek. xvii. 2-10 has more of an allegorical cast. The same original word is rendered "hard questions" in 1 Ki. x. 1. The number of the beast, Rev. xiii. 18, is a Scripture riddle on which innumerable expositors have tried their ingenuity.

**RIDGLEY** (rij'le), **THOMAS, D.D.**, was born about 1667, and after a diligent study of theology he became assistant to the Rev. Thomas Gouge, at the meeting-house near the Three Cranes, London. In conjunction with John Eames, he organized an independent academy in London in 1712, and here he delivered the lectures which were afterward published, and which have ever since been in demand among divines. They are an extended exposition of the theology of the Westminster Catechism, and for the age in which they were compiled, they certainly display a great degree of power and a wide acquaintance with theology. In fact, the work has long served as the great storehouse out of which many preachers who have not been plentifully endowed with books have drawn much of their information. He died in 1734.

**RIDLEY** (rid'le), **NICHOLAS**, one of the English Reformers who suffered martyrdom in the reign of Queen Mary, was born in 1500, at Tyndale, in Northumberland, and educated at Cambridge. He became master of Pembroke College, and being eminent for his learning, was made chaplain to Henry VIII., and appointed to the see of Rochester by Edward VI., by whom he was translated to that of London. He joined the party who proclaimed Lady Jane Grey; and when Mary succeeded, he was sent to the Tower on a charge of heresy. He was removed, along with his fellow-prisoners, Latimer and Cranmer, to Oxford, where he took part in the famous disputation. After the mockery of a trial, he was condemned to death, which he viewed as a happy release. He wrote a farewell address, which is described as one of the most affecting productions in our language, which for unpretending eloquence can bear comparison with that of Gregory Nazianzen. His courage remained unabated to the last. He was bound by an iron chain to the same stake as Latimer, but long after he expired Ridley continued to live, suffering the torture of the fire in his lower limbs until it reached the bag of gunpowder hung round his neck, on the explosion of which he ceased to breathe, October 13, 1555.

**RIGHTEOUS** (ri'ch'us), **RIGHTEOUSNESS** (ri'ch'us-ness). Righteousness is moral perfection, and that being is righteous who possesses such perfection. God, therefore, is righteous, as having righteousness in the highest sense of the word, Ps. cxix. 137; Isa. xlv. 19. But man,

created upright, is "very far gone from original righteousness;" and it is the most interesting question that can be propounded, How are those who have committed sin to be accepted by a righteous God? As the observations made here upon this topic must necessarily be brief, it may be well to present the reader with the substance of De Wette's note on Rom. i. 17, where the expression "the righteousness of God" does not designate his attribute of righteousness, but the righteousness which flows from and is acceptable to him:

The Greek *dikaïosunē* and the Hebrew *tsēdāqāh* are taken sometimes for "virtue" and "piety," which men possess or strive after; sometimes imputatively for "freedom from blame," or "justification." The latter meaning is most usual with Paul; *dikaïosunē* is that which is so in the sight of God, Rom. ii. 13, the result of his justifying forensic judgment, or of "imputation," Rom. iv. 5. It may certainly be imagined that a man might obtain justification by fulfilling the law; in that case his righteousness is an "own righteousness," Rom. x. 3, a "righteousness of the law," Phil. iii. 9. But it is impossible for him to obtain a "righteousness of his own" which at the same time shall avail before God, Gal. ii. 16. The Jews not only have not fulfilled the law, Rom. iii. 9-19, but could not fulfill it, Rom. vii. 7-25; the Gentiles likewise have rendered themselves obnoxious to the divine wrath, Rom. i. 24-32. God has ordained that the whole race should be included in disobedience. Now, if man is to become righteous from being unrighteous, this can happen only by God's grace, because God declares him righteous, Rom. iii. 24; Gal. iii. 8, the word signifying not only negatively to acquit, as in Ex. xxiii. 7; Isa. v. 23; Rom. ii. 13, but positively to declare righteousness; never, however, "to make righteous" by transformation, or imparting of moral strength by which moral perfection may be attained. Justification must be taken, as the old Protestant dogmatists rightly took it, in a forensic sense—i. e., imputatively; God justifies for Christ's sake, Rom. iii. 22-23, on condition of faith in him as Mediator: the result of his justification is "righteousness of faith;" and as he imparts it freely, it is "righteousness of God." . . . This justification is certainly an objective act of God, but it must also be subjectively apprehended, as its condition is subjective. It is the acquittal from guilt and cheerfulness of conscience attained through faith in God's grace in Christ, the very frame of mind which would be proper to a perfectly righteous man, if such there were—the harmony of the

spirit with God, peace with God. All interpretations which overlook the fact of imputations are erroneous.

It may be added in the words of Hooker: "There is a glorifying righteousness of men in the world to come, as there is a justifying and sanctifying righteousness here. The righteousness wherewith we shall be clothed in the world to come is both perfect and inherent. That whereby here we are justified is perfect but not inherent. That whereby we are sanctified is inherent but not perfect."

**RIGHT REVEREND**, the title prefixed to the name of a bishop. In those churches which hold to a gradation of ranks in the clergy it is never given to any below the standing of a bishop.

**"RIGHT SIDE."** In several ancient rubrics in the English Church the *right* means the side of the altar at which the Epistle was read, and the left the side at which the Gospel was read; but in the year 1485 a rule appeared in the Romish pontifical, then published in Venice, which reversed that usage. It was therein ruled that the terms right and left should be determined by the position of the crucifix on the altar, and hence the side adjoining the right hand of the figure in the cross was thus ruled to be the right side.

**RIMMON** (rim'mon), the name of a Syrian deity, apparently the principal deity worshiped by the Syrians in the time of Naaman, for it was going with his master and bowing in the house of Rimmon which at once occurred to his mind after his marvelous cure, as the external homage to idolatry which he should find it peculiarly difficult to shun, 2 Ki. v. 18. The name is found nowhere else in connection with the Syrian idolatry, and all attempts at explanation are mere conjectures. The manner and occasion in which mention was made of Rimmon by Naaman seem to imply that the principal object of Syrian worship was designated by that name, but it is quite possible that at Damascus Rimmon bore another meaning than it did in Palestine. In composition the name appears in Hadad-Rimmon and Tabrimon, Zech. xii. 11; 1 Ki. xv. 18.

**RIMMON** (rim'mon), a Benjamite, and known only as the father of Rechab and Baanah, who murdered Ishbosheth, 2 Sam. iv. 2-9.

**RIMMON.** 1. A city in the south of Palestine, originally allotted to Judah, afterward to Simeon, Josh. xv. 32; xix. 7, in the last place called Remmon, 1 Chr. iv. 32. It is the town mentioned in Zech. xix. 10. There can be little doubt that this is the En-rimmon of Neh. xi. 20, that in Joshua and Chronicles Ain and Rimmon should not be separated, and that this Rimmon may be identified with *Um er-Rumān*. 2. A rock or peak north-east of Geba and Michmash, near the desert, to which the remnant of the Benjamites retreated after the destruction of their tribe, Jud. xx. 45, 47; xxi. 13. This is now called *Rimmon*; it is a conspicuous conical hill. There was probably a town on it like the present village, or close at hand. 3. A town in the territory of Zebulun, but assigned to the Merarite Levites, 1 Chr. vi. 77. It is called in our translation of Josh. xix. 13 Remmon-methoar; but "methoar" is no part of the name; the words of the clause should be rendered "it (the border) passed on to

Rimmon, and stretched to Neah." This place is the modern *Rimmaneh*, in the neighborhood of picturesque hills crowded with ruins.

**RIMMON-PAREZ** (pa'reez), a station of the Israelites in the wilderness, Num. xxxiii. 19, 20.

**RING.** The Orientals have always been fond of ornamenting themselves with rings. There are two Hebrew words which are rendered "ring;" of these *hhotham* signifies a seal or signet-ring, Ex. xxviii. 11, 21; *tabbaath*, a signet-ring, Ex. xxxv. 22, or a ring of any kind, Ex. xxv. 12. The signet-ring was worn by the Hebrews on the right hand, Jer. xxii. 24. Sometimes, however, as it is in Persia at the present day, it was suspended on the breast by a string, Gen. xxxviii. 18. Many rings of which specimens have been preserved were worn by the Egyptians. A king committing his signet-ring to any one created him thereby prime minister, Gen. xli. 42. Possibly the giving of a ring in Luke xv. 22 may imply the reinstatement of the returned son with authority, at least dignity, in the household.

EFFIGY OF RICHARD I.  
From the Statue found at Rouen.

CARDINAL RICHELIEU.—See RICHELIEU.

**RING.** Ecclesiastically there are two sorts of rings: 1. A bishop's ring, which is worn on the second joint of the third finger, and retained in its place by a smaller one. It generally holds one

RICHARD I.

had amassed, the diocese of Chester, with its cathedral, was appointed by Henry VIII.

**RICHARD DE BURY**, bishop of Durham, but better known as the author of the "Philobiblon," was born in 1281, at Bury St. Edmunds, in Suffolk. He was educated at Oxford, after leaving which he entered as a monk the convent of Durham, which he quitted to become tutor to Prince Edward, afterward Edward III. On Edward's accession to the throne he received several ecclesiastical preferments, and was employed in various Continental missions. In 1333 he was consecrated bishop of Durham, and in 1334 he was appointed chancellor. Throughout his life he was an indefatigable collector of books, employing much of his money and the influence of his position to collect what became the largest library in Europe. His enthusiastic love of books, his efforts to acquire more and the details of the arrangements of the earliest lending library in England, which he formed at Oxford, are recorded in his little Latin treatise, the "Philobiblon." He bequeathed his books to Durham, now King's College, Oxford, thus founding the first public

uncut stone, and is of pure gold. The giving of this ring was the subject of great quarrels with the kings, who held that they conferred jurisdiction by bestowing it. The contest was determined by the bishops consenting to do homage for their temporalities. 2. A ring has been customarily used in the marriage ceremony. A multitude of figurative applications has been made of this usage. The marriage service, as arranged in the Book of Common Prayer, in 1549, required silver and gold to be given with the ring, but in 1552 this custom was dropped.

**RINNAH** (rin'nah), one of Judah's posterity, 1 Chr. iv. 20.

**RIPHATH** (rif'ath), the second son of Gomer, Gen. x. 3. Various opinions have been entertained of the people that sprang from him, or the region of the earth they occupied, but the weight of authority inclines to the Riphean Mountains, which were connected with the vast Carpathian range that stretches from the north-west of Asia into European Russia.

**RIPLEY** (rip'le), EZRA, D.D., was born in 1751, at Woodstock, and educated at Harvard.

CROSSED HANDS.—See RING.

From the figure of a woman on a Mummy-Case in the British Museum.

He settled in 1778, as Unitarian minister, at Concord, Massachusetts, after having served for some time in the army. He died in 1841, at Concord, on his ninetieth birthday. He was the author of several sermons, which were published, and in which his theological views were expressed.

**RISSAH** (ris'sah), one of the stations of the Israelites while passing through the desert, Num. xxxiii. 21, 22.

**RITE**, an act pertaining to the worship of God, accompanied by a form of words and ceremonies solemnly performed.

**RITHMAH** (rith'mah), a station of the Israelites in the wilderness of Paran, Num. xii. 16.

**RITTENHOUSE** (rit'ten-honse), DAVID, LL.D., was born in 1732, near Germantown, Pennsylvania. He was of Dutch descent, as his great-grandfather came from Holland. He merits a place in this work because of his eminently high attainments in the departments of mathematics as applied to practical uses. In his boyhood he mastered Newton's "Principia," and before he was nineteen years of age he discovered the principles of fluxions, thinking that he himself alone had ever made the discovery. He applied his knowledge to clockmaking, and constructed an orrery which

is to be seen in Princeton College. In 1763 he was employed in determining a portion of the boundary line, since known as Mason and Dixon's, and he also settled the boundaries between New York, New Jersey and Pennsylvania. In 1769 he was engaged by the American Philosophical Society to observe the transit of Venus, which he did successfully with instruments of his own construction; and so deeply was he affected by the experiment, that he fainted. He succeeded Franklin as president of the Philosophical Society, was treasurer of Pennsylvania and director of the United States Mint. His publications are to be found in the transactions of the Philosophical Society. He died at Philadelphia in 1796, having risen to a high place among his fellow-citizens, and holding the character of being an eminently profound thinker and a very learned man.

**RITUAL** (rit'u-al). 1. That which belongs to rites. 2. The ceremonial part of divine service.

**RITUALIST** (rit'u-al-ist), one who has studied and who attaches great importance to the use of forms and ceremonies in divine service. In the present day the favorers of *ritualism* attach great importance to the forms which they introduce, as by them they inculcate doctrine.

**RIVER**. Many streams are termed in our version rivers which are really but brooks or winter-torrents. See Brook. The only river of Palestine deserving the name is the Jordan. But of course the rivers of other countries are often named in Scripture.

The word in general use has commonly the proper name of the river added to it, as "the river Euphrates," Gen. xv. 18, "the river Chebar," Ezek. i. 1, 3. Sometimes it has the name of the region through which the stream flows, as "the river of Egypt," Gen. xv. 18, "the river of Goshen," 2 Ki. xvii. 6. In the plural it is thus found: "the rivers of Damascus," 2 Ki. xvii. 12; "the rivers of Babylon"—i. e., the Euphrates and its canals, Ps. cxxxvii. 1; "the rivers of Ethiopia," Isa. xviii. 1; Zeph. iii. 10. "The river" generally signifies the Euphrates, Gen. xxxi. 21; Ex. xxiii. 31, but in Isa. xix. 5 the Nile. There is another word, of Egyptian origin, always applied to the Nile, Gen. xii. 1, except in Dan. xii. 5, 6, 7. In the plural it means the canals through which Nile water was distributed through the country. There are other words which cannot be here noticed. The Hebrew language has a wonderful copiousness of expression for rivers, brooks and springs. For these three words of our own language it has not less than eight or ten, each of which conveyed its proper distinctive sense to the Hebrew ear. The "river of Egypt" was generally, though perhaps not always, the Nile. See EGYPT.

**RIVET** (re-vay'), ANDREW, a learned ecclesiastic who filled the divinity chair at Leyden with great reputation in the early part of the seventeenth century. He was a Poicterin by birth, having first seen the light at St. Maxent, in 1572, and having taken holy orders, was preferred to a benefice at Thonars, which he held till 1620. In this year he quitted France, and after visiting England settled finally on the professorship to which he had been elected in the Dutch university alluded to. Three volumes of his devotional and controversial writings have been published; and the university of Oxford ranks his name among those of her public benefactors, having

received from him a variety of valuable books, in return for which she complimented him with the honorary degree of doctor of divinity. His death took place in 1647.

**RIZPAH** (riz'pah), a concubine of Saul, memorable for the touching example of maternal affection which she afforded in watching the dead bodies of her sons and driving the birds away from them when they had been gibbeted by the Gibeonites, 2 Sam. iii. 7.

**ROADS**. There seem to have been roads of some kind in Palestine at an early period. Language is employed which supposes the existence of artificial roads. In Isa. xl. 3 are these words: "Prepare ye the way of the Lord, make straight in the desert a highway for our God. Every valley shall be exalted, and every mountain and hill shall be made low; and the crooked shall be made straight and the rough places plain." There cannot be a more graphic description of the operations and results connected with the formation of a long and important road. That this is the language of prophetic inspiration affords no objection; for poetry, as being an appeal to widespread feelings, grounds itself in such a case as this on fact; nor could such imagery as we find here have been employed had artificial roads been unknown in Palestine. Nor is the imagery unusual, compare Isa. xl. 16; xix. 23; xxxiii. 8; xxxv. 8; xlix. 11; lxii. 10. In 1 Sam. vi. 12 we read, "The kine went along the highway, lowing as they went, and turned not aside to the right hand or to the left." In Numbers also, xx. 17, "We will go by the king's highway," etc., Num. xxi. 22; Dent. ii. 27; Lev. xxvi. 22. Whether or not these were roads in the modern acceptance of the term, we know from the law regarding a free, open and good passage to the cities of refuge, Dent. xix. 3, that the minds of the Israelites were early familiarized with the idea: "Thou shalt prepare thee a way," etc., "that every slayer may flee thither." Indeed, it is highly probable that the Hebrews had become acquainted with roads during their sojourn in Egypt, where, in the Delta especially, the nature of the country would require roads and highways to be thrown up and maintained. To the Romans, however, Palestine was greatly indebted for its roads. In the East generally, and in Palestine in particular, they formed roads and set up mile-stones, in imitation of what they had done in Italy.

Our remarks will be confined to roads which connected Palestine with other countries, since a notice of the internal roads as well, if at all complete, would require too much space.

The Phœnicians, as a mercantile people, maintained a connection not only with the West by sea, but also overland with the East. They had two great commercial highways. One came out of Arabia Felix, through Petra. The other struck from the northern extremity of the Persian Gulf, through Palestine, to Tyre.

The first road in Palestine which we mention ran from Ptolemais, on the coast of the Mediterranean, to Damascus. This road remains to the present day. Beginning at Ptolemais (Accho), it ran south-east to Nazareth, and continuing south and east, passed the plain of Esdraelon on the north; after which, turning north and east, it came to Tiberias, where, running along the sea of Galilee, it reached Capernaum, and having passed the Jordan somewhat above the last place, it went over a spur of the Anti-Libanus (Jebel-Heish),

A REMARKABLE ROMAN-EGYPTIAN RING. —See RING.

A third line of road connected Galilee with Judæa, running through the intervening Samaria, Luke xvii. 11; John iv. 4. The journey took three days. Passing along the plain of Esdraelon the traveler entered Samaria at Ginea (Jenin), and was thence conducted to Samaria (Sebaste), thence to Shechem (Nabulus), whence a good day's travel brought him to Jerusalem.

There were three chief roads running from Jerusalem. One passed in a north-easterly direction over the Mount of Olives, by Bethany, through openings in hills and winding ways on to Jericho, near which the Jordan was passed when travelers took their way to the north, if they wished to pass through Peræa, which was the road the Galilean Jews, in coming to and returning from the festivals in the capital, were accustomed to take, thus avoiding the unfriendly territory of Samaria; or travelers turned their faces toward the south if they intended to go toward the Dead Sea. This road was followed by the Israelites when they directed their steps toward Canaan. Through Peræa the Syrian and Assyrian armies made their hostile advances on Israel, 2 Ki. viii. 28; 1 Chr. v. 26.

A second road led from Jerusalem southward to Hebron, whence travelers went through the wilderness of Judæa to Aila, or they might take a westerly direction on to Gaza. The ordinary way from Jerusalem to Gaza appears, in the Roman period, to have lain through Eleutheropolis and Ascalon. From Gaza through Rhinocorura and Pelusium was the nearest road down into Egypt from Jerusalem. Along this road many thousand prisoners, made by Vespasian in his capture of Jerusalem, were sent to Alexandria in order to be shipped for Rome. Of these two roads from Jerusalem to Gaza, one went westward by Ramlah and Ascalon, the other southward by Hebron. The third road went to the Mediterranean at Joppa (Jaffa)—a way which from the time of the Crusades has been taken by pilgrims proceeding to the Holy City from Egypt and from Europe.

**ROBBER**. See THIEF.

**ROBBINS** (rob'binz), CHANDLER, D.D., was born in 1810, at Lynn, Massachusetts, and educated at Harvard. In 1833 he settled as pastor in the Second Unitarian Church in Boston. He

published a history of this church, a liturgy for the use of a Christian Church, and sermons which have been admired for the grace of their style. His memoir of Maria Elizabeth Clapp has also been highly esteemed.

**ROBBINS**, THOMAS, D.D., was born at Norfolk, Connecticut. He graduated at Yale College in 1796, and settled as minister at East Windsor in 1809, where he remained until 1827. He held the charge of Stratford for a short time, and subsequently he preached at Mattapoisett and Rochester, Massachusetts. He filled the office of librarian and secretary to the Connecticut Historical Society, of which he was a great benefactor, and he died at Colebrook, Connecticut, in 1856, having reached his eightieth year. His published works are chiefly sermons, and an historical view of the first planters of New England.

**ROBE**. See DRESS.

**ROBE**, JAMES, is celebrated in Scotland as the well-known minister of Kilsyth who wrote the "Narrative of the Extraordinary Work of the Spirit of God at Canbuslang, Kilsyth, etc., in 1742." This work has had an immense circulation, and has been greatly valued. Editions of it have been demanded in 1840, 1843, 1849. Robe also wrote "Counsels and Comforts," in 1749; sermons at the Lord's Supper, and several letters in review of discussions on Faith.

**ROBERT** (rob'ert) DE BETUN was a native of Flanders and prior of Llanthony. He was consecrated bishop of Hereford at Oxford in 1131. He was humane, benevolent, learned and pious, and yet the members of his church rebelled against him, and he had to appeal to the pope for protection. Being relieved, he was plunged again into trouble by the civil war between Stephen and the empress Maud; his lands were laid waste and many of his buildings were demolished. The clergy were dispersed, the cathedral was deserted and he had to fly. After the establishment of peace he was permitted to return to his see, but he was soon afterward summoned by the pope to a council at Rheims, where he died in the month of May, 1148. His body was taken to England and was buried in the cathedral.

**ROBERT OF GENEVA** was the anti-pope to Urban VI. and the cause of a great schism in the Church. He died in 1394.

**ROBERT OF GLOUCESTER** is supposed to have been a monk in the abbey at that place in the reign of Edward I. He was the author of a very celebrated work—a history of England in rhyme from the time of Brutus until about A. D. 1300. This remarkable production is a metrical version of the Latin chronicon of Geoffrey of Monmouth, and it extends to about ten thousand lines. Manuscript copies are preserved in the Bodleian, the Cottonian, the Harleian, the Herald's College and other great libraries. Editions have repeatedly been printed at Oxford and London. Great value attaches to it as showing the Anglo-Saxon of his day in the dialect of the west of England. It is full of Saxonisms, and the reader may see in it the form of speech which prevailed until Chaucer refined and greatly changed the English tongue.

**ROBERT OF LORRAINE**. See LOZING, ROBERT.

**ROBERTS** (rob'erts), ROBERT R., D.D., was born in 1778, in Maryland. He entered the Methodist Episcopal Church in 1792, and after a service of great diligence he was made presiding elder of the Schuylkill district, Pennsylvania, in 1815. He was appointed president of the Philadelphia Conference, and in 1816 he was made bishop. His life has been written by the Rev. C. Elliot.

**ROBERTSON** (rob'ert-sun), ABRAHAM, D.D., was born in 1751, at Dunse, in Berwickshire, Scotland. He was educated at Christ Church College, Oxford, and in 1789 he settled as vicar of Ravensthorpe. In 1797 he became Savilian professor of mathematics at Oxford, and he died in 1826. He was specially distinguished by his successful efforts to awaken a desire in Oxford to cultivate science, which had been overlooked in the desire to cultivate classical learning, and he left an impression on the university which has never decreased, but on the other hand has resulted in new buildings, new professorships and new studies in applied science, which is indicative of a great and decided change.

**ROBERTSON**, FREDERICK WILLIAM, a very distinguished clergyman of the Church of England, was born in 1816. He entered the Church, after some hesitation between the military and clerical professions. He possessed great depth of feeling, much poetic genius, a highly cultivated taste and a richly endowed mind. He became incumbent of Trinity Chapel, Brighton, and was soon known as an eloquent, earnest and original preacher, the friend of the working classes and the supporter of every plan for improving their social and religious condition. Notwithstanding great bodily weakness and the gradual advances of disease of the brain, causing him at times the most fearful sufferings, he never flagged nor failed in energy. The impression produced by his preaching was extraordinary; and the high estimate formed by those who heard his "words that burn" is fully justified by his printed sermons, which, rich as they are in genius, truth and poetic eloquence, are likely to hold a high

ROMAN RINGS.—See RINGS.

place in our literature for some time to come. The interest of Robertson's life is very great, and of a kind peculiar to a period of intellectual and religious revolution, such as the present age. A man nobly true, intensely in earnest, heroically brave, and perfectly honest in utterance, yet endowed with a feminine sensitiveness which shrank from publicity, and still more from popularity; totally indifferent to honors and preferments; he started in life with a thorough belief in the traditional dogmas of the evangelical school, passed through the fiery ordeal of modern doubt, and ended with a firmer faith than ever in the old truth, and with an absorbing love for Christ as

the divine Saviour, the abiding source and substance of truth and life for the world. He died, like many another man of genius, at the early age of thirty-seven, August 14, 1853. His grave is in a hollow of the Downs he loved so well, and within hearing of the sea.

**ROBERTSON, JAMES, D.D.**, was born in 1803, at Pitsligo, in Aberdeenshire. In 1832 he became minister of Ellon, and he soon became distinguished for his earnest support of the "moderate" side in the Church of Scotland. He wrote with much earnestness in opposition to the views of Dr. Chalmers, whom he succeeded in the chair of divinity in the university of Edinburgh in 1843, when the Free Church of Scotland was organized, after the disruption. He died in 1860, at Edinburgh, having maintained the reputation of being a thorough example of the conservative "moderate" party in the Church of Scotland, who have ever dreaded the prevalence of the power of the people in managing ecclesiastical affairs.

**ROBERTSON, WILLIAM, D.D.**, was born in 1721, at Borthwick, in Mid-Lothian, where his father was parish minister. He was educated at Edinburgh, and settled as minister of Gladsmuir, in East Lothian. He soon became famous for his eloquence in the pulpit; and when his "History of Scotland" appeared, in 1759, he at once took rank among the eminent writers of his age. No less than fourteen editions of this work were called for before his death. In 1759 he was made chaplain of Stirling Castle, king's chaplain in 1761, and in 1762 he was raised to be principal of the university of Edinburgh. Two years later he was appointed historiographer royal for Scotland, and strange to say, his fine constitution and wonderful capacity for economizing time enabled him to discharge the duties of these offices, and, further still, to prepare his great "History of Charles V.," and in 1777 he issued his "History of America." His last publication was "An Historical Disquisition concerning the Knowledge which the Ancients had of India." He died in 1793. As an historian he is classed among the foremost writers for the graces of style. He is wonderfully clear, graphic and perspicuous, without being affected, and his narrative flows on in a lucid and yet vigorous current that shows the power of a master mind.

**ROBINSON, EDWARD, D.D.**, a distinguished philologist and Biblical scholar, was born at Southington, Connecticut, in 1794. He studied at Hamilton College, New York, and at Andover, Massachusetts, at the latter of which he became assistant professor of Biblical literature in 1821. In 1826 he visited Europe and spent some time at Paris, Halle and Berlin in the prosecution of the study of the Oriental languages and theology. On his return, in 1830, to America, he resumed his duties at Andover, and some time after became professor of Biblical literature at New York. In 1838 he commenced his travels in the East, the account of which appeared in his "Biblical Researches," a work which supplies the

most valuable contribution that modern learning and enterprise have made to our knowledge of Biblical geography and topography. A second exploration of the Holy Land was made by him in 1851, the result of which he published under the title of "Later Biblical Researches." The design of both these journeys was to collect materials for a systematic work on the physical and historical geography of the Holy Land. On this the author was engaged at the time of his death. He also published a "Harmony of the Four Gospels" in Greek. His name is held in high honor as one of the soundest and most accomplished scholars of his age. He died at New York, January 25, 1863.

**ROBINSON, JOHN**, the distinguished Puritan minister, sometimes called the Father of Independency, was born, probably in Lincolnshire, in 1575. He entered Cambridge university, and was greatly influenced during his residence there by the preaching of several Puritan clergymen. On quitting the university he appears to have officiated as a clergyman in the neighborhood of Norwich, without, however, taking full orders. Suspended by the bishop, he withdrew to Norwich, and there gathered a congregation, who became deeply attached to him. After a period of grave and painful mental conflicts, he felt it his duty to separate from the Church of England, and in 1604 he left Norwich, gave up his fellowship at Cambridge and settled at Lincolnshire. He became assistant and then sole pastor of a church at Scrooby, a village in Nottinghamshire, near the borders of Yorkshire and Lincolnshire; and when persecution dispersed the separatists he escaped, with the remnant of his church, in 1608, to Amsterdam. In the following year he removed to Leyden, and there collected and ministered to a congregation of fellow-exiles, attended lectures at the university, and became some years later a member of it, and took a zealous part on the Calvinist side in the great controversy which led to the Synod of Dort. A desire grew up among these exiles to remove to the New World, and permission was obtained for them to settle in Virginia. Accordingly, on the 22d of July, 1620, the embarkation of the "Pilgrim Fathers" took place at Delft Haven, a solemn service having been held on the previous day. They sailed in the "Speedwell" for Southampton, where the "Mayflower" was awaiting them. Robinson remained at Leyden with those who deferred their voyage till the roughest pioneering work should be done. He hoped then to follow with their wives and children. But early in 1625 he fell ill with an "inward ague," and died at Leyden on the 1st of March. Among his works are—"A Justification of Separation from the Church of England," "Of Religious Communion," an "Apology for Certain Christians no less Contumeliously than Commonly called Brownists or Barrowists," a "Defence of the Doctrine Propounded by the Synod of Dort."

**ROBINSON, RICHARD**, archbishop of Armagh, in Ireland, was born in Yorkshire in 1709. He was educated at Christ Church, Oxford, and having taken holy orders, obtained the vicarage of Aldborough, with a stall in York minster. In 1751 he was preferred to the see of Killala. Over this diocese he presided eight years, when he was translated to that of Ferns. In 1761 he was removed to Kildare, which he resigned in 1765, on being advanced to the Irish primacy. In this elevated situation he distinguished himself by his

munificence in the erection of new churches in his diocese, as well as an archiepiscopal palace with a public library and observatory annexed. He died in 1794.

**ROBINSON, ROBERT**, an eminent dissenting divine, was born at Swaffham, in Norfolk, in 1735. Having zealously attached himself to George Whitefield, he became a preacher among the Calvinistic Methodists, and occupied that office at Mildenhall, in Suffolk, and afterward at the tabernacle at Norwich and other places. He subsequently relinquished his connection with the Methodists and established an independent congregation at Norwich, over which he presided. In 1759 he was chosen pastor to an Anabaptist congregation at Cambridge, with whom he continued during the remainder of his life. He was first known as an author by the publication of "The Arcana, or the Principles of the late Petitioners to Parliament for Relief in Matters of Subscription." This work displayed considerable controversial ability, and greatly advanced his character among the dissenters. He also published "A Plea for the Divinity of Jesus Christ" and various other works. He died in 1790.

**ROBOAM** (ro-bo'am), Matt. i. 7, the Greek form of Rehoboam.

**ROCHESTER** (roch'es-ter), **JOHN WILMOT, EARL OF**, was the son of Henry, earl of Rochester, and was born about 1647. He was educated at Wadham College, Oxford, entered the navy and saw much service, having been in several engagements. He attached himself to the court, and he became noted for his skepticism, his intemperance and profligacy. He wrote several works which were profane and licentious, but it pleased God that through the influence of Bishop Burnet he was led to see the error of his life and to give signs of deep sorrow and heartfelt repentance. He used all diligence to have his works gathered and burned, and by every means in his power he sought to undo the evil of his wicked life. He died in 1680, and his life has been written by Burnet, and it has been in great demand. The life and conversion of Rochester have afforded many illustrations to divines who have not failed to impress their age by the lesson which was afforded by a man who had drunk the cup of sin to the dregs, and who could therefore from experience judge of religion in contrast with the pleasures which vice can afford.

**ROCHET** (roch'et), an alb, only shorter and with tighter sleeves, formerly worn by priests and acolytes during certain ceremonies. See ALB. Later custom has reserved the rochet to bishops, prelates and certain privileged canons. The wide sleeves attached to the chimere, or the upper robe worn by an English bishop, are an innovation on this ancient vestment. Until the time of Queen Elizabeth bishops wore a scarlet chimere or gar-

ANCIENT ROMAN MODE OF WEARING A RING.—See RING.

EGYPTIAN RING, OF GLASS.—See RING.

ment over the rochet, but Bishop Hooker scrupled at the color as being incongruous with episcopal gravity, and accordingly black satin was introduced. The bishops still wear scarlet when assembled in convocation.

**ROCK**. Besides the ordinary meaning of the term "rock," it is frequently used in a figurative way, or for illustration in a parable, as for a firm basis. Matt. vii. 24, 25, for a stronghold, Num.

EARLY ROMAN RINGS.—See RING.

xxiv. 21, to indicate a hard, careless and obstinate disposition, Jer. v. 3. And by an easy metaphor the term is applied to God as being immovable—a strong defence to those that trust in him, Deut. xxxii. 4, 15; Ps. xviii. 2, 31.

**RODANIM** (ro'da-nim). This word occurs in 1 Chr. i. 7 in some copies. If it could be proved to be the right reading, the Rhodians would most probably be meant, but it is more accurately, as in the text of Gen. x. 41, DODANIM, which see.

**ROE** (ro), or **ROE-BUCK** (ro'uck), an animal belonging to the *Cervidae*, a family of solid-horned ruminants. The roe-buck is one of the most agile and beautiful of deer. It is exceedingly shy and cautious, not herding in troops, but living singly, or in small companies, consisting of the male, female and young. It has a keen ear, is sensitive to scents, and while it is not alarmed by any of the ordinary sounds in nature, it is remarkably skillful in avoiding the hunter. The word so rendered in our version does not designate a single species, but comprises gazelles, etc. They were prized for their great elegance, Song Sol. ii. 7, were fleet, 2 Sam. ii. 18; 1 Chr. xii. 8; Prov. vi. 5, timid, Isa. xlii. 14, and they were among the animals whose flesh might be eaten, Deut. xii. 15, 22; xiv. 5; xv. 22. Among the inhabitants of the eastern and western nations it is still considered a delicacy, 1 Ki. iv. 23.

**ROGATIANS** (ro-ga'sh'anz), the name given to a sect of the Donatists.

RINGS WORN BY EARLY ROMAN CHRISTIANS.—See RING.

From the Catacombs.—See another specimen on page 392.

**ROGATION** (ro-ga'sh'un) **DAYS**. The word is derived from the Latin "rogare," which signifies to ask, and it is applied to the three days next before Ascension day; and they are so called from the forms of the prayers then used. They are supposed to have originated with Mamertus, a bishop of Vienna in the fifth century. In the Episcopal Church these days are continued as private fasts, but there is no office or form in the prayer-book for the season.

**ROGATION SUNDAY** is the Sunday before Ascension day, and it is so called because of

its connection with the three days which immediately follow.

**ROGEL** (ro'gel), 1 Ki. i. 9, margin. See EN-ROGEL.

**ROGELIM** (ro'ge-lim), a town in Gilead, 2 Sam. xvii. 27; xix. 31, perhaps within the territory of Gad.

**ROGER** (roj'er), bishop of Salisbury, adhered faithfully to Henry I. in all his troubles as prince, and was amply rewarded by him on his accession. He was made bishop of Salisbury and grand-justiciary of England; and whenever the king was absent, he acted as regent, and discharged the duties of the post in a satisfactory way. He was imprisoned by Stephen as a partisan of Matilda, and obliged to surrender to him his castles and his treasures. He died in 1139.

**ROGER DE CLINTON** and **ROGER DE NORBURG** were both eminent bishops of Lichfield. The former was consecrated in 1128, and proved himself to be a great benefactor to the city and the cathedral. He is even said to have rebuilt the cathedral, but this cannot be true, as the greatest part of it is of a style more recent than his time. He restored the see to Lichfield which had been removed to Coventry. The latter, who was elevated to the see on the death of Langton in 1321, went on with the work on the cathedral, which he had found unfinished, and he succeeded so well that Heyworth, who was consecrated in 1420, was able to complete it as it remained until the civil war in the time of Charles I., when it was ruthlessly devastated.

**ROGERS** (roj'erz), **JOHN**, an eminent English divine of the sixteenth century, was educated at Cambridge, and appointed chaplain of an English factory at Antwerp, where he met with Tyndale and Coverdale, through whose influence he adopted the principles of the Reformation, and whom he assisted in the translation of the Bible. After the accession of Edward VI. he returned home. As prebendary of St. Paul's, he preached a sermon on the Cross after Mary's entrance into London, in which he exhorted the people to abide by their Protestant principles. For this he was arrested and tried, and being condemned, was the first martyr to suffer the fires of Smithfield, resolutely refusing the pardon offered him at the last if he would only recant. His death took place in 1555.

**ROGERS, JOHN, D.D.**, was born in 1679, at Ensham, in Oxfordshire. He entered New College, Oxford, and was elected a scholar of Corpus Christi, where he became a Fellow in 1706. His first position in the Church was as vicar of Backland, in Berkshire. He was made lecturer at St. Clement Dances, and St. Leonard's, Foster Lane, London. In 1716 he received the rectory of Wrington, in Somersetshire, and in 1718 he received a prebendal stall at Wells, and in 1721 and in 1728 he became vicar of Cripples-

gate. He attracted great notice by his "Discourse on the Visible and Invisible Church" and his "Necessity of Divine Revelation." He also published several series of sermons which were devoted to the thorough discussion of leading topics, which displayed great power, and which are considered as being among the best in the language. He died in 1729.

**ROHGAH** (roh'gah), a chieftain of Asher, 1 Chr. vii. 34.

**ROIMUS** (ro'i-mus), 1 Esd. v. 8, the same as Rehum, Ezra ii. 2.

**ROLL**. See WRITING.

**ROLLING THING**. See WHEEL.

**ROLLOCK** (rol'lok), **ROBERT**, first principal of the university of Edinburgh, was born in 1555, and died at the age of forty-three. In 1583, when that university was founded, he was invited

MASSIVE THUMB-RING, WITH BUST OF THE EMPRESS PLOTINA, CONSORT OF TRAJAN.—See RING.

to take the chief management of it, and in 1585 the magistrates of the city—the founders and patrons of the university—testified their sense of the value of his labors by constituting him principal. He seems to have taught philosophy first, but ultimately his chief work was the tuition of the students in theology. In addition to his labors as principal and professor in the university, and in spite of his natural disposition for a retired and studious life, he exerted himself in various ways for the public interests of religion in Scotland, and was chosen in consequence, on one occasion, moderator of the General Assembly. Observing the crowds that gathered early in one of the churches on the mornings of the Lord's day, he began a course of lectures to them at 7 A.M. His subject was the Epistle to the Ephesians; and when he had finished the course, he published, in 1590, a "Commentary on the Epistle." About the same time he published a logical analysis of the "Epistle to the Romans." Both of these works are held in the highest esteem. The precise object of most of the author's productions is the simple and lucid illustration of the course of thought and reasoning pursued by the sacred writers, with a brief but clear

and comprehensive explanation of the verses and clauses separately, and the more important words.

**ROMAINE** (ro-ma-ne'), WILLIAM, a popular Calvinistic divine, was born in 1714, at Hartlepool, in Durham, and was educated at Oxford. In 1748 he obtained the lectureship of St. Botolph, Bishopsgate; the year following he was chosen lecturer of St. Dunstan in the West; and in 1750 he was appointed assistant morning preacher at St. George's, Hanover Square. Soon after this he was elected Gresham professor of astronomy, which situation

erence to civil privileges, Acts xv. 37, 38. St. Paul was not a native of Rome, or born in Italy, but he had by birth the rights of a Roman citizen.

**ROMAN ARCHITECTURE.** The architecture of Rome and of the Roman possessions was, in a large degree, an outgrowth and development of that of Greece, though with some features peculiarly its own. Indeed, it was so obviously and so fundamentally founded on the Greek, that it cannot be well understood without a previous knowledge of its Greek parent; while, at the same

time, the necessity of entering very largely on it is lessened by this previous knowledge. In gradually forming a national style of architecture, the Romans adopted two courses: they modified the features adopted by the Greeks, and introduced other features not known to their predecessors. One of the most striking of the latter was the arch. It is among the curiosities of architecture, that nothing is certainly known of the person by whom, the country in which, or the period when, the arch was first introduced; though great research and ingenuity have been bestowed upon the matter, it remains still in a very vague state. The chief point which has been settled is that the arch was not in use among the Greeks, unless in-

Entasis of a Greek Doric Column. SPECIMENS OF THE FIVE "ORDERS" IN ROMAN ARCHITECTURE.—See ROMAN ARCHITECTURE.

he soon resigned. He obtained such popularity by his opposition to the bill for the naturalization of the Jews that his publications on that subject were printed by the corporation of London. In 1764 he was elected to the living of St. Ann, Blackfriars, where, as well as at St. Dunstan's, he continued to officiate till his death, in 1795. Among his works are "Discourses on the Law and the Gospel" and "The Life of Faith."

**ROMANTIEZER** (ro-mam-te-e'zer), a chief of one of the courses of singers, 1 Chr. xxv. 4, 31.

**ROMAN** (ro'man). This word is used in two senses: 1. Nationally, John xi. 48. 2. With ref-

time, the necessity of entering very largely on it is lessened by this previous knowledge.

In gradually forming a national style of architecture, the Romans adopted two courses: they modified the features adopted by the Greeks, and introduced other features not known to their predecessors. One of the most striking of the latter was the arch. It is among the curiosities of architecture, that nothing is certainly known of the person by whom, the country in which, or the period when, the arch was first introduced; though great research and ingenuity have been bestowed upon the matter, it remains still in a very vague state. The chief point which has been settled is that the arch was not in use among the Greeks, unless in-

has been found in Greece; but the arch, properly so called, important as it was to the Romans, did not enter into Greek architecture.

The Romans effected alterations in the Doric, Ionic and Corinthian orders, and introduced two new ones, the Tuscan and the Composite. The general character of these orders may be judged pretty accurately by an examination of the specimens given on this page, with the meaning of the various technical terms applied to the component parts. The left-hand specimen shows the nature of the *entasis*, or swelling—the slight deviation from the straight line.

In the Roman Tuscan order, which is the heaviest of all, the base is formed of a plinth, or square

flat piece of stone, with a torus and a fillet above it. The shaft is quite plain, and is terminated at its upper end with an astragal and a fillet. Over this is the capital, consisting of a necking, or hypotrachelium, an ovolo moulding, a square abacus and a fillet. The architrave presents only a plain face with a broad fillet. The frieze is in like manner broad and plain. The uppermost member of the entablature, the cornice, consists of several mouldings, viz., an ogee, a fillet, an ovolo, another fillet and a cymatium. Thus is formed an order which, to use the language of an old English writer, "is a plain massive rural pillar, resembling some sturdy well-limbed laborer, barely clad."

In the Roman Doric the features somewhat resemble the Tuscan, but without being so plain. The Greek Doric has generally no base, but the Roman has a base, consisting of alternations of the torus or round, the scotia or hollow and the fillet or flat moulding. The capital of the Roman Doric exhibits a necking encircled with rosettes and buds; above this are three fillets, then an ovolo, then a square abacus, and lastly a small ogee and fillet. The entablature, supported by the columns, differs also in some particulars from the Greek. The architrave is plain, and there is a tania or fillet, with rows of small drops or guttæ, in groups of six each, to separate it from the frieze. The frieze is divided into triglyphs and metopes, as in the Greek; but instead of there being always only twice as many triglyphs as there are columns, they are sometimes threefold, sometimes fourfold, according to the degree of closeness in placing the columns, whether more nearly approaching the pycnostyle (very close) or the areostyle (very open). The rule is to place one triglyph exactly over each column, and to place either one, two or three more over the intercolumnial space, according to its width. The metopes are generally nearly square, but not always. Above them and the triglyphs are a small fascia, a fillet and an ogee. Then comes the mutule band, with the mutules projecting over the frieze and the drops or guttæ depending from them. The spaces between the mutules are often paneled and decorated. The cornice consists of a corona, an ogee, a fillet and a hollow moulding. In some specimens of Roman Doric the cornice has an ogee with a row of dentils or square blocks, instead of mutules with guttæ; while in other examples it has neither mutules nor dentils, but has an additional number of mouldings. Thus is formed the Roman Doric, of which the writer before quoted says, that it "is the gravest that hath been received into civil use, preserving, in comparison of those that follow, a more masculine aspect and little trimmer than the Tuscan that went before, save a sober garnishment now and then."

The Roman Ionic has a base differing in hardly any particular from the Doric. The shaft is fluted nearly like that of the Greek Ionic. Above it the capital exhibits the gracefully curled volutes, differing somewhat from those of the Greek. The architrave is divided into two fasciæ, the uppermost of which is surmounted by an enriched ogee and fillet and the lowermost by an enriched echinus and a fillet. In nearly all cases the frieze is plain, though in some few examples decoration has been employed. Between the frieze and the overhanging cornice are an ogee moulding, a row of dentils, a fillet, a bead moulding and a large enriched echinus. The cornice consists of a corona, a small ogee, a fillet and a cymatium. The flutings in the Greek Ionic are occasionally only

twenty in number, but in the Roman they are always twenty-four. Thus is formed an order which, to quote the same old author's words, "doth represent a kind of feminine slenderness, yet, saith Vitruvius, not like a light housewife, but, in a decent dressing, hath much of the *matrone*. Best known by his trimmings, for the bodice of this column is perpetually chanced, like a thick pleighted gowne. The capital, dressed on each side, not much unlike woman's wires, in a spiral wreathing."

The Roman Corinthian is the most important of all the five, for it is by many degrees the most extensively adopted, and gives a general character to the Roman style. The Composite is so much like it as hardly to deserve a separate notice. There are frequently square pilasters or pedestals beneath the columns. The base is nearly like those of the Doric and Ionic. The shaft is chan-

neled with twenty-four flutings, separated by fillets. The capital consists of two rows of acanthus leaves, eight in each row, the upper row being placed over the meeting points of those in the lower row. Four spiral volutes in each face spring from two bunches of acanthus leaves, and two of them are so connected at the corners as to support the abacus of the capital. Each face of the abacus, besides being moulded into an ovolo form, is hollowed out into a circular curve. The slight points in which the Composite capital differs from the Corinthian, may be seen by comparing the two parts of the engraving on this page. The Corinthian architrave is divided into three fasciæ, the Composite into two, the fasciæ being in both cases separated one from another by small enriched mouldings.

The frieze is enriched nearly all over with sculptures or other ornaments. The cornice, besides a number of small enriched mouldings above and below the corona, has a row of those square blocks which obtain the name of dentils. The Composite has mutules on the soffit, or under side

of the corona, like the Doric; but the Corinthian has peculiar ornaments, called modillions. In the small piece of the cornice of a temple of Jupiter at Rome (first engraving on page 449), the small square blocks near the bottom are the dentils, while a broad spreading leaf, forming the modillion, is seen to be supporting the corona or overhanging shelf of the cornice. Between every two modillions, along the under side of the corona, is an enriched panel.

Nearly all modern buildings that pattern after ancient structures, so far as columns and porticoes are concerned, have been copied rather from Roman than from Greek models; for there was a simplicity about Greek temple-architecture which did not admit of such complex arrangements as are now sometimes seen.

That addition to the superstructure, above the columns of a building, called the *attic*, requires a

HALF CORINTHIAN. THE CORINTHIAN AND COMPOSITE CAPITALS COMPARED. HALF COMPOSITE.

word to explain the term. In familiar phrase, it means the upper range of rooms in a house, but in architecture it refers to a sort of parapet wall, forming the upper part of the façade or front of a building. In strictness, that which is above the entablature (except where there is a pediment) seems to be about equivalent to the attic. Thus, on page 236 will be found an engraving showing a restoration of part of the monument of Thrasylus at Athens, in which the attic, with a sunken centre supporting a statue, is seen surmounting the entablature. And on page 1410, there is shown, both in elevation and in profile, an attic formed of statues supporting an upper railing or baluster, the whole raised above an entablature supported by Corinthian columns, forming part of a building at Thessalonica called the *Ineantada*. In the engraving on page 1259, is shown an attic surmounting a remarkably bold entablature, on the face of a building enclosing the Forum of Nerva, at Rome.

In various parts of Syria, Palestine and the adjacent countries, remains of more or less extent

still exist to show that Roman architects had been at work there. Columns, entablatures, pilasters, the bones of the architectural skeleton, are here and there to be met with, telling a tale of former days—such as the Corinthian columns in Bozrah, page 343, and the Ionic column at Tyre (see engraving at article TYRE). The same may be said of Egypt. Both the Greeks and the Romans, during the periods of their successive occupation of that country, constructed buildings which still leave evidence of their former grandeur.

Passing from Asia and Africa to Europe, it is found that nearly all the countries in the western half of Europe exhibit Roman ruins—not always temples, but structures of some kind or other. Confining ourselves here to temples, we may allude to the temple at Evora, in Portugal, page 507. This is considered to be the finest ancient remain in that country, and one of the best preserved in Europe. It is supposed to have been built by one of the Roman emperors, and to have been dedicated to Diana. The portico is hexastyle Corinthian, the columns being about three feet four inches in diameter. The entablature is wholly destroyed,

UPPER PART OF THE INCANTADA, THESSALONICA.—See ROMAN ARCHITECTURE.

except the lower mouldings of the architrave. The superstructure which now appears upon it is a later addition by the Moors, and accords but ill with the ancient columns. The body of the temple still remains, wonderfully perfect considering the time which has elapsed since it was built; but the Portuguese do not show much appreciation of it as a work of art, for they have converted the interior into a slaughter-house.

France contains many Roman remains. One of these is the temple at Nîmes called the "Maison Carrée." See engravings on pages 1411 and 1431. This was a peripteral Corinthian temple, having a hexastyle portico at each end and eleven columns along each flank. It is rather pseudo-peripteral, for the side columns are half imbedded in the walls instead of standing out at a distance from them. The columns are about thirty feet high by three in diameter. The intercolumniations are about two diameters in width—a mode of spacing which Vitruvius would have called systyle. The building is about seventy-seven feet by thirty-nine in width. The whole of the three members of the entablature, architrave, frieze and cornice, run round the four sides of the building, and are highly enriched. There are no windows and only one entrance, and the

interior was probably originally of the hypæthral form. This structure (which is familiarly known at Nîmes as the "Maison Carrée," or square-house) was used in the Middle Ages as a town-hall, afterward as an appendage to a private house, then as a church, and now as a museum for curiosities. It has been taken as a model from which the state-house at Richmond, in Virginia, has been copied. Near it are remains of what was once probably a colonnaded building or enclosure to it.

It is in Italy, however, and in Rome itself especially, that the remains of Roman temples are to be looked for, and where they are indeed found to a wonderful extent. The Etrurians, who were located in Italy before the Romans, have left many curious monuments of art behind them, but nothing which will serve as an example of their temples. The Romans most generally adopted the rectangular form of temple, like the Greeks, but in some few cases they made their temples circular. Among the most remarkable of early Roman edifices are the COLOSSEUM, the PANTHEON and the cluster forming the FORUM; for notices of these the reader is referred to the articles at the several words.

There are other remarkable specimens of Roman architecture shown throughout this work, as at pages 45, 68, 174, 212, 252, 253, 581, 651, 652, 674, 943, 1014, 1127, 1258, 1318, 1374, and elsewhere.

The Romans showed a strong yearning for that sort of notoriety which arises from the dedication of a triumphal arch or a column to any celebrated man. See MONUMENTS; also the engravings on pages 81, 146, 172, 1318, and with articles on TRUSS, etc., and elsewhere. There were at one time no fewer than thirty-six marble arches standing in Rome alone, in honor of emperors and other personages; not one-sixth of these are now remaining. At Aquino, Aosta, Pola, Nîmes, Orange, Athens, Syria, Tripoli—all places once under Roman sway—there are existing remains of similar arches. As a general rule, it may be remarked, the triumphal arches were erected across their roads,

their bridges, or at the entrance of their towns. Some were built temporarily of wood, and were deemed to have answered their purpose when the triumphal procession had passed under them; but those which we are here considering were intended as permanent memorials, and were therefore built of more enduring materials.

The general form of the Roman triumphal arch is that of a bulky mass, with an arched opening through it, in the middle of the longer side, and sometimes smaller openings on either side of the central one. The piers at the sides of the arches were decorated in part with columns; and above was usually a heavy entablature or attic, containing an inscription explanatory of the purpose for which the arch was erected. In proportion as the simpler principles of Greek architecture were departed from, these arches became overloaded with ornament, until at length they became far more rich than tasteful. Some of them were erected during the time of the republic, but most of them are of later date.

The development and the decay of architectural taste among the Romans, may readily be traced in the structures which survive, in whole or in part, and which indicate the taste of their respective times better than could any written

record. The subject is interesting, but foreign to the province of an encyclopedia, and its study must be pursued in works devoted to architecture.

In concluding this rapid notice of Roman architecture, it may be remarked that, in the opinion of many writers, the attractions presented by the vast and crumbling ruins of ancient cities are due quite as much to the associations which they engender in the mind as to any intrinsic quality possessed by them. Thus Mr. Allison observes, "What is it that constitutes that emotion of sublimity which every man of common sensibility feels upon the first prospect of Rome? It is not the scene of destruction before him. It is not the Tiber, diminished in his imagination to a paltry stream, flowing amid the ruins of that magnificence which it once adorned. It is not the triumph of superstition over the wreck of human greatness, and its monuments erected on the very spot where the first honors of humanity have been gained. It is ancient Rome which fills his imagination. It is the country of Cæsar and Cicero and Virgil which is before him. It is the mistress of the world which he sees, and who seems to him to rise again from her tomb to give laws to the universe. All that the labors of his youth or the studies of his maturer age have acquired, with regard to the history of this great people, opens at once before his imagination, and presents him with a field of high and solemn images which can never be exhausted. Take from him these associations, conceal from him that it is Rome that he sees, and how different would be his emotions!"

**ROMANESQUE** (ro'man-esk) **ARCHITECTURE**, a name given to that style of architecture which prevailed after the decline of the Roman empire till the introduction of the pointed arch. This style, or perhaps modifications of it, has by various authorities been called Saxon, Norman (which is only a more ornamented and less rude style than the Saxon), Lombard, Byzantine, etc. Its characteristics are a more or less close imitation of the features of Roman architecture. The arches are round, are supported on pillars retaining the classical proportions; the pilasters, cornices and entablatures have a correspondence and similarity with those of classical architecture, and there is a prevalence of rectangular faces and square-edged projections; the openings in the walls are small and subordinate to the surfaces in which they occur; the members of the architecture are massive and heavy, very limited in kind and repetition, the enrichments being introduced rather by sculpturing surfaces than by multiplying and extending the component parts. There is in this style a predominance of horizontal lines, or at least no predominance and prolongation of vertical ones. For instance, the pillars are not prolonged in corresponding mouldings along the arches; the walls have no prominent buttresses, and are generally terminated by a strong horizontal tablet or cornice. This style, in one form or another, spread over Western Europe, gradually became ornamented, as in the great cathedrals, and eventually gave way to the Lancet, the Decorated and the Perpendicular, of which numerous illustrations are given in this work under the proper heads.

**ROMANS** (ro'manz), **EPISTLE TO THE**. Little need be said as to the genuineness of this Epistle; from the earliest times the evidence is plain and continuous that it was written by Paul.

But though no one has denied the Pauline origin of this letter generally, yet certain modern critics have questioned Rom. xv., xvi. and some other portions, not so much denying that they were written by Paul as supposing that they were separate compositions adjoined to the Epistle. It is not worth while to notice such theories.

The date and place of writing may be readily ascertained. The apostle was then on his way to Jerusalem, Rom. xv. 25, and was lodging with Gaius, Rom. xvi. 23. But Gaius belonged to the Corinthian church, 1 Cor. i. 14; and Paul, we are told—having left Ephesus—"abode three months in Greece" just before he proceeded to Jerusalem, which he hoped to reach by Pentecost, Acts xx. 1-3, 16. Putting these notices together, and observing that prior to his quitting Ephesus he had expressed his intention of going to Rome, Acts xix. 21, and that he commends to the Christians there the deaconess Phœbe of Cenchrea (a port of Corinth), who appears to have been the bearer of the letter, Rom. xvi. 1, we cannot doubt that it was written at Corinth about the beginning of 58 A. D.

The object with which the apostle wrote is evident from the Epistle itself. He had heard much of the Roman Christians, Rom. i. 8, of their faith and of the difficulties with which they were beset from the mixed character of their body and their peculiar position in the capital. Moreover, it was specially fitting that he, the apostle of the Gentiles, should have his mind directed to that mainly Gentile community and the Gentile population around them. Yet further, from the salutations contained in the Epistle, xvi. 3-15, it would seem that many of Paul's helpers and probably disciples were the most prominent of the Roman believers, and had been the instruments, if not of first planting the gospel there, yet certainly of guiding and adding to the converts at Rome. Yet again, they had never been visited by an apostle. For else Paul would not, according to his maxim, Rom. xv. 20, have been so anxious to see them. Spiritual gifts, therefore, for their establishment, Rom. i. 11, were needed. Moreover, there could not have been at the time a regularly-constituted church at Rome; for he does not address the "church," Rom. i. 7, as he so generally does, or speak of "bishops and deacons," Phil. i. 1, appointed ministers, some of his expressions importing that there were only private communities, Rom. xvi. 5, 14, 15, instead of a public body. We may well understand, then, how necessary it was to lay down and enforce the great principles of Christian doctrine, exhibiting the relative position of Jew and Gentile, and leading them to realize their union in Christ, Rom. xv. 5-9.

As to the style much cannot be here said. It is full and energetic. The zeal of the apostle's character appears in his writings. He hurries on regardless of nicely accurate and formal expression, placing in the strongest light the idea he wishes to illustrate, propounding and answering objections, and frequently involving himself in long parentheses, which yet he marvelously succeeds in making to forward his main argument.

He evinces much rhetorical power, and, with a fondness for antithesis and play upon words, he soars occasionally into the highest flights of eloquent demonstration and invests his great subject with such a glow of divine radiance that the reader takes no note of the roughness of language. But it is not always rough; it is moulded by a skillful hand and made thoroughly expressive, while sometimes it flows on in long-drawn harmony, with cadences of grandeur which no ear will willingly forget. Even had not Paul been an inspired apostle, he would have stood in a very prominent rank among the mighty masters of speech, Rom. vii. 7-25; viii. 22-39; xi. 25-36.

Various divisions of this Epistle have been proposed. Perhaps the most natural arrangement is to regard it as having—

I. An introduction, Rom. i. 1-15.

II. Doctrinal teaching, Rom. i. 16-xi. 36, comprising the general statement that salvation to Jew and Gentile comes by faith, Rom. i. 16, 17. This proposition is proved by showing—1. That all are under condemnation, Rom. i. 18-iii. 20; 2. That the righteousness revealed by the gospel, being of

ROMAN CORINTHIAN TEMPLE, POPULARLY CALLED "LA MAISON CARRÉE," NÎMES.—See ROMAN ARCHITECTURE.

faith, is universal, Rom. iii. 21-v. 19; 3. The moral consequences of justification are exhibited, Rom. v. 20-viii. 39. 4. The rejection of the Jews is discussed, the reason of it stated, while it is shown not to be final, Rom. ix. 1-xi. 36.

III. The hortatory or practical part, Rom. xii. 1-xv. 13. 1. Inculcating holiness of life, Rom. xii., xiii.; 2. With instructions how to behave toward the weaker brethren, Rom. xiv. 1-xv. 13.

IV. The conclusion, Rom. xv. 14-xvi. 27, includes—1. Personal explanations, Rom. xv. 14-33; 2. Salutations, Rom. xvi. 1-23; 3. Benediction and doxology, Rom. xvi. 24-27.

**ROME**. The city, as the nucleus, and subsequently the capital, of the empire, demands the first notice.

I. THE CITY OF ROME is aptly styled by the exile of Patmos, Rev. xvii. 18, "that great city which reigned over the kings of the earth." An eminent writer has well said "it was the most famous city of antiquity," and, unlike Alexandria, Antioch, Athens and other famous cities of the olden time, its importance has never waned since it first achieved distinction. It has had its ups and downs, indeed, but its downs have never made it insignificant, even for a short time, as it ever ral-

lied ere the world was aware of its brief reverse. We cannot but regret that the scope of this work permits but a brief review of so fascinating a subject. To make our notice the more comprehensive, we shall place what we have to say under appropriate subheads.

1. *Its Origin*.—Almost every intelligent school-boy is familiar with the wonderful stories that long passed current as the early history of Rome, and scarcely a study can be fraught with more lively interest than has long surrounded that of determining just how much credit was due to the earlier Roman history, as recorded by the ancient Roman writers. The researches of modern scholars and critics in this field, have clearly demonstrated that a large proportion of the stories of the early "historians" is apocryphal, and falls before enlightened criticism. Still, however, though we may now safely withhold our assent from a large portion of what used to pass current as the early history of Rome, we must take care not to carry this skepticism so far as to reject, by one sweeping sentence of condemnation, every portion that has come down to us on this head. Even allowing a considerable

degree of doubt and uncertainty to pervade the first records of the Roman history from the alleged foundation of the city to its capture by the Gauls, for that is a point which Livy himself does not scruple to concede, we must yet regard even this dubious period as luminous and authentic, when compared with the times which preceded the foundation of Rome. Few sober-minded critics, indeed, will be disposed to indulge in skepticism, so far as to imagine that everything which relates to the kings of Rome is fictitious and apocryphal. It appears to us, that there are certain facts recorded in the early history of that city which rest on too undisputed a basis, too universal a consent of authorities, to be easily set aside. Where these are borne out by the succeeding and indubitable parts of the history, and exhibit a connected account of the growth and progress of the constitution of this great city, surely it would be injudicious to reject them, except in the case of evident contradiction or striking improbability. Great uncertainty exists, no doubt, on many points; but, after all, it is more in matters of detail than of real importance, and especially in the relation of those petty events and circumstances with which Livy and Dionysius have, perhaps without due discrimination, endeavored to dress up the meagre chronicles who

preceeded them, and to infuse some spirit into the dry records of the pontifical volumes. Let us retrench, if it must be so, the gaudy decorations and fanciful ornaments with which these historians have embellished their work, but let us not, at the same time, overthrow the whole fabric. We may prune what is exuberant or decayed, and weed what is rank and unprofitable; but we must beware, in the process, of encroaching upon what is sound,

ARCHITRAVE IN THE FORUM.—See ROMAN ARCHITECTURE.

or rooting out what is wholesome and nutritious. Though it be uncertain, with respect to the Horatii and Curiatii, which belonged to Rome and which to Alba, we may still believe that the latter city sank beneath its more powerful rival. The elder Tarquin's reign does not cease to be a historical fact because we hear an absurd story of an eagle uncovering his head on his arrival at the gates of Rome. The constitution said to have been formed by Servius Tullius may have been the result of longer experience and more practical wisdom than falls to the lot of a single reign; but it was such a constitution as Rome did receive, and which it was afterward enabled to bring to a state of greater perfection than any ancient form of government that we are acquainted with. Suppose the story of Lucretia false; we cannot deny that monarchy was abolished at Rome, and made way for consular authority about the time that Livy pretends, though that historian may be wrong in giving Valerius Publicola and not Horatius Barbatus as a colleague to Brutus. The valor of Horatius Cocles and the fortitude of Mutius Scaevola may be left to the admiration of schoolboys, but the siege of Rome by Porsenna is no idle tale invented for their amusement, though it should be proved that the consequences of that event were not so honorable to the Romans as Livy has

THE ROMAN AND GREEK ACANTHUS.—See ROMAN ARCHITECTURE; see, also, the engraving on page 1441.

chosen to represent them. It is a disputed point whether two or five tribunes of the people were elected at first, but does that doubt invalidate the fate of the secession to the Mons Sacer? Cancel three-fourths of the Roman victories and triumphs over the Æqui and Volsci; will it be less true that the former were nearly destroyed, the latter completely subjugated? Say it was gold, and not the valor of her dictator and his troops, which delivered Rome from the Gauls; she may surely boast of having lived to revenge herself on the barbarian

foe, and of having, by a hundred triumphs, blotted out the stain of that transaction, and of the shameful rout on the banks of the Allia. In short, though we may sometimes pause when reading the early annals of Rome, and hesitate what judgment to form on many of the events which they record, there are landmarks enough to prevent us from straying far from our course and to lead us on safely to the *terra firma* of her history. But we have not the same assistance for tracing our way, nor the same guarantees to certify us that we are treading in the right path, when we come to explore the truth of the accounts on which the origin of Rome and the actions of its reputed founder must mainly depend for their credibility. On the contrary, after reading all that Plutarch has said in the opening of his life of Romulus, and all that Dionysius has collected on the subject, it is impossible not to feel convinced that the received story of the foundation of Rome rests on very questionable grounds. Here it is not merely the more undisguised appearance of fiction, or the greater frequency of the marvelous, which is calculated to awaken suspicion, but it is the inconsistency and improbability of the whole, as an attempt to ex-

OUTLINE VIEW OF ANCIENT ROME (RESTORED).

plain the first rise and progress of unquestionably the most interesting city of antiquity, which ought to startle the mind and revolt the judgment of the philosopher and the critic. It is not also because these tales are to be traced to a Greek source that we would reject them, for we are inclined to think that the early Greek historians who made the antiquities of Italy their study—and they form a numerous class—were better informed about what they wrote and more trustworthy than perhaps they are generally allowed to be. The objection rather lies against the particular authority on whose testimony they seem entirely to depend for their support. Dioecles of Peparethus, an author mentioned by no one else, is said by Plutarch, in his life of Romulus, to

have been the first to accredit the received accounts of the circumstances relative to the origin of Rome, and it was upon his authority that Fabius Pictor, the earliest Roman historian, brought them into repute with his countrymen. Now, unless we are informed what peculiar sources of information were open to this obscure writer which were not possessed by the other early historians of his nation to whom the name of Romulus seems to have been known, there can be no reason why we should give him the preference. It will not be enough to say

that the approval of Fabius is a sufficient testimony in his favor; for as his account of the birth of their founder was most flattering to the vanity of the Romans, their partiality toward him would be easily accounted for, and by a natural consequence would tend to lower rather than raise our opinion of his credibility. But the most solid objection which can be urged against the popular account of the foundation of Rome by Romulus is chiefly grounded on the inconsistency of the circumstances under which that city is said to have commenced its political career, with the character and condition which is ascribed to it immediately after. If it be true that Romulus was surrounded by so much state and dignity, and possessed not only the insignia of royalty, but also a force such as no despicable city could display, since we are told that he could bring into the field formidable armies, then we may assert confidently that Rome did not date its beginning from a motley assemblage of lawless depredators and runaway slaves, and that its first walls held within their circuit something more than the lowly huts of shepherds or the rude palace of a village king. Nor were there traditions wanting to give strength to such

an hypothesis by ascribing to this great city an existence anterior to that which it had afterward as a colony of Alba.

But let us now proceed to the question respecting the real origin of Rome, and at the threshold we meet with a tradition which carries it back to the age of the Pelasgians. The Pelasgic origin of Rome is implied in the legend of the settlement of the Arcadian Evander on the Palatine Mount. The religion and the language of Rome sanction this belief. The same opinion was probably held, at least by the earliest of the many writers who, according to Dionysius, supposed it to be a Tyrrhenian city. If any by this expression meant that it was Etruscan, we may oppose to this the well-grounded opinion that the Etrurian sway was not extended so far south as the lower part of the Tiber till about the close of the second century of Rome. We have, however, express testimony that Rome was a Sicilian town. Varro informs us that the old annals reported that the Siculi were sprung from Rome; and the legend of Antiochus has been preserved which derived the appellation of the Siceli in Ænolia and Sicily from a mythic chief Sicelus, who fled from Rome, and was entertained by Morges, king of Ænolia. It is scarcely necessary to observe that Sicelus is a personification of the nation, and that we have

here a record of its original seat and of its subsequent migration. And the Siceli or Siculi were a Pelasgian tribe. The Siceli fled from the Opici, and the Pelasgians of Latium were overpowered by the Casci, who were probably an Opican or Oscan tribe. Whether Rome fell into the hands of the conquerors we cannot be certain, but it is very probable. It is thus we must interpret the legend preserved by Plutarch that Romus, king of the Latins, expelled the Tyrrhenians. Such a conquest would give rise to the tradition that Rome was founded on a colony from Alba. Palatium, the settlement on the Palatine Hill, probably took its name from Palatium, a town of the Oscan aborigines, on the declivity of the Apennines.

lus. It ran under three sides of the hill; the fourth side was occupied by the swamp just mentioned, where it was neither needful nor possible to carry a wall. The ancient city, comprised within this outline, or possibly only the city on the summit of the hill, was called by Roman antiquaries the "Square Rome." There is reason to suppose that some at least of the adjacent hills were the seat of similar settlements. The legend of the twin brothers, Romulus and Remus, appears to have arisen from the proximity to Rome of a kindred town called Remoria, either on the Aventine or on an eminence somewhat more distant toward the sea. The first enlargement of Rome seems to have been effected by the addition of the Cælian

Quirinal and Capitoline Hills seem to have been the seat of a Sabine settlement, distinct from the Rome on the Palatine, and in early times even hostile to it. The most poetical incident in the legend of Romulus, the rape of the Sabine virgins, involves an historical meaning. It appears to refer to a time when the Romans did not possess the right of intermarriage with some neighboring Sabine states, and sought to extort it by force of arms. By the right of intermarriage (*connubium*) is meant the mutual recognition that the children of parents, citizens of the two states, were entitled to the full rank of citizens in the state of their father. This right, among the ancient states of both Greece and Italy, was established only by

THE ANCIENT CITY OF ROME—RESTORED.—See the Outline on the opposite page.

2. *Original Site and Subsequent Growth of Rome.*—All traditions agree that the original site of Rome was on the Palatine, whether they ascribe its foundation to Evander or to Romulus. The steepness of the sides of the hill would be its natural defence; and on one quarter it was still further strengthened by a swamp, which lay between the hill and river, which was afterward drained and called the Velabrum. In the course of time, dwellings sprang up around the foot of the hill; but the Palatine must still have remained the citadel of the growing town, just as at Athens that which was the original city (*polis*) became eventually the *Acropolis*. These suburbs were enclosed with a line, probably a rude fortification, which the learning of Tacitus enabled him to trace, and which he calls the *pomerium* of Romu-

Hill, which was probably occupied by a different tribe from the people of the Palatine. Dionysius speaks of Romulus as holding both the Palatine and the Cælian Mount. The next addition to the city was the Esquiline Hill. The festival of Septimontium preserved the memory of a time when Rome included only Palatium, with its adjacent regions, Velia, Cermalus and Fagatal, the Cælian Hill, and Oppius and Cispius, the two summits of the Esquiline. The Capitoline, Quirinal and Viminal Hills were not yet comprehended in the pomerium; the Aventine was always excluded from the hallowed boundary, even when it was substantially a part of the city. Thus we see that the notion that Rome was built on seven hills was fitted originally to circumstances different from those to which it was afterward applied. The

express treaty. A citizen might live with a foreign woman as his wife; but unless the intermarriage were sanctioned by public compact, his children lost their paternal rank. Niebuhr has observed that even the poetic legend did not regard Rome as a genuine and lawful colony from Alba, otherwise it would, from the very beginning, have enjoyed the right of intermarriage with the mother city and the other Latin towns; and there would have been no consistency in the story of the want of women. In the narrative of the war with the Latins, Livy calls Tatius only king of the Sabines; but when he mentions that, at the close of the war, the Sabine appellation Quirites was extended to the people of Romulus, he derives it from Cures. Dionysius has followed the annalists who expressly specified Cures as the seat of

the kingdom of Tatius. Strabo adopted the same tradition. Now, when we consider the exceedingly narrow limits within which all the other incidents of the early Roman traditions are confined, and even the historical events of the first years of the republic after the kingly dominion of the city was redneed, it seems very unlikely that Rome, in its infancy, could have come into collision with Cures, which was distant from it more than twenty miles. Moreover, nothing is told of the war before the seizure of the Capitoline Hill. This is the point from which all the attacks of the Sabines proceed. Again, after the termination of the war, we hear nothing of the return of Tatius to Cures. He apparently deserts his old dominion, and establishes himself and his Sabines on the Capitoline and

advanced even to the neighborhood of Rome, and had established a settlement on the Quirinal and Capitoline Hills. Of this town the Capitoline must have been the citadel. It was likewise the seat of its religious worship; for the pontifical books recorded that, before the building of the capitol, its site was occupied by shrines and fane consecrated by Tatius. Tatius we can scarcely regard as a more certainly historical personage than Romulus, though the story of his death at Lavinium has an historical aspect. He is only the personification of the tribe of the Titienses or Titics, who are said to have taken their name from him. But his people had a real existence. The name of their town has been lost; their own name was undoubtedly Quirites. This people

names of Romans and Quirites were extended indifferently to both divisions of the citizens, and they were no longer distinguished as nations, but only as tribes of the same people, under the denomination of Ramnes and Titienses.

3. *The Early Roman Constitution.*—We are told that the people of Rome were divided into three tribes; and besides the Ramnes and Titienses, a third tribe appears, who are called Luceres. That they were looked upon as an important element in the state, is manifest from the legend that Roma was the daughter of Italus and Luceria. As the distinction of the two former tribes arose from the difference of their national origin, so we may conclude that the Luceres were a people of a third race, and united, either by confederacy or subjec-

THE APPIAN WAY, ROME.

Quirinal Hills. The senate of the people of Romulus and Tatius met in conference in the valley between the Palatine and Capitoline Hills; and as the Palatine was the proper seat of the one, so the Capitoline must have been that of the other. Cures vanishes from our sight; and though the union of the Romans with the Sabine people, with whom they had warred, endured unbroken, there is no trace of their possessing a wider territory than the district immediately adjacent to the hills of Rome.

These considerations are sufficient to expose the inconsistency of the vulgar legend, but the testimony to the incorporation of a part of the Sabines with the Roman people is far too strong to be set aside. The most probable supposition is, as has been before stated, that the Sabines, who, in the early period of their national existence, extended themselves down the left bank of the Tiber, had

lived in close neighborhood with the Romans on the Palatine, but they were of different and even hostile races, and no intercourse subsisted between them. Between two petty states, so situated in immediate neighborhood, it is not at all improbable that women may have been a cause of contention. We can gather from the traditions that war took place between them, which ended at last in a compact by which, not only the right of intermarriage and a community of all other rights were granted, but the two nations were combined into one. We can even trace the stages of their union. It appears at first to have been a federal union; each people had its own king and its own senate, and they only met to confer upon matters of common interest. Afterward, one king was acknowledged as the common chief of the united people; the two senates became one body and consulted for the welfare of the whole state; the national

tion, with the other two. The origin of the Titienses is distinctly marked; they were Sabines. That of the first tribe, the Ramnes, the genuine Romans of the Palatine, is not so clear; but it seems probable that they belonged to the Opican stock of the Latins. From these circumstances we might reasonably conjecture that the third tribe, the Luceres, were the remains of a people of the Pelasgian race. They are always enumerated in the third place, as the Ramnes are in the first, which accords well with the idea that they were a conquered and subject class. But there is evidence that points more directly to this conclusion. Though the origin of the Luceres was accounted uncertain by the Roman historians, so that Livy does not venture to assign a cause for their name, yet it was generally supposed to be derived from the Etruscan Lucumo, who had fought with Romulus against Tatius. Now, "Lu-

umo" was only a title mistaken for a proper name, so that nothing could be derived from it, even if the incidents of the legend were received as historical facts. Moreover, the Etruscans, in the infancy of Rome, had not penetrated so far to the south. But the story becomes clear, if we admit that we have here the customary confusion between the Etruscans and Tyrrhenians, and that the allies of the Ramnes of the Palatine were a Tyrrhenian or Pelasgian people, a portion of the old inhabitants of Latium. Dionysius adds a circumstance to the legend which confirms this hypothesis. He says that Lucumo brought his Tyrrhenians from the city Solonium. No such city is known to have existed, but the level tract on the sea-coast south of the Tiber, lying between Rome on the one hand and Laurentum and Lavinium on the other, was called the Salonian plain. This region Dionysius probably found mentioned in some annals. This would assuredly be the seat of the Pelasgian Latins; and in this very direction we are expressly told that the early dominion of Rome extended most widely. The Tyrrhenian or Pelasgian origin of the Luceres may be deduced yet more clearly from the legend which described their leader as Lucerus, king of Ardea. If we inquire for the town or chief settlement of the Luceres, we shall find reason to conjecture that it was upon the Caelian Hill. According to one tradition, Romulus was supposed to possess the Palatine and the Caelian, while Tatius and his Quirites held the Quirinal and the Capitoline. As the latter hills were the seat of the second tribe, the Titienses, and the Palatine of the Ramnes, the first and genuine Romans, it seems reasonable to conclude that the Caelian was the site of the third and subject tribe, the Luceres. Moreover, there is a tradition, though a confused one, that the Caelian took its name from a Tyrrhenian or Tuscan chief, Caelius or Celes, an auxiliary of Romulus—in short, the Lucumo from whom the Luceres were supposed to deduce their appellation.

Among the original population of the city, those who could show a noble or free ancestry constituted the Patrician order, and to them alone belonged a share in the government of the state. The rest of the people were subject to the king and to the body of the patricians; and each man, with his household, was attached, under the appellation of Client, to the head of some patrician family, whom he was bound to serve, and from whom he looked for protection and help. It has already been stated that, after the Sabine war and the union of the people of Romulus and Tatius, the citizens were distributed into three tribes, to which were given the names of Ramnes, Titienses and Luceres; these three primitive tribes were subdivided into thirty *curiæ*, ten in each tribe. In the national assembly the people were called together in their *curiæ*; the votes of the householders in each *curia* were taken in the separate *curia*, and the votes of the greater number of the thirty *curiæ* determined the business before the assembly. This assembly was called the *Comitia Curiata*. Besides this popular assembly, there was a select and perpetual council, called the senate. At its first institution, it was composed of a hundred chief men of the patrician order. Ten of these were of higher rank than the rest, and to one, the chief of all, was entrusted the care of the city whenever the king should be absent in war. After the completion of the union with the people of Tatius, the senate was doubled by the addition of a hundred Sabines, and the first Tarquinius added a third hundred to the ancient number. The senators ad-

mitted by Tarquinius were called "Fathers of the Less Houses or Kins," and the old senators, "Fathers of the Greater Houses or Kins." Such is a correct, although imperfect, outline of the forms of the primitive constitution.

The leading feature in this outline is the position that the original population of Rome was composed only of the patrician order and their clients. Upon this statement all our authorities are agreed, either by express assertion or implied consent. But this statement is generally accompanied by another, arising from a false conception, which has obscured and embarrassed the whole course of early Roman history. The clients are supposed to have been the same with the Plebeians. They are conceived to have been called plebeians as a body, in opposition to the patrician body, but clients individually, in relation to their particular patrons. Such, at least, is the explicit statement of Dionysius, and of Plutarch who has

the constitution of the commonwealth, even then the *Comitia Curiata* was exclusively patrician, and the plebeians had no part in it. The fact was that the distribution of the people into tribes and *curiæ*, and the still further division into *gentes*, or houses, had respect only to the original stock of the nation; and this original stock kept itself distinct from the *body of new citizens*, which was added by conquest, or sprang up insensibly from other causes. The clients, inasmuch as they were attached to individual patricians, were attached to the *gentes*, and so may be considered, in this sense, as included in the greater divisions of *curiæ* and tribes, although it is manifest that they could not appear as members of the *curiæ*, when these were called together as the component parts of the sovereign popular assembly. But the plebeians grew up as a separate body by the side of the original patrician citizens, and were never incorporated in their peculiar divisions. They were not members

THE RUINS OF THE FORUM ROMANUM.

followed his authority; and this view of the matter has been adopted without question by modern writers. This, however, is a positive error. The plebs, or commonalty, was of more recent origin; and the plebeians, in their civil rights, held a middle place between the ruling patricians and their dependent clients. One proof of this, and perhaps the strongest that can be adduced, is drawn from the nature of the *Comitia Curiata*. This great national council was the most important of all the institutions connected with the *curiæ*. At its first origin, and as long as it continued to have a real existence, it was composed exclusively of the patrician order. It cannot be thought strange that the clients, an inferior order of men, personally dependent on individuals of the patrician body, should not appear in the supreme council of the state. The great distinction which demands our attention is this—that the plebeians were still more certainly excluded from it. Even when the plebeian state had grown up to such magnitude and importance that it had its peculiar magistrates and was become a chief element in

of the *gentes*, or of the *curiæ*, or of the three tribes, consequently they had no share in the *Comitia Curiata*; and this assembly, in which resided the supreme power of the state, was, as we have already said, exclusively patrician. It is needless to insist upon the importance of this distinction to a right view of the constitution and of its successive changes, and, indeed, to a right notion of the whole internal history, which for more than two centuries is made up of the struggles of the patrician and plebeian orders. Yet this distinction was overlooked by all the writers on Roman history; and they suffered themselves to be misled by the superficial theory of Dionysius, who represented the government of Rome as thoroughly democratical from the very foundation of the city, and conceived the public assembly to be composed of the whole male population of the state, with the exception of household slaves.

The patrician citizens of Rome were all comprehended in certain bodies which were called *gentes* (kins or houses). The word *kin* would be the most exact translation of *gens*; but as this

word is nearly obsolete, except in particular phrases, and as the translators of Niebuhr have rendered *gens* by *house*, the latter term is now generally adopted. The members of the same *gens* were called *gentiles*. In each house were contained several distinct families. It is probable that these families were originally single households; but where their numbers increased they became families in the wider acceptance of the term. From the etymology of the term *gens*, it is evident that a connection by birth and kindred was held to subsist among all the members of the same house. The name of the house seems always to have been derived from some mythic hero, and in the popular belief the hero from whom the house was named was regarded as a common ancestor. Thus, the Julian house was regarded as the progeny of Julius, the son of Æneas, and the Valerian house was derived from Volesus, a Sabine warrior, and companion of Tatius. Even those whose superior information enabled them to reject these fabulous genealogies, adhered to the notion of an original connection by birth, and a fictitious and

were distinguished by names of a patronymic form which were derived from some hero or mythic ancestor. But notwithstanding this fictitious kindred, and though all the terms which expressed the relation were derived etymologically from the notion of connection by birth, the authorities from which we draw our precise knowledge of the institution directly and pointedly deny the reality of such a connection, and ascribe the origin of the *gens* to an arbitrary division. The great bond of union among the members of a house was a participation in its common religious rites. It seems that each house had its peculiar solemnities, which were performed at a stated time and place. There can be no doubt, that at a fitting age the children of the *gens* were admitted to these solemnities and publicly recognized as members of it; just as in Attica, at the feast of Apaturia, Athenian citizens of the pure blood were admitted and registered in their hereditary phratry.

We have spoken of the *gentes* as pertaining only to the patricians. This is affirmed upon direct testimony; but in making this statement we must

gentlemen of the clan, the *Duinhevasals*, who were the companions of the chief and the warriors of the clan, but also their dependents, to whom was left their scanty tillage and the keeping of the cattle, and who, if ever they were called to follow the warlike array of the clan, were imperfectly armed and placed in the hindmost ranks, so the Roman *gens* consisted of the freeborn patricians and of their clients. And our theory that, notwithstanding the conventional kindred of the *gentiles*, the *gentes* were really, in many cases, composed of families which had no natural consanguinity, but had been arbitrarily arranged in them, will appear less strange when we remember that not only the *Duinhevasals*, but the meanest followers of a Highland clan, claim kindred with their chief, although in many cases it may be shown, by the strictest historical evidence, that the chief and his blood relations are of an entirely different race from the rest of the clan. The clansmen are Gaels or Celts, while the chief is not unfrequently of Norman descent.

But this brief sketch must suffice for the first year of years of Rome; we must, reluctantly we admit, leave fuller details to works devoted to Roman history and Roman archaeology, and pass on to—

4. *An Outline of its History* as the capital of the great empire, or, we might say, the capital of the civilized world. At first the city had three gates, according to a sacred usage. Founded on the Palatine Hill, as we have seen, it was extended, by degrees, so as to take in the other six hills, at the foot of which ran deep valleys that, in early times, were in part overflowed with water, while the hill-sides were covered with trees. In the course of the many years during which Rome was acquiring to herself the empire of the world, the city underwent great, numerous and important changes. Under its first kings, it must have presented a very different aspect from what it did after it had been beautified by Tarquin. The destruction of the city by the Gauls (U.C. 365) caused a thorough alteration in it; nor could the troubled times which ensued have been favorable to its being well restored. It was not till riches and artistic skill came into the city, on the conquest of Philip of Macedon and Antiochus of Syria (U.C. 565), that there arose in Rome large handsome stone houses. The capture of Corinth contributed much to the adorning of the city, many fine specimens of art being transferred from thence to the abode of the conquerors. And so, as the power of Rome extended over the world, and her chief citizens went into the colonies to enrich themselves, did the masterpieces of Grecian art flow toward the capital, together with some of the taste and skill to which they owed their birth. As usurpers ever strive to strengthen themselves in the popular esteem by appearing munificent in advancing the material interests of their realms, so Julius Caesar projected improvements on a grand scale, but his early death left the work of carrying out his plans to his nephew Augustus. The latter was not content to stop at what his uncle had designed, but even went far beyond, and he it was who did most for embellishing the capital of the world, though there may be some sacrifice of truth in his boast that he found Rome built of brick and left it marble. Subsequent emperors followed his example, till the place became the greatest repository of architectural, pictorial and sculptural skill that the world has ever seen—a result to which even Nero's incendiarism indirectly conduced, as affording an occasion for the city's being rebuilt under the higher scientific influence of the times. But

bear in mind that constructions of a similar nature existed among the plebeians, which had their origin when the subject and municipal towns were independent states. The gentile connections of the plebeians were older than their character as Roman citizens. Thus, the Cæcili, though plebeians at Rome, were patricians of Præneste, and claimed as the ancestor of their house Cæculus, the son of Vulcan. The distinction between the patrician and the plebeian houses was, in the first place, that every patrician was a member of a house, while among the plebeians comparatively but few families could claim the honors of hereditary nobility; and in the second place, that the patrician houses were constituent elements of the Roman state. Their existence affected the constitution of the great councils of the nation, the *Comitia Curiata* and the senate, and their internal laws and usages were part of the common law of the Roman people, while of the plebeian houses the state took no cognizance. The nature of the Roman *gentes* may be illustrated in some points by the analogy of the Gaelic clans. All who belonged to the *gens* or to the clan bore a common name. But as the clan contained not only the freemen or

RUINS OF THE PALACE OF THE CÆSARS.

conventional kindred was acknowledged by the members of the same house. In describing this kindred of the *gentiles* as fictitious and conventional we do not mean to assert that in no case did such a connection really exist. No doubt, what were called houses were first formed by natural consanguinity. But it is probable that these natural alliances had suggested an artificial arrangement, and that families not akin to one another had been distributed into houses by some legislative power. This will appear certain if we shall be convinced of the existence of the precise numerical divisions which will be explained presently. If it be true that originally each *curia* contained ten *gentes*, and each *gens* ten householders, it is obvious that this exact division must have been made arbitrarily. A precisely similar division existed among the ancient Athenians. The Eupatridæ, a body which corresponds to the patrician order at Rome, were divided into four Phylæ, which correspond to the three Roman tribes; each Phylæ into three Phratræ, which correspond to the curiæ; and each Phratræ into thirty *Genæ* or houses, so that the total number of houses was three hundred and sixty. The Athenian houses

while thus great attention was paid to matters of taste and ornament, the practical genius of the people displayed itself in public works to this day unrivaled. Vast cloace, or sewers, conveyed the filth of the city into the Tiber, and the aqueducts, resembling, as Strabo says, "whole rivers," left no house without a full supply of the first necessary of life. The roads and highways too were kept in excellent order.

[As Paul, in custody of the centurion Julius, approached the city by the Appian Way, Acts xxviii. 14, 15, lined on either side with the sepulchres of illustrious families, he would pass through the Porta Capena, which lay at the foot of the Cælian Hill, and was always dripping with the water of the aqueduct which passed over it. The road then lay between the Cælian Mount on the right and the Palatine on the left, over the spot where the Arch of Titus was afterward erected, and down the Sacra Via, until it terminated at the Forum, the centre of business and politics. At the head of the Forum was the Milliarium Aureum, a pillar of bronze gilt, to which all the roads of the provinces converged. On the left rose the splendid buildings of the Palatine—"Cæsar's house," Phil. iv. 22; and close to them lay the barracks of the prætorian guard. It was here—though, according to others, at the great prætorian camp outside the city wall—that Julius delivered up his prisoners to the prætorian prefect Burrus, to be detained until their trial before the emperor. Some other localities—such as the Mamertine Prison, near the Forum, in which Paul and Peter were said to have been confined, and the spot on the Ostian Road supposed to be the scene of their martyrdom—are traditionally connected with the sacred history. But these traditions rest on too uncertain a foundation to render it necessary to do more than mention them. The gardens of Nero, where St. Peter's now stands, were the scene of the cruel sufferings of the Christians described by Juvenal, and in the Catacombs we have a monument both of the existence and of the faith of this Apostolic Church.]

The site occupied by modern Rome is not precisely the same as that which was at any period covered by the ancient city; the change of locality being toward the north-west, the city has partially retired from the celebrated hills. About two-thirds of the area within the walls (traced by Aurelian) are now desolate, consisting of ruins, gardens and fields, with some churches, convents and other scattered habitations. Originally, the city was a square mile in circumference. In the time of Pliny, the walls were nearly twenty miles in circuit; now they are from fourteen to fifteen miles round. Its original gates, three in number, had increased in the time of the elder Pliny to thirty-seven. Modern Rome has sixteen gates, some of which are, however, built up. Thirty-one great roads centred in Rome, which, issuing from the Forum, traversed Italy, ran through the provinces, and were terminated only by the boundary of the empire. As a starting-point, a gilt pillar (Milliarium Aureum)

was set up by Augustus in the middle of the Forum. This curious monument, from which distances were reckoned, was discovered in 1823. Eight principal bridges led over the Tiber; of these three are still relics. The four districts into which Rome was divided in early times, Augustus increased to fourteen. Large open spaces were set apart in the city, called *Campi*, for assemblies of the people and martial exercises, as well as for games. Of nineteen which are mentioned, the *Campus Martius* was the principal. It was near the Tiber, whence it was often called Tiberinus. The epithet *Martius* was derived from the plain being consecrated to Mars, the god of war. In the later ages, it was surrounded by several magnificent structures, and porticoes were erected under which, in bad weather, the citizens could go through their usual exercises. It was also adorned with statues and arches. The name of Forum was given to places where the people assembled for the transaction of business. The Forums were of two kinds—

PALACE BORGHESE.

fora venalia, "markets;" fora civilia, "law courts," etc. Until the time of Julius Cæsar there was but one of the latter kind, termed by way of distinction *Forum Romanum*, or simply Forum. It lay between the Capitoline and Palatine Hills; it was eight hundred feet wide, and adorned on all sides with porticoes, shops and other edifices, on the erection of which large sums had been expended, and the appearance of which was very imposing, especially as it was much enhanced by numerous statues. In the centre of the Forum was the plain called the Curtian Lake, where Curtius is said to have cast himself into a chasm or gulf, which closed on him, and so he saved his country. On one side were the elevated seats, or *suggestus*, a sort of pulpits from which magistrates and orators addressed the people, usually called *Rostre*, because adorned with the beaks of ships which had been taken in a sea-fight from the inhabitants of Antium. Near by was the part of the Forum called the *Comitium*, where were held the *Comitia Curiata*. The celebrated temple bearing the name of Capitol (of which there remain only a few vestiges) stood on

the Capitoline Hill, or *Mons Tarpeius*; it was square in form, each side extending about two hundred feet, and was approached by three ascents. It was one of the oldest, largest and grandest edifices in the city. Founded by Tarquinius Priscus, it was several times enlarged and embellished. Its gates were of brass, and it was adorned with costly gilding, whence it is termed "golden" and "glittering," *aurea, fulgens*. It enclosed three structures—the temple of Jupiter Capitolinus in the centre, the temple of Minerva on the right and the temple of Juno on the left. The Capitol also comprehended some minor temples or chapels, and the *Casa Romuli*, or cottage of Romulus, covered with straw. Near the ascent to the Capitol was the asylum. The Basilicæ also demand a word, since some of them were afterward turned to the purposes of Christian worship. They were originally buildings of great splendor, being appropriated to meetings of the senate and to judicial purposes. Here counselors

received their clients and bankers transacted their business. The earliest churches bearing the name of Basilicæ were erected under Constantine. He gave his own palace on the Cælian Hill as a site for a Christian temple. Next in antiquity was the Church of St. Peter, on the Vatican Hill, built A.D. 324, on the site and with the ruins of temples consecrated to Apollo and Mars. It stood about twelve centuries, at the end of which it was superseded by the modern church bearing the same name. The *Circi* were buildings oblong in shape, used for public games, races and beast-fights. The *Theatra* were edifices designed for dramatic exhibitions; the *Amphitheatra* (double theatres, buildings in an oval form) served for gladiatorial shows and the fighting of wild animals. That which was erected by Vespasian and Titus, and of which there still exists a splendid ruin, was called the Colosseum, from a colossal statue of Nero that stood near it. With an excess of luxury, perfumed liquids were conveyed in secret tubes round these immense structures, and diffused over the spectators, sometimes from the statues which adorned the interior.

In the arena which formed the centre of the amphitheatre the early Christians often endured martyrdom by being exposed to ravenous beasts.

5. *Population in the Time of Nero.*—This has been variously estimated, as low as five hundred and sixty-two thousand and as high as eight millions. The truth probably lies between the two. The free population, including the populace, the aristocracy, the aliens and the soldiers, cannot have been much less than one million two hundred thousand; and if to these we add at least eight hundred thousand slaves, it will make a total of upward of two millions. The moral state of this vast assemblage of human beings was as bad as can be conceived. There was no industrial middle class, all handicraft employments being deemed unworthy of free citizens. Trade, manufactures and arts were in the hands of slaves. A pauper population subsisted on state gratuities, and passed their time at the games and gladiatorial contests. The portentous

TEMPLE OF THE SIBYL, TIVOLI, ROME.

luxury of the wealthier classes rendered the poverty of the rest more conspicuous by the contrast. All the vices of all nations, as the satirist (Juvenal) complained, flowed into imperial Rome as a common sink; and the description which he has left of its morals justifies the remark.

No insignificant part of the population consisted of the Jews. The nucleus of this community consisted of the captives brought by Pompey after his campaign in Judaea, and the connection of the Romans with Palestine caused Jews to settle at Rome in considerable numbers. On one occasion, in the reign of Tiberius, when the Jews were banished from the city by the emperor for the misconduct of some members of their body, not fewer than four thousand enlisted in the Roman army which was then stationed in Sardinia. These appear to have been emancipated descendants of those Jews whom Pompey had taken prisoners in Judaea and brought captive to Rome. From Philo, also, it appears that the Jews in Rome were allowed the free use of

their national worship, and generally the observance of their ancestral customs. Then, as now, the Jews lived in a part of the city appropriated to themselves, where, with a zeal for which the nation had been some time distinguished, they applied themselves with success to proselytizing. They appear, however, to have been a restless colony; for when, after their expulsion under Tiberius, numbers had returned to Rome, they were again expelled from the city by Claudius. The Roman biographer does not give the date of this event, but Orosius mentions the ninth year of that emperor's reign—A. D. 50. The precise occasion of this expulsion history does not afford us the means of determining. The words of Suetonius are, "Judeos, impulsore Chresto, assidue tumultuantes, Roma expulsi."—"He expelled from Rome the Jews continually raising disturbances under the impulse of Chrestus." The cause here assigned for their expulsion is that they raised disturbances—an allegation which, at first view, does not seem to point to a religious, still less to a Christian, influence. And yet we must remember that the words bear the coloring of the mind of a heathen historian, who might easily be led to regard activity for the diffusion of Christian truth, and the debates to which that activity necessarily led, as a noxious disturbance of the peace of society. The Epicurean view of life could scarcely avoid describing religious agitations by terms ordinarily appropriated to martial pursuits. It must equally be borne in mind, that the diffusion of the gospel in Rome—then the very centre and citadel of idolatry—was no holiday task, but would call forth on the part of the disciples all the fiery energy of the Jewish character, and on the part of the pagans all the vehemence of passion which ensues from pride, arrogance and hatred. Had the ordinary name of our Lord been employed by Suetonius, we should have found little difficulty in understanding the words as intended to be applied to Jewish Christians. But the biographer uses the word *Chrestus*. The *us* is a mere Latin termination, but what are we to make of the root of the word, *Chrest* for Christ? Yet the change is in only one vowel, and *Chrest* might easily be used for Christ by a pagan writer. A slight difference in the pronunciation of the word, as vocalized by a Roman and a Jew, would easily cause the error. And we know that the Romans often did make

the mispronunciation, calling Christ *Chrest*. The point is important, and we therefore give a few details, the rather that Lardner has, under Claudius, left the question undetermined. Now, in Tacitus Jesus is unquestionably called *Chrest* ("quos per flagitia invidiosus vulgus Christianos appellabat. Auctor nominis ejus Chrestus") in a passage where his followers are termed Christians. Lucian, too, in his *Philopatra*, so designates our Lord, playing on the word *Chrestos*, which, in Greek, signifies "good." These are his words: "Since a *Chrest* (a good man) is found among the Gentiles also." And Tertullian treats the difference as a case of ignorant mispronunciation. The mistake may have been the more readily introduced from the fact that, while Christ was a foreign word, *Chrest* was customary; lips, therefore, that had been used to *Chrest* would rather continue the sound than change the vocalization. The term *Chrest* occurs in inscriptions, and epigrams in which the name appears may be found in Martial. In the same author a diminutive from the word—namely, *Chrestillus*—may be found. The word assumed also a fem-

inine form, *Chresta*, as found in an ancient inscription:

"Hoc, virtus, fatique decus et amabile nomen,  
Doto pudicitia, celebrata laboribus actis  
Vitae, Chresta jacet condita nunc tumulo."

There can, therefore, be little risk in asserting that Suetonius intended to indicate Jesus Christ by *Chrestus*; and we have already seen that the terms which he employs to describe the cause of the expulsion, though peculiar, are not irreconcilable with a reference on the part of the writer to Christians. The terms which Suetonius employs are accounted for, though they may not be altogether justified, by those passages in the Acts of the Apostles in which the collision between the Jews who had become Christians and those who adhered to the national faith is found to have occasioned serious disturbances. This interpretation is confirmed by the fact that a Christian church, consisting of Jews, proselytes and pagan Romans, had at an early period been formed in Rome, as is evident from the Epistle of Paul to the Romans, which Christian community must have been in existence a long time when Paul wrote (about A. D. 59) that Epistle, see Rom. i. 8-13; and there is ground of opinion that the foundations of the church in Rome may have been laid even during the lifetime of our Lord. It is also worthy of notice that Luke, in the book of Acts, ch. xviii. 2, when speaking of the decree of Claudius as a banishment of all the Jews from Rome, adverts to the fact as a reason why two Christians, Aquila and Priscilla, whom we know, Rom. xvi. 3, to have been members of the Roman church, had lately come from Italy; these the apostle found on his arrival at Corinth, A. D. 51. Both Suetonius and Luke, in mentioning the expulsion of the Jews, seem to have used the official term employed in the decree; the Jews were known to the Roman magistrate; and Christians, as being at first Jewish converts, would be confounded under the general name of Jews; but that the Christians, as well as the Jews strictly so called, were banished by Claudius appears certain from the book of Acts, and, independently of this evidence, seems very probable from the other authorities of which mention has been made.

6. *The Early Church at Rome.*—The question, Who founded the church at Rome? is one of some interest as between Catholic and Protestant. The former assigns the honor to Peter, and on this grounds an argument in favor of the claims of the Papacy. There is, however, but little reason for believing that Peter was ever even so much as within the walls of Rome; and if he were ever there, it is almost incontrovertible that it was in his old age and near the time of his death. But we have no intention of entering here on that disputed point, and content ourselves with referring the reader to the article PETER.

7. *Symbolic Name.*—Rome, as being their tyrannical mistress, was an object of special hatred to the Jews, who therefore denominated her by the name of Babylon—the state in whose dominions they had endured a long and heavy servitude. Accordingly, Rome, under the name of Babylon, is set forth in the Apocalypse, ch. xiv. 8; xvi. 19; xvii. 5; xviii. 2, as the centre and representative of heathenism, while Jerusalem appears as the symbol of Judaism. In ch. xvii. 9, allusion is clearly made to the Septicollis, the seven-hilled city—"seven mountains on which the woman sitteth." The description of this woman, in whom the profligacy of Rome is vividly personified, may be seen in ch. xvii. of the Revelation.

In ch. xiii., Rome is pictured as a huge unnatural beast, whose name, or number, "is the number of a man, and his number is  $\chi\epsilon\sigma\tau$ ," not improbably  $\chi\epsilon\sigma\tau\iota\sigma$ , Latin, Roman. This beast has been most variously interpreted. The several theories serve scarcely more than to display the ingenuity or the bigotry of their originators and to destroy each other. Munster thinks there is a reference to the secret name of Rome, the disclosure of which, it was thought, would be destructive to the state. Pliny's words occur in the midst of a long and picturesque account of Italy. Coming in the course of it to speak of Rome, he says, "The uttering of whose other name is accounted impious; and when it had been spoken by Valerius Soranus, who immediately suffered the penalty, it was blotted out with a faith no less excellent than beneficial." He then proceeds to speak of the rites observed on the 1st of January in connection with this belief, in honor of Diva Angerona, whose image appeared with her mouth bound and sealed up. This mystic name tradition reports to have been Valencia.

The most recent view of the name of the beast, from the pen of a Christian writer, we find in "Hyponoia, or Thoughts on a Spiritual Understanding of the Apocalypse." "The number in question (666) is expressed in Greek by three letters of the alphabet:  $\chi$ , six hundred;  $\xi$ , sixty;  $\sigma$ , six. Let us suppose these letters to be the initials of certain names, as it was common with the ancients in their inscriptions upon coins, medals, monuments, etc., to indicate names of distinguished characters by initial letters, and sometimes by an additional letter, where the initial might be considered insufficient, as C. Caius, Cn.

Cneus. The Greek letter  $\chi$  (*ch*) is the initial of  $\chi\rho\iota\sigma\tau\acute{o}\varsigma$  (*Christ*); the letter  $\xi$  (*x*) is the initial of  $\xi\lambda\omicron\nu$  (*xylos*), "wood," or "tree," sometimes figuratively put in the New Testament for the cross, and in the Revelation applied to the tree of life, the spiritual cross. The last letter  $\sigma$  is equivalent to  $\sigma$  and  $\tau$ ; but whether an *s* or an *st*, it is the initial of the word *Satanas*, Satan, or the adversary. Taking the two first names in the genitive, and the last in the nominative, we have the following appellation, name, or title:  $\chi\rho\iota\sigma\tau\acute{o}\varsigma$   $\xi\lambda\omicron\nu$   $\sigma\alpha\tau\alpha\nu\acute{\alpha}\varsigma$ , "the adversary of the cross of Christ," a character corresponding with that of certain enemies of the truth described by Paul, Phil. iii. 19. The spiritual hyponoia, or underthought, embodied in this the author thus states: "Any doctrine tending to represent the intervention of a divine propitiation as unnecessary, or militating with a belief and trust in the vicarious sacrifice of Jesus as the only hope

of salvation, must be an adversary of the cross of Christ; of this character we consider every principle of self-righteousness."

8. *The Rome of To-Day.*—We come now to the most difficult portion of our sketch of Rome—the attempt to picture it as it is seen now. Indeed, to delineate it in its present aspect, to do justice to the details, so that the reader may form a fair estimate of its grandeur as a city of the past and present, is not only difficult—it is impossible. However, we must do the best that we can, and recommend those who can to go and see it for themselves. As an aid to our sketch of the city, we have had engraved two superior illustrations which appear on this page and page 1421, besides numerous engravings of the more important

of the Campus Martius. Within this flat, and on a declivity which stretches irregularly along its east side and rises with some abruptness from it, the far greater part of modern Rome is situated. The only other portions of any extent are situated on the opposite side of the river, consisting chiefly of a suburb called Trastevere [beyond the Tiber], extending over the upper part of the lower bend facing the west, and thence north-north-west in a narrow belt along the right bank; and of the Borgo, commencing a little beyond the north convexity and forming a most important part of the city, since it is terminated on the east, close to the river, by the Castle of St. Angelo, and on the west by the vast and magnificent pile of St. Peter's. Of the seven hills of ancient Rome, all of them

MODERN ROME FROM THE BANKS OF THE TIBER.

edifices, some of which appear in this article and others at articles under specific titles, as, for example, at the article AGRIPPA will be found a fine engraving of the temple of Agrippa; at that on the COLOSSEUM, four views of the magnificent ruins; at that on the FORUM, an excellent view thereof; at that on the PANTHEON, a view of the exterior and one of the interior of that magnificent structure; and so, at other articles connected with Rome and her history, appropriate illustrations will be found, not only ornamental but exceedingly helpful.

The Tiber, in coming from the north, makes two very remarkable bends of nearly equal dimensions, forming a figure closely resembling that of the letter S. The upper bend, which of course has its concavity toward the east, encloses a large alluvial flat little raised above the level of the stream, and well known by the ancient name of

situated on the left bank of the Tiber, only three properly lie within the limits of the modern city. They form part of the declivity or ridge already mentioned as bounding the Campus Martius. Their names are the Quirinal, the Viminal and the Capitol. The first occupies the west edge of the declivity, nearly opposite to the centre of the Campus Martius, the second is immediately to the east of it and the third to the south-west, where it projects forward as if to meet the river while winding east to form its second large bend. The other four hills are the Esquiline, the easternmost of all; and south-east of the Viminal, the Caelian, also considerably east, but south of the Esquiline; the Aventine, which is the southernmost of all, and almost close to the river; and the Palatine, which has an intermediate position, forming a kind of central nucleus between the Capitol on the north-west, the Caelian on the east, and the Aventine on

the south-west. These four hills and the spaces within and around them, covering a large extent of ground to the south and east of the present city, have no human habitations except a few solitary convents and villas no longer tenanted, and are occupied for the most part by gardens and vineyards. In ancient times, however, they stood in the very heart of the city, and hence are still the sites of some of its noblest ruins. None of the hills have much elevation, and most of them are approached by easy ascents. The Esquiline, which is the loftiest, has a height of two hundred and eighteen feet, and can only be considered as an elevated flat. The Palatine, one hundred and seventy feet, appears originally to have had precipitous edges, but they have either been leveled down or are buried up by rubbish. The Capitol, though the lowest of all—only from one hundred

ture, though comparatively little of it can now be traced. The walls on the right bank are much more recent, and form two separate enclosures, a transverse wall, immediately south of the Borgo, separating it from the suburb of Trastevere, and converting it, with its Castle of St. Angelo, into a kind of isolated citadel.

The river, between the points where the walls on its left bank commence and terminate, has a length, including windings, of rather more than three miles, a minimum breadth of two hundred feet, and a maximum of not more than four hundred feet, and a deep and rapid current rolling along a considerable volume of water deeply tinged with yellow mud. The quays, which, in several other cities similarly situated, constitute their greatest ornaments and furnish their finest promenades, are here altogether want-

at the end nearest the castle, is of ancient construction, having been built by the emperor Hadrian about A. D. 130; and it was originally called *Pons Ælius*. In 1450, Pope Nicholas V. completely restored the masonry; about 1520, Clement VII. decorated it with some statues; and in 1660, Bernini, by order of Clement IX., added two others and the parapet; Bernini's figures are the two angels, the one bearing the Crown of Thorns, the other the Inscription on the Cross. Hadrian constructed the bridge to reach, the more readily from the opposite side, his Mausoleum, now the Castle of St. Angelo, which is a circular tower, one hundred and eighty-eight feet in diameter, placed on a quadrilateral basement, each side of which measures two hundred and fifty-three feet; originally this edifice was highly decorated, according to Procopius, who, writing in the sixth century, speaks of it as built of Parian marble, and adorned with statues of men and horses of the same material; no vestiges of these works remain. In the fifth or sixth century of the Christian era, it is stated to have been converted into a fortress, though the decorations were preserved intact until, at the latter invasions by the Goths, the Romans, besieged in the castle, hurled down the statues on the heads of their enemies. Its utility as a fortress being gone under the modern system of warfare, it has come to be used almost exclusively as a state prison.

At a considerable distance below, is the ancient Pons Janiculum, now Ponte Sisto, because rebuilt by the fourth pope of that name, in 1474. It has four arches. The other two bridges are about half a mile lower down, where the stream is divided into two channels by the island San Bartolomeo, anciently Insula Tiburina. The bridge from the left bank to the island, called the Ponte di Quattro Capi, from a four-headed Janus which stood near it, is the ancient Pons Fabricius, and retains a good deal of its original structure; it consists of two large arches, with a smaller one between them for a larger escape of water in case of floods. The other bridge, properly only a continuation of the one just described, is the ancient Pons Cestius or Gratius, and now bears the name of the island which it connects with the right bank; it has a large central arch and two smaller side ones.

The open gates, twelve in number, as already mentioned, are only deserving of a passing notice. The finest, the Porta Maggiore, situated near the south-east corner of the walls, and leading, by one of the three streets which meet in front of it, to Frascati, consists of a noble arch of travertine; the Porta San Sebastiano, the southernmost of all, consists of two fine semicircular brick towers resting on foundations of solid marble; the Porta San Giovanni, occupying an intermediate position between the two already mentioned, possesses less architectural merit, but forms a much more important thoroughfare than either, because the high road to Naples by the Pontine Marshes passes out of it; the Porta San Paolo, in the south-west, is considered the most picturesque of all the modern gates. Returning again to the east side, we have to the north of Porta Maggiore in turn the Porta San Lorenzo, formed of two ancient towers; on the north-east the Porta Pio, rebuilt in 1564, on the site of the ancient Porta Nomentana, from the designs of Michael Angelo; and on the north, at a short distance from the left bank of the river,

FOUNTAIN OF PAUL V.

and fifty feet to one hundred and sixty feet—is, from its abrupt face and well-marked outline, the most conspicuous. The right bank of the Tiber has also its alluvial flat, bounded by hills, especially the Janiculum immediately on the west and the Vatican considerably to the north-west. All these hills on both banks, and a considerable additional space, though only partially built upon, may be said with truth to be included in the city, since they are all enclosed by its existing walls. These, built of brick, with occasional patches of stone-work, and crested with numerous towers, have an average height of about fifty feet, are pierced by sixteen gates, of which four are closed up, and form a very irregular polygon, with a perimeter of nearly fifteen miles. Of these, twelve miles are on the east or left, and of course only three miles on the right bank. The walls on the left bank are ancient, and following the same line as that traced by Aurelian, A.D. 271, must in many parts be identical with the original struc-

ing. Many parts of the banks are even unprovided with protecting walls; and hence, as the flats along the banks are low, and the level of the water above the sea is only from thirty-five feet to forty feet, whenever from any cause, as a continuance of strong westerly breezes, the current is retarded, inundation to a greater or less extent inevitably ensues. In ancient Rome the communication between the opposite banks was maintained by eight bridges. Vestiges of all of them can still be traced, but only four are now entire and in use.

The engraving of MODERN ROME FROM THE BANKS OF THE TIBER is fine. Stretching across the river is the Bridge of St. Angelo, not in itself an imposing structure, but of vast historic interest. To the right is the Castle of St. Angelo, and beyond the bridge a mass of palatial residences, above which rises the dome of the noble St. Peter's. Between this and the castle is seen the Vatican. The bridge, except the parapets and a small arch

one of the finest of all the gates, and by far the most frequented, the Porta del Popolo, built by Vignola in 1561, from Michael Angelo's designs, and consisting of four Doric columns, with statues of St. Peter and St. Paul, by Mocchi, in the intervals between them. This gate, leading out to Florence, is that by which visitors from the north usually enter the city, and is perhaps the best point from which to commence, either in describing it or forming a practical acquaintance with it. It may be proper, however, before proceeding to a particular description of the interior, to premise that the whole space within the walls is divided into fourteen rioni, or districts. Of these only two, Trastevere and the Borgo, or Citta Leonina, as it is sometimes called, are on the right bank of the Tiber. The twelve on the left bank are arranged, not according to the space which they cover, but the density of the population they contain, and probably also according to certain local peculiarities. Hence, the extensive tracts on the east and south, because nearly without inhabitants, are wholly included in three districts, while nine are allotted to the more limited, but more densely peopled, portions of the city situated to the north and west of the Capitol.

When Rome is entered from the north, by the Porta del Popolo, it is seen under the most advantageous circumstances, and produces a more favorable impression than a closer inspection is found to justify. Immediately within the gate, is the spacious though irregular Piazza del Popolo, with a fine Egyptian obelisk in its centre, and two handsome churches in front, standing so far apart from each other and from the adjoining buildings as to leave room for the divergence of three principal streets, one in the centre, between the churches, proceeding almost due south, while the other two slant off on either side, to the south-east on the left hand and the south-west on the right. The central street is called the Corso, from the horse-races which take place in it during the Carnival. This street, the finest of which Rome can boast, is about fifty feet wide, and stretches for a mile, in a direct line, to its termination in the Piazza di Venezia, near the north foot of the Capitol. It is lined with splendid palaces, and at all times, but more especially on holidays, when its centre is thronged with carriages and its side-pavements with pedestrians, presents at once a very animated and a very imposing appearance. The diverging street on the left, above referred to, is the Via

BIRD'S-EYE VIEW OF MODERN ROME.

Babuino. It proceeds first directly to the Piazza di Spagna, and thence to the Quirinal. It is of tolerable width and considerable length, and contains a large number of handsome edifices. The whole of the city to the east of this street, and in the triangular space included between it and the

Corso, being situated on the high ground above the Campus Martius, is well aired and healthy, and is usually selected for residence by foreign visitors. The number of private palaces and elegant mansions which it contains also justifies its claim to be regarded as the aristocratic quarter. The other

diverging street, on the right of the Piazza del Popolo, is the Via Ripetta. It pursues a course nearly parallel, and in parts almost close to the river, and, though neither so elevated in its site nor so aristocratic in its appearance as the Corso and Via Babuino, is decidedly handsome. Several

at night by the police. It is allotted to the Jews, and contains their synagogue, council hall and public schools.

Rome cannot boast of many squares of much merit, though not a few of them are remarkable for the obelisks and fountains which they contain.

THE COLOSSEUM.

other streets intersecting those already noticed, more especially the Strada di Porta Pia, stretching west for nearly a mile from the gate of that name, and another, following nearly the same direction, under the successive names of Via Sistina, Via Felice and Via del Quattro Fontane, are both well built and of importance as great leading thoroughfares; but after due allowance is made for these, it must still be admitted that Rome, taken as a whole, is not well built. The streets are generally narrow and ill paved with small stones of lava; not one of them, except the Corso, has side-pavement; and though they are generally well drained by a system of sewerage founded chiefly on the ancient cloaca, many of them are extremely dirty. This is particularly the case in the *rione* (district) San Estachio, in the heart of the Campus Martius, and filled with streets of shops and

The Piazza del Popolo, with the fine obelisk in its centre, has been already noticed. The latter, of red granite, broken into three pieces and covered with hieroglyphics, once stood before the Temple of the Sun, at Heliopolis, in Egypt; its entire height, including base and ornaments, is about one hundred and sixteen feet. The Piazza Navona, occupying the site of the ancient Circus Agonalis, and still retaining its shape, is about two hundred and eighty yards in diameter, and is sometimes used for chariot-races. It is adorned with three fountains, one at each extremity and the third in the centre. The last consists of an immense circular basin, seventy-three feet in diameter, and an ancient obelisk of red granite based on a central mass of rock, to which four figures, representing four river gods, but utterly destitute of merit, are chained. The Piazza di Spagna takes its name

from a fountain within it which has the form of a boat, but possesses little merit. A more remarkable ornament of this piazza is a magnificent staircase of travertine leading to the church of La Trinita de Monte, conspicuously seated on an eminence above it. The Piazza del Pasquino, so called from an ancient mutilated fragment which now bears the name of Pasquin's statue, has less merit than fame, being the spot where the Romans, excluded of all means of expressing their opin-

ions through the press, have long been accustomed to give utterance to them by means of placards. These, though often coarse, are seldom deficient in wit or keen satire, and have hence acquired so much celebrity that the term *pasquinade* has become worldwide. Larger spaces for amusement or exercise have been formed only in a few spots. One of the finest, but least frequented, is the gar-

den of the Vatican, situated on the right bank, on the hill, and adjoining the celebrated palace of the name. A much more frequented spot is a public garden at the opposite extremity, occupying the high ground east of the Piazza del Popolo and commanding extensive villas. In the same locality, but at a short distance without the walls, the gardens of the Villa Borghesi, forming a finely-planted and richly-decorated park of three miles in circuit, though private property, having been thrown open by the liberality of the proprietor, forms the true public park of Rome, and is the favorite resort of all classes, often exhibiting a very gay and animated scene.

The most remarkable edifices divide themselves into two classes, the ancient and the modern. In several respects the former might claim precedence; but as most of them are only remains not in actual use, it accords more with our present article to begin with the latter.

(a.) *Ecclesiastical Edifices.*—Of these, the churches alone exceed three hundred. Many are, of course, very insignificant, but after deducting these, there remain far more than can be noticed within the limits of this article with the fullness which their magnificence or historical associations may seem to require. Selecting only those which it is impossible to omit, we naturally turn at once to St. Peter's. This Basilica, which has justly been pronounced by far the most magnificent which has yet reared its head in Christendom, stands on the right bank of the Tiber, near the western extremity of the Borgo, on one of the worst sites which could possibly have been chosen, a hollow space between the Janiculum and the Vatican, and so concealed by them and a ridge behind which connects them that the church, on three of its sides, up to the height of the nave, is virtually concealed, and is not seen to advantage from any commanding point, either within or without the walls. It is approached through a piazza, the buildings along which are admirably concealed by a superb colonnade, forming two semicircular porticoes, and consisting of two hundred and eighty-four columns, with an entablature on which one hundred and ninety-two statues of saints, each eleven feet in height, stand sentinel. The main body of the building consists of a Greek cross, with a dome of gigantic dimensions, rising from its centre, and borne up by four colossal piers. On this dome in particular Michael Angelo has displayed the wonders of his genius, and produced a work which impresses the beholder with a feeling of the sublime, akin to that with which the grander scenes of nature are beheld. The façade, not the work of the same great mind, but of an artist whom Forsyth stigmatizes as a wretched plasterer from Como, is not in harmony with the other parts of the structure. Though too low, and otherwise defective, it is made to come forward so prominently as to conceal the dome, which accordingly cannot be seen from any part of the piazza in its full proportions. This defect, however, is fully overcome when the interior is entered, and a scene solemn, grand, rich and harmonious, almost beyond conception, bursts upon the view. The extreme lengths within the walls are six hundred and seven feet in the central body, and four hundred and forty-five feet in the transepts; the height from the pavement to the cross is four hundred and fifty-eight feet. Owing to these immense proportions, objects within the area lose somewhat of their effect by contrast, and appear comparatively diminutive. Thus the Baldacchino, a splendid

THE PANTHEON.

manufactories; in the *rione* Ponte, enclosing the angle formed by the bend of the Tiber below San Angelo; and in the *rione* San Angelo in Pescheria, in the vicinity of the Capitol, and opposite to the island of Bartolomeo. Chiefly in this *rione*, but partly also in that of Regda, adjoining, is a very dirty quarter, called Ghetto, surrounded by walls and entered by two gates, which are locked

at night by the police.

bronze canopy over the high altar, and immediately under the dome, though one hundred and twenty feet high, appears not more than thirty feet; and the chair of St. Peter, behind the altar, seems scarcely to rise from the pavement, though seventy feet above it. The same effect is perhaps still more strikingly manifested in regard to the magnificent mosaic paintings on the interior of the great dome, which, seen from below, are so much diminished that the pen in the hand of the prophet in one of the lower compartments, seen from below, seems to be less than eighteen inches in length, though in reality six feet. To those who know St. Paul's at London, an idea of the vastness of St. Peter's may be given by

tion. Among the other remarkable churches of Rome, though they all suffer by the overshadowing of St. Peter's, are: St. John Lateran (see BASILICA, and engraving on page 289), on an isolated spot near the southern wall of the city. Owing to the numerous restorations and capricious changes to which the original structure has been subjected, its unity has been destroyed; but its façade, composed of four large columns and six pilasters, sustaining a massive entablature and balustrade, on which are colossal statues of our Saviour and ten saints, is considered a fine specimen of the architecture of the last century; while its Corsini Chapel, on which elaborate ornaments and gildings, columns of precious mar-

interest may be seen, in a most beautiful Corinthian column of white marble, forty-seven feet high, exclusive of the base and capital. It formed part of the splendid Basilica of Constantine, but is believed to belong to a much earlier and better period of art. A bronze statue of the Virgin on its top has given it the name of the Colonna della Vergine. San Croce in Gerusalemme, the fourth of the Roman basilicas, takes its name from its supposed possession of a portion of the true cross and a quantity of earth which was brought from Jerusalem and mixed with its foundation. It is richer in relics than in architectural merit, but possesses some fine columns of Egyptian granite, and is not without historical interest as

ST. PETER'S, ROME.

mentioning that the floor of the former has an area of only two acres and that of the latter of five acres. The cost of erection is still more disproportioned. That of St. Paul's was not more than seven hundred and fifty thousand pounds; that of St. Peter's, including its monuments and embellishments, is estimated at from twelve to sixteen millions. Here, however, other considerations enter, and place St. Peter's in a less favorable light. The immense sums lavished upon it were in too many instances the hard-won earnings of the industrious poor, enticed away from them by the chicanery of indulgences—a chicanery so reckless and palpable as at last to have roused the general indignation of the better part of the Christian world, and thus made the completion of this wonderful temple not merely a precursor, but a cause, of the glorious Reforma-

tion. Among the other remarkable churches of Rome, though they all suffer by the overshadowing of St. Peter's, are: St. John Lateran (see BASILICA, and engraving on page 289), on an isolated spot near the southern wall of the city. Owing to the numerous restorations and capricious changes to which the original structure has been subjected, its unity has been destroyed; but its façade, composed of four large columns and six pilasters, sustaining a massive entablature and balustrade, on which are colossal statues of our Saviour and ten saints, is considered a fine specimen of the architecture of the last century; while its Corsini Chapel, on which elaborate ornaments and gildings, columns of precious mar-

ble, bas-reliefs, and even gems, have been lavished with the greatest profusion, is without a parallel. This church, which furnishes one of what are considered the great sights of Rome, in the benediction of the people by the pope on Ascension day from one of its balconies, is remarkable as the spot where the five councils which bear its name have been held. Santa Maria Maggiore (see engraving on page 288), which ranks third among the basilicas, is supposed to occupy the site of a temple of Juno Lucina, and to have derived from it the thirty-six Ionic pillars of white marble which support its central nave; its interior, adorned with these pillars, and enriched with tasteful and costly decorations, is one of the finest of its class in existence; but its exterior, though provided with two ostentatious façades, is of little merit. In front of it, a monument of greater

the church in which the popes used annually to consecrate the celebrated Golden Rose, and by the presentation of which to the great Elector of Saxony it was once vainly hoped to entice him away from the cause of the Reformation. Among the parish churches may be specified Santa Agnese (see engraving on page 286), said to stand on the spot where St. Agnes was publicly exposed, after being put to the torture, and presenting one of the purest and most elegant specimens of the Greek cross. San Agostino, with an elegant but simple front of travertine, taken from the Colosseum, the earliest cupola that was constructed in Rome, and a celebrated fresco by Raphael, representing Isaiah and two angels. San Andrea della Fratte, rendered conspicuous by its fantastic cupola and steeple, and remarkable for its ceremonies on Good Friday, when, among other profane mummeries, an attempt

is made, by what is called the *Tre Ore*, to imitate the hours of our Saviour's agony on the cross. San Andrea della Valle, remarkable for its columned façade, with statues by Domenico Guidi, Ercole Ferrata and Fancelli, its beautiful cupola, and its fine paintings, including frescoes of the four Evangelists and of the Flagellation, and Glorification of St. Andrew by Domenichino. San Antonio Abate, supposed to occupy the site of a temple of Diana, and famous for the singular spectacle which it exhibits on the feast of St. Anthony, when droves of animals of all kinds, including the mules of the peasantry and the horses of the pope and cardinals, assemble at the church door to receive a benediction and be sprinkled with holy water, as a preservative against disease during the ensuing year. Ara Celi, a church of great antiquity, and supposed to occupy the site

coes of the Cardinal Virtues, by Domenichino, a fresco by Guido, and a Death of St. Anna, considered the masterpiece of Pietro da Cortona. San Clemente, on the Esquiline, said to have been founded on the house of Clement, St. Paul's fellow-laborer, by Constantine, and containing a number of interesting frescoes by Masaccio. Sta. Costanza, a circular building outside the Porta Pia, built by Constantine, with a baptistery, and adorned with a peristyle of twenty-four coupled granite columns supporting a dome. Sta. Francesca Romana, with some curious mosaics and several fine tombs, among others that of Sta. Francesca, covered with rich marbles and bronzes. San Francesco a Ripa, with a Dead Christ, by Annibale Caracci. San Giorgio in Velabro, remarkable as the only church in Rome dedicated to England's tutelary saint. De Gesu, the church of

of the most imposing which Rome possesses, containing eight antique columns of Oriental granite, with attached bases of white marble, a fine fresco by Domenichino, and the tomb of Salvator Rosa. Sta. Maria a Cosmedin, said to have been built originally in the third century, on the site of the temple of Ceres and Proserpine, consisting of a nave, divided from two side aisles by twelve ancient marble columns, and remarkable for its fine Alexandrine pavement. Sta. Maria di Loreto, crowned by a double dome and enriched with a statue by Fiammingo, considered one of the greatest productions of modern art, and an altarpiece by Perugino. Sta. Maria sopra Minerva, so called from occupying the site of a temple of that goddess, remarkable as the only Gothic church in Rome, and celebrated for its full length statue of our Saviour by Michael Angelo.

Sta. Maria di Monte Santo and Sta. Maria de Miracoli, the two churches already referred to as separating the Corso from the Via Babuina and Via Ripetta, and better known from their position, fronting the main entrance to the city from the north, than any architectural merit which they possess. Sta. Maria di Navicella, with a small marble ship in front of it, originally one of the oldest Roman churches, but entirely renewed from the designs of Raphael, entered by a portico of Michael Angelo, and remarkable within for eighteen fine columns of granite and two of porphyry, and the frieze of the nave painted in chiaro-scuro by Giulio Romano and Perino del Vaga. Sta. Maria della Pace (see engraving on page 661), consisting of a nave, crowned by a fine octagonal dome, and celebrated for its paintings, particularly the four Sibyls, considered among the most perfect works

INTERIOR OF ST. PETER'S, ROME.

of a temple of Jupiter, but claiming notice on the somewhat singular ground of being internally and externally the ugliest of all the Roman churches. San Bartolomeo, built on the island of that name in the Tiber, on the site of the celebrated temple of Æsculapius, and containing twenty-four granite columns supposed to have belonged to it. San Bernardo, a remarkable circular building, originally one of the halls or temples which fronted the outer wall of Diocletian's Baths, surmounted by a dome of striking appearance and richly ornamented within with stuccos. San Bonosa, in the Trastevere, said to be the burial-place of Rienzi. San Bibiana, with a magnificent sarcophagus of alabaster seventeen feet in circumference. Cappuccini, or Sta. Maria della Concezione, celebrated for its pictures of the archangel Michael, by Guido, and the Conversion of St. Paul, one of the best works of Pietro da Cortona, and the Ecstasy of St. Francis, by Domenichino. San Carlo ai Catinari, with one of the loftiest cupolas in the city, four fres-

the Jesuits, with a façade and cupola by Giacomo della Porta, and an interior enriched with the rarest marbles and several fine paintings, decorated in the most gorgeous style, and containing the monument of Cardinal Bellarmine, the celebrated Roman Catholic controversialist. San Ignazio, the church of the Jesuit College, richer even than Gesu in elaborate decorations, though often not in the best taste. San Gregorio, on the Celian, so called after Gregory the Great, on the site of whose family mansion it is built, and containing sixteen columns of Egyptian granite, from some ancient building, and some celebrated frescoes by Guido and Domenichino. San Marcello, in the Corso, a very ancient church, dating from the fourth century, and celebrated for the fine paintings of Perino del Vaga. San Marco, with a nave and two aisles, separated by twenty columns of jasper. Sta. Maria degli Angeli, originally the *Pina-cotheca*, or great hall of Diocletian's Baths, converted into a church by Michael Angelo, and one

of Raphael, but unfortunately injured by recent restorations. Sta. Maria del Popolo, an ancient church, modernized on the plans of Bernini, interesting from the number of its fine sculptures and paintings, and remarkable for its stained glass, the only specimen which Rome possesses. Sta. Maria in Trastevere, said to be the first church in Rome publicly set apart for worship, consisting of a nave and two aisles, separated by twenty-one granite columns, evidently from ancient edifices, and adorned by one of the finest frescoes of the city, an Assumption by Domenichino. Sta. Maria in Vallicella, sometimes called Chiesa-Nuova, one of the largest and most imposing of the Roman churches, and enriched by marbles and other ornaments, chiefly by Pietro da Cortona, and some of the earliest productions of Rubens. Sta. Maria della Vittoria, with fine paintings by Domenichino, Guercino and Guido, and a so-called miraculous picture of the Virgin, whose intercession is said to have obtained many vic-

stories over the Turks, flags taken from whom at the siege of Vienna are suspended from the roof. San Martino ai Monti, with a very chaste and imposing interior, consisting of a nave separated from two aisles by twenty-four ancient Corinthian pillars of different varieties of marble, some fine paintings by Gaspar and Nicolas Poussin, and a crypt which formed part of the Baths of Trajan. SS. Nereo ed Achilleo, remarkable chiefly for its two *ambones*, or marble pulpits, its ancient mosaics, and the episcopal chair of Gregory the Great. San Onofrio, enriched with some fine paintings by Domenichino, and frescoes by Baldassare Peruzzi, and interesting as the burial-place of Tasso. San Paolo alle tre Fontane, on a spot outside the walls, alleged to be that where St. Paul was beheaded, though the accuracy of the tradition is rendered more than doubtful by the absurd fictions associated with it, respecting three fountains which miraculously sprung up where the head in falling is said to have thrice bounded. San Pietro in Montorio, finely situated on a platform, from which, perhaps, the best view of modern Rome is obtained, and near the spot where St. Peter is said to have been crucified, and celebrated for the fine paintings of Sebastian-del-Piombò, from Michael Angelo's designs; in a convent immediately adjoining is a celebrated temple by Bramante, consisting of a circular building sustained by sixteen granite Doric columns, and universally admired as a model in its kind, and one of the most elegant of modern structures. San Pietro in Vincoli, a majestic edifice, supported within by twenty ancient Doric columns of Grecian marble, seven feet in circumference, and celebrated for its statue of Moses, one of the greatest creations of Michael Angelo, and fine paintings by Domenichino and Guercino. San Prassede, entered by an ancient vestibule resting on two granite columns, supported within by sixteen Corinthian granite columns, possessed of a remarkable pulpit, ascended by a double flight of steps composed of the largest blocks of *rosso antico* in existence, and numbering among its relics a column of Oriental jasper brought from Jerusalem, and gravely alleged to be the very column at which our Saviour was scourged, and a portrait of him, once in the possession of St. Peter. Sta. Sabina on the Aventine, occupying the supposed site of the temple of Juno Regina, supported within by twenty-four Corinthian fluted columns of white Grecian marble, and enriched with some small but exquisite paintings by Sasso Ferrato. San Stefano Rotondo, a large and ancient structure, in the form of a circle, as its name implies, supported within by fifty-six pillars of granite and marble, arranged in an inner and outer circle, and having its walls covered over with hideous frescoes of martyrdoms equally displeasing to the eye and defective as works of art. San Tommaso degli Inglesi, in the Trastevere, said to have been founded in 775 by Offa, king of the East Saxons, now dedicated to Thomas à Becket, one of whose arms is exhibited as a relic, and containing curious portraits of Roman Catholics who were put to death during the reigns of Henry VIII. and Elizabeth. Trinità de Pellegrini, with some remarkable paintings, especially a celebrated attempt to represent the Trinity by Guido. And the Trinità de Monte, occupying a conspicuous site above the Piazza di Spagna, approached by a magnificent staircase, and celebrated for its Descent from the Cross, in which Daniel da Volterra, with the assistance of Michael Angelo, has outdone all his other works.

(b.) *Palaces, Museums, etc.*—The Vatican, situated on the hill of the same name, in the north-west part of the city, immediately north of, and at one point connected with, St. Peter's, is an immense, irregular pile, constructed at different periods, without any previously formed plan, and hence devoid of harmony. It was probably commenced as early as the time of Constantine, and had become a palace of some consequence in the eighth century, when it was occupied by Charle-

pile, and is the ordinary papal residence, are all of later origin. The whole covers an immense space, and is rather a collection of separate buildings than a single structure. Owing to this, its exact dimensions are not easily measured, but the length is estimated at eleven hundred and fifty-one feet, and the breadth at seven hundred and sixty-seven feet. To give some idea of its vastness, we are told that it has eight grand staircases, two hundred smaller staircases, twenty courts and four

THE TRIBUNE OF ST. PETER, IN ST. PETER'S, ROME.

magne at his coronation; but the popes began to reside in it for the first time after their return from Avignon, in 1377. One inducement was the vicinity of the castle of St. Angelo, with which it communicates by a covered gallery. From this time the popes vied with each other in extending and embellishing the Vatican, though the task of completing the old palace, nearly in its present form, was reserved for the worst of all, Alexander VI. The Sistine Chapel, the Loggie, the museum, the library and the new palace, which now constitute the most conspicuous portion of the whole

thousand four hundred and twenty-two apartments. The most celebrated portions are the Scala Regia, leading to the Sala Regia, or hall of audience, a splendid apartment covered with frescoes illustrating various events in papal history, and, appropriately enough, giving a conspicuous place to the Massacre of St. Bartholomew; the Capella Sistina, or Sistine Chapel, a lofty oblong apartment, about one hundred and fifty feet long and fifty feet broad, covered with frescoes by Michael Angelo, among which the Last Judgment, sixty feet by thirty feet, is most conspicuous, and celebrated as the spot

where the cardinals meet in conclave to elect a pope and many of the most gorgeous ceremonies of the Romish Church are performed; the Capella Paolina, remarkable chiefly for Michael Angelo's two frescoes of the Conversion of St. Paul and the Martyrdom of St. Peter; the Loggie, a splendid portico of three stories, completed from the designs

DECORATIONS IN THE CHURCH OF GESU (THE CHURCH OF THE JESUITS), ROME.

of Bramante by Raphael, whose magnificent frescoes constitute its greatest ornament; the Stanze of Raphael, or four chambers adjoining the Loggie, and equally adorned by the same master-hand; the Tapestries of Raphael, worked from his Cartoons, and kept in a gallery adjoining the Stanze; the picture-gallery, containing a collection which, though small in extent—not more than fifty pictures—is unsurpassed in real value; the museum, consisting of a series of galleries in which the noblest treasures of art which the world possesses have been amassed, including among others the Laocoon and Apollo Belvedere; the library, surpassed by many collections in the number of its volumes, but by none in the known value of some and the presumed value of more of its manuscripts, for as yet comparatively few of its treasures have been properly examined; the manufactory of mosaics, a large establishment immediately adjoining the palace, and once occupied by the Inquisition; and the gardens, to which, as an interesting place of resort, reference has already been made. Another palace, or rather series of palaces, crowns the summit of the Capitol, and bears the name of the Piazza del Campidoglio. It is approached from the Corso by a flight of steps, at the foot of which two Egyptian lionesses, and at the summit two colossal statues of Castor and Pollux, standing beside their horses, are conspicuous. In the centre of the piazza is a bronze equestrian statue of Marcus Aurelius, the horse of which is so full of life that Michael Angelo, on seeing it, is said to have bid it *camina*, "go." Around the square are the senatorial palace, in which the senator held his court, ornamented by Michael Angelo with a Corinthian colonnade and crowned by a lofty tower, beneath which the whole

city seems to lie exposed in detail; the palace of the Conservatori, containing the Promotea, or collection of busts; the museum of the Capitol, with many interesting objects, but few masterpieces of sculpture except those in the hall of the Dying Gladiator, and a picture-gallery, more extensive than that of the Vatican, though the paintings individually are of far less intrinsic merit. The private palaces, both by their number and magnificence, constitute one of the peculiar features of the city, and contain some of its finest collections, but cannot here be detailed.

(c.) *Colleges, Academies, etc.*—Among these the first place is claimed by the Collegio della Sapienza, or University, originally founded in 1244 for canon and civil law, but subsequently enlarged to comprehend theology, philology and science, and at last placed on a footing with the University of Bologna. It occupies a building begun by Leo X., from designs of Michael Angelo; has forty-two professors, and is attended by about one thousand students. The professors are paid fixed salaries and their lectures are gratuitous. The ground floor of the building is occupied by the *Scuola delle Belle Arti*, in which eleven professors of the academy of St. Luke lecture on sculpture and other branches connected with the fine arts, and on the third floor is the school of engineers. Attached to the university are a library and a museum, and dependent upon it, though at a considerable distance, is a botanic garden, adjoining the Salviati palace in the Trastevere. The Collegio Romano is entirely under the direction of the Jesuits, and gives instruction in the learned languages, theology, rhetoric and natural philosophy; it possesses a library, museum and observatory. The Collegio de Propaganda Fide, situated in the Piazza di Spagna, bespeaks its nature by its name, and has acquired great celebrity as the establishment where missionaries, chiefly young foreigners, are trained to go forth for the conversion of foreign or the recovery of Protestant countries. The printing-office attached to the establishment is rich in Oriental types, and has furnished fine specimens of typography in many languages. The principal academies are those of St. Luke, already incidentally mentioned, and composed of painters, sculptors and architects; the *Accademia Archeologica*, which has published several volumes of transactions; the *Accademia d'Arcadia*, which, under a fantastical name, professed to purify the general literary taste, and has not seldom helped to corrupt it; the *Accademia de' Lincei*, which, founded in 1603 by Galileo and his contemporaries, is the earliest scientific society of Italy, and is still devoted to natural history and science; the *Accademia Tiberina*, for the promotion of historical researches, particularly in regard to Rome; and the *Accademia Filarmónica*, a recent institution, already celebrated for its fine concerts.

(d.) *Hospitals and Charities.*—The Romans boast of the large sums expended on these establishments, and might do it with justice were the expenditure generally devoted to proper objects and the establishments themselves under better management. The principal hospital, called *Spirito Santo*, a richly-endowed institution situated on the right bank of the Tiber, combines a foundling hospital, a lunatic asylum and an ordinary infirmary. The foundling hos-

pital, which receives about eight hundred infants annually, lost, in a period of five years, out of three thousand eight hundred and forty received, the appalling number of two thousand nine hundred and forty-one; and yet it and other similar institutions in the city are in such repute that inmates reach them from all parts of the Papal States, even it is said from Naples. In the lunatic asylum, again, the system of restraint and brutal violence, so justly banished from all enlightened countries, continues in vigorous operation. La Consolazione, or surgical hospital, receives all the cases of stabbing, and furnishes in its statistics a sad delineation of the public morals. Among other institutions called charitable are numerous societies, partly supported by government, for bestowing marriage dowries and making presents to girls taking the veil. Nearly three-fourths of the women married receive these dowries, which on an average amount to about eight thousand pounds per annum. But after deducting all the charities erroneous in principle or defective in management, there cannot be a doubt that many remain which are not only unobjectionable, but entitled to all praise. Among these are the hospitals, San Giovanni, chiefly for cases of fever, and reputed the best conducted in Rome; San Galliciano, occupying a fine building in the Trastevere, for cutaneous, Benfratelli, chiefly for acute, and San Giacomo, near the Corso, for incurable diseases. Another immense establishment of merit is the hospital of San Michele, combining, rather incongruously, a house of correction for juvenile culprits and women, a house of industry for children, an asylum for the aged, and a gratuitous school of art, in which the children of the poor are taught drawing, painting, architecture, music, statuary, etc.

ANCIENT ROMAN BATH, STRAND LANE, LONDON.

(e.) *Antiquities.*—These, though extensive and interesting in the highest degree, must here be disposed of very briefly. The Forum lay in the interval between the Capitoline and the Palatine, in a small irregular space recently called Campo Vaccino, from its appropriation as a cattle-market. Its exact position is still disputed, though fragments of temples and other edifices, which formed its principal ornaments, remain. It has been in

all times the most celebrated part of the city, the scene of some of the greatest events in the history of the city. Here were discussed those great questions which at one time involved the world's destiny—the porticoes once resounded the eloquent orations of Cicero and the seditious harangues of the Gracchi; now it is little better than a desert, for grass and weeds flourish at the bases of its ruined structures; but see *FORUM*. Among its once famous buildings was the temple of Fortune, but only the Ionic hexastyle portico of granite columns now stands (see engraving on page 652), the bases, capitals and entablatures of white marble bearing testimony to its pristine grandeur. Another forum, known as that of Trajan, is conspicuously pointed out by the magnificent pillar which bears his name and stands in the midst of its ruins (see page 146). The Palace of the Cæsars, which stood on the Palatine, is now a mere mass of ruins, so shapeless and undefined that no idea of the form and limits of the celebrated structure can be formed from them (see engraving on page 1416). The most celebrated temples are those of Æsculapius, on the island of the Tiber, of which only a few remains are visible among the buildings of the convent of San Bartolomeo; of Antoninus and Faustina, situated in the Forum, and now incorporated with the church of San Lorenzo in Miranda; of Antoninus Pius, now represented chiefly by eleven marble columns of its portico, forming part of the present Dogana di Terra, or custom-house; of Ceres and Proserpine, already mentioned as the site and part of the structure of the church of Sta. Maria in Cosmedin; of Concord, on the side of the Capitoline, and still, in regard particularly to a portion of its flank, tolerably preserved; of Fortuna Virilis, near the Ponte Rotto, now occupied as the Armenian church, and presenting one of the purest specimens of the Ionic in Rome; of Jupiter Capitolinus, once the most magnificent of all, the pride and wonder of ancient Rome, as it looked proudly down from the summit of the Capitol, but now only dubiously traced in part of its foundations; of Minerva Medica, still forming a picturesque ruin on the Esquiline, near the Porta Maggiore; of Pallas Minerva, a still beautiful ruin, consisting chiefly of two Corinthian columns supporting a magnificent entablature and continued frieze with an attic above, containing a full-length figure of the goddess; of Saturn, on the side of the Capitoline above the Forum, and forming one of its picturesque ruins; and above all, of the Pantheon (see engravings on pages 1296 and 1297), situated in a small dirty piazza between the Corso and the Piazza Navona, but at once one of the most magnificent and best-preserved monuments of ancient Roman architecture. Its excellent preservation is undoubtedly owing to its early conversion into a Christian church, under the name of Sta. Maria Rotonda; it is entered by a noble portico of one hundred and ten feet long, by forty feet deep, composed of sixteen Corinthian columns of Oriental granite, with capitals and bases of Greek marble [of this portico it has been well said that it presents "the most sublime result that was ever produced by so little architecture"], and consists in its interior of a rotunda one hundred and forty-three feet in diameter, crowned by a dome, the height of which is also one hundred and forty-three feet. The doors, undoubtedly the work of classic times, are of bronze, hung on

bronze pilasters, and the pavement is of porphyry, pavonazetto and giallo antico, arranged in round and square slabs. The body of the building is of brick, and has in its interior surface seven large niches, six of which have fluted giallo antico col-

146), covered over with matchless sculptures, giving the history of Trajan's achievements, and containing, among others, no fewer than two thousand five hundred human figures. For the colossal statue of Trajan holding a gilded globe, which originally

GRAND SALOON OF THE THERMÆ, OR WARM BATHS, OF CARACALLA.

umns; the external surface was once coated with marble, but vandalism, in which Pope Urban VIII. bore a principal part, has deprived the building of this and many other ornaments. The most interesting object within is Raphael's tomb.

The other antiquities deserving of notice are arches, pillars, baths, aqueducts and amphitheatres. The Arch of Constantine, built on what is

erowned the pillar, one of St. Peter has been substituted. The aqueducts are justly regarded as the most stupendous of the Roman works, but most of them, though originally brought within the walls, have their most magnificent remains considerably beyond them. That of the Aqua Julia, which pursued a course of forty-six miles, has a line of arches six miles long, which stretches

REMAINS OF AN ANCIENT ROMAN HYPOCAUST, OR SUBTERRANEAN FURNACE FOR HEATING BATHS, AT LINCOLN, ENGLAND.

called the Via Triumphalis, is one of the most elaborate and imposing monuments of the city, though in several parts indicative of the decline of art (see engraving on page 1318). There are also arches of Janus, Titus, Severus, etc. See *ROMAN ARCHITECTURE* and *MONUMENTS*, also articles *TITUS*, *SEVERUS*, etc. The noblest pillar is the column of Trajan (see engraving on page

across the Campagna, and is still used for bringing in water into the city. The amphitheatres furnish, in the Colosseum, or Flavian amphitheatre, the grandest of all the Roman ruins, and the most imposing structure ever erected. It is situated in the interval between the Palatine, Cælian and Esquiline hills, and covers with its ellipse an area of above five acres; it is built principally of

travertine, intermixed with large masses of brick and tufa. The external elevation consisted of four stories, three of them composed of tiers of arches, and the seats, extending backward and upward in regular rows from the arena, were capable of accommodating at least eighty-seven thousand spectators. The arena was two hundred and eighty-seven feet long by one hundred and eighty feet wide, and furnished the attraction which drew together this immense assemblage, composed of all classes of society, noble and plebeian, male and female. It gives a dreadful idea of the times, to think that the main part of the sport consisted in the mutual butchery of trained gladiators, and in the exposure of heathen criminals and Christian martyrs to be torn to pieces by wild beasts. See engravings on pages 429, 430 and 431.

Among the interesting remains of early Rome, the *Thermæ*, or warm baths, demand a brief notice. These were common to all portions of the Roman dominions, but those within the city itself come specially under our eye in this article, though we present illustrations of two interesting ruins in England, the second of which (see page 1427) will

INTERIOR OF THERMÆ AT POMPEII.

afford a faint conception of the vast subterranean furnaces, called *hypocausts*, by means of which these luxurious bath-houses were heated. Among the most noted baths of Rome were those of Agrippa (the friend and chief adviser—the prime minister, in modern parlance—of Augustus), of Titus, of Trajan, of Caracalla, of Diocletian, etc. These were all extensive, superb and luxurious establishments, but are now simply ruins; some have left scarce a vestige, except in relics of art appropriated in the erection and beautifying of more modern structures, while, in some instances, churches occupy the sites of once famous *Thermæ* [the church of Sta. Maria degli Angeli was once the great hall of Diocletian's baths, and San Martino di Monti has for its crypt a part of Trajan's]. The best preserved of these are the *Thermæ* of Caracalla, and their remains afford a fair criterion of other similar edifices. The erection of these baths was commenced by Caracalla about the year 212; they were extended by Heliogabalus and perfected by Alexander Severus. Bare as the walls now are, the technical perfection of the structure is still apparent, and there is ample evidence of its marvelous magnificence, while its extent can best be understood from the simple statement that sixteen hundred

bathers could be accommodated at one time. The entire establishment was quadrangular in form, and surrounded by a wall, with porticoes, race-course, etc. The large saloon engraved on page 1427 is in a fair state of preservation; it formed the *Calidarium*, or hot-air bath. There was a similar saloon, the *Tepidarium*, or warm bath, and an equally large but circular apartment, the *Frigidarium*, or cold bath, besides a large number of rooms of various dimensions for the bathers to disrobe and robe in, and to undergo the manipulations of the barber, the perfumer, etc., and for the various processes incident to bathing as a luxury. The entire establishment was most elaborately decorated with statuary, paintings, carvings, mosaics, etc., and furnished in the most superb and complete manner, absolutely without regard to expense. The Baths of Caracalla stood on the renowned Appian Way. The fountains, though many of them are remarkable as works of art, do not call for specific notice, as they are in their present state all of comparatively modern construction.

The most worthy of special mention of all the

antiquities of Rome are the stupendous subterranean labyrinths known as the CATACOMBS, but these are fully treated under their appropriate head.

II. THE ROMAN EMPIRE.—Anything approximating a history of the great Western Empire cannot be attempted here. We shall, in the main, confine our article to a brief review of the connection of Palestine and the Jews with the Roman power.

The earlier history of the Roman power has already been fairly canvassed in this article, and all that we need here say of that period is, that very soon after she had achieved her own independence, Rome entered vigorously into wars of conquest. The early kings started her successfully on her career of subduing the world. The Republic was not slow to follow in the same course, but it remained for the Empire to complete the great undertaking and bring almost the entire world under Roman domination. The wonderful achievements of Julius Caesar, and the energetic and successful course of Augustus and his successors, made the Roman arms absolutely irresistible for a long course of years.

At the time of Augustus, the great countries of Europe, Asia and Egypt, with all the northern

part of Africa, were comprehended in the Roman Empire. The boundaries in Europe were the Rhine and Danube, in Asia the Euphrates and the deserts of Syria, and in Africa the tract of land known at present under the name of Sahara. Subsequent additions were made by Claudius, of Britain, and by Trajan, of Dacia.

The population at the time of Augustus, has been calculated at eighty-five millions, including both sexes, all ages, and every class of inhabitants; and Gibbon reckons the population at the time of Claudius, at about one hundred and twenty millions.

The entire armies of the Roman Empire are reckoned to have comprised three hundred and forty thousand men, exclusive of the battalions maintained in Rome itself, not counting the numerous battalions of auxiliaries levied throughout the Empire. Augustus may also be regarded as the founder of a naval power which has been considered to have numbered twenty-one thousand men.

Though it was the endeavor of Augustus to make the government introduced by him appear as possessing the forms of the ancient Republic, he had established in fact an absolute monarchy. He united in his own person all the attributes of supreme power. It is true that the senate possessed extensive prerogatives. To secure the maintenance of peace in countries which had been subdued by force, it became necessary to maintain standing armies in them, and, in the year B. C. 27, Augustus arranged that the provinces should be divided between the senate and himself. The governors of those provinces which were assigned to the senate were called proconsuls ("deputies," Authorized Version, Acts xiii. 7; xviii. 12; xix. 38), whatever their previous office may have been. The imperial provinces, on the other hand, were governed by a legatus, or praetor, even if the officer appointed had been consul. The minor districts of the imperial provinces were governed by a procurator ("steward," Authorized Version, Matt. xx. 8). Augustus brought all the procurators under his control. Under the Republic they had managed the affairs of private citizens, but under the Empire they discharged the duties performed by the quaestors in the senatorial provinces. They controlled the revenue and collected the taxes, and their power extended from these matters to justice and administration. The procurators of Judaea seem to have been under the control of the proconsul of Syria, as Quadratus condemned the indiscretion of the procurator Cumanus. They are called "governors" (*hēgēmōnēs*) in the New Testament. The verb (*hēgēmōneō*) is employed in Luke ii. 2 to show the nature of the government of Quirinus over Syria, Asia and Achaia were assigned to the senate, and in each case the title of the governor in the Acts is proconsul, Acts xviii. 12; xix. 38. Dion Cassius informs us that Cyprus was retained by the emperor, but Sergius Paulus is called in the Acts, ch. xiii. 7, "proconsul." This is quite correct, as Dion adds that Augustus restored Cyprus to the senate in exchange for another district of the Empire. Coins and inscriptions of Cyprus also bear the title "proconsul." The procurator sometimes had the power of life and death, as in the case of Pontius Pilate.

The procurator of Judaea resided principally at Caesarea, and the military forces were generally stationed there. During the Passover, the troops were stationed at Jerusalem, in order to prevent any insurrection from the multitude of visitors at that festival, Acts xxi. 31; xxii. 24; xxiii. 23.

The troops consisted of infantry and cavalry, Acts xxiii. 23, and were commanded by tribunes, Acts xxiii. 17, and centurions, Mark xv. 39, 44, 45; Matt. viii. 5; xxvii. 54; Acts x. 1, 22. The former were at the head of the cohorts and the latter at the head of the centuria. It was the duty of the soldiers to execute the sentence of death and to keep guard over the prisoners, Matt. xxvii. 27, etc.; John xix. 23, etc. (compare Acts xxii. 25), and the garments of those who were executed became their perquisite, John xix. 23. They also guarded the prisoners, Acts xxiii. 23; xxvii. 31. In Acts x. 1, mention is made of the Italian band at Caesarea. This was probably a cohort serving in Syria composed of natives of Italy, and called "Italian" to distinguish it from those which consisted of troops raised in Syria, as we know from Gruter that Italian cohorts were serving in Syria.

Some of the cities within the provinces were free cities, like Thessalonica, at which there was an assembly of the people, Acts xvii. 5, and supreme magistrates called politarchs, Acts xvii. 8. So also were Antioch in Syria, Tarsus and Athens. Others were colonies, like Philippi, Troas, or Antioch in Pisidia, whose affairs were regulated by *strategoi* (Authorized Version, "magistrates"), Acts xvi. 22. Their proper title was *dumviri*, but they preferred calling themselves by the Roman title praetor. They were usually attended by lictors (Authorized Version, "sergeants"), Acts xvi. 35.

Under this arrangement, the welfare of the provinces was greater than it had been under the Republic; but the condition of those provinces over which Augustus had special control was often preferable to that of the others, instances being recorded of some of the senatorial provinces requesting to be transferred to the rule of the emperor.

Seeing how great the privileges were, the eagerness with which Roman citizenship was sought, and the earnestness with which it was pleaded in case of any unjust treatment, are not to be wondered at. The freedom of Rome was often obtained by purchase for great sums, Acts xxii. 28, though at the time of Claudius it is said that it became so cheap it might be bought for a little broken glass. A citizen under the Republic could in criminal cases, if he were so minded, appeal from the magistrates to the people, for without the acquiescence of the whole Roman people no man could be put to death. At the commencement of the imperial period it was, however, necessary that the appeal should be made to the emperor, who had assumed the privilege of final adjudication. It was thus that St. Paul, when being tried before Festus, "appealed unto Caesar," Acts xxv. 11; xxvi. 32, fulfilling our Lord's words that he should "bear witness also at Rome," Acts xxiii. 11; xxvii. 23; xxviii. 14, 16, 17; 2 Tim. i. 17; iv. 17. See PAUL. The scourging of a Roman citizen was contrary to the law, and St. Paul, by the assertion of his Roman citizenship, prevented Claudius Lysias from ordering him to be scourged, Acts xxii. 26-29; xxiii. 27. At an earlier period, Paul and Silas had been scourged, Acts xvi. 37, and two Roman laws thereby violated—Lex Valeria, B. C. 508; Lex Porcia, B. C. 300. They were also illegally treated, being "uncondemned."

The Romans carefully abstained from forcing their own language upon the inhabitants of the countries they conquered, though the strictness with which every official act, even to the farthest limits of the Empire, was carried out in the Roman language was never relaxed, but the edicts were generally translated into Greek. The better educated Romans undoubtedly spoke Greek. The

inscription on the cross was written in Hebrew, Roman and Greek, Luke xxiii. 38; John xix. 20; the Hebrew for the Jews, the Latin the official language, and the Greek that usually spoken.

The freedom of religious worship enjoyed by the nations subject to Rome was remarkably great, though foreign religions were not allowed to be introduced among the Romans; and it is recorded by Dion Cassius that Maecenas advised Augustus not to permit such innovations, as they would only tend to destroy the monarchy. This rule was strictly maintained by all his successors. Judaism was an exception, though, as we shall see, the Jews were sometimes expelled from Rome.

We must now briefly review the connection of the Jews and their land with the Roman government, and with that close our article.

In 1 Macc. i. 10, it is stated that there arose "a wicked root, Antiochus, surnamed Epiphanes, son of Antiochus the king, who had been a hostage at Rome." About the year B. C. 161, when Judas Maccabeus heard of the defeat of Philip, Perseus and Antiochus, and of the great fame of the Romans, he sent an embassy to them to solicit an alliance and to obtain protection against the Syrian government, 1 Macc. viii. 1, etc.; cf. 2 Macc. xi. 34. The ambassadors were graciously received, and Demetrius ordered to desist from harassing the Jews; but before the answer arrived Judas was slain, having valiantly engaged the whole army of Bacchides, sent by Demetrius into Judaea, 1 Macc. ix. 1-18. In B. C. 143, Jonathan renewed the alliance with the Romans, 1 Macc. xii. 1-4, 16, the embassy being admitted before the senate; and on his death, the same year, his brother Simon, who succeeded him, sent also to Rome to again seek a renewal of friendship. The Romans readily acceded to his request, and the valiant deeds of Simon and his predecessors were engraved on tables of brass. Shortly afterward, Simon sent Numenius to Rome with a great shield of gold, of a thousand pounds weight, to confirm the league with the senate, which at once consented to its re-establishment, and recognized him as high-priest and prince of Judaea. The tables of brass on which the league was written were set up in the temple, 1 Macc. xiv. 17, etc. Lucius, the Consul of the Romans, wrote to several kings and nations requesting them to assist the Jews, 1 Macc. xv. 16-23. Hyrcanus, the successor of Maccabeus, again sent, in B. C. 129, an embassy to Rome, which was favorably received, confirming the alliance already concluded. In the year B. C. 66, Pompey arrived in the East to take command of the Roman armies, and sent his general Scaurus to Syria. While at Damascus, the latter received an offer of four hundred talents from Aristobulus and Hyrcanus, who were then fighting for the kingdom, each one wishing to be aided. Scaurus accepted the offer of Aristobulus, and ordered Aretas, who was assisting Hyrcanus, to withdraw his forces, or he would be declared an enemy to the Romans. The following year, Pompey came into Syria and deprived Antiochus XIII. (Asiatius) of his kingdom, reducing it to a Roman province. Ambassadors were sent to Pompey from the rival princes, and in B. C. 64, when Pompey returned again to Damascus from Asia Minor, their respective causes were heard by him. Notwithstanding the prejudices of the people in favor of Aristobulus, Pompey, perceiving the weakness of character and imbecility of Hyrcanus, seemed to incline toward the latter, knowing that it was better to have a weak man under the Roman control. He, however, left the matter undecided, and Aristobulus,

seeing that his cause was lost, withdrew to make preparations for defence. Pompey then occupied himself in reducing the forces of Aretas, and afterward marched against Aristobulus, who fled to Jerusalem. Aristobulus, on his approach, met him, and offered him a large sum of money, and Pompey sent Gabinius to receive it; but on his arrival at Jerusalem he found the gates closed. Aristobulus was then thrown into prison, and Pompey marched to Jerusalem. Hyrcanus opened the gates to him, whilst the party of Aristobulus, including the priests, shut themselves up in the

[Weight

4000 grains.]

THE AS.—Copper.

This was not a *Coïn*, but simply a piece of copper cut round; and figures of cattle (*pœdarii*), sketched upon one side of many of these money pieces, gave rise to the term *pœdarii* as applied to money. Some attribute the origin of round money to Numa, others to Servius Tullius. Previous to this, pieces of leather, painted wood, and metal, with no regard to shape, were used for barter and exchange.

temple and withstood a siege of three months. Pompey, observing that the Jews did not work on the seventh day, gained material advantages, and at last took the place by assault, killing, according to Josephus, as many as twelve thousand persons, even desecrating the temple by entering the holy of holies, though he did not touch any of the treasures. Hyrcanus was then appointed high-priest and governor of the country, but was forbidden to wear a diadem. Tribute was also exacted of him, and Pompey took Aristobulus and his two sons, Alexander and Antigonus, prisoners to Rome, from whence they subsequently escaped.

The restoration of Hyrcanus was, however, merely nominal, as the Idumean Antipater, an active friend of the Romans, was placed over him as governor of Judaea. Now began the struggle which was destined to continue, with little intermission, for nearly two hundred years. It was nourished by feelings of the deadliest animosity on both sides; it was signalized by the most frightful examples of barbarity, in which each of the contending parties strove to outdo the other; but it was directed by a controlling Providence to a beneficial consummation, in the destruction of the Jewish nationality and the dispersion throughout the world of the Christian communities.

In the year B. C. 57, Alexander, the eldest son of Aristobulus, having escaped from Pompey, took up arms in Judaea. Hyrcanus upon this applied for assistance to Gabinius, the Roman proconsul of Syria, who thereupon sent Mark Antony with a large force into Judaea. Antony, being joined by Antipater with the forces of Hyrcanus, defeated Alexander and compelled him to fly to Alexandria. Gabinius soon after arrived, and through the mediation of the mother of Alexander, made peace with him and allowed him to depart. After these matters were settled, Gabinius went to Jerusalem, and there committed the care of the temple

THE QUADRANS.—Copper.  
This was one-fourth of an As, and it was not a Coin.—See remarks under the engraving on the preceding page.

to Hyrcanus, thus changing the government from a monarchy to an aristocracy. At the same time he instituted five councils, instead of the two sanhedrins which had existed in every city, and he distributed these five among five cities. These were Jerusalem, Gadara, Amathus, Jericho, and Sephoris, in Galilee.

In B. C. 54, Gabinius was superseded in the government of Syria by Crassus, who plundered the temple of about ten thousand talents, notwithstanding that a beam of gold of immense value had been given him, on condition that he would touch nothing else in the temple. All this time Antipater was gaining influence with the Romans, and after the death of Pompey, in B. C. 48, he was very useful to Julius Caesar in his war against Egypt. In return for this he made Antipater procurator of Judaea, gave him the privilege of a citizen of Rome and freedom from taxes everywhere. Hyrcanus also was confirmed in the priesthood and ethnarchy, the claims of Antigonus, the only surviving son of Aristobulus, being put on one side, and thus the aristocratical constitution of Gabinius was abolished. The ascendancy and prosperity of Antipater were now ensured. He had four sons. Two of them, Phasael and Herod, were holding important posts, the former being governor of Jerusalem, the latter of Galilee. An account of the many intrigues and tragedies of the next forty years will be found under the HERODIAN FAMILY.

The Jewish people, being at last worn out with the disputes and cruelties of the Herods, sent a mission to Rome, begging that Judaea might be made a Roman province. A. D. 6, Archelaus was banished and Judaea put under the government of Rome. The first procurator appointed was Coponius, who accompanied Cyrenius (the Greek form of the Roman name *Quirinus*) into Syria. The latter had been sent to take an account of their substance and to make a census of the inhabitants of Judaea, Luke ii. 1.

In A. D. 10, Coponius was succeeded by Marcus Ambivius, who remained at the head of the government till A. D. 13, and was then replaced by Annus Rufus. The next year Augustus died. On the accession of Tiberius, Valerius Gratus was made procurator, a post he filled for eleven years, and was succeeded (A. D. 25) by Pontius Pilate, who entered Jerusalem with the military ensigns, on which were the effigies of the emperor. The Jewish law forbade the making of images, and a great tumult arose, and shortly Tiberius ordered him to withdraw them. Pilate tyrannically governed the Jews till A. D. 35, and at last, owing to continual complaints, was ordered by Vitellius, the president of Syria, to proceed to Rome to give an account of his administration. Tiberius died before he arrived, and he put an end to his life at the commencement of the reign of Caius (Caligula). It was during his administration that our Lord was condemned and crucified, Matt. xxvii.; Mark xv.; Luke iii. 1; xxiii.; John xviii., xix. On Pilate's departure, Marullus was appointed over Judaea by Vitellius. The new emperor Caius, however, superseded him, and appointed Marcellus procurator of Judaea. In A. D. 40, Vitellius was recalled, and Petronius sent as president of Syria, with orders from Caius to set up his statue in the temple. This insult caused the whole nation to rise. The intercession of Agrippa, and ultimately the death of the tyrant, prevented this order from ever being executed. In the Acts it is recorded that the churches had rest through all Judaea, Galilee and Samaria, Acts ix. 31. Under Claudius, who succeeded to the throne in A. D. 41, the Jews had some peace. Agrippa I. was king of the whole country from that period to A. D. 44, when he died, leaving one son. Claudius wished to allow the young Agrippa to rule his father's kingdom, but, evidently by persuasion, sent a Roman procurator to govern the province. Cuspius Fadus was the first appointed. It was under his administration that a movement of the whole Jewish people broke forth, in consequence of the sacred vestments being placed under his charge. Longinus, the governor of Syria, interfered, an embassy was sent to Rome, and the matter ended in the Jews being permitted to retain these vestments under their care. Judaea was cleared of robbers by the care and providence of Fadus. He was succeeded by Tiberius Alexander, a renegade Jew and nephew of Philo. In A. D. 47, Tiberius was recalled, and Ventidius Cumanus appointed in his stead. During his government a fearful tumult ensued, which would have spread far and wide had not Quadratus, the governor of Syria, interfered. The matter ended in the banishment of Cumanus and the appointment of Felix, the brother of Pallas, the favorite of Claudius, as procurator. Felix was procurator from

A. D. 52 to A. D. 60. Of his government Tacitus speaks in strong terms of censure, and his corruptness is shown by his expecting to receive money from St. Paul, Acts xxiv. 26. He had induced Drusilla, the daughter of Agrippa I., to live with him. She was with him when Paul preached "of righteousness, temperance and judgment to come," Acts xxiv. 25. Felix, however, did some good services while he was in power, for the country being infested with robbers and impostors, he cleared several parts of it. He also drove out the Egyptian impostor, Acts xxi. 38. These are doubtless the *very worthy deeds* alluded to by Tertullus, Acts xxiv. 2. Bearing ill-will against Jonathan the high-priest, Felix had him barbarously murdered. By treachery, also, he put to death Eleazar, the captain of a company of robbers. At last his misgovernment caused his recall, and Porcius Festus succeeded. His government seems to have been milder. He heard Paul with King Agrippa at Caesarea, Acts xxv., xxvi. Festus died after two years. He was succeeded by Albinus, a bad and cruel man, who, on hearing that Gessius Florus was coming to succeed him, brought out all the prisoners who seemed most worthy of death, and put them to death, and at the same time released many of them, but only on receiving a bribe. He was recalled in A. D. 65, and Gessius Florus appointed in his stead. He was the last and the worst of the Roman procurators. Josephus does not hesitate to accuse him of the most flagrant and horrid crimes, and even Tacitus says that the Jewish patience could endure the yoke no longer. In A. D. 66, Cestius Gallus, the prefect of Syria, found it necessary to march a powerful army into Palestine. He was, however, defeated with great loss, and immediately sent word to Nero, laying the whole blame on Florus, Florus likewise laying the blame on him. He soon afterward died, as some have supposed from chagrin or disappointment. The following year, Nero sent Vespasian into Judaea. In 68, Nero died. Galba, Otho and Vitellius followed in quick succession, and Vespasian himself was elected emperor by the legions in Judaea. In A. D. 70, Titus was sent by his father to conduct the war, and after a four months' siege Jerusalem was taken. Josephus states that one million one hundred thousand were killed during the siege, that several were allowed to depart, and an immense number sold to the army and carried captive. These numbers are of course exaggerated, see Luke xxi. 24.

EARLY ROMAN COINS.  
These specimens were found in excavations among Roman ruins in London.

ultimately the death of the tyrant, prevented this order from ever being executed. In the Acts it is recorded that the churches had rest through all Judaea, Galilee and Samaria, Acts ix. 31. Under Claudius, who succeeded to the throne in A. D. 41, the Jews had some peace. Agrippa I. was king of the whole country from that period to A. D. 44, when he died, leaving one son. Claudius wished to allow the young Agrippa to rule his father's kingdom, but, evidently by persuasion, sent a Roman procurator to govern the province. Cuspius Fadus was the first appointed. It was under his administration that a movement of the whole Jewish people broke forth, in consequence of the sacred vestments being placed under his charge. Longinus, the governor of Syria, interfered, an embassy was sent to Rome, and the matter ended in the Jews being permitted to retain these vestments under their care. Judaea was cleared of robbers by the care and providence of Fadus. He was succeeded by Tiberius Alexander, a renegade Jew and nephew of Philo. In A. D. 47, Tiberius was recalled, and Ventidius Cumanus appointed in his stead. During his government a fearful tumult ensued, which would have spread far and wide had not Quadratus, the governor of Syria, interfered. The matter ended in the banishment of Cumanus and the appointment of Felix, the brother of Pallas, the favorite of Claudius, as procurator. Felix was procurator from

Under Trajan the Jews again broke out into open revolt, and the disturbances continued under Hadrian. At last, A. D. 131, one Barchochebas, "the son of a star," was placed at the head of the Jews. Several times the Roman arms were defeated; but Julius Severus, by reducing their fortresses one by one, finally defeated him, in A. D. 135. Dion Cassius says that five hundred and eighty thousand Jewish people were slain in these battles. This statement is as extravagant as that above of Josephus.

In A. D. 136 the emperor Hadrian founded a new city, under the name of *Ælia Capitolina*, to which he gave the privileges of a colony. None but Christians and pagans were allowed to enter.

The treatment that the Jews received at the hands of the Romans was at times very moderate. Under Julius Caesar they were not forbidden to live according to their customs even in Rome itself; and Augustus ordered that they should have full freedom of worship, hold their assemblies and make gifts to their temple. They were even admitted with the citizens to a share in the

MARCELLUS (II), ROMAN CONSUL, B. C. 51.

largesses of corn, and when it fell upon the Sabbath day Augustus allowed it to be put off to the next day. They were also exempted from military service on account of their religious prejudices. Suetonius records that the Jews were in great grief at the death of Augustus. Tiberius and Claudius banished them from Rome—the latter on account of tumults caused by a certain Chrestus (see earlier in this article, page 1418). But the expulsion by Claudius is contradicted by Dion Cassius; and a few years after the Jews were again at Rome in great numbers, Acts xxviii. 17, etc. The administration of religious ceremonies was committed to the high-priest and Sanhedrin; civil and criminal jurisprudence was retained by them, and they were permitted to pass the sentence of condemnation, but its execution depended upon the procurator, Mark xiv. 53-55, 62-65; John xviii. 31: "It is not lawful for us to put any man to death." The stoning of Stephen probably took place during a tumult, and not with the sanction of the procurator, Acts vii. 28. Even beyond the borders of Palestine the Jews exercised among themselves the civil jurisdiction according to their laws. Josephus gives a Roman decree to the city of Sardis sanctioning this privilege.

ANTONINUS PIUS—ONE OF THE BEST OF THE ROMAN EMPERORS.

Notwithstanding their privileges, the Jews were heavily taxed. These consisted of the poll-tax, Matt. xxii. 17; Luke xx. 22, and the custom-tax, Matt. xvii. 25. Various passages in the New Testament show how odious the collectors of the tributes (Authorized Version, "publicans") were to the Jews, Matt. v. 46; Mark ii. 15, 16; Luke iii. 12, inasmuch that the Pharisees would hold no communication with them, Matt. xi. 10, 11; xxi. 31, 32.

Notwithstanding the attempts of Augustus to stop all tendencies to corruption by punishing immorality, it was chiefly immorality that undermined the Empire. With a high civilization, a flourishing commerce and general outward refinement, was associated a terrible depravity of morals. Yet the prosperous state of the Empire was confessed by the provinces as well as the Romans. "They acknowledged that the true principles of social life, laws, agriculture and science, which had been first invented by the wisdom of Athens, were now firmly established by the power of Rome, under whose auspicious influence the fiercest barbarians were united by an equal government and common language." The cruelties and exactions of the provincial magistrates were suppressed by Augustus and Tiberius. Roads were constructed and commerce increased, but all of no avail. Society would not be reformed, and St. Paul draws a

FAUSTINA, CONSORT OF MARCUS AURELIUS AND MOTHER OF COMMODUS.

striking picture of the corruption of the age, Rom. i. 14-23. "Charity and general philanthropy were

so little regarded as duties that it requires a very extensive acquaintance with the literature of the time to find any allusion to them. There were no public hospitals, no institutions for the relief of the infirm and poor, no societies for the removal of abuses or the improvement of the condition of mankind from motives of charity. Nothing was done to promote the instruction of the lower classes, nothing to mitigate the miseries of domestic slavery, and far less to stop altogether the perpetual atrocities of the kidnapper and the slave-market." But the spirit of Christianity was floating in the atmosphere, and "the wisdom of Providence was preparing a knowledge which struck root as deeply as the literature of the Augustan age had been scattered superficially."

The Roman Empire terminated with the anarchy which followed the murder of Justinian II., the last sovereign of the family of Heraclius; and Leo III., or the Isaurian, must be ranked as the first Byzantine monarch.

On the ensuing page, we give a "Chronological

CARACALLA—ONE OF THE MOST INFAMOUS OF THE ROMAN EMPERORS.

List of the Roman Emperors." It will be seen that, in some cases, two names are given at one number—in these instances, either the two reigned jointly, as Gordian I. and II., etc., or the realm was, for the time, divided between the two, as Valens and Valentinian I. There were several periods of *interregnum*, and in more than one case, the emperor was such only in name, or at best ruled only a fragment of the Empire.

The New Testament history falls within the reigns of Augustus, Tiberius, Caligula, Claudius and Nero. Only Augustus, Luke ii. 1, Tiberius, Luke iii. 1, and Claudius, Acts xi. 28; xviii. 2, are mentioned, but Nero is alluded to in the Acts from ch. xxv. to the end, and in Phil. iv. 22. The Roman emperor in the New Testament is usually called Caesar, Acts xxv. 10, 11, 12, 21, though sometimes Augustus, Acts xxv. 21, 25, and once lord, Acts xxv. 26. We thus find many characteristics of the Roman rule constantly before us in the New Testament. The publicans, Luke iii. 12; xix. 2; the tribute-money, Matt. xxii. 19; soldiers and centurions recruited in Italy, Acts x. 1; Caesar the only king, John xix. 15; the tetrarchs, Herod, Philip and Lysanias; the appeal against the governor, Acts xxv. 11; Roman money, etc.

## CHRONOLOGICAL LIST OF THE ROMAN EMPERORS.

No.	Name.	Year of Coronation.	No.	Name.	Year of Coronation.
1.	Julius Cæsar murdered.	B. C. 44	43.	Diocletian.	A. D. 284

ROMAN COINS OF OUR LORD'S TIME.

Roman architecture and the stamp of Roman art, and in the almost innumerable relics of Roman handicraft brought to light in all quarters of the world. Of a large number of the former excel-

lent engravings will be found throughout this Encyclopedia, while of the latter those possessing special merit are also carefully represented. Either of the two classes of Roman remains referred to embraces too large a number of specimens to admit of their specific mention in a work of this character, but the engravings speak for themselves and, better than words, convey a good idea of the characteristics of the several buildings, vessels, etc. See ROMAN ARCHITECTURE, and elsewhere.

**ROME, CHURCH OF.** The definition given of this Church by its theologians is, that it is the Catholic or "universal" Church, consisting of the community of the faithful united to their lawful pastors, in communion with the See of Rome and under the obedience of its Bishop the Pope, who is claimed to be the successor of St. Peter and the Vicar of Christ on earth.

The origin of this Church is a question in dispute between its members and its Protestant opponents. The former claim that it was established by the apostles, that Peter was its first bishop and that it has descended in direct progression, its bishops successively being Peter's successors. Protestant authorities acknowledge that a branch of the Church was early planted in Rome, that it was strengthened and established by Paul, that the Church of Rome, as now constituted, is the outgrowth of the early Church, with material and unauthorized alterations and additions which grew from and to it as the apostolic influence lessened and error developed. Protestant authorities generally deny that there is any reliable proof that Peter ever was in Rome, or, if there at all, they claim that he never, in any sense, held or exercised any authority above his brother apostles. See PETER. Indeed, they say, if any one was, in any particular function, chief bishop, there is reasonably strong reason to believe it was James, the bishop of Jerusalem, as he presided at the first great council of the Church, Acts xv. But this question can only be stated, not discussed or decided, here.

The creed of this Church was elaborately defined by the Council of Trent, which was in session from 1545 to 1563. The decrees of this council were prepared with the greater care on account of the spirit of reform which was agitating Western Christendom at that time, in the hope of checking its triumphant march from nation to nation. In many points these decrees would not be deemed obnoxious, at least so far as their verbiage is concerned, by the most evangelical Protestants, but in others even the phraseology is at variance with what Protestants recognize as the teaching of God's word. The chief of the latter may be briefly summed up as follows (the paragraphs quoted are abridged from the decrees themselves): "That Christ has established a Church upon earth, and this Church is that which holds communion with the See of Rome, being one, holy, catholic and apostolic." "That we are obliged to hear this Church, and therefore that she is infallible, by the guidance of Almighty God, in her decisions regarding faith." "That Peter, by divine commission, was appointed the head of this Church, under Christ its Founder; and that the Pope, or Bishop, of Rome, as successor to St. Peter, has always been, and is at present, by divine right, head of this Church." [The Creed of Pius IV., universally received by the Roman Church, speaks thus: "XXXIII. I do acknowledge the holy Catholic and Apostolic Roman Church to be the mother

and mistress of all Churches; and I do promise and swear true obedience to the Bishop of Rome, the successor of St. Peter, the prince of the Apostles and Vicar of Jesus Christ." That the Virgin Mother of Jesus is entitled in her own right, as chosen of God, to receive the humble homage and adoration of those who profess to love her Son. "That the Canon of the Old and New Testament, as proposed to us by this Church, is the Word of God," but that all Traditions preserved and handed down by this Church, as originally delivered by Christ to his disciples, are entitled to equal respect and credence; but that both the written word and the traditions must be received only as defined and expounded by the Fathers, and since authoritatively by this Church, in and by duly constituted councils. [The Creed of Pius IV. says: "XIV. I do admit the Holy Scriptures in the same sense that Holy Mother Church doth, whose business it is to judge of the true sense and interpretation of them; and I will interpret them according to the unanimous sense of the Fathers." "That honor and veneration are due to the angels of God; that the saints, reigning together with Christ, are to be worshiped and prayed to; and that they do offer prayers unto God for us, and that their relics are to be had in veneration." "That the images of Christ, of the Blessed Virgin the Mother of God, and of other saints ought to be had and retained, and due honor and veneration ought to be paid to them." That salvation is of Christ, through and on account of faith and good works; that God not only assists the faithful to perform good works, but recognizes the merit of such good works and rewards their doer; and further it is declared, "By such good works we not only comply with the precepts of the divine law, but that we thereby likewise merit eternal life." "That there is a Purgatory, or middle state, and that the souls of imperfect Christians therein detained are helped by the prayers of the faithful." "That there are seven Sacraments of the law, truly and properly so called, instituted by Jesus Christ our Lord, and necessary to the salvation of mankind, though not all of them to every one, viz.: Baptism, Confirmation, Eucharist, Penance, Extreme Unction, Orders and Marriage; and that they do confer grace; and that of these Baptism, Confirmation and Orders may not be repeated without sacrilege. I do also receive and admit the received and approved rites of the Catholic Church in her, solemn administration of the above-said Sacraments." "That in the most holy Sacrament of the Eucharist there is, truly, really and substantially, the body and blood, together with the soul and the divinity, of our Lord Jesus Christ." "That in this Sacrament there is, by the omnipotence of God, a conversion or change of the whole substance of the bread into the body of Christ, and of the whole substance of the wine into his blood, which change we call Transubstantiation." "That under either kind Christ is received whole and entire." "That in the Mass, or Sacrifice of the Altar, is offered to God a true, proper and propitiatory sacrifice for the living and the dead." "That in the Sacrament of Penance the sins we fall into after Baptism are, by the divine mercy, forgiven us." "That the power of Indulgences was left by Christ in the Church, and that the use of them is very beneficial to Christian people." There are also articles which declare the efficacy of works of supererogation; the duty and necessity of private (auricular) confession to be made to the priest, and the efficacy of his absolution; likewise articles decreeing the absolute and per-

petual celibacy of the clergy of all orders, and recommending the same to laymen and laywomen who desire to attain special sanctification and other high privileges. There are decrees covering many other points of more or less moment, but what we have epitomized will suffice to give the reader a fair idea of the leading grounds of the great Reformation, as each of these dogmas was the subject of protest on the part of the Reformers, and each of them still forms a stronger than granite wall between Romanism and Protestantism. The final clause of the Creed of Pius IV. is very explicit: "XXIV. I do undoubtedly receive and profess all other things which have been delivered, defined and declared by the Sacred Canons and Œcumenical Councils, and especially by the holy Synod of Trent; and all other things contrary thereto, and all heresies, condemned, rejected and anathematized by the Church, I do likewise condemn, reject and anathematize."

But to the above recapitulation of the chief doctrines promulgated by the Council of Trent we must add a brief notice of a couple of important dogmas put forth more recently as articles to be implicitly believed by the faithful: these are the dogma of the Immaculate Conception (first asserted as a doctrine by the Vatican Council of 1854) and that of the personal Infallibility of the Pope (first advanced as a part of the Creed by Pius IX. and, in obedience to him, by the Council of 1870-71).

The Pope, as we see above, must, as an article of the faith, be recognized as the infallible head of the infallible Church, but, in the view of Romanists generally, he is also a temporal sovereign above all kings, the viceregent of God and ruler of all nations. These high claims, which began to be made in the eighth century, were very fully avowed and acted upon by Gregory VII. and Innocent III., in the eleventh and thirteenth centuries, and have been affirmed with varying emphasis by many Popes since that period, and have recently been restated by Pope Pius IX. with all possible fullness.

For very many years, the Roman Pontiffs succeeded in making good their claims to temporal supremacy in almost all European lands, making and unmaking kings and emperors, and compelling the laughtiest to do them reverence. But within a few years, the Pope has lost almost entirely his temporal sway, and has even lost the Italian States, long known as the States of the Church, through the unification of Italy under Victor Emmanuel, with his capital at Rome.

Since the accession of Pius IX., great changes have been wrought in the position and prospects of the Church. The promulgation of the doctrine of the Immaculate Conception of the Virgin Mary and the publication of the Pope's "Syllabus," in which the highest claims of papal supremacy over kings and nations are fruitlessly reaffirmed, were very offensive to several governments and many members of the Church, and led to alienation on the part of some of the most powerful of the adherents of the Church. This dissatisfaction was greatly increased by the proclamation by the Vatican Council, in 1871, of the Infallibility of the Pope, against the remonstrances and protests of some of the most eminent theologians of the council. This widespread dissatisfaction has found expression in the organization of the "Old Catholic Church" in Germany and Switzerland, under the lead of Dr. Dollinger, and in the consecration of Bishop Reinkenz by the Jansenist bishop of Holland. This new movement is progressing with great rapidity, and it may result in a very large

and permanent secession from the Church of Rome, and the establishment of a Church on much more liberal principles.

The worship of this Church is liturgical, and throughout the greatest part of its extent the Latin language is used in all public and authorized religious worship, the object being "to preserve uniformity; to avoid the changes to which living languages are exposed, and thereby to prevent the novelties which might be thus introduced; to facilitate the commerce of different Churches on religious matters; and to promote a spirit of study and learning among the ministers." In the public worship everything is fixed and uniform. The Missal and Breviary contain the rites and prayers adopted in ordinary religious assemblies, and the Pontifical and Ritual contain the forms and prayers with which the sacraments are administered, the blessing of God invoked upon his creatures, the power of evil spirits over the souls and bodies of the faithful destroyed or re-

ancient compilations on that subject. "The Canon Law" consists, 1. Of the "Decretals of Gratian," a compilation made up of the decrees of different Popes and Councils, and of several passages of the Holy Fathers and other reputable writers. 2. Of the "Decretals," in five books. 3. Of the compilation known by the name of the "Sixth Book of Decretals." 4. Of the "Clementines." 5. Of the other Decretals, known under the name of the "Extravagantes." These, containing besides the decrees of Popes and the canons of several Councils, constitute the body of the Canon Law. It is, however, only in matters of faith that she admits of no diversity; her discipline is not everywhere perfectly uniform, nor does she consider some variety in matters of worship or discipline as subversive of peace, or as breaking the bonds of communion.

The Roman Church observes a vast number of saints' and other holy days. Every Friday is required to be kept as a fast-day, except when a

THE TIARA, KEYS, ETC.—INSIGNIA OF THE CHURCH OF ROME, OR RATHER OF ITS HEAD, THE POPE.

strained, the method also of deprecating the wrath of God in times of public calamity, and of returning him thanks for signal public blessings; and directions how to afford the comforts of religion to the sick and dying, with the prayers to be made use of in the Christian interment of the dead. Such of the above functions as belong to the episcopal character or office are to be found in the Pontifical; those which belong to simple priests, or even the inferior clergy, are inserted in the Ritual. Besides the foregoing forms for public services, there are many approved forms for private devotion.

The government of the Roman Church is hierarchical. A Romish writer expresses their system tersely, thus: "Roman Catholics obey their bishops, the bishops the metropolitans, the metropolitans the primates and patriarchs, and all of them their head, the Pope; and of all these is composed one Church, having one faith, under one head."

The discipline of the Church of Rome is regulated by what is called "the Canon Law," which has taken the place of the "Canons of the Apostles," "the Apostolic Constitutions," and all the

stated festival falls on it; besides, the calendar calls for a number of stated seasons of fasting.

As to the present extent of the Church of Rome, all that can be said is that the total number of Romanists (including the families of those in actual communion and many who are so accounted, though they are not in good standing) have been variously estimated at from eighty to a hundred and twenty millions, scattered over all the world. The countries which, until a very recent period, were considered entirely papal, and in which a very large majority still continue under the spiritual obedience of the Pope, are Italy, Spain, Portugal and the States of Mexico and South America; while in France, Austria, Poland, Belgium, Ireland, Lower Canada, the number of Romanists vastly preponderates over the members of all other churches. Switzerland has seven hundred thousand, Germany a very large proportion, England more than half a million, and the United States five millions. In Asia there is scarcely a nation in which Christianity exists, where there are not some bodies which recognize the Pope's supremacy. They have missionaries in China, in

Cochin China, in the Philippine Islands, and in fact in almost every portion of the world.

The Papal Church has ever been active in the work of seeking the conversion of heathen and others to its views, and has been often signally successful. The monastic system of the Church has ever been a powerful instrumentality in the propagation work. There are several orders of monks, the chief being the Basilians, Benedictines, Augustinians, Dominicans, Franciscans, Canons Regular, etc. All the different orders take the solemn vows of poverty, chastity and obedience, and all firmly hold the Roman Catholic faith, and only differ in their rules of discipline, in their

ALTAR OF THE CATHEDRAL CHURCH AT NUREMBERG.

dress, in the particular privileges granted by the Pope, and in their names, which they generally take from that of their founder. In general, they are exempt from the jurisdiction of the bishop, and are immediately under that of the Pope. Of nuns there are different orders, each following their own rules and wearing a prescribed habit. See MONKS. The solemn vows of poverty, chastity and obedience are taken by them also. But no one agency since the Reformation has exerted so wide an influence in the papal Church, or done so vast an amount of labor for its extension and upbuilding, as the Society of Jesus, commonly called the Jesuits.

**ELECTION OF THE POPE.**—Before closing our article upon the Roman Church, it may add to its

interest to give a brief notice of the mode of electing a Pope, together with a word on the College of Cardinals. The Pope was originally elected by the bishops, clergy, nobles and people. Under Nicholas II., through the influence of Hildebrand, the election was confined to the cardinal bishops—seven in number—and to cardinal priests, whose number was twenty-eight. The nomination belonged to the former and the confirmation to the latter. The cardinals became an organized, recognized, permanent body first in the time of Pope Gelasius (492-96). Their number has varied greatly at different periods. In the twelfth century there were rarely more than thirty. In 1516 they numbered but thirteen. The largest number ever reached was seventy-six, under Pius IV. (1559). The Council of Basle passed a decree that their number should not exceed twenty-four. Sixtus V. (1585) fixed the number at seventy, with reference to the seventy elders of Israel, or the seventy disciples of Christ, the number of which the College of Cardinals is now composed when it is full, and which, since that period, it has become a rule with the Popes never to exceed. When the College is full, there are six cardinal bishops, fifty cardinal priests (rectors of churches in Rome) and fourteen overseers of hospitals, who are cardinal deacons. A large majority of the cardinals are always Italians. They have the rank of princes at home and in all the courts of Europe to which they are accredited as nuncios. Their peculiar privileges are stated to be three hundred in number. When a new Pope was to be elected, the custom has been to confine them in conclave in the palace of the Quirinal, and permit them to have no intercourse with the external world. Now that the king of Italy has possession of the palace of the Quirinal, and the Pope's relation to Rome and to Germany, Austria and Spain has become changed, Pius IX. has issued a brief by which many of the formalities hitherto required are allowed to be omitted in order that the election may be speedily effected. The German emperor and the kings of France and Spain have hitherto exercised the right of interposing one veto, through a cardinal who represents his sovereign, to an election of a Pope whom they do not approve. This prerogative cannot henceforth be exercised.

The double government of the Pope, as both bishop and king, has led to the establishment of an anomalous order called the Prelature. They are neither priests nor laymen, but, as it were, a combination of the two. They have the training and wear the dress, and are subject to some of the restrictions, of the priesthood—such as inability to marry while in the service of the Pope—and they have the duties and the freedom of laymen. This class is recruited chiefly from the ranks of the aristocracy. They are, in fact, clerks and secretaries of the cardinals and nuncios and high officials of the Roman Curia. They can be advanced to the rank of monsignieur, which is next to the cardinalate; but they cannot be created cardinals unless they have been ordained as deacons. It is possible for them to marry; but in that case they cease to belong to the Prelature, and pass into the class of laics.

**SOCIETY OF JESUS, commonly called JESUITS.**—This is a semi-monastic order or society founded, in 1540, by Ignatius Loyola. Loyola was of noble family; in early life he became a page in the gay court

of Ferdinand and Isabella, and subsequently a wild soldier. A severe wound led his mind to serious thoughts, and it took an enthusiastic, intensely devotional and somewhat mystic turn. He renounced the world and devoted himself as the Knight of our Lady—i. e., the Virgin Mary—laying his sword upon her shrine. He became associated with nine young men of like feelings (among them the afterward renowned Francis Xavier). They started on a pilgrimage to Jerusalem, which was interrupted by the war with the Turks, then raging. They took up their quarters in Rome, and won no little notice and veneration by their self-devotion to asceticism and good works, and in a short time concluded to found a new order, with Loyola, the ruling spirit, at its head. He produced a plan of its constitution and laws, which he affirmed to have been suggested by the immediate inspiration of Heaven, and applied to the Roman Pontiff Paul III. for the sanction of his authority. The Pontiff, though naturally cautious, yet partially foreseeing the advantages to be derived from the services of this nascent order, and clearly perceiving the benefit of multiplying the number of his devoted servants, instantly confirmed by his bull the institution of the Jesuits, granted the most ample privileges to the members of the society, and appointed Loyola to be the first general of the order. It was a fundamental maxim with the Jesuits from their first institution not to publish the rules of their order; they never communicated them to strangers, nor even to the greater part of their own members.

This new order differed from the regular monastic orders in several important particulars, though like them its members took the vows of poverty, chastity and loyalty to the Church; their vow of obedience was even more stringent than that of the monastic fraternities. The grand object of the Jesuits was not their individual advancement in holy living, but the advancement of their Church, and more especially of their society. Hence, while the monk was a retired devotee of heaven, the Jesuit was a sworn soldier of Mother Church; he was not required to spend his time in the long ceremonial services, or to practice the austerities, enjoined on his monk-brothers. The Jesuits went forth rather to every quarter of the world to watch and promote the best interests of their Church and fraternity. Every member was solemnly pledged to absolute and unquestioning obedience to the requirements of his superiors. The government of the society was a pure despotism, except that the becoming a member was a matter entirely at the option of each individual. The membership is divided into four classes—the novices, the scholastics, the coadjutors and the *confessed*. The novices are required to pass two years upon probation. The scholastics devote two years to rhetoric and literature, and three years to philosophy, physics and mathematics. After having been engaged in instruction for five or six years, they are permitted to take up theology, to which they devote four to six years. The course is followed by another year of training, after which they are elevated to the priesthood, and assume the vows of *coadjutor spiritualis* or *professed*. The coadjutor assumes the vows of a monk, and pledges himself to give special attention to the instruction of youth. A fourth class is that of the *confessed*, who are under vows of absolute, unquestioning obedience to the head of the order and to the pope. This class is composed of the ablest men of the order, and of those most devoted to its interests and to the papacy.

The Jesuits are, and have been since their or-

ganization, the most powerful of all the orders of the Church of Rome. In 1540, when founded, they numbered but ten members, and in 1608 their rolls showed the large membership of ten thousand five hundred and eighty-one. Before the expiration of the sixteenth century, they had obtained the chief direction of the education of youth in every Roman Catholic country in Europe, and had become the confessors of almost all its monarchs. Their wealth increased with their power, and they soon rivaled, in the extent and value of their possessions, the most opulent monastic fraternities. They have influenced the policy of states, by becoming the confessors and spiritual guides of kings; they have controlled the population of kingdoms, by becoming the most acceptable confessors and directors of consciences among the people. They have often dictated the policy of the papal government itself.

Notwithstanding their great successes, or perhaps partially as a consequence of such successes, they have had terrible reverses. They have time and again been suppressed in, or expelled from, different countries, and their property confiscated and some of their members imprisoned, and once, under Clement XIV., the order was entirely suppressed, and even their name ostracized. But in every country where suppressed, or whence expelled, they have speedily recovered their lost prestige and power, and even from the blow of suppression by the head of their own Church they recovered, being restored by Pius VII., and they have since continued in high favor at the papal court, where their power is great.

Whatever censure they may deserve (and they have received it without stint, not only from Protestant, but more unsparingly from Roman Catholic sources), it would be vain to deny that many considerable advantages have been derived by mankind from the labors of the Jesuits. Their ardor in the study of ancient literature, and their labors in the instruction of youth, greatly contributed to the progress of polite learning. They have produced a greater number of successful authors than all the other religious fraternities taken together; and they can boast of many eminent masters in the separate branches of science, many distinguished mathematicians, antiquarians, critics, and even some orators of high reputation. But their greatest usefulness has been in the missionary field. No corner of the world has been neglected by them; perils by land and perils by water, perils from wild beasts and perils from possibly wilder human animals, perils of climate and perils of hunger and want, everything has been braved by devoted men of the society in their self-sacrificing efforts to extend the bounds of that Church, membership in which they regard as indispensable to salvation. This much we have deemed it not amiss to say, though our province is neither to commend nor condemn, but simply to recite facts of general interest.

**JANSENISTS.**—This was the name of a numerous party of members of the Roman Church who adopted the views of Cornelius Jansenius, bishop of Ypres, in the Netherlands. The Jansenist controversy was preceded and suggested by that of the Jesuits and Dominicans on the subject of grace and free-will. It was opened by the publication of the "Augustinus" of Jansenius. It cost Jansenius twenty years of incessant labor, and was published in 1640, after his death. His professed object was to show, not what ought to be believed on the subjects involved in the Molinist controversy, but simply what St. Augustine believed.

The Jesuits attacked the "Augustinus" violently, and persuaded Urban VIII. to pronounce it erroneous and secure its prohibition by the inquisitors. But the doctors of Louvain, and other theologians in the Netherlands, defended the work. A bitter controversy arose and soon extended to France. The Jesuits were numerous and powerful in France, but the opposite party included many men of the highest piety and greatest learning and genius. ARNAULD, NICOLE, PASCAL and QUESNEL [see the articles at these names]—subsequently called the Port Royalists—were conspicuous among them. They taught and exemplified the inner divine life of love and faith as constituting the reality of religion. They devoted themselves to education, and to the composition of books of instruction, in all departments of learning. They produced practical and devotional works of the most admirable character. They sought to persuade the world that God had sanctioned their cause and doctrine by miracles in their behalf. A severe and systematic persecution of them, instigated and kept up by the Jesuits, ending in the complete destruction of their headquarters at Port Royal (1679), broke up the order, and the members dispersed. Some yielded to the pressure, while a number of them took refuge in Holland and established an independent Church, in separation from the Roman obedience, which still exists, with the seat of its episcopate at Utrecht. It is an interesting circumstance that Dr. Reinkens, the bishop of the "Old Catholic" organization recently inaugurated in Germany, was consecrated by the Jansenist bishop of Utrecht.

The Jansenists were learned, pure, spiritual, though inclined to mysticism. Their theology was that of Augustine. But there was something of superstition and fanaticism in their views. They made penitence to consist largely in voluntary self-inflicted punishment. They were ascetic in their views of the necessity of fasting, of hard labor and of constant prayer. Their credulity in reference to miracles wrought in their behalf was real and fairly chargeable upon their enthusiasm. But, on the other hand, their merit and services to the cause of pure religion were unquestionably great.

**OLD CATHOLIC CHURCH.**—The Old Catholic movement took its rise in Germany, where it still has its headquarters, though it has spread into other Roman Catholic countries of Europe, and even beyond Europe. Its points of difference from the Roman Church are laid down in a manifesto issued by the Old Catholic Congress which met at Munich, September 22, 1871. We make a brief extract: "We, therefore, claim our full rights as members of the Catholic Church, and refuse to be thrust out of Church communion or of the ecclesiastical or civil rights appertaining thereto." They deny the validity of their excommunication by the Papal authorities. They say: "From the standpoint of the confession of faith contained in the Tridentine Creed, we reject the doctrines introduced under the pontificate of Pius IX., in contradiction to the teach-

ing of the Church and the principles observed from the Apostolic Council downward, especially the dogma of 'the infallible teaching office,' and supreme ordinary and immediate jurisdiction of the Pope." "We adhere to the ancient constitution of the Church," etc.

In fact, the movement was not designed to establish a new sect, but to effect reforms within the Roman Catholic Church. The movement has been given an ecclesiastical head, Dr. Reinkens, late professor of ecclesiastical history at Breslau, having been chosen missionary bishop for the Old Catholics of Germany. He was consecrated at Rotterdam by the Jansenist bishop of Deventer, on August 11, 1873, according to the Roman rite, but with no recognition of the Pope's supremacy.

TOMB OF STA. MARIA DEL POPOLO, IN THE CHURCH OF THAT NAME IN ROME.

What is to be the result of the movement must be left for time to unravel, but this at least is certain, that its supporters are very numerous, and the number is rapidly growing, and they include a large proportion of the learned and influential Roman Catholic clergy of Germany, and a goodly number in France and elsewhere. It is also evident that the movement has the air of calm consideration and conscientious rectitude that are important indices of permanence and advancement.

**ROME FEE, ROME PENNYING, ROME SCOT, ROME SHOT.** Terms applied to PETER'S PENNY, which see.

**ROMEYN** (ro-mîn'), THEODORIC D., D.D., and JOHN BRODHEAD, D.D., father and son, both eminent divines of the Reformed Dutch Church. The former was born at Hackensack, New Jersey,

January 12, 1744, and educated at the college at Princeton, in that State, where he graduated in 1765. He was settled in the ministry in his native town in 1766, and remained there until 1784, when he accepted the care of a church in Schenectady, New York. His death occurred in 1804. He was a man of extensive learning, and one of its most active patrons. It was chiefly by his efforts that Union College was founded at Schenectady, not long after his removal to that place. He was distinguished for his piety, was an eloquent preacher and enjoyed in a high degree the respect and esteem of his contemporaries. The latter was born in 1778, at Schenectady, New York. He

subject and induced to remember it. He died February 25, 1825, at the age of forty-seven years.

**ROMULUS** (rom'u-lus), according to the old Roman poetic legend, was twin-brother of REMUS, their father being Mars and their mother Ilia or Rea Silvia, the daughter of Numitor. The entire story of their birth and early history, culminating in the founding of Rome by Romulus and the death of Remus, is a pleasant romance of the early Roman type, as indeed is the account of Romulus' exploits as king, and his death, when he is said to have been borne away in clouds and darkness by his divine father. It is now generally admitted that the whole story is a fable. See **ROME**.

**RONGE** (rong'eh), JOHN, born at Bischofswalde, in Silesia, in 1813, was ordained a Romish priest in 1840; but soon afterward he was suspended for alleged heretical teachings, and in 1844 he published a letter denouncing the exhibition of the "holy coat," which had just been proclaimed by Bishop Arnoldi, of Treves. He was excommunicated, but still made rapid headway in gaining adherents, and in 1845 a German Catholic Church, independent of the Roman see, was founded. In 1848 he was compelled to seek refuge in England, where, with the assistance of his wife, he established a kinder-garten in his house. He published "A Practical Guide to the English Kinder-Garten," by John and Bertha Ronge," and "An Autobiography and Justification."

**ROOD**. This is a Saxon word which signifies a cross or crucifix. The term is more particularly applied to the large cross erected in Romish churches over the entrance of the chancel or choir. This is often of very large size, and when complete is, like other crucifixes, accompanied by the figures of St. John and the Virgin, placed one on each side of the foot of the cross; but these are often omitted. Lights are frequently placed in front of these roods, especially on certain festivals of the Church.

**ROOD-ARCH**, the arch which supported the ceiling of the rood screen.

**ROOD-BEAM**, the crossbeam on which the rood was placed.

**ROOD-LOFT**, the gallery or screen in churches or cathedrals on which the rood was placed.

**ROOD-TOWER**. This name is sometimes applied to a tower built over the intersection of a cruciform church, as the term *rood-arch* is sometimes applied to the arch between the nave and the chancel, from its being immediately over the rood-loft.

**ROOD-SCREEN**, a screen which separated the choir of a cathedral or the chancel of a church from the nave, and on the top of which the rood was placed on a floor or gallery. These screens were of either wood or stone, and they were ornamented in the style of the age in which they were

erected. Some in the Perpendicular period are exceedingly fine.

**ROOF**. See **HOUSE**.

**ROOM**. See **HOUSE**.

**ROOT**. The Hebrew word so translated, besides its literal signification, is often used figuratively. Individuals and communities are poetically likened to a tree; the root then designates the chief part mentioned, as of the wicked, Isa. v. 24, of Ephraim, Hos. ix. 16. It also implies the lowest part of anything, and so a stock, race, Isa. xiv. 29, the seat or dwelling of a people, Jud. v. 14, ground of a dispute, Job xix. 28. The same word signifies a sprout, and thus is used metaphorically of the Messiah, Isa. xi. 10.

**ROQUES** (rôk), PIERRE, author of "The Evangelical Pastor" and other excellent works, was born at La Caille, France, in 1685. He became pastor of a Protestant church in Bâle in 1710, became eminent as a preacher no less than as a writer, and died in 1748.

**ROSARY** (ro'-za-re). The form of devotion known by this name consists of fifteen Pater Nosters and Glorias and one hundred and fifty Ave Marias, said in decades, of one Pater, ten Aves and a Gloria, preceded by the creed. A string of beads is used to assist in this devotion, each bead representing a single prayer. It is uncertain when the rosary was introduced, as beads were used as an assistance in devotion when importance began to be attached to the number of prayers which were offered. Peter the Hermit has got the credit of having introduced the rosary in its present form during the crusades.

**ROSARY OF THE BLESSED VIRGIN MARY** is the title of a rosary composed in honor of the Virgin by Alan de la Roche, a Jacobin, and approved by Sixtus IV., A. D. 1470.

**ROSCELLINUS** (ros-sel-le'nus), founder, of the scholastic sect of the Nominalists, was a native of Brittany, where he flourished toward the end of the eleventh and the commencement of the twelfth century. Being presented with a canonry in the diocese of Soissons, he delivered lectures at the request of the chapter, in which, contrary to the principles of Aristotle, he taught that universals subsist, not prior to individual bodies nor after them, but within them, and that they are mere names or words by which kinds of individuals are expressed. Hence he and his followers obtained the name of nominalists, and their opponents that of realists. By applying this doctrine to the trinity he brought on himself a suspicion of heresy and of arithmeism, and was obliged to retract. Fatigued at length with controversy and persecution, he retired into Aqu-

ROOD.

taine, where he distinguished himself by his piety and charity. The time of his death is unknown.

**ROSE** (rôz). Song Sol. ii. 1 and Isa. xxxv. 1 are the only passages in the Bible where our version finds the rose. In neither instance is it supported by the Septuagint, which, in the Song, gives vaguely enough "flower of the plain," and in Isaiah makes it a lily. Both Rosenmüller and Gesenius, laying stress on the etymology, insist on some plant with a bulbous root, the former preferring the narcissus, the latter the autumnal crocus, and it must be allowed that the presumptions are very faint in favor of the best-known and most admired of all our flowers. Yet there are different species which still grow wild in the Holy Land, and we have the incidental evidence of the son of Sirach to show that the Jews were familiar with it, Wis. ii. 8; xxiv. 18; xl. 17; l. 8.

**ROSE**. 1. An ornament used in mouldings in Norman work. 2. The badge of the Tudors, and found on buildings erected in their reigns.

**ROSE, HUGH JAMES, B.D.**, and **HENRY JOHN**, brothers who attained some eminence as English divines and as writers. The former was born at Little Hoorsted, Surrey, in 1795, and educated at Trinity College, Cambridge, gained the first Bell's scholarship in 1814 and took his degree in 1817. He was made deacon in 1818, and having been ordained, became vicar of Horsesham in 1821, and rector of Hadleigh in 1830; he exchanged the latter for Fairstead and Wesley, in Essex, in 1833, and this again for St. Thomas', Southwark, where he remained till his death. He was also prebend of Chichester from 1827 to 1833, Christian advocate at Cambridge from 1829 to 1833, professor of divinity in the university of Durham from 1833, domestic chaplain to the archbishop of Canterbury from 1834, and principal of King's College, London, from 1836. He embarked for Calais, October, 1838, on a tour for his health, which was so shattered that he died at Florence the following year. He was a most prolific writer, but his works are mostly of a controversial character, and hence of a measurably local and temporal interest. Among his best known publications is the valuable "Biographical Dictionary" which he projected and planned, but did not live to complete. His brother was also educated at Cambridge, graduating as fourteenth wrangler in 1821; he became a Fellow of Cambridge in 1824, and soon after a rural dean; in 1837 he became rector of Houghton Conquest, Bedfordshire. Like Hugh, he was a voluminous writer, and many of his publications were of marked value. Among his chief works was a "History of the Christian Religion and Church during the First Three Centuries," from Neander, and "The Laws of Moses Viewed in Connection with the History and Character of the Jews," etc. He was also editorially connected with the "Encyclopedia Britannica," and was co-editor of Schnorr's Bible Prints.

**ROSE-WINDOW**, a circular window with mullions and tracery springing from the centre, sometimes called a marigold or Catherine-wheel window. Rose-windows received much attention, and they were often erected in a most ornate style, with complicated tracery and of vast dimensions, as may be seen in St. Mary's, Cheltenham, St. David's in Wales, Durham Cathedral and else-

where in England; and they may be often seen in the French cathedrals.

**ROSELINI, IPPOLITO** (ip-po-le'to ro-sel-le'ne), one of the most celebrated archaeologists of modern times, was born at Pisa in 1800, completed his studies at the university of his native town in 1821, and three years later obtained the chair of Oriental languages, which he had prosecuted at Bologna meanwhile with great zeal under the celebrated Cardinal Mezzofanti. Having made Egyptian antiquities his peculiar study, he followed eagerly in the steps of the illustrious Champollion, whom he accompanied first to Paris and then to Egypt in the prosecution of his researches; and on whose death he undertook the publication of the splendid work, the result of their united efforts, entitled the "Monuments of Egypt and Nubia," etc. He died in 1843.

**ROSEN** (ro'-zen), **FRIEDRICH AUGUST**, a distinguished Orientalist, was born at Hanover in 1805. He studied at the universities of Leipzig and Berlin, and afterward studied Sanscrit under Professor Bopp. Having distinguished himself by the publication of his "Sanscrit Roots," he was appointed professor of Oriental languages in the London University, a post which he held for several years. He was afterward professor of Sanscrit in University College, honorary foreign secretary to the Asiatic Society, and secretary to the Oriental Translation Committee. His studies and literary labors were gradually concentrated on the earliest Indian literature, and he began to publish, but did not live to complete, the hymns of the *Rig Veda*, with a Latin translation. He edited the "Essays" of his friend Colebrooke and the "Algebra" of Mohammed Ben Musa, with an English translation; prepared the catalogue of Syriac manuscripts in the British Museum, which was published by Forshall, and contributed many articles on Oriental literature and geography to the "Penny Cyclopaedia." Rosen was the correspondent of the most eminent foreign scholars, and was as much esteemed for the charms of his

character as he was respected for his scholarship. He died suddenly at London, September 12, 1837.

**ROSENMÜLLER** (ro-zen-mool'ler), the name of two German divines.

**JOHANN GEORG** was born at Unmerstadt, December 18, 1736. He was successively pastor at Hildburghausen, Hessburg and Königsberg, in Franconia, and professor of theology at Erlangen, at Geissen and at Leipzig, at which last place he also held the office of pastor of the church of St. Thomas and superintendent. He died there March 14, 1815. He exerted considerable

PORTICO DE LA GLORIA OF THE CATHEDRAL OF SANTIAGO.—See **ROME**, CHURCH OF.

was educated at Columbia College, where he graduated in 1795. He studied theology under the guidance of his father, and subsequently under that of the Rev. Dr. Livingston. In 1798 he was licensed to preach, and the following year was ordained and installed pastor of the Reformed Dutch church at Rhinebeck, where he remained until 1803, when he was transferred to the Presbyterian church in the city of Schenectady. The next year he removed to the First Presbyterian Church in Albany, as successor to the Rev. Dr. Nott, where he continued about four years, when he removed to the Presbyterian church then located in Cedar street, New York, of which he was the first pastor, and where he remained until his death. He was an eloquent and impressive preacher, and no one could listen to him without being interested in the

influence both on religious opinion and on education in Germany during his long and active life, and is now remembered chiefly as the author of "Scholia" on the New Testament.

**ERNST FRIEDRICH KARL**, son of the preceding, was born December 10, 1768, at Hessburg, near Hildburghausen. After studying at Erlangen and Giessen, he entered the university of Leipzig, where the rest of his life was spent. In 1792 he became a docent there; in 1796, professor-extraordinary of Arabic; and in 1813 ordinary professor of Oriental languages—an office which he held till his death, on the 17th of September, 1835. His time was divided between the duties of his professorship and the pursuit of Biblical studies. Of

his numerous publications, all of which are of high value, the most important is his "Scholia" on the Old Testament. The "Scholia" of the younger Rosenmüller are far superior to those of his father, which have been justly severely criticised. They belong to the lower order of sacred criticism, and are occupied with the investigation of the meaning of words and phrases. Nor is it the inner, full, theological import of words and phrases that Rosenmüller seeks; he is content with knowing how to translate the New Testament into Latin. He does not look at it as a storehouse of divine truth, which, as truth, is to be profoundly studied, and has its close relations and dependencies, like all other truths. Such a commentator was Calvin; but very far from it the elder Rosenmüller. As far as lower criticism, from a man who had no relish for the sublime truths of the gospel can go, so far his "Scholia" are, and will continue to be, valuable. They will guide to the vestibule of the temple; they will not show the glories within.

**ROSETTA** (ro-zet'tah) **STONE**. This is a very celebrated stone, so called because it was found at the village of Rosetta, in Egypt. It is now

ROSE OF JERICHO.—See ROSE.

in the British Museum in London, and it has accomplished much for the students of hieroglyphics. It is a piece of black basalt, three feet long and two feet six inches broad, and on it are three inscriptions, one of them in sacred characters, or, as they are termed, *hieroglyphics*; the second in enchorial characters, or those which were commonly used in the country; and the third in Greek. It appeared that the meaning of these inscriptions is identical; that the matter was a royal decree, and that it was ordered to be published in the three forms so that it might be intelligible to all who understood the different characters. The reports, however, of Dr. Young and of Champollion state that the matter contained in the Greek merely gives the substance of the other inscriptions; still, it has aided very materially in advancing the knowledge of hieroglyphical writing. According to the Greek inscription, the stone was erected in the reign of Ptolemy Epiphanes, A. C. 194, whose benevolence it describes, and it enumerates his victories and the principal transactions of his reign.

**ROSEWELL** (rōz'wel), THOMAS and SAMUEL, father and son, both eminent as ministers of the gospel. The father began his ministerial career as a clergyman of the Church of England,

in 1657, as rector of Sutton Mandeville, but was ejected for nonconformity in 1662. He became minister of Rotherhithe in 1674, but in 1684 one of his sermons gave great offence to the civil authorities, and he was arrested, tried, convicted and pardoned on the charge of high treason. He died in 1692. The son, Samuel, entered the ministry as assistant at Silver Street Chapel, London, where he soon became pastor. He wrote the commentary on the Ephesians in Matthew Henry's great work, besides a pamphlet, "The Arraignment and Trial of Thomas Rosewell." A volume of and several single sermons were also published, and evinced great pulpit power. He died in 1722.

**ROSH**. 1. One of the sons of Benjamin, Gen. xli. 21. 2. What is rendered "chief prince" in the Authorized Version at Ezek. xxxviii. 2, 3; xxxix. 1, is by many authorities made "prince of Rosh." The reading then becomes, "Gog, prince of Rosh, Mesch and Tubal." This seems to be more natural than "Gog, chief prince of Mesch and Tubal," especially as this rather peculiar designation of "chief prince" would be repeated three times. Besides, evidence exists of an ancient people called Rosh, or Rhos, supposed to be the original stem from which the Russi, or modern Russians, have derived their race and name. "Prince of Rosh," therefore, appears on the whole to be the preferable translation.

**ROSICRUCIANS** (ro-ze-kroo'shanz), a sect of visionary speculators who existed in Germany about the beginning of the seventeenth century. They claimed to have a much higher antiquity; but it is probable that if any body of philosophers who adopted this title ever existed in reality they were the alchemists, fire-philosophers or Paracelsists of the sixteenth century, who adopted this mode of giving vogue and fashion to their tenets. It has been held that Andrea, a German scholar, was the original propagator of the stories respecting the Rosicrucians. They have been associated with Freemasonry, but without due proof, with the Cabbalists, the Illuminati, etc.

**ROSIN** (roz'en), Ezek. xxvii. 17, margin. Here rosin is meant, as in the text. See BALM. But the "rosin" of the Apocrypha, S. of 3 Chil. 23, was probably naphtha, which is a natural product of Babylonia and other parts.

**ROSSINI** (ros-se'ne), GIOACCHIMO, the most distinguished music composer of this century, was born on the 29th of February, 1792, at Pesaro, Italy. His mother was a singer in a peripatetic opera company, and his father a horn-blower. He was partially taught by Padre Mattei of Bologna, but derived his style from Mozart and Haydn, of whom he was an enthusiastic student. He became known as a composer in 1812, and wrote a large number of secular pieces, the most noted of which was "The Barber of Seville;" but the composition which brings him into these pages is his "Stabat Mater," which was his last production, and it alone would make his name and fame enduring. He died in 1868.

**ROTA ROMANA**, a court of papal jurisdiction, founded by John XXII., consisting of twelve prelates.

**ROTHERHAM** (roth'er-ham), THOMAS, archbishop of York, was born at Rotherham, in Yorkshire, on the feast of St. Bartholomew, 1423.

He was educated in his native town and at King's College, Cambridge. After receiving various ecclesiastical preferments, he became chaplain to Edward IV., and later bishop of Rochester. In 1474 he was appointed lord-chancellor, and in 1480 archbishop of York. He died at Cawood in 1500. Among his benefactions the best remembered are those to Lincoln College, Oxford, so great that he was considered its second founder, endowing it with large revenues, finishing the buildings and giving it a code of statutes.

**ROTHWELL** (roth'wel), RICHARD, an English divine, was born in Lancashire, England, near Bolton in the Moors, about A. D. 1563. He received his education at Cambridge, where he distinguished himself as a skillful linguist, a subtle disputant and an eloquent orator. After spending a number of years in the university, he was ordained presbyter by Archbishop Whitgift. He became a preacher of singular power, and knew no other joy than to devote the energies of a vigorous constitution to the glory of his heavenly Father. He afterward spent most of his time in Durham, having gone there at the proposal of Lady Bowes. When it was suggested to him that on account of the fierce disposition of the people, and their never having heard the gospel, they might deal unkindly with him, he answered, "If I thought I should not meet the devil there, I would not go; he and I have been at odds in other places, and I hope we shall not agree there." He did indeed meet with opposition, and his life was attempted; but by his patience and courage he overcame, and was the instrument of doing much good. His death, which took place in 1627, in the sixty-fourth year of his age, was most happy. It is not known that he left any writings. He seems to have confined himself entirely to preaching.

**ROU** (roo), JEAN, an eminent French Protestant writer, born in Paris, in 1638. He spent most of his life in England and Holland. He died in 1711. Among his numerous productions the most notable is his "Seduction Avoided," being a series of letters from Bossuet, on the one hand, and from Rou and De Vrillac on the other, and showing the efforts of the first to "seduce" the others from their Protestant faith, and their successful "avoidance" of the snares.

**ROUNDHEADS** (rownd'hedz), a name of reproach applied to the adherents of Cromwell.

**ROUS, ROUSE or ROWSE, FRANCIS**, was born in 1579, at Halton, in Cornwall, England. He was educated at Oxford, in Broadgates Hall, now Pembroke College, and after leaving the university he studied law. During the reign of Charles I. he was a member of Parliament, and in 1643 he was made provost of Eton College. In 1653 he sat in the House of Commons for Devonshire, and in 1656 for Cornwall. He sat in the House of Lords next year, and he occupied a seat in Cromwell's privy council, and he was one of the few laymen whom the House of Commons sent to the Westminster Assembly. He was the author of a great number of works, which were sought after in their day but are no longer in demand, but his name has continued to the present day in connection with the version of the Book of Psalms which he produced, and which after certain modifications was adopted by the Church of Scotland, and is still in use by that Church, by the Irish, the Canadian and other Presbyterian Churches.

**ROUSSEAU** (roos-so'), JEAN JACQUES, one of the most eloquent writers and one of the most eccentric characters of the age, was born at Geneva, in 1712. He was son of a watchmaker, and was successively apprenticed to a notary and to an engraver, but his restless disposition would not suffer him to remain with either. At the age of sixteen he was found by a priest wandering through the Savoy, and almost in a state of starvation. The priest placed him in a monastery, but the restraint of the place was irksome to him, and he soon found the means of escape. He fled to Annecy, where he met with the famous Madame de Warens, a recent convert to the Catholic faith, who devoted part of her fortune to deeds of charity. For eight years he remained the guest of this amiable woman, who had been to him a mother and a friend. In 1742 he was at Venice, as secretary to the French ambassador, and it was not till his thirty-eighth year that he made his debut as an author by winning the prize offered by the academy of Dijon for the best essay on the question, "Whether the progress of arts and sciences has tended to the purification of morals?" From this time his writings were numerous and various.

ROSE OF SHARON (*Cistus roseus*).—See ROSE.

In 1760 he published his "New Heloise," a kind of romance, in which the writer endeavors to show the superior value of conjugal to maidenly virtue. A treatise "On the Social Contract" was his next work, and his bold though superficial speculations on the condition and destiny of man and society produced considerable alarm and irritation. In 1762 appeared "Emile," wherein the author professes to embody his system of education. It is, however, much to be lamented that while tracing out the education of a young man, and drawing a most affecting picture of the divine Author of Christianity, as also of the sublime beauties of the gospel, he attacks with blind, misguided fury the miracles and prophecies on which that divine revelation rests, building his system of salvation on reason and natural religion. The book was prohibited in Switzerland and France, anathematized by the archbishop of Paris, and publicly burned in the streets of Geneva by the hangman. Rousseau withdrew to Switzerland, and there wrote his "Letters from the Mountain," a sort of defence of "Emile." He soon afterward visited England, and made the friend-

ship of Hume, the historian, whom he afterward solemnly renounced, and returning to France, died suddenly, in 1778, not without the suspicion of suicide.

Rousseau was the author of other works besides those we have noticed, all of them exhibiting his peculiar warmth and energy of style and vigor of thinking, but his productions, with all their fascination of splendid and passionate eloquence, have no place among the lights that men love and walk by. His social and political theories have no basis more solid than his personal feelings, and these he interpreted falsely.

**ROUSSEL** (roo-sel'), GERARD, whose name is sometimes found as RUFFI, and is Latinized into RUFUS, was born near Amiens, and became a distinguished Reformer. The first notice we find of him is in 1526, as chaplain to Marguerite, sister of Francis I., and ten years later he was made bishop of Orléans. His active efforts for reform secured him violent enemies in the Church, though he sought reform in the Roman body and had no thought of separation from it. He died in 1550, without leaving any tangible fruits of his great labors.

**ROUTH** (routh), MARTIN JOSEPH, D.D., was born in 1755, at South Elmham, near Beccles, England. He entered Magdalen College, Oxford, in 1770, and in 1776 he became a Fellow. In 1781 he was made librarian, and he afterward was appointed senior proctor and junior dean of arts. In 1791 he was placed at the head of his college as president, and he held this office with great honor for many years, as he died in the one hundredth year of his age, in 1854, after a long life of great usefulness in the university. His most important works are "Reliquiae Sacrae" and his "Life of James II." He bequeathed his extensive and valuable library to the rising university of Durham.

**ROW** (ro), JOHN. There have been three eminent Scottish divines of this name—father, son and grandson. The first was born near Stirling, about 1526, and in 1550 was agent of the Scottish clergy at the Vatican, Rome, but was converted to the views of the Reformers, and became a Protestant minister and a distinguished leader of the great Reformation in his native land. He was one of the six ministers who composed the Confession and "First Book of Discipline of the Church of Scotland." He died in 1580. His eldest son was born at Perth in 1568, was educated at the university of Edinburgh and became minister of Carnock, Fifeshire, in 1592, where he remained fifty-two years. It is said he could read the Hebrew Bible at the early age of seven years. He died in 1646, leaving among his writings a valuable "History of the Kirk of Scotland, with Additions and Illustrations by his Sons," which, after lying unprinted for more than two hundred years, was published by the Wodrow Society in 1842. The third of the name was even more distinguished than his father. He was born at Carnock, in 1598, and like his father and grandfather became early eminent for his intimate acquaintance with the Hebrew and Greek Scriptures. He was for many years rector of the Perth Grammar-School, and in 1652 he was made principal of King's College, Aberdeen, but at the Restoration was compelled to resign this important position, when he retired into private life, living in the

parish of Kinellar, where he died in 1672, leaving a number of valuable works, chiefly on his favorite subjects—the Hebrew and Greek Scriptures. It is not worth while to enumerate his writings, as they have been superseded by later writers.

**ROWE** (ro), ELIZABETH, an English authoress, distinguished alike in her life and in her writings by a truly Christlike spirit. She was born in 1674, at Ilchester, Somersetshire, England, her father, Rev. Walter Singer, being a dissenting minister of some note. She exhibited poetic tastes very young, and it is said that she could scarcely write even a brief note of friendship without betraying the poetic bent of her mind. Among her earlier friends were Bishop Ken, Dr. Watts and Hon. Mr. Thynne, the latter of whom was her tutor for some time. When scarcely nineteen years of age, at the suggestion of Bishop Ken, she wrote her "Paraphrase of the Thirty-eighth Chapter of Job," which gained her

THE ROSE OF SHARON.—See ROSE.

no slight repute. She had several suitors for her hand, among them Matthew Prior, but declined all until, in 1710, she married Thomas Rowe, himself a poet of no mean talents. Her married life was very happy and very brief, her husband dying in 1715. She survived her husband twenty-two years, devoting her life to active Christian charity and her leisure to literary pursuits, among the fruits of the latter being: "Poems on Several Occasions, by Philomela;" "Friendship in Death, in Twenty Letters from the Dead to the Living;" "Letters, Moral and Entertaining, in Prose and Verse;" "History of Joseph," a poem; "Devout Exercises of the Heart, in Meditation and Soliloquy, Praise and Prayer," revised by the Rev. Dr. Isaac Watts, and a volume of "Miscellaneous Works, in Prose and Verse, to which are added Poems by Thomas Rowe, and the Lives of the Authors," the last-named being published after Mrs. Rowe's death.

**ROWLAND** (ro'land), DAVID S., a Congregational minister of Windsor, Connecticut, born at Fairfield, in that State, in 1719, graduated at

Yale College in 1743. He was first settled in Plainfield, and subsequently at Providence, Rhode Island, where he remained twelve or thirteen years. At the commencement of the Revolution he removed, and March 27, 1776, was installed pastor of the First Church in Windsor, where he resided, greatly esteemed for his talents, piety and usefulness, until his death, January 13, 1794.

**ROWLAND** (ro'land), **HENRY AUGUSTUS**, D.D., was born in 1804, at Windsor, Connecticut, and educated at Yale College, whence he went to Andover Theological Seminary. In 1830 he settled at Fayetteville, North Carolina, from which he removed to the church in Pearl street, New York, and subsequently to Honesdale, Pennsylvania. He next settled in Newark, New Jersey, as pastor of the Park Street Presbyterian Church, where he remained until his death. He died in 1860, leaving several published sermons and other minor works to attest the clearness of his views and his earnestness as an evangelical preacher.

THE RUBENS MEMORIAL CHAPEL, ANTWERP, ERECTED BY THE PAINTER'S WIDOW.

**ROWLAND**, **THOMAS**, D.D., a clergyman of the English Established Church, born in Philadelphia, in 1771. His father, the Rev. John Hamilton Rowland, was a missionary from the Church of England to the province of Pennsylvania, and at the time mentioned resided in Philadelphia. During the troubles which arose between the mother country and her colonies, Mr. Rowland removed to Nova Scotia, and ministered in a church at Shelburne. His son, the subject of this paragraph, received the rudiments of his education on Staten Island, under the instruction of the Rev. Mr. Moore, father of Rt. Rev. Richard Canning Moore, D.D., for years bishop of Virginia. Thence he went to King's College, Nova Scotia. In 1796 he received ordination from the hands of Bishop Charles Inglis, and subsequently succeeded his father in the parish of Shelburne. He performed the duties of this, his only parochial charge, for more than fifty years, until age and infirmities obliged him to resign. He then returned to the United States to spend the remainder of his days with an only daughter, residing at Manchester, Alleghany county, Pennsylvania, where he died, March 14, 1853, in the eighty-second year of his age.

**ROWLAND**, **WILLIAM GORSUCH**, an English divine, born August 14, 1770. He received his education at the Royal Free Grammar School in Shrewsbury, of which his father, the Rev. John Rowland, was one of the tutors for twenty-seven years. He then went to Oxford, where he took his first degree, in 1790, was admitted to holy orders, and in 1793 assumed the curacy of Holy Cross and of St. Giles, Shrewsbury, where he remained thirty-two years. In 1814 he was collated to the prebendary stall of Carborough, in the cathedral church of Lichfield, and in 1823 was elected one of the ministers of St. Mary's, Shrewsbury. He was a most liberal patron of this church, giving at one time more than three thousand pounds to effect various improvements connected with it, and showed himself to be a most indefatigable friend of education, not only by his pecuniary benefactions, but also by his personal labors. From early life he had felt the importance of affording to youth a Scriptural education, and he accordingly assisted in the establishment of the first Sunday-school in Shrewsbury.

As a friend of the laboring classes he was also instrumental in the establishment of a savings bank in the county of Salop; and he was accustomed for many years annually to distribute several hundred pounds weight of beef to the humbler classes of his parishioners. Mr. Rowland lived to the venerable age of eighty-one years, dying

November 28, 1851.

**ROYE** (roy), **WILLIAM**, was a celebrated friar who aided Tyndale in his translation of the New Testament into English. He is also famous for his keen satire on the Romish priesthood and on Cardinal Wolsey, entitled

"Rede me and be not wrothe,  
For I say no thyng but trothe."

He was burned in Portugal for heresy.

**RUBENS** (ru'benz), **PETER PAUL**, the most distinguished painter of the Flemish school, was born at Siegen, in Westphalia, in 1577. When he was ten years old, his mother, then a widow, returned to her native place—Antwerp. He received an excellent education; and after studying in his own country, especially under Otto Van Veen, he went to Italy, where he improved himself by copying the works of the best masters, but chiefly Titian. While in Italy he was employed by the duke of Mantua, not only as an artist, but on an embassy to Madrid. He returned to Antwerp in 1608, and was soon after made court-painter to the archduke Albert, Spanish governor of the Low Countries. In 1620 he

was employed by the princess Mary de Medici to adorn the gallery of the Luxembourg with a series of paintings illustrative of the principal scenes of her life. While thus engaged, he became known to the duke of Buckingham, who purchased his museum. He was afterward employed by the Infanta Isabella and the king of Spain in some important negotiations, which he executed with such credit as to be appointed secretary of the privy-council. On going to England with a commission from the Infanta, he obtained the favor of Charles I. While here he painted the fine picture called "Peace and War," now in the National Gallery, the Apotheosis of James I. (or of William the Silent, as it is now named), and the picture of Charles I. as St. George, for which he was knighted and received a chain of gold. Rubens acquired immense wealth, and was twice married, the second time, in 1631, to a lovely girl of sixteen. He died at Antwerp, in 1640. Rubens, beyond all comparison, was the most rapid in execution of the great masters; and according to Sir Joshua Reynolds, he was the greatest master of the mechanical part of his art that ever existed. His works are very numerous and very diversified in subject. There are nearly a hundred in the picture gallery at Munich. The "Descent from the Cross," at Antwerp, is perhaps his master-piece, though his "Last Judgment" will stand comparison with it.

**RUBRIC** (ru'brik), the order of the liturgy of the Roman Catholic Church and of the Protestant Episcopal Church. The directions printed in books of law and in prayer-books are so termed because they were originally distinguished by being in red ink.

**RUBRUQUIS** (roob-roo-keess'), **GUILLAUME DE**, a distinguished traveler and missionary of the Middle Ages, whose real name was **WILLEM DE RUYSBROEK**, was born in Brabant, probably about 1230. He entered the Franciscan order, set out for the Holy Land, and in 1253 was sent by Louis IX., who was then in Palestine, on an embassy to Manchu, the great khan of Tartary, and in search of the famous but undiscoverable Prester John. He was accompanied by two other monks, and had interviews with Batu Khan and his son, the great Sartak and the grand Khan Manchu. After an absence of two years and a half, Rubruquis returned to Syria and entered the Franciscan monastery at Acre. He sent the narrative of his journey to Louis, and wished to visit France, but whether he did is not known. He was living in 1293. His narrative is full of curious information, and is remarkable for accuracy and sobriety.

**RUBY** (ru'be), a precious gem of a rose-red color belonging to the class corundum. The word occurs in several places in our version, Job xxviii. 18; Prov. iii. 15; viii. 11; xx. 15; xxxi. 10; Lam. iv. 7, but it is not probable that the ruby is meant. Some critics are disposed to understand pearls. Pearls, however, would ill suit the last-cited passage. But it seems more reasonable to understand, with other critics, red coral. For the sardius, Ex. xxviii. 17; xxxix. 10; Ezek. xxviii. 13, the margin gives "ruby." Perhaps the word translated agate really means ruby. See **AGATE**.

**RUCHRATH** (rook'rat), **JOHANN**, called **JOHANN VON WESEL**, born about 1410,

at Ober-Wesel-on-the-Rhine, attained eminence as a pre-Reformation reformer, though he somewhat marred his good name by recanting in his old age to escape torture and death. He was for some years a professor of divinity at Erfurt, and for seventeen years preached at Worms. He wrote "Concerning the Authority, Duty and Power of Pastors" and a "Treatise against Indulgences;" and as a natural consequence, there being no other answer possible to his powerful arguments, was arraigned for "heresy." He was then in his seventieth year, his mind was no longer equal to the ordeal, and he recanted. He died in 1481, two years before Luther's birth.

**RUDBORNE** (rud'born), **THOMAS**, bishop of Saint David's in the fifteenth century, was a native of Hertfordshire, or, as some say, of the county of Wilts. He was a member, and afterward warden, of Merton College, Oxford, the great gateway and tower of which edifice were built under his auspices and after his own design. In the earlier part of his life he had been one of the clerical advisers who instigated Henry V. in enforcing his pretensions to the French crown, and had even accompanied that monarch as chaplain on the celebrated expedition which terminated in the victory of Agincourt. In the following reign he was elevated to the mitre, which he wore something less than ten years, dying about the year 1442.

**RUDD**, **JOHN CHURCHILL**, D.D., a clergyman of the Protestant Episcopal Church, was born at Norwich, Connecticut, May 24, 1779. His parents were Presbyterian; but on removing to the city of New York, in 1800, he joined the denomination of which he was an ornament through life. He received a good academical, but not a collegiate, education, and was admitted to holy orders by Bishop Benjamin Moore, in 1805. In December of the same year he became rector of St. John's Church, Elizabethtown, New Jersey, where he remained until 1826, and where, in addition to the care of the parish, he also superintended the education of young men. In 1826 he removed to Auburn, in Western New York, where he became rector of St. Peter's Church, and likewise for three years had charge of an academy. In 1828 he was elected president of Geneva College, but declined. In 1827 he established the "Gospel Messenger and Church Record," a weekly religious journal, of which he continued to be editor and proprietor until his death, a period of nearly twenty-two years. In 1831 he resigned the rectorship of St. Peter's Church, and in 1836 removed the place of publication of his paper to Utica. Dr. Rudd was for twelve years a delegate from the diocese of New Jersey to the General Convention of the Protestant Episcopal Church, beginning with the year 1811. In 1832 he was a delegate to it from the diocese of New York, and from 1833, when the diocese of Western New York was organized, he was a member and president of the standing committee thereof until the close of his life. He was also a trustee of Geneva College, and held a professorship in Hobart Hall Academy. In addition to what he wrote for his own and other periodicals, he published only one small volume and a few sermons and tracts. Bishop Delancey, when alluding to his death before the convention of the diocese in 1849, said, "Dr. Rudd was a most useful laborer in the Church, firm in his principles, but kind and catholic in his feelings." Dr. Rudd died at Utica, November 15, 1848, in the sixty-eighth

year of his age, and his remains were removed to a vault under St. John's Church, Elizabethtown, New Jersey, where he had ministered more than twenty years.

**RUDIMENTS** (ru'de-ments), Col. ii. 8, 20. See **ELEMENTS**.

**RUDOLPH** or **RUDOLF** (roo'dolf), or **RODOLPH** (ro'dolf), II., son of Maximilian II., born at Vienna in 1552, was made king of Hungary in 1572, of Bohemia and of the Romans in 1575, and the following year was elected emperor on his father's death. He was an irresolute as well as an unfortunate monarch; when his dominions were invaded by the Turks, he showed neither spirit nor courage to repel the attack, and when his brother Matthias revolted from him he yielded up to him, with little opposition, successively, the sovereignty of Austria, Moravia, Hungary, Bohemia, etc. His weakness made him the perfectly willing tool of the Roman Church in its opposition to the Reformation. The celebrated confederation of Protestant princes under the elector palatine Frederick IV. was formed in his reign. He was very superstitious; and notwithstanding he patronized learned men, he yet had the weakness to listen to the suggestions of astrologers. He died, unmarried, January 20, 1612, aged sixty.

**RUE**, a plant on which the Pharisees were careful to pay tithe, Luke xi. 42. Common rue is a native of the South of Europe, a half-shrubby plant of a peculiar yellowish-green color. Every part of it is marked by transparent dots, filled with volatile oil. Rue possesses powerful stimulant, anti-spasmodic and tonic properties. The odor is peculiar and strong, the taste of the leaves intensely bitter and aromatic. Rue is sometimes called "herb of grace" and cultivated as an ornamental plant.

**RUFINA** (roo-fe'na), a Christian martyr under Valerian, was the daughter of an eminent gentleman at Rome. Her suitor, who had professed Christianity, to avoid danger and save his fortune, renounced his faith. He then endeavored to entice Rufina from her profession, but she remained steadfast. She afterward left the city; and when her suitor found her unyielding, he informed against her, which occasioned her apprehension. She passed through several tortures, but remaining inflexible, was beheaded, A. D. 257. Her sister Secunda, alike true, shared her martyrdom.

**RUFINUS** (roo-fe'nus), by some called **TORANUS**, a priest of Aquileia, in the fourth century. He became attached to St. Jerome, and accompanied him to the East; but being persecuted by the Arians, he was banished to a remote part of Palestine. After his return he founded a monastery on Mount Olivet, and employed himself in translating Greek authors into Latin. His

version of Origen gave such offence to his old acquaintance, Jerome, that he wrote bitterly against him, and Rufinus was cited to Rome by Pope Anastasius. The pope condemned his works, upon which he retired to Sicily, where he died about 410. The works of Josephus, the ecclesiastical history of Eusebius, and the writings of Gregory Nazianzen and St. Basil were also translated by Rufinus.

**RUFUS** (roo'fus), son of Simon the Cyrenian, who assisted our Saviour in carrying his cross, Mark xv. 21. Rufus probably was famous among the first Christians, since Mark names him with distinction. His father was probably the same as Simeon, mentioned Acts xiii. 1. In Rom. xvi. 13 Paul calls the mother of Rufus "his mother." Now, she could not be the mother of Paul unless Paul and Rufus were brothers, nor could she be the mother-in-law of Paul by natural relation to his wife unless Rufus was brother-in-law to Paul.

HALF THE CAPITAL OF THE TEMPLE AT TIVOLI (ROMAN).  
HALF THE CAPITAL OF THE MONUMENT OF LYCISTRATES (GREEK).  
ROMAN AND GREEK CORINTHIAN CAPITALS COMPARED.—See ROMAN ARCHITECTURE.

Perhaps, however, he means no more than that the mother of Rufus had favored him with those attentions and services, truly maternal, which a mother might have shown, and therefore the apostle salutes her son and herself under this affectionate recollection. This leads to an inquiry where this intimacy could have taken place. If Simeon the teacher at Antioch were her husband, then, as we know that Paul was long at Antioch, we see time, place and occasion of the services rendered by the mother of Rufus to Paul, and of mutual kindness and intimacy between them. As to the residence of this pious woman at Rome with her son Rufus, we may well suppose that her husband Simeon was dead at Antioch, and that she accompanied her son to the capital of the empire, where many Jews had settled. In what capacity Rufus dwelt at Rome we have no means of determining. If he were a Christian teacher, as his father had been, it would appear that he visited Philippi in his journeyings, where he suffered many adversities; for Polycarp, in his epistle to the Philippians, speaks of the "patience, which ye have seen set

forth before your eyes, in the blessed Ignatius and Zozimus and Rufus and in Paul himself." This association of persons contributes to confirm to Rufus the character of a distinguished teacher, and to mark him as the same Rufus, elect in the Lord, with whom Paul was familiar; his brother not only by profession and grace, but also by intimacy, and perhaps by constant residence in the same family.

excellent writings it is not easy to pursue our usual practice of naming two or three of the best known, for from the one named above to her last-written, "Watchwords from the Warfare of Life," all are worthy of and have attained a large circle of interested and approving readers, who will endorse the critique of a careful reviewer: "Their spirit is purely evangelical; their whole tendency is to promote true Christianity."

THE RUSSIAN PATRIARCHAL CHURCH, AT MOSCOW.—See RUSSIAN CHURCH.

**RUHAMAH** (ru-ha'mah), "having obtained mercy," a symbolical name which the prophet Hosea was instructed to apply to the female members of the covenant, in token of the purpose of mercy which was still in reserve for them, Hos. ii. 1.

**RUINART** (roo-e-nar'), THIERRI, a Benedictine monk, born at Rheims, in 1657, was an able theologian, and pupil, and subsequently an assistant, of Mabillon in his literary labors. He was the author of "The Acts of the Martyrs of the First Four Centuries," "History of the Persecution of the Vandals," "The Life of Mabillon" and "The Life of Pope Urban V.," besides an edition of Gregory of Tours. He died in 1709.

**RULER** (roo'ler). See **PRINCE**. Ruler of the synagogue, Mark v. 22. See **SYNAGOGUE**.

**RUMAH** (roo'mah), a place named as the habitation of the father of Jehoiaquim's mother, 2 Ki. xxiii. 36. It may be the same with Arumah.

**RUNDLE** (run'd'l), ELIZABETH, authoress of the celebrated work "The Schönberg-Cotta Family," and of a large number of works which have been for years, still are, and promise to be for many years to come, exceedingly popular, was the only child of the late John Rundle, banker and member of Parliament of Tavistock, Devonshire, England. She was born in 1826, and early in life acquired an enviable reputation as a linguist, artist, musician, poet and more especially as a Christian authoress. She married, at the age of twenty-five, Mr. Andrew P. Charles of London, but her fame attaches to her maiden name. Among her many

**RURAL** (roo'ral) **DEAN**. This order, which is now almost extinct, had the care and inspection of districts, now called deaneries.

**RUSH**. See **REED**.

**RUSLING** (rus'ling), JOSEPH, for twenty-five years a preacher connected with the Philadelphia Conference of the Methodist Episcopal Church, was a native of England, born about twelve miles from Epworth, Lincolnshire, May 12, 1788. When he was about twelve years of age his parents emigrated to this country and settled first in New York, and subsequently in Eastern New Jersey. They had been Wesleyans, and on making their home on this side the Atlantic connected themselves with the Methodist Episcopal Church. Like the majority of the sons of farmers of moderate means, Joseph enjoyed only the limited opportunities of education afforded by the country public school of his district, working meanwhile on his father's farm. At the age of twenty he was converted, and became an earnest member of the church of his parents. Four years later he felt called to the work of the gospel ministry, and promptly responded; and two years thereafter, in 1814, became connected with the conference, and continued the connection till 1839, in which year, July 6th, he died as those die who love the Lord and are faithful in his vineyard. Bishop James bears warm testimony to Mr. Rusling's fervid earnestness and peculiar power as a preacher of Christ. Besides numerous sermons, Mr. Rusling is known by several valuable contributions to religious and devotional literature, "Devotional Exercises," "Christian Companion"

and "Hymns for Sunday-schools" being the more important and valued.

**RUSHWORTH** (rush'wurth), JOHN, a distinguished partisan of the Cromwellian commonwealth and a historian of no mean abilities, was born in Northumberland in 1607 and died in 1690. The truthfulness and impartiality of his historical statements have been extravagantly lauded by some and strongly denied by others, according to their bias; but the truth is probably that he aimed to be honest, but his warm prejudices warped his judgment.

**RUSSELL** (rus'sel), JOHN. "A wise man and a good," says Sir T. Moore, "and one of the most learned men, undoubtedly, that England had in his time." He was chancellor of the university of Oxford, and after being engaged in political missions was made bishop of Rochester and of Lincoln, and appointed privy seal, and was chancellor under Edward V. and Richard III. The latter king, however, took the great seal from him in 1485. He died in 1494.

**RUSSELL, LADY RACHEL**, was the second daughter of Thomas Wriothesley (rot'es-le), earl of Southampton. She was twice married—first to Lord Francis Vaughan, who died in 1667, and in 1669 she became the wife of Lord William Russell, and for fourteen years they enjoyed uninterrupted felicity. In 1683 he was arraigned for complicity in the Rye-house plot, and unjustly condemned and executed. He was refused a legal adviser and allowed only an amanuensis, and by his choice his noble wife acted in that capacity. While making every human exertion to obtain a mitigation of the sentence, while nobly offering to accompany him into perpetual exile, his heroic and lovely wife never for a moment desired him to swerve from the strictest honor and

LADY RACHEL RUSSELL.

integrity. Lord Russell said, "There was a signal providence of God in giving me such a wife, where there was birth, fortune, great understanding, pure religion and a great kindness to me." She parted from him at last without shedding a tear, and retired in silent anguish to her wretched and dreary home. Though, after the execution of Lord Russell, his lady was deeply affected, yet her mind never sank. She survived him forty years, but refused to enter again into the marriage state. She died at the age of eighty-seven, in 1723. Lady Russell was a woman of

deep, ardent and unaffected piety, and an excellent understanding. Her "Letters," which do equal credit to her understanding and heart, have been often reprinted. After the revolution the proceedings against Lord Russell were annulled. His portrait has been added to the national portrait-gallery of England.

**RUSSELL, MICHAEL, LL.D., D.C.L.**, bishop of Glasgow and Galloway, was born at Edinburgh, 1781; studied at Glasgow, and having received ordination, was in 1808 appointed to St. James' chapel, Leith, where he continued to officiate till his death. To extensive acquirements, theological and literary, Dr. Russell added the pen of a ready and elegant writer. His works on Palestine, Egypt and various other publications still hold their ground, and his "Connection of Sacred and Profane Histories" extended his fame far beyond the limits of his native land. On his elevation to the episcopal chair in 1837, the university of Oxford marked its respect for his character and attainments by conferring on him the degree of doctor of civil law by diploma—an honor never before bestowed on a Scotchman not educated at Oxford. He died in 1848.

**RUSSIAN** (roo'sh'an or rush'an) **CHURCH**, or the Greek Church in Russia, adheres, in the main, to the doctrines and ceremonies of the Greek Church in other parts of the East, although it is independent of the patriarch of Constantinople. See **ORIENTAL CHURCH**. Peter the Great made strenuous efforts to diminish the number of superstitions and puerile ceremonies which prevail in all the Greek Churches and to elevate the character of the clergy, but his success was very limited. Since his reign the czar has acquired an immense influence in the Church throughout his dominions, and is regarded as its head, and invested with a quasi-spiritual authority which secures to him reverence and obedience in spiritual things, not much inferior to that which is rendered by the Romanists to the Pope.

The Russian Church has displayed a toleration of other sects, and in this respect it contrasts favorably with the papal, yet it lays itself open to the charge of intolerance toward its own members by refusing to allow them under any circumstances to quit its communion. It approximates to the Romish Church in doctrine, but differs from it essentially in government and discipline, inasmuch as it rejects the claims of the Pope to supremacy, acknowledging the emperor as its temporal head, and submitting to be governed by a supreme synod, composed in part of lay members; in permitting all but bishops to retain their wives, if married before ordination; forbidding the use of images or corporeal representations of any kind, except pictures, which it uses lavishly; and more important than all, in permitting the free circulation of the Scriptures in the vulgar tongue. In government it is an episcopacy, composed of forty dioceses; of which four are governed by metropolitans, sixteen by archbishops and twenty by bishops. The churches are extremely numerous, and they are generally the best constructed and the most conspicuous edifices in all towns and villages. In Petersburg and Moscow the cathedrals are especially grand and of great magnitude, and the services are most imposing. In the towns and villages of Russia the churches are celebrated for the number and the magnitude of their bells, the incessant ringing of which appears to be one of the most characteristic parts of their ceremonial.

Like the Greek Church generally, the Russian acknowledges the authority of the first seven councils. The Bible, including the Deutero-canonical books as interpreted by the Church, is held to be the rule of faith. The reader is referred to the article on the **ORIENTAL CHURCH** for a condensed view of the doctrines and ordinances which obtain in the Greek Church, as these are characteristic of the Russian Church, of which the distinguishing particular is the headship which has been assumed by the emperor, and which has been admitted by the Church. There are a number of sects in Russia which differ from the Church in several points, chiefly in opposing the headship of the emperor, such as the Raschelniks, who regard him as Anti-christ.

**RUST**, Matt. vi. 19, 20; James v. 3. Two different Greek words are rendered "rust." The first has a more general meaning, perhaps equivalent

RUSSO-GREEK CHURCH, AT BUCHAREST, WALLACHIA.—See RUSSIAN CHURCH.

lent to our "wear and tear." "Tarnish" might better express the sense in the last-named passage.

**RUTER** (roo'ter), MARTIN, D.D., a minister of the Methodist Episcopal Church, was born at Charlestown, Massachusetts, April 3, 1785. He had very few educational advantages in early life, and when only sixteen years of age received his license to preach. He employed his time not only in the active work of the itineracy, but became thoroughly grounded in history, science and the languages. He was at one time principal of the New Market Wesleyan Academy, and was subsequently located at Cincinnati as the Western agent of the Methodist Book Concern. From 1834 to 1837 he was president of Alleghany College, and in the latter portion of his life he labored faithfully in mission work in Texas, but his physical strength gave way before the exposures and hardships incident to that work. He died May 16, 1838. He was the author of "History of Martyrs," "Ecclesiastical History" and other works.

**RUTH**. The book of Ruth, like the last four chapters of the book of Judges, is properly a supplement to that book, of which, in the ancient Hebrew canon, it formed a part.

The book of Ruth was certainly written after the establishment of the monarchy, see ch. i. 1, and probably about the time when David was coming into public life after he had been anointed by Samuel as the future king, ch. iv. 1, 7; 1 Sam. xvi. 13. It has generally been ascribed to that prophet, and internal indications favor the tradition.

The events, however, which it relates evidently belong to a much earlier period, for the author found it necessary to explain a custom here noticed which had since become obsolete, ch. iv. 1, 7. One circumstance which has been relied upon, in attempting to ascertain the date of these events, is the famine mentioned in ch. i. 1, which Bishop Patrick supposes to have been caused by the incursions of the Midianites just before the admin-

istration of Gideon, see Jud. vi. 4-6. But Usher and others, following the greater Hebrew chronology, with far higher probability assign the narrative to the times of Ehud and Shamgar. See Jud. iii. 12-14, 31. In any case, it seems necessary to suppose that in the genealogy in ch. iv. 18-22 some names have been omitted according to the frequent practice of the Hebrews. Compare Matt. i. 8 with 1 Chr. iii. 11, 12. These names should probably be supplied between Obed and Jesse.

This narrative of private life was doubtless included in the canon of Scripture chiefly on account of its relation to the family of David, and thus to the divine King and Head of the Church; and because the adoption of Ruth, a Moabitess, into the commonwealth of Israel and into the line of the ancestors of Messiah, intimates that through him the Gentiles should be sanctified and united to his people, so that there should be "one fold and one Shepherd." But it is also valuable as presenting to us admirable examples of faith, piety, patience, humility, industry and kindness in the common occurrences of life. It also forcibly teaches us that,

while we are always in this life exposed to change, there is no condition, however unfavorable, which is absolutely hopeless, for God can raise "the poor out of the dust," "that he may set him with princes;" and that a devout trust in his overruling Providence will not be disappointed; so that we may well exclaim with Bishop Hall, "Oh the sure and bountiful payment of the Almighty! Who ever forsook the Moab of this world for the true Israel, and did not at length rejoice in the change?"

This book contains Ruth's marriage into the family of Elimelech, the death of her father-in-law and husband, and her return with her widowed mother-in-law to Bethlehem, ch. i., where she gleaned in the fields of Boaz, whose kindness encourages her to claim from him the duty of a kinsman, ch. ii., iii.; her marriage to Boaz, and her descendants, with a genealogical table, ch. iv.

**RUTHERFORD** (ruth'er-ford), **SAMUEL**, a famous divine of the covenant, was born about 1600

ment met he passed away, March 20, 1661, with the words, "Glory, glory!" upon his lips.

**RUTHERFORTH** (ruth'er-forth), **THOMAS**, D.D., F.R.S., born in 1712, in Cambridge-shire, England, and was educated at St. John's, Cambridge, of which he became a Fellow, and afterward, in 1745, he was made regius professor of divinity at Cambridge. He was rector successively of Barrow, in Suffolk, Shenfield, in Essex, and Barley, in Hertfordshire, and in 1752 he was made archdeacon of Essex. He died in 1771. He was a ready writer, and left a number of works on religious, philosophical and kindred topics that have been in demand, and have been highly commended by competent critics.

**RUTLEDGE** (rut'lej), **FRANCIS HUGER**, D.D., bishop of the Protestant Episcopal Church in Florida, was born in Charleston, South Carolina, in 1800; he was the son of Chancellor Hugh Rutledge, and nephew of Edward (signer of the

of his alma mater. In 1839, he removed to Philadelphia, where he had charge of Saint Joseph's Church. He was afterward pastor of Saint John's Church in Frederick, Maryland. For nine years he presided over Georgetown College, and for nearly three years he was at the head of the college of the Holy Cross, Worcester, Massachusetts. He was widely and favorably known as an eloquent preacher and public lecturer. He died in Philadelphia, January 12, 1860.

**RYE**. The word so rendered in Ex. ix. 32; Isa. xxviii. 25, is translated "fitches" in Ezck. iv. 9, "spelt" in the margin. Rye is a plant bearing naked seeds on a flat ear furnished with awns like barley. It grows on light soils unfit for wheat. But there is little doubt that the plant intended by the Hebrew word is not rye, but **SPELT**, which see.

**RYLAND** (ri'land), **JOHN**, D.D., an eminent English divine of the Baptist denomination, was born at Warwick in 1753. His precocity was remarkable, and he is said to have read a chapter in the Hebrew Bible before he was five years old. He entered the ministry in 1771, was first associated with his father at Northampton, then sole pastor, and removed to Bristol in 1793, where he became president of the Baptist College. He was one of the founders of the Baptist Missionary Society, of which institution he was senior secretary from 1815 to his death, in 1825.

**RYLE** (ril), **JOHN CHARLES**, an eminent evangelical clergyman of the Church of England whose admirable tracts have made his name favorably known in all parts of the United States no less than in his own land. He was born in 1816, and received his education at Christ Church, Oxford, where he graduated bachelor of arts in 1836; he was a Craven university scholar, and took a first-class in classical honors. He entered holy orders in 1841, and took the curacy of Exbury, in the New Forest. His advancements have been—rector of St. Thomas's, Winchester, 1843; rector of Helmingham, Suffolk, 1844, and vicar of Stradbroke, Suffolk, 1861. His tracts exceed two hundred in number, and not only have immense quantities of them been circulated in English-speaking countries, but many of them have been translated into French, German, Dutch, Italian, Portuguese, etc. Besides tracts, he has produced a large number of valuable books, among which the most admired have been—"Assurance," "Home Truths," "The Young Man's Christian Year," "Startling Questions," "The Priest, the Puritan and the Preacher," "Plain Speaking," "Spiritual Songs," "Expository Thoughts on the Gospels," "The Bishops and Clergy of Other Days," "The Christian Leaders of the Last Century," etc.

**RYVES** (rivz), **BRUNO**, an English clergyman and writer, born about 1596 or earlier, in Dorsetshire. The first record we find of him is as chaplain of Magdalen College, Oxford; after which he was vicar of Stanwell, Middlesex, rector of St. Martin's, Vintry, London, and chaplain to Charles I. He was sequestered and suffered severe persecution during the civil wars, but after the Restoration was rewarded by the appointments of chancellor of Chichester and dean of Windsor in 1660, registrar of the knights of the Garter in 1661, and rector of Acton, Middlesex. He wrote some controversial works of temporary interest, and he assisted Walton in the preparation of his Polyglot Bible.

**RYDER** (ri'der), **JAMES**, D.D., a divine of the Roman Catholic Church, was a native of Dublin, where he was born in October, 1800. He emigrated to this country at an early age, and pursued his academic studies at Georgetown College. He completed his theological course at Rome, and after being ordained he taught theology in the college of Spoleto. Returning to this country in 1828, he was appointed vice-president

"LA MAISON CARRÉE," AT NÎMES.—See ROMAN ARCHITECTURE, page 1410, and engraving on page 1411.

in the parish of Nisbet, Roxburghshire, and educated at the university of Edinburgh. In 1627 he was ordained minister of the parish of Anwoth, but without any engagement to the bishops. His pastorate was marked by its affectionate fidelity and great success, but in 1636 he was forbidden to exercise his ministry. The court of high commission confirmed the sentence, and he was ordered to confine himself to the city of Aberdeen during the king's pleasure. His principal offence was his preaching against the articles of Perth. He remained nearly two years in this virtual exile, and in February, 1638, he returned to his attached flock. The famous general assembly met in Glasgow that same year, and he was one of the delegates. By the commission of that assembly he was appointed professor of divinity at Saint Andrew's. He was in 1643 sent up to the Westminster Assembly. On returning to Saint Andrew's he was elected principal of the new college, and afterward rector of the university. After the Restoration he was deprived of office, confined to his house, and summoned to appear before Parliament on a charge of treason. But before Parlia-

ment met he passed away, March 20, 1661, with the words, "Glory, glory!" upon his lips.

S.

**SA**, or **SAA**, **DE** (deh sah), **EMANUEL**, a Jesuit scholar of note, born in 1530, at Condé, in Portugal, was professor of theology at Coimbra, and subsequently at Rome, but relinquished the latter and became a preacher in order to superintend a new edition of the Vulgate, at the desire of Pius V. He wrote "Scholia on the Gospels," "Notes on the whole Sacred Scriptures," etc. He died at Arona, in 1596.

**SAADI** (sa'de), **Sheikh MOSLIM EDDIN**, one of the most celebrated poets of Persia, and equally distinguished for his religious zeal and devoutness, was born at Shiraz, in 1175, and died in the one hundred and sixteenth year of his age. He studied at Bagdad, and pursued a religious course of life under the direction of the famous Sophi Abd al Kadir Ghilani, whom he accompanied on a pilgrimage to Mecca. He afterward made the same pilgrimage fourteen times. He fought against the infidels and extended his wanderings into India and Asia Minor. Being, however, taken prisoner by the Turks, he was put to work on the fortifications of Tripoli, but was redeemed by a merchant of Aleppo, who gave him his daughter in marriage, with a dowry. Toward the close of his life he built a hermitage near the walls of Shiraz, where he passed his time in exercises of piety; and his tomb, on the spot where he had lived, was long visited by the admirers of his genius and devotion. The "Gulistan" is the most celebrated of Saadi's works. It is a collection of unconnected moral stories, historical and fictitious, with admixture of verse. It has been several times translated into English, German, French and Dutch. The "Bostan" is of like character, but entirely in verse. His other works consist of miscellaneous odes and essays.

**SAADIAS** (sa-a-di'as), **BEN JOSEPH**, or **SAADAS GAON**, a Jewish rabbi, author of a book on the "Belief of the Jews" and an Arabic translation of the Old Testament, commentaries on Ezra and Daniel and "Explanation of Jezirah." He was born at Faioum, in Egypt, in 892, was for a number of years principal of the school at Sura, near Babylon, and died in 943.

**SABACHTHANI** (sa-bak-tha'ne), one of the words uttered by our Lord on the cross, Matt. xxvii. 46. See **ELI**, **ELI**.

**SABAOTH** (sa-ba'oth). The word is left untranslated in Rom. ix. 29; James v. 4. The Lord of Sabaoth is therefore equivalent to the Lord or Jehovah of hosts—i. e., of the armies of heaven.

**SABAT** (sa'bat), 1 Esd. v. 34, a person not identified.

**SABAT**, 1 Macc. xvi. 14, the same as **Sebat**. See **MONTHS**.

**SABATEAS** (sa-ba-te'as), 1 Esd. ix. 48, the same as **Shabbethai**, Neh. viii. 7.

**SABATEL-SEVI** (sā-bā-tā'e sā've), born in 1625, a false Christ, who seduced a great number of his fellow-Jews, and seemed likely to have effected a revolution in the East, when he was arrested. On being brought before the sultan Mohammed he avowed his fraud and embraced Islamism. He died in 1676.

**SABATHIANS** (sa-ba'the-anz) were the followers of a Novatian heretic named Sabathius.

**SABATIER** (sa-ba-te-ay'), or **SABBATHIER**, **PIERRE**, a native of Poitiers who was born in 1682, became a member of the order of the Benedictines of St. Maur, and was engaged for twenty years in making a collection of the Latin versions of the Bible, which was published

WALL OF SEVERUS, NEAR HOUSESTEAD, ENGLAND.—See close of article **ROME**, subhead **ROMAN EMPIRE**.

in 1743, under the title of "Bibliorum Sacrorum Latinae Versiones Antiquae." He died at Rheims, March 24, 1742.

**SABATUS** (sab'a-tus), 1 Esd. ix. 28, the same as **Zabad**, Ezra x. 27.

**SABBAN** (sab'ban), 1 Esd. viii. 63, a strange corruption for **Binnui**, Ezra viii. 33.

**SABBATARIANS** (sab-ba-ta're-anz), those who adhere to the Jewish Sabbath.

**SABBATATI** (sab-ba-ta'te), a name applied to the Waldenses, derived from the wooden *sabots* worn by many of them.

**SABBATH** (sab'bath), a Hebrew word signifying rest, generally applied to the seventh day of

the week observed as a sacred season of cessation from labor, but used also to designate other days or times set apart and sanctified in a similar way, Lev. xxv. 4. The original term sometimes denotes a week, Matt. xxviii. 1; Luke xxiv. 1; Acts xx. 7.

It is first mentioned when, the work of creation through six successive periods being completed, God is said to have rested on the seventh day and to have sanctified it, Gen. ii. 2, 3. We do not find in the records of the antediluvian world or in the histories of the early patriarchs any notice of the observance of this day. The first distinct mention of a weekly Sabbath is at the giving of the manna, when the Israelites were commanded to gather on the sixth day as much as would suffice them for two days, seeing that it would not fall on the sev-

enth; and while ordinarily that which was reserved became corrupt, yet the additional quantity collected and kept according to the divine command would continue wholesome on the Sabbath, Ex. xvi. 12-30. There would seem proof from this account that the weekly Sabbath was not the first instituted, and that the observance existed before the giving of the moral law.

Into that law it was solemnly incorporated, with great particularity of detail, reference being made both to the six days' work of creation and the seventh day's rest, and also to the deliverance of Israel from bondage, Ex. xx. 8-11; Dent. v. 12-15. They were to remember that they had been bondmen, and to grant their bondmen that rest which they had not been able to enjoy till their deliverance, which thus became to them a fresh inauguration of the weekly Sabbath.

The Sabbath thus commanded was observed

from sunset on one day to sunset on the next, Matt. viii. 16, with great strictness by the Hebrews. They were to abstain from all servile work, Ex. xxiii. 12. The violation of its sanctity was rebellion against God, and punishable with death, Ex. xxxv. 2. In the wilderness, as we have seen, they were not to gather manna, and generally they were not to light a fire for culinary purposes, neither to sow nor reap, Ex. xxxiv. 21. Neither were they to make a journey. This restriction seems to be based upon Ex. xvi. 29; it was afterward more precisely defined to intend that only a short specified distance—a Sabbath-day's journey, about two thousand paces or five or six furlongs—grounded on the space prescribed between the ark and the people, Josh. iii. 4, the same being perhaps between the tabernacle and the tents in the wilderness encampment, might be traversed on the Sabbath. Yet religious services, though involving labor, such as those of the tabernacle or temple, might be performed. Thus sacrifices might be prepared, Lev. vi. 8-13, and persons be circumcised on the Sabbath, John vii. 22, 23. We have little information from the law as to ritual observances

and observances were insisted on which made the salutary provision a yoke of bondage. Our Lord rectified this; he showed that "the Sabbath was made for man," for his welfare and spiritual training, "not man for the Sabbath," just to be tied to a hard, oppressive rule, Mark ii. 27; and by his own example he maintained the liberty of God's children. The Jews accused him of breaking the Sabbath, Mark ii. 23-26; John ix. 16. He did not break the Sabbath; he disregarded, indeed, the human gloss; he never violated the divine law; just as he repeatedly in other respects made the clear distinction between God's command and human superstition, censuring the formal religionists of the day for making void the commandment of God by their traditions, Matt. xv. 1-9. And similar warnings were given by the apostles, Col. ii. 16.

There are many questions connected with this subject which have given rise to discussion. Some of them must be briefly noticed.

It is doubted whether the Sabbath was merely an Israelitish observance, or whether it was intended to apply to the whole human family. In some passages already referred to it is connected with the deliverance from Egypt, and is termed a sign or covenant symbol of God's promises to Israel. But that by no means interferes with its higher object; and when it is stated, just after the narrative of creation, that God sanctified the seventh day, and when this is alleged in the commandment, and when that commandment is enshrined in the decalogue, confessedly standing in the highest position of the earlier revelation, it does seem hard to conclude that the Sabbath was merely a Mosaic rite. Now, let it be asked whether this was a salutary observance,

Surely not to unremitting earthly labor, not to those sensuous enjoyments which debase instead of elevating, which enervate instead of strengthening for renewed duties? If the Hebrew Sabbath-rest was typical, it was typical mainly of the rest of eternity; and as we have not yet entered that rest, we still need in our earthly course some figure of it.

It can hardly be denied that considerations of this kind have their weight; and seeing that the profanation of the Sabbath is always treated as a great moral fault, and that a blessing is pronounced on those, not literally of the seed of Israel, who hallowed it, Isa. lvi. 3-8, it is reasonable to conclude that the command touches, in some measure at least, the inhabitants of the world generally.

Along with the Jewish Sabbath there began to grow up the observance of another day from the time of our Lord's resurrection; and we read in the Christian Church of assemblies held on the first day of the week, John xx. 1, 19, 26, and of Christ's presence there, and of the breaking of bread on that day, Acts xx. 7, 8; 1 Cor. xvi. 2, and of a day—we cannot doubt that it was the same—called "the Lord's day," Rev. i. 10. Early Christian writers soon begin to mention it. Justin Martyr repeatedly speaks of it, showing that Christian assemblies were held on the Sunday which was observed on account of both the creation and our Lord's resurrection.

The day of Christian rest is the first in the week; the Hebrew Sabbath was the seventh. It has been urged that there ought to be a special enactment in Scripture for the change of day, and that, failing such enactment, the obligation cannot be supposed to be transferred. Some learned men have endeavored to show that the day originally sanctified after the creation was the first of the human week, that a change occurred on the deliverance of Israel from bondage, and that we now, in keeping the day of the Lord's resurrection, have reverted to the original observance, and are therefore under the original command; but their conclusions are extremely doubtful. Our Lord and his apostles taught by example quite as precisely as by precept, and their practice is enough to sanction the observance of the Lord's day. Besides, the dispensation changing, it was but fitting that there should be a change in this, else the bondage of the law might have attempted to restrain the liberty of the gospel.

And, indeed, an observance of the Jewish Sabbath did for some time prevail in the Christian Church in connection with the observance of the Lord's day. Probably this might be, at least at first, to conciliate the Jews. Care was, however, taken not to hallow it after the Jewish fashion, and censures were passed on those that so acted.

It has been already said that the rest-observance of the Sabbath had a typical meaning. It prefigured in some degree, no doubt, the gospel dispensation, more perhaps the millennial state, but in its highest and most assured intention the eternal rest of that glorious state into which God's Church will finally enter—a rest not of idleness but of active fulfillment of the divine will, not of constraint but of delightful freedom from all that can grieve or injure or annoy, so that every faculty of the restored man has its highest and most fitting employment, and therefore its perfect bliss. The apprehension of this, its final object, will furnish no uncertain guide to the right mode of hallowing now the day of rest.

It may be added that St. Paul's caution, Col. ii.

16, by no means precludes the consecrated service of the Lord's day; it had to do with the Jewish ritual, which, it has been already said, is not binding upon the Christian Church. Besides, the term "Sabbath" is not restricted to the weekly observance; it was applied, as above noted, to days in various festivals, Lev. xv. 29-31, when ordinary work was prohibited.

**SABBATH-DAY'S JOURNEY.** See JOURNEY.

**SABBATH OF LAZARUS,** in the Greek Church, the day preceding Palm Sunday.

**SABBATH, THE SECOND AFTER THE FIRST,** Luke vi. 1, perhaps the first Sabbath of a year that stood second in the Sabbatical cycle.

**SABBATHEUS** (sab-ba-the'us), 1 Esd. ix. 14, the same as Shabbethai, Ezra x. 15.

**SABBATICAL YEAR.** See JUBILEE.

**SABBEUS,** 1 Esd. ix. 32, the same as Shemaiah, Ezra x. 31.

**SABEANS** (sa-be'anz). There were at least two tribes of the name—1. Descendants of Seba, Isa. xlv. 14. 2. Those of Sheba, son of Joktan, and the tribes associated with his posterity, Joel iii. 8. See SEBA, SHEBA. Possibly the Sabeans mentioned in Job i. 15 were a marauding race, to be distinguished from the other two. The word rendered "Sabeans" in Ezek. xxiii. 42 is not a proper name; it should be translated "drunkards."

**SABELLIANS.** See SABELLIUS.

**SABELLIUS** (sa-bel'le-us), a distinguished heresiarch of the third century. He was an African by birth, and became a disciple of Noctus and an eminent Church teacher. He was one of the most profound thinkers who took part in the controversies respecting the nature of God and the mode of his existence. He was one of the so-called Monarchians, and especially insisted on the oneness of the Divine essence, treating the terms Father, Son and Holy Spirit as merely different names for the same person, according to the different relations in which he is conceived as standing to his creatures. Sabellius was opposed and formally condemned by Dionysius of Alexandria, but his followers long existed as a distinct sect.

**SABI** (sa'bi), 1 Esd. v. 34, probably a corruption of Zebaim, Ezra ii. 57.

**SABIANS** (sa-be-anz), a designation applied to the CHRISTIANS OF ST. JOHN, which sec. This title, according to some, was first applied to this Christian body by the Mohammedans, while others claim that they received the appellation from the fact, as they assert, with scarcely any reason even assigned, that they sprang from the ancient idolatrous sect of that name, which has been held by many to have been the original source of Mohammedanism. The idolatrous sect of Sabians, so far as anything can be known of them, worshiped the planets, or hosts of heaven; hence the name, from *saba*, "a host."

**SABIN** (sa'bin), or **SABINE** (sa'bin), ELIAH ROBINSON, the pioneer of Methodism in New Hampshire and in portions of Massachu-

setts, was the fifth of eight children of Nehemiah Sabin, a soldier of the Revolution. He was born at Tolland, Connecticut, September 10, 1776, but eight years later the family removed to the western part of Vermont, then an unbroken wilderness, and Elijah had no further opportunity to attend school. His thirst was so great for knowledge, however, that he studied under the most discouraging circumstances, carrying a book to the field with him and studying at intervals and even while at work, and frequently studying late at night by the light of a burning pitch-pine knot. By manhood he had acquired a fair education. He was converted at an early age. In 1798 he began preaching in Vermont; a year later he was received on probation into the New York Conference, and sent to Needham, Massachusetts; and in 1800, having passed a successful examination "respecting his moral character, gifts, grace and usefulness," and been adjudged "a pious and useful preacher," he was appointed to the Landaff Circuit in New Hampshire. His fame as a preacher grew apace, but meanwhile his health broke down, and at the end of two years he had to retire from active ministry, and was placed on the list of supernumeraries. In 1805, his health having improved, he was restored to active work, and, young as he was, was made presiding elder of the Vermont district. In 1809 the New England Conference was formed, and Mr. Sabin was assigned to the care of New London district, a charge he held two years, after which he served successfully in Boston and elsewhere, until 1811, when he was elected chaplain of the Massachusetts House of Representatives. He shortly afterward severed his connection with the conference as an itinerant, and settled in Hampden, Maine, taking charge of a union church, embracing Methodists, Baptists and Congregationalists. Here he remained until 1817, when his health completely broke down, and he was enabled, by the kindness of a Christian gentleman of means, to travel in the South in the hope of relief, but lived only to reach Augusta, Georgia, where he died on the 4th of May, 1818. He was peculiarly a preacher, and not a writer, though he left two or three small works.

**SABINIANUS** (sa-bin-e-a'nus), the sixty-sixth pope, succeeded Gregory I. in the year 604, and was succeeded in turn by Boniface III. in 607. He had a quiet pontificate, and is said to have been a good and worthy man.

**SABTA**, or **SABTAH** (sab'tah), a son of Cush, of the family of Ham, Gen. x. 7. From him descended a tribe of Cushites, located probably in the Ethiopian city Saba, or Sabat, on the south-west coast of the Red Sea, not far from the present Arkiko. But Kalisch prefers the statement of Josephus, who interprets Sabath of the Astabori, or tribes dwelling near the stream Astaboras, which forms the eastern river of the land Meroe, where there might formerly be a town Sabtah.

**SABTECHA**, or **SABTECHAH** (sab'te-kah), the youngest son of Cush, Gen. x. 7, the founder of an Ethiopian or Cushite tribe. On Egyptian monuments the word SBTCK, or Sabatoen, appears as the proper name of the Ethiopians; but the precise locality of this tribe has not been ascertained.

**SACAR** (sa'kar). 1. The father of Ahikam, one of David's warriors, 1 Chr. xi. 35. In 2 Sam.

xxiii. 33 he is called Sharar. 2. A Levite porter, 1 Chr. xxvi. 4.

**SACCOBENEDETTO** (sak'ko-ben-e-det'to), a garment worn by those under sentence of death by the Spanish Inquisition while on their way to execution. It was of linen, colored yellow, and besides two crosses had devils and flames painted upon it.

**SACCOPHORI** (sak-kof'o-re). 1. A body of Manichee heretics who were condemned to death by Theodosius. 2. A portion of Thessalian heretics whose name was derived from their custom of clothing themselves with sackcloth.

**SACERDOTALES** (sas-ser-do-ta'lez), the vestments worn by the clergy in the divine offices.

**SACHEVERELL** (sa-kev'er-cl), HENRY, an English divine who introduced politics into the pulpit, was born in 1672, and was educated at Oxford. In 1709 he was appointed preacher at St.

SACKCLOTH.—See the article.

Saviour's, Southwark, during which period he preached his two famous sermons, the object of which was to create alarm for the safety of the Church and to excite hostility against the dissenters. Being impeached in the House of Commons, he was sentenced to be suspended from preaching for three years. This persecution, however, established the fortune of Sacheverell, who was collated to a living near Shrewsbury, and the same month that his suspension terminated he was appointed to the valuable rectory of St. Andrew's, Holborn. His abilities, however, were poor and contemptible. He died in 1724.

**SACKBUT.** See MUSICAL INSTRUMENTS.

**SACKCLOTH** (sak'kloth) was used to denote both the rough hair (in the East commonly camels' hair) from which sacks or the coarser garments were made, and then these articles themselves, used by the poorest people or by mourners. To clothe one's self with sackcloth was to assume the symbol of mourning, which was also worn by spiritual mourners, penitents, like Elijah in the Old Testament times, or John the Baptist in the New, 2 Ki. i. 8; Matt. iii. 4.

PART OF A ROMAN WALL, AT ST. ALBANS (ANCIENT VERULAM), ENGLAND.—See ROME.

or special worship on the Sabbath. There was to be an additional burnt-offering of two lambs, Num. xxviii. 9, 10, and the show-bread was then to be changed, Lev. xxiv. 8. But in later times it was indisputably the practice to meet in the synagogues, when the sacred writings were read and expounded, and no doubt public prayers offered, Luke iv. 16. And perhaps the Psalms which were composed for the Sabbath-day may be taken as testimony that, still earlier, assemblies were held for praise and thanksgiving, see Ps. xcii. Sabbath-observance, like obedience to other laws, would seem in times of national declension to have been little regarded. We find the prophets frequently rebuking the people for their profanation or merely formal respect of it, Jer. xvii. 21-27; Ezek. xx. 12-24.

On the return from the captivity there was a more rigid sanctifying of the Sabbath. Nehemiah's exertions probably contributed to it, Neh. xiii. 15-22. In the Maccabean wars the Jews would not at first defend themselves on the sacred day; and whenever the necessity of doing so became apparent, they still refrained from attack, 1 Macc. ii. 32-41. No trace of such scrupulousness is found in the Old Testament; but gradually Pharisaic tradition overlaid the divine command,

Did it tell—not in the minute details with which superstition overloaded it, but in its grand principle and its practical working—for the good of man and beast? Was it a suspension, for the time, of the original destiny, consequent on Adam's sin, of grinding toil? Was it held out rather as a privilege to be welcomed than a burdensome duty uncasily to be discharged? If so, we can hardly imagine that the blessing of the earlier Church would be withheld from the latter. If the worshiping of God is incumbent on his creatures, and the assembling of themselves together necessary for instruction and for the fostering of piety, we should naturally expect that provision would be made for this, some time be marked out when worldly cares might be laid aside and God approached with calm serenity of spirit and the employment be begun in which saved men shall rejoice for ever in the world above. If it be said that it was typical, that it was a shadow which was to pass away, we must ask, Of what was it typical? and to what was it to give place? No good thing or observance of the earlier covenant was removed except to be replaced by something better, more spiritual, of higher privilege—as legal sacrifice by the oblation of Christ, circumcision by baptism. To what, then, was the Sabbath to give place?

**SACK, BRETHREN OF THE**, a religious order which was established about the beginning of the thirteenth century, and had monasteries in France, Germany, Italy and England. The brethren were very austere, for they neither ate flesh nor drank wine. Besides the sack which they wore, and from which they took the name, they went barelegged and had only wooden sandals upon their feet.

**SACRAMENT** (sak'ra-ment) is derived from the Latin word *sacramentum*, which signifies "an oath," particularly the oath taken by soldiers to be true to their country and general. The word was adopted by the writers of the Latin Church to denote those ordinances of religion by which Christians came under an obligation of obedience to God, and which obligation they supposed was equally sacred with that of an oath. Of Sacraments, in this sense of the word, Protestant Churches admit of but two; and it is not easy to conceive how a greater number can be made out from Scripture if the definition of a Sacrament be just which is given by the Church of England. By that Church the meaning of the word Sacrament is declared to be "an outward and visible sign of an inward and spiritual grace given unto us, ordained by Christ himself as a means whereby we receive the same, and a pledge to assure us

**SACRAMENTALIST** (sak-ra-men'tal-ist), one who holds the doctrine of the real presence of Christ in the eucharist.

**SACRAMENTARIANS** (sak'ra-men-ta'-re-anz), those German Reformers in the sixteenth century who rejected both the Lutheran and Romish doctrine of the eucharist.

**SACRAMENTARY** (sak'ra-men'ta-re), in the Roman Catholic Church, a book containing the collects, prefaces and canon of the mass.

**SACRAMENTSHAUSLEIN** (sak-ra-men't-shaws'line), Among all the specimens of German art few objects can be found more remarkable than the sacramentshauslein of Adam Kraft. This marvelous structure, which is carved out of stone, is placed against a pillar beside the high altar in the church of St. Laurence, in Nuremberg. It is intended as a receptacle for the consecrated bread and wine. The delicate tracery ascends in tapering columns until it reaches the spring of the arch, where it bows its head like a snowdrop on its stem. There is nothing in all the range of art more delicate and beautiful.

**SACRARIUM** (sa-era're-um). 1. The portion of a church or cathedral in which the altar is placed. 2. An apartment attached to a church in which the consecrated vessels of the church and the garments in which the clergyman officiates are deposited.

HUMAN SACRIFICES.—See SACRIFICE, subhead SACRIFICE, HUMAN.

thereof." According to this definition, Baptism and the Lord's Supper are Sacraments, for each consists of an outward and visible sign of what is believed to be an inward and spiritual grace; both were ordained by Christ himself, and in the reception of each does the Christian solemnly devote himself to the service of his divine Master. The Romanists, however, add to this number Confirmation, Penance, Extreme Unction, Ordination and Marriage, holding in all seven Sacraments. See **ROME, CHURCH OF**. Numerous, however, as the Sacraments of the Romish Church are, a sect of Christians sprang up in England early in the last century who increased their number. The founder of this sect was a Dr. Deacon. According to these men, every rite and every phrase in the book called the Apostolical Constitutions was certainly in use among the apostles themselves. Still, however, they make a distinction between the greater and the lesser Sacraments. The greater Sacraments are only two, Baptism and the Lord's Supper. The lesser are no fewer than ten, viz., five belonging to Baptism—exorcism, anointing with oil, the white garment, a taste of milk and honey and anointing with chrism or ointment. The other five are, the sign of the cross, imposition of hands, unction of the sick, holy orders and matrimony. All Protestant Churches hold that Baptism and the Lord's Supper alone can be admitted as Sacraments, seeing that Christ, the Head and Lawgiver of the Church, established them and no others.

**SACRIFICE** (sak'ri-fiz), an offering made to God on an altar, by means of a regular minister, as an acknowledgment of his power and a payment of homage. Sacrifices (though the term is sometimes used to comprehend all the offerings made to God, or in any way devoted to his service and honor) differ from mere oblations in this, that in a sacrifice there is a real destruction or change of the thing offered; whereas an oblation is only a simple offering or gift, without any such change at all. Thus, all sorts of tithes and first-fruits, and whatever of men's worldly substance is consecrated to God for the support of his worship and the maintenance of his ministers, are offerings or oblations; and these, under the Jewish law, were either of living creatures or other things; but sacrifices, in the more peculiar sense of the term, were either wholly or in part consumed by fire. They have by divines been divided into bloody and unbloody. Bloody sacrifices were made of living creatures; unbloody, of the fruits of the earth. They have also been divided into expiatory, impetratory and eucharistical. The first kind were offered to obtain of God the forgiveness of sins, the second to procure some favor, and the third to express thankfulness for favors already received. Under one or other of these heads may all sacrifices be arranged, though we are told that the Egyptians had six hundred and sixty-six different kinds, a number surpassing all credibility.

Sacrifices have in all ages, and by almost every

nation, been regarded as necessary to placate the divine anger and render the deity propitious. Though the Gentiles had lost the knowledge of the true God, they still retained such a dread of him that they sometimes sacrificed their own offspring for the purpose of averting his anger. Unhappy and bewildered mortals, seeking relief from their guilty fears, hoped to atone for past crimes by offering up objects most dear to their affections; they gave their "first-born for their transgression, the fruit of their body for the sin of their soul."

Various have been the opinions of the learned concerning the origin of sacrifices. Some suppose that they had their origin in superstition, and were merely the inventions of men; others, that they originated in the natural sentiments of the human heart; others imagine that God, in order to prevent their being offered to idols, introduced them into his service, though he did not approve of them as good in themselves or as proper rites of worship.

An objection to the divine origin of sacrifices has been drawn from the Scriptures themselves, particularly Jer. vii. 22, 23. Dr. Doddridge, however, justly remarks that, according to the genius of the Hebrew language, one thing seems to be forbidden and another commanded, when the meaning only is that the latter is generally to be preferred to the former. The text before us is a remarkable instance of this, as likewise Joel ii. 13; Matt. vi. 19, 20; John vi. 27; Luke xii. 4, 5, and Col. iii. 2. And it is evident that Gen. xlv. 8; Ex. xvi. 8; John v. 30; vii. 19 and many other passages are to be expounded in the same comparative sense, so that the whole may be resolved into the apophthegm of the wise man: "To do justice and judgment is more acceptable to the Lord than sacrifice," Prov. xxi. 3.

But that animal sacrifices were not instituted by man seems extremely evident from the acknowledged universality of the practice, from the wonderful sameness of the manner in which the whole world offered these sacrifices, and from the expiation which was constantly supposed to be effected by them. Indeed, the Scriptures sufficiently indicate that sacrifices were instituted by divine appointment immediately after the entrance of sin, to prefigure the sacrifice of Christ. Accordingly, we find Abel, Noah, Abraham, Job and others offering sacrifices in the faith of the Messiah, and the divine acceptance of their sacrifices is particularly recorded. But in religious institutions the Most High has ever been jealous of his prerogative. He alone prescribes his own worship, and he regards as vain and presumptuous every pretence of honoring him which he has not commanded. The sacrifice of blood and death could not have been offered to him without impiety, nor would he have accepted it had not his high authority pointed the way by an explicit prescription.

Under the law sacrifices of various kinds were appointed for the children of Israel—the paschal lamb, Ex. xii. 3; the holocaust, or whole burnt-offering, Lev. vii. 8; the sin-offering, or sacrifice of expiation, Lev. iv. 3, 4; and the peace-offering, or sacrifice of thanksgiving, Lev. vii. 11, 12.

Such were the sacrifices of the Hebrews—sacrifices indeed very imperfect and altogether incapable in themselves to purify the soul. Paul has described these and other ceremonies in the law "as weak and beggarly elements," Gal. iv. 9. They represented grace and purity, but they did not communicate it. They convinced the sinner of the necessity to purify himself and make satisfaction to God, but they did not impart holiness to him. Of this fact the pious Jew was not in-

sensible. Hence the profound feeling of David: "The sacrifices of God are a broken spirit; a broken and a contrite heart, O God, thou wilt not despise," Ps. li. 17. The Jews were taught that without these dispositions they could not present any offering agreeable to God, and he often explains himself on this matter in the prophets, Isa. i. 11-14; Jer. xxxv. 15; Amos v. 21, 22; Hos. xiv. 2-4; Joel ii. 12, 13, etc.; Ps. li. 16. But this is not all. The Psalmist often looks beyond even the sacrifice of a broken heart, Ps. ex. 4; xl. 6. All emblematically set forth the sacrifice of Christ, being the instituted types and shadows of it, Heb. ix. 9-15; x. 1. Accordingly, Christ abolished the whole of them when he offered his own sacrifice, Heb. x. 8-10; 1 Cor. v. 7. In illustrating this fundamental doctrine of Christianity, the apostle Paul, in his Epistle to the Hebrews, sets forth the excellence of the sacrifice of our great High-Priest above those of the law in various particulars.

The term sacrifice is often used in a metaphorical sense, and applied to the good works of believers, and to the duties of prayer and praise, as in the following passages: "But to do good and to communicate, forget not; for with such sacrifices God is well pleased," Heb. xiii. 16. "I beseech you, by the mercies of God, that ye present your bodies a living sacrifice, holy and acceptable to God, which is but your reasonable service," Rom. xii. 1.

**SACRIFICE, HUMAN**.—That the barbarous practice of human sacrifice existed among the nations which adjoined Palestine is unquestionable. The monuments of Egypt show that the inhabitants of that civilized land were familiar with the horrid custom. In a tomb discovered by Belzoni there is a scene depicted in which the serpent god is worshipped. Three human beings are beheaded while kneeling (page 53), and the serpent raises his head to receive their blood. In some of the illustrations given in this work it is shown that captives were immolated, but in others, as on page 1448, it is obvious that native Egyptians were sacrificed. That the custom was a religious one adds to the intensity of its character, and when its prevalence in Egypt and the East is considered, it is not strange that a stern interdiction and preclusion of such cruelty was inserted in the Jewish law. The incident recorded in 2 Ki. iii. 26, 27 shows the importance which was attached by the Moabites to human sacrifice, and the departure of the besiegers was calculated to confirm the king of Moab in his cruel faith. It was an act of wisdom to destroy the brazen serpent which Moses had made, as the Israelites had begun to regard it with superstitious reverence.

**SACRILEGE** (sak're-lég), Rom. ii. 22, the crime of profaning sacred things. The Jews were often guilty of it, though the word is not found except in the place noted. It was a sacrilegious act to introduce bargaining and trade into the temple, Matt. xxi. 12, 13.

The ancient Church distinguished several sorts of sacrilege. 1. The diverting of things appropriated to sacred purposes to other uses. 2. Robbing the graves, or defacing and spoiling the monuments of the dead. 3. Those were considered as sacrilegious persons who delivered up their Bibles and the sacred utensils of the Church to Pagans, in the time of the Diocletian persecution. 4. Profaning the sacraments, churches, altars, etc. 5. Molesting or hindering a clergyman in the performance of his office. 6. Depriving men of the use of the Scriptures or the sacraments, particularly the cup in the eucharist. The Romish casuists acknowledge all these but the last.

**SACRISTAN** (sa-kris'tan), an officer of a church who takes care of the vestments of the clergy, the sacred vessels and other things belonging to public worship.

**SACY** (sa'se), or **SAACI**, LOUIS ISAAC, an eminent French ecclesiastic, whose real name was **LE MAISTRE**, was born at Paris, in 1613. He entered into orders, and was chosen director of the nuns of Port Royal, where he settled, and to which he gave the chief part of his property. Persecuted as a Jansenist, he quitted Port Royal in 1661, and concealed himself, but his retreat was discovered in 1666, and he was sent to the Bastille, where he was confined three years. He spent his time chiefly in making a new translation of the Scriptures. This is the one known as the "Testament of Mons," which was condemned by Pope Clement IX. He was also joint author with others of a very valuable commentary on the Holy Scriptures. The name Saaci is only an anagram of Le Maistre's Christian name Isaac. He died in 1684.

**SADAMIAS** (sa-da-mi'as), 2 Esd. i. 1, a corruption of Shallum, Ezra vii. 2.

**SADAS** (sa'das), 1 Esd. v. 13, the same as Azgad, Ezra ii. 12.

**SADDEUS** (sad-de'us), 1 Esd. vii. 45. This name, apparently identical with Daddens, 1 Esd. vii. 46, is a corrupt form of Iddo, Ezra viii. 17.

**SADDLE** (sad'dl'). The ancient saddles were very simple, Gen. xxii. 3, like those at present in Egypt and Syria, a mat or a quilted cloth, a pad being sometimes used (see engravings on pages 214 and 215). Hence the garments placed upon the ass on which our Saviour rode, Matt. xxi. 7. The common pack-saddle of the camel is high and made of wood; the camel's hump fills the cavity, and carpets, cloaks, etc., are heaped upon this saddle to form a comfortable seat. But ladies and sick persons sometimes ride in a sort of covered chair or cradle thrown across the back of the camel. It was probably in the hollow of the framework of the pack-saddle that Rachel concealed her father's images, Gen. xxxi. 34.

**SADDLE-BACK TOWER**, a tower with a roof, the two sides of which meet in a horizontal line, thus forming two gables. The roof itself is called a saddle-roof.

**SADDUC** (sad'duk), 1 Esd. viii. 2, the same as Zadok, Ezra vii. 2.

**SADDUCEES** (sad'du-seez), one of the Jewish sects of which we read in the New Testament, doctrinally in sharp opposition to the Pharisees, but ready to work with them against the person and teaching of Jesus. Their origin is involved in some obscurity. They are said to have derived their name from Zadok, a scholar of Antigonus Socho, president of the Sanhedrim, who was himself a disciple of Simon the Just, and died 263 B. C. But this is a very questionable account. It was natural, when the Pharisaic tendency was developing itself, that an antagonistic mode of thought

would grow and, as time ran on, assume the form of a distinct school. And it may be that, when the name Pharisees had been appropriated by the one body, their rivals might assume that of Sadducees, as deduced from a word signifying just or righteous. If, however, it was an individual from whom the name was derived, it is not improbable that it was Zadok, the eminent high-priest in the time of David and Solomon. A body of persons regarding themselves as more enlightened than

CAPTIVES BEHEADED FOR SACRIFICE.—See SACRIFICE, subhead SACRIFICE, HUMAN.

others may well have formed a kind of sacerdotal aristocracy, and have called themselves the company or party of Zadok.

The tenets of the Sadducees may be gathered from the notices we have of them in the New Testament, illustrated by the account given by Josephus. They disregarded the traditions and unwritten laws which the Pharisees prized so highly, and professed to take the Scriptures as the sole authoritative guide of religion. Not perhaps that they practically threw away all observance of tradition, but they denied its divine authority. Some have asserted that they did not receive more than the five books of Moses. But this appears to be a mistake; they did not disagree with the rest of their nation in regard to the acceptance of the whole sacred canon. They denied the existence of angels and spirits, and maintained that there was no resurrection, Matt. xxii. 23, the soul according to them dying with the body, so that there could be no future state of reward or punishment. It was their maxim, therefore, that actions to be virtuous must not be done in hope of recompense. Another great principle of their belief was the absolute freedom of man's will, so that he had full power of himself to do good or evil as he chose, and then only could his actions have a moral value. But this tenet was pushed so far as almost entirely to exclude the divine interposition in the government of the world.

The Sadducees were by no means so numerous as the Pharisees, nor were their tenets so acceptable to the bulk of the people. Yet many of their body were men of wealth and influence. They were found in the supreme council, and it

CAPTIVES IMMOLATED FOR SACRIFICE.—See SACRIFICE, subhead SACRIFICE, HUMAN.

was sometimes a Sadducee who filled the office of high-priest, Acts iv. 1; v. 17; xxiii. 6. Their party had, moreover, a political complexion; they were austere, it may be added, in their habits and severe in the administration of justice. After the first century of the Christian era they disappear from history.

**SADEEL** (sa-däl'), **ANTOINE**, a learned French Huguenot and theological writer, was born of a noble family, in the Maçonnais, in 1534. At an early age he preached the Reformed faith, for which, however, he was imprisoned, but obtained his release through the interposition of his royal patron, Henry of Navarre. When Henry became king of France, he made Sadeel his chaplain, and he attended that monarch in some of his campaigns; but on the reconciliation of the king to the Church of Rome, he retired to Geneva,

SACRAMENTSHAUSEIN.—See article.

where he was chosen pastor and Hebrew professor. He died in 1591.

**SADLEIR** (sad'leer), **FRANCIS**, D.D., provost of Trinity College, Dublin, born in 1774, was lineally descended from Sir Ralph Sadleir, chancellor of the duchy of Lancaster and privy councillor to Queen Elizabeth. In the year 1827 Dr. Sadleir succeeded Dr. Lloyd in the office of provost of Trinity College. He was an accomplished scholar and a most benevolent and kind-hearted man, and on more than one occasion declined a mitre, preferring to remain in the position of provost. He was one of the first commissioners selected for administering the funds set apart for the education of the poor of Ireland, which commission he continued to hold until a few months previous to his decease. In 1833 he was appointed, together with the primate, the lord chancellor and other high dignitaries and officials, to alter, as well as to amend, the laws relating to the tem-

poralities of the Church of Ireland, but he resigned that trust upon his appointment to the provostship. He died December 14, 1851, at Castle-Knock glebe, Dublin.

**SADOC** (sa'dok), a person in the line of our Lord's ancestry, Matt. i. 14.

**SADOC**, 2 Esd. i. 1, the same as Zadok, Ezra vii. 2.

**SADOLETO** (sa-do-le'to), **JACOPO**, a learned cardinal, was born at Modena, in 1477. He received his education at Ferrara, and attained great celebrity by his Latin poetry and philosophy. On the election of Leo X. to the pontificate he was made one of the secretaries, and soon after bishop of Carpentras. He suffered much from the vicissitudes of war, and was several times compelled to quit the city, leaving his palace, etc., to the plunder of the soldiery. Clement VII. restored him to his office; and the succeeding pontiff, Paul III., again recalled him to Rome, raised him to the purple and employed him on many negotiations. He was one of the most learned men of his learned age, and much esteemed for his wisdom and kindness by Protestants themselves. Erasmus often consulted him on literary and theological matters. He died in 1547.

**SAEMUND** (sä'mund), **SIGFUSSON**, a celebrated Icelandic priest, poet, legislator and historian of the eleventh century. He had a share in forming the ecclesiastical code, wrote a "History of Norway," and was the compiler of the collection of Scandinavian poetry and mythology termed "The Edda." He died in 1135.

**SAEWULF** (sä'wulf) is supposed to have been a merchant of Gloucester who left in manuscript an account of travels in the Holy Land, which have been quoted in more recent publications, as in volume vii. of Bohn's Library of Antiquity. Sæwulf lived in the latter part of the eleventh and first of the twelfth centuries.

**SAFFRON** (sa'fron). This substance is mentioned in conjunction with various perfumes and spices, Song Sol. iv. 14. It consists of the dried stigmas of the *Crocus sativus*, a plant which is a native of Greece and Asia Minor. There are three stigmas in the flower; and these with a portion of one style are plucked out when the calyx is fully expanded, spread upon paper and dried by kilns or the heat of the sun. They are narrow, threadlike and of an orange-yellow color. They have a penetrating aromatic odor, with a bitter taste, tingling the mouth and saliva yellow. The stigmas of nine flowers are required for a grain of saffron. This is what is called hay-saffron, the cake-saffron being a compound of saffron-flower, or bastard saffron, gum, etc. Saffron was formerly in high esteem as a medical stimulant; it is still used in the East medicinally and as a condiment.

**SAGE**, **JOHN**, born in 1652, in the parish of Creich, Fifeshire, Scotland, was educated at St. Andrew's, Edinburgh, and became a clergyman of the Scottish Episcopal Church in 1684. He officiated in Glasgow for a time, until the Revolution of 1688, after the close of which, in 1705, he was made bishop of Edinburgh. He died in 1711. He wrote a number of works, chiefly controversial, which were republished by the Spottiswoode Society in 1844-46, and are valued by Episcopalians.

**SAGITTARIUS** (sa-jit-tä're-us), **JOHANN CHRISTFRIED** and **CASPAR**, father and son, both eminent, learned Lutheran divines. The former was born at Breslau in 1617, and died at Jena in 1689; he was for some years professor of history at Jena, and his chief literary labor was as editor of Luther's works, though he published a number of dissertations. His son was born at Luneburg in 1643, and died in 1694 at Jena, where he had succeeded his father, in 1674, in the chair of history. He published a dissertation "On the Oracles" and quite a number of other works.

**SAILER** (sä'ler), **JOHANN MICHAEL**, Romish bishop of Ratisbon from 1829 till his death, in 1832, was born near Schrobenhausen, Bavaria, in 1751, and previous to his elevation to the bishopric had gained distinction as a theologian, as professor of divinity successively at Ingolstadt and Landshut. His chief publication was "A Prayer-Book for Catholic Christians," which became popular in the Roman Catholic Church.

**SAINCTES, DE** (deh sangkt), **CLAUDE**, a deputy to the Council of Trent, was born in 1525, and died in 1591, having been for sixteen years the zealous bishop of Evreux. His writings were controversial, and in their day were prized by Romanists.

**SAINT**. The word is applied to persons holy by profession and covenant, Ps. xvi. 3; to the angels, Dent. xxxiii. 2; to the holy dead, Matt. xxvii. 52. See **HOLINESS**. In the Romish Church the term is applied to persons who have distinguished themselves by acts of piety or of great service to the Church, and who, because of their great merit, are "canonized." The claims of these persons are duly examined and canvassed by a recognized court of inquiry at Rome, and when approved, they are placed among the number of the "Saints" by papal authority.

**SAINT-AMOUR, DE** (deh sang-ta-moor'), a French theologian and philosopher who distinguished himself in the defence of the privileges of the university of Paris, of which he was rector, against the encroachments of the Dominicans, who were sustained by the pope. He was professor of philosophy as well as rector of the university. He died in 1272, leaving several works, including one that made some stir at the time, "The Perils of the Latter Times."

**SAINT-CYRAN** (sang-se-rong'), **JOHN DU VERGER**, abbot of De Honrann, a learned ecclesiastical, born at Bayonne, in 1581, was educated in divinity at Louvaine, where he gained the friendship of Lipsius and was patronized by the bishop of Poitiers, who assigned to him the abbey of St. Cyran. He wrote various books, was universally esteemed for his learning and became celebrated in France for maintaining what were called two extraordinary paradoxes—that a person under certain circumstances may kill himself, and that bishops may take up arms. He was for some time persecuted by Richelieu, and was one of those who disapproved of the Council of Trent, and considered it as a political assembly rather than as an ecclesiastical meeting. He died in 1643.

**SAINT JOHN**, **JAMES AUGUSTUS**, was born in Carmarthenshire, in 1801. He settled in

London, and associated himself with J. S. Buckingham in conducting the "Oriental Herald." In 1827 he aided in establishing the "Weekly Review," and two years afterward he removed to Normandy; but a desire to examine the various countries of the East led him to Egypt, Nubia and other regions, and on his return he published a large number of works as the result of his travels. He has been a most voluminous writer. His chief productions have been a "Journal of a Residence in Norway," "Lives of Celebrated Travelers," "History, Manners and Customs of the Hindoos," "Egypt and Mohammed, or Travels in the Valley of the Nile," "The Hellenes, or Manners and Customs of Ancient Greece," "History of the Four Conquests of England," "Preaching of Christ." Besides these, he edited Sir Thomas Browne's "Religio Medici," Bunyan's "Pilgrim's Progress," "Locke's Philosophical Works," Sir Thomas More's "Utopia," Bacon's "Atlantis" and "Milton's Prose Works;" while a great number of minor works have flowed from his prolific pen. Several members of his family have also displayed unusual acquirements in literature.

**SAINT-LAMBERT** (lam'bert), **CHARLES FRANÇOIS**, was born in 1716, at Vezelize, in Lorraine. He became eminent in the literary world, and he distinguished himself as a contributor to the "Encyclopedie." The "Seasons" include his principal poetical works, which received great praise from his intimate friend and associate Voltaire. He was admitted as a member of the French Academy, and in 1798 he published "The Catechism;" and other works on philosophy followed, all of which were of an infidel character. He died in 1803.

**SAINT-MARTIN** (mar'tin), **ANTOINE JEAN**, who became celebrated as a French Orientalist, was born in 1791, at Paris. In early life his studies were influenced by Silvestre de Sacy, who, in 1820, secured his election to the Academy of Inscriptions. His most important literary works are—"Historical and Geographical Memoirs on Armenia" and "New Researches on the Epoch of the Death of Alexander and the Chronology of the Ptolemies." He became very famous by his "Historical Notice on the Zodiac of Denderah," which appeared in 1822. His latest effort was the preparation of an edition of Lebeau's "History of the Lower Empire," in twenty-one volumes. He died in 1832.

**SAINT MARTIN, LOUIS CLAUDE DE**, a celebrated French mystic, styled "The Unknown Philosopher," was born at Amboise in 1743. He was of an honorable family, and received a careful and religious education. The first book which gave a decided bent to his mind, and led him to meditation on divine mysteries, was the work of Abbadie on self-knowledge. For a short time he was set out to study law, and then he entered the army. He soon quitted it, however, and entered into holy orders. His cultivated and refined nature was attracted by the higher order of mysticism; and while desirous of spreading the spiritual doctrines which satisfied him, he aimed to do so unobtrusively. He was not a recluse, but moved and was welcomed in the best society. Saint Martin visited Italy in 1775 and 1787, and spent about three years at Strasburg after his return, where he found congenial society, and first studied the works of Jacob Bohme. He was expelled from Paris as a noble, in 1794, and retired into his na-

tive district. His first and best work is entitled "Error and Truth." He died at Annay, near Paris, in 1803.

**SAINT-MAUR** (mawr), **Lady J. W.**, deserves a place in this work because of her mental power and the direction in which she aimed at consecrating her talents. She became much impressed with the value of seamen to society; and in view of the dangers to which they are exposed and their limited opportunities of receiving instruction, she prepared and published an excellent collection of "Sacred Songs for British Seamen," which appeared in 1837. It has been well received by the class for whom it was intended.

**SAINT-PIERRE** (pe-air'), **CHARLES IRENEE CASTEL**, who became a prolific writer on politics and philosophy, was born in 1658, at Bar-le-Duc, in Normandy. He entered the priesthood, and his high literary standing secured his admission as a member of the French Academy. He was famed for the benevolence of his character, and his great aim was to secure the maintenance of a European peace by means of a diet of arbitration. In 1718 he criticised the policy of Louis XIV. so severely that the king in revenge had him expelled from the Academy. He was a friend of J. J. Rousseau, who esteemed him as "an honor to his age." He died in 1743.

**SAINT-PIERRE, DE, JACQUES HENRI BERNARDIN**, was born in 1737, at Havre, and educated at the college in Rouen. He entered the army as an engineer, from which he was dismissed for insubordination; after which he went to Russia. On his return to France he was appointed as an engineer in the Isle of France, but he only remained three years abroad. In 1771 he reached Paris, associated himself with Rousseau and other eminent men in the capital and devoted himself to literature. His publications began to appear in 1773, and they followed each other with due regularity for several years. His "Voyage to the Isle of France" was succeeded by his "Studies of Nature." Then followed his tale of "Paul and Virginia," which was speedily translated into different languages. In 1789 he published "The Desires of a Solitary," and in 1791 his "Indian Cottage," the "Harmonies of Nature" and his "Essay on Rousseau." He died in 1814, having enjoyed the friendship of the leading men of France, among his admirers being Louis XVI., Joseph Bonaparte and the first Napoleon. His "Paul and Virginia" has been recognized as a "classic" in the French language.

**SAINT-RUTH**, who rose to eminence as a general in the army of France, was famed for his ferocious cruelty and his savage persecution of the Huguenots. He was placed at the head of the army in Ireland which aimed at the restoration of James II., and he was killed July 12, 1690, at the battle of Aughrim. He lost his life at an early period of the action, and his army was defeated.

**SAINT-SIMON, DE, CLAUDE HENRI**, who was a French count, was born in 1760 at Paris. He was related to the due de Saint-Simon and the nephew of the bishop of Agde. He entered the army at an early age, and he served under General Washington in America. After the independence of the United States was acknowledged he spent several years in foreign countries. He engaged, along with Count Redern, in acquiring property

which was confiscated in France during the Revolution, but he was defrauded by Redern, and only saved about thirty thousand dollars out of an immense fortune. He aimed at being a social reformer; and adopting the principle that Christianity was progressive, he began to propagate his views. His first work on the "Scientific Labors of the Nineteenth Century" appeared in 1807, and in 1814, by the aid of Augustin Thierry, he issued "The Reorganization of European Society," and in 1825 he published his "New Christianity." As all such speculators attract attention in France, he became very famous, and his views were adopted with modifications by Comte, Chevalier, Carnot and Rodrigues, and ere long his followers were hopelessly divided in their theories and aims for remodeling and improving society. He died in 1825.

**SAINT-VICTOR, ADAM OF**, one of the most distinguished Latin hymnologists of the Middle Ages, flourished in the twelfth century.

SAFFRON.—See article.

He is called a Briton, but it is unknown whether he was a native of England or of Brittany. He studied at Paris, where he entered the religious foundation of Saint-Victor, and spent his whole life there, surviving till 1172, or more probably till 1192. He was buried in the cloister, and his epitaph, engraved on copper, existed till the French revolution. Adam of Saint-Victor was the personal friend of Thomas à Becket, who during his exile found a home at Saint-Victor's. Till recently but a small portion of his hymns were known, but through searches in the Imperial library of Paris a considerable addition has been made to their number.

**SAINT'S DAY**, a day on which, by special religious observances, the Church commemorates the birth or death of some saint.

**SALADIN** (sa-lah'din), **MALEK AU NASR SALAH EDDYN**, the great Egyptian sultan, was born in 1137, at the castle of Tccris on the Tigris. He succeeded as vizier his uncle, and on the death of the sultan Nonreddin he established the inde-

pendence of Egypt, and adding to it the provinces of Syria and Mesopotamia, assumed the title of sultan. He was attacked by the Crusaders and defeated at Ramleh, but gained a decisive victory over them at Tiberias; and in the same year he took Jerusalem, putting an end to the Christian kingdom there. Vexed at the loss of the Holy City, the Christians undertook the third crusade to recover it; but though led by the brave Richard Cœur de Lion, Saladin retained possession of it, though he had to surrender Acre after enduring a three years' siege. Saladin died the following year—1193—and even the Christians are said to have wept over his grave. He was a high-minded, chivalrous warrior, and though very successful, was humble-minded. It was his custom to send a standard-bearer through the ranks of his soldiers carrying aloft a shroud and exclaiming, "This is all that remains to Saladin the Great, the conqueror and the king, of all his glory."

**SALAH** (sa'lah), a son of Arphaxad, and the father of Eber, Gen. x. 24; xi. 12. Of his personal history nothing whatever is known.

GAZELLES AND HARES.—See ROE and HARE.

**SALAMIS** (sa'la-mis), one of the chief cities of Cyprus on the south-east coast of the island, visited by Paul and Barnabas on their first missionary tour, Acts xiii. 5. It was afterward called Constantia, and in still later times Famagusta.

**SALASADAI** (sa-la-sa'da-e), Jud. viii. 1, an ancestor of Judith.

**SALATHIEL** (sa-la'the-el), a descendant of the royal house of David, 1 Chr. iii. 17. He is more frequently called Shealtiel in the Old Testament. Salathiel seems to have been the son of Neri, Luke iii. 27, and he was placed in the line of succession to the throne, Matt. i. 12, on the failure of heirs through Jehoiachin. He was the father or grandfather of Zerubbabel.

**SALCAH** (sal'kah), **SALCHAH** (sal'kah), a city on the eastern frontier of Bashan, taken by the Israelites and assigned to the half-tribe of Manasseh, Deut. iii. 10; Josh. xii. 5, the border of Gad coming close up to it, 1 Chr. v. 11. It has been identified as the modern *Sulchad*, on the southern spur of the Jebel Hauran, seven hours south-east of Busrah, and is said to abound in vineyards.

**SALE**, **GEORGE**, the translator of the Koran into English, is said to have been a native of Kent, to have been born in 1680 and to have followed the profession of the law. Of his personal history little is known. An eminent English writer says of him: "This great Orientalist, when he quitted his studies, too often wanted a change of linen, and often wandered in the streets in search of some compassionate friend who would supply him with the meal of the day." His great work, the translation of the Koran, was published in 1734; it has long been the standard English version of the sacred book of the Mohammedans. It has been said that had Sale lived "he would have proved the English Herbelot."

**SALEM** (sa'lem), the original name of Jerusalem, Gen. xiv. 18, and which continued to be used poetically in later times, Ps. lxxvi. 2. See JERUSALEM.

**SALES**, **DE** (deh sal), **SAINT FRANÇOIS**, bishop of Geneva, founder of the Order of the Visitation, was born of a noble Savoyard family, at the château of Sales, near Geneva, in 1567. He was educated by the Jesuits at Paris, studied law at Padua, and having a strong bent to theology and a religious life, entered the Church. Earnest and successful as a preacher, he was sent, in 1594, with his kinsman, Louis de Sales, to preach in the duchy of Chablais, and bring back, if possible, to the Catholic Church followers of Calvin. His conferences with Théodore de Beza, Calvin's successor at Geneva, were, however, without result. He went to Paris in 1602, preached there with great success, and steadily refused the offers of dignities made by the French king. The same year he was appointed bishop of Geneva, and taking St. Charles Borromeo as his model, applied himself zealously to the reform of the diocese and its monasteries. He was disinterested and free from worldly ambition, declined the offer of a cardinal's hat and the renewed invitations of the king of France. In 1610 he founded the Order of the Visitation, of which the first directress was his friend Madame de Chantal. He was sent again to Paris in 1618, and died in 1622. His best known works are the "Introduction to the Devotional Life," "Philothée, or the Characteristics of the Love of God," and his "Spiritual Letters." He was canonized by Pope Alexander VII. in 1665.

**SALESBURY** (sälz'ber-re), **WILLIAM**, a Welsh philologist of the sixteenth century, was born at Plasisy, Llanrust, Denbighshire. He was educated at Broadgate Hall, Oxford, and afterward began the study of law. He appears to have devoted himself by preference to the acquisition of languages, of which he mastered nine, including Hebrew. To his skill as a Hebraist was due his appointment by the Welsh bishops to the charge of translating the New Testament into Welsh. Salesbury was interrupted in the task of

translating the Old Testament by a quarrel with one of the bishops about the etymology of a word. He died about 1595.

**SALIM** (sa'lim), a place mentioned to indicate the locality where John the Baptist was baptizing, John iii. 23. It may be the *Salim* said to be about eight miles south of Scythopolis or Bethshean, but we can hardly believe it yet exactly identified. See *ANON*.

**SALISBURY**, **JOHN OF**. See *JOHN* (39) OF *SALISBURY*.

**SALL** (sawl), **ANDREW**, D.D., born near Cashel, Ireland, about 1612, became a Jesuit, and, having won some fame as a scholar, was made lecturer in the University of Salamanca. After some years, however, his religious views underwent a change, and he returned to Ireland, renounced the Roman Church and joined the Church of England. He wrote several powerful works, setting forth the errors of Rome and the scripturalness of the faith and practice of the Church he had connected himself with. He died in 1682.

**SALLAI** (sal'li). 1. A Benjamite, Neh. xi. 8. 2. A priest, Neh. xii. 20; he is most likely the same with Sallu, Neh. xii. 7.

**SALLE**, **DE LA** (deh lah sal), **JEAN BAPTISTE**, was born in 1651, at Rheims, became famous as the founder of the celebrated "Institution of Brethren of the Christian Schools." The object of the order was to carry the advantages of education to the poor for whose instruction no provision existed. The order extended in France, it was introduced into Ireland, and in the large cities of the United States the members of this fraternity are placed in charge of the denominational schools which are established under the supervision of the Romish priesthood.

**SALLOW SUNDAY**, another name for Palm Sunday, so called in Russia because of the custom of substituting willows for palms.

**SALLU** (sal'lu). 1. A Benjamite, 1 Chr. ix. 7; Neh. xi. 7. 2. A priest in the days of Joshua, Neh. xii. 7; the representative of his family in the time of Joiakim was Kallai, Neh. xii. 20.

**SALLUMUS** (sal'lu-mus), 1 Esd. ix. 25, the same as Shallum, Ezra x. 24.

**SALMA** (sal'ma), **SALMAH** (sal'mah), the son of Nahshon and father of Boaz, 1 Chr. ii. 11. He is also called Salmon, Ruth iv. 20, 21. 2. A son of Caleb, the son of Hur, called the "father"—i. e., founder—of Bethlehem, 1 Chr. ii. 51. But there is reason to believe that this Salma was identical with the first-named, and that he was adopted by Caleb or called his son because his inheritance, Bethlehem, was part of Caleb's territory.

**SALMANASAR** (sal-ma-na'sar), 2 Esd. xiii. 40, the same as Shalmaneser.

**SALMANASSER** (sal-ma-nas'ser), Hos. xi. 5, margin. See *SHALMANESER*.

**SALMASIUS** (sal-ma'sh'us), **CLAUDIUS**, or **SAUMAISE**, **DE** (deh so-mäz'), **CLAUDE**, an erudite writer, born at Saumur, in 1588, was descended from a respectable family. He was

educated under the supervision of his father, subsequently studied at Paris and then went to Heidelberg, where he publicly professed the Protestant religion, a predilection for which he had imbibed from the precepts and example of his mother. He elicited the admiration of the university by his learning and continued application. His literary reputation procured him pressing and most

liberal offers from Venice, Oxford and even from the pope; but he declined them all, and in 1632 settled in Holland, where he succeeded Scaliger as professor at Leyden. In 1640, on the death of his father, he visited Burgundy, and received the strongest solicitations from Richelieu, accompanied by the offer of a pension of twelve thousand livres a year, to settle in France; but this he again rejected, preferring the independence and freedom of Holland to the servility of a courtier. He died September 3, 1653. Salmasius was universally acknowledged to be the most learned man of his era. He was well acquainted with all the languages of Europe, and in Greek, Latin, Hebrew and the other Oriental tongues he was a most perfect master. His works are very numerous.

CAPTURING A GAZELLE.—See ROE. From an Egyptian Sculpture.

**SALMERON** (sal-mō-rōn'), **ALPHONSUS**, a native of Toledo, born in 1511. He completed his education at Paris, and became one of the first as well as the most zealous followers of Ignatius Loyola, traveling through Germany, Poland, the Low Countries and Ireland. He was sent by Paul III. as a delegate to the Council of Trent, where he won great distinction as a learned and eloquent orator. He was subsequently very active in the establishment of the Jesuits' College at Naples, where he died, February 13, 1585. He wrote many works, mostly theological.

**SALMON** (sal'mon), Ruth iv. 20, 21. See *SALMA*.

**SALMON**, Ps. lxxviii. 14. See *ZALMON*.

**SALMON** (sal'mon), **NATHANIEL**, an English divine and antiquary, who wrote and published many works, all devoted to antiquarian researches, which were popular in their day. He died in 1742.

**SALMONE** (sal-mō'ne), a promontory forming the eastern extremity of the island of Crete, Acts xxvii. 7.

**SALOM** (sa'loim). 1. Bar. i. 7, Shallum, father of Hilkiah, the high-priest. 2. 1 Macc. ii. 26, Salu, Num. xxv. 14.

**SALOME** (sa-lo'me). 1. A woman of Galilee who accompanied Jesus in some of his journeys,

and ministered unto him, and was one of those who witnessed his crucifixion and resurrection, Mark xv. 40; xvi. 1. It is gathered, by comparing these texts with Matt. xxvii. 56, that she was the wife of Zebedee and mother of the apostles James and John. 2. The name (though not given in Scripture) of that daughter of Herodias whose dancing before her uncle and father-in-law, Herod Antipas, was instrumental in procuring the decapitation of John the Baptist. See *HERODIAN FAMILY*; *JOHN THE BAPTIST*. There is a singular tradition that Salome accompanied her mother Herodias and her father-in-law Herod Antipas in their banishment; and that the emperor having obliged them to go into Spain, as she passed over a river that was frozen, the ice broke under her feet, and she sunk in up to her neck; when, the ice uniting again, she remained thus suspended by it, and suffered the same punishment she had made John the Baptist undergo. But none of the ancients mention this; and Josephus tells us she first married

Philip the tetrarch, son of Herod the Great and Cleopatra, who died about A. D. 33 or 34, and afterward Aristobulus, son of Herod king of Chalcis, her cousin-german, by whom she had several children. Thus she lived thirty years after the exile of her father-in-law.

**SALT**. This substance is procured in Palestine from the rock salt at the south end of the Dead Sea, and also from the salt deposits on the shores of that lake, see Zeph. ii. 9, and from various marshes. From this last source Dr. Thomson tells us that most of the salt now used is procured. "It is not manufactured by boiling clean salt water, nor quarried from mines, but is obtained from marshes along the sea-shore . . . or from salt lakes in the interior, which dry up in summer, as the one in the desert north of Palmyra, and the great lake of Jebbul, south-east of Aleppo." Much earth and impurity is collected with this salt; and with the chloride of sodium, which easily dissolves in water, much insoluble sulphate of lime is mixed, so that there is an insipid residuum, the salt which has "lost its savor," and which travelers assure us they have seen literally "trodden under foot," Matt. v. 13. Salt was used for rubbing the bodies of new-born children, Ezek. xvi. 4, for the purpose of hardening the skin, also for seasoning the food, Job vi. 6. It was mixed with the provender of cattle, Isa. xxx. 24. Meat-offerings were to be seasoned with salt, Lev. ii. 13; compare Ezek. xliii. 24, where it is prescribed for burnt-offerings; and it has been thought that the sacred perfume was to have it as one of the ingredients, Ex. xxx. 35, margin. Perhaps its preserving quality was the reason of these directions; or it might be that what man found savory was regarded as most fit to be offered to God. Salt, therefore, was largely required, and there seems to have been a chamber in the temple in which it was stored.

Salt, however, destroys vegetation. Cities when demolished were sown with salt, Jud. ix. 45, as devoted to perpetual sterility. Hence the word is figuratively employed to denote barrenness, Deut. xxix. 23; Jer. xvii. 6. For "covenant of salt" see *COVENANT*. The eating of bread and salt to-

gether is an Arab custom in making a covenant, compare Ezra iv. 24, margin.

**SALT**, **CITY OF**, a town in the wilderness of Judah. It must have been near to the southern extremity of the Dead Sea, as it is mentioned in conjunction with En-gedi, Josh. xv. 62. Perhaps it was in or close by the valley of Salt.

**SALT**, **PILLAR OF**, Gen. xix. 26. See *LOT*. Josephus and others speak of a pillar which they identified with Lot's wife. It is encrusted with saline deposit, and it is probably forty feet high, and no doubt a natural production formed by the action of winter rains. The Mohammedans say that she was a native of Sodom and an infidel; that Gabriel raised the cities so high that the barking of the dogs and the crowing of the cocks were heard by the inhabitants of heaven; and that then he overturned the cities, so that their foundations were upward, and in the ruin a great stone fell on Lot's wife and she died.

**SALT SEA**, Gen. xiv. 3. See *SEA*.

**SALT**, **VALLEY OF**, a valley at one time apparently well known by this name, and forming a convenient battle-ground between Judah and Edom. It is mentioned in a few passages as the scene of two great victories gained by the arms of Israel over Edom—one by David, 2 Sam. viii. 13, the other by Amaziah, 2 Ki. xiv. 7. See *TEEN*, Robinson and Porter concur in identifying this

valley with the tract adjoining the Salt Mountain (the Jebel Usdum of the Arabs), forming the upper part of the Arabah, or plain to the south of the Salt Sea, and also, as Robinson notes, "the boundary between the ancient territories of Judah and Edom." There seems no valid reason for calling in question this identification.

**SALT**, **HENRY**, an English antiquary who traveled much and wrote most interesting narra-

valley with the tract adjoining the Salt Mountain (the Jebel Usdum of the Arabs), forming the upper part of the Arabah, or plain to the south of the Salt Sea, and also, as Robinson notes, "the boundary between the ancient territories of Judah and Edom." There seems no valid reason for calling in question this identification.

**SALT**, **HENRY**, an English antiquary who traveled much and wrote most interesting narra-

GAZELLES.—See ROE.

tives of his experiences and discoveries in Abyssinia, in Egypt, etc. He was born at Lichfield, in 1780, and died in 1827, leaving his greatest work, on the "Antiquities, and especially the Hieroglyphics, of Egypt," in an incomplete state. His completed works, however, are certainly of standard value.

**SALTER** (saw'l'ter), RICHARD, D.D., a distinguished Congregationalist divine, born in 1723, in Boston, and graduated in 1739 from Harvard. He first studied for the medical profession, but soon after entering upon its practice he felt himself called of God to the gospel ministry. He was ordained June 27, 1744, Mansfield, Connecticut, being his first and only church, where he labored faithfully and successfully for more than

PILLAR OF SALT.—See SALT, PILLAR OF, and LOT.

forty years, going to his reward April 14, 1789. He was a Fellow of Yale from 1771 till 1780, and in 1782 that college conferred on him the degree of doctor of divinity.

**SALTER**, SAMUEL, D.D., a learned divine, born at Norwich, and educated at the Charterhouse as well as at Benet College, Cambridge, of which he became a Fellow, was appointed tutor to the children of Sir Philip Yorke, subsequently Lord Hardwicke, and to this connection he was indebted for his preferment in the Church, which included, in 1756, rectorship of St. Bartholomew, London, and in 1761 mastership of the Charterhouse, and he was also collated to a prebend of Norwich. He died May 2, 1778. He was a man of great abilities, eminent as a scholar, as also popular as a preacher, and blessed with such a retentive memory that he always delivered his sermons without using notes.

**SALTMARSH** (sawlt'marsh), JOHN, an English divine of the early half of the seventeenth century who gained some celebrity by several works advancing extreme Antinomian views. His writings were severely handled and successfully replied to by Gataker. He died in 1647.

**SALU** (sa'lu), a Simeonite chief, Num. xxv. 14.

**SALUM** (sa'lum). 1. 1 Esd. v. 23, identical with Shallum, Ezra ii. 42. 2. 1 Esd. viii. 1, Shallum, the father of the high-priest Hilkiah.

**SALUTATION** (sal-u-ta'shun). By this term is meant the friendly greeting which in ancient, as in modern times, has been wont to take place between persons when meeting or parting, also when sending epistolary communications to each other. In substance, there is no great diversity in this respect among different nations, so long as simple manners and good faith prevail among them. The salutation is always, in one form or another, an expression of personal regard and good wishes, but the forms, both as to word and action, naturally vary. On meeting, the most customary form of salutation in the East, from the earliest times, has been the *salaam*, or bespeaking peace to each other—"Peace be to thee" or "with thee," John xx. 19; Luke xxiv. 36; and to salute one was literally "to ask of him peace," or wish it for him, Ex. xviii. 7; John xviii. 15. The giving hail, or joy, of later times, had much the same meaning, Matt. xxvii. 29; Luke i. 28. Sometimes it took a more distinctly religious form, as at Ruth ii. 4: "The Lord (Jehovah) be with you;" and sometimes again a more tender and endearing one, with a kiss. At parting the prevailing form was much the same as at meeting—"Go in peace," 1 Sam. i. 17; Mark v. 34; but sometimes a formal blessing was pronounced, as was natural, especially when the parting was

of a more anxious kind, Gen. xxiv. 60; xxviii. 3. Such salutations, of course, unless where they were mere matters of form, implied a good understanding between the parties as to their respective aims and positions; and when a serious divergence or antagonism in these respects discovered itself, they could not be honestly or cordially exchanged. Hence St. John forbids Christians to wish joy and prosperity to those who were teachers of false doctrine, 2 John 10. As regards salutations by epistle, we have many examples in the apostolic writings of the New Testament, both of a shorter and longer form. Those sent to individuals, for example in Rom. xvi., are commonly expressed in a single word—salute. But for the churches or individuals addressed, the salutation usually takes the more solemn form of "Grace be to you and peace," or "Grace, mercy and peace," and these from God the Father and the Lord Jesus Christ. But James employs the simple "greeting," or to

wish joy; so, also, in the joint epistle of the apostles, elders and brethren assembled at Jerusalem, they sent to the churches greeting, Acts xv. 23. There was, therefore, no absolute uniformity in the Christian Church in the matter of salutations; but generally they took, if not a more religious, yet a more decidedly Christian, character, connecting themselves expressly with God and Christ.

**SALVATION** (sal-va'shun). This word is sometimes used generally for deliverance or preservation, Ex. xiv. 13, but more frequently and particularly for the deliverance of mankind from the power of sin and Satan by the Lord Jesus Christ, Zech. ix. 9; Luke i. 69, 77; Rom. i. 16; Heb. v. 9 and elsewhere. Hence it comprises all the blessings of the new covenant, having their fullness and consummation in the life of everlasting glory, 1 Pet. i. 5, 9. So that the gospel is termed "the gospel of salvation," Eph. i. 13. And as God is the author of salvation, he is sometimes said to be the "salvation" of his people, Ps. xxvii. 1. Similarly salvation is ascribed to him, Rev. xix. 1, because it is his gift, compare Eph. ii. 8, 9. Christ has procured this salvation, and therefore it is that emphatically he is called the Saviour, Matt. i. 21.

**SALVIANUS** (sal-ve-a'nus), one of the Fathers of the Church, an elegant writer who flourished in the fifth century. Neither the place nor the date of his birth is known. For some years he lived at Treves, where he married, but afterward was settled at Marseilles. He was accustomed to write homilies for bishops who were not skillful in composition. Of his numerous works there now remain only eight books upon Providence, four books against avarice and nine epistles.

**SAMAEEL** (sam'a-el), Judith viii. 1, an ancestor of Judith, perhaps Shelumiel, Num. i. 6.

**SAMAIAS** (sa-mi'as). 1. 1 Esd. i. 9, the same as Shemaiah, 2 Chr. xxxv. 9. 2. 1 Esd. viii. 39, same as Shemaiah, Ezra viii. 13. 3. Tob. v. 13.

**SAMARIA** (sa-ma're-a), a celebrated city of Palestine, founded by Omri king of Israel. The hill on which the city was built belonged to Shemer. And of him Omri purchased it for two talents of silver, and the city that he built thereon he called Samaria, after the name of the former owner, 1 Ki. xvi. 18, 23, 24. Thenceforth it was the metropolis of the northern kingdom, the rival of Jerusalem, and generally the residence of the Israelitish monarchs, 1 Ki. xvi. 29; xx. 43, though they had also a palace at Jezreel, 2 Ki. viii. 29. The worship of Baal was set up in Samaria by Ahab, who built there an altar and a temple to the idol-god, 1 Ki. xvi. 32, which were destroyed by Jehu, 2 Ki. x. 18-28.

Samaria was unsuccessfully besieged by the Syrians in the reigns of Ahab and Joram, 1 Ki. xx. 1-21; 2 Ki. vi. 24-33; vii. It was ultimately taken by the Assyrians after a siege of three years in the reign of Hoshea, 2 Ki. xvii. 5, 6; xviii. 9, 10. The inhabitants were carried into captivity, and colonists put in their place, 2 Ki. xvii. 24. This city continued a place of importance for some time after the Babylonish exile; then it was taken by Alexander the Great, who placed a body of Syro-Macedonians in it. Subsequently, Samaria was utterly destroyed by John Hyrcanus. It must, however, have been ere long rebuilt, for in the time of

Alexander Jannæus it was reckoned one of the cities possessed by the Jews. Pompey assigned it to the province of Syria; Gabinius fortified it afresh; Augustus gave it to Herod the Great, who embellished it, settled a colony of veterans there and strengthened its defences. He also gave it the name of Sebaste in honor of the emperor, *Sebastos* being the Greek equivalent of Augustus. But it began to decay, overshadowed by its neighbor Nablous, and it is now but a mass of ruins adjacent to the modern village of *Sebastieh*.

The name Samaria often occurs in a more extended sense, not only as the capital of the northern kingdom, but as that kingdom itself. Thus the sovereigns are called kings of Samaria as well as of Israel, 1 Ki. xxi. 1; 2 Ki. i. 3; and we also read of "the cities of Samaria," 2 Ki. xvii. 24. In New Testament times Samaria was one of the great divisions of Palestine lying between Galilee and Judea; so that any one who would pass straight from one of these provinces to the other "must needs go through Samaria," John iv. 4. It occupied the ancient territories of the tribes of Ephraim and Western Manasseh.

**SAMARIA**, 1 Macc. v. 66. This can hardly be the celebrated city of the name. An error has been supposed for Marissa—i. e., Mareslah.

**SAMARITAN** (sa-mar'e-tan). This name must have originally and properly designated an inhabitant of the city of Samaria. But afterward Samaria acquired a more enlarged signification, and sometimes was taken to include the whole of the northern state, 1 Ki. xiii. 32; Ezek. xvi. 46, 51, 53, 55; Hos. viii. 5, 6; Amos iii. 9. Hence the term Samaritan might also be extended. It is very questionable, however, whether it ever was applied to the inhabitants generally of the kingdom; and indeed it is used in the Old Testament but once, 2 Ki. xvii. 29, and there it signifies the population introduced by the king of Assyria into the cities of Samaria. By these "cities of Samaria," of course, can be understood only those in the centre of Palestine, north of Judah, and excluding the trans-Jordanic territory, and also that of Galilee, both which appear to have been previously overrun by the Assyrian kings, 1 Chr. v. 26. It was the posterity of this population, intermixed with the Israelites who had been left, that bore afterward the name Samaritans, as we find it in the New Testament.

The introduction of the eastern tribes was probably effected by Esar-haddon or one of his generals, Ezra iv. 2, 10, and they were brought from Babylonia and other neighboring provinces, 2 Ki. xvii. 24. These tribes were utterly ignorant of the true God and worshiped their own false deities, and the remnant of Israel were but too ready to unite with them in their idolatry. But this gross conduct in the Lord's land was not to remain unpunished. He sent lions among them; for the beasts of the field had doubtless increased after the desolation occasioned by the Assyrian invasions. Then application was made to the king, and one of the priests who had been carried away was brought back to teach the people "the manner of the god of the land." The result was that though Jehovah was nominally worshiped, it was but as one deity among many, the idols of each respective tribe being equally honored by them, 2 Ki. xvii. 25-41. And thus they continued, the mixed population of Hebrews and Gentiles, their religion a miserable medley in which the false and foul far overbore the pure and true.

We read nothing more of them till after the Jews' return from Babylon. Then they desired to take part with Zerubbabel in rebuilding the temple at Jerusalem. They must have relied on the Hebrew element among them. But of course they were refused; and then, filled with envy and bitter malice, they represented to the Persian kings the danger of allowing Jerusalem to rise again to honor and influence; and of course in this representation they laid as much stress as possible on their being mainly composed of eastern nations. Their opposition was successful. For several years the work was forbidden at Jerusalem, Ezra iv.

Later we find the same enmity, Neh. iv., vi. It was brought to a culmination by the erection of a rival temple on Mount Gerizim. Manasseh, a priest who had been expelled from Jerusalem for an unlawful marriage, obtained leave from Darius Nothus, king of Persia, to build this temple about 409 B. C. And as various Jewish apostates from

James and John, who desired nothing less than the utter destruction of such a people. Their compassionate master rebuked their fiery zeal; he was come "not to destroy men's lives, but to save them," Luke ix. 52-56. He himself once made a deep impression on a Samaritan town. It was matter of surprise, indeed, that a Jew should ask drink of a woman of Samaria; but his loving discourse taught her her error, and his weighty words overcame all national prejudice, so that many Samaritans believed on him and besought him to tarry with them; nor did he refuse their request, John iv. 1-41.

After his resurrection the Lord commanded that his gospel should be preached in Samaria as well as in Judea, Acts i. 8; and very joyful ere long, we are expressly told, was Samaria when the glad tidings of salvation were proclaimed in her streets and miracles were wrought there, and by the apostles' hands the Holy Ghost was conferred, Acts viii. 5-25. And there was joy in heaven, too, that the

THE VALLEY OF SALT.—See SALT, VALLEY OF.

time to time resorted to them, the Samaritans possessed additional claims to Hebrew descent, and holding superstitiously to their copy of the Pentateuch, professed to observe the law more strictly than the Jews themselves. The most intense hatred thenceforward subsisted between the Jews and the Samaritans. Every kind of communication was forbidden. The productions of Samaria, and all articles of diet among them, were pronounced as unclean as swine's flesh. The Samaritans were never to be received as proselytes to the Jews' religion, and they were declared incapable of partaking of the resurrection to eternal life.

The history of the Samaritans illustrates many circumstances in the gospel narrative. The charge our Lord gave first to his apostles was not to go into the way of the Gentiles, nor to enter into any city of the Samaritans, Matt. x. 5. There they would be little likely to be listened to. And when he himself was intending to pass through a Samaritan village, and was inhospitably rejected there because it was seen that he was journeying to Jerusalem, the old hatred readily flamed out in

wanderers, the despised and the outcast were received into the flock of Christ.

It need not be supposed that Samaritans, properly so called, occupied all the cities and villages of Samaria. It is likely, indeed, that the number of their settlements had gradually diminished, so that in our Lord's time they were most chiefly congregated in the central part of this district. Yet they were by no means an unimportant people. It was through their complaints of the treatment they had received from Pilate that that governor was displaced. Vespasian had to deal severely with them; still they continued numerous, and were considered to be determined enemies of Christianity. Little need be said of their later history. They have dwindled down to about two hundred, who still at Nablous tenaciously cling to their law and to the sepulchres of their fathers, celebrating the Passover, with minute attention to the prescribed rites, on Mount Gerizim.

**SAMARITAN PENTATEUCH, THE.** The Pentateuch exists in the Samaritan or the

ancient Hebrew character—that is, the language is Hebrew, but written with letters varying from those in which for many centuries Hebrew has been expressed. Yet this Pentateuch is not a mere servile copy of Hebrew made by only a change of character; it is an independent edition, preserved with jealous care among the Samaritans, and presenting several readings different from those in the Hebrew Pentateuch.

Biblical critics are by no means agreed upon its origin. Many imagine that it is not older than the establishment, some time after the Babylonish captivity, of independent Samaritan worship and of a temple on Gerizim; but there are good reasons for believing its prior existence. There must have been copies of the law among the ten tribes at the time of the disruption, for it was Jeroboam's great anxiety to prevent his people from resorting to Jerusalem for sacrifice according to the law that

lonish captivity, when the Samaritans were violently opposed to the Jews, they would have adopted the sacred book from their enemies. And it may be added that we have in the existence of the Samaritan Pentateuch a strong argument for the antiquity of the whole. Had any portion of it, as some have imagined, been composed and introduced in the later times of the kingdom of Judah, surely we should never have had a Samaritan Pentateuch; for it is obvious that the Samaritans would never have cared to preserve what their adversaries had lately concocted and attributed to Moses.

Scholars have differed respecting the critical value of the Samaritan Pentateuch. Some have regarded its readings as preferable very frequently to those of the Hebrew copies. Gesenius, however, is of a different opinion. He admits only four readings, Gen. iv. 8; xiv. 14; xxii. 13; xlix.

SAMARIA.—See article.

induced him to set up the golden calves at Beth-el and Dan, 1 Ki. xii. 26-33; and we cannot suppose Israelitish prophets like Elijah and Elisha ignorant of the Pentateuch. That there are traces of it in the writings of Hosea and Amos, who prophesied chiefly in the northern kingdom, has been proved. Copies, no doubt, were rare, and in a time of almost universal apostasy the law would be little regarded; but yet the existence of the book—of course in the old character—in Israel before the Assyrian deportation is most probable. When the Assyrian king sent back one of the priests to teach the mixed people "the manner of the god of the land," though the worship continued of a debased kind, yet the teachings given were surely based on some written document. And then we find Josiah, in his reformation, which extended over Samaria, rather appealing to "the book of the covenant," as Hezekiah had done before him, than introducing it afresh, 2 Ki. xxxiii. 21. It is less likely that, after the Baby-

14, to be superior to the Hebrew. And the first of these is the only one, of any consequence, the words, "Let us go into the field," as Cain's address to his brother, being introduced. But a recent writer questions Gesenius' conclusions. He has not succeeded in overthrowing them; and the Samaritan Pentateuch is critically of little value. It may be added that there is a remarkable similarity, not yet fully accounted for, between the Samaritan and the Septuagint text.

The Samaritan Pentateuch has been translated into the Samaritan dialect, which is a mixture of Hebrew and Aramaean. There is also an Arabic version extant in Samaritan characters.

**SAMATUS** (sa-ma'tus), 1 Esd. ix. 34, a name mentioned in the list of those who put away their foreign wives.

**SAMEIUS** (sa-mi'us), 1 Esd. ix. 21, the same as Shemaiah, Ezra x. 21.

**SAMGAR-NEBO** (sam'gar-ne'bo), one of the king of Babylon's princes, Jer. xxxix. 3.

**SAMI** (sa'mi), 1 Esd. v. 28, identical with Shobai, Ezra ii. 42.

**SAMIS** (sa'mis), 1 Esd. ix. 34, the same as Shimci, Ezra x. 38.

**SAMLAH** (sam'lah), one of the ancient kings who reigned in Edom, Gen. xxxvi. 36, 37.

**SAMMANS** (sam'manz), **SCHAMANS** or **SHAMANS** (sha'manz) (as the first letter is differently pronounced), were originally worshipers of the heavens (in Chaldee *Shemim*) and the heavenly bodies. Such were the ancient Chaldeans, Syrians and Canaanites. From these early Sammans seem to have sprung the Sammanes or Sammanians, an ancient sect of philosophers in India from whom Dr. Priestley thinks the Hindoo religion was originally derived. "The Sammanians, being persecuted by the Brahmins and driven by them out of India proper, are thought to have taken refuge in Pegu, Siam and other countries beyond the Ganges; and it is supposed that the religion of those countries was derived from their principles. The religion of the lamas in Thibet is also said to be a reformed Schamanism." And from the same source this author, with probability, derives the modern Schamans of Siberia, who are opposed to the worshipers of Delai Lama. The Sammans of India are at present described as wholly illiterate; but their predecessors are said to have written many books on philosophy and religion.

**SAMMUS** (sam'mus), 1 Esd. ix. 43, the same as Shema, Neh. viii. 4.

**SAMOS** (sa'mos), an island in the Aegean Sea, off the coast of Ionia, about five miles from the promontory of Trogyllium, over against Miletus. It was celebrated as the seat of Juno-worship and as the birthplace of Pythagoras. St. Paul put in there when on his voyage toward Jerusalem, Acts xx. 15. Many Jews were settled in Samos, 1 Macc. xv. 23.

**SAMOTHRACIA** (sam-o-thra'shi'ah), a lofty and conspicuous island north of Lemnos, in the Aegean Sea, off the coast of Thrace, where the Hebrus empties itself. It was formerly celebrated for the mysteries of Ceres and Proserpine. Originally called Dardania, it was afterward occupied by the Thracians, and also at a later period by Samians, whence its compound name. It is now called *Samotraki* or *Samandrakhi*. St. Paul touched at Samothracia on his first voyage to Europe, Acts xvi. 11.

**SAMPSAMES** (sam-psa'meez), 1 Macc. xv. 23, probably a place thought to be on the coast of the Black Sea.

**SAMPSON** (sam'sun), who was the twenty-fifth archbishop of Menevia, or St. David's in Wales, became famous for his desertion of his charge because of a contagious sickness which he dreaded. He retired to Dol, in Bretagne, and there he either found a see vacant or he attempted to form one, to the great discontent of the bishop of Tours. The strife between his successors at Dol and the archbishops of Tours continued for a long time, but it was ultimately decided by one of the popes in favor of the archbishop of Tours; yet

the bishops of Dol have the cross still carried before them in processions, and they take precedence of all other bishops in the province. On the abdication of Sampson the see of St. David's lost its metropolitan character, and his successors were only bishops of St. David's, though all the Welsh bishops received their consecration from them till the time of Henry I., when Bishop Bernard, a Norman who was forced on them by the king and not chosen by the clergy, yielded submission to the see of Canterbury. Sampson died

February, 1749, and his early years were spent in laboring on his father's farm. But his talents and inclinations led him to seek a different sphere of life, and he succeeded in gaining admission to Yale in 1769, whence he graduated, in 1773, with distinction in a class which was notable for the number of eminent men it contained. He was ordained on the 15th of February, 1775, and settled as pastor at Plympton, Massachusetts, where he remained for twenty-one years, when an affection of the head and a partial failure of his voice com-

**SAMPSON, FRANCIS S.**, D.D., born near Dover Mills, Goochland county, Virginia, in November, 1814, and died April 9, 1854, not yet forty years of age, yet in his brief life Dr. Sampson achieved an enviable fame as a learned, godly and successful minister of the cross. He received his early training in the school and family of Rev. Thornton Rogers, who was his maternal uncle, and is said to have been a truly devoted servant of Christ. At seventeen he experienced a change of heart and joined the Presbyterian church in

RUINS OF SAMARIA.—See article.

and was buried at Dol, though his relics were afterward removed to Middleton, in Dorsetshire, where a magnificent abbey, built by King Athelstane, was dedicated to his honor—a proceeding which seems inconsistent with the story of his having fled when urgent duty called him to remain at his post. His death is believed to have occurred about the beginning of the tenth century, but the date is unknown.

**SAMPSON, EZRA**, a divine of the Congregationalist Church, was noted for his learning, no less than for his peculiar force as a pulpit orator. He was born at Middleborough, Massachusetts, in 183

pelled him to resign his charge. Removing to Hudson, New York, he devoted himself to literary pursuits, preaching occasionally in the Presbyterian church of that place. In 1820 he removed to New York city, where he resided with his children until his death, December 12, 1823. He published "The Beauties of the Bible," a number of single sermons and some political effusions called forth by the patriotic spirit of the times (1775 and following years), besides a "Historical Dictionary for Schools." The two works named went through several editions each, and long held an important place in popular esteem.

Charlottesville. He graduated master of arts from the university of Virginia in July, 1836, and in November entered the Union Theological Seminary, where his scholarly attainments secured him the position of teacher of Hebrew, early in 1838, when he had scarcely half completed his theological course. In 1839 he was licensed to preach, and in 1841 ordained as an evangelist by the presbytery of East Hanover. A severe attack of pleurisy, in 1846, brought on by fatigue and exposure in preaching, though not fatal, so shattered his constitution that he never fully recovered, and in 1848 crossed the Atlantic in the hope of relief. He spent nearly a year at Halle and Berlin, and

returned home in August, 1849, so much improved in health that the anxiety of his friends was somewhat relieved. Meanwhile, in October, 1848, he had been chosen professor of Oriental languages and literature in the Union Theological Seminary, and on his return assumed the duties of that position; but the restoration of his health was deceptive, and he soon felt assured that his end was not far distant. On Sunday, April 2, 1854, he preached in the college church with remarkable power and fervor. That night he retired to bed apparently in his usual health, but ere morning he was seriously ill, and within one week of intense suffering he calmly fell asleep in Jesus, April 9. His "Lecture on the Authority of the Sacred Canon and the Integrity of the Sacred Text," and his "Critical Commentary on the Epistle to the Hebrews," are enduring monuments to Dr. Sampson's erudition and his reverence for inspired truth.

**SAMPSON, THOMAS**, was a learned and greatly esteemed Puritan divine. He was born in 1517, and educated at Oxford. In 1551 he became rector of Allhallows, in London, and dean of Chichester in 1554, but during the reign of

even the most unbridled actions of men for the furtherance of his own wise purposes; and it was this alliance which first of all inflamed the Israelitish champion against the oppressors of his countrymen. The marriage was celebrated pretty much after the fashion in which weddings are now celebrated in the same region. There was jollity and feasting for seven days, and riddles were put forth for the amusement of the company. Samson had his riddle, from his discovery of honey in the carcass of a lion he had slain; but none of the guests could solve it. And so quarrels arose; and Samson plundered the Philistines, and left his wife, who was given to another, Jud. xiv. When his anger was appeased, Samson was desirous of being reconciled to his wife; but discovering what had been done with her, he resolved to destroy the Philistines' corn. So, having collected three hundred foxes or jackals, he tied them in pairs, fastened a firebrand to each pair and turned them loose. He had become in a degree sensible of his mission, to plague the enemies of Israel, and he intended to inflict a widespread desolation. Standing corn, shocks, vines and olives were to be destroyed throughout the whole district; hence the number of the jackals employed. A train of conse-

SAMARITAN COINS.—See SAMARIA.

Mary he had to fly to the Continent, and he resided at Strasburg until the accession of Elizabeth, when on his return he refused the see of Norwich. He was made a prebendary of Durham, and in 1561 he was appointed to the responsible position of dean of Christ Church College, in Oxford. In his zeal for Puritanism he declaimed against the habits and vestments of the clergy, and at length he was deprived of his deanery and imprisoned. His chief works were, a "Letter to the Trew Professors of Christes Gospell," "A Warning to Take Heed of Fowler's Psalter," "A Brief Collection of the Church and Ceremonies thereof," and "Prayers and Meditations." He edited some of the sermons of Bradford the martyr, and he translated certain of the works of Chrysostom. He died in 1589.

**SAMPSON** (sam'sun), one of the most noted judges of Israel. His birth was foretold by an angel of the Lord, who commanded that the child should be "a Nazarite unto God from the womb." He was of the tribe of Dan and a native of Zorah, where his father Manoah dwelt, Jud. xiii.

Samson, of unsurpassed bodily strength, was also a man of ungovernable will. He resolved, contrary to his parents' wish, to contract a marriage with a Philistine female. God, however, can overrule

quences followed. The Philistines, maddened with the injury they had received, burnt Samson's wife and her father as the original cause of their disasters; and Samson took vengeance by a slaughter of the Philistines. This people were now convinced of the necessity of securing so dangerous a foe; they therefore entered the territory of Judah in force and demanded that he should be given up to them. The men of Judah, cowed and fearful, agreed to this, and Samson permitted himself to be bound; but he was no sooner among the Philistines, who were delighted to see him a captive, than he burst his bonds; and seizing the jaw-bone of an ass, no doubt a heavy implement, he fell upon his enemies and destroyed one thousand of them. And when he was exhausted by this achievement, ready to faint with thirst, he cried unto the Lord, and a spring of water gushed forth from a hollow, not in the jaw-bone, but in the place called Lehi, or "jaw," from the wonderful event which had just occurred there. This fountain, "the spring of the caller," would seem to have been still flowing at the time the sacred penman wrote, a standing witness of the truth of the record, Jud. xv. 1-19. Of course skeptics have found much to ridicule in this narrative; but he who admits the power of God will not be perplexed by such objections.

Samson was now an acknowledged chief. He "judged Israel," Jud. xv. 20, not perhaps as an ordinary magistrate in peaceful times, or as a commander heading the hosts of Israel in battle, but rather as a single warrior of unequalled strength and activity, dealing fearful blows and preparing for that more regular national struggle, wherein the Philistine yoke in the days of Samson, Saul, and David, would be ultimately broken.

The next incident in Samson's life was an illicit connection with a harlot at Gaza. The Gazites beset the gates, and thought that they should trap and kill him. But with his marvelous arms he tore down the gates, and carried them and the posts and the bar to the top of an eminence looking toward Hebron, Jud. xvi. 1-3.

Untaught by experience, Samson yielded again to the lures of a Philistine woman, told her the secret of his strength, and was consequently seized and blinded, and made like a slave to work at a mill, such as those, no doubt, the sound of which is yet heard ringing in Gaza, Jud. xvi. 4-21. In his misery, thoughts of repentant sorrow filled the fallen champion's heart. And his hair began to grow again and his strength to return, and he had one more opportunity of destroying the Philistines.

It was the feast of their god Dagon; and they were holding festival, and brought out Samson to amuse them. Multitudes were congregated in Dagon's temple, common people and lords of high degree, and three thousand were on the flat roof, when Samson, having lifted his voice in prayer to God, bore down the two pillars he had been permitted to clasp, and died with the vast assembly in the ruin that ensued. He thus slew more in his death than he had done in his life. He was buried in the tomb of Manoah his father, Jud. xvi. 22-31.

Samson is reckoned among the worthies whose faith is celebrated, Heb. xi. 32. The date of his story cannot be accurately determined; perhaps it coincided with the priesthood of Eli; and the festival in the house of Dagon might be on occasion of the capture of the sacred ark, 1 Sam. iv.

**SAMPSON DE NANTEUIL** deserves a place in this work because of his contribution to religious literature in a dark age. He lived in the middle of the twelfth century, and was a retainer of Adelaide de Condé, the lady of Horn-castle, Lincolnshire. The work by which he is known is a metrical Anglo-Norman translation of the Proverbs of Solomon, accompanied with a gloss or interpretation. A manuscript copy of it is preserved in the Harleian Library.

**SAMUEL** (sam'u-el), a great prophet, the last judge of Israel before the monarchy, which he inaugurated, from whom too the succession of the prophets downward continued without interruption till after the captivity. He was son of Elkanah, a Levite, descended from that Korah who perished in the wilderness, Num. xvi.; xxvi. 11.

It was at Ramathaim-zophim that Elkanah lived. His best-loved wife Hannah was for some time childless, but on her prayer and vow at Shiloh, confirmed by Eli's blessing, God granted her this boy, whom, when she had weaned him, she carried, as she had vowed, to Shiloh, that he might minister there before the Lord. He was a Nazarite from his birth, and seems to have been a child of gracious temper, attracting general favor, 1 Sam. i.; ii. 26. A remarkable revelation was made to him while yet young of the punishment

which God would inflict on Eli's house for the profligacy of his sons; and it would seem that after this, such revelation being continued, his fame as a seer or prophet was established through the whole country. The catastrophe followed in which the sacred ark was taken, and Eli died. Afterward, it is difficult to say how long, the people were gathered at Mizpeh, when a great victory was gained over the Philistines, and Samuel's authority as a judge was confirmed. Little is recorded in detail of his administration. For a number of years he judged Israel—this is the sum of what is told—though whether his authority was recognized by all the tribes may admit of question. The places to which he is said to have gone on circuit were all in the south of Palestine, 1 Sam. vii.; and when he appointed his sons to office it was in Beersheba, the extreme south.

Samuel was now advancing in years, and his sons did not follow the pattern of his integrity.

uel died, and here he was buried amid the general lamentation of the people, 1 Sam. xxv. 1, who when the kingdom was established were obliged to acknowledge that his conduct had been without a stain, 1 Sam. xii. 1-5. It is nowhere stated at what age Samuel died. He lived, it is evident, through the greater portion of Saul's reign, for David had come into public life some time before the prophet's death, and David was but thirty when Saul fell on Gilboa. He was mourned by all Israel, and buried in Ramah, 1 Sam. xxv. 1; xxviii. 3, at the place, according to an ancient tradition, still known as *Nebi Samuel*.

**SAMUEL, FIRST AND SECOND BOOKS OF.** The two books of Samuel originally formed only one, which was called "The Book of Samuel," but was divided by the Greek translators into two, and designated "The First and Second Books of Kings." Their authorship is uncertain, but there is great probability in the ancient opin-

time a new era of prophecy began, which extended, with scarcely any interruption, to the days of Malachi. Samuel is spoken of, in Acts iii. 24, as the first of this succession of prophets, whose chief object was to foreshow the redemption of Christ and to prepare the way for his coming, as well as to give religious instruction to the people. The maintenance of this succession was doubtless greatly assisted by the schools of the prophets, so frequently alluded to in the subsequent history, which are supposed to have been first established under Samuel.

These two books extend over a period of one hundred and fifty-four years, according to Usher, or one hundred and thirty-two, according to Hales. **THE FIRST BOOK OF SAMUEL** begins with an account of the birth and early ministry of that prophet; it describes the low and oppressed condition of the people at that period, the appointment of Samuel as judge, and his eminently useful services, both as a prophet and as a ruler, and

SAMARIA: THE ANCIENT CITY RESTORED.—See SAMARIA.

Public affairs were therefore in an unsettled state, and it would seem that an invasion by the king of Ammon was apprehended, 1 Sam. xii. 12. Hence the elders of Israel proposed the establishment of a monarchy. The proposal was very distasteful to the prophet, who appears to have viewed it as a reflection on his own administration, 1 Sam. viii. 6. But laying the matter before the Lord, he was directed to inaugurate a king, and Saul was accordingly appointed. As a prophet, however, and possibly as administering justice, Samuel retained all his influence, 1 Sam. vii. 15. He was authorized to convey God's commands to Saul, to rebuke him for disobedience, and to pronounce sentence on him at last, that for his sin his kingdom should be transferred to another. That other he was commissioned to anoint, though Saul's suspicions were now aroused, and it was clear that he would not hesitate in revenge to commit any atrocious crime, 1 Sam. xvi. 1, 2. The person anointed was David, after which Samuel dwelt quietly at Ramah, where he had gathered prophetic schools, and whither David subsequently fled to him, 1 Sam. xix. 18-24. Here, too, Sam-

uel, founded on various passages in the books of Chronicles, that they were the productions of contemporary prophets, with a few explanatory insertions by their successors. Thus, the first sixteen chapters, with a few subsequent portions, may be attributed to Samuel, whose name, according to Hebrew custom, is given to the whole, and the rest to Nathan and Gad.

The great subject of these books is the institution of the monarchy and its establishment in the family of David. The divine plan of redemption is thus presented in a new aspect, exhibiting the delegation of royal authority by the Invisible King to the hands of a human representative. From the time when "the man after God's own heart" was seated on the throne, the Spirit of prophecy delights to employ the emblems of royalty to set forth the spiritual glories of Messiah, see Ps. ii., xlv., lxxii., cx., whilst the inspired history of the line of David opens a track by which, step after step, we are led on to Him in whom the independent successions of prophets, priests and kings finally meet.

It is remarkable, too, that almost at the same

mentions the degeneracy of his sons. It then relates the change in the mode of government by the introduction of the monarchy, an event which had been prophetically anticipated by Moses four hundred years before, see Deut. xvii. 14. As this was a change of great importance in the national history, the circumstances attending it are related in detail. Under divine direction Saul is appointed king, but not conducting himself in the government according to the command of God, he is rejected, and the son of Jesse is chosen by God and anointed as his successor. David is then, by the arrangements of Providence, brought before the eyes of the nation and into relationship with Saul, who, however, being jealous of his growing popularity, attempts his life, drives him from court into the wilderness and subjects him to the most harassing persecutions. These are overruled by God to prepare David for the work he had to do, developing his fortitude and prudence, and making him intimately acquainted with the power of the dreaded Philistines and other enemies whom he was afterward to subjugate.

The history of David is important, not only on

account of the great moral and spiritual lessons which it affords, but also for the understanding of many other parts of Scripture, particularly the Psalms and much of the New Testament. As an ancestor of Messiah according to the flesh, and as a representative of him and of his people, both in his conflicts and in his triumphs, his whole life is invested with peculiar interest.

This book may be divided into two parts:

I. THE CONCLUSION OF THE TIMES OF THE JUDGES, comprising the birth and early life of Sammel, the wickedness of Eli's sons and denun-

Adullam, ch. xviii.-xxii. 1-5; the slaughter of the priests at Nob, ch. xxii. 6-23; David's rescue of Keilah, and flight into the wilderness and to Gath, ch. xxiii.-xxvii.; renewal of war by the Philistines, Saul and the witch of Endor, ch. xxviii.; David's dismissal by the Philistine princes, and pursuit of the Amalekites, ch. xxix., xxx.; defeat of the Israelites by the Philistines, and death of Saul and his sons, ch. xxxi.

THE SECOND BOOK OF SAMUEL is wholly occupied with the history of the reign of David, embracing a period of forty years. It commences

with his accession to the sovereignty of Judah, and exhibits his growing strength until his authority is established over all Israel. It relates the capture of Jerusalem, which he constituted the capital of his kingdom, both for civil and sacred purposes; his subjugation of the whole of the promised land and of the adjacent nations on the east and south which had so greatly molested the Israelites, thus extending his sway to the utmost boundaries of the land promised to Abraham, and his zealous and successful efforts to promote the prosperity of his people, to provide for the worship of God and to effect the reformation of religion. In connection with these events are impartially recorded his grievous aberrations from the path of duty, and the painful chastisements, both domestic and public, with which he was visited in consequence.

In the history of David begins the fulfillment of Jacob's prediction respecting the pre-eminence of the tribe of Judah, Gen. xlix. 8. The elevation of the shepherd of Bethlehem to the throne is followed by the greatness of his family and of the tribe, and the men of Judah appear as the foremost on all important occasions. This accomplishment of the first part of the ancient prophecies respecting the favored tribe could not but engage the attention of pious Israelites to other portions which remained yet to be fulfilled, respecting Him to whom the "gathering of the people" was to be.

The contents of this book may be arranged under two general divisions:

I. THE TRIUMPHS OF DAVID, comprising David's lamentation over Saul and Jonathan, ch. i.; his election as king, first over Judah, and then over all Israel, ch. ii.-iv.; his capture of Jerusalem and victories over the Philistines, ch. v.; the bringing up of the ark to Jerusalem, ch. vi.; his desire to build a temple, God's covenant of mercy with him, and his prayer and thanksgiving, ch. vii.; the subjugation of the Philistines, Moabites, Syrians, Ammonites, etc., ch. viii.-x.

II. THE TROUBLES OF DAVID, with their cause; his repentance and subsequent history, including David's sin in respect to Uriah, and Nathan's reproof, ch. xi., xii.; Amnon's sin and murder by Absalom, ch. xiii.; Absalom's rebellion, ending in his defeat and death, ch. xiv.-xix.; rebellion of Sheba and its suppression, ch. xx.; avengement of the Gibeonites, ch. xxi. 1-14; battles with the Philistines, ch. xxi. 15-22; David's psalm of thanksgiving and last words, ch. xxii., xxiii. 1-7; his chief military officers, ch. xxiii. 8-39; his offence in numbering the people, with its punishment; his prayer and sacrifice, ch. xxiv.

SAMUEL, JACOB, who devoted himself to the work of a missionary, chose to labor among the Jews in India, Persia and Arabia. His acquaintance with the population of those countries directed the course of his literary labors, and accordingly his first work was "The Remnant Found, or the Place of Israel's Hiding Discovered; being a Summary of Proof showing that the Jews of Daghistan, on the Caspian Sea, are the Remnant of the Ten Tribes." In 1844 he published, as the result of his personal exploration, "A Journal of a Missionary Tour through the Desert of Arabia to Bagdad." Both these works are of unusual interest, although it is probable that judicious readers will hesitate to adopt all his conclusions in his first publication.

SAMUEL, MAROCCANUS, a Jew who was converted to Christianity and wrote in Arabic a book of twenty-seven chapters on the coming of the Messiah. His work was translated into Latin by Bonhomme, and into various other languages.

SAMUEL, or SAMUELL, WILLIAM, lived in the middle of the sixteenth century. In his works he describes himself as a "Minister of Christ's Kirche," London. His first work was an "Abridgement of God's Statutes, in Meeter," which appeared in 1551. In 1556 he published "A Prayer to God," also in metre; and in 1558 he issued an "Abridgment from the Bible," in the style of the metre of Sternhold. Next appeared "The Love of God," and lastly, in 1569, "An Abridgement of all the Canonical Books of the Olde Testament," written in Sternhold's metre. These works show the character of his mind and indicate the quaint and fanciful taste which then existed, and which was satisfied with getting even sacred things in a rhyming dress.

SANABASSAR (san-a-bas'sar), 1 Esd. ii. 12, 15, the same as Sheshbazzar, Ezra ii. 8, 11.

SANABASSARUS (san-a-bas'sa-rus), 1 Esd. vi. 18, 20, the same as Sheshbazzar, Ezra v. 14, 16.

SANASIB (san'a-sib), 1 Esd. v. 24, a name mentioned in the list of the Jews that returned home.

SANBALLAT (san-bal'lat), a native of Horonaim, in Moab, who seems to have held some post of authority in the time of Nehemiah. He stirred up the Samaritans to impede the purpose of Nehemiah to rebuild the walls of Jerusalem, and imputed rebellion to the Jews, Neh. ii. 10, 19, 20. When Nehemiah returned to the Persian court, Sanballat gained great influence in Jerusalem; and a son of Joiada, the son of Eliashib the high-priest, became his son-in-law, which provoked Nehemiah's anger, when he heard it on resuming his government, Neh. xiii. 28. Sanballat afterward obtained leave from Darius Nothus to erect a temple on Gerizim, where he placed his son-in-law as high-priest. Josephus mistakenly attributes this to the time of Darius Codomannus.

SANCHEZ (san'cheth), PETER ANTHONY, a Spanish divine, born at Vigo, in Galicia, in 1740, became canon of the cathedral of St. James and professor of divinity at his native place, where he was admired as a preacher and esteemed for his charity. He died in 1806. His works comprise a "System of Sacred Theology," "Sacred Annals," "A Treatise on Toleration," "History of the Church of Africa," "Essay on Pulpit Eloquence," "Sermons," and on "The Means of Encouraging Industry."

SANCHEZ, THOMAS, a learned Jesuit, was born at Cordoba, in 1551. He acquired a great reputation for chastity and self-mortification. He died at Granada, May 19, 1610, and was buried with extraordinary magnificence. His treatises on the "Decalogue," on "Monastic Vows," etc., display great genius, but in his chief work, "On the Sacrament of Marriage," he has used language which is too frequently coarse and indelicate.

SANCHONIATHON (san-ko-ne'a-thon), a Phœnician author who, if the fragments of his works that have reached us be genuine, and if such a person ever existed, must be regarded as the most ancient writer of whom we have any knowledge, after Moses. His father's name was Thabion, and he himself was chief hierophant of the Phœnicians. According to some, he was a native of Berytus, but Athenæus and Suidas make him a Tyrian. As to the period when he flourished, all is uncertain. Some accounts carry him back to the era of Semiramis, others assign him to the period of the Trojan war. St. Martin, however, endeavors to prove that he was a contemporary of Gideon, the judge of Israel, and flourished during the fourteenth century before the Christian era. The titles of the three principal works of this writer are as follows: 1. "Of the Physical System of Hermes;" 2. "Egyptian Theology;" 3. "Phœnician History," cited also under other titles, one of which is "Theology of the Phœnicians." All these works were written in Phœnician. The history was translated into the Greek language by Herennius Philo, a native of Byblus, who lived in the second century of our era. It is from this translation that we obtain all the fragments of Sanchoniathon that have reached our times. Philo had divided his translation into nine books, of which Porphyry made use in his diatribe against the Christians. It is from the fourth book of his last work that Eusebius took, for an end directly opposite to this, the passages that have come down to us. And thus we have these documents relative to the mythology and history of the Phœnicians from the fourth hand.

St. Martin and others are inclined to the opinion that the three works mentioned above as having been written by Sanchoniathon were only so many parts of one main production. According to Porphyry, the Phœnician history of Sanchoniathon was divided into eight books, while we learn, on the other hand, from Eusebius, that the version of Philo consisted of nine. Hence it has been supposed that the Greek translator had united two works, and that thus the treatise on the physical system of Hermes, or that on Egyptian theology, became a kind of introduction to the Phœnician history, and increased the number of books in the latter by one. And it has been further supposed that the two titles of "Egyptian Theology" and "Physical System of Hermes" belonged both to one and the same work.

The long interval of time between Sanchoniathon and his translator renders it extremely probable that the latter must often have erred in rendering into Greek the ideas of his Phœnician original; and we may suppose, too, that occasionally Philo may have been tempted to substitute some of his own. And yet, at the same time, the fragments of Sanchoniathon contain so many things evidently of Oriental origin that it is extremely difficult to believe they were forged by Philo. A difference of opinion, however, ever has existed, and will continue to exist, on this head. Grotius and other writers highly extol the fragments in question on account of the agreement which they discover between them and the books of the Old Testament. Cumberland and Meiners, on the other hand, only see in them an attempt to prop up the religious system of the Phœnicians and Egyptians, and discover in them no other principle but those of the Porch concealed under Phœnician names. In 1836 a work appeared in Germany with the title "Sanchoniathon's Early History of the Phœnicians, condensed from the lately-found Manuscript of Philo's Complete Translation of that work. With Annotations by Fr. Wagenfeld and a Preface by Dr. G. F. Grotefend." This was followed, in 1837, by a work purporting to be the Greek version of Philo, with a Latin translation by Wagenfeld. The whole was a forgery, clumsily executed.

SANCROFT (san'kroft), WILLIAM, D.D., was born in 1616, at Fressingfield, in Suffolk.

He entered Emmanuel College, Cambridge, where he rose to be a Fellow; but refusing to sign the Solemn League and Covenant, he was deprived. On the accession of Charles II. he was made rector of Houghton le Spring, in Durham, and in 1661 was appointed a prebendary of Durham cathedral. Next year he was chosen master of Emmanuel College, and in 1663 he was raised to the deanery of York. In 1664 honors flowed in on him, for he was made dean of St. Paul's and prebendary of London. Four years afterward the archdeaconry of Canterbury was given to him, and in 1677 he reached the primacy, being made archbishop of Canterbury. He was one of the seven bishops who refused to order the reading of the indulgence

SAMSON AND THE LION.—See SAMSON.

SAMSON IN CAPTIVITY.—See SAMSON.

which James II. had resolved on carrying into effect, and accordingly he and his recusant brethren were committed to the Tower, and their acquittal, received by acclamation all over the kingdom, was recognized by James as fatal to his policy. He refused to take the oath of allegiance to William and Mary, and in 1691 he was deprived of his see, whereupon Tillotson was appointed in his place. He and seven other bishops, with about four hundred of the clergy, were removed from their charges, and thus the Nonjurors were established under the leadership of Sancroft. His literary works are unimportant. He was present at the dying scene of Charles II. Addressing the king, he said, "It is time to speak out; for, sir, you are about to appear before a Judge who is no respecter of persons." The king answered not a word. Sancroft died in 1693.

**SANCTIFICATION** (sank-te-fi-ka'shun), **SANCTIFY** (sank-te-fi). To sanctify is spoken sometimes of God and sometimes of men.

Of God, when he manifests his glory and vindicates his high perfections; thus he is said to "sanctify" his great name, Ezek. xxxvi. 23. Or when he sets apart some person or thing to a holy office or use; thus the Father is said to "sanctify" Messiah, John x. 36; God "sanctified" the seventh day, Gen. ii. 3; and so the first-born of Israel were sanctified by his command, Ex. xiii. 2. Also when he frees anything from pollution, imparting holiness or rendering clean and fit for holy use and service. Hence believers in Christ who had entered on a new life were said to be "sanctified," 1 Cor. vi. 11, and creatures of God, such as meats, to be "sanctified by the word of God and prayer," 1 Tim. iv. 5.

Again, the term is used of men when they pay fitting honor to the Deity. Thus they are commanded to "sanctify" the Lord of hosts, Isa. viii. 13; and Moses and Aaron were censured because they did not so "sanctify" the Lord in the eyes of the children of Israel, Num. xx. 12.

Sanctification and justification, though distinct in their nature, are inseparable and equally necessary in the salvation of the sinner. Because of guilt and transgression, the sinner needs pardon

SANDALS.—See article.

and a title to heaven; and because of the corruption of nature, the sinner needs the renewal and sanctification of his soul, without which he would have no meetness for heaven. In justification the title is acquired, and in sanctification the spirituality and holiness are wrought, which enables the Christian to enjoy the inheritance. Thus, Christ becomes to the believer "wisdom and righteousness and sanctification and redemption," 1 Cor. i. 30. So, also, Paul teaches in Eph. i. 4, 7, that those who have forgiveness of sins are also made "holy and without blame before him in love." As a blind man could have no enjoyment in a picture-gallery, and a deaf man could have no pleasure in a concert-room, so the sinner in an unrenewed state could have no enjoyment in the spiritual engagements of heaven. Even if he were pardoned and brought into heaven, he would be miserable, for as God is holy, and heaven is the scene of holy things, it follows that without holiness no man can see God. Hence the importance of sanctification in our salvation; for, as in our fall we lost all righteousness and became guilty, and therefore need pardon, so also have we lost our original spirituality, and hence we need renewal and sanctification. Now, Christ as a Saviour, through his atoning work, secures our pardon, and as our purifier he also renews our nature by his Spirit, and so prepares us for eternal fellowship with the redeemed in glory.

**SANCTIONS** (sank'sh-unz), **DIVINE**, are those acts or laws of the Supreme Being which render any thing obligatory, or the promises and penalties attached to them.

**SANCTUARY** (sank'chu-a-re), a holy or sanctified place, used apparently for the holy land in which God would plant his people, Ex. xv. 17; more generally for the tabernacle, Ex. xxv. 8, and the temple, 1 Chr. xxii. 19; sometimes for the holy place exclusive of the court of the tabernacle, Lev. iv. 6. The word is also applied to God's holy habitation in heaven, Ps. cii. 19. And as the sacred places had the privilege of an asylum, the term "sanctuary" sometimes signifies a place of refuge or protection, Isa. viii. 14.

**SANCTUS** (sank'tus), a Christian martyr under Marcus Antoninus, was a deacon of Vienna. When put to the torture, he bore it with great fortitude, only exclaiming, "I am a Christian." Red-hot plates of brass were applied to the most tender parts of his body, which contracted the sinews; but remaining inflexible, he was remanded to prison. According to tradition, on being brought out from his confinement, a few days after, his tormentors were astonished to find his wounds healed and his person as perfect as before. He was again tortured, and reconducted to prison, where he remained some time after. He at length received the crown of martyrdom by being beheaded, which took place about the middle of the second century.

**SAND**. The sand of the sea is often used as the symbol of multitude, Gen. xxii. 17, or abundance, Gen. xii. 41; also of intolerable weight, Job vi. 3. There is a passage in which Job speaks of multiplying his days like the sand, Job xxix. 18.

**SANDAL** (san'dal), a covering for the feet, usually denoted by the word translated "shoe" in the Authorized Version. It was usually a sole of hide, leather or wood, bound on to the foot by thongs; but it may sometimes denote such shoes and buskins as eventually came into use.

Ladies of rank appear to have paid great attention to the beauty of their sandals, Sol. Song vii. 1; though, if the bride in that book was an Egyptian princess, as some suppose, the exclamation, "How beautiful are thy feet with sandals, O prince's daughter!" may imply admiration of a luxury properly Egyptian, as the ladies of that country were noted for their sumptuous sandals. But this taste was probably general, for at the present day the dress-slippers of ladies of rank are among the richest articles of their attire.

It does not seem probable that the sandals of the Hebrews differed much from those used in Egypt, excepting, perhaps, that from the greater roughness of their country, they were usually of more substantial make and materials. The Egyptian sandals varied slightly in form; those worn by the upper classes and by women were usually pointed and turned up at the end, like our skates and many of the Eastern slippers at the present day. Those of the middle classes who were in the habit of wearing sandals often preferred walking barefooted. Shoes or low boots are sometimes found at Thebes; but these are believed by Sir J. G. Wilkinson to have been of late date and to have belonged to Greeks, since no persons are represented in the paintings as wearing them, except

foreigners. They were of leather, generally of a green color, laced in front by thongs, which passed through small loops on either side, and were principally used, as in Greece and Etruria, by women.

In transferring a possession or domain it was customary to deliver a sandal, Ruth iv. 7, as in the Middle Ages a glove. Hence the action of throwing down a shoe upon a region or territory was a symbol of occupancy. So Ps. lx. 10: "Upon the land of Edom do I cast my sandal"—i.e., I possess, occupy it, claim it as my own. In Ruth, as above, the delivering of a sandal signified that the next of kin transferred to another a sacred obligation, and he was hence called "sandal-loosed."

It was undoubtedly the custom to take off the sandals on holy ground, in the act of worship and in the presence of a superior. Hence the command to take the sandals from the feet under such circumstances, Ex. iii. 5. This is still the well-known custom of the East, an Oriental taking off his shoe in cases in which a European would remove his hat. The shoes of the modern Orientals are, however, made to slip off easily, which was not the case with sandals, that required to be unbound with some trouble. This operation was usually performed by servants; and hence the act of unloosing the sandals of another became a familiar symbol of servitude, Luke iii. 16; John i. 27. So, also, when a man's sandals had been removed, they were usually left in charge of a servant. In some of the Egyptian paintings servants are represented with their master's sandals on their arm; it thus became another conventional mark of a servile condition to bear the sandals of another, Matt. iii. 11.

**SANDEMAN** (san'de-man), **ROBERT**, a Scotch controversialist, was born at Perth, in 1723, and educated at St. Andrew's. He promulgated peculiar theological views as to the nature of justifying faith, and became the recognized head of the small sect known as Sandemanians. In 1765 he came to New England, made many proselytes, and died in 1772. The chief practices in which the sect differs from others are, the weekly administration of the Lord's Supper, weekly offerings for the poor, washing each other's feet, etc.

**SANDEMANIANS** (san-de-ma'ne-anz), a sect founded in 1723, in Scotland, by John Glass or Glas, sometimes called Glassites, but better known as above, because Robert Sandeman, a son-in-law of the founder, having espoused the new sect, made amendments and additions to its tenets, and to some extent reorganized it. It never attained large proportions, though a few congregations were formed in England. They teach that Scriptural faith is a simple assent to the divine testimony in regard to Christ. They commune with no other denomination and admit none to their communion except their own members. They hold to a weekly celebration of the Lord's Supper; a weekly love-feast, which consists of their dining together at each other's houses in the interval between the morning and afternoon service; the kiss of charity, used at the admission of a new member, and at other times when they deem it necessary and proper; weekly collection before the Lord's Supper for the support of the poor and paying their expenses; mutual exhortation; abstinence from blood and things strangled; washing each other's feet, when, as a deed of mercy, it might be an expression of love, the precept concerning which, as well as other precepts, they understand literally; community of goods, so far as

that every one is to consider all that he has in his possession and power liable to the calls of the poor and the Church; and the unlawfulness of laying up treasures upon earth, by setting them apart for any distant, future and uncertain use. They allow of public and private diversions, so far as they are unconnected with circumstances really sinful; but, apprehending a lot to be sacred, disapprove of lotteries, playing at cards, dice, etc.

They contend for a plurality of elders, pastors or bishops in each church, and the necessity of the presence of two elders in every act of discipline and at the administration of the Lord's Supper. In the choice of these elders want of learning and engagement in trade are no sufficient objection, if qualified according to the instructions given to Timothy and Titus (but second marriages disqualify for the office); and they are ordained by prayer and fasting, imposition of hands and giving the right hand of fellowship.

In their discipline they are strict and severe, and think themselves obliged to separate from the communion and worship of all such religious societies as appear to them not to profess the simple truth for their only ground of hope, and who do not walk in obedience to it.

**SANDERS** (san'derz), **BILLINGTON McCARTER**, a Baptist divine of some eminence, born in Columbia county, Georgia, December 2, 1789, and was early left an orphan, his father dying in his seventh and his mother in his ninth year, but fortunately found an excellent home in a Christian household. Having received a fair preparatory training, he entered Franklin College, Athens, Georgia, probably in 1806, remaining about two years, when in 1808 he went to South Carolina College, whence he graduated in December, 1809. He held the position of rector of the Columbia County Academy, Applington, for a time, represented the county in the State Legislature for one year, declining re-election, and for several years was one of the judges of the Superior Court, all of which positions he filled with honor. In 1823, or early in 1824, however, he was led to enter the ministry, and immediately commenced preaching; he was ordained January 25, 1825. After successfully filling the pastorate of Union Church, Warren county, for some time, he was induced to take the supervision of the Mercer Institute, then projected by the Georgia Baptist Association, which grew under his charge till it became the Mercer College, of which he was made president, and refusing to serve in that capacity after the first year, was made its treasurer; it still flourished and grew until it became the Mercer University. He is deservedly revered as its founder, on account of his active agency in its inception and development. Meanwhile he was faithfully attentive to the spiritual work of the ministry, being pastor four years of the Shiloh Church, Penfield, ten years after that at Greenesborough, and then seven years at Penfield. He was very prominent in the Association, being for several years its clerk, for nine years its moderator, and for six years he was president of the Georgia Baptist Convention. He died March 12, 1854, after three years of illness, deeply mourned not only by his own denomination, but by Christians of every name.

**SANDERS, DANIEL CLARKE, D.D.**, a Unitarian clergyman and president of the university of Vermont, born in Sturbridge, Massachusetts, May 3, 1768; was admitted into Har-

vard College in 1784, took his degree in 1788, was made preceptor of Cambridgetown Grammar School, and was a resident in college; studied theology, and was licensed to preach in 1790. On the 12th of June, 1794, he was ordained, and settled at Vergennes, in Vermont; in 1799 was dismissed from the church at Vergennes at his own request, whereupon he immediately removed to Burlington in that State. The same year Harvard University conferred on him the degree of doctor of divinity. In 1810 he was unanimously elected president of the university of Vermont; in 1812 was elected an honorary member of the Society in Boston for Promoting Christian Knowledge, Piety and Charity; and in 1813 was elected a member of the American Antiquarian Society. March 24, 1814, the American troops, under General Wade Hampton, having taken possession of the college buildings, the course of instruction was entirely suspended and his connection with the college was dissolved. In the autumn of that year he went to Boston, and was soon invited to Medfield, where he was settled May 24, 1815. He continued his pastoral relation with the church and people there until May 17, 1829, when, owing to divisions among his people in regard to religious creeds, which more or less affected all the towns in New England, he was dismissed. He never again settled as a pastor over any church. For fifty years he kept a meteorological table of the weather, which he continued to the very day of his death. Dr. Sanders died at Medfield, Massachusetts, October 18, 1850, aged eighty-two. On the day of his death he went out at two o'clock P. M., apparently in good health, and on his return he fell dead at his house-gate.

**SANDERS, NICOLAS**, a zealous Romish controversialist, was born at Charlewood, Surrey, and educated at Winchester School, as also at New College, Oxford. He became professor of canon law at Oxford, but was soon after banished on account of his religious tenets. He then was made professor of theology at Louvain. He attended Cardinal Hosius at the Council of Trent, subsequently went to Poland, and was sent to Ireland by Gregory XIII. as his nuncio, where during the civil troubles, to avoid falling into the hands of the English, he wandered about in the woods and bogs, and perished of want in 1581. His principal work is his treatise against the Reformation, entitled "De Origine ac Progressu Schismatis Anglicani."

**SANDERS, STEPHEN CREAGH, LL.D.**, bishop of the united diocese of Cashel, Emly, Waterford and Lismore, born in 1799 and educated at the university of Dublin, was a man of profound learning, but of unobtrusive manners. In 1836 he was consecrated bishop of Cashel and Emly, and in 1839 was invested with jurisdiction over the other sees. He died November 15, 1842.

**SANDERSON** (san'der-sun), **ROBERT, D.D.**, was born in 1662, at Rotherham, in Yorkshire. He was educated at Oxford, where he became a Fellow of Lincoln College in 1606. In 1608 he was appointed reader (lecturer) in logic, and in 1611 he was ordained. He held the office of subrector of his college, and in 1616 he was raised to be proctor of the university. He held

the living of Wilberton, in Lincolnshire, for a short time, whence he was removed to Boothby Pannell, which he retained for more than forty years. Honors continued to flow in on him. Prebendary of Lincoln, of Oxford and of Southwell, chaplain to Charles I. and regius professor of divinity, with a canonry in Christ Church College, these showed the esteem in which he was held, and these offices were conferred on him in 1642. Next year the Parliament selected him as a member of the Westminster Assembly, but he never took his seat. He was opposed to the proceedings of the friends of the Covenant, and helped to draw up a document against their courses. In 1660 he was made bishop of London. He was a voluminous writer, and his sermons have gone through numerous editions. His treatises on logic, on conscience and on the Church stood their ground for a long time, and even at the present day two editions of his works have commanded a great sale. He died January 29, 1662.

**SANDFORD** (sand'ford), **DANIEL, D.D.**, was born near Dublin in 1766, and educated at Oxford. Having been ordained, he was settled in Edinburgh in 1792, where he became greatly dis-

ANCIENT SHOES.—SEE SANDALS

tinguished as a preacher. In 1806 he was made bishop of Edinburgh. He died in 1830. His son, Sir Daniel Keyte Sandford, Knt., D.C.L., became still more famous, because of his great attainments in Greek literature. He was educated at Christ Church, Oxford, and at the early age of twenty-one years he assumed the duties of the Greek chair in the university of Glasgow, and here his fame shone out with great brilliancy. He became so eminent that the electors of Glasgow returned him to the House of Commons as a member for the city. His publications all bore on the culture of Greek literature, and his influence was felt not only in Glasgow, but in all the other universities of the kingdom. He received the honor of knighthood in 1830 because of his high literary standing. He died in 1838.

**SANDFORD, JOHN**, who was son to Bishop Sandford of Edinburgh and brother of Sir D. K. Sandford, was educated at Balliol College, Oxford, where he graduated as first in classics in 1824. In 1844 he was made honorary canon of Worcester, and archdeacon of Coventry in 1851. Three years afterward he became rector of Alve, and his reputation was now so well established among literary men that he was appointed Bampton lecturer in Oxford in 1861, his theme being "The Mission and the Extension of the Church at Home." His

published works include sermons, charges and lectures. His wife took a high place also in the literary world as a biographer and a writer on subjects connected with the social condition of women.

**SANDIFORD** (san'de-ford), RALPH, who was a member of the Society of Friends, became famous as the author of one of the earliest works against the slave trade. He was threatened with a severe penalty if he permitted it to be circulated, but he distributed it without fear wherever he thought it would be read. Franklin says, "About the year 1728 or 1729 I myself printed a book for Ralph Sandiford, another of your friends in this city, against keeping negroes in slavery, two editions of which he distributed gratis. And about the year 1736 I printed another book on the same subject for Benjamin Lay, who also professed being one of your friends, and he distributed the books chiefly among them. By these instances it appears that the seed was indeed sown in the good ground of your profession, though much earlier than the time (1758) you mention." Sandiford published another work, entitled "The Mystery

he sailed for Europe in discharge of his mission among the English, the Scotch and the Irish; also upon the Continent of Europe, particularly in Germany and France. Although forty years of age, he went through a full course of study of the French and German languages, to enable himself to address each and all in their own tongue. In his preaching there was a clearness and a pathos rarely surpassed. Many testimonies were borne to the efficacy of his mission; and his memory is still precious among many survivors who knew him personally—his name being familiar wherever the Society is known. David Sands also wrote with precision and force. His journals, letters and essays furnish good specimens of English literature. His foreign tour did not terminate until he was about the age of threescore years. The remainder of his days was spent more immediately at or near his family residence in Cornwall, Orange county, New York, where he died in 1818.

**SANDSTORM.** All travelers in Central Arabia and in the deserts of Africa are aware of the dangers to which they are exposed from storms of sand.

SANDSTORM OF THE DESERT.—See SANDSTORM, and DESERT.

of Iniquity; in a Brief Examination of the Practice of the Times, etc., by R. S., 1739, 12mo," thus showing how early the Friends engaged in seeking a social reform in the American colonies.

**SANDS** (sandz), DAVID, a minister of the Society of Friends, was born on Long Island, New York, October 4, 1745. His parents were Presbyterian, and his early education was unusually good for that period. Such was his desire for the acquisition of knowledge that, when studying in his boyhood, his close application threatened to injure his health. On arriving at manhood he embarked in mercantile pursuits, for which he possessed a natural tact, combined with an intuitive knowledge of human nature. At this period of his life his mind was much perplexed on the subject of religion, and did not become composed until he embraced the distinctive principles and habits of the followers of George Fox. At a nearly simultaneous period he married a wife of that Society, who encouraged him in those labors of love which occupied the greater portion of his earthly pilgrimage. He commenced his public ministry in 1772, by visiting various parts of New England, New York, Philadelphia and Canada. In 1794

It is nearly certain that the army of Sennacherib was destroyed by such an agency, 2 Ki. xix. Bruce, in his travels, describes the awful effect of the heated wind and sand that carry desolation in their course. Large caravans of pilgrims and commercial travelers have often been overwhelmed by these awful catastrophes. See SIMOON.

**SANDYS, SANDS, or SANDES** (san'des), EDMUND, D.D., archbishop of York, was born at Hawkshead, in Lancashire, England, in the year 1519. He received his education at Cambridge. In 1542 he was junior proctor of the university, and in or about the year 1547 was elected master of Catherine Hall. In 1548 he was vicar of Haversham, and the year following was presented to a prebend in the cathedral of Peterborough. The same year he took the degree of doctor of divinity. In 1552 Edward VI. granted him a prebend in the church of Carlisle. At the time of the king's decease, in 1553, Dr. Sandys was vice-chancellor of Cambridge, and having espoused the cause of Lady Jane Grey, he rendered himself obnoxious to the vindictive Mary. In consequence of this, on her accession to the throne he was imprisoned in the Tower of London,

where he remained twenty-nine weeks. He was, however, through the mediation of Sir Thomas Holeroff, the night-marshal, set at liberty; but it having been suggested to Gardiner that he was the greatest heretic in the country, the bishop caused immediate search to be made for him. He, however, escaped to Flanders, whence he had to flee to Strasburg. In his exile he lost his wife, his child and his health. He went to Zurich. On the death of Mary he returned to England, and was appointed by Elizabeth one of the nine Protestant divines who were to hold a disputation before both houses of Parliament with the same number of the Romish persuasion. He was subsequently bishop of Worcester, then of London, and at length archbishop of York. He was consulted on every occasion and appointed to every work which demanded extensive learning and a strong mind. He was one of the commissioners to revise the Liturgy, and was one of the translators of the "Bishops' Bible." He was most bitter in his hostility to popery, and ever exhibited a mind of the sternest order. Attempts were made to ruin his character, but he died, after a life of continual strife occasioned by the turbulence of the times, in the confidence of the Church, July 10, 1588, in the sixty-ninth year of his age. He published many valuable works.

Two of the archbishop's sons attained distinction in the world of letters. EDWIN, the second son, traveled some and published an interesting account of what he saw, and has been credited with a number of excellent sacred hymns; he was knighted by King James; he was born in 1561 and died in 1629. GEORGE, the seventh and youngest son, was born in 1577 and died in 1643; his works were numerous, and included a very popular narrative of his travels in Nubia and Egypt, in the Holy Land and other Oriental lands, besides "The Psalms of David Paraphrased," "Christ's Passion" (a drama) and other poetical works, which won for him high praise not only from his contemporaries, but from Dryden, who calls him the best versifier of his age.

**SANFORD** (san'ford), DAVID, graduated at Yale College in 1755, and, influenced by the known wish of his father (then deceased), became a student of theology, but soon concluded that he had not the requisite spiritual qualifications for the Christian ministry, and relinquished his studies and settled upon a farm near Great Barrington, Massachusetts, and it was not till some years later that, having experienced a change of heart, he resumed his theological studies. He was ordained and became pastor of the Congregational church at Medway, Massachusetts, April 14, 1773. He was a brilliant and yet practical preacher, and was signally blessed in his ministrations. In 1807 he had a severe stroke of paralysis, from which he never sufficiently recovered to be able to resume his labors, and after three years of suffering died on the 7th of April, 1810. He was not a writer, or at least not a publisher, for but two brief dissertations from his pen found their way into print—the one on "The Nature and Constitution of the Law which was given to Adam in Paradise," and the other on "The Scene of Christ in the Garden of Gethsemane."

**SANFORD, JOSEPH**, born in February, 1797, in Vernon, Vermont, gave early indications of the influence of grace; he became a communicant at thirteen, and even at that youthful age his walk and conversation were remarkably in

harmony with his profession. He entered Union College, Schenectady, New York, in 1817, graduating in 1820; he then went to Princeton, New Jersey, where he spent three years. In April, 1823, he was licensed, and in October was ordained and installed as pastor of the Presbyterian (now the First) Church of Brooklyn, New York. In December he was called to bear a sad bereavement in the sudden and unlooked-for death of his wife, whom he had wedded but a few weeks before his ordination. The Presbyterian church of Montreal had called him before his ordination, and repeated the call twice or thrice after, but he felt it his duty to refuse, and in 1828 he received a call from the Second Presbyterian Church, Philadelphia, which after much prayer and careful weighing of duty he accepted, and was installed in January, 1829. He was permitted to labor here less than three years, when, December 25, 1831, God called him to a higher sphere, for which, though young, he was fully prepared. Throughout his brief career all who had come in contact with him had learned to esteem and many to love him, and his death was a sad visitation to more than his immediate circle of kindred, or even his loving and beloved church.

**SANGER** (sang'ger), ZEDEKIAH, D.D., was born in 1748, at Sherburne, Massachusetts. He was prepared for college by his pastor the Rev. S. Locke, D.D., who became president of Harvard. He entered at Cambridge in July, 1767; and having greatly distinguished himself, he graduated with honor in 1771. He then commenced the study of theology under the Rev. Jason Haven of Dedham. In 1776 he was ordained and installed as pastor of the church in Duxbury. He had to encounter great difficulties for a time in the matter of his support, owing to the depreciation of the Continental currency, and he was obliged to have recourse to farming. Thus toiling during the day and studying at night, he injured his eyesight, and the result was his resignation of his charge. In 1788, on the restoration of his sight, he became junior pastor at South Bridgewater, and here he labored until the close of his life. He was one of the original members of the American Academy of Arts and Sciences. When he reached the age of seventy years, he requested the aid of a colleague; and when his request was complied with, he gradually relinquished the more active duties of the ministry. A paralytic attack laid him aside in the year 1820, and in the month of November in that year he closed a very laborious life. His publications mainly consisted of sermons preached on public occasions. In theology he held Unitarian views, and in Church polity he was a Congregationalist.

**SANHEDRIM** (san'he-drim), or **SANHEDRIN** (san'he-drin), the highest council of the Jews, who attribute its origin to the appointment of the seventy elders on whom the divine Spirit was poured, that they might assist Moses in the administration of affairs, Num. xi. 16, 17, 24, 25. There is, however, no further notice of such a body in Old Testament history, and it is probable that the appointment was but temporary. But if this council did not continue, it might well serve as the model of that which we find afterward in authority, and both the number and in some respect the powers might be defined according to the ancient type. The earliest mention we have of a

council likely to be the Sanhedrim is in the Apocrypha. It there appears with some prominence as taking part in public business and recognized by foreign potentates, 2 Macc. i. 10; iv. 44. It is probable, therefore, that it was constituted after the return from Babylon, and as some corroboration of this it may be remarked that the name is of Greek derivation, implying a body of assessors. In the New Testament we have various notices of the Sanhedrim. It would seem to have comprised chief priests (perhaps the heads of the twenty-four courses and those who had borne the office of high-priest), elders and scribes, Matt. xxvi. 57, 59; Mark xiv. 53, 55; Luke xxii. 66; John vii. 41-52; Acts iv. 5-21. The "servants," Matt. xxvi. 51, 58, very probably were the officers or bailiffs of the council who were in waiting during its session. The power of this body was considerable. It was the highest judicial court, taking special charge of offences against the sacred law, but exercising also other jurisdiction. Its power was acknowledged even by those Jews who lived beyond the boundaries of Palestine, for Paul had commission from it to arrest Christians at Damascus and carry them for trial to Jerusalem, Acts xxii. 5. According to the Talmud, the right of punishing capitally was taken from the Sanhedrim about forty years before the downfall of the Jewish polity, and this may be supposed to explain John xviii. 31. Still, it condemned Stephen, Acts vii. 57, 58. And though this is said to have been hurried, rash and illegal, yet so far as we read, no censure for it was ever conveyed to the Sanhedrim by the higher Roman authorities. It may be, therefore, that as at last the charge against Jesus was treason against the emperor, John xix. 12—a crime clearly beyond the Sanhedrim's cognizance—the want of power was alleged on this account.

As to the number of this council authorities differ; it is variously said to be, seventy, seventy-one and seventy-two. But the Jews generally hold that seventy-one is the true number, on the ground that seventy elders were appointed to assist Moses, who with Moses himself would make up the seventy-one. The president, very generally the high-priest, Matt. xxvi. 62, was designated *nasi*, the elevated one. There was a vice-president, styled "father of the house of judgment," who sat at the president's right hand. The other councilors were ranged in front of these two in the form of a semicircle. Two scribes attended to register the votes, one for acquittal, the other for condemnation, and the record was made accordingly.

The place where this council met seems to have varied. A hall called *gazit*, at the south-east of one of the temple courts, and another at no great distance, are said to have been successively used. Certainly sometimes the Sanhedrim met in the high-priest's palace (3). It was subsequently settled at Tiberias.

**SANHERIB** (san-he'rib), 2 Ki. xviii. 13, margin, the same as Sennacherib.

**SANSANNAH** (san-san'nah), a city in the South of Judah, Josh. xv. 31, believed to be identical with Hazar-susah, Josh. xix. 5, or Hazar-susim, 1 Chr. iv. 31, in the modern *Wady es-Suny*, or *Sunich*.

**SANSCRIT** (san'skrit) is the name of one of the most important of all the tongues of antiquity. It is the ancient and classical language of India, and it is still cultivated by the learned throughout a country comprising upward of one million two hundred and fifty thousand square miles—equal to about a third part of the entire area of Europe. Among the one hundred and seventy millions inhabitants of this extensive region Mohammedanism and various other forms of religion exist, but the predominant creed is Brahminism, which is professed by three-eighths of the people. The ancient Brahminical writings, called the Vedas, inculcate the existence of one Supreme Being, but the government of the universe is said to be delegated to three hundred and thirty millions of subordinate deities. The origin of the Sanscrit language is lost in remote antiquity. No authentic record exists of the peopling of India. It is generally believed that many centuries anterior to the Christian era a people of Japhetic origin settled in that country and brought their own lan-

A SANTON AWAITING CALLERS.—See SANTON.

guage with them, and that the language of the aborigines, or at least of the inhabitants of the northern provinces, became blended with theirs. This language was the Sanscrit; and of late years the evidence of philology has proved its close connection, if not its original identity, with the Zend, the language of ancient Bactria, thus pointing pretty clearly to the origin of the early settlers. Sanscrit, which is the root or basis of the greater number of all the languages and dialects of India, was a refined and polished language many ages when Europe was plunged in barbarism; and the philosophy, science and erudition of the Brahmins, inscribed in their rich and flexible language on the fragile leaves of the palm trees, were from generation to generation religiously concealed in temples from the gaze of the Western world. The successes of the British in India during the last century led to the examination of these monuments of ancient lore, and the language in which they were written then began to be studied by Europeans.

The study of Sanscrit opened up a new field in philology. It was discovered that the same grammatical principles on which the Sanscrit is based

pervaded the Greek, the Latin, the German, the Icelandic, and in fact all the languages constituting what has been appropriately designated the Indo-European class, while the fifteen hundred radical monosyllables, by means of which all Sanskrit words are constructed, were traced, with precisely similar significations, and to the number of one thousand, among the elements of the Indo-European languages; for these numerous languages, as Eichhorn has well remarked, exhibit the fragments of a grand edifice, of which the whole is to be seen entire only on the banks of the Ganges. The very name of the Sanskrit language denotes its completeness; and Sir William Jones, in comparing it with the two learned languages of Europe, attested its superiority over both; for it is, as he said, "more perfect than the Greek, more copious than the Latin and more exquisitely refined than either." It is, in short, the most perfect and most beautiful language in existence. Its

The alphabetical characters used in writing Sanskrit are called *Devanagari*, from *nagara*, a city, and *deva* (divus), a god; and thus they are attributed to a divine origin.

It seems to have been by the special interposition of Providence that the means of effecting a translation of the Scriptures into Sanskrit were provided at the precise period when the first attempt was made to commence this important work. Only a few years previous to the arrival of the venerable Carey in India, Sanskrit was almost inaccessible to Europeans. Sir William Jones, by large pecuniary payments which would have been beyond the means of the missionary, secured the services of a pundit in elucidating the principles of the language; and the works afterward prepared by this celebrated Orientalist, and by others who followed in the same track, removed the apparently insuperable difficulties which had placed the Sanskrit language beyond the reach of ordinary

SITE OF ANCIENT SARDIS.—See SARDIS.

nouns, like the Greek, admit of three numbers (singular, dual and plural) and of three genders; the cases resemble those of the Latin and Greek in power; but including the vocative, they reach the number of eight, the two additional cases being the *instrumental*, which has the sense of *by* or *with*, and the *locative*, which conveys the meaning of *in* or *on*. The cases of nouns present the type of the Greek and Latin declensions. So, also, in the conjugation of the verbs affinities are everywhere to be traced with the Greek, Latin and Germanic languages, but more especially with the Greek. Like the Greek, Sanskrit verbs have three voices, active, middle and passive; and the middle voice has disappeared from the Latin and from the other languages of this class, except the Gothic and the Zend. Sanskrit verbs have five moods, and the indicative has six tenses. It is very remarkable, also, that the Lithuanian, the Lettish, the Old Prussian and the Slavonian tongues all have in their words and structure a connection with Sanskrit, and thus exhibit the evidence of a common origin.

**SANTA SCALA** (san'tah skal'ah), a celebrated staircase in Rome which is said to have

belonged to the house of Pilate; but it was brought to Rome on the authority of tradition, and it is ascended by multitudes on their knees, as an act of devotion, out of reverence for its having been trodden on by the feet of our Saviour.

**SANTI** (san'te), GIOVANNI, the father of Raphael (see ITALIAN ART AND ARTISTS), and himself an excellent painter, was a native of Colbordolo, in Urbino. He died in 1494.

**SANTON** (san'ton). The idea suggested by this term originates in the attribute of holiness conveying extraordinary power. Among the Turks a *santon* is a hermit, or dervish, one who leads a retired, contemplative life, and whose aid is sought in cases of emergency. In the East this idea of "power" has long been associated with men who have led retired lives, and who in their seclusion have been supposed to hold special intercourse with the Deity.

**SAPH**, a Philistine giant slain by Sibbechai, 2 Sam. xxi. 18. He is called Sippai in 1 Chr. xx. 4.

**SAPHAT** (sa'fat), 1 Esd. v. 9, the same as Shephatiah, Ezra ii. 4.

**SAPHATIAS** (sa-fa-ti'as), 1 Esd. viii. 34, the same as Shephatiah, Ezra viii. 8.

**SAPHEH** (sa'feth), 1 Esd. v. 33, the same as Shephatiah, Ezra ii. 57.

**SAPHIR** (sa'fir), a place mentioned only in Mic. i. 11. From the connection in which we find it we may suppose it in the Philistine plain. Robinson found three villages bearing nearly the name between Askalon and Eleutheropolis.

**SAPOR** (sa'por) I. and II., two kings of Persia who distinguished themselves by successful warfare against the great Roman power. The second, called the Great, was, by some curious ceremony, crowned king before his birth; he became a most cruel persecutor of the Christians, giving them no peace and employing against them every species of cruelty that could be devised.

**SAPPHIRA**. See ANANIAS, 2.

**SAPPHIRE** (saf'fire), a precious stone, one of the gems in the high-priest's breastplate, Ex. xxviii. 18; xxxix. 11. The Hebrew name, which is similar to ours, implies beauty, splendor. Sapphire, being clear bright blue in color, aptly describes the pavement beneath the feet of the divine Being in the manifestation vouchsafed to Moses, Aaron and the elders of Israel, Ex. xxiv. 10, as also the tint of the throne Ezekiel saw, Ezek. i. 26. The sapphire is alluded to by Job, Job xxviii. 6, and is said to have formed one of the foundations of the heavenly Jerusalem, Rev. xxi. 19. There can be no doubt that the true sapphire is intended in these places.

**SARA** (sa'ra), Rom. iv. 19, identical with Sarah.

**SARA**, Tob. iii. 7, the person whom Tobias is said to have married.

**SARABAITES** (sar-a-ba'ites), wandering fanatics, or rather impostors, of the fourth century

who, instead of procuring a subsistence by honest industry, traveled through various cities and provinces and gained a maintenance by fictitious miracles, by selling relics to the multitude and other frauds of a like nature.

**SARABIAS** (sa-ra-bi'as), 1 Esd. ix. 48, the same as Sherebiah, Neh. viii. 7.

**SARACENIC** (sar-a-sen'ik) **ARCHITECTURE**. When the Arabians extended their empire from Constantinople to Spain, their peculiar taste was displayed in the style of the vast edifices which they erected. The style has been known as Moorish or Saracenic; and as the Arabians invented no architecture of their own, an examination of their buildings will show that the Byzantine gave form to their edifices, and the changes which the Moorish builders introduced only affected the various members of the style. They used slender columns, they covered the walls with diaper work, with foliage and minute fanciful forms, in rich colors; they used the horseshoe arch, with elaborate ornamentation on the curve of the arch; their domes were small; and altogether their edifices were attractive, though wanting the solidity of the Byzantine and the solemnity of the Ptolemaic or the Gothic. See ORIENTAL ARCHITECTURE.

**SARACENS** (sar'a-senz), more correctly, **ARRACENS**, a name first belonging to a people in Arabia Felix, and derived most probably from that of the town Arra. The application of the name Saracen to all the Arabians, and thence to all Mohammedans, is of comparatively recent origin. Ammianus Marcellinus employs the term in question as having been used by others before him.

**SARAH** (sa'rah). 1. The wife of Abraham, whose half-sister she appears to have been, Gen. xx. 12. Her name was originally Sarai, and it was changed by divine command at the time when Abram was changed to Abraham. Sarah was a beautiful woman, as is sufficiently shown by Abraham's apprehension that she would be coveted for the harem of the monarch in Egypt, and again at Gerar. She was, however, barren. And though promises were made that Abraham should have a son, and that Sarah should bear, she manifested some incredulity. In Sarah's character we see traits of impatience and jealousy, but her history is so interwoven with that of her husband, whom she accompanied from Ur of the Chaldees, that little need here be said of her. See ABRAHAM. Sarah was ninety at Isaac's birth, and died at Hebron aged one hundred and twenty-seven. She was buried in the cave of Machpelah. In the New Testament she is called Sara, and is commended as the spiritual mother of the children of promise, Gal. iv. 22-31; her faith, too, spite of temporary wavering, is noted, Heb. x. 11, and her example as an obedient wife propounded to Christian females, 1 Pet. iii. 5, 6. 2. Num. xxvi. 46. See SERAH.

**SARAI** (sa'ri), the wife of Abraham. See preceding article.

**SARAIAS** (sa-ri'as), 1 Esd. v. 5, Seraiah, the high-priest, Ezra ii. 2. In 1 Esd. viii. 1; 2 Esd. i. 1 the same person is doubtless meant, the term "son" implying descendant or a near relative.

**SARAMEL** (sar'a-mel), 1 Macc. xiv. 28, a place unknown. Some believe it an honorary appellation of Simon the high-priest.

**SARAPH** (sa'raf), a descendant of Judah, one of those who are said to have had dominion in Moab, 1 Chr. iv. 22.

**SARAVIA** (sa-ra'vya), HADRIAN, was born in 1531, at Artois, in France. He rose to be professor of divinity at Leyden; and having occupied the chair in that place from 1582 until 1587, he went to England. He taught at Jersey and at Gloucester, and in 1591 he was made a prebendary at Gloucester. Four years afterward a similar position was given him at Canterbury, and in 1601 he was honored with a stall in Westminster. He died in 1613, and was buried in Canterbury Cathedral. His works were greatly valued in his own day, and even yet new editions of some of them are called for. His treatise on

great sarcophagus taken by the British in Egypt, in 1801, and now preserved in the British Museum (see engraving, page 82).

**SARDANAPALUS** (sar-da-na-pa'lus). See ASSYRIA, especially page 221.

**SARDEUS** (sar-de'us), 1 Esd. ix. 28, a strange corruption of Aziza, Ezra x. 27.

**SARDINE**, Rev. ix. 3. See SARDIUS.

**SARDIS** (sar'dis), an ancient city, the capital of Lydia, where Croesus reigned, seated on the river Pactolus, by the side of Mount Tmolus, in a fruitful plain. It was destroyed by an earthquake in the reign of Tiberius, but was rebuilt by the emperor's assistance. To the church there one of the apocalyptic epistles was addressed, Rev. i. 11; iii. 1-6, in which earnest reproof was conveyed for its declining state.

RUINS OF ANCIENT SARDIS.—See SARDIS.

Church government appeared in the French language, and it was translated into English. In 1840 and in 1855 editions of his work on the degrees in the Christian ministry were issued. He was one of those continental divines who, like Erasmus and others, were greatly esteemed in England in the period of the Reformation.

**SARCHEDONUS** (sar-ke-do'nus), Tob. i. 21, identical with Esar-haddon.

**SARCOPHAGUS** (sar-kof'a-gus). This word is derived from two Greek terms, *sarx*, "flesh," and *phago*, "I consume," and it is used to designate a stone receptacle—a large coffin for a dead body. The name originates in the use of the *lapis Assius*—i. e., "the stone of Assos," in Asia Minor—which was said to have been anciently prepared for this purpose on account of its supposed property of corroding dead bodies so as to consume them entirely in forty days, which, together with other incredible qualities, is ascribed to it by Theophrastus and Pliny. One of the most celebrated specimens of this object of art is the

**SARDITES** (sard'ites), a family of Zebulun descended from Sared, Num. xxvi. 26.

**SARDIUS** (sar'de-us), or **SARDINE** (sar'dine), a precious stone, several times referred to in Scripture. It is sometimes called by profane writers sard or sardel. It is an agate, of one color, a clear bright red, and in modern times is best known by the name of carnelian or cornelian. The sardius is the first stone named in our version, Ex. xxxix. 10, as adorning the sacerdotal breastplate of Aaron; and though the ruby is suggested in the margin, yet probably the text is correct, not only on account of the difficulty of procuring a hyaline gem like the ruby of the size required, but on account also of the adaptability of the sardius for engraving. It is represented as forming the sixth foundation of the wall of the New Jerusalem, Rev. xxi. 20; and the form of Him who sat upon the throne in heaven is said to have been "like unto a jasper and a sardine stone," Rev. iv. 3.

**SARDONYX** (sar'donix), Rev. xxi. 20, a variety of the onyx, in which the opaque white

alternates with translucent rich deep orange brown. See **ONYX**.

**SAREA** (sar'e-a), 2 Esd. xiv. 24, a scribe whom it was said Esdras was to take.

**SAREPTA** (sa-rep'ta), Luke iv. 36, the Greek form of Zarephath.

**SARGENT** (sar'jent), **JOHN**, who became a Fellow of King's College, Cambridge, has been well known in the religious world as the author of the life of Henry Martyn. He was the son of John Sargent, M.P., who was distinguished for his poetical powers. The son became rector of Grafton in 1805, and of Woolavington in 1813. He published an admirable life of the Rev. J. T. Thomason, M.A., in 1833, and after a life of great zeal and much usefulness he died in 1836, aged fifty-two years.

**SARGENT**, **LUCIUS MANLIUS**, was born in 1786, at Boston, Massachusetts. He entered Harvard in 1804, and after his college course he began the study of the law. He died at Roxbury in June, 1867, having written a vast number of miscellaneous works, some being classical and of

A SATYR AND A FAUN.—See SATYR.

much value, and others being of great importance in the temperance reformation and in the social progress of the country. He also took part in the discussion of the slavery question, and his mental vigor and fine education appear in all his writings.

**SARGENT**, **THOMAS FRAZER**, M. D., was born in Frederick county, Maryland, in the year 1776. In his eighteenth year he was brought to see the importance of religion, and he united in membership with the Methodist Episcopal Church. Shortly afterward he was induced to try his gifts in exhorting, and in 1794, at the request of the presiding elder of his district, he traveled the Talbot and Kent circuits. He was then transferred to the Philadelphia Conference, and was appointed to the Chester and Lancaster circuits. He was ordained deacon by Bishop Asbury, in 1796, and he went back to the Baltimore Conference. In 1799 he was ordained elder by Asbury, and transferred to the New York Conference, and stationed in New York. Thence he passed to Boston, to New York again and to Philadelphia. From 1824 until 1832 he was a supernumerary in that conference, and was next transferred to Ohio. He began the study of medicine in 1803 in Philadelphia, and he made great progress in that science. His services in all the places where he labored were greatly esteemed. He was an ad-

mirable preacher and a most laborious, faithful man. In 1833, while in the pulpit, he was seized with apoplexy, and he expired almost immediately.

**SARGON** (sar'gon), king of Assyria. See **ASSYRIA**; **MERODACH-BALADAN**.

**SARID** (sa'rid), a place on the border of Zebulun, Josh. xix. 10-12.

**SARISBURY** (sar'is-ber-re), **JOHN OF**, an English ecclesiastic, born at Rochester in 1110, was the favorite of Henry II. and of Thomas à Becket, and for some time was the English resident ambassador at the court of Rome. He was subsequently the friend and faithful companion of Becket, and was with him when he was assassinated at Canterbury. He then went to France, and in 1179 was appointed bishop of Chartres, but died soon after. He was a man of great genius and extensive learning. Besides his letters, he wrote a life of Becket, and a treatise on logic and philosophy, much commended by Du Pin as well as by Lipsius.

**SARJEANT** (sar'jent), **JOHN**, a secular priest, whose real name was **SMITH**, was born in Lincolnshire, in 1621, and educated at St. John's College, Cambridge. He became secretary to Morton, bishop of Durham, but subsequently went to Lisbon, and while residing at the English college in that city changed his religion. He returned to England in 1652, and wrote some tracts in favor of the new doctrines which he had embraced, and which were especially directed against Tillotson, Branhall, Pierce and Hammond. He died about the year 1670.

**SARON** (sa'ron), Acts ix. 35, the New Testament form of Sharon.

**SAROTHE** (sa-ro'th'e), 1 Esd. v. 34, a name in the list of the Jews who returned home.

**SARPI** (sar'pe), **PIETRO**, better known by his monastic name of **FRA PAOLO**, or **FATHER PAUL**, the illustrious historian of the Council of Trent, was born at Venice, in 1552. About 1572 he became a monk of the Servite order, was for a short time professor of theology at Mantua, was consulted at Milan by the archbishop San Carlo Borromeo, and in 1585 was proctor-general of his order. This drew him for a time from his cell, and brought him, by the various missions entrusted to him, into relation with some of the distinguished men of the time. In 1597 he was at Rome. He allowed himself to speak freely and severely of the corruptions of the papal court, and was never forgiven or forgotten. During the pontificate of Paul V. Venice was threatened with an interdict for defying the claim of papal supremacy over secular governments, and Fra Paolo was employed by the republic to plead their cause. This he did boldly and successfully, and in recognition of his services he was named consulting theologian of the republic, and afterward counselor of the tri-

bunal of the Ten. Plots were formed by his adversaries to assassinate him, and in one instance he received a friendly warning from Cardinal Belarmin. In October, 1607, Sarpi was actually attacked by a party of ruffians, and received many wounds from their weapons; but he recovered. From that time he seldom quitted his monastery, but worked there indefatigably with his pen. He was chiefly occupied with the composition of his noble, learned, honest and religious "History of the Council of Trent." Fra Paolo died at Venice after a long illness, January 14, 1623. The ambassadors of the republic were charged to announce his death to all the powers of Europe, and a marble monument was erected to him.

**SARSECHIM** (sar'se-kim), a Babylonian prince, Jer. xxxix. 3.

**SARSON** (sar'son), **LAURENCE**, who lived in the middle of the seventeenth century, rose to be a Fellow of Emanuel College, Cambridge. In his first work, which was published in quarto in 1643, he discussed the question of the lawfulness of adoring any being but God. In 1645 he issued a learned tractate on 1 Tim. i. 15 and the following verses; and in 1650 his work on the "Unity and the Nullity of the Roman Worship" appeared. He was a close reasoner, and his theology was of the type which then prevailed at Cambridge.

**SARUCH** (sa'ruk), Luke iii. 35, the same as Serug.

**SARUM** (sa'rum). This is the name of a place of great antiquity in Wiltshire, England. During the Roman sway in Britain it was called *Sorbidunum*. It is situated about a mile and a half north of Salisbury. It was the residence of the West Saxon kings until the heptarchy was merged into one kingdom under Egbert. Sarum was the episcopal seat of the diocese from A. D. 1056 until the splendid cathedral was erected at Salisbury. The new edifice was commenced in 1220, consecrated in 1225, and in that year the bodies of three deceased bishops were removed from "Old Sarum" to the more magnificent edifice. In 1834 the foundations of the cathedral at Sarum were uncovered, and the building appears to have been two hundred and seventy feet long, and the transept extended one hundred and fifty feet. The bishops of Salisbury still sign their names officially as being bishops of Sarum; thus Gilbert Burnet's signature was "Gilbert Sarum." Among the old "rotten boroughs" of England Sarum held a prominent place. It was disfranchised by the Reform Act, and all its importance is in connection with its ancient history.

**SARUM USE**, the form of service adopted and established at Salisbury. It was based on the Anglo-Saxon and Norman customs, particularly that of Rouen, and put forth by St. Osmund, A. D. 1087, as a means of reducing the different customs in his diocese to something like uniform order. It was gradually adopted by other dioceses, and Hereford and York based their missals on it. The first appearance of it in Scotland was under Herbert, bishop of Glasgow, A. D. 1147-1164, and his example was followed by the dioceses of Murray and Dunkeld in A. D. 1242-1249. It also prevailed in the English pale in Ireland.

**SATAN** (sa'tan). This word properly signifies an adversary, and it is used in that sense in

Num. xxii. 22 of the angel who stood in Balaam's way to intercept him; it is also used of political adversaries in 1 Sam. xxix. 4; 2 Sam. xix. 22; 1 Ki. v. 4. Doubtless, in Ps. cix. 6 the word "Satan" should be rendered "an adversary," as it has no

article before it, and this change makes the verse harmonize with the rest of the psalm. So also in 1 Chr. xxi. 1 the wiser translation would have been "an adversary," as there is no article, and thus the supposed inconsistency between this verse and 2 Sam. xxiv. 1 is more easily solved. There still remain the passages in the first and second chapters of Job, and in the third of Zechariah, in which the article is prefixed, and which evidently apply not to an earthly but to a spiritual opponent of the people of God and of his purposes. From these glimpses of the unseen world we gather that "the old serpent," not contented with marring God's fair work, was setting himself against the future restoration of man; and when we come on to the New Testament, we are more clearly taught that he was a sinner from the beginning, 1 John iii. 8; that he was condemned for pride, 1 Tit. iii. 6; that he is at the head of all the powers of darkness and ignorance; that he is the god of this age, deceiving the world and working in the children of disobedience, Rev. xii. 9; 1 John v. 19. He sows tares among the wheat, and is the enemy and accuser of the Church, 1 Pet. v. 8; Rev. xii. 5; he is the author of persecution and tribulation, Rev. ii. 10, and works evil on the bodies of men, Luke xiii. 16; 1 Cor. v. 5. He attacks with cunning snares and with fiery darts, Eph. vi. 11; 2 Cor. ii. 11; and he suggests evil thoughts, John xiii. 2; Acts v. 3. His power over man extends to death, Heb. ii. 14, but beyond that he appears to be utterly powerless; he can neither injure the servants of God any more, nor is he represented as the agent of the miseries of the wicked. He is overcome by Christ, Luke x. 18; Heb. ii. 14; 1 John iii. 8, and by the Christian,

in the strength of God, Romans xvi. 20; James iv. 7; Rev. xii. 11. His end is to share the eternal punishment of those whom he has seduced.

**SATANIAN** (sa-ta'ne-anz), a branch of the

**SATHIANADHAN** (sat-thi-a-nad'han), Rev. W. T. Although the facts connected with the birth and early life of this Indian minister are not accessible in this country, still it is a matter of great interest to the Christian reader to know

SAMUEL ANOINTING SAUL AS FIRST KING OF ISRAEL.—See SAUL, and DAVID.

Messalians, who appeared about the year 390. It is said, among other things, that they believed the devil to be extremely powerful, and that it was much wiser to respect and adore than to curse him.

**SATHRABUZANES** (sa-thra-bu'za-nes), 1 Esd. vi. 3, the same as Shethar-boznai, Ezra v. 3, 6.

that when the gospel is brought to the minds of Hindoos it produces an awakening and elevating effect as well as in Western lands. The subject of this notice has distinguished himself by a work in Christian literature which was published at Madras in 1864, under the title "A Brief History of the Church of Christ," indicating a tendency to historical research in the author's mind.

**SATURNIANS** (sa-tur'ne-anz), a Gnostic sect which arose about the year 115. They derived their name from Saturnus of Antioch, one of the principal Gnostic chiefs.

**SATURNINUS** (sa-tur'ne-nus), a Christian martyr under Diocletian, was a priest of Albitina, in Africa, who, having been informed against for officiating in his clerical capacity, was apprehended, with four of his children, and sent to

according to rabbinical tradition must be taken here to represent the wood-demons, said popularly to resemble goats, which haunt desolate places. The same word is rendered "devils" in Lev. xvii. 7; 2 Chr. xi. 15, the objects of idolatrous worship. But there the images of such false deities are meant, which were literally fashioned in the shape of brute animals; so that a better word than "devils" might have been found in our version. And we can scarcely imagine the prophet Isaiah

name from the Hebrew *shawim*—i. e., "hairy men." In the same way we may, perhaps, account for St. Augustine's story of a satyr having been seen and caught in his own time in the deserts of Africa. In Grecian dramatic literature, the name Satyr is applied to a theatrical piece in which the chorus consisted of satyrs of a semi-burlesque character—to judge of it by the only specimen left to us, the "Cyclops" of Euripides. In zoology, the orang-outang is sometimes called satyr.

SAMUEL REPROVING SAUL.—See SAUL.

Carthage, to be examined before Amelinus, the proconsul of that quarter of the globe. On his examination Saturninus vindicated the Christian religion with great eloquence. The proconsul, enraged at his arguments, which he could not confute, ordered him to cease from speaking and to be put to a variety of tortures. After these he was remanded to prison, where he died from starvation, about A. D. 305. His children met the same fate.

**SATYR** (sat'ir). The Hebrew word so rendered, Isa. xiii. 21; xxxiv. 14, means he-goat, and

giving countenance to popular superstition or confirming the notion that demons inhabited the ruined cities. It seems better, therefore, to translate literally, "wild goats."

**SATYRS**.—In classical mythology the satyrs were divinities, or rather supernatural personages, represented with the heads, arms and bodies of men and the lower part of goats. They were under the peculiar government of the god Bacchus. Some antiquarians have imagined that the notion of satyrs arose from the introduction of orang-outangs by the real Bacchus on his return from his conquest of India, and derive the

**SAUL** (sawl), the son of Kish, of the tribe of Benjamin, and the first king of Israel.

The place of Saul's birth and earliest home is not distinctly marked in the history. Probably it was Zelah, where was "the sepulchre of Kish his father," 2 Sam. xxi. 14. His residence was afterward fixed at Gibeah, "the Hill," a position which may still be identified.

He first appears in the Bible narrative as a young man of unusual stature and of prepossessing appearance. His father's asses had gone astray, and he, with a trusty servant, went forth to seek them. The route taken by Saul is stated

stage by stage, though its course cannot be easily traced so as to identify each spot. The search proved fruitless. Saul, to relieve his father's solicitude, resolved to return home. His servant proposed that they should first consult "the seer" who resided in the neighborhood, obviating Saul's

objection by himself producing a quarter of a shekel for the present which they supposed would be needful. Already had Samuel been prepared by divine revelation to receive Saul's visit. It was the first meeting of these remarkable personages, and proved singularly eventful to both of them. Samuel treated Saul on this occasion with marked distinction. He lodged him honorably for the night, and on parting with him on the morrow privately anointed him to be king over Israel, giving him certain "signs," 1 Sam. x. 2-7, as tokens of a divine commission to anoint on the part of Samuel, and of a divine call to the kingdom on the part of Saul. This private designation of Saul to the kingship was followed by a public election to the office. Chosen by lot at Mizpah, under the superintendence of Samuel, he was recognized as king by the acclamations of the assembled tribes of the people.

After Saul's appointment to the kingdom he appears to have returned to his home amongst his own tribe and to have busied himself in industrial pursuits, without any signs of state or royalty. We next hear of him at Gibeah ploughing with his oxen, when his attention was attracted to an alarming message, and his indignation aroused thereby. A sudden calamity had happened in a district of the country beyond the Jordan; Nahash the Ammonite had come upon Jabesh-gilead and reduced its inhabitants to the necessity of making a treaty with him based on disgraceful and disastrous conditions, unless speedy help could be afforded by the tribes of Israel, 1 Sam. xi.

On this occasion Saul displays remarkable vigor

and promptitude. The fierceness of his tribe and his own ability and boldness suddenly flash out. Success follows the execution of his plans. Great enthusiasm is awakened in his favor. The kingdom is solemnly renewed at Gilgal, and now Saul appears to have assumed royal functions and to

invade Israel with a formidable army. To such extremities was Saul reduced by the desertion of his army, by the want of arms and by the overwhelming forces of the Philistines that he rashly committed himself to a line of conduct which led to his downfall. Then occurred the first open

SAUL ATTEMPTS DAVID'S LIFE.—See SAUL, and DAVID.

have surrounded himself with royal state. When he had reigned two years over Israel, we find him with a standing army of three thousand men, two under his own command at Michmash and one under Jonathan at Gibeah. Soon after this time Israel was reduced to great straits. Jonathan had already attacked a garrison of the Philistines at Geba, and had thereby provoked that people to

breach between him and Samuel. He had publicly taken upon himself the entire direction of national affairs without waiting to consult the prophet, or to learn in the appointed way what might be the will of the God of Israel. He committed a willful violation of the conditions on which the monarchy was founded and on which he had been appointed king. His forfeiture of the

throne was therefore declared to him by Samuel. But Saul pursued his own course. The battle of Michmash followed soon after. Begun by a bold attack made by Jonathan and his armor-bearer on the Philistine intrenchments, it ended in a great victory. The tide now flowed in favor of the Israelites, for after this battle "Saul secured the kingdom over Israel," and not only so, but he seems also to have extended the boundaries of his power by attacking the neighboring tribes of Moab, Bene-Ammon, Edom, Zobah, the Philistines and

ation of his character, of gathering clouds and darkness closing upon him, of his sad downfall and pitiable end. Many of the details have already been related (see DAVID and SAMUEL), and it is not needful to repeat them here.

Of the nature of Saul's malady much might be said. So far as it was natural, it seems to have been partly physical and partly moral. The tribe of Benjamin appears to have been singularly irascible, fierce and energetic, and Saul partook largely in the characteristics of his tribe. His temper

easily-excited fears, bitter hatred, unrelenting vengeance, and, above all, the torturing reflection that he had lost the kingdom, disinherited his sons and incurred the anger of God by his own perversity and passion. So melancholy grew into remorse and remorse deepened into occasional madness, and yet not such madness as could be distinguished from ungoverned passion and unrestrained outbursts of insubordination, hatred and revenge. And there was serious ground of alarm. A formidable rival appeared, on whom his jeal-

SAUL'S PURSUIT OF DAVID.—See SAUL, and DAVID.

Amalek. This was the time of Saul's greatest prosperity. It would appear also that his rejection from the kingdom was not yet finally settled. He was put upon another probation. Precise directions were given to him by Samuel to undertake an expedition against Amalek. Again he failed in obedience to divine authority, and again he was brought into conflict with the prophet. This occasioned the final rupture between these two remarkable men, and decided the fate of Saul's reign and dynasty. The history of Saul for the next periods of his life is the narration of his malady, of his failing fortunes, of the rapid deterior-

seems to have been susceptible and impressible to a high degree. The intelligence of the calamity at Jabesh-gilead inflamed him with sudden and fierce warlike energy. David's appeal to his sense of justice and honor melted him to tenderness and to tears. On such a temperament his unlooked-for elevation to the throne and his hopeless forfeiture of it must have wrought most deeply—"A spirit of sadness from the Lord" (a deep, dejecting sense of God's departure), instead of the "Spirit of the Lord" (a consciousness of divine help), came upon him, and grew into moody melancholy. Then there sprang up evil surmises, unjust suspicions,

ousy and rage were directed. When the Philistines were gathered in battle array at Shochoh, a champion stepped forth and challenged the hosts of Israel to send a warrior to meet him in single combat. David, the son of Jesse, already secretly anointed to the kingship, goes out to meet the Philistine, and returns victorious. Henceforth Saul looks on David as a rival to be dreaded, and if possible destroyed. In his conduct toward David some of the worst features of Saul's character are displayed in the most unhappy period of his life. We need not pursue the painful details—his unworthy devices to destroy Da-

vid, the horrid cruelty of his conduct to Abimelech and the priests of Nob, his pursuit of David, whom he hunted as a partridge on the mountains until he escaped and found refuge amongst the Philistines; they all show the sad declension of Saul from the promise of his early days and the inveterateness and malignity of the evil spirit which had come upon him. The end is now approaching. Once more the Philistines break out and spread over the territory of Israel. In the plain of Esdraelon, so famed as the field of many battles, they assembled their forces, their chariots and horses. They pitched their tents on the slope of Little Hermon, and the Israelites on Mount Gilboa. Before the battle Saul turned once more, in his anxiety for counsel and help, to the priests of God; but he inquired in vain. His willful spirit was still unsubdued. If God will not answer him, "a woman that hath a familiar spirit" shall. He will seek an interview with Samuel, who shall be summoned from the unseen world to meet him. The preternatural appearance of Samuel in the house of the witch of Endor has been the subject of very much discussion; but it certainly seems to be consistent with the character of the narrative to regard it as a simple statement of fact. Saul went to consult the woman. Before she had begun her incantations Samuel appeared. Unexpected reality set aside her pretences. Her enchantments were forgotten in the unlooked-for apparition. Terrified by the presence of a power which she thought not of, she recognized at once both Samuel and Saul. Samuel delivered to Saul the last rebuke; he uttered his last prediction to the king whom he had anointed: "Why hast thou disquieted me to bring me up? To-morrow shalt thou and thy sons be with me." Nothing now remained but the last conflict. It ended disastrously for Saul and for his house. Three of his sons were slain; Saul himself was wounded, partly with self-inflicted strokes; perhaps the final blow was given by the Amalekite who stripped him of his royal crown and bracelet and hastened to inform David in hope of a reward. When the Philistines returned to the battle-field they found the body of the king; they hung his stripped and decapitated corpse on the walls of Bethshan, together with those of his sons, whence the men of Jabesh-gilead removed them to Jabesh. There they were burned and buried, and finally they were deposited by David in the family burial-place in Zelah. The length of Saul's reign was forty years, B. C. 1095-1055, according to the statement of Paul in the New Testament, Acts xiii. 21.

SAUL OF TARSUS. See PAUL.

SAUNDERS (sawn'derz), EPHRAEM DOD, D.D., was born in Morristown, New Jersey, and educated at Princeton. He studied theology in the seminary in that place; and when licensed to preach the gospel, he went to Virginia, where he labored with great zeal and much success in the formation of churches in desolate districts. His

185

known scholarship induced his friends to encourage him in opening an academy in Petersburg, Virginia, which he conducted for some time with great success. In 1848 he visited Europe, traveling very extensively through England, Scotland, Ireland, France and other countries on the Continent, and on his return to his native land he settled at Pottsville, Pennsylvania, where he engaged in laboring in the formation of a new church and congregation. He next settled in Philadelphia, where he established a flourishing academy, devoting himself with great diligence to preaching the gospel as opportunity was presented. He was characterized by great geniality of character, an earnest desire to do good, and his aim ever was

Church Langton, in Leicestershire, and afterward the rectory of Allhallows, in Bread street, London. When Mary came to the throne, the fervent, faithful and successful labors of Saunders could not pass unnoticed. Accordingly, he was apprehended, and after a series of imprisonments and trials before Gardiner and Bonner, in which he nobly defended himself and the cause for which he suffered, was condemned to be burnt. On the 8th of February, 1555, he was led to the place of execution. Having come within sight of it, a proposal was made to him by the officer, to which he replied, "I hold no heresies, but the doctrine of God, the blessed gospel of Christ; it is that I hold, it is that I believe, it is that I have taught and it is that I will

SULTAN ACHMET'S MOSQUE.—See MOSQUE and ORIENTAL ARCHITECTURE.

the extension of the Redeemer's cause. He was greatly cheered by witnessing the growth of a vigorous church adjoining his seminary grounds, for the welfare of which he toiled with earnestness. Attached as he was to his own denomination, he was well known for catholicity of feeling and his love for all good men. He died suddenly in 1872, in the sixty-fourth year of his age. His publications were in biography and matters pertaining to the theological questions of the day.

SAUNDERS, LAWRENCE, an English divine and martyr under Queen Mary, was educated at Cambridge. In the reign of Edward VI. he received orders and was made lecturer of Fotheringay. He was next made leader in the cathedral of Lichfield, where he was very successful in winning souls to God. He was thence removed to

never revoke." When he came to the place, he fell to the ground and prayed; he then arose, and embracing the stake to which he was chained, kissed it, saying, "Welcome the cross of Christ, welcome everlasting life." He endured his torments with the utmost fortitude and patience.

SAURIN (so-rang'), JACQUES, the "Protestant Chrysostom," as he was popularly called, and one of the most illustrious preachers of his day, was born at Nismes, in 1677. He was educated at Geneva, whither his parents had fled after the revocation of the Edict of Nantes. His studies, however, he for a while abandoned to serve under the duke of Savoy against Louis XIV. In 1700 he was ordained, having already gained great reputation for his eloquence. He became immediately the pastor of a French congregation in Lon-

don, which he left for The Hague in 1705, where for the rest of his life he ministered to his Protestant fellow-countrymen. Possessed of a clear logical faculty and great powers of graphic description, Saurin occupies deservedly a foremost place amongst the great orators of France. He died in 1730.

**SAVAGE** (sav'ej), **ARCHBISHOP**, presided over the see of York, and he presents an illustration of the characteristics which were often displayed among the dignified clergy of his age. He had held the bishoprics of Rochester and London, from the latter of which he was translated to York. The wealth of the see enabled him to gratify his tastes; and instead of residing at York and attending to the duties of the see, he preferred to occupy the palaces of Cawood and Serooby, which he elaborately adorned at vast cost. At these rural seats he was enabled to enjoy the diversion of hunting—"a sport," says Drake, "he was too passionately fond of to mind the business of his see." Cardinal Wolsey suc-

ORIENTAL SAWYERS.—See SAW and HANDICRAFT.

ceeded Savage in the see, yet he never once visited York, although he lived at Cawood a whole summer and part of a winter, as Drake observes, in "a reasonable good sort."

Savage died at Cawood Castle in 1507, and his chaplain, Thomas Dalby, archdeacon of Richmond, erected a splendid altar tomb to his memory in the north aisle of the choir of York minster. In 1813 it was repaired by the dean and chapter, and it is a fine specimen of mediæval art.

**SAVAGE, HENRY, D.D.**, was born in 1604, in Worcestershire. He entered Balliol College, Oxford, in 1621, where he became a Fellow in 1628. He was elected master of his college in 1630, and five years afterward he was made a prebendary of Gloucester and rector of Blaydon. The work by which he is best known is a "Commentary on the Foundation, Founders and Affairs of Balliol College," which he published under the quaint title "Balliol Fergus." He wrote on infant baptism, on Church reform and other subjects. He is charged with glaring mistakes and errors in his work on Balliol. He died in 1672.

**SAVAGE, JOHN A., D.D.**, who greatly distinguished himself as president of Carroll College, in Wisconsin, was born in the year 1800. For upward of twenty-three years he discharged the duties of the pastorate in the Presbyterian church in Ogdensburg, New York, whence he was removed to the growing State of Wisconsin, in expectation that his zeal, his prudence and his intelligence would advance the cause of education in a rising community. In this respect the confidence of his friends was fully justified. He died at Waukesha on December 13, 1864.

**SAVARAN** (sav'a-ran), 1 Macc. vi. 43, an appellation given to Eleazar of the Maccabean family, perhaps corrupted from Avaran, 1 Macc. ii. 5.

**SAVARY** (sa-va-re'), **NICOLAS**, a French traveler and writer of merit, born at Vitre, in Brittany, educated at Rennes, and in 1776 journeyed to Egypt, where he resided three years, attentively studying the manners and habits of the inhabitants as well as the antiquities of the country. On his return voyage he visited the islands of the Archipelago. In 1780 he published a translation of the Koran, and subsequently his "Letters on Egypt," a popular work, which was translated into English, German, Dutch and Swedish, and was prized in all. He also published "Letters on Greece." He was a man of good talents and refined taste, and possessed a warm imagination. He died at Paris in 1788.

**SAVERY** (sa'ver-e), **WILLIAM**, a distinguished preacher in the Society of Friends, was the author of several volumes of sermons which have been much esteemed. His publications began to appear at the close of the last century, and for more than thirty years they appeared with due regularity. His "Journal and Life," in one volume, are in the Friends' Library in Philadelphia, under date of 1837.

**SAVIAS** (sa-vi'as), 1 Esd. viii. 2, Uzzi, one in the line of high-priests, Ezra vii. 4.

**SAVILE** (sav'il), **BOURCHIER WREY**, who became curate of Tattingstone and chaplain to Earl Fortescue, began his literary career in 1853 by publishing a work on apostasy. Next, in 1858, followed his "First and Second Advent of Christ," to which succeeded a "Letter to the Rev. J. C. Ryle on Baptism." He then directed his attention to church rates, which in 1859 were before Parliament; and in 1861 he issued "Lyra Sacra; a Collection of Hymns, Ancient and Modern." A work of more importance, and involving antiquarian research, engaged him for some time, and in the same year he gave it to the public under the title "Introduction of Christianity into Britain." To this he added, in the following year, "Revelation and Science in respect to Bunsen's Biblical Researches, the Evidence of Christianity," etc. In 1863 he replied to the attack of Bishop Colenso on the veracity of the Pentateuch, and in the same year he published "Man, or the Old and New Philosophy," thus showing a great fertility of mind and remarkable diligence and industry.

**SAVILE, SIR HENRY**, a learned Englishman, born at Bradley, near Halifax, Yorkshire, November 30, 1549, and educated at Merton College, Oxford, of which he became Fel-

low, early distinguished himself as an excellent scholar, and after traveling on the Continent was appointed tutor of the Greek language to Queen Elizabeth. In 1585 he was appointed warden of Merton, over which society he presided with great dignity for thirty-six years, and in 1596 was advanced to the office of provost of Eton College. He was as great a favorite with James as he had been with Elizabeth, but declined all offers of promotion either in Church or State, resting satisfied with the honor of knighthood conferred upon him in 1604. After the loss of his son he devoted all his property and his time to the encouragement of learning, and with commendable munificence, in 1619, founded two professorships at Oxford, one of astronomy and the other of geometry, besides bestowing various sums of money, as well as lands, upon the university for the purpose of promoting improvements therein. He also presented some valuable books to the Bodleian Library. This amiable man died at Eton College, February 19, 1621-2. His character has been deservedly applauded by his learned contemporaries, who held that he was one of the most learned men of any age or nation. He published many classical works, but one of his greatest efforts was an edition of Chrysostom in eight folio volumes, which cost him forty thousand dollars. He also published Bradwardin's De Causa Dei and Lectures on the Geometry of Euclid.

**SAVIOUR.** See ATONEMENT, and JESUS CHRIST.

**SAVIOUR, ORDER OF SAINT**, a religious order of the Roman Church, founded by St. Bridget, about the year 1345, and so called from its being pretended that our Saviour himself declared its constitution and rules to the foundress.

**SAVONAROLA** (sa-vo-na-ro'lah), **FRA GIROLAMO**, the celebrated Christian reformer in the Church of Rome, was born at Ferrara, in 1452. His mother, a pious woman, encouraged in him from boyhood the religious bent of his mind; and having applied himself to the study of theology, chiefly on the works of Thomas Aquinas, he entered, when not very young, through his admiration of the great schoolman, the Dominican order, and in 1488 he was made prior of the convent of San Marco, in Florence. The manners of the Florentines were growing more and more corrupt under the influence of heathen philosophy and Medicean policy. Savonarola attempted to stem the progress of unbelief and to save the freedom of the commonwealth by his preaching. In his sermons to the Florentine people he exalted with fervid eloquence the purity of primitive Christianity, contrasting it with the rotten condition of the Church in his age. The popular party having finally got the upper hand, Savonarola became one of the leaders of the republic even in political matters. He reformed the state, and endeavored to restore republican freedom through religious austerity and civic virtue, applying at the same time his views of moral reform to public education, letters, science and art, which in his opinion were all blighted by paganism. Alexander VI. (Borgia) was then on the pontifical chair. His conduct and that of his children was a scandal to the Church. Savonarola fearlessly attacked from the pulpit the papal court. He was summoned to Rome, but refused obedience, and Alexander VI. excommunicated him. The Florentine government—all who were earnest and devoted in the

city—supported the austere monk, but a strong party of free-thinkers, partisans of the Medici and Libertines, was meanwhile forming itself against his influence and preaching. Adverse friars—the Franciscans and Augustines in particular—joined the reaction. A fanatical monk offered to prove the justice of papal excommunication by the ordeal of fire, challenging Savonarola to pass with him through a burning pile. The trial, which had been fixed for the 17th of April, 1498, by some accident or other, did not take place, to the great disappointment of the assembled multitude. Tumults broke out in the town. The convent of St. Mark was stormed by the enemies of the reformer, who was imprisoned, together with two fellow-monks. They were tried under judges appointed by the pope, and condemned to be burnt alive. They suffered with heroic constancy torture and death, and their ashes were thrown into the river Arno. The memory of Savonarola is held in reverence by the people of Italy even in our days. His numerous works, moral, theological and mystic, as well as his sermons and poems, have of late formed the subject of accurate study in Germany, France, England and elsewhere. He died in 1498.

**SAVOY** (sa-voi') **CONFERENCE**, a series of meetings held by royal commission at the residence of the bishop of London, in the Savoy, in the year 1661, between the bishops and the non-conformist ministers, in order so to review, alter and reform the liturgy as to meet the feelings of those who had serious scruples against its use. The commission comprehended the archbishop of York, with twelve bishops on the one side and eleven nonconformist ministers on the other. The negotiation turned out a complete failure.

**SAVOY CONFESSION OF FAITH**, a declaration of the faith and order of the Independents, agreed upon in their meeting at the Savoy, in the year 1658. This was reprinted in the year 1729. It differs from the Westminster only in relation to Church government.

**SAW.** This instrument was used by the Hebrews for sawing both wood and stone, 1 Ki. vii. 9. Ancient saws have been discovered, as a double-handed iron one at Nimroud. Egyptian saws appear to have been only single-handed, the teeth inclining, as is now customary in the East, toward the handle, and not from it, like ours. It is not quite clear whether David's putting the subdued Ammonites under saws, 2 Sam. xii. 31; 1 Chr. xx. 3, implied torture; the last-named place would certainly favor the notion that it did. Sawing asunder was a punishment still practiced in the East. According to Jewish tradition, Isaiah was so put to death, Heb. xi. 37.

**SAWYER** (saw'yer), **JOHN, D.D.**, was born at Hebron, Connecticut, in 1755, and educated at Dartmouth College. He served in the army, and was present at the surrender of General Burgoyne. He turned his attention to the ministry, and in 1787 he was ordained as pastor of the Congregational church of Orford, New Hampshire, from which he retired in 1795. For ten years, from 1793 to 1808, he labored at Boothbay, Maine, and for more than forty years he served as a missionary in that State. It is recorded of him that in June, 1857, when he was in the one hundred and second year of his age, he addressed a large audience for upward of an hour. He died at Bangor, Maine, in 1858, in the one hundred and third year of his age.

**SAWYER, LEICESTER AMBROSE**, was born at Piekney, New York, and educated at Hamilton College. He was ordained to the ministry of the Presbyterian Church in 1831, and for some time he served as president of Central College, Ohio. In 1854 he became pastor of the Congregational church at Westmoreland, New Jersey. He is well and favorably known as a writer. In 1836 he published "Elements of Biblical Interpretation," "Mental Philosophy" in 1839, and in 1845 he issued his "Moral Philosophy." To this succeeded "Organic Christianity" in 1854, and in 1858 he published a new translation of the New Testament, to which, in 1860, he added a volume of the Old Testament, and in 1862 a work entitled "Biblical Science Improved."

**SAWYER, THOMAS JEFFERSON, D.D.**, was born in 1804, at Reading, Vermont, and educated at Middlebury College, where he graduated in 1829. Next year he was placed over a congregation of Universalists in New York, and in 1845 he became principal of the Clinton Liberal Institute at Oneida, New York. Here he also taught theology. He returned to his charge in New York in 1852, and shortly afterward he engaged in a discussion with a Baptist clergyman, the Rev. Isaac Westcott, and the debate was published in 1854 with the title "Discussion of the Doctrine of Universal Salvation." On retiring from New York, he aided in establishing Tufts College, where he assumed the duties of the theological chair in 1869. He has also done much in founding the theological school at Canton, New York. His wife, Caroline M., whose maiden name was Fisher, has been a prolific writer both of poetry and prose, and an excellent translator from the German.

**SAXO GRAMMATICUS** (sax'o gram-mat'e-kus), a celebrated writer whose origin and birth-place are involved in obscurity. He is generally supposed to have been a native of Zealand, an island of Denmark, and to have flourished in the twelfth century. He studied theology, was employed in the cathedral of Roschild, and in 1161 went to Paris to invite some of the monks of St. Genevieve to come and endeavor to reform the morals of the Danish priests. He died about the year 1208, aged upward of seventy, and was buried in Roschild cathedral, where, three centuries subsequently, Lago Urne, bishop of Scalandra, placed an inscription on his tomb.

**SAXON ARCHITECTURE.** The buildings of the Anglo-Saxons were usually of wood,

rarely of stone, until the eleventh century. The only dated examples of this style in England are about the middle of the eleventh century, as at Deerhurst, in Gloucestershire, with the exception of a few remains near the mouth of the Tyne, which are of an earlier and distinct character. The buildings which remain of this style are chiefly in the part of England where the Danes held sway, and near Lincoln and Gainsborough, in Northamptonshire; and in Monkwearmouth, at the mouth of the Wear, there are churches in this style. The example from Earl's Barton, in Northamptonshire, gives a correct idea of a tower in the early period, and the tower at Monkwearmouth

THE TOWER OF EARL'S BARTON CHURCH.—See SAXON ARCHITECTURE.

church is also a perfect specimen. The walls were usually built of rubble stone, without buttresses, and often plastered on the outside. The quoins are usually of hewn stones placed alternately flat and on end; the walls are often ornamented externally with flat vertical strips of stone projecting slightly from the surface, resembling wooden framing; the jambs of doorways and other openings are very commonly of this "long and short work," and around the arch there is often a projecting course, occupying the situation of a hood-moulding; the arches are plain, but sometimes rude and massive mouldings were added; the arches are semicircular; and this rude style soon gave place to the bolder, more majestic and grand forms of the Norman, which soon became exceedingly splendid.

**SAYER** (say'er), GREGORY, who was educated at Cambridge, became a Benedictine monk in 1585. His name has come down to posterity because of his being the author of the "Clavis Regia Sacerdotum Casuum Conscientie," or a "Royal Key to Open Cases of Conscience, or a Theological Treasury of Morals." It appeared at Antwerp in a folio volume in 1619. It is now very rare, and is sought after by book collectors.

**SCALIGER** (skal'e-ger), JOSEPH JUSTUS, born at Agen in 1540, was the son of a celebrated scholar and eritic. He studied at Bordeaux and under his father, but after the death of the latter he went to Paris to attend the lectures of Turnebus. His impatience to improve, however, could not be content with the slow progress of regular lectures, and he applied himself to Greek without the assistance of an instructor, and when a perfect master of that language turned his attention to the Hebrew. He became master of thirteen different languages. So much learning, to which was united a profound knowledge of the sciences, rendered his name very celebrated. In 1603 he accepted the chair of belles-lettres at Leyden, and died there of dropsy January 21, 1609. Like his father, Scaliger possessed great abilities, but was so much his superior in learning that he was deservedly called the most learned man of the age. He had been a Romanist, and was converted to Protestantism, and made himself very famous by a warm controversy with Scorpilus, which see. The works of this extraordinary man are numerous and various, but the most celebrated and useful is his great work on chronology, in which he lays the foundation of a regular and systematic chronology, especially by the invention of the Julian period, meriting therefor the name which he has received of the Father of Chronology. He also wrote *Thesaurus Temporum*, in which he corrected some of the errors of his former work, besides many other works of more or less merit.

**SCANDAL** (skan'dal), a snare, encumbrance or obstacle to piety. In Scripture and in ecclesiastical authors it is put for anything that a man finds in his way which may occasion him to trip. Calmet remarks that the Greek word *skandalon*, or *proskomma* or *skolon*, answers to the Hebrew *micshol*, which signifies fall, ruin, sin, what hinders from walking and makes one fall, which comes from the root *cashal*, to fall, to tumble, and in the conjugation *hiphil* signifies to cause to fall, to overthrow, to lay snares, etc. See OFFENCE.

When we read that the Jews were scandalized at the mean family of Christ, Matt. xiii. 57; Luke vii. 23, it implies mistake, since his family was truly royal; at the doctrine of the cross, Gal. v. 11, it implies mistake, since the resurrection had removed that cause of scandal; and also at the persecutions suffered by Christians, since that was really their glory, etc. Christ has promised to remove out of his kingdom everything that causeth scandal, Matt. xiii. 41.

**SCAPE-GOAT**, one of the two goats presented "before the Lord at the door of the tabernacle of the congregation," Lev. xvi. 7, on the day of atonement. Lots were cast upon them, one to be "for the Lord," the other "for the scape-goat," or "for Azazel," Lev. xvi. 8; compare margin. The ceremonies and typical meaning of the service have been already described. See ATONEMENT, DAY OF.

**SCAPULA** (skap'u-la), JOHN, a lexicographer, who studied at Lausanne, and was subsequently engaged in the printing-house of Henry Stephens. While thus employed he privately made an abridgment of the great work which his master was preparing for the press, and by publishing it in 1580, under the title of a Greek lexicon, not only gained a considerable sum, but dishonorably ruined, in some degree, the laborious *Thesaurus* of Stephens, which, when it appeared, found comparatively few purchasers.

**SCAPULARY** (skap'u-la-re), a portion of the dress of the monastic orders, consisting of two bands of woollen stuff, of which the one crosses the back or shoulders and the other the stomach. According to the Abbé Fleury, the scapulary originated with St. Benedict, and was a large and heavy covering of the shoulders worn by the early monks in their rural labors, for the convenience of carrying loads and to protect the tunie. Simon Stock, an Englishman, general of the Carmelites in the thirteenth century, first introduced, under the authority of a vision, the notion that the

ANCIENT EGYPTIAN SCARABÆI.—See SCARABÆUS.

scapulary is an especial sign of devotion to the Virgin Mary. Since that time it has not been an uncommon belief that whoever wears it is safe from dangers and is sure of salvation. The scapulary of lay persons consists of two pieces of stuff on which the name of the Virgin is embroidered.

**SCARABÆUS** (skar-a-be'us), an antiquarian term. The use and the meaning of the scarabæus as a symbol are as yet among the mysteries of archaeological science. The Egyptians, it is said, found in it an emblem of the world instinct with the seeds of life, because the kind of beetle represented by it forms a ball of earth in which to deposit its eggs. It is also called a type of the sun. However this may be, it was habitually worn by the Egyptians and the Etrurians as an amulet. Several different styles of the scarabæus are distinguishable. The ancient Egyptian scarabæus was plain, or inscribed with characters, and was made of an opaque stone, basalt or porphyry. The Etrurian scarabæus (found in quantities in sepulchres) was of semi-transparent stone, cornelian, onyx, sardonyx, agate or jasper. It is almost always engraved with the figure of a god or genius, supposed to be the chosen protector of the

individual who wore it. The modern Egyptian scarabæus of Roman times was generally of precious or semi-precious stones, and rudely engraved, used as an ornament, as the religious idea seems to have been forgotten.

**SCARLET.** See COLORS.

**SCEPTIC** (skep'tik) properly signifies considerate and inquisitive, or one who is always weighing reasons on one side and the other without ever deciding between them. The word is applied to an ancient sect of philosophers founded by Pyrrho, who denied the real existence of all qualities in bodies except those which are essential to primary atoms, and referred everything else to the perceptions of the mind produced by external objects; in other words, to appearance and opinion. In modern times the word has been applied to Deists or those who doubt of the truth and authenticity of the sacred Scriptures. One of the greatest sceptics in later times was Hume; he endeavored to introduce doubts into every branch of physics, metaphysics, history, ethics and theology. He has been confuted, however, by many able writers. See INFIDELITY.

**SCEPTRE** (sep'ter), a rod or staff of authority, often richly decorated, Ezek. xix. 11. Hence a king is designated as one that "holdeth the sceptre," Amos i. 5. At the Persian court the holding out of the sceptre to a person was a mark of the king's grace and favor to him, Esth. iv. 11; v. 2; viii. 4. A carved ivory staff found at Nimroud is supposed to be a sceptre. The word is often used figuratively as denoting authority or dominion, Gen. xlix. 10; Ps. xlv. 6; Heb. i. 8.

**SCEVA** (ske'va), a Jewish priest whose sons were exorcists, Acts xix. 14.

**SCHAAF** (shawf), CHARLES, a learned German, born at Nuss, near Cologne, in 1646, was educated at Duisbourg, and there became professor of Oriental languages, whence he removed in 1679 to Leyden to fill the same office. He died of apoplexy at Leyden in 1729. He wrote a number of philological works in connection with Hebrew, Chaldaic and Syriac literature, besides making a Syriac version of the New Testament.

**SCHAEFFER** (shā'fer), FREDERICK DAVID, DAVID FREDERICK, and FREDERICK CHRISTIAN, were eminent Lutheran ministers who greatly distinguished themselves in their denomination. Frederick David was born in Frankfort-on-the-Main in 1760, and after a course of education in his native land, he accompanied an uncle to this country, and settled in York county, Pennsylvania. He was licensed to preach in 1786 by the Synod of Pennsylvania, and in 1788 he was ordained. He preached for some time at Carlisle, and thence he went to Germantown, where he labored till 1812, when he settled in Philadelphia as colleague with Dr. Helmuth. Here he continued for twenty-two years, and in 1834 he removed to Frederick, Maryland, where he suffered from declining health until January, 1836, when he died. On the usage of the German language in Sabbath services, he held that worship should be continued in that tongue, but that provision should be made for those who understood English. His son David Frederick was born in 1787, at Carlisle, and after a thorough education he was settled as pastor at Frederick, Maryland, where

he remained till his death, in 1837. He was a fine scholar and an excellent man. He edited the "Lutheran Intelligencer" for several years, and his memory was precious among all who knew him. Another son, Frederick Christian, was born in Germantown, Pennsylvania, in 1792, licensed to preach in 1812, and settled as pastor in Harrisburg, whence he was removed to New York, and where he continued until his death, in 1832. He wrote on the Reformation, on the parables, and several of his sermons were published. Several members of this eminent family are in the ministry, and they all maintain the high characters of their ancestors for mental endowments, love of education, solid acquirements and decided piety.

**SCHALL** (shawl), JEAN ADAM, the learned Jesuit missionary to China, was born at Cologne, in 1591. He reached China in 1622, and employed himself without interruption and with success in his apostolical duties, and in the study of the sciences which are connected with astronomy. He superintended the construction of a church, which was built partly by the aid of the new converts and partly by the assistance of the Chinese who had not embraced the faith of the missionary, who gave their aid solely in consequence of the interest which had been awakened in the study of mathematics. The reputation he had acquired by his scientific knowledge brought him into intimate associations with the government, by whom he was selected to perform important services; these relations held during the consecutive reigns of three emperors, and in this period he obtained a much higher degree of estimation and favor. The emperor held Schall personally in great consideration. Schall took advantage of the royal favor to promote the cause of the mission. He obtained a decree for the free preaching of Christianity, which so increased the number of converts that, it is said, in fourteen years, from 1650 to 1664, one hundred thousand Chinese were baptized. On the death of Chun-tchi the hopes which the auspicious commencement of their labors had caused the missionaries to indulge very soon vanished. The regent who governed the empire during the minority of Khanghi began a persecution against the Christians, of which Schall was one of the first victims. He was accused of having had the audacity to hold up and venerate a crucifix before the image of the deceased emperor. He and three companions were loaded with irons, dragged, during nine months, from tribunal to tribunal, and finally condemned to be strangled and cut into a thousand pieces. The sentence was not, however, carried into execution, but, exhausted and worn down by ill treatment, he expired August 15, 1669. The composition of one hundred and fifty volumes in Chinese has been attributed to Schall, but this has been pronounced an exaggeration, and his publications in the Chinese language computed at twenty-four.

**SCHAUM** (showm), JOHN HELFRICH, was born in Giesen, in Germany. He came to this country by way of England, and settled in Philadelphia in 1745. He was sent as a "Diaconus" by Pastors Muhlenberg and Brunholz to the Raritan in 1747, and next year he went to York, Pennsylvania, and here he remained for seven years. In 1755 he was called to Tohickon, and until the close of his life he labored with great diligence in that place, in New Providence, Upper Dublin and the districts around. He died in 1778, having displayed a character

free from all guile, great gentleness, piety, zeal and humility.

**SCHELLING** (shel'ling), FREDERICK WILLIAM JOSEPH, one of the most distinguished German philosophers of the nineteenth century, was born at Leonburg, in Swabia, January 27, 1775. After studying theology in the university of Tubingen, he visited Jena, that he might profit by the lessons of Fichte, who at that time professed the philosophy of Kant, greatly modified by himself. Schelling at first followed the doctrines of Fichte, and wrote in support of them, but abandoned them some years after for that doctrine of identity which soon became celebrated under the name of the philosophy of nature. He wrote many works advocating this philosophy, the first of which was published in 1797. At this time, and up to the year 1812, he was a Pantheist in the fullest sense of the word. During this period, his fame having spread throughout Germany, he was offered the chair of philosophy in the university of Wurzburg, which he occupied four years, and was named a member of the academy of sci-

INSCRIPTIONS ON EGYPTIAN SCARABÆI.—See SCARABÆUS.

ences at Munich, as well as secretary-general of the class of fine arts. From 1812 to 1840 Schelling wrote nothing, but in 1840, being invited by King Frederick William IV. to lecture at Berlin, he made a complete recantation of his Pantheism. During the closing years of his life, at Berlin, he held the office of privy counselor. He died in Switzerland, August 20, 1854, in his eightieth year.

**SCHELLING, JOSEPH F.**, general superintendent at Maulbrunn, in Wurtemberg, was born in 1737, and died in 1812. Among his contributions to Biblical literature are "The Writings of Solomon, translated into Latin, with Notes," and a "Dissertation on the Use of the Arabic to a thorough Knowledge of Hebrew."

**SCHENCK** (skenk), GEORGE, was born in 1816, at Matteawan, New York, and after an academical training he was sent to Yale College, and here he came under gracious influences which affected him during all his life. He had received an injury in early life on ice, but his great zeal enabled him to do a work in the ministry which placed him in the front rank of those who in his day were laboring for Christ. His theological

education was carried on at New Brunswick, New Jersey. In October, 1840, he was settled as pastor in the Reformed Protestant Dutch Church of Bedminster, New Jersey, and he continued in this charge until his death. He was eminently practical as a preacher, but yet his matter was saturated with evangelical truth. He was greatly blessed in his ministry. He had singular ability as a preacher, and owing to his systematic habits he was able to accomplish an amount of work which few men could have undertaken. He died in July, 1852.

**SCHEWENKFELDIANS** (schwenk'fel-di-anz), a denomination in the sixteenth century, so called from one Gasper Schewenkfeldt, a Silesian knight. He differed from Luther in three chief points. The first of these points related to the doctrine concerning the eucharist. Schewenkfeldt inverted the words of Christ, *This is my body*, and insisted on their being thus understood: *My body is this*—i. e., such as this bread which is broken and consumed, a true and real food which nourisheth, satisfieth and delighteth the soul. *My blood is this*—that is, such its effects as the wine which strengtheneth and refresheth the heart. Secondly, he denied that the external word which is committed to writing in the Holy Scriptures was endowed with the power of healing, illuminating and renewing the mind; and he ascribed this power to the internal word, which, according to his notion, was Christ himself. Thirdly, he would not allow Christ's human nature, in its exalted state, to be called a creature or a created substance, as such a denomination appeared to him infinitely below its majestic dignity, united as it is in that glorious state with the divine essence.

**SCHIMMELPENNING** (shim'mel-pen-nink), MARY ANNE, best known by her "Memoirs of Port Royal," was the eldest child of Samuel and Lucy Galton, of Dudson, near Birmingham, and was born on November 25, 1778. Her parents belonged to the Society of Friends. Her father was known as a man of science and was also engaged in mercantile pursuits. Her mother, a lineal descendant of Barclay the apologist, was a woman of uncommon powers of mind, philosophic views and strong principles. She joined the Church of United Brethren, or Moravians, in 1818. In 1806 she married Lambert Schimmelpenninck, of the Dutch family of that name, and went to reside at Bristol. Her "Memoirs of Port Royal" have been often reprinted. Her literary labors comprehend essays on various religious subjects, an ingenious theory on the "Principles of Beauty" and pamphlets in the anti-slavery cause. A slight paralytic seizure in 1837 for a time impaired the vigor of her mind, and was the occasion of her removal to Clifton. Her genius was characterized by that mixture of pathos and humor that belonged to the poet Cowper, and which, united to her wit and originality, gave her unrivaled powers of conversation. Her religion partook of the largeness of her mind, and she had the rare art, without effort, of making it a part of the daily interest of life. She died at Clifton August 29, 1856.

**SCHINDLER** (shind'ler), VALENTINE, professor of Oriental languages at Wittenberg and Helmstadt; died in 1610. He was one of the most thoroughly learned men of his time in Oriental languages and literature, and among his publications was one which was a marvel of learned accu-

racy, a lexicon in five languages, Hebrew, Syriac, Chaldaic, Talmudico-Rabbinic and Arabic, which was of sufficient weight to be republished in England.

**SCHISM** (sizm), from the Greek *schisma*, "a rent," "a cleft," "a fissure," originally any division or separation, has come to be applied only or chiefly to divisions or separations arising from diversity of opinions among people of the same religion and faith. All separations, however, must not, properly speaking, be considered as schisms.

"Schism," says a learned critic, "is properly a division among those who stand in one connection of fellowship, but where the difference is carried so far that the parties concerned entirely break up all communion one with another, and go into distinct connections for obtaining the general ends of that religious fellowship which they once did, but now do not carry on and pursue with united endeavors, as one church joined in the bonds of individual society; where this is the case, it is undeniable there is something very different from schism; it is no longer a schism in, but a separation from, the body." Dr. Campbell also supposes that the word schism in Scripture does not signify open separation, but that men may be guilty of schism by such an alienation

ANCIENT SCEPTRES.—See SCEPTRES.

of affection from their brethren as violates the internal union subsisting in the hearts of Christians, though there be no error in doctrine nor separation from communion. See 1 Cor. iii. 3, 4; xii. 24-26.

The Great Schism of the West is that which happened in the times of Clement VII. and Urban VI., which divided the Church for nearly fifty years, and was at length ended by the election of Martin V. at the Council of Constance.

The Romanists number thirty-four schisms in their Church; they bestow the name English Schism on the Reformation in that kingdom. Those of the Church of England apply the term Schism to the separation of the Presbyterians, Independents, Baptists and Methodists.

**SCHISM BILL**, an act passed in the reign of Queen Anne, in virtue of which nonconformists teaching schools were to be imprisoned three months. Each schoolmaster was to receive the sacrament and take the oaths. If afterward present at a conventicle, he was to be incapacitated and imprisoned; he was bound to teach only the Church catechism. But offenders conforming were to be recaptured, and schools for reading, writing and the mathematics were excepted. It was to have extended to Ireland; and if it had, its course was designed to have been followed with an attempt to deprive the dissenters, all over the kingdom, of their right

to vote in elections for members of Parliament. But the queen died the very day the act was to have received her signature and taken force, and it fell to the ground.

**SCHLEIERMACHER** (shli-er-ma'kher), **FREDERICK**, a celebrated divine, born at Breslau, in 1768. His parents were members of the Church of the United Brethren, but in 1787 he joined the Lutheran Church and entered the university of Halle, where he listened to the instructions of Nosselt, Knapp and Wolf; but adopting Spinoza as his model, he became a Pantheist. He commenced public life as a preacher, subsequently became a professor of theology at Halle, and was distinguished for the energy of his character as well as the extent of his acquirements. The Biblical Repository speaks of him as a man of "great simplicity of manners and one of the deepest thinkers of the day, who wandered at will over the whole field of theology. He seems to stand between the rationalists and evangelical party, being, however, more distant from the former than the latter." He died at Berlin, February 12, 1834.

**SCHLEUSNER** (shlens'ner), **JOHN FREDERICK**, D.D., professor of theology at Wittenberg, was born in 1759. He wrote "Contributions to the Illustration of Isaiah and the Proverbs of Solomon," "Exegetical and Critical Observations on the Lamentations of Jeremiah," and various other works of minor importance. His "Greek and Latin Lexicon of the New Testament" was a great advance, in its time, in New Testament lexicography, but it has been superseded by more improved lexicons. Prof. Schleusner also published a lexicon of the Septuagint, of prime value.

**SCHLICHTINGIUS** (shlik-ting'ge-us), **JONAS DE BUKOWIC**, a native of Poland, banished by the diet of Warsaw on account of his Socinian principles, retired to Moscow and Germany, and then settled at Züllichau, where he died in 1661, aged sixty-five. His works are chiefly commentaries on the Holy Scriptures.

**SCHMIDT** (shmit), **CHRISTIAN F.**, professor of theology at Wittenberg; born in 1741 and died in 1778. He was a profound scholar; and though he died young, he made many exceedingly valuable contributions to sacred literature. Among his most prized works are "The Ancient History and Vindication of the Old and New Testaments," "Observations on the Epistle to the Hebrews," "Annotations on the Epistle to the Romans," and a treatise on the question whether the Revelation is of divine authority.

**SCHMIDT**, **ERASTUS**, professor of mathematics and Greek at Wittenberg; born in Misnia, in 1560; died at Wittenberg, in 1637. He was a scholar of vast attainments, and his works are still deservedly prized, especially his Greek concordance to the New Testament, which has been repeatedly republished, and has been pronounced by a capable critic the best that has ever been executed. He also published a highly-improved edition of Beza's version of the New Testament and an edition of Pindar with learned notes.

**SCHMIDT**, **JOHN ANDREW**, a Lutheran divine, born at Worms, in 1662, was professor of

theology at Marienthal, and died there in 1726. He wrote a "Compendium of Church History," a "Small Church Dictionary," etc.

**SCHMIDT**, **JOHN FREDERICK**, was born in 1746, at Frohse, in the principality of Halberstadt. He was educated at the celebrated orphan house at Halle, then under the care of the well-known Francke. Here he made great progress in mathematics, astronomy and history both secular and ecclesiastical. He became a teacher in the institution; and when Dr. Helmuth was appointed to his work in America, Dr. Francke arranged that Schmidt should accompany him. From Hamburg they proceeded by way of London, and in April, 1770, they reached Philadelphia. He settled at Germantown, where he preached for seventeen years, and in 1785 he became assistant to his friend Dr. Helmuth, in Philadelphia. He died in 1812, in his sixty-seventh year, having maintained a high character as a learned, eminent and most faithful man and minister. His love for mathematical science continued with him all his life, and this bent of his mind gave him great accuracy in preaching, though in the pulpit Dr. Helmuth was more admired because of his ability to reach the popular mind.

**SCHMUCKER** (shmuk'er), **JOHN GEORGE**, D.D., was born in 1771, at Michaelstadt, in the duchy of Darmstadt. He was brought to America by his father, who emigrated in 1785. He lived in Northampton county, Pennsylvania, but a year later he settled at Woodstock, Virginia. Being brought under serious impressions by a layman of the Baptist Church, he desired to enter the ministry, and accordingly he went to Philadelphia to be educated by Drs. Helmuth and Schmidt. In 1792 he was admitted as a member of the synod of Pennsylvania, and his first charges were in York county, Pennsylvania, where he did much good, laboring at the same time in the study of Hebrew and theology. In 1794 he was settled at Hagerstown, Maryland; and here he had eight congregations to care for, and yet he was only twenty-two years of age. In 1807 he was called to succeed Dr. Kunze in New York, but he refused to go, and in 1809 he agreed to settle at York; and here he labored for twenty-six years. In 1852, in declining health, he removed to Williamsburg, Pennsylvania, where some members of his family resided, and here he died in 1854, in his eighty-fourth year. He held a high place in the Lutheran Church. He did much to promote the establishment of the Pennsylvania College, of which he was a trustee for twenty years. He was president of the Foreign Missionary Society, president of the directors of the Theological Seminary of the General Synod, and at the time of his death he was senior vice-president of the American Tract Society.

**SCHNEIDER** (shni'der), **JOHANN CHRISTIAN FRIEDRICH**, a distinguished composer, was born in 1786, near Zittau. His father began life as a weaver, but gained an appointment of organist at Watersdorf, and himself superintended the education of his boys. At an early period the son was distinguished, not merely as a pianoforte player, but as a composer; and during the course of his life, though contemporaneous with the career of Beethoven, Weber, Spohr and Mendelssohn, he took his place among the musical creators of Germany. His productions include every form of

musical composition, theatrical writing alone excepted. His oratorios—the works by which he is best known—comprise his "Deluge," "Last Judgment," "Paradise Lost," "Pharaoh," "Christ the Master," "Absalom," "Christ the Child," "Gideon," "Gethsemane and Golgotha," besides cantatas, psalms, hymns and other service music. At the time of his death he was chapel-master to the duke of Anhalt-Dessau. He died in 1853.

**SCHNORR VON KARLSFELD** (shnor fon kar'ols-felt'), **JULIUS**, whose "Bibel in Bilden" has made him a name among Bible readers, while his frescoes and other paintings have given him an imperishable fame, was born at Leipsic, in 1794. After some time devoted to study in Vienna, he spent ten years in Rome, where, after mastering his art, he painted his "Wedding at Cana," "Jacob and Rachel," "Ruth in the Field of Boaz" and other pictures, besides assisting in the decoration of the Villa Massini. He then settled at Munich. He was appointed, in 1827, professor of historical painting in the academy by King Ludwig, and here he remained nineteen years. He removed in 1846 to Dresden, where he spent his remaining years as professor of painting and director of the picture-gallery. Schnorr executed many other paintings and designs, and his works display great force of imagination, variety of invention, and surprising technical skill. He died at Dresden, April 13, 1853.

**SCHNURRER** (shnoor'er), **CHRISTIAN F.**, chancellor and professor of Greek and Oriental literature at Strasburg, where he had previously been extraordinary and then ordinary professor of philosophy; born at Canstadt, in Württemberg, in 1742, and died at Strasburg, in 1822. He published a "Bibliotheca Arabica," containing an account of all the printed Arabic works, "Philological and Critical Dissertations," which are highly valued on the Continent, and display much sound and well-applied learning.

**SCHOLASTIC** (sko-las'tik) **DIVINITY** is that part or species of divinity which clears and discusses questions by reason and argument; in which sense it stands, in some measure, opposed to *positive* divinity, which is founded on the authority of Fathers, councils, etc. The school divinity is now fallen into contempt, and is scarcely regarded anywhere but in some of the universities, where they are still by their charters obliged to teach it.

**SCHOLEFIELD** (sköl'fēld), **JAMES**, regius professor of Greek in the university of Cambridge, England, canon of Ely and incumbent of St. Michael's Church, Cambridge, was born in Oxfordshire, in 1789, entered Trinity College in 1809. He was ordained in 1813, and became curate to Charles Simeon; in 1815 he was elected Fellow of his college, and in 1825 he became regius professor of Greek. His connection with St. Michael's began in 1823, and for thirty years he labored there with rare fidelity. His clerical duties, added to his professional labors in the university, made his responsibilities extremely onerous, but he never shrank from them. He died April 4, 1853, suddenly, while apparently in the vigor of life. Besides numerous sermons, he published "Hints for an Improved Translation of the New Testament," a work of which Home speaks in high praise; "The New Testament, the Greek and English in Parallel Columns," "Re-

lections and Prayers for Passion Week," and other works of less note.

**SCHOLIA** (sko'le-a), short notes of a grammatical or exegetical nature. Many scholia are found on the margin of manuscripts, or interlined, or placed at the end of a book. They have also been extracted and brought together, forming what is called *Catena Patrum*.

Writers of scholia on passages of Scripture are called **SCHOLIASTS**. A multitude of scholia from the ancient Christian Fathers, especially those of the Greek Church, have come down to us in their works. Their value, of course, depends on the learning and critical acumen of the authors. Theodoret, Theophylact and Eusebius are among the best of them.

**SCHOLTZ** (shölts), **JOHANN MATHIAS AUGUST**, the German Biblical scholar and philologist, was born near Breslau, in 1794. He was educated at the university of that city, and early devoted himself to the task which occupied so many years of his life, the critical examination of the text of the New Testament. He spent several years in visiting the principal European libraries and collating the manuscripts of the Greek Testament, traveled in Egypt and Palestine, was ordained priest in 1821, and two years later was appointed professor of theology at the university of Bonn and canon of the cathedral. His principal work, the edition of the Greek New Testament, appeared in 1830-1835. Scholtz maintained the existence of two *recensions*, or families of manuscripts, the Alexandrian, which he called Occidental, and the Constantinopolitan, which he called Oriental; and in forming his text he gave the preference to the latter, believing them directly descended from the autographs of the writers. Among the other works of Scholtz is a "Hand-Book of Biblical Archaeology." He died in November, 1852.

**SCHOOL**. See **EDUCATION**.

**SCHOOLMEN** (skool'men), a body of men in the twelfth, thirteenth and fourteenth centuries, who framed a new method of divinity, called Scholastic Theology. See **SCHOLASTIC DIVINITY**. Their system was founded upon and confirmed by the philosophy of Aristotle, and lay, says Dr. Gill, in contentious and litigious disputations, in thorny questions and subtle distinctions. Their whole scheme was chiefly directed to support the dogmas of the age by logical reasonings; so that by their means popish darkness was the more increased and Christian divinity almost banished out of the world.

"Considering them as to their metaphysical researches," says an anonymous but excellent writer, "they fatigued their readers in the pursuit of endless abstractions and distinctions, and their design seems rather to have been accurately to arrange and define the objects of thought than to explore the mental faculties themselves. The nature of particular and universal ideas, time, space, infinity, together with the mode of existence to be ascribed to the Supreme Being, chiefly engaged the attention of the mightiest minds in the Middle Ages. Acute in the highest degree, and endowed with a wonderful patience of thinking, they yet, by a mistaken direction of their powers, wasted themselves in endless logomachies, and displayed more of a teasing subtlety than of philosophical depth. They chose rather to strike into the dark and intricate by-paths of metaphysical science than to

pursue a career of useful discovery; and as their disquisitions were neither adorned by taste nor reared on a basis of extensive knowledge, they gradually fell into neglect when juster views in philosophy made their appearance. Still, they will remain a mighty monument of the utmost which the mind of man can accomplish in the field of abstraction. If the metaphysician does not find in the schoolmen the materials of his work, he will perceive the study of their writings to be of excellent benefit in sharpening his tools. They will aid his acuteness, though they may fail to enlarge his knowledge."

Some of the most famous were—Damascene, Lanfranc, P. Lombard, Alex. Hales, Bonaventure, Thomas Aquinas, Duns Scotus and Durandus.

**SCHOOLS OF THE PROPHETS**. See **PROPHET**.

**SCHOPENHAUER** (sho-pen-how'er), **ARTHUR**, a German philosopher, was born at Dantzic, in 1788. He studied at Göttingen, attended

THE SCORPION.—See SCORPION.

the lectures of Fichte at Berlin, spent some time at Weimar and Dresden, and led a very restless life till 1831, when he settled at Frankfurt-on-the-Main. He wrote a number of works on philosophy, the principal one being "The World as Will and Appearance" (or "Representation"). It appeared in 1819, and after being neglected for many years attracted a good deal of attention and received some sharp blows of criticism. The practical upshot of his system, which makes *Will* the one sole reality, is intolerably melancholy, taking from man all that constitutes his greatness, his goodness or his bliss. God, futurity, the soul—mere names, illusions, and the world of men is to him bad, hopelessly bad, and made so. He died at Frankfurt, September 21, 1860.

**SCHÖTTGEN** (shet'gen), **CHRISTIAN**, rector of the gymnasium at Dresden, and previously invested with the same office at Frankfurt-on-the-Oder, then at Stargard; born at Wurzen, in Saxony, in 1687, and died in 1751. His "Hore Hebraice et Talmudice in Novum Testamentum" attracted much notice, and was deemed of peculiar value in its day by contemporary scholars. He

also continued the "Bibliotheca Latina" of Fabricius, and wrote a dissertation illustrating the belief of the Jews concerning the Messiah from the Talmud and the writings of the rabbins.

**SCHROEDER** (shrae'der), **JOHN FREDERICK**, D.D., was born in 1800, at Baltimore, and educated at Princeton, where he graduated in 1819. He entered the ministry of the Protestant Episcopal Church, and became an assistant at Trinity Church, New York, and the chapels connected with that charge. Here he labored for fourteen years. His next sphere was at St. Ann's Hall, at Flushing, in Long Island, from which he returned to New York. He preached in the Church of the Crucifixion, and in Brooklyn, at St. Thomas' Church. He contributed to a work, along with three other brethren, on Biblical literature, his portion being an "Essay on the Authenticity and Canonical Authority of the Scriptures of the Old Testament." He wrote "Death, Judgment and Eternity," "Bible Questions," "A Class-Book on Astronomy," "Mémorial of the Life and Character of Mrs. Mary Anna Boardman," "Life and Times of Washington" and several discourses and sermons, which were published at different intervals. He died in 1857.

**SCHULTENS** (shool'tenz), **ALBRECHT**, a celebrated Orientalist, was born at Groningen, in 1686. Having studied at his native place, at Leyden, and afterward at Utrecht, he became a preacher at Wassenaer, near Leyden, in 1711. In 1713 he became professor of the Oriental languages at Franeker, and in 1717 university preacher also. In 1720 he was invited to Leyden, where he taught Hebrew and the Oriental languages till his death, in 1760. Schultens opened up a new path for the student of the Oriental languages by comparing cognate dialects with the Hebrew, especially the Arabic, and so facilitating a better acquaintance with the sacred tongue. This method of criticism had a beneficial influence on German scholarship.

**SCHUNEMANN** (shoo'ne-mahn), **JOHANNES**, who rose to eminence as a minister of the Reformed (Dutch) Church, was born in 1712, at West Camp, New York. After such education as he could acquire under the direction of Frelinghuysen and Goetschius, he was solicited to become pastor of the churches in Catskill and Cossackie, with the condition that he should proceed to Holland to be further instructed and accepted as a candidate for the ministry. The churches bore his expenses, and at the conclusion of a term of study he was ordained by the Classis of Amsterdam. He returned in 1753, and began to preach at Cossackie and Catskill. Though not profoundly learned, he was earnest, faithful and evangelical. In the controversy which then prevailed in the Reformed Dutch Church, he held that the American branch of the Church should examine students and ordain to the ministry independently of the mother Church in Holland. During the Revolutionary struggle he was an earnest patriot, and his life was often endangered. He remained in his original charge all his life, and his last sermon was preached at Cossackie a few days before his death, from the text "It is finished." He died in the full assurance of faith, on the 16th day of May, 1794.

**SCHURMANN, VON** (fon shoor'mahn), **ANNA MARIA**, was born at Cologne, in 1607. Her acquirements in the learned languages, the

fine arts and polite literature obtained for her the appellation of the modern Sappho. She understood the Hebrew, Greek, Latin, Chaldee and several modern languages, and was skilled in painting, engraving, sculpture and music, and yet she at length became the victim of fanatical delusion. In 1650 she appeared as a zealous disciple of the enthusiast Labadie, to whom, it is said, she was secretly married, and after his death she retired to Friesland, where she died in 1678. She wrote quite a number of learned works, which were collected and published under the title "Opuscula Hebræa, Græca, Latina et Gallica; Prosaica et Metrica."

**SCHWARTZ** (shwartz), **CHRISTIAN FRIEDRICH**, German missionary to the East Indies, was born in 1726. He had great success at Tanjore and Trichinopoly, where he spent fifty years,

ANCIENT EGYPTIAN SCULPTURE.—IN RELIEF.—See SCULPTURE.

illustrating by his life the holy doctrines which he taught, establishing English and other schools for the converts of all classes, and in every possible way promoting their temporal as well as eternal welfare. He was highly appreciated by Bishop Heber, beloved by the natives and respected by their rulers. When the rajah of Tanjore was on his deathbed he delivered his young son and heir into the hands of Schwartz to educate and protect, and that son erected in after years a marble monument over the grave of the faithful Schwartz. His death occurred in 1798.

**SCHWARTZ**, **JOHN G.**, was born in 1807, at Charleston, South Carolina. His early training was conducted under the care of Dr. Bachman. He early displayed a desire for the gospel ministry, and at length, after careful investigation

by Dr. Bachman, he was placed at the school of the German Friendly Society, and in 1824 he entered Carolina College, at Columbia. In 1827 he began to preach, and he labored for some time in missionary work in the middle and upper districts of the State. He next became assistant professor of ancient languages in Charleston College; and with a view to invigorate his health, he undertook to preach in four churches in an unhealthy district—a proceeding which was eminently unwise. In 1829, when the Lutheran Church established a theological seminary in South Carolina, he was chosen the first professor. He displayed great zeal in his new office; but he was seized with a violent fever, which closed his life on the 26th of August, 1831, at the early age of twenty-four.

**SCIENCE.** See **PHILOSOPHY.**

**SCIOPPIUS** (se-op'pe-us), **SCHOPPIUS** (skop'pe-us), or **SCHOPPE** (skop'pe), **CASPAR**, a German "humanist" and enemy of philosophy, was born in 1576, at Neumark, in the Palatinate. He studied at Heidelberg, Altorf and Ingolstadt. In 1598 he went to Italy, ingratiated himself with Clement VIII., and followed him to Rome. He abjured Protestantism with great pomp, and in return was made a knight of St. Peter and apostolic count of Claravalla. He attacked his former co-religionists, the Lutherans, in the most libelous writings, denouncing Charles V. for not having burnt Wittenberg, and Henry IV. for enacting the Edict of Nantes. By way of relaxation he wrote an elaborately filthy commentary on the *Priapeia*, and "Elements of the Stoic Philosophy." He showered upon the Jesuits the most fulsome praises, calling them with more irreverence than good taste the "praetorian cohort of the camp of God." By all these things he gained the affections of Cardinal Bellarmine and the hearty contempt of the great Sarpi, both of which he richly deserved. Soon he fancied himself slighted by the Jesuits, and denounced them in writings which are at once models of Latinity and of Billingsgate. He died in 1649, detested by Protestants as an apostate, despised by Romanists as a convert of doubtful sincerity and questionable morals, viewed by literary men as a pedant, and utterly loathed by philosophers.

**SCORESBY** (skörz'be), **WILLIAM**, D.D., whose name will long be remembered in connection with Arctic explorations, was born in Whitby, in 1790. The son of the captain of a Whitby whaler, he had a strong passion for the sea, and from the early age of ten years spent more than twenty years as a sailor, beginning at the foot of the profession and working his way up to the post of captain. After a time, however, considering that he had a call to the ministry, Mr. Scoresby abandoned the sea, and in 1823 entered Queen's College, Cambridge, received ordination in 1825, and accepted the chaplaincy of the Mariners' Church, Liverpool; and at a later period he took charge of an immense parish at Hull. He received the degree of doctor of divinity in 1834. For the last few years of his life he resided at Torquay in retirement, devoting his time to scientific pursuits and philanthropic labors. Wherever he was he succeeded in gaining the warm affection of all. Besides works on the Arctic regions and numerous scientific articles in the "Edinburgh Philosophical Journal," Dr. Scoresby published "Discourses to Seamen," which have gone through many editions. He died in 1857.

**SCORPION** (skor'pe-on). *Scorpio* is a genus of the class *Arachnida*, order *Pulmonaria*, section *Pedipalpi*. This genus is distinguished from other groups of spiders by having the abdomen articulated and terminated by a curved spur; the *palpi* are large, and the terminal segment assumes the form of the lobster's claw, being in like manner provided with pincers. The scorpion properly so called has six eyes. These creatures inhabit hot countries, and lurk under stones and among ruins. They run swiftly, curving the tail over the back; this they can turn in any direction and use for attack or defence, as it is provided with a sting. Scorpions are common in Palestine and the neighboring countries, Deut. vii. 15; Luke x. 19; but their sting, though painful, is not fatal. The word "scorpion" is sometimes used figuratively to describe wicked and injurious men, Ezek. ii. 6; Rev. ix. 3, 5, 10. Some have imagined a resemblance between an egg and a scorpion, Luke xi. 12, but Dr. Thomson assures us that this is a mistake. The ordinary scorpion is black, though a white scorpion is spoken of by old writers. The "scorpions" of 1 Ki. xii. 11, 14, denoted a kind of loaded whip.

**SCOPAS** (sko'pas), a celebrated Grecian sculptor, was a native of the isle of Paros, and flourished in the fourth century B. C.

**SCOT**, **REGINALD**, or **REYNOLD**, an English author, descended from an ancient family, was born near Smeeth, in Kent. He was educated at Hart Hall, Oxford, but left the university without taking a degree and retired to his ancestral seat, where he passed his time in reading the works of obscure authors. He stands conspicuous as one who in a superstitious age not only refused to believe in witchcraft and kindred superstitions, but dared to oppose the popular belief. He published "The Discoveries of Witchcraft" in 1584, and a "Discourse upon Devils and Spirits" a little later. These writings subjected him to much obloquy; not only the illiterate, but the learned, regarded his views with disfavor, and such scholars as Meric Casaubon, Joseph Glanvil, Dr. John Raynolds (see **RAYNOLDS**, **JOHN**) and others of equal eminence wrote warmly against Scot and his teachings, while James I. ordered the burning of all the copies of the first edition of the first-

VERY ANCIENT EGYPTIAN GROTESQUE FIGURES.—See SCULPTURE.

named work that could be found, and wrote his "Demonologie," as he tells us, "chiefly against the damnable opinions of Wierns and Scot." This worthy man, who was distinguished for his piety and benevolence, as well as for his learning, died in 1599, and was buried at the church of Smeeth.

**SCOTISTS** (sko'tists), a sect of school divines and philosophers, thus called from their founder, J. Duns Scotus. See **DUNS SCOTUS**.

**SCOTT** (skot), **ARCHIBALD**, was a native of Scotland. He came to this country about the year 1760, and he was introduced to the Rev. Dr. Finley, who was then conducting a celebrated academy. Going to the great valley of Virginia, he studied theology under Principal Graham, of Liberty Hall Academy, and in 1777 he was licensed to preach. Next year he was settled as pastor over the united churches of Hebron and Bethel, in Augusta county, Virginia, and here he remained for more than twenty years. He died in 1799, after a laborious and most faithful ministry, in which he gave a judicious attention to each department of his office. Catechising the young, visiting his charge from family to family and earnest preaching in the olden style were all duly regarded, and thus as a pastor he was eminent for his wisdom as well as his zeal.

**SCOTT**, **JOHN**, author of "The Christian Life," was born at Chippenham, in Wiltshire, in 1638, and graduated at New Inn Hall, Oxford. Having entered into orders, he went to London, and was successively curate of Trinity in the Minories, a minister of St. Thomas in Southwark and rector of St. Peter le Poor. He was a distinguished preacher, and associated himself with the moderate party of the restoration Church who went by the name of Latitudinarians, and who numbered among them many of the most popular preachers of the day. He declared himself strongly against popery when that system began to rise again into favor in the reigns of Charles II. and James II., and he was a warm supporter of the principles of the Revolution settlement, although personally averse to occupy any of the high places of the Church left vacant by the deprived non-jurors. But in 1691 he had surmounted these difficulties, and accepted a canonry of Windsor and became rector of St. Giles-in-the-Fields. He died in 1694. His principal work was "The Christian Life." Though long superseded by later and better publications, it will always be interesting in a historical point of view, as illustrating the state of English theology during that period of decline.

**SCOTT**, **THOMAS**, the well-known Commentator, was born at Braytoft, in Lincolnshire, February 16, 1747. Having received some amount of education, he was apprenticed, in his fifteenth year, to an apothecary and surgeon in Alford, in his native county, but was, after a few months, dismissed in disgrace, and had to turn to the drudgery of a grazier's life as an assistant to his father. Notwithstanding his difficulties and disadvantages, he applied for and obtained ordination in his twenty-sixth year, and was appointed to the united curacies of Stoke Goldington and Weston Underwood. Reversing the ordinary course, he now entered himself at Clare Hall, Cambridge, to complete his education. After this he removed to the curacy of Ravenstone, where the great change in his spiritual life, described in the "Force of Truth," took place. At the instance of the Rev. J. Newton he accepted

the curacy of Olney, left vacant by the removal of Mr. Newton to London. In 1785 he became chaplain of the Lock Hospital, London, and in 1801 was appointed to the living of Aston-Sandford, Bucks, where he died April 16, 1821. Mr. Scott

ANCIENT EGYPTIAN SCULPTURE.—See SCULPTURE, and **PASHT**.

was a diligent student and sound theologian of the moderate Calvinistic school. He wrote and published many useful theological works, none of which requires notice here except that which he regarded as "the grand business" of his life: "The Holy Bible, containing the Old and New Testaments, with Original Notes, Practical Observations and copious Marginal References." His "Sermons" and his "Force of Truth" have been held in great esteem, and his "Reply to Bishop Tomline" is one of the finest specimens of forcible yet calm, earnest discussion which the age presents.

**SCOTT**, **WILLIAM COWPER**, was born in 1817, at Martinsburg, in Berkeley county, Virginia. His father, who was a Presbyterian minister and the son of a minister, removed for the discharge of missionary labor to Hardin county; and here the young man spent the most of his life, in the bold and fine scenery peculiar to that region. He was sent to South Hanover College, Indiana, and next to Union Theological Seminary, Virginia. In 1840 he was licensed to preach; and refusing a call to Bethel Church, which his grandfather had founded, he undertook to supply three churches on Staunton River. In 1842 he was ordained over the churches of Providence and Bethesda, and here he remained until 1846, when he removed to

Farmville, Virginia. Bronchial disease obliged him to resign, and for two years he devoted his life to works of general usefulness. His chief literary work was suggested by the tendency to free-thinking which he had witnessed among young men of boldness in thinking; and in order to be of use to such he wrote "Genius and Faith"—a most excellent and well-reasoned treatise. He was seized with typhoid fever, and died on the 23d of October, 1854, after a brief illness.

**SCOTUS ERIGENA** (sko'tus e-rij'e-na), JOHANNES, a scholastic philosopher, and as Hallan declares "in a literary and philosophical sense, the most remarkable man of the Dark Ages," was a native of Ireland (or Erin), at least so his name would indicate, though some claim for him Welsh nativity, while others state that he was born at Ayr in Scotland. Eager in the pursuit of knowledge, he abandoned his native country to travel into foreign lands, and at Athens became so perfect in classical and Oriental literature and science that he proved the greatest philosopher and most learned man of the age. In compliance with the invitation of Charles the Bald, he resided for some years at the French court, where he was munificently patronized by the king. At the request of his patron he translated the pretended works of Dionysius the Areopagite into Latin, but his independent thought and enlightened views exposed him to the displeasure of the Church, and he went to England, where he was courteously received by Alfred the Great and placed at the head of his newly-founded college at Oxford; but in consequence of some dispute, after three years' residence he retired to Malmesbury, where he is said to have opened a school. It is asserted by some writers that his students murdered him in revenge for severity practiced on them, but others state that he died in France. The most celebrated of Scotus' works is his treatise on the "Division of Nature." It is written with great astuteness and metaphysical subtlety, and embraces theology, metaphysics, etc. His distinctive theological works were pronounced heretical by the Roman Church; the more notable of these were a treatise "On the Predestination of God, in reply to Gottschalehus," and one "On the Body and Blood of our Lord." The former was sharply assailed by Prudentius and Florus, but the latter (among other tenets, emphatically denying transubstantiation) was positively abhorrent to the Romish Church, and a council in 1059, more than a century and a half after the author's death, solemnly decreed that it be burned. The time of his death is unknown, some asserting that he died in 875, while Tanner states that as late as 879 he was a professor at Oxford.

**SCOU GAL** (sko'gal), HENRY, an eminent Scottish theological writer, was born in 1650, at Salton, East Lothian. The piety of his young spirit was early developed, and during his course of study at King's College he excelled his companions in all departments. On taking his degree he was chosen assistant to one of the regents, and in 1669, at the age of nineteen, he was appointed a professor. But his youth and inexperience were against him, and he accepted a rural pastoral charge, but after a year's residence was recalled to the chair of theology, in 1674. His principal work, "The Life of God in the Soul of Man," is a record of experimental piety, of his own soul's fellowship with God. The work at once became popular, and soon went through many editions.

Scougal survived the publication of this work only about a year, and died in 1678.

**SCOURGE.** See PUNISHMENTS.

**SCREECH-OWL.** See OWL.

**SCRIBES.** The Hebrew word thus rendered implies "writers." Some of these were high functionaries, 1 Ki. iv. 3. The "king's scribe," or secretary, 2 Ki. xii. 10, was probably the officer who wrote down the edicts of the sovereign. The "scribe of the host," Jer. lli. 25, may be supposed to have had charge of the muster-rolls of the army. In the later books the name is

EARLY ETRUSCAN FIGURE, IN TUFO.—See SCULPTURE.

given to a class of persons skilled in the law and the sacred writings. Thus Ezra is called "a ready scribe in the law of Moses," Ezra vii. 6; Baruch, too, was a scribe, Jer. xxxvi. 32.

The scribes of the New Testament were of this class, which no doubt multiplied after the return from Babylon. They were held in great respect among the people. They are mentioned with the chief priests in the temple, Luke xx. 1, and as a class had more authority than the hereditary priesthood; they made part of the great council or Sanhedrim with the chief priests and elders, Matt. xxvi. 3. Besides the position which some of them occupied as counselors, they had schools in which they taught their disciples, Luke ii. 46; Acts v. 34, and they gave advice to those who consulted them more privately. For the term

"scribes" seems to have included those who were "lawyers," or "doctors of the law;" it was a comprehensive word; while the "lawyers," specially, were the jurists whose duty it was to interpret the law. It may be added that though the scribes appear most closely and frequently connected with the Pharisees, Matt. v. 20, yet some of them must have been Sadducees, Acts xxiii. 9.

In their teachings and expositions the scribes had overlaid the Scripture with tradition. It is no marvel, therefore, that we find them in determined opposition to our Lord, and pointed at by his severest censures. They were continually trying to embarrass and entangle him by subtle questions; they watched him to find matter of accusation against him, and frequently perverted his words and deeds, Matt. ix. 3; Luke v. 30. With reason, therefore, did he pronounce them hypocrites, blind and unfaithful guides, and ask how, such being their character, they expected to escape a terrible judgment, Matt. xxiii. 13-33. But yet the name was honorable, and the gravity and learning of the conscientious scribes were to be imitated by those who would advance the kingdom of God, Matt. xiii. 52.

**SCRIMGEOUR** (skrim'jure), JAMES, was born in 1757, near Edinburgh, in Scotland, and educated in the university of the Scottish capital, Dr. Robertson being then the principal. He studied theology under John Brown of Haddington, was licensed and settled as a minister in the Associate Reformed Church, the sphere of his labor being at North Berwick. Declining health obliged him to retire from the charge; and in 1802, his strength being restored, he was induced to accompany Dr. John M. Mason to this country. He settled at Newburg, on the Hudson, where he remained until 1812, when he removed to Little Britain, his last charge. He died in the winter of 1825. He was very evangelical in his views and an excellent, impressive, solid preacher, greatly beloved by his friends and the members of his different flocks.

**SCRIP**, a bag used for the carrying of food or other necessities, generally made of leather and slung over the shoulder, 1 Sam. xvii. 40; Matt. x. 10. A similar article is still used by the Syrian shepherds.

**SCRIPTURE** (skrip'chur), a word derived from the Latin *scriptura*, and in its original sense of the same import with writing, signifying "anything written." It is by emphasis, however, commonly used to denote the writings of the Old and New Testaments, which are called sometimes the Scriptures, sometimes the Sacred or Holy Scriptures and sometimes Canonical Scriptures. These books are called the Scriptures by way of eminence, as they are the most important of all writings. They are said to be holy or sacred on account of the sacred doctrines which they teach; and they are termed canonical because when their number and authenticity were ascertained their names were inserted in ecclesiastical canons to distinguish them from other books which, being of no authority, were kept out of sight, and therefore styled apocryphal.

Among other arguments for the divine authority of the Scriptures the following may be considered as worthy of our attention.

1. The sacred penmen, the prophets and apostles, were holy, excellent men, and would not—

artless, illiterate men, and therefore could not—lay the horrible scheme of deluding mankind. The hope of gain did not influence them, for they were self-denying men that left all to follow a Master who had nowhere to lay his head, and whose grand initiating maxim was, "Except a man forsake all that he hath, he cannot be my disciple." They were so disinterested that they secured nothing on earth but hunger and nakedness, stocks, prisons, racks and tortures, which, indeed, was all that they could or did expect, in consequence of Christ's express declaration. Neither was a desire of honor the motive of their actions; for their Lord himself was treated with the utmost contempt, and had more than once assured them that they should certainly share the same fate. Besides, they were humble men, not above working as mechanics for a coarse maintenance, and so little desirous of human regard that

EARLY PHOENICIAN FIGURE.—See SCULPTURE.

they exposed to the world the meanness of their birth and occupations, their great ignorance and scandalous falls. Add to this that they were so many and lived at such distance of time and place from each other that, had they been impostors, it would have been impracticable for them to contrive and carry on a forgery without being detected. And as they neither would nor could deceive the world, so they neither could nor would be deceived themselves; for they were days, months and years eye- and ear-witnesses of the things which they relate; and when they had not the fullest evidence of important facts, they insisted upon new proofs, and even upon sensible demonstrations; as, for instance, Thomas in the matter of our Lord's resurrection, John xx. 25; and, to leave us no room to question their sincerity, most of them joyfully sealed the truth of their doctrines with their own blood. Did so many and such marks of veracity ever meet in any other authors?

2. But even while they lived they confirmed

their testimony by a variety of miracles wrought in divers places and for a number of years; sometimes before thousands of their enemies, as the miracles of Christ and his disciples; sometimes before hundreds of thousands, as those of Moses. See MIRACLE.

3. Reason itself dictates that nothing but the plainest matter of fact could induce so many thousands of prejudiced and persecuting Jews to embrace the humbling, self-denying doctrine of the cross which they so much despised and abhorred. Nothing but the clearest evidence, arising from undoubted truth, could make multitudes of lawless, luxurious heathens receive, follow and transmit to posterity the doctrine and writings of the apostles, especially at a time when the vanity of their pretensions to miracles and the gift of tongues could be so easily discovered, had they been impostors, and when the profession of Christianity exposed persons of all ranks to the greatest contempt and most imminent danger.

4. When the authenticity of the miracles was attested by thousands of living witnesses, religious rites were instituted and performed by hundreds of thousands, agreeable to Scripture injunctions, in order to perpetuate that authenticity; and these solemn ceremonies have ever since been kept up in all parts of the world—the Passover by the Jews, in remembrance of Moses' miracles in Egypt, and the Lord's Supper by Christians, as a memorial of Christ's death and the miracles that accompanied it, some of which are recorded by Phlegon the Trallian, a heathen historian.

5. The Scriptures have not only the external sanction of miracles, but the eternal stamp of the omniscient God by a variety of prophecies, some of which have already been most exactly confirmed by the event predicted. See PROPHECY.

6. The scattered, despised people, the Jews, the irreconcilable enemies of the Christians, keep with amazing care the Old Testament, full of the prophetic history of Jesus Christ, and by that means afford the world a striking proof that the New Testament is true; and Christians, in their turn, show that the Old Testament is abundantly confirmed and explained by the New.

7. To say nothing of the harmony, venerable antiquity and wonderful preservation of those books, some of which are by far the most ancient in the world, to pass over the inimitable simplicity and true sublimity of their style, the testimony of the Fathers and the primitive Christians, they carry with them such characters of truth as command the respect of every unprejudiced reader.

They open to us the mystery of the creation, the nature of God, angels and man, the immortality of the soul, the end for which we were made, the origin and connection of moral and natural evil, the vanity of this world and the glory of the next. There we see inspired shepherds, tradesmen and fishermen surpassing as much the greatest philosophers as these did the herd of mankind, both in meekness of wisdom and sublimity of doctrine. There we admire the purest morality in the world, agreeable to the dictates of sound reason, confirmed by the witness which God has placed for himself in our breast, and exemplified in the lives of men of like passions with ourselves. There we discover a vein of ecclesiastical history and theological truth consistently running through a collection of sixty-six different books, written by various authors, in different languages, during the space of above fifteen hundred years. There we find, as in a deep and pure spring, all the genuine drops and streams

of spiritual knowledge which can possibly be met with in the largest libraries. There the workings of the human heart are described in a manner that demonstrates the inspiration of the Searcher of hearts. There we have a particular account of all our spiritual maladies, with their various symptoms, and the method of a certain cure—a cure that has been witnessed by multitudes of martyrs and departed saints, and is now enjoyed by thousands of good men, who would account it an honor to seal the truth of the Scriptures with their own blood. There we meet with the noblest strains of penitential and joyous devotion, adapted to the dispositions and states of all travelers to Zion. And there we read those awful threatenings and cheering promises which are daily fulfilled in the

EARLY ETRUSCAN FIGURE, IN TUFO.—See SCULPTURE.

consequences of men, to the admiration of believers and the astonishment of attentive infidels.

8. The wonderful efficacy of the Scriptures is another proof that they are of God. When they are faithfully opened by his ministers, and powerfully applied by his Spirit, they wound and heal, they kill and make alive, they alarm the careless, direct the lost, support the tempted, strengthen the weak, comfort mourners and nourish pious souls.

9. It is exceedingly remarkable that the more humble and holy people are, the more they read, admire and value the Scriptures, and, on the contrary, the more self-conceited, worldly-minded and wicked, the more they neglect, despise and asperse them.

As for the objections which are raised against their perspicuity and consistency, those who are both pious and learned know that they are generally founded on prepossession and the want of un-

derstanding in spiritual things, or on our ignorance of several customs, idioms and circumstances which were perfectly known when those books were written. Frequently, also, the immaterial error arises merely from a wrong punctuation, or a mistake of copiers, printers or translators, as the daily discoveries of pious critics and ingenious confessions of unprejudiced inquirers abundantly prove. See INTERPRETATION, BIBLICAL.

To understand the Scriptures, says Dr. Campbell, we should, 1. Get acquainted with each writer's style. 2. Inquire carefully into the character, the situation and the office of the writer,

RUDE SCULPTURE OF EARLY SYRIA, AT NYMPH.—See SCULPTURE.

the time, the place, the occasion of his writing, and the people for whose immediate use he originally intended his work. 3. Consider the principal scope of the book, and the particulars chiefly observable in the method by which the writer has purposed to execute his design. 4. Where the phrase is obscure the context must be consulted. This, however, will not always answer. 5. If it do not, consider whether the phrase be any of the writer's peculiarities; if so, it must be inquired what is the acceptance in which he employs it in other places. 6. If this be not sufficient, recourse should be had to the parallel passages, if there be any such, in the other sacred writers. 7. If this throws no light, consult the New Testament and the Septuagint, where the word may be used. 8. If the term be only once used in Scripture, then recur to the ordinary acceptance of the term in classical authors. 9. Sometimes reference may be had to the Fathers. 10. The ancient versions, as well as modern scholiasts, annotators and translators, may be consulted. 11. The analogy of faith and the etymology of the word must be used with caution, as it is easy to fall into error by taking words apart from their connections.

Above all, let the reader unite prayer with his endeavors, that his understanding may be illuminated and his heart impressed with the great truths which the sacred Scriptures contain.

SCROLL. See WRITING.

**SCROPE** (skrōp), who rose to be bishop of Lichfield, and who distinguished himself in that see so much that he was made archbishop of York, threw all his influence against the effort of Henry IV. to gain the throne of England. The result was his arrest, which terminated in his being beheaded in the year 1405. He was long held in great esteem, and he was venerated as a martyr by the part of the population who viewed Henry as a usurper.

**SCUDDER** (skud'der), JOHN, D.D., was born in 1793, at Freehold, New Jersey. After an excellent preparatory training he entered Princeton College, and graduated as bachelor of arts in 1811, after which he entered on the study of medicine. He settled in New York, and soon rose to eminence in his profession, but in 1819 he determined to devote himself to the cause of foreign missions. He sailed from Boston to Calcutta, and in May, 1821, he was ordained in the Wesleyan chapel at Jaffnapatam by ministers of the Congregational, Baptist and Methodist denominations. He labored in Ceylon until 1830, when, in conjunction with Mr. Winslow, he commenced an important mission at Madras. Failing health led him to seek a change of climate; and the Netherland provinces proving unavailing, he returned to his native land. He effected a great work in favor of missions by his addresses in different cities. On his return to India he connected himself with the work at Madura, and in 1854, when his health had again failed, he sailed to the Cape of Good Hope, where he improved so much that he resolved on returning to India; but he died quite suddenly, in an apoplectic fit. Dr. Scudder was one of the most eminent of all the noble band of worthies who in our land have dedicated their

lives to the extension of the gospel among the heathen. He was a pre-eminently wise and holy man, of great intellectual vigor and of highly cultivated powers. He was a splendid speaker, earnest, devoted to his lifework, and a remarkable evidence of the manner in which the native powers of the mind become educated and strengthened by contact with the spiritualities of the divine life.

**SCULPTURE** (sculp'ture). The word is derived from the Latin "sculpo" (*I carve*). It is the art of carving in wood, stone, or other material, and its uses and abuses in connection with religion invest it with a right to be treated of in this work. The origin of sculpture is so remote that there is no likelihood of any authentic account of it being satisfactorily deduced, nor even an indication of that nation in which it first appeared. It is probable that idolatry may have favored its early progress, but we are not indebted to religion alone for its invention. The first artist on record as a sculptor is Bezaleel, who, with Aholiab, Ex. xxxi., formed the cherubim that covered the mercy-seat, but previous to these the art of moulding and working in metal was long known. The presents to Rebekah consisted of jewels of silver and gold; Judah gave to Tamar his signet and his bracelets; in Egypt "Pharaoh took off his ring from his hand and put it upon Joseph's hand." Then, as to the art of moulding or carving, we know from the use of idols that it must have existed in Asia

and in Egypt from the time of Abraham and Isaac. Indeed, as Abraham, when he went down into Egypt, found a compact government and old national institutions, and as the institutions of Egypt were of a permanent character, it is impossible to say, with even an approach to accuracy, how long before the time of Abraham the Egyptians had been accustomed to apply the arts of the sculptor to their public monuments. According to the best commentators, the *teraphim* which Rachel stole from her father, Gen. xiii. 19, 30, were carved images in a human form and household deities, like the Penates and the Lares of the Romans many centuries afterward, and like the little idols which are found so commonly at the present day among the Hindoos in India. Then, again, the commandment will doubtless occur to the reader, "Thou shalt not make to thyself any graven image," as well as the address of Moses to the Israelites, "Ye know how we have dwelt in the land of Egypt, and how we came through the nations which ye passed by; and ye have seen their abominations and their idols of wood and stone, silver and gold, which were among them."

Diodorus has described some of the most extraordinary specimens of early sculpture as being the work of Semiramis, but it is probable that the representations are exaggerated. She is said to have had figures in brick on her palace of every sort of animal in relief. These were colored so as to have the appearance of living things. In the midst of them Semiramis was represented as piercing a tiger with a dart, and near her Ninus killing a lion with a lance. In another part of the same palace were placed the statue of Jupiter Belus, those of Ninus, Semiramis and the principal officers of state executed in bronze. We are told, also, that by her command a temple was built at Babylon, on the top of which three massive statues were placed of Jupiter, Juno, and Rhea, that of Jupiter being forty feet high.

Still more wonderful is the statement, that she caused the rough and lofty side of a mountain at Bagdistan, which was seventeen stadia in height, to be reduced to a smooth surface, on which a figure of herself was sculptured attended by one hundred of her guards. Apocryphal as this story may be, the same sort of scheme was proposed to Alexander by the architect Dinocrates, as related by Vitruvius in the preface to one of his books.

Little notice of sculpture among the Persians is required. It was contrary to their tenets to make any representation of the human form. Still, in Persepolis there are some extraordinary sculptures bearing considerable resemblance to the style of the Egyptian bassi-relievi in the palace of Thebes.

The earliest sculpture to which we can refer with any degree of historical confidence is that of the Egyptians. Herodotus tells us that they erected the first altars and temples to the gods and carved the figures of animals in stone. The abundance and variety of the specimens still in exist-

RUDE SCULPTURE OF EARLY GREECE, AT SPARTA.—See SCULPTURE.

ence of their sculpture—minute and colossal, domestic and religious—prove them to have been a people of prodigious energy and resources, and distinguished for their affection for the arts. The greater portion of their sculpture seems to have been sacred—that is, representations of the divinities and their attributes and qualities. In size many of their statues were enormous. Herodotus mentions one before the temple of Vulcan, at Memphis, and another at Sais, placed there by King Amasis, each of the height of seventy-five feet. The part of the Sphinx (see SPHYNX) near

RUDE SCULPTURE OF EARLY GREECE, FROM THE TOMB OF ORCHOMENOS.—See SCULPTURE.

the great pyramid that remains out of the sand—that is, from the throat upward—rises to the height of twenty-five feet. At Thebes, the sitting statues of Memnon (see pages 1190 and 1191), the mother and the sons of Osmandias, are each fifty-eight feet high; while in the British Museum there is an arm of a statue (see page 191) which must have been sixty-five feet high. Grace and elegance are not found in Egyptian sculpture. Their faces have a resemblance to the Chinese features; they have large bellies; the arms either hang down or, if one be raised, it is at right angles across the body. Some of their statues are kneeling and some are sitting, and the faces are generally flat, with a mild, calm expression, while the

drapery is usually without folds. The forms of the feet and hands are gross, and they are deficient in anatomical details. The material usually employed is granite or basalt, and the figures are polished after being dressed with the chisel.

Correct notions of Phœnician sculpture are chiefly gained from the medals of the Carthaginians, who were a colony from Phœnicia. The Phœnicians, who are called Canaanites in Scripture, were at an early period far advanced in civilization. When Moses sent out the spies to examine the land, they returned with the report "that the people be strong that dwell in the land, and the cities are walled and very great." According to reliable authority, the Phœnicians derived the knowledge of the arts from Chaldaea, having previously been established in Egypt. In personal appearance the Phœnicians were superior to the Egyptians, and they were therefore better models for artists. Their wonderful progress in commerce stimulated the culture of art, and hence several of the statues in their temples were celebrated in history.

Among the Etrurians, or the ancient Tuscans, art was cultivated at an early period, and it would appear that among them a great degree of perfection had been developed before much progress in sculpture had been made in Greece. In Etruria the first attempts in art were made in clay, of which innumerable examples are found in the environs of Rome. There are two styles of Etruscan art; the earliest, in which the lines and the contour are stiff and the attitude wanting in ease; but in the second stage a considerable knowledge of anatomy is displayed. Certain critics have held that there was a third period of Etrurian art coeval with the conquest of Greece by the Romans, when the Etrurians adopted many of the principles of Greek art. That sculpture had attained to a high place at that period among the people is evident from the fact stated by Pliny, that when the Romans conquered Volsinium, one of the twelve cities of Etruria, they carried away from that city alone about two thousand statues.

The family likeness of the Hindoo and Egyptian sculpture is obvious, although the former is still more rude and imperfect than the latter, having little resemblance to nature. Nevertheless, the stupendous excavations at Ellora and the idol gods which are scattered all over the temples of India attest the fact that art, though rude, was known in India in primitive times.

In Egypt and Phœnicia the art was restrained within very narrow bounds, but in Greece the beautiful forms of the male and female models and the genial climate were favorable to the progress of art. From all attachment to the combinations of human with the brutal forces of Egypt, the noblest and softest emotions of the human heart found nourishment in a land where beauty was loved. The institution of public games, at which all men of celebrity and of all ranks contended for pre-eminence, and the beauty of form which was continually to be seen at them, raised the Greeks into a nation of connoisseurs. In Egypt no crowns, no honors decreed by an assemblage of intelligence, awaited the monotonous labors of the workman. He labored on in conformity with the practice of former ages. Egypt abounded with artisans, Greece with artists.

Greek sculpture has usually been arranged under three periods. In the primitive age Pansanias tells us that the figures were little more than blocks of stone. Dædalus and Endæus appear to have worked in wood, but about 775 B. C.

Dipenris and Seyllis the Cretan made great advances in their statues of marble. It was the opinion of Flaxman that the statues of Hercules and Apollo in the British Museum were produced by Dipenris and Seyllis, and the taste of their age may be seen in these well-known works.

In the time of Ageladas, who was contemporary with Pisistratus, there was evidently a great advance in refinement, and the expression of the beautiful in form, and the fact that a statue was now raised to every one who had received three crowns in the public games, tended greatly to progress in art. Great encouragement was given to all who felt the inspiration of genius, and the sculptor labored in presence of his whole country. Now appeared Callimachus, who according to Vitruvius invented the Corinthian capital, and from his time the figure was drawn with greater regard to the formation of the parts; attitude was studied, the form was better displayed through the drapery, and everything indicated the advent of a better age, when at length Phidias appeared.

Phidias flourished about four hundred and ninety years before the Christian era. He appeared in an age peculiarly splendid in history, as it abounded with statesmen, warriors, artists, philosophers and poets, among whom the names of Socrates, Plato, Pericles, Miltiades, Cimon, Themistocles and Xenophon appear. Under Pericles the city of Athens rose into surpassing splendor, and he wisely employed Phidias in the works essential to the adornment of the city. His celebrated statue of Minerva in the Parthenon was among the chief glories of Greece; and while other sculptors, such as Polycleus, displayed their powers in the production of human forms, Phidias became still more celebrated by his representations of the gods.

In the third epoch the names of Praxiteles and Lysippus appear. They and their contemporaries introduced the *fine* style, in which youth, beauty and the softer forms of art prevailed. The Venus

FRAGMENT OF A LATER GREEK STATUE AT ATHENS.—See SCULPTURE.

A GREEK BUST.—See SCULPTURE.

of Cnidos was the great achievement of Praxiteles, while the genius of Lysippus may yet be seen by all travelers who in Venice contemplate the group of horses in the front of the church of St. Mark. Athens and Rhodes were the great schools of this period, and the latter produced the celebrated Laocoon, a group not inferior to any known work, the Torso Farnese and the Colossus. After the death of Alexander, three hundred and twenty-four years before the Christian era, the arts declined in Greece. The year 146 B. C. was signalized by the entire reduction of Greece under the dominion of the Romans. Sixty-six years previously, a dawn of luxury and taste had opened at Rome by the introduction through Marcellus of statues from Syracuse; but though in Rome growing luxury increased the demand for fresh objects of art, the history displays a constant decline, and shows that its energies and beauties were destined to expire among a people of a strange land. The only occupation then left for Greek artists was to

notwithstanding the influence of Greek art when it became known to the wealthy and when the collection of Greek statues became a fashion. Among the emperors at different times very vigorous efforts were made by the erection of statues to affect the public taste. Thus Vespasian decorated the temple of Peace with the choicest specimens of Greek painting and sculpture which he could procure. Trajan had statues erected in honor of the eminent men of his day. Adrian even cultivated art himself, and he restored many buildings at Athens, and he erected a colossal statue of Jupiter at Olympia. A multitude of statues were erected in honor of Commodus, but after his death they were ordered by the senate to be destroyed. After this time these efforts became less and less successful, and the disturbances of the age and the rapid succession of emperors, who nearly all died by violence, and the unsettled condition of public affairs, withdrew men's minds more and more from all objects connected with taste and art. In fact, by the end of the fourth century taste had nearly died out, as the arch of Constantine and the statues of that prince indicate; and when Constantinople rose to power, Rome no longer swayed the sceptre of the fine arts.

From the fourth until the thirteenth century the history of the arts is such a blank as to be scarcely worth the trouble of tracing. In the thirteenth century, however, the clouds of darkness began to separate, opening a dawn for their revival in the fourteenth which was soon afterward to bring on the blaze of day. Here, again, three epochs or periods are deserving of notice.

When the Roman power was entirely destroyed in the West of Europe, Italy became divided into republics and principalities, whereof the chief were Venice, Genoa and Pisa, these being the earliest in fully establishing liberty. But to Pisa belongs the honor of being the first to establish a school of art. The Pisans owned a considerable extent of

coast, and they had overcome the Saracens in Africa, Sardinia, Majorca, Minorca and Sicily; and they had thus acquired the treasures with which they commenced the erection of their cathedral, which was finished in 1092, about seven years after that of St. Mark, at Venice, had been consecrated. Schools of painting, sculpture and architecture soon arose after this period, and the cause of religion found employment for the talent they produced. It is held that a Greek named Buschetto, who was a Greek, though the name would indicate an Italian origin, was the founder of the Pisan school; but the glory of the twelfth century was Nicolo de Pisa, who first gave dignity and importance to sculpture in that school. He studied the remains of Greek art as far as his opportunities permitted, and his works at Bologna, at Pisa, Sienna and on the cathedrals of Orvieto and Lucca, testify to his success. Then again, at Milan, at Florence and at Sienna, the pupils who imbibed the spirit of Nicolo—such as Arnolfo, Andrea Ugolino, Giovanni de Balduccio—produced inimitable works, which remain to the present day, and which attest the genius and taste

which deservedly gave character and fame to this great school.

At the beginning of the second epoch we find six great artists engaged in a competition for executing the bronze doors of the baptistery at Florence, in which, after a year's trial, Lorenzo Ghiberti bore away the palm from his rivals. Among the greatest of these eminent men was Donatello, of whom Flaxman says, "Some of his works, both in bronze and marble, might be placed beside the best productions of Greece without discredit." His Singing Boys, in the Duomo of Florence, can scarcely be exceeded for the accuracy of drawing, the arrangement of drapery and great beauty. The marble statue which he executed of St. George so excited the admiration of Michael Angelo that, after viewing it in silence

ROMAN STATUE OF A FISHERMAN.—See SCULPTURE.

for a length of time, he suddenly exclaimed "March!" And the same great genius, when he saw and studied the Gates of the baptistery by Ghiberti, bestowed on them the appellation of the "Gates of Paradise." The completion of these gates occupied forty years of Ghiberti's life; and by all critics they are recognized as one of the noblest monuments of modern art. It is true that Reynolds held that "the landscape and buildings occupy so large a portion of the compartments that the figures remained but secondary objects, entirely contrary to the principle of the ancients;" but the fact that doors or gates, and not solitary statues standing apart from each other, had to be constructed, would seem to be an adequate reply. In this age, also, Brunelleschi, the great architect, became famous for his achievements in sculpture; and in 1450 Florence ranked among her honored citizens Verrochio, the master of Perugino and Leonardo da Vinci, and Ghirlandaio, the master

of the still more eminent Michael Angelo da Buonarroti, who, though a master of painting and architecture, was equally renowned as a sculptor, thus displaying a genius which seemed to be influenced by a species of inspiration. Florence and Venice still possess most attractive and precious evidences of the talents of these justly-famed artists.

The third epoch includes the period in which the perfect restoration of the art was accomplished. The historian who wrote the life of Michael Angelo thus apologizes for a biography during the lifetime of the subject: "Let none be surprised that I have here written the life of Michael Angelo, who is yet living. Indeed, it cannot be expected that he will ever die, and therefore it has appeared to me proper to do him this little honor; for when, in common with other men, his life shall pass away, he will be immortal in his immortal works, the fame of which, as long as the world lasts, will live with glory in the mouths of men and in their records, in contempt of envy and death." Michael Angelo, who was of noble birth, was patronized by Lorenzo de Medici, who took him into his house at the age of fifteen, and he continued his friend during his life. His career in sculpture was commenced by a sleeping Cupid, a Bacchus and a young fawn, the colossal David and a group of a Madonna sitting with the dead Christ on her knees—works which raised him immediately above his contemporaries. Julius II. employed him on a mausoleum for the centre of the dome of St. Peter's. It was projected on a magnificent scale, but the death of the pope and other causes delayed its completion, and only one side was finished, which was afterward erected in the church of St. Pietro in Vincola. In this monument the celebrated Moses and other statues are found. His statues of Lorenzo and Giuliano de Medici are in the Capella dei Depositi, and the recumbent statues of Daybreak and Night are in the same chapel. These works are masterpieces, and they display the same genius which lavished its powers on the ceiling of the Sistine chapel and the Last Judgment.

ROMAN STATUE OF A FEMALE, FOUND IN ROME.—See SCULPTURE.

This mighty master was doomed to experience ill-treatment, as many men of genius before and since his time have had to experience from ignorance and ingratitude; and though universal in his accomplishments, he was in his later years mainly useful in defending the city of Florence when it was besieged by the prince of Orange. He did

not live to finish a great work on which his mind was much set. He began a group of four figures when he had reached the age of eighty, consisting of the dead body of our Saviour, supported by Joseph of Arimathea, attended by two Marys. The conception of the group was grand, but death arrested his hand before its completion. He died on the 15th of December, 1563, being almost ninety years of age. He had conferred honor on seven popes; he was the friend of Solymann emperor of the Turks, Francis I. of France, the emperor Charles V., the princes of the republic of Venice, and those of Italy, particularly the duke of Tuscany, reigning at his death. He was buried at Rome, but afterward his body was removed to Florence with every demonstration of pomp and splendor. Flaxman, in his lectures on sculpture, justly says of him, "The character and works of Michael Angelo have been dwelt on at greater length, because, as his mental and bodily powers continued far beyond the usual date of human life, his diligence attained to so much greater perfection in the principles of art. Anatomy, the motion and perspective of the figure, the complication, grandeur and harmony of his grouping, with the advantages and facility of execution in painting and sculpture, besides his mathematical and mechanical attainments in architecture and building, together with the many prodigious works he accomplished, demonstrate how greatly he contributed to the restoration of art." About this period, or a little later, Giovanni da Bologna flourished. The former is famous for the grace of his figures and the flowing ease which they display, while the latter, who was one of the strangest and most eccentric men that any age has produced, displayed a talent which, especially in metal-working, has never been surpassed. Chief among his works is the figure which may be seen at Florence of Perseus holding the head of Medusa in his left hand. Following in the footsteps of Michael Angelo, but at a distance, came Raphael di Monte Lupo, Nicolo di Tribolo, who made the bronze gates of the cathedral at Bologna.

Many others who might be mentioned carried the principles of art through Lombardy and into the Neapolitan territory. To this period, also, belongs Torregiano, who was a man of real genius, but of an erratic disposition. He received one thousand pounds for his work on the tomb of Henry VII., at Westminster. Leaving England, he went to Spain, where he executed several important and valuable works; and the story is told that, having been commissioned by the duke d'Arcus to complete a Madonna and Christ of the size of life, with a promise of an ample reward, he completed a splendid group. The duke sent two servants loaded with money as payment; but on opening the bags they were found to contain only as many brass maravedi as amounted to the trifling sum of thirty ducats; whereupon, fired with rage at the insult, he seized his mallet and broke the group into pieces, ignoring the sacred character of the subject and the value of the work. The duke in return denounced him to the Inquisition as a heretic. He pleaded his right to do as he pleased with his own works, but in vain, for he was cast into prison, doomed to lose his life, and in despair he starved himself to death.

Spain produced some celebrated sculptors in the sixteenth century, their first native artist being Berruguette, a pupil of Vasari and Buonarroti. Paul de Cespedes, who was a disciple of Berruguette, is held to have been the greatest sculptor

STATUE OF THALIA, FROM THE BATHS OF CLAUDIUS.—See SCULPTURE.

that Spain has produced. Germany produced no sculptor of eminence before the seventeenth century; and it is only of late years that Denmark has produced a sculptor, as Thorwaldsen was born in 1770. France received an impulse from Italy, and as early as the time of Michael Angelo Jacques d'Angoulême, who had been at Rome, was bold enough to compete with him. Jean Gougeon, who was one of the victims in the massacre of St. Bartholomew, finished the Fountain of the Innocents at Paris in 1559. Then, again, Jean Cousin, Adrian, Della Bella and Tacca occupy the interval up to the time of Louis XIV., after which the art of sculpture rapidly spread, as Moette, Chaudet, Lebrune and others who rose to eminence testify.

In England, sculpture and painting were in the hands of foreigners until comparatively modern times. In the stall-work of the great cathedrals and in the other carvings which produce the rich effect which is visible in these vast edifices, great perfection was attained. Henry VIII. seems to have been the first monarch who took a decided interest in painting. It is true that Henry VII. employed Mabuse, a Flemish painter; but it is probable that the stranger, who led an irregular life, was driven to England by distress, and that he owed little to the thrifty monarch. Holbein created a taste for art, which was fostered by Charles I., who invited Rubens to England; and with the Cartoons of Raphael and the influence of

Sely, it seemed likely that a knowledge of art would extend; but the political upheaval which affected the nation turned the popular attention to other and more stirring things. Sculpture was still less favored. At length, Cibber, Roubiliac and Scheemacher created a taste in England for statuary, which gradually extended, and which received a decided impulse by the splendid achievements of Canova, who became the theme of admiration in the leading capitals of Europe. He was born at Passagno in 1757, and his works were exceedingly numerous. Thorwaldsen, of Copenhagen, was a contemporary, though several years his junior, and the performances of these masters did much to create a love of sculpture in England, as the educated among the upper classes were brought by their journeys on the Continent into contact with these great men. Accordingly, it soon appeared that English talent was directed into this department of art, and the works of Bacon, Banks and Nolckens made English talent known all over Europe. Flaxman, however, rose to a

place. The Greek Slave by Powers did much to bring the name of American art into prominence on both sides of the Atlantic; and the patronage of art among the cultured classes of our population is encouraging our students at Florence and Rome, where their works are deservedly taking rank among the finest specimens which modern Italian talent has been able to produce.

Those who desire to compare the sculpture of the various ages and nations will find engravings illustrative of the same on the following pages and elsewhere throughout the Encyclopedia:

*Assyrian Sculptures*—Pages 50, 51, 217, 218, 219, 220, 221, 222, 223, 224, 226, 227, 255, 260, 407, 1263, etc.

*Persian Sculptures*—Pages 74, 75, 481, 1084, etc.

*Egyptian Sculptures*—Pages 33, 39, 47, 53, 62, 63, 64, 67, 101, 110, 130, 140, 143, 189, 190, 191, 243, 267, 344, 348, 381, 382, 384, 386, 413, 432, 433, 434, 435, 516, 517, 546, 668, 679, 783, 863, 864, 865, 866, 867, 922, 923, 924, 925, 936, 937, 1134, 1190, 1191, 1300, 1327, 1352, 1353, etc.

THE RED SEA, FROM RAS MOHAMMED.—See SEA, 3.

position as eminent as that of Canova, and it is admitted that in Epic sculpture he was his superior. Flaxman was born at York, in 1755. He became professor of sculpture at the Royal Academy, where his lectures produced a remarkable effect on the pupils of the school which was rapidly growing in the English capital. He died in 1826, but it only needed to mention the names of Westmacott, Lough, Rennie and Chantrey to show how powerful the impulse had become in London in the direction of art. Later still Landseer, Foley, Macdowell, MacIse, Gibson, Westmacott, Marochetti, Gahagan, Adams, Bacon, Behnes and Baily may be mentioned among the number of those who of late years have given character and fame to British art.

In our own country, as might have been expected, the great work of subduing a continent and devoting it to the uses of civilization has been enough for a generation, but already in art the names of our countrymen have been placed high in the roll of fame. In the capitals of Europe and in the great exhibitions of art and science our sculptors now occupy an honorable

*Christian Sculptures*, Ancient, Mediæval and Modern—Pages 54, 55, 56, 60, 123, 127, 151, 153, 155, 245, 272, 273, 275, 276, 284, 289, 329, 350, 420, 441, 466, 606, 815, 837, 838, 839, 841, 1023, 1026, 1028, 1077, 1122, 1151, 1156, 1161, 1163, 1179, 1209, 1305, 1310, 1311, 1334, etc.

**SCURVY** (skur've), a disease, Lev. xxi. 20. The original term conveys the idea of scratching or scraping. It is thought to be scurvy of a malignant kind. The same is also translated "the scab," Deut. xxviii. 27.

**SCYTHIAN** (sith'e-an). The Scythians were the wild nomadic tribes who, like the more modern Tartars, roamed over the regions of Asia north of the Black and Caspian Seas. They were most probably the descendants of Magog, and were known to the Israelites under that name. See MAGOG. The term is used by St. Paul, Col. iii. 11, to illustrate the large mercy of God, free to every nation.

**SCYTHOPOLIS** (sith-op'o-lis), 2 Macc. xii. 29. See BETH-SHEAN.

**SCYTHOPOLITANS** (sith-o-pol'i-tanz), 2 Macc. xii. 30, inhabitants of Scythopolis.

**SEA**. This word is used in Scripture with considerable latitude. Besides designating seas properly so called, and that "gathering together of the waters," Gen. i. 10, which we regard as the ocean, it is applied to any considerable mass of water, salt or fresh, as to lakes—*c. g.*, "the salt sea," Gen. xiv. 3; or even rivers, as the Nile, Isa. xix. 5, and the Euphrates, Isa. xxi. 1. The following are mentioned by the sacred writers:

1. The "Sea of Chinnereth," Num. xxxiv. 11, termed also the Lake or "Sea of Galilee," Matt. iv. 8, of "Gennesaret," Luke v. 1, and of "Tiberias," John xxi. 1. See TIBERIAS, SEA OF.

2. The Mediterranean Sea washed the western coast of Palestine. This was generally called the "great sea," Num. xxxiv. 6, 7; sometimes simply the "sea," Josh. xv. 46; also the "utmost," "utmost" or "hinder sea," Deut. xi. 24, because the east was considered geographically as in front of any one; and the "Sea of the Philistines," Ex. xxiii. 31, because the Philistine territory lay along the coast of the Mediterranean. This sea, extending from the straits of Gibraltar to Asia Minor, and washing Spain and France, Italy and Greece, Syria and Palestine, Egypt and Libya, is of course frequently alluded to in Scripture. The Tyrian commerce traversed it; the apostle Paul repeatedly crossed it.

3. The Red Sea, in places where there could be no danger of confounding it with the Mediterranean, is not unfrequently called simply the "sea," Ex. xiv. 2. But its special name in Hebrew is *suph*, the word signifying a woolly kind of seaweed which is to this day plentifully found on the shores of the Red Sea; it has been thought also to include a fluvial rush, such as the papyrus.

The Red Sea from the straits of Bab el-Mandeb to its most northerly point at Suez is about fourteen hundred miles in length, from 12° 40' to 30° N. lat., its greatest width being about two hundred miles; it is divided by the Sinaitic peninsula into two large arms or gulfs, the easternmost running north-east or northerly about one hundred miles, with an average width of fifteen miles, while the westernmost runs north-west near one hundred and eighty miles, with an average width of twenty. There is reason to believe that anciently this last gulf extended much farther northward to the lake of Heröopolis, now *Birket el-Timsah*, and it was connected by a canal with the Nile. Now the country at the head of the gulf is a waste and desert region, which may be a fulfillment of Isa. xi. 15; xix. 5; but when the Red Sea extended through it, it was irrigated and fertile.

The principal Scriptural interest of the Red Sea centres in the gulfs of Suez and Akabah. It was through some part of the former that the passage of the Israelites was made on their deliverance from Egypt, Ex. xiv. The tribes proceeded, we are told, from Rameses, doubtless in Goshen, to

Succoth, where they made their first encampment, Ex. xii. 37. Their journey was not along the ordinary road to Canaan, through the Philistine territory, Ex. xiii. 17, by which we may suppose they would have rounded the head of the gulf; but they were directed to turn, most probably southward, by Etham, in the edge of the wilderness, to Pi-hahiroth, between Migdol and the sea, over against Baal-zephon, Ex. xiii. 18, 20; xiv. 1. Pharaoh determined to pursue them. He had information that they had quitted the regular route; they were entangled among mountains, and their further progress was barred by the sea. It seemed as if the mighty arm that had hitherto defended them was now withdrawn. The standing force of six hundred chariots, with all the other chariots of Egypt that could be hastily collected, were at once in motion. This formidable body speedily overtook the Israelites, whose retreat it was evidently Pharaoh's object to cut off. He encamped, therefore, between them and the head of the sea; while they, utterly dispirited at the sight of their former masters, could not, it is clear, have made any resistance. Perhaps it was evening when the Egyptian army took up their position. And the guiding cloud which had hitherto preceded changed its place, stood between the two hosts, a pillar of fire to give light to Israel, while it cast additional gloom upon the Egyptians. Then, on the cry of Moses to the Lord, the signal was given, at the lifting of his rod, for the Israelites to move on. Their column must have been a very broad one; and as they marched all night, the sea was probably some miles wide. The Egyptians soon perceived that the tribes were gone, and ignorant, it may be thought, of the miracle, they pursued. In vain; they could not come up with Israel; disasters overtook them; their chariots could make no way on the unsound ground; perhaps there were storms which beat against them, Ps. lxxvii. 15-20; and when the morning dawned and Israel was saved, at the lifting up again of the wonder-working rod the sea returned to its strength and the Egyptians perished. Ever after was this great deliverance cited as the most marvelous interference of God for his people.

Various conjectures have been formed, with greater or less probability, as to the point where this stupendous miracle was wrought. It may have been below the modern Suez. But many of these conjectures are based on the presumption that the localities continue nearly the same as they were in the days of Moses. Considering that the gulf extended anciently, as above remarked, much farther than it now does, it is not unreasonable to believe that the passage was where there is at present a sandy waste. Possibly the Israelites marched through what is now the *Wady et-Tuneylat*, or it may be along the *Wady et-Teah*, which leads to the Red Sea from opposite Memphis. But we cannot presume to suppose the route certainly discovered. Some have chosen to imagine that there were fords, and that Moses took advantage of low water, which the Egyptians disregarding were overwhelmed. Even if we were to concede this, the transaction would not be reduced to an ordinary event. Whence, it might still be asked, the knowledge that Moses had of the right time to cross and the skill with which he carried his vast multitudes safely through? Whence, too, the strange blindness which made the Egyptians, who must have been well acquainted with the fords and the tides, rush on to inevitable destruction? To explain away the miracle renders the whole account unnatural and

incredible. And how, if it were mere skillful management, could that profound impression have been made upon the Canaanitish nations which we find years afterward paralyzing them when the people so led appeared before their cities? Josh. ii. 10.

4. The Salt Sea bears a variety of names in Scripture. It is sometimes simply "the sea," when misconception is impossible, Ezck. xlvii. 8; it is more frequently the "salt sea," Gen. xiv. 3; Josh. xv. 2, 5; it is also the "sea of the plain," Deut. iv. 49; it is, besides, termed the "east sea" and the "former sea"—*i. e.*, the sea in front, an observer being supposed to look toward the east, Ezck. xlvii. 18; Joel ii. 20. By later writers it was distinguished as the Asphaltic Lake and Sea of Sodom, but it is now generally known as the Dead Sea, from the belief that neither animal nor vegetable life subsisted in it, or indeed near it. The Arabs term it *Bahr Lûl*, the "sea of Lot."

This remarkable expanse of water is of an elongated oval shape, save that the regularity of the figure is broken by a large peninsula projecting from the eastern shore near to the southern end, dividing the whole into two reaches which com-

extending to the eastern gulf of the Red Sea; and as the Arabah is higher than the Ghôr, most of its waters drain off into the lake.

The Jordan, also, and various streams east and west empty themselves into it. And as there is no outlet, the waters are intensely salt and combined with much earthy matter. The solid matter in the Dead Sea water is far greater than that in the ocean; its specific gravity is therefore higher, so that persons unable to swim elsewhere cannot sink in this lake. It was once imagined that life could not subsist here; the waters were said to be almost motionless, of a dull leaden hue, and their steam pernicious. Such notions are now proved unfounded. Wild as are some of the surrounding heights, the view, generally speaking, of the lake is beautiful. The color of its waters may change according to circumstances, but they often are seen as blue as in other lakes. Living creatures, though of a low type, have been found in them; and animals, birds, and especially reptiles, throng the neighboring thickets, while ducks and other aquatic birds have been observed swimming and diving in the waters. There is something, how-

ADJEROUD, ANCIENTLY "ETHAM IN THE EDGE OF THE WILDERNESS."—See SEA, 3.

municate by a somewhat narrow channel. The extreme length is about forty-six miles, the greatest breadth above ten miles. The superficial area has been estimated at about three hundred square miles.

It is bounded east and west by lines of bare mountains broken by clefts and ravines, and indented by remarkable terraces. There is little vegetation except where a spring gushes forth, and then around it are reeds and thorn-bushes and palm trees, with other plants; but the general aspect is burnt and barren, presenting often scenes of rugged and utter desolation. At the southwestern end is a ridge of rock salt, dislocated and furrowed, detached pieces of which look like pillars. On the margin on the western side is a beach of varying width of shingle, sometimes intermixed with marl, chalk and gypsum, and various kinds of *débris*. A line of drift-wood encircles the lake, branches and limbs of trees, brought down by the Jordan and other torrents, and marking the highest level of the water. There is a salt and stony plain at the north-east corner, but of the eastern side little has been explored. To the south is a plain called *el-Ghôr*, part of which is salt and barren and muddy, part fertile, well wooded and watered. The Ghôr is closed by hills to the south, beyond which is the great Arabah,

ever, in the prevalent sterility and the dry burnt look of the shores, the overpowering heat, the occasional smell of sulphur, the dreary salt marsh at the southern end and the fringe of dead drift-wood round the margin, which must go far to excuse the title which so many ages have attached to the lake, and which it will never lose.

The most extraordinary fact in regard to the Dead Sea has yet to be mentioned. It lies in so deep a cleft among its mountains that its surface is, according to Lieutenant Lynch, one thousand three hundred and sixteen feet seven inches below the level of the Mediterranean, but according to the report of the English engineers who lately surveyed the country, one thousand two hundred and eighty-nine feet. The Jordan flows through a sunken valley, the fall along its course being rapid and considerable, till it reaches its lowest point in this lake. Whether the whole line of country was once far more elevated, and whether by some great catastrophe it descended to its present position, we cannot tell; but it is clear from its conformation that the most extraordinary changes would have to be made before the Jordan could flow on through the Arabah into the Red Sea. Moreover, the depth of the water of the lake is very great—one thousand three hundred and eight

feet at a point one-third of the length from the northern end, while south of the peninsula it is very shallow.

The whole question of the origin of the Dead Sea is large, and cannot be argued here; but the remarks of Mr. Tristram in his "Land of Israel," on the supposed volcanic agencies, will be read with interest. "I think there can be no question," he says, "but that the old notions of volcanic agencies about the Dead Sea were erroneous. . . . Such traces are not to be found; . . . the whole region has been slowly and gradually formed through a succession of ages; and . . . its peculiar phenomena are similar to those of other salt lakes in Africa, or referable to its unique and depressed position. But setting aside all preconceived notions, and taking the simple record of Gen. xix. as we find it, let us see whether the existing condition of the country throws any light upon the Biblical narrative. Certainly we do observe by the lake sulphur and bitumen in abundance. Sulphur springs stud the shores; sulphur is strewn, whether in layers or in fragments, over the des-

been submerged. The simple and natural explanation seems, when stripped of all the wild traditions and strange horrors with which the mysterious sea has been invested, to be this—that during some earthquake, or without its direct agency, showers of sulphur, and probably bitumen, ejected from the lake or thrown from its shores, and ignited perhaps by the lightning which would accompany such phenomena, fell upon the cities and destroyed them. The history of the catastrophe has not only remained in the inspired record, but is inscribed in the memory of the surrounding tribes by many a local tradition and significant name."

5. A "sea" of Jazer is spoken of in Jer. xlviii. 32. For a conjectural notice of it, see JAAZER.

**SEA-CALVES**, Lam. iv. 3, margin. The original word, rendered "sea-monsters" in the text, probably denotes jackals.

**SEA, THE MOLTEN**, a large brazen (copper or bronze) laver which Solomon made for the use

THE GULF OR BAY OF SUEZ, IN THE RED SEA.—See SEA, 3, and SEZ.

olate plains; and bitumen is ejected in great floating masses from the bottom of the sea, oozes through the fissures of the rocks, is deposited with gravel on the beach, or, as in the Wady Mahawat, appears, with sulphur, to have been precipitated during some convulsion. We know that at the times of earthquakes in the north the bitumen seems even in our own day to be detached from the bottom of the lake, and that floating islets of that substance have been evolved coincident with the convulsions so frequent in North-eastern Palestine. Everything leads to the conclusion that the agency of fire was at work, though not the overflowing of an ordinary volcano. The materials were at hand, at whichever end of the lake we placed the doomed cities, and may probably have been accumulated then to a much greater extent than at present. The kindling of such a mass of combustible material, either by lightning from heaven or by other electrical agency, combined with an earthquake ejecting the bitumen or sulphur from the lake, would soon spread devastation over the plain, so that the smoke of the country would go up as the smoke of a furnace. There is no authority whatever in the Biblical record for the popular notion that the site of the cities has

of the priests in the temple. It was to supply the place of the "laver" of the tabernacle. It was five cubits in height, ten in diameter and thirty in circumference, the thickness of the metal being one hand-breadth. The brim was of lily-work—ornamented with flowers like lilies—and just underneath was a double border of knobs, said to be shaped like gourds. The whole was placed upon twelve oxen, in allusion to the twelve tribes, standing with their faces outward, 1 Ki. vii. 23-26. This great basin contained two thousand or three thousand baths. It was set at the south-east corner of the court of the priests, 1 Ki. vii. 30. It was not for them to bathe in, but contained water for their ablutions. Ahaz removed the oxen from under the sea and fixed it upon a stone pavement, 2 Ki. xvi. 17. It was finally broken up by the Chaldeans, 2 Ki. xxv. 13.

**SEABURY** (see'ber-re), CHARLES, was born in 1770, at West Chester, and was the youngest son of the Right Rev. Samuel Seabury, D.D., bishop of Connecticut and Rhode Island. After a careful education, and having studied theology under Dr. Mansfield of Derby, Dr. Smith of Narragansett, and his father, he was ordained

as a deacon by his father in 1793, at Christ Church, Middletown, on the recommendation of the assembled clergy. In 1793 he began his ministry in Grace Church, Jamaica, Long Island, whence he was removed to the rectorship of St. James' Church, New London. In 1814 he was removed to Setauket, in Long Island, and to his work at that place he added missionary labor at Huntington and Islip, Long Island. In his seventy-third year he retired from the more active duties of the ministry, continuing to reside at Setauket, until his death, in December, 1844. He was famed for his disinterestedness, his humility and his great faithfulness in the discharge of all personal and official duties; and the testimony which his son, the Rev. Samuel Seabury, D.D., of New York, has borne to his character in the brief memoir which he has published of his father is as remarkable for its truthfulness as it is for its tenderness and respectful regard.

**SEABURY, SAMUEL**, D.D., first bishop of the Protestant Episcopal Church in the United States, was born in 1728, and graduated at Yale College in 1751. After finishing his classical education, he went to Scotland with the view of studying medicine, but soon turned his attention to theology, and took orders in London in 1753. Returning to America, he officiated first at Brunswick, New Jersey, then at Jamaica, Long Island, next at Westchester, New York, and lastly at New London, Connecticut, where he resided as rector of the parish in that city during the remainder of his life. Much as he was esteemed by his parishioners, his influence also extended among his brethren throughout the State; and when the Episcopal Church was organized in that diocese, he was elected bishop. He immediately went to England to obtain consecration; but meeting with some unexpected obstacles, he repaired to Scotland, where he succeeded in accomplishing the object of his mission. He was consecrated at Aberdeen, November 14, 1784. Hastening home, he resumed his duties as parish minister at New London, in connection with the performance of the episcopal functions of the diocese. Bishop Seabury possessed a vigorous and well-cultivated mind, and acquired a reputation corresponding with his high station. He died February 25, 1796, aged sixty-eight years.

**SEAL** (seel), a portable instrument used for the purpose of stamping upon any document or thing, instead of or with a sign manual. This impression had the same legal validity as an actual signature, as is still the case in the East. This custom is of very ancient date. A seal in the Alnwick Museum bears the date of Osirtasen I., about 2000 B.C.; and another, found at Nimroud, is supposed by Layard to have been the seal of Sennacherib, about 700 B.C. The seals were made of different forms and different materials, such as copper, silver and gold, and not unfrequently of precious stone set in metal, and sometimes of stone only, or even pottery or porcelain.

The seals were used for two purposes—to make an impression on a soft material, as on wax, and to stamp upon paper, etc. The material used by them to stamp the impression of the seal was not wax, but clay. The document itself, especially in Assyria and Babylon, was made of baked clay, and sealed whilst it was soft. In other cases a lump of well-compacted clay was impressed with the seal, and then, when baked, attached to the document by strings. In a somewhat similar manner

coffers containing valuables were sealed, and even doors of houses. The Hebrews, in common with other Orientals, had these customs, and the above usages illustrate the references to them in holy writ. Judah's signet was, probably, one suspended from the neck over his breast, Gen. xxxviii. 18, as was used amongst his people in after ages, Song Sol. viii. 6. Sealing up treasures is mentioned by Moses, Dent. xxii. 34. The lions' den was sealed upon Daniel, Dan. vi. 17; and so was the tomb of our Saviour, Matt. xxvii. 66. When secrecy was to be observed, the same kind of seals was attached to letters and documents, Dan. xii. 4; Rev. v. 1. Hence the royal seal was given to persons as a badge of authority, as in the cases of Pharaoh with Joseph, Gen. xli. 41, 42, and Ahasuerus with Haman and Mordecai, Esth. iii. 10; viii. 10. The figurative allusions to sealing, both in the Old and New Testaments, are easily interpreted if the above usages be kept in view.

**SEAMAN** (se'man), LAZARUS, D.D., a native of Leicester, educated at Emanuel College, Cambridge, and appointed principal of Peterhouse, on account of his active and zealous exertions in aid of the Parliament during the civil wars. He was subsequently one of the divines of the Westminster Assembly, and died in 1675. He published several sermons. It is said that his library was the first ever sold by auction in England.

**SEAR** (seer), 1 Tim. iv. 2. The original word means literally to brand in a mark with a hot iron branding instrument. When a hot iron is applied to the skin, it makes it hard and dead to sensibility. So the conscience may be hardened to bear delusion unconcernedly, not wincing at a system of fraud. But perhaps this explanation does not fully reach the apostle's meaning, which is rather that ignominious marks were burnt in and left there. "They knew," says Bishop Ellicott, "the brand they bore, and yet, with a show of outward sanctity, they strove to beguile and seduce others, and make them as bad as themselves."

**SEASON** (se'zun). There are six several seasons of the year indicated in Scripture—"seed-time and harvest, and cold and heat, and summer and winter," Gen. viii. 22. These may be thus arranged:

1. Seed-time.	Tisri, latter half, Marchesvan, Chisleu or Kisleu, former half, Chisleu, latter half, Tebeth, Sebat, former half, Sebat, latter half, Adar.	beginning of October to beginning of December.	Early rain due.
2. Winter.	Sebat, former half, Sebat, latter half, Adar, Nisan, former half, Nisan, latter half, Iyar, or Zif, Sivan, former half, Sivan, latter half, Tammuz.	beginning of December to beginning of February.	
3. Cold season.	Adar, Nisan, former half, Nisan, latter half, Iyar, or Zif, Sivan, former half, Sivan, latter half, Tammuz.	beginning of February to beginning of April.	Latter rain due.
4. Harvest.	Adar, Nisan, former half, Nisan, latter half, Iyar, or Zif, Sivan, former half, Sivan, latter half, Tammuz.	beginning of April to beginning of June.	
5. Summer.	Adar, Nisan, former half, Nisan, latter half, Iyar, or Zif, Sivan, former half, Sivan, latter half, Tammuz.	beginning of June to beginning of August.	
6. Hot season.	Adar, Nisan, former half, Nisan, latter half, Iyar, or Zif, Sivan, former half, Sivan, latter half, Tammuz.	beginning of August to beginning of October.	

**SEAT**. The ancient Egyptians used chairs, which very probably were customary among the Hebrews. But in later times the practice was introduced of reclining at meals. The Orientals now sit on low sofas or divans, or on mats or carpets, with the legs bent under them. See MEALS and FURNITURE.

**SEBA** (se-ba), a son of Cush, of the family of Ham, Gen. x. 7. His descendants appear to have formed a nation in the distant south, Ps. lxxii. 10; they are mentioned as of equal importance with

Egypt and Ethiopia, Isa. xliii. 3; they were a strong people and of imposing stature; their land, if Isa. xviii. 2, 7, may be applied to them, was intersected with streams, and it is described as a blessed triumph when Seba is subdued to God, Isa. xlv. 14. Now, Josephus says that Cambyes gave to Seba, the royal city of Ethiopia, the name of Meroe, after his sister. Meroe was an extensive region enclosed by the rivers Astapus (*Bahr el-Azrak*) and Astaboras (*Tacazze*), extending to the narrow tract where the latter river joins the Nile.

of Oxford in 1737; and in 1758 he was raised to the archiepiscopal see of Canterbury, in which situation he conducted himself with great dignity, munificence and proper severity against any laxity in the morals and manners of the clergy under his more especial superintendence. He died in 1768.

**SECT**. The original word so translated signifies a choice, and in the New Testament generally a chosen or adopted way of life—i. e., a school or party, Acts v. 17. See HERESY.

THE DEAD SEA.—See SEA, 4.

And this country answers all the conditions required for the identification of Seba.

**SEBAT**. See MONTH.

**SECACAH** (se-ka'kah), a town in the wilderness of Judah, Josh. xv. 61.

**SECHENIAS** (se-ken-i'as). 1, 2. 1 Esd. viii. 29, 32, the same as Shecaniah, Ezra viii. 3, 5.

**SECHER** (se'ker), a place near to Ramah, where there was a well, 1 Sam. xix. 22.

1. Seed-time.	Tisri, latter half, Marchesvan, Chisleu or Kisleu, former half, Chisleu, latter half, Tebeth, Sebat, former half, Sebat, latter half, Adar.	beginning of October to beginning of December.	Early rain due.
2. Winter.	Sebat, former half, Sebat, latter half, Adar, Nisan, former half, Nisan, latter half, Iyar, or Zif, Sivan, former half, Sivan, latter half, Tammuz.	beginning of December to beginning of February.	
3. Cold season.	Adar, Nisan, former half, Nisan, latter half, Iyar, or Zif, Sivan, former half, Sivan, latter half, Tammuz.	beginning of February to beginning of April.	Latter rain due.
4. Harvest.	Adar, Nisan, former half, Nisan, latter half, Iyar, or Zif, Sivan, former half, Sivan, latter half, Tammuz.	beginning of April to beginning of June.	
5. Summer.	Adar, Nisan, former half, Nisan, latter half, Iyar, or Zif, Sivan, former half, Sivan, latter half, Tammuz.	beginning of June to beginning of August.	
6. Hot season.	Adar, Nisan, former half, Nisan, latter half, Iyar, or Zif, Sivan, former half, Sivan, latter half, Tammuz.	beginning of August to beginning of October.	

**SECKER** (sek'er), THOMAS, archbishop of Canterbury, an eminent and pious prelate, was born at Sibthorpe, in Nottinghamshire, in 1693, and was educated with the view of becoming a dissenting minister. He, however, conformed to the Church of England, took orders and obtained preferment. He became successively rector of Houghton-le-Spring, prebendary of Durham, king's chaplain and rector of St. James's, Westminster. In 1735 he was elevated to the see of Bristol, whence he was translated to that

SOUTHERN TERMINATION OF THE DEAD SEA.—See SEA, 4.

**SECUNDIANS** (se-kun'de-anz), a denomination in the second century which derived their name from Secundus, a disciple of Valentine. He maintained the doctrine of two eternal principles, whence arose the good and evil that are observable in the universe. See VALENTINIANS.

**SECUNDUS** (se-kun'dus), a Christian of Thessalonica, Acts xx. 4.

**SEDECIA** (se-de-ki'as). 1. Bar. i. 1, one of Baruch's ancestors. 2. Bar. i. 8, Zedekiah the king.

**SEED**. By this term is generally to be understood offspring or descendants. The seed of the woman, Gen. iii. 15, the seed of Abraham, Acts iii. 25, and the seed of David, Rom. i. 4, specially designate Messiah.

**SEED-TIME**, Gen. viii. 22. See **SEASON**.

**SEEKERS** (seek'erz), a denomination which arose in the year 1645. They derived their name from their maintaining that the true Church ministry, Scripture and ordinances were lost, for which they were seeking. They taught that the Scriptures were uncertain; that present miracles were necessary to faith; that our ministry is without authority; and that our worship and ordinances are unnecessary or vain. The term was also applied at one time to the Friends, or rather to their forerunners.

**SEER**, 1 Sam. ix. 9. See **PROPHET**.

**SEETHE**, Ex. xvi. 23, to boil.

**SEFFRID** (seff'rid). There were two eminent bishops of this name who presided over the see of Chichester. Seffrid II. was elected in 1180, and died in 1204. During his episcopate the cathedral was greatly injured by fire, and eleven years were occupied in repairing the havoc made by this second great conflagration, in which the work of former ages was almost ruined. The new work was completed in the purest style of the twelfth century, and so considerable were the additions that a new consecration of the whole fabric was thought necessary, which ceremony was performed by this bishop in the year 1199, who had in the same year assisted at the coronation of King John. The work of Bishop Seffrid was far more beautiful than the parts to which he added his early pointed triforium. The small columns are of Petworth marble, with capitals carved so as to represent the leaves of the palm tree, and the spectator cannot fail to perceive a considerable resemblance in this part of the cathedral to the more imposing structure at Peterborough.

**SEGNERI** (seg-nā're), PAUL, a native of Nettuno, who, by the austerity of his manners and his natural eloquence, became a popular preacher and an active missionary of the Jesuits. He was invited to Rome by Pope Innocent XII, to whom he became chaplain; but he soon after fell into a decline, which occasioned his death, December 9, 1694, aged seventy. He published "The Unbeliever without Excuse," "The Pastor Instructed," "The Illusions of the Quietists" and "The Servant of Mary," besides seven volumes of sermons.

**SEGUB** (se'goob). 1. The youngest son of Hiel, 1 Ki. xvi. 34. 2. A descendant of Judah, 1 Chr. ii. 21, 22.

**SEIR** (seer). 1. A phylarch or chief of the Horim, who were the former inhabitants of the country afterward possessed by the Edomites. 2. The mountainous country of the Edomites, extending from the Dead Sea to the Elanitic Gulf. The name is usually derived from the Seir above mentioned; and as he was a great chief of the original inhabitants, it is difficult to reject such a conclusion. Some, however, as Gesenius, would rather

regard Seir as an appellation, and as denoting "the shaggy mountain"—i. e., clothed or bristly with woods and forests; but this is not, in any marked way, a characteristic of the range in question. 3. A mountain named in describing the limits of the territory of Judah, Josh. xv. 10.

**SEIRATH** (se'ra-th), a place or district to which Ehud fled after killing Eglon, Jud. iii. 26. It was perhaps in the mountains of Ephraim, Jud. iii. 27.

**SELA**, or **SELAH** (se'lah), "rock," a city in the territory of Edom, probably the capital, taken by Amaziah, king of Judah, and named by him Joktheel—i. e., "subdued of God"—in memory of his conquest, 2 Ki. xiv. 7. It afterward passed under the dominion of Moab, Isa. xvi. 1. It would seem that this place is meant in

ANCIENT SEAL- OR SIGNET-RINGS OF EGYPT.—See SEAL.

1. Solid Fine Gold Ring of Pharaoh Cheops, about B. C. 1175, found in the Pyramid which bears his name. 2. The Hieroglyphics on oval face of No. 1. 3. Bronze Ring of about B. C. 1300, worn by military men not of the royal household. 4. Bronze Ring of Amunoph III., B. C. 1403-1367. 5. Egyptian Ring of uncertain date. 6. Solid Fine Gold Ring of the Pharaoh who succeeded Amunoph III., whose name appears on one surface of the revolving Seal; on the second is a lion with the legend, "Lord of Strength;" on the third a crocodile, and on the fourth a scorpion. This ring contains nearly one hundred dollars' worth of pure gold.

two or three places, where in our version the word is translated "rock," Jud. i. 36; Obad. 3. There can hardly be a doubt that Sela is identical with the Petra of later times, celebrated as the chief city of the Nabatheans in the fourth century B. C., and as a central station for the commerce of the East. It was afterward the residence of the Arabian princes who bore the name of Aretas, and was subjected to the Roman power by Trajan; from Adrian it received the name of Adriana.

The remains of the city lie in the Wady Mousa about two days' journey to the north of the gulf of Akabah, and somewhat farther to the south of the Dead Sea. It is enclosed by rugged cliffs of red sandstone, and rocky ravines from fifty to two hundred and fifty feet in depth, and surrounded by a dry and barren desert. The plain on which it stands is on a high level, and is not more than

about a mile square. The ravine of Wady Mousa varies in breadth from twelve to one hundred and fifty feet, and the overhanging rocks almost shut out the sun's rays. But it was through this ravine that an artificial passage was made, about a mile long, the only way of access to the town. Along it ran a little river, supplying it with water, over which bridges were thrown, and by the sides of which quays were constructed. The traveler who penetrates through the surrounding dry and desert country to Petra finds piles of tombs excavated in the rocks, with colonnades and obelisks of imposing dimensions.

In another ravine-like but broader valley is that astounding structure, *el-Khuzneh*, probably used as a temple, one of the wonders of the East, the facade of which consists of two rows of six columns over one another, with statues between, with capitals and sculptured pediments, the upper one of which is divided by a little round temple crowned with an urn. Behind the *el-Khuzneh* the eye is struck by many beautiful and varied facades, leading to apartments excavated in the cliffs, used either as tombs or as temples, and later as churches; but in a wider part of the valley, on its left side, is the splendid Greek theatre, entirely hewn out of the rock, one hundred and twenty feet in diameter at the base, with more than thirty rows of seats, in the native rock, red and purple alternately, and holding upward of three thousand spectators, surrounded with tombs, and overgrown on the sides with the wild fig tree and the tamarisk. In the ancient site of Petra itself every variety of ruins, of streets, houses, temples and palaces, bespeaks the vanished glory of a town once splendid and wealthy—the palace of Pharaoh (*Kasr Faron*), the isolated column likewise bearing the name of the Egyptian monarch (*Zub Faron*), and indicating the former site of a large pillared temple, the remains of triumphal arches, the colossal columns of a depraved Corinthian or Doric order, hewn out of the solid rock, and still forming part of the native mass; and majestic colonnades, giving the whole base of the mountain the appearance of a vast pile of grand architecture. Astonishing and almost numberless excavations are everywhere wrought in the front of the mountain, in its ravines and recesses, and even in the precipitous rocks around it, in many cases one rising over the other, and sometimes several hundred feet above the level of the valley, with steps cut in the solid rocks, some widely conspicuous, others hidden in the most inaccessible cliffs. These excavations shine in all the magic of variegated, though not uniformly bright, colors, equaling in softness those of flowers or of the plumage of birds, and exhibiting a gorgeous crimson, streaked with purple, and often intermixed, ribbon-like, with yellow and blue; they are of the most various dimensions, and serve the most manifold purposes. Some are small niches, perhaps intended for votive offerings; others are designed for tombs, and exhibit an endless variety in size, workmanship and style; they consist of spacious chambers with recesses, sometimes near the ceiling, at the height of eight or ten feet, and often adorned in the front with architectural embellishments of astonishing richness and striking beauty. The cloister (*deir*) at the north-western extremity of the cliffs, also hewn out of the rock, with a most splendid facade and a vast urn on the summit, is accessible through a long and tortuous ravine by a path five or six feet broad, and steps cut in the stone with immense exertion; is surrounded by

ruins, covered with inscriptions in the Sinaitic character, crosses, and figures of the wild goat or ibex, indicating its sacred character, but rather modern in effect.

**SELA-HAMMAHLEKOTH** (se'la-ham-mah'le-koth), a rock in the wilderness of Maon whence Saul was summoned from pursuing David by the news of a Philistine incursion, 1 Sam. xxiii. 27, 28.

**SELAH** (se'lah), a word which occurs seventy-one times in thirty-nine Psalms; also in Hab. iii. 3, 9, 13. There are various opinions as to the meaning. Thus Gesenius tells us that some think it is an abbreviation, the letters of which it is composed each standing for a word. By some it is derived from a verb signifying "to raise up," the meaning, therefore, being a raising of the voice, in response to the instruments. This Gesenius himself prefers. But others, adopting the same derivation, understand "suspend the voice"—i. e., rest, pause. Sommer has minutely investigated the matter, and Keil has adopted and illustrated his opinion. They suppose that it directs the falling in of the sound of the priests' trumpets into the Levites' psalm-singing and playing on stringed instruments. It occurs, therefore, where very warm emotions have been expressed.

**SELDEN** (sel'den), JOHN, an eminent lawyer and antiquarian, was born at Salvington, near Worthing, in Sussex, December 16, 1584. He received his education at Hart or Hert Hall (since merged in Magdalen Hall), Oxford, where, although possessing great abilities, he did not particularly distinguish himself. He entered himself at Clifford's Inn, in 1602, for the study of law, and in 1604 removed to the Inner Temple for the completion of his legal studies. He acquired very early a taste for antiquarian research, in which department he afterward became so eminent. He was, in fact, one of the most learned men of his age. He lived in stirring times, and was, almost inevitably, mixed up with the stormy politics of the period; but he belonged to no extreme party, although a friend of liberty and of the popular cause. He died November 30, 1654. His works are very numerous and learned; the following are those which require special notice here: "History of Syrian Idolatry," "Marriage and Divorce among the Hebrews," and "The Jewish Sanhedrim."

**SELED** (se'led), one of the descendants of Judah, 1 Chr. ii. 30.

**SELEMIA** (se-le-mi'ah), 2 Esd. xiv. 24, a scribe whom Esdras was to employ.

**SELEMIAS** (se-le-mi'az), 1 Esd. ix. 34, the same as Shelemiah, Ezra x. 39.

**SELEUCIA** (se-len'sh'ah), a city of Syria, situated about sixteen miles west of Antioch, on the sea-coast, near the mouth of the Orontes; sometimes called Seleucia Pieria, from the neighboring Mount Pierus; and also Seleucia ad Mare, in order to distinguish it from several other cities of the same name, all of them denominated from Seleucus Nicanor. Paul and Barnabas on their first journey embarked at this port for Cyprus, Acts xiii. 4; see also 1 Macc. xi. 8.

**SELEUCIANS** (se-len'sh'anz), disciples of Seleucus, a philosopher of Galatia, who about the

year 380 adopted the sentiments of Hermogenes and of Andens. He taught, with the Valentini-ans, that Jesus Christ assumed a body only in appearance. He also maintained that the world was not made by God, but was co-eternal with him, and that the soul was only an animated fire created by the angels; that Christ does not sit at the right hand of the Father in a human body, but that he lodged his body in the sun, according to Ps. xix. 4; and that the pleasures of beatitude consisted in corporeal delight.

**SELEUCUS** (se-lew'kus), surnamed NICA-TOR, was the founder of the dynasty of the Seleucidae. He reigned from 312 B. C. to 280. There were several who took the name Seleucus on ascending the throne.

**SELEUCUS**, 1 Macc. vii. 1; 2 Macc. iii. 3. This king, the fourth of the name, entitled PHILOPATOR, succeeded his father, Antiochus the Great, and reigned over Syria twelve years, 187-175 B. C. He was sometimes called king of Asia. Having need of large sums of money to pay the tribute imposed by the Romans, he sent his officer Heliodorus to plunder the tem-

EARLY EGYPTIAN SEAL- OR SIGNET-RINGS.—See SEAL.

ple at Jerusalem—an attempt which is said to have been supernaturally defeated, 2 Macc. iii. 7-40. Seleucus was afterward murdered by this same Heliodorus, and was succeeded by Antiochus Epiphanes.

**SELLER** (sel'ler), ABEDNEGO, a native of Plymouth, England, educated at Lincoln College, Oxford, which he left without taking a degree, became minister of Combeintine Head, Devonshire, and obtained a living in London, both of which he lost after the Revolution for refusing to take the oaths of allegiance to William. He wrote "Remarks relating to the State of the Church in the Three First Centuries," "The Devout Communicant," frequently reprinted under the title of "The Week's Preparation for the Sacrament," and "Tracts against Popery." He died about the year 1720, aged seventy-three.

**SELLON** (sel'lon), PRISCILLA LYDIA, born in 1820, was the founder, or leader in the founding, of the sisterhoods in the Church of England on a plan similar to that of the Sisters of Charity, etc., of the Romish Church. The movement met with no little opposition, and Sister Sellon has written in its defence "A Few

Words to some of the Women of the Church of God in England," and a "Reply to a Tract by the Rev. J. Spurrell concerning the Sisters of Mercy." She was made "Mother Superior of the Sisters of Mercy of Devonport and Plymouth."

**SELYNS** (sel'inz), HENRY, was born at Amsterdam, in Holland, in 1636. He was educated for the ministry, and after being licensed to preach, he received an appointment to the church at Breukelen (Brooklyn), in New Netherland, from the Dutch West India Company. The members of the church were poor, much scattered, and as their former pastor was now an aged man, Selyns feared to engage his services beyond the term of four years, thus aiming at the safety of the church, which he did not wish to involve, and also caring for his own support. He was inducted on the 7th of September, 1660. His firmness and regard for the privileges of his office were tested by the magistrates, who attempted to dictate to him in a matter of discipline. He had censured a member of the church, and the magistrates interfered; but he asserted his right, vindicated his

position, refused to yield and maintained his course with wisdom and dignity.

With a view to supplement his support, Governor Stuyvesant engaged him to preach to the negroes and others on his farm at Bourverie (the Bowery), where St. Mark's Church now stands. In July, 1664, he sailed for Holland, and in 1666 he was preaching at Waverveen, near Utrecht; and here he remained for sixteen years. In 1682 he again crossed the ocean to serve as pastor in New York, in which city he labored until his death, in July, 1701, in the sixty-fifth year of his age. He stood very high in the estimation of the leading men of New England, as well as among the influential men of the Hollanders. Increase Mather, Cotton Mather, Samuel Willard, the vice-president of Harvard College, and James Allen of the First Church in Boston were among the number of his friends and correspondents. His only published work, so far as is known, was a small volume of poetry, entitled "Anthology of the New Netherland."

**SEM**, Luke iii. 36, Shem; a Greek form.

**SEMACHIAH** (sem-a-ki'ah), a Levite porter, 1 Chr. xxvi. 7.

**SEMEI** (sem'e-i), a person named in our Lord's genealogy, Luke iii. 26.

**SEMEI**. 1. 1 Esd. ix. 33, identical with Shiméi, Ezra x. 33. 2. Rest of Esth. xi. 2, identical with Shiméi, an ancestor of Mordecai, Esth. ii. 5.

**SEMELIUS** (se-mel'le-us), 1 Esd. ii. 16, 17, identical with Shimshai, Ezra iv. 8, 9.

**SEMI-ARIANS** (sem-e-a're-anz). By this name the great bulk of the Arian party became distinguished from the strict Arians after the Council of Nicea. They were a large body of the clergy and laity, of great political influence in the Eastern Empire, who were opposed alike to the strict definition of orthodox Nicene theologians like St. Athanasius and to the equally strict definition which characterized the logical intellectualism of the old Arians, revived under the leadership of Aëtius and Eunomius. The orthodox were represented by the term *Homöousios*, which signified that our Lord is of one substance with the Father, and thus shut out entirely the idea of his being a created Person. The old Arians, on their revival, adopted the term *Anomöios*, which signified exactly the opposite, and defining the Son to be unlike in substance to the Father, expressed the idea that he was a created, and not an uncreated, Being. They were therefore known as *Anoarians*. The Semi-Arians, halting between these two opinions, endeavored to find a resting-place for their theology in the middle term *Homoiousios*, which signified that the Son is of a similar substance to the Father, but so far indefinite as to permit a great variety of interpretations respecting the extent to which such similarity makes him to differ from created beings. Practically, this attempted compromise enabled the Semi-Arians to call our Lord divine, but still to deny that he "is equal to the Father as touching his Godhead," and thus simply and truly God.

During the fifty-six years that elapsed between the Council of Nicea and that of Constantinople (A. D. 325-381) as many as eighty councils are on record, a large number of which were held by the Semi-Arian bishops in support of their contests with the orthodox and with their own sects.

**SEMI-CIRCULAR** (sem-e-cir-cu-lar) **ARCH**, an arch formed by a semi-circle. Also called Norman and round arch.

**SEMIFRATRES** (sem-e-fra'trayz), brothers of the second order among the Carmelites.

**SEMINARY** (sem'i-na-re), a college appointed for the theological education of those who purpose to enter the ministry. The houses of the society "De Propaganda Fide" are thus named.

**SEMINARY PRIEST**. This name was at one time given in England to Jesuits and priests who were trained at Rheims and Douai.

**SEMI-PELAGIANS** (sem-e-pe-la'je-anz). This name was invented by the Schoolmen to designate a large number of persons who, chiefly in Gaul, during the fifth century embraced a modified form of Pelagianism. The movement was a reaction no less against the views of predestination held by St. Augustine in his later years than against the extravagant assertions about free-will made by Pelagius.

The real founder of Semi-Pelagianism was the famous Cassian, an Eastern monk of Scythian extraction, who had been trained in a monastery at Bethlehem, and had resided afterward among the monks of Egypt prior to taking up his residence at Constantinople. Here he was ordained deacon by Chrysostom, and was selected by the clergy of that city, during the banishment of their bishop, to proceed on a mission to Innocent I., at Rome, where he probably received priest's orders. He subsequently settled at Marseilles, where he founded monasteries for both sexes, and where he wrote several books which led to his being called a Semi-Pelagian. In A. D. 431 an appeal was made to Rome to have his doctrines condemned. About this time the famous Vicentius of Lerins began to attack the views of Augustine on predestination, and in his monastery a native of Britain named Faustus adopted the same side. Toward the close of this century Gennadius, a priest of Marseilles, became a distinguished advocate of the position adopted by Vicentius. Pope Gelasius condemned the views of Faustus, and Clandianus Mamertus, Avitus bishop of Vienne, Caesarius

baptism are able, with his assistance, to accomplish what is pleasing to him. Whence it is most clearly to be believed that the marvelous faith of the thief whom the Lord summoned to Paradise, of the centurion Cornelius to whom an angel was sent, and of Zaccheus who was found worthy to entertain our Lord, was not natural, but the gift of God.

The general object of Semi-Pelagian doctrine was described by Cassian to be to protest against two extremes, the Augustinian denial of free-will and the Pelagian infringement of grace. The following positions are deduced from Cassian's works, viz.: Since the fall all men have original sin and are subject to death, but they have not lost a knowledge of God or free-will. It can neither be maintained (with Augustine) that the commencement of what is good in us always originates in God, nor (with Pelagius) that it always originates with ourselves. Sometimes it is God who first implants good thoughts and purposes in us. Sometimes it is man who takes the first step, and whom God afterward supports with his assistance. In either case the grace of God is unmerited, not absolutely but relatively, as it bestows on the weak and worthless efforts of man such favors here and so great reward hereafter. Thus four points of Augustinian teaching were rejected, viz.: 1. Unconditional election. 2. The inability of man under any circumstances to do good. 3. The constraining influence of grace on free-will. 4. The final perseverance of the saints.

On the other hand, the Semi-Pelagians made an equally emphatic protest against the pure Pelagianism which was sometimes attempted to be brought against them. "Let no one imagine," said Cassian, "that we give support to the profane notion of some, who assert that the sum of salvation is in one's own power, and by ascribing everything to free-will make the grace of God to be dispensed according to each man's merit." Unlike Pelagius, he did not deny—1. The existence of original sin in all men; 2. Its results, such as concupiscence, death, the loss of right of succession to eternal happiness. Nor did he assert that—3. Human nature is still as healthful as it was in the time of Adam's innocence; 4. Or that man is able without the assistance of grace to perform every kind of good work, to reach the highest degree of perfection and to accomplish the work of his salvation by his own natural power. He insisted that original sin has not so far weakened human nature that man is unable naturally to desire to have faith, to quit sin or to recover righteousness; that when he entertains these good dispositions God recompenses them by the gift of grace, so that the commencement of salvation actually may rest with man and not with God, although this was not necessarily and always the case.

**SEMIRAMIS** (se-mir'a-mis), a celebrated queen of Assyria (see ASSYRIA), daughter of the goddess Dereto by a young Assyrian. She was exposed in a desert, but her life was preserved by doves for one whole year, till Simmas, one of the shepherds of Ninus, found her and brought her up as his own child. Semiramis, when grown up, married Menones, the governor of Nineveh. The monarch, having seen and become enamored of Semiramis, asked her of her husband, and offered him his daughter Sosana instead, but Menones, who tenderly loved his wife, refused; and when Ninus had added threats to entreaties, he hung himself. No sooner was Menones dead than Se-

ANCIENT ROMAN SEAL- OR SIGNET-RINGS.—See SEAL.

1. Solid Gold, with figure of Hygeia on its face. 2. The Seal-face of a massive Gold Ring; the Inscription is, "Thou hast a Pledge of Love." 3. Also the Seal-face of a like Ring, with Inscription, "Proterus to Ugia." 4. A heavy Gold Ring, with two devices, the larger a figure of Mars, the smaller a dove and branch of myrtle. 5. A heavy Gold Ring, with private signet.

bishop of Arles, and Fulgentius of Ruspe, wrote on the "orthodox" side. In A. D. 529 the Council of Orange, in the province of Arles, and of Valence, in the province of Vienne, declared—1. That by the sin of Adam free-will has been so perverted and weakened that none have since then been able to love God, or believe on him, or to do good actions for his sake, unless divine grace has prevented them.

2. After grace has been received by baptism, all baptized persons are able by divine assistance and co-operation to do all things that belong to the soul's salvation, if they are willing to work with faith.

3. We not only do not believe that some persons have been predestined to evil by the divine power, but we pronounce anathema against all who incline to hold such an opinion.

4. We also profess and believe that in every good work it is not we who begin, and who are afterward assisted by the mercy of God, but God himself first inspires faith and love, without any previous good works on our part, so that we faithfully demand the sacrament of baptism, and after

miramis married Ninus, by whom she had a son called Ninyas. Not long after this Ninus died, and Semiramis became sole ruler of Assyria. One account makes her to have put Ninus to death. According to this statement, Semiramis, having secured the co-operation of the chief men of the state by gifts and promises, solicited the king to put the sovereign power in her hands for five days. He yielded to her request, and all the provinces of the empire were commanded to obey Semiramis. These orders were executed but too exactly for the unfortunate Ninus, who was put to death. Semiramis, on attaining to sovereign power, resolved to immortalize her name, and with this view commenced the building of the great city of Babylon, in which work she is said to have employed two millions of men, who were collected out of all the provinces of her vast empire. She visited every part of her dominions and left everywhere monuments of her greatness. To render the roads passable and communications easy, she hollowed mountains and filled up valleys, and water was conveyed, at a great expense, by large and convenient aqueducts to barren deserts and unfruitful plains. She was not less distinguished for military talents, and reduced many neighboring and even distant nations under her sway. India, in particular, felt the power of her arms. At length, being plotted against by her son Ninyas,

SEAL OF KING ALFRIC.—See SEAL.

and recalling to mind a response which she had received some time before from the oracle of Ammon, she voluntarily abdicated in favor of her son, and immediately disappeared from the eyes of men. Some said that she was changed into a dove, and that, several birds of this species having alighted upon the palace, she flew away along with them. Hence, according to the legend, the dove was held sacred by the Assyrians. Semiramis is said to have lived sixty-two years, and to have reigned forty-two years. The legend of Semiramis seems to connect the Syrian and Assyrian mythologies.

There are those who deny the whole story of this queen and her exploits, and even that any such person ever lived; but possibly the better course would be to strip the legend of its absurdities and let the possible statements stand, as we suggested in the case of Romulus. See ROME.

**SEMIS** (se'mis). 1 Esd. ix. 23, identical with Shiméi, Ezra x. 23.

**SEMLER** (sem'ler), JOHANN SALOMO, D.D., an eminent German theologian, was born at Saalfeld, December 18, 1725. He was educated at the university of Halle, where he was appointed, in 1751, professor of theology, a post which he held till his death, March 14, 1791. He may be regarded as the principal founder of the rationalistic school of criticism and exegesis in Germany.

He was a very prolific writer, but his works have now little beyond a historical value as marking an epoch in the history of Biblical science. Among his most effective works was his "Aid to the Liberal Interpretation of the New Testament."

**SEMPLE** (sem'p'l), ROBERT BAYLOR, D.D., born at Rose Mount, King and Queen county, Virginia, January 20, 1769. His father died the ensuing year. His mother was a pious woman, a member of the Episcopal Church, and trained her children with faithful care. By the generosity of a friend who was the principal of an academy, young Semple was enabled to acquire a fair education. Before he attained his majority, he entered upon the study of the law. In December, 1789, he experienced conversion, and joined the Upper King and Queen Baptist Church, and soon after, feeling himself called to the gospel ministry, he abandoned the law, and in September, 1790, was regularly ordained, and became pastor of Bruntington church in King and Queen, and this pastorate he held for forty years, till the Master called him home, though he did the work of an evangelist in all the region for many miles around. He was zealous in furthering missionary work throughout this and foreign lands. He soon attained great prominence not only by his zeal, but by his great learning and marked talents. He was repeatedly moderator of the Virginia Association; was president of the Triennial Convention from the year 1820. In 1827 was induced to make an earnest effort in behalf of Columbian College, then in peril of its life, for which purpose he temporarily removed to Washington, District of Columbia, still discharging his pastoral duties at Bruntington church. In his last year on earth, 1831, the Holy Spirit afforded him the grand joy of a wonderful revival in his church, during which more than a hundred were led to Jesus. On Christmas morning of this year he passed calmly from his labors to his reward, exclaiming, "I can depart in peace." He was a felicitous writer, though his active life afforded him time to write but little; his "History of the Rise and Progress of the Baptists in Virginia" has been considered his chief work, while his "Catechism for Children" was worthy of its popularity.

**SENAAH** (se-na'ah), a place the inhabitants of which returned in large numbers from Babylon with Zerubbabel, Ezra ii. 35; Neh. vii. 38. These are meant in Neh. iii. 3, the article being prefixed so as to form the word Hassenaah.

**SENATE** (sen'at), Acts v. 21, the body of elders.

**SENECA** (sen'e-ka), LUCIUS ANNÆUS, the celebrated Roman philosopher, was born at Corduba, in Spain, about the beginning of the Christian era. He studied rhetoric under his father, but after a while abandoned it for philosophy, adopting the principles of the Stoics, which he taught to a large class. He was banished from Rome on a false charge of immorality, but after eight years returned, was made praetor, and became tutor to the infamous Nero. He remained with the latter after he ascended the throne; but as to the nature of the influence he exercised over the emperor there is much uncertainty. He is supposed to have advised the death of Britannicus, and to have written Nero's apology for the murder of his mother, Agrippina. By degrees Seneca was supplanted by Nero, who became jealous and fearful of him, and at

length, accusing him of being concerned in a conspiracy, ordered him to die. Upon this, Seneca opened some of his veins, and bled to death in a warm bath. This event occurred A. D. 65. The works ascribed to him are numerous, but all are not genuine.

**SENAULT** (seh-no'), JEAN FRANÇOIS, a Flemish ecclesiastic, was a native of Antwerp. He became a member of the Oratory, subsequently its superior, and died at Paris, universally respected, August 3, 1672, aged seventy-one. He wrote a "Treatise on the Use of the Passions," a popular work, translated into English, German, Italian, etc.; a "Paraphrase of Job," "The Christian Man," "The Criminal Man," "The Duties of the Sovereign," "Lives of Saints and Illustrious Persons," etc.

**SENEH** (se'neh), 1 Sam. xiv. 4. See BOZEZ.

**SENEY** (se'ne), ROBERT, was born in 1799, at Queen Anne, on the Eastern Shore in Maryland.

SEAL-JEWEL OF ALFRED THE GREAT.—See SEAL.

After the death of his father, his mother removed him to New York, and in due time he entered Columbia College, where he graduated in 1815. He then commenced the study of the law in Baltimore; but his mind being directed to spiritual things, he abandoned the law and dedicated his life to the work of the ministry. New York city and State, Connecticut and Vermont were the principal spheres of his labor. In 1852 and 1853 he was a supernumerary at Brooklyn, where he continued to reside until his death, from paralysis, in July, 1854. He was an admirable, most impressive and effective preacher, but he was averse to writing for the press. He was well educated, though he always avoided a show of learning, and in ecclesiastical assemblies he disliked the appearance of being a leader; but his solid sense and well-balanced mind were always admired when he spoke in any debate, and among all his brethren he was greatly beloved.

**SENIER** (se'ner), Mount Hermon, or a part of it, 1 Chr. v. 23. See HERMON.

**SENNACHERIB** (sen-na-ke'rib), king of Assyria, who in the fourteenth year of King Hez-

ekiah (B. C. 713), came up against all the fenced cities of Judah and took them; on which Hezekiah agreed to pay the Assyrian monarch a tribute of three hundred talents of silver and thirty talents of gold. This, however, did not satisfy Sennacherib, who sent an embassy with hostile intentions, charging Hezekiah with trusting on "this bruised reed Egypt." The king of Judah in his perplexity had recourse to Isaiah, who counseled confidence and hope, giving a divine promise of miraculous aid. Meanwhile, "Tirhakah, king of Ethiopia" and of Thebes in Egypt, had come out to fight against the Assyrians, who had threatened Lower Egypt with an invasion. On learning this, Sennacherib sent another deputation to Hezekiah, who thereon applied for aid to Jehovah, who promised to defend the capital. "And it came to pass that night that the angel of the Lord went out and smote in the camp of the Assyrians

there be no soul, no mind, there can be no sensations.

**SENTENCES, BOOK OF THE.** This work was written by Peter Lombard, bishop of Paris, A. D. 1162, after the book called "Summary of the Sentences," in which received doctrines are methodically arranged and supported by lengthy quotations from the Fathers and from Scripture.

**SENTENCES, OFFERTORY,** texts of Scripture which are read at the collection of the alms in the service of the Church of England and in the services of the Protestant Episcopal churches in the United States, and generally in Episcopal churches in the British colonies and elsewhere.

**SENTENCES, SUMMARY OF.** A book thus named was written by Hugo de St. Victor in

SHRINE OF ST. SEBALD, IN THE CHURCH OF THAT NAME, NUREMBERG, A FINE SPECIMEN OF GERMAN SCULPTURE.

an hundred four-score and five thousand; and when they arose early in the morning, behold they were all dead corpses," 2 Ki. xviii. 13. On this Sennacherib returned to Nineveh, and was shortly after murdered by two of his sons as he was praying in the house of Nisroch, his god, 2 Ki. xix. 36, 37; 2 Chr. xxxii. 21; Isa. xxxvii. 37, 38. See MERODACH-BALADAN.

**SENSUALISTS** (sen'shu-al-ists), a name given to the followers of the school of Locke and Hume, who derive their premises in reasoning from the senses, as distinguished from the Intellectualists, who after Plato, Leibnitz, Kant and others derive theirs from man's inner nature. To Locke's principle, "Nihil in intellectu nisi quod prius fuerit in sensu" (there is nothing in the intellect which has not already been in sensation), Leibnitz added, "Nisi ipse intellectus" (except the intellect itself), thus holding that the existence of sensations involves the existence of a sentient nature or soul, for if

the twelfth century, which is a systematic work on theology; it preceded Peter Lombard's "Book of the Sentences."

**SENUAH** (se-nu'ah), a Benjamite, Neh. xi. 9, probably Hasenuah, 1 Chr. ix. 7.

**SEORIM** (se-o'rim), the chief of one of the courses of the priests, 1 Chr. xxiv. 8.

**SEPHAR** (se'far), an Arabian mount mentioned in connection with the sons or descendants of Joktan; "their dwelling was from Mesha, as thou goest unto Sephar, a mount of the east," Gen. x. 30. It has been generally agreed that this name is preserved in the very ancient city *Zafar*, but now pronounced *Isfar*, in the province of Hadramaut, of South Arabia, not far from the seaport Mirbat. That Sephar is called a mountain "of the East," is to be understood with reference to popular language, according to which Arabia is described as the "east country."

**SEPHARAD** (se-fa'rad), a country or district where there were Hebrew exiles, Obad. 20. The ancient Targum, and some Jewish authorities, understood by it Spain; but the Jew by whom Jerome was instructed in Hebrew gave it as his opinion that it meant the Bosphorus, most probably the Thracian Bosphorus.

**SEPHARVAIM** (se-phar-va'im), a city of the Assyrian empire whence colonists were brought into the territory of Israel, afterward called Samaria, 2 Ki. xxvii. 24. The place is probably represented by Sipphara, in Mesopotamia, situated upon the east bank of the Euphrates, above Babylon.

**SEPHARVITES** (se-far'vites), 2 Ki. xvii. 31, the inhabitants of Sepharvaim.

**SEPHELA** (se-fe'lah), 1 Macc. xii. 38. The low fertile district of Judah lying between the central hill-country and the Mediterranean. The cities and towns in it are enumerated in Josh. xv. 33-47; but as some of these stood in the highlands, the district was probably not defined with much exactness.

**SEPTUAGESIMA** (sep-tu-a-jes'e-mah). 1. The season between the Epiphany and Lent. It begins, in round numbers, seventy days from Easter. 2. The week preceding Sexagesima. 3. Septuagesima Sunday, the Sunday with which the season begins.

**SEPTUAGINT** (sep'tu-a-jint). The principal Greek version of the Old Testament is thus designated, and it has been so called because of the tradition that it was executed by seventy-two learned men at the instance of Ptolemy Philadelphus, for his library at Alexandria. Many fanciful and unfounded statements were long credited respecting this venerable and most precious version which are now known to be without a basis of fact.

Archbishop Usher held that this Greek translation was made within the year B. C. 277; and this date and the facts connected therewith rest on the authority of Aristæus, a supposed officer of Ptolemy Philadelphus, who also reported that seventy-two men were engaged on the work. According to Aristæus, there was in the court of Ptolemy a learned Athenian, Demetrius Phalereus, who was urged by the monarch to procure books from all surrounding nations; and discovering the value of the "Book of the Law of Moses" among the Jews, the king authorized him to procure the book, and to obtain interpreters, so as to make a faithful copy of the book. With a view to success, Demetrius urged Ptolemy to deliver from bondage in Egypt the Jews who were held there, to the number of one hundred thousand men. These, together with their mothers and their children, were freed and endowed at the cost of six hundred and sixty talents. No doubt this is quite fabulous, as the wealth of Egypt could have produced no such sum in order to secure a volume on the religion of the Jews. Then, again, a detailed statement is given of the enormous sums sent to Jerusalem for the temple, for sacrifices and other objects; and also of the copy that was made in golden letters, and of the manner in which six elders out of every tribe made a correct version into Greek, each answering every question in the same terms, and all agreeing about every word, and the whole work being thus wondrously finished in the space of seventy-two days. The enormous rewards that

these translators received are also specified, but the reader can easily see the fabulous character of these tales.

Aristobulus, an Alexandrian Jew, is the next who makes mention of this version, and his statement is on the whole a repetition of the fancies of Aristæus. His work is not now extant. All that remains of it are some few fragments quoted by Clemens Alexandrinus and Eusebius, in which, having asserted that Pythagoras, Plato and other Grecians had taken most of their philosophy from the Hebrew Scriptures, to make this seem the more probable he tells us these Scriptures had been for the most part translated into Greek before the time of Alexander and the Persian empire; but that under Ptolemy Philadelphus a more perfect translation was made of the whole by the care of Demetrius Phalereus.

The next that alludes to this version is Philo, another Alexandrian Jew, who was contemporary with our Saviour. It was but a short time after the crucifixion when Philo was sent on an embassy from the Jews in Alexandria to Caius Cesar, the Roman emperor. He agrees with Aristæus in his statement about Ptolemy Philadelphus sending to Jerusalem for elders to make this version, of the questions they answered to show their wisdom, of their being shut up in the island of Pharos to complete their work; but he adds that they all agreed even to a word in their translation, and hence he holds that they were divinely directed in their whole work, and that they were not common interpreters. He adds that the Jews were accustomed to go over into the island of Pharos annually to commemorate their work, to feast and rejoice while they gave thanks to God. Then, again, Josephus and Eusebius agree on the whole with Aristæus, the chief difference being the amount of the indemnity which Ptolemy gave to the liberated Jews, which Josephus places at the sum total of four hundred and sixty talents. After Josephus comes Justin Martyr, who flourished in the middle of the second century, about one hundred years after Philo. He had been at Alexandria, where he had learned all about the wonderful agreement of the translators, where he saw the cells in which they were separately confined to prevent communication with each other, and then, when their separate works were all produced, they agreed to a word; and the pious man says: "These things we now relate unto you, O Greeks, are not fables and feigned stories; for we ourselves, having been to Alexandria, did see the ruins of those little houses or cells in the island of Pharos there still remaining; and what we now tell you of them we had from the inhabitants of the place, who had received it from their forefathers by undoubted tradition." Irenæus, Clemens Alexandrinus, Hilary, Augustine, Cyril of Jerusalem and others of the Fathers follow Justin in the matter of the cells and the other wonders which he records. In A. D. 368 it appears from Epiphanius that the tradition had greatly expanded, and the most childish fables were received as true respecting Ptolemy, the translators and all concerned in the work.

The judgment of history is to the effect that the version was really made in the time of the Ptolemies. We have the book now, and it is the same which was in use in our Saviour's time; for most of the passages which the penmen of the New Testament quote out of the Old Testament are now found verbatim in the Greek Septuagint. The book bearing the name of Aristæus is a manifest fiction, made out of design to give the greater authority to this translation. The Jews, after their

return from the Babylonish captivity to the time of our Saviour, were much given to religious romances, as appears from their apocryphal books still extant; and that the book which bore the name of Aristæus was such a romance, and was written by some Hellenistical Jew, is evident, for Aristæus is made to speak as a Jew, not as a heathen; and so also of Ptolemy, Demetrius and all others referred to. The ransom or indemnity is quite absurd, and so are the questioning and answers of the interpreters, the selection from the tribes; while in the book there are incidents referred to which are not in accord with the true history of the time. Aristæus being set aside, his followers must share the same fate, as Philo, Josephus and the others are mere credulous copyists of his tales.

That a Greek version of the Scriptures was really and gradually made for the Alexandrian Jews because of their residence in a Greek colony is undoubted. The children of the colonists spoke Greek just as Chaldees was spoken by those who were born of the Jews in Babylon. At first, the law only was translated, because it was required in their worship; but afterward, when the reading of the prophets also came into use in the synagogues of Judea, in the time of Antiochus Epiphanes, the Jews of Alexandria were induced to do the same, and this caused a translation of the prophets to be also made into the Greek language. Subsequently, others translated the rest for private use; and thus the whole version came to be completed which we now call the Septuagint. Being once made, it was used by all the Hellenized Jews in all the Greek cities where they dwelt. It is quoted no less than eighty times in the New Testament, thereby establishing its accuracy, and also showing how Christ and his inspired apostles recognized the propriety of the word of God being translated into the vernacular language of people that they might know in their own tongues the precious revelation of the Lord, and so be made wise unto eternal life.

As Christianity spread, the credit and the use of this version extended. The apostles quoted from it, so did the early preachers and Fathers.

The Greek churches used it, and the Latins had no copy of the Scriptures but those which were made from it until the time of Jerome. As to Greek versions of the text, it may be stated that those of Aquila, Theodotian and Symmachus were in great repute. Origen collected four versions in the Tetrapla, with the fifth, sixth and seventh editions in the Hexapla and Octapla. The three modern editions of the Septuagint are—1. The Complutensian edition of Cardinal Ximenes, printed in 1515; 2. The Aldine, published at Venice in 1518; 3. The Roman edition of Sextus V., which was published in 1587, and of this a Latin version was made; and at Paris, Cambridge and London editions have repeatedly been issued. The Alexandrine manuscript of the Septuagint is the best and most ancient of all the originals. It was sent as a present to King Charles I. of England by Cyrillus Lucaris, then patriarch at Constantinople. He

sent it to London by Sir Thomas Roe, the British ambassador, with a letter in his own hand, of which the following is a translation: "This book of the holy Scriptures of the Old and New Testaments, as we have it by tradition, was written by the hand of Thecla, a noble Egyptian lady, about one thousand three hundred years since, a little after the Council of Nice. The name of Thecla was formerly written at the end of the book; but the Christian religion being by the Mohammedans suppressed in Egypt, the books of Christians were reduced to the like condition, and therefore the name of Thecla is extinguished and torn out of the book, but memory and tradition doth still observe it to have been hers."—Cyril, Patriarch of Constantinople.

Such is this important version of the Old Testament Scriptures, which has been honored by our

PORTAL TO CHURCH OF ST. SEBALD, AT NUREMBERG.—See SCULPTURE.

Saviour and his apostles, and which has been blessed to do a great work in the Church of God.

**SEPULCHRE.** See FUNERAL.

**SEPULCHRE, HOLY.** See HOLY SEPULCHRE.

**SEQUESTRATION** (se-kwes-tra'sh'n) is a process by which, in virtue of a writ used against a benefited clerk (minister), the bishop is warranted to enter into the rectory or parish church and to take and sequester the same, and to hold them until, of the rents, tithes and profits thereof and of the other ecclesiastical goods of the defendant, sufficient may be collected to pay all his debts.

**SERAH** (se'rah), a daughter of Asher, Gen. xlv. 17. She is also called Sarah, Num. xxvi. 46.

**SERAIAH** (se-ra'yah), a very common name among the covenant people, especially in the later days of the commonwealth; but none of the persons bearing it attained to particular note, unless we except the Seraiah, the son of Neriah, and brother of Barnah, who accompanied Zedekiah in the fourth year of his reign to Babylon, and to whom Jeremiah committed the roll containing his prophecy concerning Babylon, with a charge to read it at Babylon, and thereafter cast it into the river Euphrates, bound to a stone that it might sink to the bottom. This was to be done for a sign of the certain doom and perdition of Babylon, Jer. li. 61-64. The other persons bearing this name were a son of Kenaz, brother of Othniel, 1 Chr. iv. 13, 14; a scribe or secretary of David, 2 Sam. viii. 17, apparently the same who is called Shavsha in 1 Chr. xviii. 16; a high-priest in Zedekiah's time who was taken captive and slain at Riblah, 2 Ki. xxv. 18; the son of Tanhumeth the Netophathite, 2 Ki. xxv. 23; and various others, of whom notice may be found by consulting the following passages: 1 Chr. iv. 35; Ezra ii. 2; vii. 1; Neh. x. 2; xi. 11; xii. 1.

MOUNT SEIR AND ITS REGION.—See SEIR.

**SERAPEUM** (se-ra-pe'um), or **SERAPION** (se-ra-pi'on), a name given to the temples of Serapis in Egypt, of which there were a great number. 2. A celebrated temple of Serapis in Alexandria, and one of the two temples in which the famous library was deposited. 3. Another temple of Serapis in Egypt, situate to the south of Heroöpolis. A settlement grew up around it, and the place was also famous for being the middle point in the road from north to south. 4. A temple of Serapis at Rome, on the Capitoline Hill, erected by Caracalla.

**SERAPHIM** (ser-a'fim), "lofty ones," "princes." This word is used to denote some attendants on the divine Majesty, probably an order of angels. They are described as having six wings, with twain of which in reverent adoration they covered their faces, with twain their feet, and with twain they flew to perform the Lord's commands, Isa. vi. 2, 3, 6, 7. See **ANGELS**.

**SERED** (se'red), one of the sons of Zebulun, Gen. xli. 14.

**SERGEANT** (sar'jant), JOHN, was born in Newark, in 1710. He graduated at Yale College in 1729, and acted as tutor in the college from

1731 to 1735. In the western part of Massachusetts an important work had been begun among the Indians, and after mature consideration the young tutor agreed to labor among that people. His preaching, his efforts at education and his various plans for the civilization and elevation of the Indians showed his wisdom and great zeal. He was rewarded by considerable fruit; for when he died, in 1749, one hundred and twenty-nine had been baptized and forty-two were communicants. He died of decline, and he was enabled to experience the power of the gospel in his own soul which he had taught to the children of the forest. He died in the full assurance of faith.

**SERGIUS** (ser'je-us), the name of a line of popes. The first was a Sicilian, and incurred the anger of the emperor Justinian for refusing to accept the decrees of the Trullan Council of Constantinople, who tried to arrest him. He fled from Rome, and was absent seven years. He baptized Cedwalla, king of the West Saxons, and introduced divers ceremonies into the service of the Church. He died in 701.

The second was elected without the consent of the emperor Lotharius, who therefore sent an army against him, but matters were accommodated. During his reign the Saracens sailed up the Tiber, attacked Rome, but without success, and ravaged the neighborhood. He died in 847.

The third was, according to Baronius, the most wicked of men, and delivered over to every vice. He owed his election to the intrigues of a lady, Marosia, by whom he had a son, who afterward became pope, under the title of John XI. He died in 911.

The fourth, before his elevation, was called "Bocca di Porco," or Pig's Snout. He exerted himself against the Saracens. He died in 1012.

**SERGIUS PAULUS** (ser'je-us pau'lus), the proconsul of Cyprus at the time the island was visited by Paul and Barnabas on their first missionary tour, Acts xiii. 7. Sergius is described as a man possessed of intelligence and discretion; and though previous to the coming of Paul and Barnabas he appears to have surrendered himself in a great degree to a Jewish sorcerer, Bar-jesus, yet when now under better teaching he rose above this sinister influence and embraced the truth of the gospel.

**SERJEANTS** (ser'jants), Acts xvi. 35, 38. The Greek word is literally "rod-bearers"—i. e., the lictors who bore the rods; not the *fascies*, but *bacilli*, which were carried before such magistrates as had authority at Philippi. See **MAGISTRATES**.

**SERLE** (serl), AMBROSE, a layman of the English Church who left several valuable works, one at least of which will serve as an enduring memorial of his excellent gifts and his Christian spirit, and at the same time a precious legacy to true Christian people of every name; we allude to the "Horæ Solitariae, or Essays upon some Remarkable Names and Titles of Jesus Christ and of the Holy Spirit." It has gone through many editions, and is still highly prized as "a very devotional and experimental work," as Bickerteth characterizes it. His "Christian Remembrancer," "Church of God," "Christian Husbandry," "Charis, or Reflections on the Spirit," "Christian Parent" and "Secret Thoughts of a Christian" are all in sufficient demand to warrant the hope that it will be many years before they will be suffered to get "out of print." No devout Christian will deem money used in the purchase, or time given to the perusal, of any one of his writings as misspent. Serle was born about 1740 and died in 1815.

**SERLO** (ser'lo) was one of the great clerical builders whose monuments still abide in the great cathedrals of England. He was a Norman monk, whom William I. brought over and established as the third abbot of the Benedictine house at Gloucester. In A. D. 1089 he began a new church, of which Robert, bishop of Hereford, laid the first stone, but it was not finished till the year 1100, when it was consecrated with great pomp by Sampson of Worcester, Gundulph of Rochester and Henry of Bangor. The abbey of St. Peter's was a mitred one, the bishops of Worcester being the visitors. The last visitation was made by the excellent bishop Latimer. The abbey was surrendered to Henry VIII. in 1539, and it was afterward changed to an episcopal see, the letters of endowment being dated in September, 1541. Part of the work of Serlo yet remains; and the visitor who enters by the west door is struck by the unusual height of the massive cylindrical columns of the nave. These, with their semicircular arches, and the unusual low triforium over them, attest his taste and show the style which was approved in his day.

**SERON** (se'ron), 1 Macc. iii. 13, 23, 24, a general of Antiochus Epiphanes, routed by Judas Maccabæus.

**SERRANUS** (ser-ra'nus), JOHANNIS, or **DE SERRRES** (deh sã'r), JEAN, a learned Frenchman, who, being a Protestant, with difficulty escaped from the St. Bartholomew massacre, and fled to Lausanne. He was subsequently minister at Nismes, and enjoyed the favor of Henry IV. In 1597 he published a book "On the Catholic Faith," in which he attempted to reconcile the Protestants and Roman Catholics to the same tenets, and in consequence displeased both parties. He died suddenly in Geneva, in 1598, aged about fifty, and some supposed he was poisoned. Besides the work named above, he wrote a "Treatise on the Immortality of the Soul," "On the Condition of Religion and of Public Affairs in France," besides an edition of Plato, of which the Latin version is very elegant, but inferior in accuracy to that of Ficinus.

**SERPENT** (ser'pent). There are several special names given in our translation to various kinds of serpents, as "adder," "asp," "cockatrice," "dragon," "vipér." But there is also a Hebrew word in the Old Testament, and a Greek one in the New, of more general meaning, corresponding with our own term "serpent." And there are matters of high interest to which this general word is applied.

Thus we are told that it was by the instrumentality of a serpent that our first parents were tempted to commit the sin which forfeited their happy state, Gen. iii. Many strange speculations have been broached in regard to the serpent of Eden. Some critics have amused themselves by supposing that another animal was intended; some say that prior to the fall the serpent had feet, and was deprived of them as a part of his sentence, "Upon thy belly shalt thou go;" and some would attribute to it naturally the gift of speech, while almost all descent upon the peculiar subtlety of a serpent, as if in power or instinct it was superior to all other brute creatures.

But such reasoning is beside the mark. Let us take a more comprehensive view. We find repeated instances in Scripture of God's making use of inferior creatures and their natural organs to teach great lessons to men. It was by giving voice to the ass that Balaam's rashness was reproved, Num. xxii. 22-35. It was by means of a fish that Jonah's disobedience was punished, Jonah i. 17; ii. 10. Other examples also are to be found, Matt. xvii. 27; John xxi. 3-8. And the devils, who by God's permission exercise a marvelous power in the world, have not only possessed and become identified, as it were, with men, but have also instigated animals to strange unnatural deeds, Matt. viii. 28-34. Quite analogous, therefore, is Satan's using the serpent as the means of his machinations in Eden. And the subtlety attributed to it and the judgment pronounced upon it, though having some ground-work in the creature, pointed far more to the evil agent who had used that creature for his own purposes. The serpent was "full of all subtlety and all mischief," just as St. Paul addressed a "child of the devil," Acts xiii. 10, because there was a higher and more venomous influence working in it.

Then as to the curse; there was no change wrought in the constitution of the serpent. Geological research has demonstrated the existence of serpents in serpent form, and (we may conclude) with the same habits and propensities in the earlier periods of the world's history. But it is not by any means a strange thing for a natural object to have a new significance given to it. Doubtless from ordinary causes the rainbow had been seen long before it was made the sign of God's covenant to Noah, Gen. ix. 12-17. The curse on Cain wrought no physical change in him, Gen. iv. 11. So there was no change in the physical conformation of the literal serpent. But the serpent's habits, trailing on its belly amid the dust, venomous, and loathsome to the eye of man, read to every age a striking lesson, and expose the tempter, whose vehicle of mischief it was, as cursed and to be hated. Mischief indeed he has done and can still do; he can bite the heel, but it will always be to the bruising and crushing of his own head. The facts of the fall, as narrated by the sacred historian, must not be explained away or regarded as of a mythic character. Other parts of Scripture bear testimony to their literal truth, 2 Cor. xi. 3; but yet to comprehend their whole significance we must look beyond the reptile to the dark power

who for a time identified himself with it. Hence it was that the serpent was feared and thought a being to be propitiated. And hence that strange worship which in so many ages and so many lands was offered to it.

Of the particular kind of serpents called "fiery serpents," by whose bite the Israelites were plagued at Punon or Zalmonah, Num. xxi. 4-10; xxxiii. 41-43, little satisfaction can be gleaned. Some have thought that they were called fiery from their color; others, with more reason, believe that allusion is made to the burning pain of the venomous bite. The remedy provided was remarkable. A serpent was to be made of copper or bronze, and placed upon a pole. It might be thought that this could be of no service. But it was a trial of faith; whoso looked thereon lived.

Besides the immediate relief, here was a divinely-intended historical type. God purposed that it

of superstitious regard to the Jews, was broken up by Hezekiah, 2 Ki. xviii. 4. See **NEHUSHTAN**.

**SERPENT-CHARMING**. We frequently find references in Scripture to serpent-charming, Ps. lviii. 4, 5; Eccles. x. 11; Jer. viii. 17; James iii. 7. This practice is still common in the East. "I have seen," says Dr. Thomson, "many serpent-charmers who do really exercise extraordinary power over these reptiles. The thing is far too common to be made a matter of skepticism." In Ps. lviii. 4-6 there is evidently an allusion to certain kinds of serpents which cannot be charmed.

**SERUG** (se'roog), one of the patriarchs in the line of Shem, Gen. xi. 20, 23; in Luke iii. 35 Sarah.

**SERVANT** (ser'vant). This word is fre-

SELA, OR PETRA.—See SELA.

should illustrate the doctrine of the gospel to be afterward fully revealed. "As Moses lifted up the serpent in the wilderness, even so must the Son of man be lifted up; that whosoever believeth in him should not perish, but have eternal life," John iii. 14, 15. And never was this more signally illustrated than at the very time when Christ was "lifted up." There was the thief suffering worthily the punishment of his misdeeds; how should he obtain forgiveness and life? Little likely did it seem that one hanging crucified in weakness beside him could be his Saviour. Yet he looked to him. He discovered in that innocent sufferer the divinely-appointed means of his salvation. He looked, and with new-born faith exclaimed, "Lord, remember me." The answer was immediate, the cure perfect: "To-day shalt thou be with me in paradise," Luke xxiii. 39-43. So mighty is the effect of a believing look to Jesus! And so it is still; the sinner looks to Christ and lives. The brazen serpent, having become an object

quently used in our version of both Testaments, when "slave" would have been much more fitting. There are terms, indeed, which imply attendance or confidential service, but these are generally rendered "minister" or "young man." So Joshua was Moses' attendant, Ex. xxiv. 13; xxxiii. 11—clerk or secretary we might in modern language say—it being understood that the designation in the last named passage does not define Joshua's age. But the words 'ebed (implying "laborer") in Hebrew, and *doulos* in Greek, are spoken of slaves.

In the brief sketch to be here given of Hebrew servitude, it may be well to distinguish between native and foreign slaves.

There were various ways in which a Hebrew might be reduced to servitude, as by impoverishment, by theft for which he could not make restitution, and in the case of a female by exercise of parental authority. Every man had a certain inheritance which he could not legally altogether

alienate. He might mortgage it, but only for a term of years; at the jubilee it would return into his possession. But if he had mortgaged his land, and the jubilee was distant, he would naturally be in a destitute position; he might contract debts, and have no present ability of discharging them, and in either case his only resource might be the selling of himself to a master, Lev. xxv. 39. Further, a thief was compelled on detection to restore double the value of that which he had fraudulently acquired. But if he was unable to do this, he might be sold, to pay in person what he could not in property, Ex. xxii. 3, 4.

The treatment of those in servitude was to be kind and brotherly. It was specially commanded that they were not to be rigorously dealt with, but regarded as if they were hired servants and sojourners, Lev. xxv. 39, 40, 43, 46. This servitude was to be only for a limited time. In the case of one sold for theft, as soon as the amount of his dishonesty was worked out he was free. And, generally, servitude ended in six years—not the sabbatical year, but six years from the commencement, the wife, if the man was married, being freed with her husband, Ex. xxi. 2, 3. If, however, the master had given his slave a wife—that is, as we must suppose, not a Hebrew—the man alone was freed at the six years' end; his wife and children still belonged to the master. Then, if the slave was unwilling to leave his family, and was attached to his master, public examination being had before the magistrates, he had his ear pierced with an awl, and became his master's property for ever, Ex. xxi. 4-6; Deut. xv. 16, 17. In ordinary cases, when the six years' servitude expired, the freed slave was not to be sent away empty; he was to be liberally furnished out of his master's flock and floor and wine-press, Deut. xv. 13-15, so that he might not return to a condition of poverty. We see that this kind of servitude involved no degradation; no one, though temporarily a slave, lost thereby his rights as a man; rather he was deemed a brother, toward whom kindness must specially be shown.

But sometimes a Hebrew might be enslaved to a stranger—that is, to one not of Israelitish stock, but yet dwelling in Israel. To such freedom after six years' servitude did not apply; the slave was released only at the jubilee, unless he sooner redeemed himself or a near relative could redeem him. But care was taken that the yoke on such persons was not galling; the slave was to be treated by his master as if he were a hired servant. And though a stranger might not be supposed to pay that reverent obedience to the law of the Lord which a true Israelite would show, doubtless the evil power would interfere on complaint of any one ill-used: "The other shall not rule with rigor over him in thy sight," Lev. xxv. 47-55.

The law was different in regard to slaves not Hebrews. These were captives taken in war, or else bought with money; and as they were the property of the master, their children were his also, and so there were slaves born in the house. Thus the household of Abraham, privileged like him to receive circumcision, the symbol of God's covenant, are described as "men of his house, born in the house and bought with the money of the stranger," Gen. xvii. 27. A large number of such slaves (females) were made in the war on Midian, Num. xxxi. 18, 35. The Gibeonites were reduced to servitude—not to individual masters, but for public labors and work in the sanctuary, Josh. ix. 23, 27. And Solomon numbered the remnant of the old inhabitants of Canaan and made them labor-

ers on his works, specially (it is noted) exempting Israelites from such service, 2 Chr. ii. 17, 18; viii. 7-9.

These, whose servitude was perpetual (unless freed by their masters' pleasure), were to be treated kindly. They were to enjoy the Sabbath-rest, Ex. xx. 10; Deut. v. 14, 15. They were to share in the national festivities, Deut. xii. 12, 18; xvi. 11, 14, circumcision of course being necessary for religious privileges, but to this we may suppose, as in the case above mentioned of Abraham's household, those born in the family were entitled. There were enactments to secure them from ill-usage. The willful murder of a slave was in the eye of the law a crime as great as that of a freeman; the penalty was death, Lev. xxiv. 17, 22. Lesser punishments were to be inflicted in cases of what we should call manslaughter. Thus, if by severity of correction a man killed his slave, he was according to the circumstances to be amerced; if death did not immediately ensue, the loss of the slave was considered a sufficient penalty, Ex. xxi. 20, 21. In these cases it is clear that the death was by misadventure, not being intentional; the master might be highly blameworthy, but he was not a murderer. If permanent injury was done to a slave—such as the loss of an eye or a tooth—he was to have his freedom in recompense, Ex. xxi. 26, 27. These regulations, imperfect no doubt as delivered for an imperfect state of society, must have tended to secure gentle treatment for the slave. And the whole charge was enforced by the continual remembrance that Israel was once a slave in Egypt. The effect seems to have been produced; we rarely read in Scripture of slaves running away from their masters, 1 Sam. xxv. 10; 1 Ki. ii. 39. We get the estimated value of a slave from the sum of money to be paid by the owner of an ox which had gored a bondman; it was thirty shekels, Ex. xxi. 32. And it is curious to compare this with the price fixed for redemption (certainly for native Hebrews) of a vow, which varied according to age and sex from three to fifty shekels, Lev. xxvii. 1-7. The thirty shekels for a slave, being as we should say an average price, was by no means low.

There was a remarkable provision in respect to a female captive. If a man wished to marry such a captive, she was to be allowed a month to bewail her parents and to shave her head; he might then take her for his wife. But if he had no pleasure in her, he must let her go free; he must not sell her, Deut. xxi. 10-14.

Slaves might, it would seem, acquire property. Ziba was a hereditary bondman to the house of Saul, probably, therefore, not an Israelite. But he possessed twenty slaves himself, 2 Sam. ix. 2, 10. Similarly the Jews who had been captive in Babylon carried with them back to their country servants of their own, seven thousand three hundred and thirty-seven among forty-two thousand three hundred and sixty freemen, Ezra ii. 64, 65.

The occupations in which slaves were employed must have been various; though, if Hebrews, they were not to be put to the servile work of hereditary bondmen, Lev. xxv. 39, 44. But the more faithful of these were occasionally elevated to places of trust, Gen. xxiv. 2, and sometimes they were permitted to ally with their master's family, 1 Chr. ii. 34, 35, just as Jacob served for his wives, Gen. xxix. 18, 20, 27. This fact will help to explain the great increase of Israel in Egypt. Jacob went down thither with a large establishment, with whom we cannot doubt his own descendants intermarried.

With regard to hired servants little need be said. They were free to engage or not at their pleasure. The main provision of the law for them was that their wages should be duly paid at the specified time, Deut. xxiv. 14, 15.

In the New Testament the kind of slavery we read of was far worse than that of the Hebrews. A Roman master had absolute authority over his bondman, and regarded and often treated him as a chattel. Christianity did not interfere with the relations it found subsisting. But it had its word of admonition for every class. Remembering what the bondage of those times was, we cannot help observing the wisdom as well as humanity of the apostolic injunctions, 1 Cor. vii. 20-24; Eph. vi. 5-9; Col. iii. 22-25; iv. 1; 1 Pet. ii. 18-25.

It may be added that among the heavy judgments threatened against Israel for disobedience was the being reduced to bondage, Deut. xxviii. 48, 68. How exactly this was fulfilled at the destruction of Jerusalem every one knows.

**SERVETUS** (ser-ve'tus), MICHAEL, a violent Arian theologian, born in 1509, at Villanuova, in Aragon. He studied law at Toulouse, but subsequently turned his attention to medicine, which he studied at Paris, where he took his doctor's degree. He left the capital to settle at Lyons, but subsequently retired to Charleux. On the invitation of the archbishop of Vienne, in Dauphiny, he was prevailed upon to locate there, and might have lived there in peace and been respected, had he been satisfied to seek celebrity in medical pursuits alone; but being eager to publish his Arian opinions, he propounded three questions to Calvin, on the divinity of Christ, on regeneration, and on the necessity of baptism; and when answered with civility, he criticised the opinions of his correspondent with arrogant harshness. Indeed, it was throughout, not so much his wild notions, as the offensive manner of thrusting them upon others, that led him into dire troubles. He was arraigned for heresy by the Inquisition, but escaped from prison. Notwithstanding he was distinctly warned to stay away from Geneva, he persisted in going there, and was immediately arrested by the magistrates as a heretic. Forty heretical errors were proved against him by his accusers, which Servetus refused to renounce, and the magistrates ordered the unhappy man to be burnt. On the 27th of October, 1553, the sentence was fulfilled. In the nineteenth century it is exceedingly easy to look back to the sixteenth and condemn many of the acts of really good men of that time, making no account of the condition of circumstances or the defective conception of religious liberty in those days of trial and peril. Hence it is much the fashion to speak harshly of Calvin and the Geneva authorities, ignoring all except the one fact that a man was executed for heretical doctrines; but see CALVIN, JOHN.

**SESES** (se'sis), 1 Esd. ix. 34, identical with Shashai, Ezra x. 40.

**SESTHEL** (ses'thel), 1 Esd. ix. 31, identical with Bezaleel, Ezra x. 30.

**SETH**, the third son of Adam, to whom Eve gave this name in consequence of regarding him as sent to replace Abel, whom Cain had slain, Gen. iv. 25, 26.

**SETHUR** (se'thur), the spy selected from the tribe of Asher, Num. xiii. 13.

**SETON** (se'ton), ELIZABETH ANN, was born in 1774. She was the daughter of Richard Bayley, M. D.; and when only twenty years of age, she was married to William Seton, Esq., whom she accompanied to Florence, where he died in the year 1803. On her return to New York, she entered the Romish Church, and with a view to her support she opened a school in Baltimore. Being aided by a gentleman named Cooper, she commenced a semi-conventual establishment at Emmettsburg; and from this establishment a branch was opened up at Philadelphia in 1814. She was the foundress of the order of the Sisters of Charity in the United States. In 1817 the sisterhood was incorporated by an act of the Legislature of Maryland. She died at Emmettsburg, on January 4, 1821, and the Rev. Charles J. White published a memoir of her life and works, which appeared in New York in 1853.

**SEVEN** (sev'en). This word is used in Scripture not only in its literal sense, but as expressing completeness; indeed, it seems to be the covenant number, the sign and signature of God's covenant relation to mankind, more especially to his Church. Dr. Trench has illustrated this fact very fully, and from him the following sentences are borrowed: "The evidences . . . reach back to the very beginning. We meet them first in the hallowing of the seventh day, Gen. ii. 3; compare Ezek. xx. 12. So, too, circumcision, being the sign of a covenant, is accomplished on the eighth, or after seven days, Lev. xii. 3. And as seven is the signature of God's covenant with man, so of all man's covenants with his fellows, resting, as these do and must, on the anterior covenant with God; thus of treaties of peace, Gen. xxi. 30; of marriages, Jud. xiv. 12. Seven is the number of sacrifice, 2 Chr. xxix. 21; . . . of purification and consecration, Lev. iv. 6, 17; Num. xix. 12, 19; . . . of forgiveness, Matt. xviii. 21, 22; . . . of every grace or benefit bestowed on Israel, Josh. vi. 4, 15, 16; . . . of reward, Deut. xxviii. 7; . . . of punishment, Lev. xxvi. 21, 24, 28. . . . All the feasts are ordered by seven, or else by seven multiplied into seven. . . . Thus . . .

it is with the passover, Ex. xii. 15, 16; the feast of weeks, Deut. xvi. 9; of tabernacles, Deut. xvi. 13, 15; the sabbath-year, Lev. xxv. 2-4; and the jubilee, Lev. xxv. 8. Also the number seems to have an universal reference, as in Naaman's washing seven times, 2 Ki. v. 10, and seven "times" passing over Nebuchadnezzar, Dan. iv. 16, 23, 25.

itself the signature of the covenant. No mere accident or caprice dictated the selection of it.

**SEVEN CAPITAL SINS**, the same as "seven deadly sins," which have been thus classified: 1. Pride; 2. Covetousness; 3. Lust; 4. Gluttony; 5. Anger; 6. Envy; 7. Sloth.

SERPENT-CHARMING IN THE EAST.—See SERPENT-CHARMING.

Then there are seven beatitudes, seven clauses in the Lord's Prayer, seven words from the cross, etc. And the whole structure of the book of Revelation is arranged by this number. As to the reason of the fact, three is the signature of God in the ever-blessed Trinity, four of the world—four elements, four seasons, four winds, etc. There are reasons, then, amply sufficient why seven, being thus, as it is, made up of three and four, should be

**SEVEN GIFTS OF THE HOLY SPIRIT** have been classified as the spirit of wisdom and understanding, the spirit of counsel and might, the spirit of knowledge and true godliness and the spirit of holy fear.

**SEVEN PRINCIPAL VIRTUES.** 1. Faith; 2. Hope; 3. Charity; 4. Prudence; 5. Justice; 6. Fortitude; 7. Temperance.

**SEVEN SACRAMENTS OF THE CHURCH.** See **ROME, CHURCH OF**, and **SACRAMENT**.

**SEVENEH** (se-ve'neh), Ezek. xxix. 10, margin. See **SYENE**.

**SEVERINUS** (sev-c-re'nus), the seventy-second pope of Rome, who succeeded Honorius I. in 640, and was succeeded the same year by John IV. See page 1344.

EGYPTIAN SERVANTS.—See **SERVANT**.

**SEVERUS** (seh-va'rns), a celebrated Monophysite who became patriarch of Antioch in 511, and was deposed in 520 by order of the emperor Justin. He fled to Egypt and took up his abode in Alexandria, where he was successful in securing a large following. So greatly do the Monophysites venerate his memory as one of the chief founders of their body that they have a festival to commemorate his entrance into Egypt.

**SEVERUS**. There were two Roman emperors of this name. The first, **LUCIUS SEPTIMIUS** (loo'shi-us sep-tim'e-us), was born A.D. 146, and was proclaimed emperor by his army in 193, but had to overthrow several rival claimants of the throne. After a successful war in the East, he went to Britain in 208, conquering all opponents; during this incursion he built the famous rampart known as the Wall of Severus (see page 1445), extending across the North of England from the Solway to the Tyne. As a monarch he was cruel, and it has been said that he never performed an act of humanity or forgave a fault. He was a man of letters, and composed a history of his own reign. He died at York, in 211.

**ALEXANDER** was born at Aere, in Phoenicia, about A.D. 205, his proper name being Marcus Anrelius Alexander. He was made Caesar in 221, and succeeded Elagabalus in the following year, assuming the name Severus. The principal public event of his reign was the war with Artaxerxes, king of Persia, over whom he gained a great victory in person, and on his return to Rome was honored with a triumph. He next marched against the Germans, who had invaded Gaul; and while there a sedition broke out in his army, headed by Maximin, and the emperor and his mother were murdered, A.D. 235. He was conspicuous for wisdom, justice, clemency and general interest in the welfare of his people.

**SEWALL** (soo'al), **JOSEPH, D.D.**, and **JOTHAM**, were both eminent ministers in New England. The former was born in 1688, at Boston, educated at Harvard and settled in the Old South Church in Boston, in 1713, where he labored

until his death from paralysis, in 1769. He had four colleagues during his ministry, and he was a man of unusual mental vigor. He became president of Harvard in 1724, and he held the office until 1765, having done much for the college during his tenure of office.

Jotham Sewall was born in 1760 at York, Maine. In 1783 he became impressed with religious convictions by hearing a sermon of Boston's, and he began to conduct religious meetings, reading on such occasions the sermons of Flayal, Erskine and Davies. At length, in 1800, he was ordained as an evangelist, and the greater part of his life was spent as a missionary in the State of Maine, where his labors were greatly appreciated. He died in 1850, in the ninety-first year of his age, leaving two sons, two sons-in-law and one grandson, who

have all been ordained, and who are laboring faithfully in the work of the gospel.

**SEWALL, STEPHEN**, was born in 1734. He was inaugurated professor of Hebrew in Harvard College in 1765, and continued in office more than twenty years, but spent the latter part of his life in retirement. He died July 23, 1804, aged seventy. Professor Sewall possessed a well-cultivated mind. His publications were numerous and valuable; those connected with sacred literature were—"The Scripture Account of the Shechinah," "The Scripture History relating to the Overthrow of Sodom and Gomorrah, and to the Origin of the Salt Sea, or Lake of Sodom," and "Dictionary in Chaldee and English."

**SEWELL** (soo'el), **WILLIAM**, a worthy and distinguished member of the Society of Friends, was born at Amsterdam, in 1654, of English parents, practiced as a surgeon in that city, but distinguished himself principally by his excellent "History of the Society of Friends," written in Low Dutch and translated into English. He also wrote a "Dictionary of the English and Low Dutch Languages," a "Dutch Grammar," a "Translation of Josephus" and of "Kennet's Roman Antiquities." He died at Amsterdam, in 1720, universally respected and mourned.

**SEXAGESIMA** (sex-a-jes'e-mah), the week preceding Quinquagesima; in round numbers, sixty days before Easter.

**SEXTARIUS** (sex-ta're-us), Mark vii. 4, margin. See **MEASURES**.

**SHAALABBIN** (sha-lab'bin), or **SHAAL-BIM** (sha-al'bim), a city of Dan, Josh. xix. 42, on the hills not far from Ajalon; the Amorites for a while continued to hold it, Jud. i. 35, but it was at length subdued, and included in Solomon's reign in one of the commissariat districts, 1 Ki. iv. 9.

**SHAALBONITE** (sha-al-bon'ite), an inhabitant or native of Shaalbin, 2 Sam. xxiii. 32.

**SHAAPH** (sha'af), 1, 2. Two names in the genealogy of Judah, 1 Chr. ii. 47, 49.

**SHAARAIM** (sha-a-ra'im), 1. A city in the plain country of Judah, 1 Sam. xvii. 52, called Shairaim in Josh. xv. 36. Perhaps it is the modern *Sa'rah*. 2. 1 Chr. iv. 31. See **SHILIM**.

**SHAASHGAZ** (sha-ash'gaz), a chamberlain or chief eunuch in the harem of Ahasuerus, Esth. ii. 14.

**SHABBETHAI** (shab'be-thi), a Levite who assisted in expounding the law and in investigating the marriages of Jews with strange wives, Ezra x. 15.

**SHACHIA** (shak'yah), a Benjamite, 1 Chr. viii. 10.

**SHADDAI** (shad'di), an appellation of the Deity, originally used, it may be, in invocation, but afterward as a name generally. It is translated "Almighty," Gen. xvii. 1; Ex. vi. 3, and elsewhere.

**SHADFORD** (shad'ford), **GEORGE**, was born in 1739, in Lincolnshire, England. At an early age he had been profane and thoughtless, but under the influence of his parents he went through the form of preparing for confirmation by the bishop, and he was admitted to the Lord's Supper. His serious impressions soon faded away, and he enlisted in the militia. While stationed in Lancashire he became affected by the services at a meeting of Methodists, but he again fell away, and not until 1762 was he brought to a decided state. He began to exhort at meetings; and having preached in Cornwall, in Kent and in Norfolk, he

EGYPTIAN SERVANT.—See **SERVANT**.

agreed to emigrate to America. He landed at Philadelphia, and began his labors at Trenton, whence he removed to New York. He returned to Philadelphia, and in due time he visited Baltimore, Virginia and the Eastern Shore of Maryland. During the Revolutionary struggle he felt unhappy, as he was unable to see his way to oppose the authority of the crown, and so he returned to his native land. He entered on the work of the ministry with all the zeal and fervor which he had displayed while preaching in the colonies, and thus he continued until his death, in 1816. He was eminently simple and earnest in his style, never affecting great learning or profound philos-

ophy, his chief object being a desire to lead perishing souls to Christ.

**SHADOW** (shad'o), the effect produced by an opaque body intercepting the rays of light flowing from a luminous object. A beautiful illustration is hence taken to describe the Deity, the Father of the lights, of the glorious orbs which sparkle on high, as being subject to no change, touched with no shadow which arises from the revolution of created things, James i. 17. On earthly beings a shadow falls; there are those who "dwell in the land of the shadow of death," Isa. ix. 2; Luke i. 79, in the death-shade of ignorance and sin. Sometimes, however, shadow is used in a better sense. In summer heat it is pleasant to be sheltered from the sun's scorching rays, Isa. iv. 6. And then, as there is a resemblance between the shadow and the substance which casts it, and a connection, though the first is unsubstantial, the last a solid reality, the Jewish rites related to and typical of Christian truth are called "the shadow of things to come," Col. ii. 17; Heb. viii. 5; x. 1. A shadow, once more, is evanescent; it depends upon the light, upon the object which casts it; it is now visible, now it is gone. How graphically does this illustrate the fleeting character of human life! Job xiv. ii.

**SHADRACH** (shad'rak), the Chaldean name of Hananiah, one of the three friends of Daniel who were delivered from the burning fiery furnace.

**SHAFTESBURY** (shafts'ber-re), **ANTHONY ASHLEY COOPER**, third **EARLOF**, a celebrated skeptic and writer, was born in 1671, in London. His education was partly received at Winchester School and partly privately, under John Locke, to whose teachings he subsequently became a warm opponent. After having traveled, he became, in 1693, member of Parliament, and as such he acted on enlightened principles. Subsequently his health deterred him from taking part in public affairs, and he devoted his leisure to literature. He died, in 1713, at Naples. His works, the style of which is polished with too laborious care, and the sentiments advanced with too little, were collected in three volumes, under the title of "Characteristics of Men, Manners, Opinions and Times," a work of elegant diction, but most pernicious sentiments.

**SHAGE** (sha'ge), the father of one of David's warriors, 1 Chr. xi. 34.

**SHAHARAIM** (sha-ha-ra'im), a Benjamite, 1 Chr. viii. 8.

**SHAHAZIMAH** (sha-ha-tse'mah), a border-place in the territory of Issachar, Josh. xix. 22.

**SHAKERS.** See **UNITED SOCIETY OF BELIEVERS**.

**SHALEM** (sha'lem). The word occurs only in Gen. xxxiii. 18 as a proper name, and there only by mistake in the Authorized and some other versions. Instead of reading "And Jacob came to Shalem, a city of Shechem," it should be, "And Jacob came in safety to the city of Shechem." The Septuagint began the mistranslation, and they were followed by the Vulgate and others.

**SHALIM** (sha'lim), a district in the territory of Ephraim, 1 Sam. ix. 4. Possibly it may be the same with the land of Shual, 1 Sam. xiii. 17.

**SHALISHA** (sha-le'shah), **THE LAND OF**,

of Josiah, Jer. xxii. 11, better known by the name of Jehoahaz. See **JEHOAHAZ**, 2. 3. The husband of Huldah the prophetess, 2 Ki. xxii. 14. Several other persons of this name occur in Ezra ii. 42; vii. 2; x. 24, 42; Neh. iii. 12; vii. 45; 1 Chr. ii. 40; iv. 25; vii. 13; ix. 19.

**SHALLUN** (shal'lun), one who assisted in repairing the gates and wall of Jerusalem, Neh. iii. 15.

**SHALMAI** (shal'mi), one whose children, Nethinim, returned from Babylon with Zerubbabel, Ezra ii. 46.

**SHALMAN** (shal'man), Hos. x. 14, probably an abbreviation for—

ARCH OF SEPTIMIUS SEVERUS IN ROME.—See **SEVERUS** and **ROME**.

some district traversed by Saul in his search for his father's asses, mentioned immediately after Mount Ephraim and before the land of Shalim, 1 Sam. ix. 4.

**SHALLECHETH** (shal'le-keth), the name of one of the gates of the house of God, 1 Chr. xxvi. 16; but why so called, or to what part of the temple it belonged, is unknown.

**SHALLUM** (shal'lum), the fifteenth king of Israel. In the troubled times which followed the death of Jeroboam II., B.C. 772, his son Zechariah was slain in the presence of the people by Shallum, who by this act extinguished the dynasty of Jehu. Shallum then mounted the throne (B.C. 771), but occupied it only one month, being opposed and slain by Menahem, who mounted the throne thus vacated, 2 Ki. xv. 10-15. 2. A king of Judah, son

**SHALMANESER** (shal-ma-ne'ser), a king of Assyria. See **ASSYRIA**.

**SHAMA** (sha'mah), one of David's warriors, 1 Chr. xi. 44.

**SHAMARIAH** (sha-mar'yah), a son of Rehoboam, 2 Chr. xi. 19.

**SHAMBLES** (sham'b'lez), the flesh-market, the place where provisions were sold, 1 Cor. x. 25.

**SHAMED** (sha'med), a descendant of Benjamin, 1 Chr. viii. 12. In the Hebrew text, in many copies, the name is Shamer.

**SHAMER** (sha'mer). 1. A Levite, 1 Chr. vi. 46. 2. A chief of Asher, 1 Chr. vii. 34, called also Shomer, 1 Chr. vii. 32.

**SHAMGAR** (sham'gar), one of the judges of Israel. He was the son of Anath, and in his days the people were grievously oppressed; but he slew six hundred Philistines with an ox-goad, and delivered Israel, Jud. iii. 31; v. 6.

**SHAMHUTH** (sham'huth), one of David's captains, 1 Chr. xxvii. 8. The name is perhaps corrupted from Shammah. See SHAMMAH, 4.

**SHAMIR** (sha'mer), a Levite, 1 Chr. xxiv. 24.

**SHAMIR**. 1. A town in the hill country of Judah, Josh. xv. 48. 2. A place in Mount Ephraim where Tola the judge resided and was buried, Jud. x. 1, 2.

**SHAMLAI** (sham'li), Ezra ii. 46, margin. See SHALMAI.

**SHAMMA** (sham'mah), a chieftain of Asher, 1 Chr. vii. 37.

A VERY ANCIENT ETRUSCAN STATUE.—See SCULPTURE.

The original bronze, in the British Museum, is the oldest and one of the finest of the specimens of very ancient art.

**SHAMMAH** (sham'mah). 1. A descendant of Esau and "duke" of Edom, Gen. xxvi. 13, 17. 2. The third son of Jesse, 1 Sam. xvi. 9, called also Shimeah, 2 Sam. xiii. 3, 32, Shamma, 1 Chr. ii. 13, and Shimea, 1 Chr. xx. 7. 3. One of David's warriors, 2 Sam. xxiii. 11, 33. Or two different persons may be here intended. 4. Another mentioned in the list of warriors, 2 Sam. xxiii. 25, called also Shammoth, 1 Chr. xi. 27; compare Shamhuth, 1 Chr. xxvii. 8.

**SHAMMAI** (sham'mi). 1, 2, 3. Three descendants of Judah, 1 Chr. ii. 23, 32, 44, 45; iv. 17.

**SHAMMOTH**. See SHAMMAH, 4.

**SHAMMUA**, or **SHAMMUAH** (sham'mu'ah). 1. A Benjamite selected as one of the spies, Num. xiii. 4. 2. One of David's sons born at Jerusalem—Shamma in 1 Chr. xiv. 4, Shammuh in 2 Sam. v. 14, and Shimea in 1 Chr. iii. 5. 3. A Levite, Neh. xi. 17; called also Shemaiah, 1 Chr. ix. 16. 4. A priest in the days of Joiakim, Neh. xii. 18.

**SHAMSHERAI** (sham'she-ri), a Benjamite, 1 Chr. viii. 26.

**SHAPHAM** (sha'fam), a Gadite, 1 Chr. v. 12.

**SHAPHAN** (sha'fan), the scribe or secretary of King Josiah, 2 Ki. xxii. 3, 12. He appears to have had the charge of receiving and paying out money for the king, 2 Ki. xxii. 4. The name occurs also in Jer. xxix. 3 and Ezek. viii. 11.

**SHAPHAT** (sha'fat). 1. One of the persons selected to spy out the land of Canaan; the son of Hori, of the tribe of Simeon, Num. xiii. 5. 2. The father of the prophet Elisha, 1 Ki. xix. 16.

3. Three other persons of no particular note, 1 Chr. iii. 22; v. 12; xxvii. 29.

**SHAPHER** (sha'fer), a mountain in the Arabian desert, one of the stations of the Israelites, Num. xxxiii. 23, 24.

**SHARAI** (sha'ri), one who had married a foreign wife, Ezra x. 40.

**SHARAIM** (sha-ra'im). See SHARAIM.

**SHARAR** (sha'rar). See SACAR.

**SHAREZER** (sha're-tser), one of the sons of Sennacherib who, with his brother Adrammelech, murdered their father, 2 Ki. xix. 37.

**SHARON** (sha'ron). 1. A district in Palestine lying upon the sea-coast. It appears to be a continuation of the plain country of Judah, and to have extended from Joppa to Caesarea and from the central hills to the Mediterranean. It was a region well adapted for pasture, 1 Chr. xxvii. 29, very fertile, Isa. xxxiii. 9, and celebrated for its roses, Song Sol. ii. 1. Its locality is further indicated as being in the neighborhood of Lydda, Acts ix. 35, where it is called Saron. 2. There is another Sharon mentioned, on the west of the Jordan. It is coupled with Gilead, 1 Chr. v. 16, but its exact situation, and whether it was a district or a town, can only be conjectured.

**SHARONITE** (sha'ron-ite), an inhabitant of Sharon, 1 Chr. xxvii. 29.

**SHARP, DANIEL, D.D.**, an eminent Baptist minister, born in Yorkshire, England, December 25, 1783. He became a commercial agent at the age of nineteen, came to the United States in 1802, and established himself in the city of New York. Previous, however, to his doing this, he had received a good academical education in his native land. When in New York, his attention was inclined, partly by the advice of friends and partly by his own taste and persuasion of duty, to the profession in which he acquired so great a reputation. Accordingly, he retired from business and studied theology. Having completed his course of study, he took charge of a Baptist church in Newark, New Jersey, where he remained a few years, but in 1811 removed to Boston, and became pastor of the Baptist church in Charles street, which position he held more than forty years. During his residence in Boston he was not only popular and influential in his own denomination, but was an object of universal respect as a man, a citizen and a minister. Although firmly attached to the peculiarities of the Baptist faith, his catholicity of feeling caused him to be loved by individuals belonging to sects the least resembling his own. On the death of Bishop Griswold, Dr. Sharp delivered a formal funeral sermon which contained one of the most glowing eulogies bestowed on the character of that distinguished prelate. In private life he was a model of dignity, disinterestedness and urbanity, it being proverbial that during his long ministry he was never betrayed into the commission of an unworthy deed or the utterance of an unkind or injudicious word. In 1811 Brown University conferred on him the honorary degree of master of arts, and in 1828 that of doctor of divinity, the latter degree being also conferred upon him in 1843 by Harvard. He was a member of the corporation of Brown

University from 1820 to 1828, when he became one of the Fellows of that institution. He died June 23, 1853, in his seventieth year. At his funeral his pall-bearers comprised members of eight denominations of Christians.

**SHARP, GRANVILLE**, the grandson of an archbishop of York, the son of an archdeacon of Northumberland, and the father of the prebendary of Durham, himself a Christian philanthropist and writer, was born in 1734, at Durham, and was brought up to trade, but soon abandoned it. A place in the ordnance office he resigned because he disapproved of the American war; the rest of his long life was spent in exertions of active benevolence. He, with very great difficulty and expense, established the right of Africans to freedom in England, instituted the society for the abolition of the slave trade, promoted the distribution of the Bible, and exerted himself in the cause of parliamentary reform. He died July 6, 1813. Among his works are various pamphlets on slavery, tracts on the Hebrew language, and remarks on the definite article in the Greek Testament.

**SHARP, JAMES**, archbishop of St. Andrews, born in Banffshire, in 1618, was educated at Aberdeen, and early distinguished himself as an able

EARLY EGYPTIAN SCULPTURES.—See SCULPTURE.

opponent of the Covenanters. He went to England, where he was noticed by Hammond, Taylor and others. On account of his great abilities he obtained some preferment. He advocated the cause of a Presbyterian party for Scotland before Cromwell, acquitting himself with great dexterity; and when Monk was commander in Scotland, he used the talents of Sharp in his attempts to settle the ecclesiastical affairs of the kingdom, and in soliciting the approbation of the exiled king in the proposed measures. At the Restoration he became a convert to the Church of England, and was appointed archbishop of St. Andrews; but this elevation being considered a shameful desertion of his friends, his life was unsuccessfully sought in 1678 by a fanatic preacher, but in 1679 nine assassins barbarously murdered him on Magask Moor, three miles from St. Andrews.

**SHARP, JOHN, D.D.**, archbishop of York, born at Bradford, Yorkshire, in 1644, was educated at Christ's College, Cambridge; and having taken orders, he rose steadily in the Church, becoming, in 1672, archdeacon of Berks, in 1675 prebendary of Norwich, then rector of St. Bartholomew, and subsequently of St. Giles' in the Fields. In 1686 he was suspended for preaching in favor of the Anglican and censuring the Roman Church; the bishop of London, who refused to suspend him, was himself suspended; a year or two later he was restored to favor, and

in 1689 promoted to the deanery of Canterbury. He refused some of the bishoprics vacated by nonjuring bishops, but accepted the see of York on the death of Dr. Lamplugh. He preached the sermon on Anne's coronation, and was appointed privy councillor. He died at Bath in 1713, and was buried in York Cathedral, where an inscription by Dr. Smalridge records his merits. His sermons, published since his death, are deservedly popular. His youngest son, THOMAS, D.D., was born in Yorkshire, and educated at Trinity College, Cambridge, where he obtained a Fellowship in 1728. His preferments included the rectory of Rothbury, Northumberland, a prebend of Durham and the archdeaconry of Northumberland. He died in 1758, aged sixty-five. He was the author of two dissertations on "the Etymology of the Hebrew Words Elohim and Berith," besides "Discourses on the Antiquity of the Hebrew Tongue and Characters." He was father to Granville Sharp.

**SHARPE, GREGORY**, an Oriental scholar and divine, was born in Yorkshire, in 1713, was

EARLY EGYPTIAN SCULPTURE.—See SCULPTURE.

educated at Westminster and Aberdeen, and eventually became master of the Temple. Among his writings are—"A Review of the Controversy on the Demoniaes," "Defence of Dr. Clarke against the Attacks of Leibnitz," "Dissertations on the Origin of Languages, and the Original Powers of Letters, with a Hebrew Lexicon," etc. He died in 1771.

**SHARRETS** (shar'rets), NICHOLAS G., was born in 1802, in Union county, Pennsylvania. In early life he displayed an earnest regard for religion; and having expressed a desire to become a preacher of the gospel, he was directed in his views by his pastor, the Rev. Benjamin Keller, and in due time he entered Dickinson College, at that time under the care of the Rev. John M. Mason, D.D. He graduated in 1825, and commenced the study of theology under the Rev. Dr. Schmucker of York, Pennsylvania, but he finished his course at Gettysburg. He then entered on a mission in the north-western part of the State of Pennsylvania, including the counties of Clearfield, Venango and Indiana in his sphere of labor. He settled at Blairsville, ministering at that place and at Indiana until 1836, when he was removed by fever contracted in a tour which

he had undertaken to collect funds to liquidate a debt on the Indiana church. As a member of the Lutheran Church and a faithful, self-denying minister he was highly esteemed, and his loss was greatly regretted. Though not powerful as a rhetorician, he was eminently successful in bringing souls to Christ.

**SHARUHEN** (sha-roo'hen), a city in the territory of Simeon, Josh. xix. 6. See SHILHIM.

**SHASHAI** (sha'shi), one who had married a foreign wife, Ezra x. 40.

**SHASHAK** (sha'shak), a Benjamite, 1 Chr. viii. 14, 25.

**SHAUL** (sha'ool). 1. A son of Simeon by a Canaanitish woman, Gen. xlv. 10. 2. An Edomite king, 1 Chr. i. 48, 49, called Saul in Gen. xxxvi. 37, 38. 3. A Kohathite Levite, 1 Chr. vi. 24, the Joel of 36?

**SHAULITES** (sha'ool-ites), a family of Simeon, descendants of Shaul, Num. xxvi. 13.

**SHAVEH** (sha'veh), a valley on the north of Jerusalem, called also the King's Dale, Gen. xiv. 17.

**SHAVEH-KIRIATHAIM** (kir-ya-tha'im), a plain near the city of Kirjathaim, Gen. xiv. 5. See KIRJATHAIM.

**SHAVSHAH**. See SERAIAH.

**SHAW, JOSEPH, LL.D.**, was born in 1778, in the parish of Rattray, Aberdeenshire, Scotland. His education was commenced in his childhood, and in his thirteenth year he entered the university of Edinburgh, which at that time was adorned by Robertson, Blair, Playfair, Dalzell, Dugald Stewart and others. He graduated in 1794, and entered on the study of theology at the Associate Divinity Hall at Whitburn, under Professor Bruce. On the death of the Rev. William Marshall, the pastor of the Associate Church in Walcutt street, Philadelphia, Mr. Shaw was appointed to the vacancy. He was seized with a severe throat affection when absent on duty from his charge, and after several months of suffering, he resigned the church and traveled for his health, visiting Nova Scotia and other regions. In 1813 he became professor of languages in Dickinson College, and in 1815 he was removed to Albany Academy, where he taught languages with great success. In 1824 he went to Philadelphia on a visit; and being seized with a fever, he died quite suddenly and unexpectedly. He wrote on sanctification, on the gospel ministry, and several of his discourses appeared in the "Religious Monitor." Correctness rather than brilliancy characterized his sermons. He was benevolent, thoughtful of the poor and remarkably free from selfishness. In general society he was taciturn and utterly void of sanctimonious airs and religious ostentation.

**SHEAL** (she'al), one who had married a foreign wife, Ezra x. 29.

**SHEALTIEL**. See SALATHIEL.

**SHEAR**. See SHEEP.

**SHEARIAH** (she-ar'yah), a descendant of Saul, 1 Chr. viii. 33; ix. 44.

**SHEAR-JASHUB** (she-ar-ja'shoob), a symbolical name given to a son of the prophet Isaiah, intended to show that, though the people should be carried captive, yet a remnant should return to their own land, Isa. vii. 3.

**SHEBA** (she'bah). 1. One of the descendants of Cush, of the family of Ham, Gen. x. 7. 2. A son of Joktan, of the family of Shem, Gen. x. 28. 3. A son of Jokshan, Abraham's son by Keturah, Gen. xxv. 3.

**SHEBA**. There is a difficulty, not so much in determining what country was inhabited by descendants of Sheba as in distinguishing whether there were more tribes than one that bore the name, and whether, if so, any line of demarcation could be found between their respective localities. Gesenius, comparing the three names, believes that the Sabaeans of Arabia Felix, adjacent to Sanaa, are the posterity of Joktan. The other two names of Sheba he refers to one and the same people. He assumes, therefore, two tribes—one, Joktan's descendants, the more powerful of the two, in Arabia Felix, the other dwelling toward the Persian Gulf, not far from the mouth of the Euphrates. Winer sees no occasion for Gesenius' division into two tribes. The view, however, taken by Kalisch seems most satisfactory. Sheba, he believes, is Saba, the chief city of Yemen, the leading province of Arabia. The inhabitants of

MODES OF SITTING.—See SEAT AND SCULPTURE.

this country were a powerful race, receiving fresh accessions and throwing out many colonies. Their land was bordered on the west by the Red Sea, on the south by the Indian Ocean; to the north it reached nearly to Idumaea, but on the east its boundaries varied at different times. Among the immigrants into this country occupied by Cushites were the descendants of Joktan; so that it was peopled by both Hamites and Shemites—the former in the south-west adjoining Africa, the latter to the east and the north. And then a portion of the tribes of Jokshan, the descendants of Abraham, settled in the territories of older nations—occupied, in fact, some of the country Sheba. Sheba, so peopled, was long regarded as the most southern country of the habitable earth; it was very wealthy and luxurious, its commerce most extended, its capital—Sabas or Mariaba—a splendid city. From this land came that queen who visited Solomon, respecting whom the Jews have many legends, 1 Ki. 1-13.

**SHEBA**. 1. A Benjamite who, after the suppression of Absalom's rebellion, headed a fresh insurrection, fostered by the rising jealousy between Judah and the other tribes. He was pursued by David's troops, but occupied the city of Abel. A wise woman there persuaded the people to deliver Sheba's head to Joab, and the revolt was immediately crushed, 2 Sam. xx. 1-22. 2. A Gadite chieftain, 1 Chr. v. 13.

**SHEBA**, a city in the territory of Simeon, Josh. xix. 2.

**SHEBAH** (she'bah), the name of the well at Beer-sheba, Gen. xxvi. 33.

**SHEBAM** (she'bam), Num. xxxii. 3. See **SIBMAH**.

**SHEBANIAH** (she-ban'yah), a name borne by several priests and Levites, chiefly of later times, 1 Chr. xv. 24; Neh. ix. 4; x. 4, 12; xii. 14.

**SHEBARIM** (she-ba'rim), a place or spot near Ai to which the Israelites were pursued, Josh. vii. 5.

**SHEBER** (she'ber), a son of Caleb the son of Hezron, 1 Chr. ii. 48.

1. SHEKEL OF SILVER.

**SHEBNA** (sheb'nah), the prefect of the palace to King Hezekiah, Isa. xxii. 15; afterward promoted to be scribe or secretary to the same monarch, when his former office was given to Eliakim, 2 Ki. xviii. 26, 27.

**SHEBUEL** (she-bu'el). 1. A descendant of Moses, 1 Chr. xxiii. 16; he is also called Shubael, 1 Chr. xxiv. 20. 2. One of the Levite singers, 1 Chr. xxv. 4; he too is called Shubael, 1 Chr. xxv. 20.

**SHECANIAH**, or **SHECHANIAH** (she-kan'yah), a name occurring pretty frequently in the later genealogies, especially among priests and Levites, though none of them rose to distinction, 1 Chr. iii. 21, 22; xxiv. 11; 2 Chr. xxxi. 15; Ezra x. 2; Neh. iii. 29; vi. 18; xii. 3.

2. SHEKEL OF COPPER—SIMON.

**SHECHEM** (she'kem). 1. The son of Hamor the Hivite, who, having defiled Dinah, Jacob's daughter, was slain by her brothers Simeon and Levi, Gen. xxxiii. 19. 2. A descendant of Gilead of the tribe of Manasseh, Num. xxvi. 31. 3. Another descendant of Manasseh, 1 Chr. vii. 19.

**SHECHEM**, a celebrated city of Palestine, called also Sichem, Gen. xii. 6; Sychar, John iv. 5, and Sychem, Acts vii. 16. It was of great antiquity, for it was in existence when Abram entered Canaan. It was occupied by Hivites when Jacob pitched his tent before it and purchased some ground, where he built an altar; and it was plundered, and the inhabitants put to the sword by Simeon and Levi, because the chief son had defiled their sister Dinah, Gen. xxxiii. 18-20.

Shechem was after the conquest territorially in the tribe of Ephraim, but was assigned to the Levites of the family of Kohath, and appointed a city of refuge, Josh. xvii. 7; 1 Chr. vi. 67. There the bones of Joseph were buried; and as a central point, it was the place where Joshua gathered Israel to receive his last instructions, Josh. xxiv. 1-23, 32. Its history in the time of the judges, so far as we find it recorded, was disgraceful and disastrous. Idolatrous worship appears to have been introduced, and the inhabitants were persuaded to make Abimelech, Gideon's son by a woman of their town, king, Jud. viii. 31. Then followed the massacre of Gideon's other sons, and dissension soon arose between the Shechemites and their king; the result was the destruction of the city and the death of Abimelech, Jud. ix. It was afterward rebuilt and regained its importance; for we find that Rehoboam went thither to be inaugurated king; it was there that in consequence of his folly the revolution broke out; and at Shechem, fortified by Jeroboam, was at first the seat of the new monarchy, 1 Ki. xii. 1-19, 25. It was standing after the destruction of Jerusalem, Jer. xli. 5; and after the return of the Jews from captivity it became the centre of Samaritan worship, a temple being erected on Gerizim.

Shechem was situated in a beautiful valley, in the range of the mountains of Ephraim, on the borders of Ephraim and Manasseh, between Ebal and Gerizim, about seven miles south of Samaria. The modern town is called *Nablous*, or *Nablús*. The following is Dr. Thomson's description of the vale and town of Nablús: "Nothing in Palestine surpasses it in fertility and natural beauty, and this is mainly due to the fine mill-stream which flows through it. The whole country is thickly studded with villages, the plains clothed with grass or grain, and the rounded hills with orchards of olive, fig, pomegranate and other trees. . . . Nablús is a queer old place. The streets are narrow and vaulted over, and in the winter-time it is difficult to pass along many of them on account of brooks, which rush over the pavement with deafening roar. In this respect I know no city with which to compare it except Brusa; and like that city, it has mulberry, orange, pomegranate and other trees mingled in with the houses, whose odoriferous flowers load the air with delicious perfume during the months of April and May. Here the bilbút delights to sit and sing, and thousands of other birds unite to swell the chorus."

Almost two miles to the east lies a small village, *Baldta*, where Joseph's tomb is believed to be, Josh. xxiv. 32, and at a little distance south-east Jacob's well. See **JACOB'S WELL**.

**SHECHEMITES** (she'kem-ites), a family of Gilead, of the tribe of Manasseh, descended from Shechem, Num. xxvi. 31.

**SHECHINAH** (she-ki'nah), a derivative of the common Hebrew root signifying to "dwell," either of God or of men, but itself not found in the Old Testament. In literature subsequent to the Bible it has two uses, one proper and one euphemistic. The word meaning an "indwelling"—i. e., of God—is properly applied to visible manifestations of God's presence, as the burning bush, the pillar of cloud and fire of the exodus in the wilderness, etc. Whether this visible manifestation

of the presence of God was considered to be the visibly manifested present God, or something much less, may be made a question. Likely something less, otherwise the second use of the word could hardly have arisen. This use is a euphemistic circumlocution generally for the divine name or any personal pronoun employed of God either by himself or by others when he is addressed or spoken of, and arises from a reverential dislike of even Biblical anthropomorphisms,

3. SHEKEL OF COPPER—SIMON.

which dislike distinguishes later Jewish religious thinking. Thus, Num. v. 3, "in the midst whereof I dwell" is rendered by the Targum, "among whom my shekinah is dwelling." Difference of opinion exists as to whether there was any continuous visible manifestation of God's presence in the holy of holies over the mercy-seat. Jewish authorities hold there was, and that this shekinah did not return to the second temple. Many Christian writers deny its continuous visibility even in the first. See **CLOUD, PILLAR OF**.

**SHEDEUR** (she-de'ur), the father of the prince of Reuben, Num. i. 5.

**SHEEP**. See **FLOCK**.

**SHEEP-FOLD**, an enclosure or shelter for sheep. Sheep-cotes or sheep-folds are often mentioned in Scripture, Num. xxxii. 24, 36; 1 Sam. xxiv. 3; 2 Chr. xxxii. 28. The word is sometimes used figuratively, John x. 1. Modern sheep-folds in Syria are described as low flat buildings, in which when the nights are cold the sheep are shut. There is a yard attached where they are kept in milder weather. This is fenced with a stone wall crowned with sharp thorns.

**SHEEP-GATE**, THE, one of the ancient gates of Jerusalem, the position of which is uncertain, Neh. iii. 1, 32. If it be this which is referred to in John v. 3 (where the Authorized

4. DEMI-SHEKEL OF COPPER.

Version has "sheep-market," but without any authority, it was probably near the temple.

**SHEEP-MARKET**. See **SHEEP-GATE**.

**SHEHARIAH** (she-har'yah), a Benjamite chief, 1 Chr. viii. 26.

**SHEKEL** (she'kel). The Hebrew word, which is untranslated in our version, signifies poising or weighing. Originally the shekel was a certain weight. See **MONEY**. Eventually stamped pieces

were made and used as coins. The first mention of a shekel in Scripture is in the time of Abraham, Gen. xxiii. 15, 16. It occurs again as denoting weight, Gen. xxiv. 22; and subsequently the use of the term is frequent.

We insert herewith, as of interest, a series of ten engravings with suitable descriptions, which will enable the reader to form a fair idea of the shekel and its fractions.

1. A shekel of silver, having on the obverse a vase, supposed, no one knows how truly, to repre-

5. KENNICOTT'S QUARTER-SHEKEL OF COPPER.

sent the pot of manna preserved in the old tabernacle and temple, with the legend, "Shekel of Israel;" the *aleph* over the cup denotes the first year of freedom. On the reverse, an almond branch in blossom, in memory of that of Aaron: inscription, "Jerusalem the Holy." These are repeated on numerous coins of various sizes. There are half, third and quarter of shekel pieces, which differ from this only in size and in the denomination of value, and which, therefore, we have not deemed it worth while to copy.

2. This is from a copper shekel. It exhibits the front of a building with a row of columns, and as it answers to the description is supposed to represent the magnificent family sepulchre which Simon himself built at Modin. The word is "Simon;" on the obverse is a sheaf bound up, with the common legend, "For the Freedom of Jerusalem."

3. This is from a copper coin. Obverse, a palm tree and fruit, with the name of "Simon." Reverse, a vine leaf, the legend partly obliterated, but apparently the usual—"For the Freedom of Jerusalem."

4. A half-shekel of copper: the obverse two sheaves of corn, with a vine leaf between, with the words, "Demi-shekel." The reverse a palm tree, with a measure of corn (some think a tower) on each side, with the legend, "For the Fire" . . . the rest obliterated.

6. QUARTER-SHEKEL OF COPPER—SIMON.

5. This is a very curious, and we believe unique, quarter-shekel of copper, purchased by Dr. Kennicott in the East, and figured in his observations on the first book of Samuel vi. 19. The figures it is difficult to make out, unless that on the reverse be the ephod; but the legend on the obverse is, "The fourth year;" on the reverse, "From the Freedom of Zion."

6. A quarter shekel of copper, having on the obverse a very elegant urn, or ancient pither, and on the reverse a knotted laurel crown, joined above by a collar of pearls, and enclosing the name of "Simon." The legend on the other side is, "For the Freedom of Jerusalem."

7. Another quarter-shekel, with an urn of a dif-

ferent shape from the last on the obverse, and a vine leaf on the reverse. On this we read, "The second year—of Zion's Freedom." This is in the British Museum.

8. Another copper quarter-shekel, with an ob-

7. QUARTER-SHEKEL OF COPPER—SIMON.

verse like No. 1 and a reverse like No. 2. Legend, "The fourth year—of Zion's Freedom."

9. A silver quarter-shekel of peculiar interest, as the obverse exhibits the form of the ancient Hebrew lyre. Legend, the name of "Simon," partly effaced, and "For the Freedom of Jerusalem."

10. Another quarter-shekel of silver, distinguished by the two curious pillars on the obverse, which may very possibly represent the pillars to which were attached the tablets of brass on which were inscribed the services of Simon to the nation, and that in consequence he had been elected to be its pontiff and prince. The cluster of grapes on the reverse occurs on many Jewish coins. See **MONEY, WEIGHTS**.

**SHELAH** (she'lah), the youngest son of Judah by a Canaanite mother, the daughter of Shuah, Gen. xxxviii. 5; xlv. 12, the founder of the family of Shelanites, Num. xxvi. 20.

**SHELANITES** (she'lan-ites), a family of Judah, descendants of Shelah, Num. xxvi. 20. See **SHILONI**.

**SHELDON** (shel'don), GILBERT, archbishop of Canterbury, was born at Staunton, Staffordshire, in 1598. He studied at Oxford, and became Fellow of All Souls College. Entering the Church, he was made chaplain to Thomas Lord Coventry, then keeper of the great seal, through whose influence appointments and promotion came rapidly. He was named chaplain to Charles I., and as such assisted at the treaty of Uxbridge and attended the king at Oxford. After holding the wardenship of his college for twelve years, he was deprived in 1647 and imprisoned. He lived in retirement till the Restoration, and was then made, in succession, dean of the Chapel Royal, bishop of London, master of the Savoy, and in 1663 he was raised to the primacy. The celebrated "Savoy Conference" was held at his house, but he did not take part in it. He stood courageously at his post during the plague in 1665, and rendered great and generous service. He was afterward chancellor of the university of Oxford, built there the well-known Sheldonian Theatre, and gave endowments to several colleges,

8. QUARTER-SHEKEL OF COPPER.

and rebuilt the library at Lambeth. He died at Lambeth in 1677.

**SHELEMIAM** (she-lem'yah), a name of pretty frequent occurrence in later times among

the covenant people: the father of Irijah, the captain of the ward who arrested Jeremiah, Jer. xxxvii. 13; the father of Jehucal in the time of Zedekiah, Jer. xxxvii. 3; one of the persons appointed to lay hold of Jeremiah, Jer. xxxvi. 26; two of the offspring of Bani, Ezra x. 39, 41.

**SHELEPH** (she'lef), a son of Joktan, Gen. x. 26. His descendants perhaps were the Salapeni, a tribe of Arabia Felix, south-east of the present Medina.

9. QUARTER-SHEKEL OF SILVER—SIMON.

**SHELESH** (she'lesh), a chieftain of Asher, 1 Chr. vii. 35.

**SHELOMI** (she-lo'me), the father of the chief of Asher appointed to superintend the division of the land, Num. xxxiv. 27.

**SHELOMITH** (she-lo'mith). 1. The mother of the person who was stoned for blasphemy in the wilderness, Lev. xxiv. 11. 2. The daughter of Zerubbabel, 1 Chr. iii. 19. 3. Besides these, the name occurs of three males in the genealogies, 1 Chr. xxiii. 9, 18; xxvi. 26, 28.

**SHELTON** (shel'ton), PHILO, was born in 1754, at Ripton (now Huntington), Connecticut. He graduated at Yale in 1775; and devoting himself to the ministry of the Episcopal Church, he began the study of theology. In 1785, having completed a thorough course, he was ordained, and settled at Fairfield, which grew rapidly, and the name of the place was changed to Bridgeport. He was an unobtrusive and very efficient laborer. He sympathized with the mother-country in the early period of the Revolutionary struggle, as many of his brethren did, and he kept out of public life until his death, but in his ministerial sphere he was exceedingly diligent and active. He was eminently useful in procuring the charter of Trinity College, Hartford, and his zeal for education and religion

10. QUARTER-SHEKEL OF SILVER—SIMON.

continued unabated amid many trials until his death, in 1825.

**SHELUMIEL** (she-loo-mi'el), the prince of Simeon in the wilderness, Num. i. 6.

**SHEM**, one of the three sons of Noah, Gen. v. 32; 1 Chr. i. 4. He was preserved in the ark during the flood, and afterward his dutiful conduct to his father and the blessing pronounced upon him are recorded, Gen. ix. 20-27. Shem was the eldest of Noah's three sons; for the translation, "the brother of Japheth the elder," Gen. x. 21, cannot be sustained; it is really "the elder brother of Japheth." This patriarch was the father of one of the three great divisions of mankind; the na-

tions called Shemitic, including the Hebrews, Arameans, Persians, Assyrians, etc., occupying the central parts of the ancient world, were descended from him, Gen. x. 21-31; 1 Chr. i. 17-23. In the direct line from Shem we have the genealogy of the Israelitish nation, Gen. xi. 10-26. He lived six hundred years; and if the ordinary chronology is to be depended on, he must have been many years contemporary with Abraham. In Luke iii. 36 he is called Sem. See EARTH, TONGUES.

**SHEMAIAH** (she-ma'yah). 1. A prophet of the time of Rehoboam who was commissioned to enjoin that monarch to forego his design of reducing the ten tribes to obedience, 1 Ki. xii. 22-24. 2. A person who, without authority, assumed the functions of a prophet among the Israelites in exile. He was so much annoyed by the prophecies which Jeremiah sent to Babylon, the tendency of which was contrary to his own, that he wrote to Jerusalem, denouncing the prophet as an impostor, and urging the authorities to enforce his silence. In

5. 2, 3. Two who had married foreign wives, Ezra x. 32, 41.

**SHEMEBER** (she-me'ber), the king of Zebulun, one of the five cities of the plain, Gen. xiv. 2.

**SHEMER** (she'mer), the person to whom the hill of Samaria belonged, and who sold it to Omri.

**SHEMIDA, SHEMIDAH** (she-mi'dah), a descendant of Manasseh, Num. xxvi. 32.

SENNACHERIB MURDERED BY HIS SONS IN THE HOUSE OF NISROCH.—See SENNACHERIB.

**SHEMA** (she'ma). 1. One of Judah's descendants, 1 Chr. ii. 43, 44. 2. A Reubenite, 1 Chr. v. 8, who appears to be the same with Shemaiah, 1 Chr. ii. 4. 3. A Benjamite chief, 1 Chr. viii. 13, possibly the Shimhi of ver. 21. 4. One of those who stood by Ezra when he read the law, Neh. viii. 4.

**SHEMA**, a city in the extreme South of Judah, Josh. xv. 26.

**SHEMAAH** (she-ma'ah), a Benjamite, father of two chiefs who joined David at Ziklag, 1 Chr. xii. 3.

return he received new prophecies, announcing that he should never behold that close of the bondage which he fancied to be at hand, and that none of his race should witness the re-establishment of the nation, Jer. xxix. 24-32.

Besides the two already mentioned, a number of persons with the name occur in the genealogies and later books—upward of twenty—but none of them remarkable, 1 Chr. iii. 22; iv. 37; v. 4; ix. 14, 16; xxiv. 6; xxvi. 4; Ezra viii. 13; x. 21, 31; Neh. x. 8; xii. 34, 36, 42, etc.

**SHEMARIAH** (she-mar'yah), a Benjamite warrior who joined David at Ziklag, 1 Chr. xii.

**SHEMIDAITES** (she-mi'da-ites), a family of Manasseh, descended from Shemida, Num. xxvi. 32.

**SHEMINITH** (she-mi'nith), a technical musical term of which the signification is doubtful, Ps. vi. xii, titles. It may have been a harp of eight strings; or it may rather refer to the time—from the eighth or octave.

**SHEMIRAMOTH** (she-mi-ra'moth). 1. One of the Levites, porters, who played on the psaltery, 1 Chr. xv. 18, 20. 2. A Levite in Jehoshaphat's reign, 2 Chr. xvii. 8.

**SHEMITIC** (she-mit'ik), or rather **SEMITIC** (se-mit'ik), **LANGUAGES**, a term commonly applied to a certain number of cognate idioms supposed to have been spoken by the Shemites—i. e., the descendants of Shem. Considering, however, that the Canaanites and the Phœnicians, the Cushites and a number of Arabic tribes, all derived in the genealogical list of Genesis x. from Cham, did speak "Shemitic," while Elam and Lud, derived from Shem, did not, as far as our present information goes, that designation must be pronounced a complete misnomer, although it has kept its ground for want of a precise and accurate term.

Comparative philology exercised itself at an early period, and in a vague manner, in these idioms. The resemblance between them is indeed so striking at first sight—its roots being as nearly identical as can be—that it could hardly have been otherwise. It is the difference between them rather than the similarity that requires a closer scrutiny in order to be discovered at all. As it is, they do not vary among themselves to the extent even of the dialects in any single group of the Indo-European languages. Yet the idea still entertained by not a few scholars—viz., of one of the Shemitic languages standing in the relation of maternity to another—must now be utterly discarded, and all that can be granted is the possibility of some kind of extinct prototype out of which they might have individually developed.

Meanwhile, the existence of three distinct "Shemitic" dialects of independent existence has been established beyond all doubt, and, as usual, different names and divisions have been proposed for them. The most widely adopted and the most rational ones are those that are taken from the abodes of the different tribes who first spoke them. Thus we have—*a*. The northern or north-eastern branch—i. e., that of the whole country between the Mediterranean and the Tigris, bordered by the Taurus in the north, by Phœnicia, the land of Israel and Arabia in the south, and embracing Syria, Mesopotamia and Babylonia. This is called the "Aramaic" branch. *b*. The idiom spoken by the inhabitants of Palestine—"Hebraic;" and *c*. That of the peninsula of Arabia—"Arabic," the idiom confined to this part up to the time of Mohammed.

Sinking for a moment the distinctions between these different Semitic idioms, and viewing them as one compact unity, we find that they are distinguished in a very marked manner.

1. *By the Three-Letter Root*.—This is one of the most striking characteristics of these languages, as it does not appear that there is any language not belonging to this class in the formation of whose roots the same law has been at work. It is very difficult to ascertain the origin of this singular phenomenon. It may possibly be regarded as a

roots from which the existing three-letter roots have been derived; but it has been properly remarked that such an investigation carries us quite away from the Semitic province. When we reach the two-letter root, we have left behind us the Semitic languages altogether and drawn forth a new language, which might be regarded, did we not

ORIENTAL SHEPHERD AND HIS FLOCK.—See SHEPHERD.

kind of equivalent for the compound roots of other languages (which are altogether wanting in the Semitic), an original two-letter root being enlarged and expanded into a greater or less number of three-letter roots, for the purpose of giving expression to the various modifications and shades of the primitive root idea. The attempt has indeed been made, and with no small measure of success, to point out and specify the two-letter

know that the most ancient is not always the most simple, as the one primeval language of mankind.

2. The consideration of the Hebrew three-letter root, and its possible growth out of a more original two-letter root, leads on to the notice of another prominent feature of the Semitic languages—viz., the further growth and expansion of the three-letter root itself into a variety of what are called conjugational forms, expressing intensity, reflex-

iveness, causation, etc. A similar formation may be traced in all languages; in some non-Semitic languages, as the Turkish, it is very largely and regularly developed. In English we have examples in such verbs as "sit" and "set," "lie" and "lay," "set" being the causative of "sit," "lay" of "lie;" or we may say "sit" is the reflective of "set," and "lie" of "lay." So in Latin *sedo* and *sedeo*, *jacio* and *jaceo*, etc., in which latter root the conjugational formation is still further developed into *jacto* and *jactito*. But what in these languages is fragmentary and occasional in Hebrew and the cognate languages is carried out and expanded with fullness and regularity, and consequently occupies a large space in the Semitic grammar. The conjugations are of three sorts—(a) Those expressing intensity, repetition, etc., which are usually distinguished by some change within the root; (b) those expressing reflexiveness, causation, etc., which are usually distinguished by some addition to the root; (c) the passives, distinguished by the presence of the *u* or *o* sound in the first syllable.

3. Another prominent distinction of the Semitic languages is the extent to which modifications of the root idea are indicated, not by additions to the root, but by changes within the root. "The Semitic roots," says Bopp, "on account of their construction possess the most surprising capacity for indicating the secondary ideas of grammar by the mere internal moulding of the root, while the Sanscrit roots at the first grammatical movement are compelled to assume external additions. These internal changes are principally of two sorts:

(a) *Vowel Changes*.—Nothing is more remarkable in the Semitic languages than the significance of their vowel sounds, the sharp *a* sound, formed by opening the mouth wide, being associated as a symbol with the idea of activity, while the *e* and *o* sounds are the symbols of rest and passiveness. In the Arabic verb this characteristic is very marked, many of the roots appearing under three forms, each having a different vowel, and the signification being modified in accordance with the nature of that vowel. The same law appears in the formation of the passives. Thus *katala*—pass. *kutela*.

(b) *Doubling of Consonants*, usually of the middle letter of the root. By means of this most simple and natural device the Semitic languages express intensity or repetition of action, and also such qualities as prompt to repeated action, as "righteous," "merciful," etc. By comparing this usage with the expression of the corresponding ideas in our own language we observe at once the difference in the genius of the two languages. We say "merciful," "sinful"—*i. e.*, full of mercy, full of sin. Not so the Semitic. What we express formally by means of an added root the Semitic indicates by a sign, by simply laying additional stress on one of the root letters. And thus in the formation of the Semitic languages the dominant influence was that of instinctive feeling, passion, imagination, the hand of nature appearing everywhere, the voice of nature heard in every utterance. In this how widely separated from the artificial and highly organized languages of the Indo-European family!

Respecting the visible representation of the Semitic languages, it may be broadly observed that writing, which in no language fully expresses all the sounds in their various shades, has in the Semitic languages this additional imperfection, that only the consonants—the skeleton of the word—are represented by real letters, while the vowels originally are either entirely omitted or only the

longer ones are expressed by certain consonants. It was only at a comparatively late period that also the minor vowels were added in the shape of little strokes and dots above or below the line, but this aid, too, is only intended for less practiced readers. Arabic and Hebrew are still commonly written and printed without vowels. Another point is the direction of the Semitic writing from right to left—of which only modern Ethiopic makes an exception—a peculiarity still inherent in the alternate line of the *Boustrophedon* of the early Greeks. The nearest approach to the most ancient form of the Semitic characters is found in the Phœnician, from which also all our European alphabets are derived.

In Africa the Semitic forms are found in the Mogrebin, or African-Moorish or Western Arabic, a dialect which is spoken in all the States of Barbary. Ethiopic is called by the Abyssinians *Lisana Gheëz*, or language of the *free-born*, because it was anciently the only vernacular dialect of all Abyssinia. Tigré is little else than vulgar Ethiopic, while Amharic is properly only the vernacular dialect of Amhara, a division or kingdom of Abyssinia lying west and south of the Tacazze, and measuring about one hundred and twelve miles

WILLIAM SHERLOCK.—See article.

from east to west by forty in breadth. It is a degenerate Semitic language, having lost many of its original characteristics by admixture. Having devoted special articles to the different branches of the Semitic languages, we have here given only a general and comprehensive view of the subject, and the reader is referred for fuller details to the separate articles.

**SHEMUEL** (shem'u-el). 1. One of the persons selected from the tribe of Simeon to superintend the division of Canaan, Num. xxxiv. 20. 2. 1 Chr. vi. 33. See **SAMUEL**. 3. A chieftain of Issachar, 1 Chr. vii. 2.

**SHEN**, a place somewhere near Mizpeh, between which and Mizpeh Samuel set up a stone and called it Ebenezer, 1 Sam. vii. 12. Its precise site is unknown.

**SHENAZAR** (she-na'tsar), one of David's posterity, 1 Chr. iii. 18.

**SHENIR** (she'nir), a name of Mount Hermon, or a part of it, Dent. iii. 9; Song Sol. iv. 8. See **HERMON**.

**SHEPARD** (shep'ard), **SAMUEL**, D.D., a Congregational clergyman of Massachusetts, was

born at Portland (then called Chatham), Connecticut, November, 1772. He graduated at Yale College in 1793, receiving one of the two highest honors; after which he studied theology. He was ordained pastor of the Congregational church in Lenox, Massachusetts, in 1795, and remained there until his decease, a period of nearly fifty-one years. The published works of Dr. Shepard consist of occasional sermons, preached to his own people and published by request. He was for many years one of the trustees of Williams College and a member of the board of examiners for conferring degrees on graduating classes. During a number of years previous to, and also at the time of, his death, he was vice-president of the college. Dr. Shepard's prominent traits of character were frankness, exuberance of spirits, love of order and punctuality, generosity, and decision and firmness. His pulpit oratory was of a high order, and he was an excellent pastor. He died January 5, 1846.

**SHEPARD**, THOMAS, a native of England, born November 5, 1605, was educated at Emmanuel College, Cambridge. After leaving the university he became a preacher of some distinction; but being a Puritan, he was induced to seek an abode in America. He arrived in Boston, October 3, 1635, and commenced forming a congregation at Cambridge, Massachusetts, of which he held the pastorate until his death, which occurred August 25, 1649. He exerted a powerful influence upon the interests of learning and religion in the infant colony, and it was partially owing to his influence that Harvard College was located at Cambridge. His publications, which were numerous for that period, include the following: "Theses Sabbaticæ," "New England's Lamentation for Old England's Errors," "Cautions against Spiritual Drunkenness," "Subjection to Christ in all his Ordinances the best Means to Preserve our Liberty," "The Sincere Convert," "The Sound Believer," "Singing of Psalms a Gospel Ordinance," "The Saint's Jewel and Soul's Imitation of Jesus Christ," etc.

**SHEPHAM** (she'fam), a place on the north-eastern border of Palestine, Num. xxxiv. 10, 11.

**SHEPHATHIAH** (she-fa-thi'ah), or **SHEPHATHIAH** (she-fa-ti'ah), a common name among the covenant people, but borne by no one who made a figure in history. It occurs of a son of David by his wife Abital, 2 Sam. iii. 4; of a descendant of Perez or Pharez, Neh. xi. 4; of a son of Maachah, a chief man among the Simeonites, 1 Chr. xxvii. 16; of a son of Jehoshaphat, 2 Chr. xxi. 2; of a son of Mattan who took part against Jeremiah, Jer. xxxviii. 1; and two distinct families of a Shephathiah are mentioned among the returned exiles, Ezra ii. 4, 57; Neh. vii. 9, 59.

**SHEPHERD**. See **FLOCK**.

**SHEPHI** (she'fi), or **SHEPHO** (she'fo), a descendant of Seir, 1 Chr. i. 40.

**SHEPHUPHAN**. See **SHUPHAM**.

**SHEPREVE** (shep're-ve), **JOHN**, an eminent scholar, born at Sugworth, near Abingdon, Berks, and educated at Corpus Christi College, Oxford, where he became Greek reader, in 1538 succeeded Wakefield as professor of Hebrew and acquired great popularity as a lecturer. He had a most retentive memory, and wrote verses with astonishing rapidity. He died in 1542, at Amersham, in Buck-

inghamshire. He wrote "A Complete Synopsis of the New Testament, comprised in Two Hundred and Sixty Distichs," besides other works. His nephew, **WILLIAM**, became a Roman Catholic, and went to reside in Rome, where he wrote some religious pieces. He died in 1593.

**SHERAH** (she'rah), a daughter of Ephraim, 1 Chr. vii. 24.

**SHEREBIAH** (she-reb'yah), one of the chief among the Levites or priests who assisted Ezra and sealed the covenant, Ezra viii. 18, 24.

**SHERESH** (she'resh), a descendant of Manasseh, 1 Chr. vii. 16.

**SHEREZER** (she-re'zer), one of the persons sent in the reign of Darius to the house of God, Zech. vii. 2.

**SHERLOCK** (sher'lok). The name of several eminent English divines, of whom three especially demand notice in these pages.

1. **WILLIAM**, dean of St. Paul's, was born in 1641. He was master of the temple, and incurred the anger of the king for refusing to read the declaration of indulgence and for preaching against popery. After the revolution he was one of the nonjurors, but greatly offended them by subsequently taking the oaths. Subsequently he obtained the deanery of St. Paul's, and wrote numerous books and pamphlets, the greater part of which were of the controversial kind. His "Practical Treatise on Death" has been highly valued and very much read. He died in 1707.

2. **THOMAS**, bishop of London, son of the preceding, born in 1678, was distinguished as a spirited controversial writer. He was educated at Cambridge, succeeded his father as master of the Temple, and became successively dean of Chichester and bishop of Bangor, Salisbury and London. He took a leading part in the Bangorian controversy, and did good service in his day in the controversies respecting the evidences of Christianity by his work on Prophecy and by his clever and interesting "Trial of the Witnesses." He died in 1761.

3. **RICHARD**, D.D., a clergyman of the English Church, born in 1613, at Oxtou, in Werral, Cheshire, was educated at Magdalen Hall, Oxford, whence he removed to Trinity College, Dublin. He obtained some preferment in Ireland, but during the civil wars returned to England and was made chaplain to one of the king's regiments. At the Restoration he took the degree of doctor of divinity at Dublin, and was presented to the valuable living of Winwick, Lancashire, where he died June 20, 1689. He was more eminent for his earnest piety and Christian love and fidelity than for learning, in an age when learning was almost the sole qualification sought in the ministry, though he was not below the average even as a scholar. The most celebrated of his works are—"The Practical Christian," to the sixth edition of which his life is prefixed by Bishop Wilson; "Confessions, Meditations and Prayers for the Sacrament;" and Tracts against the Quakers.

**SHERMAN** (sher'man), **JOHN**, was born in 1613, at Dedham, in England. He was brought up under the celebrated John Rogers. At an early

age he was sent to Emmanuel College, Cambridge, the great literary fountain whence so many eminent scholars flowed over to this western land. He left college without a degree, as he "scrupled" at the terms of subscription, thus gaining the sobriquet of the "College Puritan." He came to New England in 1634. He first preached at Watertown, from which he removed to New Haven. He retired from the ministry for two or three years, and again he settled at Watertown, rejecting an invitation from Boston and London. He continued to preach with great energy until near the close of life. His death occurred in 1685, in the seventy-second year of his age.

**SHERWOOD** (sher'wood), **MARY MARTHA**, one of the most popular writers of juvenile and serious fiction, was the daughter of Dr. George Butt, chaplain to George III., vicar of Kidderminster, and rector of Stanford, in Worcestershire, where she was born in 1775. In 1803 she married

THE SHEW-BREAD—PRIESTS REMOVING THE OLD AND SUBSTITUTING THE NEW.—See **SHEW-BREAD**.

Henry Sherwood of the British army, and accompanied her husband to India the same year, where she displayed great zeal in the cause of religion amongst the soldiers and natives dwelling around her. The great number of her books prevents an enumeration of even the more popular of them, but among the most universally read are "Henry and his Bearer," "The Lady of the Manor," "The Church Catechism," "The Nun," "The Fairchild Family," "The Golden Garland of Inestimable Delight," etc. She died in 1851.

**SHESHACH** (she'shak), a symbolical name of Babylon, Jer. xxv. 26; li. 41. It has been a puzzle to account for Babylon's being so called. Some critics believe that it is written according to the cabalistic plan of putting the last letter of the alphabet for the first, the last but one for the second, and so forth. Sheshach would then be Babel or Babylon. But according to Sir H. Rawlinson, Shishaki is, in one of the ancient Babylonian dialects, the name of the moon-god, and is supposed to designate the city Ur.

**SHESHAI** (she'shi), one of the sons of Anak, Num. xiii. 22, or perhaps the name of a family of Anakim.

**SHESHAN** (she'shan), a descendant of Judah, 1 Chr. ii. 31, 34, 35.

**SHESHBAZZAR** (shesh-bats'zar), the name apparently borne in Persia by Zerubbabel, Ezra i. 8, 11.

**SHETH**. 1. Num. xxiv. 17. Here the word is probably not a proper name: we may translate "the sons of tumult;" compare Jer. xlviii. 45. 2. 1 Chr. i. 1. See **SETH**.

**SHETHAR** (she'thar), one of the seven princes of Persia, Esth. i. 14.

**SHETHAR-BOZNAI** (she'thar-böz'ni), a Persian officer in Syria, Ezra v. 8, 6.

**SHEVA** (she'va). 1. 2 Sam. xx. 25. See **SHAVSHA**, **SERAIAH**. 2. A son of Caleb, son of Hezron, 1 Chr. ii. 49.

**SHEW-BREAD** (sho'-bred), the expression used in our version for what is literally "bread of faces," or "bread of the presence," so called because it was set before Jehovah in the holy place, Ex. xxv. 30. The shew-bread consisted of twelve loaves or cakes, according to the number of the tribes of Israel, fresh every Sabbath day, placed in two rows or piles, with frankincense on each row. The frankincense was burnt as an offering made by fire, and the bread taken away to make room for the fresh loaves was to be eaten by the priests in the holy place, Lev. xxiv. 5-9. This bread was placed upon a table made of shittim-wood overlaid with gold, Ex. xxv. 23-30, set in the sanctuary, Ex. xxxix. 36. On this table were, besides the "continual bread," as it was sometimes termed, bowls and cups in which there was, probably, wine for libations, Ex. xxv. 29, 30. The shew-bread was an offering, placed before the Lord, whose ever-watchful eye

looked thereon with complacency, a portion of their substance consecrated by the people for God's honor; and as incense was put upon it the lesson was taught that the spiritual sacrifice symbolized by the bread was to be ever presented with supplication, and could only so meet with the divine favor.

**SHIBBOLETH** (shib-bo'leth), a word pronounced by the Gileadites to the fugitive Ephraimites in order to detect by their pronunciation whether they were really of that tribe, Jud. xii. 4-6. It appears from this circumstance that there were variations of dialects in the spoken language of Palestine.

**SHIBMAH** (shib'mah), a town originally belonging to the territory of Bashan, and called *Sebam* or *Shebam*, Num. xxxii. 3, but afterward assigned to Reuben, by whom it was rebuilt, and called *Sibmah*, Num. xxxii. 38. From two allusions in Isaiah it appears to have been famous for

waters; but in the Authorized Version only once put *Shihor*, which is the correct form, 1 Chr. xiii. 5; in other places it is *Sihor*, Josh. xiii. 9; Isa. xxiii. 3; Jer. ii. 18. When Isaiah speaks of the "seed" or sowing "of Sihor, the harvest of the river," and Jeremiah says, "What hast thou to do in the way of Egypt, to drink the waters of Sihor?" it is scarcely possible to doubt that the Nile is meant—the river which might be taken as the representative of Egypt. But in the passage of Joshua, *Shihor* is spoken of as being *before* Egypt—that is, to the east of it; which could not properly be spoken of the Nile, since this flows directly through Egypt, but should apparently be understood of the Rhinocorum of the ancients, the Wady el Arish of the moderns. This last is called in Scripture the *Nachal* or River of Egypt; and it would seem that *Shihor* was also occasionally applied to this stream, the term being then used merely as a designation for a river somehow connected with or pertaining to Egypt. Thus at Josh. xiii. 3, "from

be the Sharnhen of Josh. xix. 6 and the Sharaim of 1 Chr. iv. 31.

**SHILLEM** (shil'lem), one of the sons of Naphtali, Gen. xlv. 24. He is called Shallum in 1 Chr. vii. 13.

**SHILLEMITES** (shil'lem-ites), a family of Naphtali descended from Shillem or Shallum, Num. xxvi. 49.

**SHILOAH**. See **SILLOAM**.

**SHILOH** (shi'loh), a city in the tribe of Ephraim, situated among the hills to the north of Bethel, eastward of the great northern road, where the tabernacle and ark remained for a long time, from the days of Joshua, during the ministry of all the judges, down to the end of Eli's life, Josh. xviii. 1; 1 Sam. iv. 3. To this circumstance Shiloh owed all its importance, for after the loss of the ark—which never returned thither after it had been restored to Israel by the Philistines—it sunk into insignificance. It was, indeed, the residence of Ahijah the prophet, 1 Ki. xi. 29, but it is more than once mentioned as accursed and forsaken, Ps. lxxviii. 60; Jer. vii. 12, 14. The last mention of it in Scripture is in Jer. xli. 5, which only shows that it survived the exile. Dr. Robinson identifies it with a place named Seilun, a city surrounded by hills, with an opening by a narrow valley into a plain on the south. The ruins consist chiefly of an old tower with walls four feet thick, and of large stones and fragments of columns indicative of an ancient site.

**SHILOH**. This word occurs in Jacob's prophetic blessing, Gen. xlix. 10. Various and most diverse have been the interpretations of the passage. Gesenius would translate, "The sceptre shall not depart from Judah . . . until he (Judah) shall come to Shiloh, and the nations obey him." And he supposes that the prediction meant that Judah would lead the tribes in the conquest of Canaan, Jud. i. 1, 2, till the central regions being subdued and the tabernacle set up there in Shiloh, Judah's leadership would cease, the different tribes enjoying each independently its own inheritance. An obvious and fatal objection to this interpretation is that it does not reach to that highest point of Judah's supremacy when a family of the tribe sat upon the throne of Israel. And besides, as Kalisch has shown, the words we render "sceptre" and "lawgiver" must indicate regal dignity, and not mere leadership in the field. Kalisch himself translates, "The sceptre shall not depart . . . even when they come to Shiloh; and to him shall be submission of nations," and interprets that Judah's royalty should not be extinguished, even when by proclamation at Shiloh, where Ahijah lived, who predicted the disruption, the ten tribes set up a rival sovereignty. To this also there is a fatal objection. Shiloh had ceased to be the gathering-place and sanctuary of the nation years before; and besides, it was not at Shiloh but at Shechem that the revolt occurred and was consummated, 1 Ki. xii. Hengstenberg's explanation is far preferable. He maintains that the prediction had a Messianic reference. This has been held from the earliest times, and even by Jewish writers. Hengstenberg therefore translates, "The sceptre shall not depart from Judah, nor the lawgiver from between his feet—i. e., from him—until the Peace-maker comes, and him shall the nations obey." And he believes

the *Shihor* (so it should be read) before (or over against) Egypt," becomes equivalent to "the river that is over against Egypt"—viz., the Wady el Arish; and in the same manner should the "*Shihor of Egypt*" in 1 Chr. xiii. 5 be understood.

**SHIHOR-LIBNATH** (shi'hor-lib'nath), a river or stream, as appears from the etymology of the word, on the southern boundary of the tribe of Asher, near Carmel. It is only mentioned in Josh. xix. 26.

**SHITES** (shi'ites), Mohammedan sectaries who, after the death of Mohammed, followed Ali, his son-in-law; regarding him as the vicar of God, they execrated all who stepped in between him and his inheritance.

**SHILHI** (shil'hi), the father of King Jehoshaphat's mother, 1 Ki. xxii. 42.

**SHILHIM** (shil'him), a city in the southern part of Judah, Josh. xv. 32. This would seem to

the meaning to be, not that the tribe of Judah should not cease to subsist as a people, and have a government of their own till the coming of Messiah, when they should lose their dominion, but that Judah should not cease to exist as a tribe, or lose its superiority, until it was exalted to higher honor and glory through the great Redeemer who was to spring from it, and whom not only the Jews, but all the nations of the earth, should obey. Hengstenberg supports his position with great ability, and shows how Judah, eminently, was carried through the temporary exile at Babylon,

place, and denotes a native of or resident in Shiloh, 1 Ki. xi. 29.

**SHILSHAH** (shil'shah), a chieftain of Asher, 1 Chr. vii. 37.

**SHIMEA** (shim'e-a), **SHIMEAH** (shim'e-ah), a name in frequent use, and found in respect to a brother of David, 2 Sam. xxi. 21; a son of David by Bathsheba, 1 Chr. iii. 5; a descendant of Jehiel, the father of Gibeon, 1 Chr. viii. 32; of two Levites, 1 Chr. vi. 30, 39.

2. A member of the family of Saul, residing at Bahurim, who grievously insulted King David when he fled from Absalom, 2 Sam. xvi. 5-13. The king not only saved him from the immediate resentment of his followers, but on his triumphant return by the same road after the overthrow of his rebellious son, he bestowed on Shiméi the pardon which he implored, 2 Sam. xix. 16. It seems, however, that it was policy which chiefly dictated this course, for it was by the advice of David himself, 1 Ki. ii. 8, 9, that Solomon, after his father's death, made Shiméi a prisoner at large in Jeru-

SHIMEI MOCKING DAVID.—See SHIMEI, 2, and DAVID.

the ten tribes never recovering, after their deportation, a national existence. Whatever the shades of difference, then, in the modes of application, the Messianic view of the prophecy must be maintained.

**SHILONI** (shi-lo'ne). If this is taken as a proper name, it should be *Hashshiloni*; but if it is a Gentile, it should be rendered *the Shilonite*.

**SHILONITE** (shi'lon-ite). Two words derived from different roots appear in this form. The one is derived from *Shelah*, the youngest son of Judah, and denotes a descendant of Shelah, 1 Chr. ix. 5. The other is derived from *Shiloh*, the

**SHIMEATH** (shim'e-ath), an Ammonitess, mother of one of the assassins of Joash king of Judah, 2 Ki. xii. 21.

**SHIMEATHITES** (shim'e-ath-ites), a family who dwelt at Jabez; they seem to be reckoned among the Kenites, 1 Chr. ii. 55.

**SHIMEI** (shim'e-i). 1. A son or grandson of Gershon and descendant of Levi, Num. iii. 18; he is also called Shiméi, Ex. vi. 17. It is questionable whether this Shiméi is intended in 1 Chr. xxiii. 9; possibly there may be some error of transcription, or it may be the nephew of the Shiméi of verses 7 and 10.

salem, 1 Ki. ii. 36, 37. Three years after, he broke his parole by leaving Jerusalem in pursuit of some runaway slaves, and was, on his return, put to death by order of the king, 1 Ki. ii. 39-46.

3, etc. A large number of persons, without any particular personal distinction, bore this name besides those already specified, 1 Ki. iv. 18; 1 Chr. iii. 19; iv. 26, 27; v. 4; vi. 42; xxv. 17, etc.

**SHIMEON** (shim'e-on), one who had taken a foreign wife, Ezra x. 31.

**SHIMHI** (shim'hi), a Benjamite, 1 Chr. viii. 21. He is supposed to be the same with Shema, 1 Chr. viii. 13, but this is questionable.

**SHIMI** (shim'i), a Levite, son of Gershon, Ex. vi. 17; he is identical with Shimei, 1.

**SHIMITES** (shim'ites), a family of Gershonite Levites descended from Shimi or Shimei, Num. iii. 21.

**SHIMMA** (shim'ma), a brother of David, 1 Chr. ii. 13; he is also called Shammah, Shimea and Shimeah. See **SHAMMAH**, 2.

**SHIMON** (shi'mon), a descendant of Judah, 1 Chr. iv. 20.

**SHIMRATH** (shim'rath), a Benjamite, 1 Chr. viii. 21.

**SHIMRI** (shim'ri). 1. A descendant of Simon, 1 Chr. iv. 37. 2. The father of one of David's warriors, 1 Chr. xi. 45. 3. One of the Levites in the reign of Hezekiah, 2 Chr. xxix. 13.

**SHIMRITE** (shim'rite), 1 Chr. xi. 45, margin, an appellation of Jedaiel, son of Shimri, 2.

**SHIMRITH** (shim'rith), a Moabitess, mother of Jehozabad, one of the murderers of Joash king

A SHIP FROM A VERY ANCIENT BAS-RELIEF. - See SHIP.

of Judah, 2 Chr. xxiv. 26. The name is also given, 1 Ki. xii. 21, as Shomer.

**SHIMROM** (shim'rom), **SHIMRON** (shim'-ron), the fourth son of Issachar, and the founder of the family that bore the name of Shimronites, Gen. xvi. 13; Num. xxvi. 24.

**SHIMRON** and **SHIMRON-MERON**. These were probably names for the same place. In Josh. xix. 15 Shimron occurs among the towns belonging to the tribe of Zebulun; and in Josh. xii. 20 the king of Shimron-Meron appears in the list of thirty-one kings that had fallen before Joshua. But no certain trace has been found of the place.

**SHIMRONITES**. See **SHIMROM**.

**SHIMSHAI** (shim'shi), an officer or scribe in Samaria who resisted the rebuilding of Jerusalem, Ezra iv. 8, 9, 17, 23.

**SHINAB** (shi'nab), the king of Admah, one of the five cities of the plain, Gen. xiv. 2.

**SHINAR** (shi'nar), the proper name of the country around Babylon, the plain in which lay the cities of Erech, Acad and Calneh. It also embraced the province of Babylon as distinguished

from Assyria and Elam, and may be said to have been the southern district of Mesopotamia from the Persian Gulf to the so-called Median wall which separated it from Mesopotamia proper, and which ran from the Tigris a little north of Sittace, across the plain to the Euphrates; in the west and south-west, however, Shinar extended beyond the Euphrates to the tracts of Arabia. These were the original boundaries of Babylonia, or Shinar, or the land of the Chaldees.

**SHINN**, ASA, was born in 1781, in the State of New Jersey. His parents removed to the eastern slope of the Alleghany mountains in Virginia. He entered the Episcopal Methodist Church; and when about twenty years of age, he yielded to the suggestions of his friends and began to exhort. In 1802 he was appointed to the Shenango Circuit, and next year he was sent to the wilderness of Ohio to form a new circuit on the waters of the Hocking. He was next toiling around Steubenville, and then to Kentucky, whence he was brought to the Baltimore Conference. In Baltimore, Georgetown, Redstone, Harford and Pittsburg he labored very faithfully. He entered earnestly into the controversy which issued in the formation of the "Methodist Protestant Church," and in 1829 he withdrew and became identified with the separate organization. He died in 1853. On several occasions his work was interrupted by temporary attacks of derangement. He had a high reputation as an author, and his works on the "Plan of Salvation" and on the "Benevolence and Rectitude of the Supreme Being" were much esteemed.

**SHIP**. In few things is there greater danger of modern associations misleading the reader of the Scriptures than in regard to the subject of the present article. Both the ships and the navigation of the ancients were as dissimilar as things of the same kind can well be to the realities which the terms now represent. Navigation confined itself to coasting; or if necessity, foul weather or chance drove a vessel from the land, a regard to safety urged the commander to a speedy return, for he had no guide but such as the stars might afford under skies with which he was but imperfectly acquainted. And ships, whether designed for commercial or warlike purposes, were small in size and frail in structure, if our immense piles of oak and iron be taken as the objects of comparison.

The Jews cannot be said to have been a seafaring people; yet their position on the map of the world is such as to lead us to feel that they could not have been ignorant of ships and the business which relates thereunto. Phœnicia, the north-western part of Palestine, was unquestionably among, if not at the head of, the earliest cultivators of maritime affairs. Then the Holy Land itself lay with one side coasting a sea which was anciently the great highway of navigation and the centre of social and commercial enterprise. Within its own borders it had a navigable lake. The Nile was a great thoroughfare for ships. And the Red Sea itself, which conducted toward the remote east, was at no great distance even from the capital of the land. Then at different points in its long line of sea-coast there were harbors of no mean repute. Let the reader call to mind Tyre and Sidon in Phœnicia, and Acre (Aco) and Jaffa (Joppa) in Palestine. Yet the decidedly agricultural bearing of the Is-

raelitish constitution checked such a development of power, activity and wealth as these favorable opportunities might have called forth on behalf of seafaring pursuits. There can, however, be no doubt that the arts of shipbuilding and of navigation came to Greece and Italy from the East, and immediately from the Levant, whence we may justifiably infer that these arts, so far as they were cultivated in Palestine, were there in a higher state of perfection at an early period at least than in the more western parts of the world, Ezek. xxvii. In the early periods of their history the Israelites themselves would partake to a small extent of this skill and of its advantages, since it was only by degrees that they gained possession of the entire land, and for a long time were obliged to give up the sovereignty of very much of their seaboard to the Philistines and other hostile tribes. The earliest history of Palestinian ships lies in impenetrable darkness, so far as individual facts are concerned. In Gen. xlix. 13 there is, however, a prophecy the fulfillment of which would connect the Israelites with shipping at an early period: "Zebulun shall dwell at the haven of the sea, and he shall be for a haven of ships, and his border shall be unto Zidon." These local advantages, however, could have been only partially improved, since we find Hiram, king of Tyre, acting as carrier by sea for Solomon, engaging to convey in floats to Joppa the timber cut in Lebanon for the temple, and leaving to the Hebrew prince the duty of transporting the wood from the coast to Jerusalem. And when, after having conquered Elath and Ezion-geber on the farther arm of the Red Sea, Solomon proceeded to convert them into naval stations for his own purposes, he was still indebted to Hiram for "shipmen that had knowledge of the sea," 1 Ki. ix. 26. The effort, however, to form and keep a navy in connection with the East was not lastingly successful; it soon began to decline, and Jehoshaphat failed when at a later day he tried to give new life and energy to the enterprise, 1 Ki. xxii. 49, 50.

In the time of the Maccabees Joppa was a Jewish seaport, 1 Macc. xiv. 5. Herod the Great availed himself of the opportunities naturally afforded to form a more capacious port at Casarea. Nevertheless, no purely Jewish trade by sea was hence even now called into being. Casarea was the place whence Paul embarked in order to proceed as a prisoner to Rome, Acts xxvii. 2. His voyage on that occasion, as described most graphically in the Acts of the Apostles, ch. xxvii., xxviii., affords rich and valuable materials toward a history of ancient maritime affairs, and might be so treated as of itself to supply many irresistible evidences of the certainty of the events therein recorded, and of the credibility of the evangelical history in general. No one but an eye-witness could have written the minute, exact, true and graphic account which these two chapters give.

The reader of the New Testament is well aware how frequently he finds himself with the Saviour on the romantic shores of the Sea of Genesareth. There Jesus is seen, now addressing the people from on board a vessel, Matt. xiii. 2, now sailing up and down the lake, Matt. viii. 23. Some of his earliest disciples were proprietors of barks which sailed on this inland sea, Matt. iv. 21; John xxi. 3. These "ships" were indeed small. They were not, however, mere boats. They carried their anchor with them.

There was too a kind of vessel larger than this, called *schedia* by Josephus, who narrates a sea-fight which took place on the lake, conducted on the part of the Romans by Vespasian himself. It thus appears that the lake was not contemptible, nor its vessels mean, and those should hence learn to qualify their language who represent the Galilean fishermen as of the poorest class.

The vessels connected with Biblical history were for the most part ships of burden, though the Phœnician states can hardly fail to have supported a navy for warlike and predatory purposes. A few details respecting chiefly ships of burden may be of service to the Scriptural student. In a ship of this kind was Paul conveyed to Italy. They were, for the purposes to which they were destined, rounder and deeper than ships of war, and sometimes of great capacity. In consequence of their bulk and weight they were impelled by sails rather than by oars. On the prow stood the insignia from which the ship was named, and by which it was known. These in Acts, ch. xxviii. 11, are called "sign," which it appears consisted in this case of figures of Castor and Pollux, brilliant constellations auspicious to navigators. Each ship was provided with a boat, intended in the case of peril to facilitate escape, Acts xxvii. 16, 30, 32, and several anchors, Acts xxvii. 29, 40; also a plumb-line for sounding, Acts xxvii. 28. Among the sails one bore the name of artemon, translated in Acts xxvii. 40 by "mainsail," but possibly the word may rather mean what is now termed the "topsail." In great danger it was customary to gird the vessel with cables, in order to prevent her from falling to pieces under the force of wind and sea, Acts xxvii. 17. The various expedients that were employed in order to prevent shipwrecks are described to the eye in the passage in the Acts. First, the vessel was lightened by throwing overboard all lumber, luggage and everything that could be spared. If the peril grew more imminent, the freight was sacrificed, Acts xxvii. 38. When hope or endurance had come to a period, recourse was had to the boat, or efforts were made to reach the shore on spars or rafts, Acts xxvii. 38, 44.

The dangers of the ocean to sailors on board such ships as these were caused sailing to be restricted to the months of spring, summer and autumn; winter was avoided. To the Romans the sea was opened in March and closed in November; and ships which toward the end of the year were still at sea earnestly sought a harbor in which to pass the winter, Acts xxvii. 12.

**SHIPHI** (shif'i), a Simeonite chief, 1 Chr. iv. 37.

**SHIPMITE** (shif'mite), an inhabitant, probably, of Siphmoth, 1 Chr. xxvii. 27.

**SHIPRAH** (shif'rah), one of the midwives in Egypt who refused to execute Pharaoh's command, Ex. i. 15.

**SHIPHTAN** (shif'tan), the father of the Ephraimite chief appointed to assist in the division of Canaan, Num. xxiv. 24.

**SHISHA**. See **SERAIAH**, 1.

**SHISHAK** (shi'shak), a king of Egypt to whom, at the close of Solomon's reign, Jeroboam fled, 1 Ki. xi. 40. In the fifth year of Rehoboam Shishak invaded Judah with a vast army, captur-

ing the fenced cities in his way and occupying Jerusalem. He plundered the temple and the royal treasury, and probably made the Judean kingdom for a while dependent upon Egypt, 1 Ki. xiv. 25, 26. There can hardly be a doubt that this Egyptian monarch was Sheshonk I., the first of dynasty XXI. of Tanite-Bubastites (or XXII.). His accession has been assigned to the year 978 B.C., and he is supposed to have reigned twenty-one years. But it is probable that he had reigned some time in Lower Egypt before he became master of Thebes. The monuments at Karnak represent Sheshonk as presenting to the Theban trinity the chiefs of a great number of conquered nations. Among them may be observed one with a remarkably Jewish physiognomy and an inscription *Judahmalek*. This may mean "the kingdom of Judah," and Rehoboam probably is intended.

**SHITRAI** (shit'ri), one of David's chief herdsmen, 1 Chr. xxvii. 29.

VESSEL ON THE NILE. - See SHIP.

**SHITTAH** (shit-tah) **TREE**. By this term the acacia is generally understood. *Shittim* is the Hebrew plural form; consequently shittim wood is the wood of the shittah tree. Offerings were made of this for the construction of the tabernacle, Ex. xxv. 5; and it was evidently considered of value, as a gospel promise was given that it should be planted in the wilderness, Isa. xii. 19. But there are several species of acacia, and it is doubtful which of them was meant. The *Acacia seyal* grows abundantly in the Sinaitic peninsula, and a good deal of gum-arabic is obtained from it. But it would hardly yield boards of the size required for the tabernacle. The wild acacia is also found in the mountains of Sinai; and this, now called *sumt*, is popularly identified in the East with the burning bush. Its bark is covered with large black thorns; the wood, though light, is hard, resembling ebony when old, and the kernels of its fruit are said to be used in dyeing leather red. Another species, *Acacia sena*, grows to a considerable size. It is found in Egypt, but is not known to occur in the peninsula of Sinai, where, as has been said, the *seyal* species prevails.

**SHITTIM** (shit'tim), "acacias." 1. Num. xxv. 1. See **ABEL-SHITTIM**. 2. A valley of Shittim is mentioned in Joel iii. 18. It was most likely on the western side of Jordan; some interpreters believe it the valley of the Kidron. It may be simply meant that a dry valley—acacias love a dry valley—shall become well watered.

**SHITTIM WOOD**. See **SHITTAH TREE**.

**SHIZA** (shi'zah), a Benbenite, father of one of David's warriors, 1 Chr. xi. 42.

**SHOA** (sho'ah), "opulent," probably used to signify the wealth of the Babylonians, Ezek. xxiii. 23.

**SHOBAB** (sho'bab). 1. One of David's sons, born in Jerusalem, 2 Sam. v. 14. 2. A descendant of Judah, son of Caleb, Hezron's son, 1 Chr. ii. 18.

**SHOBACH** (sho'bak), the commander of the

forces of Hadarezer, king of Zobah. He was defeated and slain by David, 2 Sam. x. 16, 18. He is also called Shophach, 1 Chr. xix. 16, 18.

**SHOBAL** (sho'bal), one whose descendants, porters, returned from Babylon with Zerubbabel, Ezra ii. 42.

**SHOBAL** (sho'bal). 1. One of the sons of Seir the Horite, Gen. xxxvi. 20, 23, 29. 2. A descendant of Judah, said to be "father" or founder of Kirjath-jearim, 2 Chr. ii. 50, 52. 3. Also a descendant of Judah, probably identical with No. 2, 2 Chr. iv. 1, 2.

**SHOBEK** (sho'bek), one who sealed the covenant, Neh. x. 24.

**SHOBER** (sho'ber), **GOTTLIEB**, was one of the founders of the General Synod of the Lutheran Church, and was its president in 1825, when it met at Frederick, Maryland. He was also engaged in the work, with a committee, in preparing a hymn-book and in translating Luther's Catechism. He was born

in 1756, at Bethlehem, Pennsylvania, where his parents were connected with the Moravian Church. He devoted some time to learning a mechanical trade, then he opened a school, and next he engaged in the study of law, and for a short time he practiced as a lawyer. It was thus that he gradually acquired his education; and in 1810, having gone to South Carolina in the company of the Rev. Mr. Stork, he was induced to preach a sermon. In the autumn of that year he was ordained, and settled in the Lutheran church at Salem, where he ministered until a short time before his death. He was greatly beloved by his brethren. His chief literary works were a translation from the German of Stilling, entitled "Scenes in the World of Spirits," and a second, entitled "A Comprehensive Account of the Rise and Progress of the Church by Dr. Martin Luther, interspersed with Views of his Character and Doctrine." The latter was written at the request of the Synod of South Carolina, and by that body it was highly approved and commended to the public.

**SHOBI** (sho'bi), a distinguished Ammonite, son of Nahash (apparently the king), who aided David with supplies in Absalom's rebellion, 2 Sam. xvii. 27.

ANCIENT SHIP: FROM A PAINTING.—See SHIP.

**SHOCHO, SHOCOH** or **SHOCO** (sho'ko). See **SOCOH**.

**SHOE**. See **SANDAL**.

**SHOHAM** (sho'ham), a Merarite Levite, 1 Chr. xxiv. 27.

**SHOMER** (sho'mer). 1. The father of one of the assassins of King Joash, 2 Ki. xii. 21. In 2 Chr. xxiv. 26 the mother is called Shimrith. 2. A chieftain of Asher, 1 Chr. vii. 32, given also as Shamer, 1 Chr. vii. 34.

**SHOMERON** (sho'me-ron), 1 Ki. xvi. 24, margin, Samaria.

**SHOPHACH**. See **SHOBACH**.

**SHOPHAN** (sho'fan). This word should be joined with the preceding word, Num. xxxii. 35. See **ATROTH**.

**SHORE, JOHN**, Right Hon. **LORD TEIGNMOUTH**, one of the peerage of Ireland and president of the British and Foreign Bible Society, was born in London, in 1751. When about the age of eighteen, he went to India in the civil service of the East India Company, residing there about sixteen years, and returning to England in

1785. Subsequently, he served as governor-general of India. In 1797 he was promoted to an Irish peerage, and in 1798 retired from office and returned to England. In 1814, on the formation of the British and Foreign Bible Society, Lord Teignmouth, at the suggestion of Bishop Porteus, was chosen the first president, Bishops Porteus, Barrington, Fisher and Burgess, together with Sir William Pepperell, Lord Gambier, Charles Grant and William Wilberforce, being vice-presidents. This office Lord Teignmouth held until his death, and to the able, zealous and prudent manner in which he conducted the affairs of the society, and to the catholic and amiable spirit with which he presided over it, the institution has been greatly indebted for its prosperity. He died in London, February 14, 1834.

**SHORT, THOMAS VOWLER, D.D.**, was born in 1790, at Dawlish, in Devonshire, England. He was educated at Christ Church, Oxford, where he took a "double first" at graduating, in 1812. This term is one of the highest honor, as it indicates the fact that the first place in both classics and science has been gained by the candidate; and the history of the university shows that those who reach this eminence are generally found in subse-

quent life to reach the highest offices in Church and State. He was made public examiner in 1820 and select preacher in 1823. Various rural preferments were conferred on him, and in 1834 he was made rector of St. George's Church, Bloomsbury, and three years subsequently he became deputy clerk of the closet to the queen. He was raised to the see of Sodor and Man in 1842, and in 1846 was translated to St. Asaph. His published works include, among others which bore on academical and collegiate matters, "Sermons on the Fundamental Truths of Christianity," "Sketch of the History of the Church of England," "Parochialia," "Seven Charges, with Appendices and Criticisms." He was a learned and energetic man.

**SHOSHANNIM** (sho-shan'nim), "lilies," an expression found in the titles of Psalms xlv., lxix. Most probably it implies a direction that those psalms should be sung to the tune or melody of some well-known poem, entitled "The Lilies."

**SHOSHANNIM-EDUTH** (e'dooth), "lilies of the covenant," Ps. lxxx., title. A similar direction is implied with that noted above.

**SHOVEL**, Isa. xxx. 24. See **FAN**.

**SHOWER, JOHN**, was born in 1657, at Exeter. He entered the ministry among the dis-

senters, and in 1679 he became assistant to Vincent Alsop in Westminster. In 1690 he held the same relation to the celebrated John Howe, and he afterward became the pastor of the Old Jewry Chapel, where he remained until his death, in 1715. He was an admirable preacher, and his works are most precious. The most important of them are "The Mourner's Companion," "Family Religion," "Funeral Discourses," "Reflections on Time and Eternity" (this work has been edited by Sir Matthew Hale and Dr. Chalmers), "Heaven and Hell," "Sacramental Discourses" and "Winter Meditations."

**SHRINES**, Acts xix. 24, small models of the celebrated temple of the Ephesian Artemis, with her statue, which it was the custom to carry on journeys and place in houses as a charm.

**SHRINES**. See **TOMBS**.

**SHRUB** is a low dwarf tree, a plant with several woody stems from the same root. Palestine abounds in shrubs. On the lower eminences and in the ravines of the Carmel range there are many varieties. A species (the Sea Goose-foot) is given on page 1520. Hasselquist noticed several kinds of the goose-foot in his day; as, for instance, the green goose-foot—*Chenopodium viride*. There is a species known as "the oak of Jerusalem," valued for the ambrosial scent of the leaves when bruised, although the flowers have no beauty. Near Jericho there is the "swallow-wort," and on the banks of the Jordan the "chaste tree," while the tamarisk abounds near the Dead Sea, and the jasmine and the sunae are found generally.

**SHUA** (shoo'ah). 1. The father-in-law of Judah, 1 Chr. ii. 3, called also Shuah, Gen. xxxviii. 2, 12. 2. A daughter of the house of Asher, 1 Chr. vii. 32.

**SHUAH** (shoo'ah). 1. One of the sons of Abraham by Keturah, Gen. xxv. 2. Possibly his descendants occupied the district called Sakkaea, eastward of Batanea. 2. See **SHUA**, 1. 3. A name in the genealogies of Judah, 1 Chr. iv. 11; it has been supposed the same with Hushah, 1 Chr. iv. 4.

**SHUAL** (shoo'al), a chieftain of Asher, 1 Chr. vii. 36.

**SHUAL**, a district, 1 Sam. xiii. 17, possibly the same as Shalim, 1 Sam. ix. 4.

**SHUBAEL** (shoo-ba'el). 1. 1 Chron. xxiv. 20. See **SHEBUEL**, 1. 2. 1 Chr. xxv. 20. See **SHEBUEL**, 2.

**SHUCKFORD** (shuk'ford), **SAMUEL**, a learned divine who was educated at Caius College, Cambridge, and became prebendary of Canterbury and rector of Allhallows, in Lombard street. He wrote two works, "On the Creation and Fall of Man," and "The History of the World, Sacred and Profane." He died in 1754.

**SHUHAM** (shoo'ham), a son of Dan, Num. xxvi. 42; he is called Hushim in Gen. xlv. 23.

**SHUHAMITES** (shoo'ham-ites), a family of Dan, descended from Shuham, Num. xxvi. 42.

**SHUHITE** (shoo'hite) appears to be a patronymic from Shuah. It is applied only to Bildad,

one of the allocutors in the book of Job, ch. ii. 11, and probably marks him as a descendant of Shuah, the son of Abraham.

**SHULAMITE** (shoo'lam-ite), a symbolical name given to a maiden in Solomon's Song, Song Sol. vi. 13. It is considered by some critics equivalent to Shunammite—i.e., a native of Shunem. See **SOLOMON**, **SONG OF**.

**SHUMATHITES** (shoo'math-ites), the designation of a family or tribe, derived from a word signifying "garlic," 1 Chr. ii. 53. Nothing is known of it.

**SHUNAMMITE** (shoo'nam-mite), an inhabitant of Shunem, 1 Ki. i. 3, 15.

**SHUNEM** (shoo'nem), a town of the tribe of Issachar, Josh. xix. 18, where the Philistines encamped before Saul's last battle, 1 Sam. xxviii. 4, and to which belonged Abishag, the last wife of David, 1 Ki. i. 3, and "the Shunammite woman" with whom Elisha lodged, 2 Ki. iv. 8-37. Eusebius and Jerome describe it as, in their day, a village lying five Roman miles from Mount Tabor, toward the south. It has of late years been recognized in a village called Solam, three miles and a half north of Zerin (Jezreel), which is a small place on the slope of a hill, where nothing occurs to denote an ancient site.

**SHUNI** (shoo'ni), a son of Gad, Gen. xlv. 16.

**SHUNITES** (shoo'nites), a family of the Gadites, descended from Shuni, Num. xxvi. 15.

**SHUPHAM** (shoo'fam), a son or grandson of Benjamin, Num. xxvi. 39. He is called Muppim, Gen. xlv. 21, and Shephuphan, 1 Chr. viii. 5. See **SHUPPIM**, 1.

**SHUPHAMITES** (shoo'fam-ites), a family of Benjamin descended from Shupham, Num. xxvi. 39.

**SHUPPIM** (shoop'pim). 1. A Benjamite, 1 Chr. vii. 12, possibly the same with Shupham. It is not quite clear in what degree of relationship he stood to Benjamin. Some critics believe that he was Benjamin's son, but that his family were afterward reckoned with that of which Ir, Benjamin's grandson, was chief. 2. A Levite porter, 1 Chr. xxvi. 16.

**SHUR** (shur), a city on the confines of Egypt and Palestine, Gen. xvi. 7; 1 Sam. xv. 7. Josephus makes it the same as Pelusium; but this city bore among the Hebrews the name of Sin. More probably Shur was in the vicinity of the modern Suez. The desert extending from the borders of Palestine to Shur is called in Ex. xv. 22 the "desert of Shur," but in Num. xxxiii. 8 the "desert of Etham."

**SHUSHAN**. See **SUSA**.

**SHUSHAN-EDUTH** (e'dooth), "lily of the testimony," the name of some ode or poem, according to the tune of which the psalm, Ps. lx., title, to which these words are prefixed, was to be sung.

**SHUTE, DANIEL, D.D.**, a Congregational minister of Massachusetts, born in 1722, graduated

at Harvard College in 1743. He declined an invitation to settle in Malden, and in 1746 he was ordained and became pastor of the church in Hingham, where he remained until his death, which occurred August 30, 1802, at the age of eighty years. During the period of his ministry both pastor and people were severely tried by the French revolutionary wars. In 1758 he was appointed by Governor Pownall chaplain of a regiment commanded by Colonel Joseph Williams, which was raised "for a general invasion of Canada." He was an ardent patriot in the Revolutionary struggle, and he was a member of the Convention which formed the Constitution of the United States. He published a number of sermons.

**SHUTHALHITES** (shoo'thal-hites), descendants of Shuthelah, Num. xxvi. 35.

**SHUTHELAH** (shoo'the-lah), one of the sons of Ephraim, Num. xxvi. 35, 36. See **EPHRAIM**.

**SHUTTLE**, Job vii. 6. See **WEAVING**.

ANCIENT PERSIAN WAR-BOATS.—See SHIP.

**SHUTTLEWORTH** (shut't'l-wurth), **PHILIP NICHOLAS**, bishop of Chichester, was born in 1782, at Kirkham, Lancashire. He received his education at Winchester and New College, Oxford, and was distinguished by his superior attainments. For some time he resided in Oxford, and filled the situation of tutor to his college; and when, in 1822, the wardenship of New College became vacant, he was unanimously elected. In 1840 Dr. Shuttleworth was promoted to the see of Chichester; but his episcopal dignity was of brief duration, as he died in January, 1842. His principal works are a "Discourse on the Consistency of the whole Scheme of Revelation with Itself and with Human Reason" and "Scripture not Tradition," in which his objections to Puseyism are stated with great force and learning.

**SIA**, or **SIAHA** (si'a-hah), one whose descendants returned with Zerubbabel, Ezra ii. 44.

**SIBBECAI**, or **SIBBECHAI** (sib'be-ki), one of David's warriors who killed Saph, a Philistine giant, 2 Sam. xxi. 18. In the list of 2 Sam. xxiii. 27 he is called Mebunnai.

**SIBBOLETH**. See **SHIBBOLETH**.

**SIBMAH**. See **SHIBMAH**.

**SIBRAIM** (sib'ra-im), a city between Damascus and Hamath, Ezek. xlvii. 16; nothing is known of it.

**SIBYLISTS** (sib'il-ists), a name of reproach given to the early Christians because in their disputes with pagans they quoted the authority of their own prophets against them.

**SICARD** (se-ka'), **ROCH-AMBROISE CUCURRON**, an eminent teacher of the deaf and dumb, was born in 1742, at Fousset, near Toulouse. He was for a time under the instruction of the celebrated L'Épée, and at his death, in 1789, the Abbé Sicard was called to succeed him in the direction of the establishment in Paris. In 1792 he was arrested amidst his scholars, sent to prison, and was in imminent danger of becoming a victim in the ensuing massacres. He, however, obtained

his liberty, and in 1796 took part in compiling the "Annales Catholiques," for which he was sentenced to transportation, but escaped. When this storm had passed away, he resumed his situation as teacher of the deaf and dumb. In addition to the above-named book, he wrote several valuable works relating to the instruction of deaf mutes. He died in 1822.

**SICCUTH** (sik'kooth), a tabernacle which the idolatrous Israelites are thought to have constructed in the desert for the worship of an idol, like the tabernacle of the covenant according to the command of Jehovah, Amos v. 26, margin.

**SICHEM**. See **SHECHEM**.

**SICKLE**. See **AGRICULTURE**.

**SICKLES** (sik'k'iz), **JACOB, D.D.**, was born in 1772, at Tappan, Rockland county, New York. After a good academical education he entered Columbia College, in the city of New York, and in 1792 he graduated with distinguished honor, excelling in languages, having mastered French

and German so thoroughly that he could read them as easily as his mother-tongue. He entered the membership of the Reformed (Dutch) Church and entered on the study of theology, completing his course under an eminent divine, and in 1794 was licensed to preach the gospel. He labored as an assistant at Schenectady for two years, declined a call to the Reformed (Dutch) Church in Albany, and settled at Coxsackie and Coeymans, where he labored with great fidelity. He devoted a fair share of his time also to missionary labor, and in 1800 he accepted a call to the church at Kinderhook. In 1809 he traveled in Canada at the instance of the General Synod; and thus zealously laboring, he continued until 1835, when growing infirmities constrained him to resign his charge. He declined rapidly in mental vigor; but as in other remarkable cases, even when he knew little or nothing of surrounding objects, he was still able to conduct devotional services and to speak correctly of the Saviour's work. He died on the 19th day of January, 1848, having earnestly and with great clearness preached the gospel during an effective ministry.

**SICYON** (sik'yōn), a city lying on the north coast of the Peloponnese, to the west of Corinth, and capital of the small state Sicyonia, 1 Macc. xv. 23. It no longer exists.

**SIDDIM** (sid'dim), a valley in which probably stood the cities of Sodom and Gomorrah; it was certainly the scene of the defeat of the five kings by their eastern foes. It is said to have been full of asphalt pits, and has generally been believed to be partially if not wholly occupied by the Dead Sea, Gen. xiv. 3, 8, 10. This belief, however, is most probably erroneous, and the vale of Siddim may yet exist near the sea, perhaps to the north of it; but the district once so fertile is now barren and desolate. See **SODOM**, **Zoar**.

**SIDE** (si'de), 1 Macc. xv. 23, a city on the coast of Pamphylia. It was a place of importance, and there are now considerable remains.

**SIDE ALTAR**, any altar other than the "high" or chief one. These came into use at Rome, perhaps as early as the sixth century. Bede mentions the existence of different chapels in the monasteries of his time, and they began to be common about the ninth century, in proportion as the honoring of saints increased.

**SIDE-CHAPEL**, a subordinate chapel to an aisle, transept or choir, with an altar in it.

**SIDESMEN** (sidz'men), persons appointed in large parishes to assist the churchwardens in inquiring into the manners of evil-livers and in presenting offenders at visitations. The word is a contraction from "synodsmen." They have also been called "questmen," from the inquiries they made.

**SIDNEY** (sid'ne), **MARY**, countess of Pembroke, celebrated for her beauty, intelligence and goodness, was the sister of Sir Philip Sidney, the gentleman, scholar, statesman, poet and brilliant prose-writer. She married Henry, earl of Pembroke, about 1576; wrote several religious works and some poetical pieces, and translated from the French the "Discourse of Life and Death," by Philippe de Mornay. The "Arcadia" of her

brother was written for her pleasure, and on its first publication was called "The Countess of Pembroke's Arcadia." Her chief production was "The Psalms of David, translated into Divers and Sundry Kindes of Verse," which some have ascribed to her and her brother Sir Philip jointly, others to the latter alone, while the best critics seem to favor her authorship. She died, after a widowhood of twenty years, in 1621, and Ben Jonson wrote her epitaph:

"Underneath this sable hearse  
Lies the subject of all verse,  
Sidney's sister, Pembroke's mother:  
Death! ere thou hast slain another  
Fair and wise and good as she,  
Time shall throw a dart at thee."

**SIDON** (si'don). Sidon, Tsidon or Zidon is said to have been the first-born of Canaan, Gen. x. 15. But it is questionable whether the name was borne by any individual.

**SIDON**, an ancient and most noted Phœnician town, with a good haven, Acts xxvii. 3, situated on the coast of the Mediterranean, on the northern slope of a small promontory which juts out into the sea from a low plain, not two miles broad, between the Lebanon and the sea. On the hill

SHISHAK.—See article.

behind, on the south, stood the citadel. It is not quite twenty miles north of Tyre, and about twice that distance south of Berytus, or *Beirut*. Sidon is very generally associated in the sacred writings with Tyre; and it has been believed to be the more ancient city of the two, and also thought that the younger city was a colony from the older.

On the division of Canaan among the Israelites, the inheritance of Asher is described as reaching up to Sidon, Josh. xix. 28. That tribe, however, never possessed it, Jud. i. 31; indeed, the Sidonians rather kept the Hebrews in subjection, Jud. iii. 3. They were luxurious in their habits, Jud. xviii. 7, celebrated for their manufactures and works of art, and also for their commerce, 1 Ki. v. 6; Ezra iii. 7. It seems clear that in David's time Sidon was subordinate to Tyre; and frequently, when the Sidonians are mentioned, we must suppose that the word is used generally, in consequence of Sidon's earlier supremacy, for Phœnicians, 1 Ki. xi. 1, 5, 33; 2 Ki. xi. xxiii. 13, including, at all events, the residents not merely of the town, but in the district; and it seems to have furnished mariners to Tyre, Ezek. xxvii. 8. When the Assyrian king Salmanser invaded Phœnicia, Sidon, it is likely, freed itself from the yoke of Tyre; and thenceforward we read of kings of Sidon, Jer. xxv. 22; xxvii. 3. They could hardly, however, have been independent, and per-

haps by submitting to Nebuchadnezzar the Sidonians were enriched at the expense of Tyre. Indisputably, Sidon flourished under the Chaldean and Persian dominion, and secular writers speak highly of its prosperity. It revolted against Artaxerxes Ochus, and was wellnigh destroyed. It arose, however, from its ruins, subsequently took part with Alexander the Great against Persia, had its vassal princes, and after Alexander's death was subject sometimes to the Syrian, sometimes to the Egyptian, kings, but flourished as a place of trade till both Sidon and Tyre fell under the Roman power. In New Testament times we find it mentioned. Our Lord approached it, Matt. xv. 21, though we have no reason to believe that he ever actually entered the city. He also held up Tyre and Sidon as likely to have repented, had the mighty works done in Chorazin and Bethsaida been done in them, Luke x. 13, 14. Doubtless, ultimately the gospel was preached there; for we find Paul, when the vessel in which he was sailing touched at Sidon, visiting friends—that is, Christians in the city—Acts xxvii. 3. Sidon still exists under the name of *Saida*, and looks beautiful among her fruitful orchards.

The language of the Sidonians is mentioned in Deut. iii. 9; it must have been Phœnician. Their worship was idolatry, Ashtoreth being called, in some of the passages referred to above, their "goddess." Both these points have lately received remarkable confirmation. On January 20, 1855, a sarcophagus was discovered near Sidon. It had an inscription in Phœnician, which has been translated; from this it appears that the body deposited there was that of Ashmunazer, king of the Sidonians, whose mother was a priestess of Ashtoreth. This king, it seems, possessed Dor and Joppa, and some of the corn-lands of Dan, having extended his authority along the coasts of the Mediterranean. This prince lived, perhaps, in the eleventh century B.C. The sarcophagus is now in the Louvre.

**SIDONIANS** (si-do'ne-anz), the inhabitants of Sidon.

**SIEGE**. See **WAR**.

**SIGEBERT** (sig'e-bert) II., king of Austrasia, was son of Dagobert I., and was born in 630. He resigned the virtual management of affairs into the hands of one of his bishops, devoted himself to a religious life and founded a number of religious houses. He died in 656. He was canonized by the Church of Rome.

**SIGISMUND** (sig'is-mund), king of Burgundy, who succeeded his father, Gondebald, in 516, chiefly celebrated as having abjured Arianism. He was engaged in war with Clodomir, son of Clovis, who, having captured him, threw him into a well to perish, together with his wife and family, at Orleans, in 523.

**SIGISMUND**, emperor of the West, was second son of Charles IV., and was born in 1366. He was elected emperor of Germany in 1411, in room of the deposed Wenceslaus, having succeeded to the throne of Hungary in 1386. It was at his instigation that the famous Council of Constance was convened, when Huss was condemned and burnt, though he had the emperor's safe-conduct, as was also his disciple, Jerome of Prague. This violation of the imperial word caused a serious insurrection in Bohemia, which

gave the emperor trouble for sixteen years. This and an inroad of the Turks prevented Sigismund carrying out his plans for the good of the empire. He died at Znaim, in Moravia, in 1437.

**SIGISMUND I.**, king of Poland, was the fifth son of Casimir IV., and was born in 1466. He succeeded his brother Alexander in 1506. He claims space here only on account of his bitter hostility to the Reformers, which he showed in every way that he could devise. His son Sigismund II. came to the throne in 1548. He secretly favored the Reformed religion, which made great progress in his reign, and he secured the addition of Lithuania and Livonia to Poland. He displayed a great love for the arts, and he patronized learning. Sigismund III. was king of both Poland and Sweden. He was chosen king of Poland in 1587, and crowned in Sweden in 1594. He was the son of John III. of Sweden, and his mother was sister to Sigismund II. of Poland. He was deposed by the states of that kingdom on account of his bigoted zeal for Romanism and his partiality for Poland. His subservience to the Jesuits caused frequent commotions in the latter country, and his reign was darkened by disastrous wars with the Russians, Swedes and Turks. He died in 1632.

**SIGN**. A "sign" or a "wonder" was often given to authenticate the commission of a prophet, Ex. vii. 3. Of the two Hebrew words used, *oth* and *môpheth*, the last, if a distinction is made, has a more restricted meaning, referring only to something future, while the former applies also to the past or present. A "sign" sometimes betokens the fulfillment of a prediction, 1 Ki. xiii. 3, 5, or is just the prediction itself, Ex. iii. 12; sometimes it signifies an extraordinary appearance, the forerunner of a great event, Luke xxi. 11, 25.

**SIGNET**. See **SEAL**.

**SIGONIO** (se-go'ne-o), **CAROLO**, an eminent classical scholar and antiquary, born at Modena about 1520. He studied under Portus, professor of Greek at Modena, and then went to the universities of Bologna and Pavia. In 1546 he succeeded to the chair of Portus, was afterward professor at Venice and Padua, and in 1563 at Bologna, whither his learning and reputation had attracted many students. He was author of a large number of works, chiefly illustrative of Roman history and antiquities, though he also wrote, at the request of Gregory XIII., an "Ecclesiastical History." He died in 1584, near Modena.

**SIGOURNEY** (se-gur'ne), **LYDIA HUNT-LEY**, an American poetess and miscellaneous writer, was born in Connecticut, in 1791. "Huntley" was her maiden name, and she married Charles Sigourney, a merchant of Hartford, in 1819. Her first literary productions appeared in 1815, and from that period she was a very prolific writer, and her works enjoyed great popularity. Her writings are too numerous to be even named here, and their uniform excellence makes it inexpedient to select some as her chief works. Her poetry is characterized by grace and tender and pious feeling, and compares favorably with the poetry of Mrs. Hemans. Mrs. Sigourney died at Hartford, Connecticut, June 11, 1865.

**SIHON**. See **AMORITES**.

**SIHOR**. See **SHIHOR**.

**SIHOR-LIBNATH**. See **SHIHOR-LIBNATH**.

**SILAS** (si'las), an eminent person of the Church at Jerusalem, Acts xv. 22, who had the right of Roman citizenship. Silas in the Acts, he is Silvanus in St. Paul's Epistles. He was a prophet, Acts xv. 32, and accompanied Paul on his second missionary journey through Asia Minor to Macedonia, Acts xv. 40-xvii. 4. He remained at Berea after Paul had left, Acts xvii. 10, 14, 15, but rejoined him at Corinth, Acts xviii. 5; 1 Thess. i. 1, where he probably continued a while preaching the gospel, 2 Cor. i. 19. Whether the Silvanus by whom Peter sent his first Epistle to the churches of Asia Minor, 1 Pet. v. 12, was Silas has been doubted, but with no great reason.

**SILK**. This word occurs in Gen. xli. 42, margin; Prov. xxxi. 22, but the word so rendered is elsewhere rightly translated "fine linen." There is another word used in Ezek. xvi. 10, 13, and the Hebrew interpreters understand by it a silken garment, but according to Gesenius it must mean fine thread, stuff composed of fine threads. In New

SIDON, NOW SAIDÉ, FROM THE NORTH-EAST.—See **SIDON**; also the engravings on page 1521 and on page 1527.

Testament times, however, silk was certainly known, and is the substance intended in Rev. xviii. 12.

**SILLA** (sil'la), some place near the castle of Millo, 2 Ki. xii. 20.

**SILLIMAN** (sil'le-man), **BENJAMIN, M.D.**, LL.D., was born in 1779, at North Stratford, Connecticut, and educated at Yale College. He took his bachelor's degree in 1796, and he became master of arts in 1799, in which year he was appointed a tutor in the college. He turned his attention to the study of the law, and in 1802 he was admitted to the bar at New Haven. His great scientific attainments led to his appointment in 1804 to the departments of chemistry, mineralogy and geology in Yale, and he held this position until 1853, when he was made emeritus professor. Very appropriately he was designated "the Nestor of American Science" by Edward Everett, and his great influence in Yale, his numerous writings on science, and the connection of science with revelation, amply justified the appellation. Through a long and an honored life he was a leading mind in the field of American literature, and his influence in the culture of science in our colleges was second to none in our country. He died at New

Haven on November 24, 1864. His "Consistency of the Discoveries of Modern Geology with the Sacred History of the Creation and the Deluge" is that which specially places him in this encyclopedia, the rest being connected exclusively with science and art. Referring to the life of Dr. Silliman, a modern critic says, "It was a noble life—simple, pure and illustrious—and its history is full of instruction and encouragement."

**SILOAM** (si-lo'am), or **SILOAH** (si-lo'ah). The name Siloah or Siloam is found only three times in Scripture as applied to water; once in Isaiah, ch. viii. 6, who speaks of it as running water; again, as a pool, in Neh. ii. 15; and lastly, also as a pool, in the account of our Lord's healing the man who had been born blind, John ix. 7-11. None of these passages afford any clue to the situation of Siloam; but this silence is supplied by Josephus, who makes frequent mention of it as a fountain, and indicates its situation at the mouth of the valley of Tyropæon, where the fountain, now and long since indicated as that of Siloam, is still found. He describes its waters as sweet and abundant. Jerome, indicating its situation more precisely, also mentions its irregular flow—a very re-

markable circumstance which has been noticed by most subsequent pilgrims and travelers. This assures us that the present fountain of Siloam is that which he had in view, and that it is the same to which the Scriptural notices refer there is no reason to doubt. The pool of Siloam is within and at the mouth of the valley of Tyropæon, and about eighty paces above its termination is that of Jehoshaphat. The water flows out of a small artificial basin under the cliff, the entrance to which is excavated in the form of an arch, and is immediately received into a larger reservoir, fifty-three feet in length by eighteen feet in width. A flight of steps leads down to the bottom of the reservoir, which is nineteen feet deep. This large receptacle is faced with a wall of stone, now slightly out of repair. Several columns stand out of the side walls, extending from the top downward into the cistern, the design of which it is difficult to conjecture. The water passes out of this reservoir through a channel cut in the rock, which is covered for a short distance, but subsequently it opens and discloses a lively copious stream, which is conducted into an enclosed garden planted with fig trees. It is afterward subdivided, and seems to be exhausted in irrigating a number of gardens occupied with fig, apricot, olive and other trees, and some flourishing legumes. The small

upper basin or fountain excavated in the rock is merely the entrance, or rather the termination, of a long and narrow subterranean passage beyond, by which the water comes from the Fountain of the Virgin. See EN-ROGEL. This has been established beyond dispute by Dr. Robinson, who

A BRANCH OF THE SHITTAH TREE.—See SHITTAH TREE.

had the hardihood to crawl through the passage. He found it seventeen hundred and fifty feet in length, which, owing to its windings, is several hundred feet more than the direct distance above ground. It is thus proved that the water of both these fountains is the same, though some travelers have pronounced the water of Siloam to be bad and that of the other fountain good. It has a peculiar taste, sweetish and very slightly brackish, but not at all disagreeable. Late in the season,

SEA GOOSE-FOOT.—See SHRUB.

when the water is low, it is said to become more brackish and unpleasant. The most remarkable circumstance is the ebb and flow of the waters, which, although often mentioned as a characteristic of Siloam, must belong equally to both fountains. Dr. Robinson himself witnessed this phenomenon in the Fountain of the Virgin, where the water rose in five minutes one foot in the reservoir, and in another five minutes sunk to its

former level. The intervals and the extent of the flow and ebb in this and the Fountain of Siloam vary with the season, but the fact, though it has not yet been accounted for, is beyond dispute.

The village lies at the base of the Mount of Olives, east of the Kedron. The villagers live partly in houses, and partly in the old rock tombs which abound in the lower part of the hill. They are notorious thieves, reckless and ready to plunder any defenceless persons, and they render the roads around Olivet dangerous to travelers unless well protected, and the evil is all the greater because of the inefficiency of the authorities, who make but feeble efforts to enforce law.

**SILVANUS.** See SILAS.

**SILVER** (sil'ver) is not mentioned in Scripture till the time of Abraham, who is said to have returned from Egypt "rich in cattle, in silver and in gold," Gen. xiii. 2. Later in his life it is noted as a medium of exchange, not as coined into money, but as weighed out by the buyer to the seller, Gen. xxiii. 15, 16. It was manufac-

tured into various kinds of utensils, Gen. xlv. 2, 8, ornaments, Ex. xii. 35, vessels and instruments for sacred use, Num. vii. 13, 84. Idols also were made of it, Jud. xvii. 2-4. In the prosperous days of the Hebrew kingdom, when riches flowed in from tributary states and by Solomon's foreign commerce, silver, we are told, was little accounted of, gold being so plentiful, 2 Chr. ix. 20. This metal appears to have been procured from Tarshish, 2 Chr. viii. 21, perhaps also from Arabia, Job xxviii. 1; it was purified from dross by a repeated process, Ps. xii. 6; Prov. viii. 19. In later times it was the common material of ordinary money, and Hebrew, Greek and Roman silver coins were in general use.

**SILVERLING** (sil'ver-ling), Isa. vii. 23, a piece of silver, probably a shekel.

**SIMALCUE** (sim'al-ken), an Arabian who brought up Antiochus VI., 1 Macc. xi. 39.

**SIMEON** (sim'e-un). 1. The second son of Jacob, born of Leah, Gen. xxix. 33, and progenitor of the tribe of the same name. He was the full brother of Levi, Gen. xxxiv. 25, with whom he took part in cruelly avenging upon the men of Shechem the injury which their sister Dinah had received from the son of Hamor, Gen. xxxiv. 25-30. The ferocity of character thus indicated probably furnishes the reason that Joseph singled Simeon out to remain behind in Egypt, when his other brethren were the first time dismissed, Gen. xlii. 24; but when they returned, he was restored safely to them, Gen. xliii. 23. Nothing more of his personal history is known. The tribe de-

scended from Simeon contained fifty-nine thousand three hundred able-bodied men at the time of the exode, Num. i. 13, but was reduced to twenty-two thousand two hundred before entering Palestine, Num. xxvi. 14. This immense decrease in the course of one generation was greater than that sustained by all the other tribes together, and reduced Simeon from the third rank to the lowest of all in point of numbers. It cannot well be accounted for but by supposing that the tribe erred most conspicuously and was punished most severely in those transactions which drew down judgments from God. As it appeared that Judah had received too large a territory in the first distribution of lands, a portion of it was afterward assigned to Simeon. This portion lay in the south-west, toward the borders of Philistia and the southern desert, and contained seventeen towns, Josh. xix. 1-9. However, the Judahites must afterward have reappropriated some of these towns; at least Beer-sheba, 1 Ki. xix. 3, and Ziklag, 1 Sam. xxvii. 6, appear at a subsequent period as belonging to the kingdom of Judah. The remarkable passage in 1 Chr. iv. 41-43 points to an emigration of or from this tribe, perhaps more extensive than the words would seem to indicate, and suggests that when they ceased to have common interests this small tribe was obliged to give way before the greater power of Judah and the pressure of its population, compare Gen. xlix. 7. Nothing more of this tribe is recorded, although its name occurs in unhistorical intimations, Ezek. xlviii. 24; Rev. vii. 7.

2. The aged saint who received the Lord into his arms at the time of the presentation in the temple. He uttered an inspired song, which has almost ever since been used as one of the most precious canticles in the services of the Christian Church, Luke ii. 25-35. It has been conjectured, but on no sure grounds, that this Simeon was son of the famous doctor Hillel, and father of the no less famous Gamaliel. 3. One in the line of our Lord's ancestry, Luke iii. 30. 4. A Christian teacher at Antioch called Niger, "the black," Acts xiii. 1. Nothing more is known of him. 5. Acts xv. 14, the same as Peter. 6. Ancestor of Mattathias, founder of the Maccabean family, 1 Macc. ii. 1.

**SIMEON, BEN JOCHAI**, or **JOCHAIIDES**, called also **RASHBI**, a celebrated rabbi of Palestine, disciple, as the Jews affirm, of Akiba and prince of the Cabbalists, flourished A. D. 120. To him is ascribed the "Zohar"—i. e., "light"—an obscure Commentary on the Pentateuch, written in Chaldee, which treats of the most secret mysteries of the law and of the cabbala, or traditions. It has been printed at Mantua, Lublin, Sulzbach and Amsterdam.

**SIMEON, CHARLES**, born in 1759, was a leading minister of the evangelical section of the English Church. He was educated at King's College, Cambridge, where he made great progress in his theological studies, and received those religious impressions for which through life he was distinguished. In 1783 he was appointed to Trinity Church, Cambridge, and there for fifty-three years carried on an active and stirring ministry, wakening up the lethargy of the times and place, and promoting the cause of missions to the heathen. He left twenty-one volumes of sermons and skeletons of sermons, which form a Commentary upon every book of the Old and New Testament; and he succeeded in making arrangements by a fund which he procured, to have evangelical ministers

settled in many churches as they became vacant. He was an eminently active, pious and devoted minister. His death took place in 1836.

**SIMEON OF DURHAM** was a monk in the monastery of Durham in the twelfth century. He was also the precentor of the cathedral and teacher of the sciences at Oxford, mathematics being his special department. His name is attached to the old work "Historia de Gestis Regum Anglorum, A. D. 616-1129" (History of the Deeds of the Kings of England). Much of this work is copied from the chronicle of Florence of Worcester, which is also a compilation. John, a prior of Hexham, continued the history of Simeon to 1156. Simeon also attached his name to a history of the church of Durham, although it was really written by Turgot. These works, which bear on the antiquities of the northern part of England, have been lately edited by the Record Commission.

**SIMEON STYLITES** (stil'ites), **SAINT**, the famous anchorite, was born in Syria, towards the close of the fourth century. From a shepherd-boy he became a monk, entering a monastery at the age of thirteen. He outdid his companions in austerity and mortification of the body, and went such lengths as several times to have narrowly escaped death. He afterward retired to a desolate mountain-side, chaining himself to the stones; and finally be thought himself of more completely escaping the sinful world, and drawing nearer to heaven, by establishing himself on the top of a column, first of nine feet, and finally of sixty feet, in height. Here he lived—abode, rather—for thirty years, through heat and cold, calm and storm alike; stood, knelt, bowed head to feet, sung, prayed and gave exhortations to the throngs who came to see him, and who venerated him as a more than earthly being. Simeon died about the middle of the fifth century. His example was followed by a crowd of pillar-saints; his images were superstitiously venerated, and a figure of him was set as an amulet at the entrance of shops at Rome.

**SIMEONITES** (sim'e-un-ites), the descendants of Simeon, Num. xxv. 14.

**SIMEONITES**, a party name given to the followers of the Rev. Charles Simeon, who about the year 1793 gathered a number

SAIDE AS IT APPEARS AT THE PRESENT TIME.—See SIDON.

of undergraduates about him at Cambridge whom he endeavored to train up in his views. With an earnest desire to perpetuate his principles, he es-

successful campaign in Galilee in the lifetime of his brother Judas, 1 Macc. v. 17-23, and with Jonathan avenged the death of Judas, 1 Macc. ix.

THE INLET TO THE POOL OF SILOAM.—See SILOAM.

established a fund called the "Simeon Trust," for the purchase of the right of presentation to parishes, so as to secure the induction of men who held evangelical principles. See SIMEON, CHARLES.

**SIMMONS** (sim'munz), GEORGE FREDERICK, was born in 1814, at Boston, and educated at Harvard, where he graduated in 1832. He improved his mind after graduation by acting as private tutor, and he made a tour in Europe, after which he entered the divinity school at Cambridge. He settled at Mobile, but was driven away because of his views on slavery, and in 1841 he settled as pastor at Waltham. Two years afterward he went to Germany; and having diligently availed himself of the lectures at the university of Berlin, he returned in 1845, and after preaching in various places, became the pastor of the Unitarian Church in Springfield. Here also he met with trouble, and he resigned the charge. In 1853 he was placed in Albany, and in 1855 he was seized with typhus fever, and he died on the 5th day of September in that year. He wrote on slavery and on questions connected with the Unitarian controversy, the chief of these being, "Who was Jesus Christ?" and "The Trinity; its Scripture Formalism, and the Early Construction of Church Doctrines respecting it."

**SIMON** (si'mun). 1. Simon Chosameus, 1 Esd. ix. 32, perhaps a corrupted form of Shimeon, Ezra x. 31. 2. A Jewish high-priest, the son of Onias, highly commended for his care of the temple and faithful discharge of the duties of his office, Eccles. i. There is some difficulty in determining which Simon was meant in this place. For a Simon, called the Just, succeeded his father Onias in the high-priesthood in the time of Ptolemy, the son of Lagus, and another Simon succeeded another Onias in the time of Ptolemy Philopator. It is most probable that the former is meant. His pontificate is variously reckoned 310 or 300-292 B. C. 3. One of the brothers of Judas Maccabeus, surnamed THASSI, 1 Macc. ii. 3, 65. He conducted a

33-42. He was advanced to the government and high-priesthood when Jonathan was slain, was confirmed in his authority by Demetrius, allowed to coin money by Antiochus, the son of Demetrius, acknowledged prince and high-priest of the Jews by the Romans, but was ultimately murdered with two of his sons by Ptolemy, son of Abubus, 136 or 135 B. C. His son John Hyrcanus succeeded him, 1 Macc. xiii.-xvi. See MACCABEES, THE FAMILY OF MACCABEUS. 4. A Benjamite, made governor of the temple under Selencus Philopator, king of Syria. His evil conduct and slander of the high-priest Onias is related in 2 Macc. iii. 1-12. Some have denied that Simon was a Benjamite. 5. Matt. iv. 18. See PETER. 6. An apostle, sometimes called "Simon the Canaanite," and sometimes "Simon Zelotes," Mark iii. 18. We are not to suppose that the designation "Canaanite" is derived from Canaan; it is most likely the Hebrew equivalent to Zelotes, indicating that Simon had been one of the party called Zealots. See ZEALOTS. "Canaanite" should be spelt Kananite. Of the history and acts of this apostle the New Testament gives no information. He has been thought the same with Simon, one of the "brethren" of the Lord, believed to be the sons of Alpheus and Mary the Virgin's sister, Matt. xiii. 55. That Simon, however, is said to be the person who succeeded James as bishop of Jerusalem, and if so cannot have been an apostle. 7. One called "the leper," in whose house our Lord was entertained at Bethany shortly before his passion, Matt. xxvi. 6-13. Some perplexity has been felt at the statement that Martha was one of those that "served" on the occasion. And it has been supposed, by way of explanation, that Simon was the father of Lazarus, or the husband of Martha. If he were still living, he had doubtless been cleansed of his leprosy by the Lord's power. 8. A Cyrenian who was coming out of the country, or out of the fields, on the day of the crucifixion, and was compelled to carry Christ's cross. From the way in which his sons Alexander and Rufus are spoken of we may deem

them disciples, Matt. xxvii. 32. 9. A Pharisee at whose house the woman that was a sinner anointed the feet of Jesus, Luke vii. 36-50. 10. The father of Judas Iscariot, John vi. 71. 11. A sorcerer at Samaria who believed at Philip's preaching and was baptized. He afterward offered Peter and John money to purchase the power of bestowing the Holy Ghost. His presumption was severely rebuked by Peter, Acts viii. 9-24. 12. A tanner at Joppa at whose house St. Peter lodged, Acts ix. 43. This house, it is pretended, is still to be seen at Jaffa.

**SIMON, RICHARD**, a celebrated French theologian and controversialist, was born at Dieppe, in 1638. He entered into the congregation of the Oratory in 1659, and for some years lectured on philosophy at the college of Juilly and at Paris. He was engaged in almost continual controversy with Bossuet and the Port-Royalists, and by his angry way of carrying on the discussions he entered upon, offended both Catholics and Protestants. The work which excited most attention, and which led to his exclusion from the Oratory, was the "Critical History of the Old Testament." One of his obnoxious assertions was that the Pentateuch was not written by Moses, but compiled by the scribes of the time of Esdras. This work had a large circulation, and was translated into Latin and English. He died in 1712.

**SIMONIAN** (si-mo'ne-anz), or **ST. SIMONIAN**, an infidel sect whose fundamental principle is that religion is to perfect the social condition of man; therefore Christianity is no longer suitable for society, because it separates the Christian from other men and leads him to live for

THE POOL OF SILOAM, WITH THE WATER LOW.—See SILOAM.

another world. The world requires a religion that shall be of this world, and consequently a god of this world. They reject whatever they suppose to have been derived from the philosophy of the East; they consider the Deity neither

as spirit nor matter, but as including the whole universe, and are thus Pantheists; and they regard evil as nothing more than an indication of the progress which mankind are doomed to make in order to be freed from it; in itself, they maintain, it is nothing.

What is very curious in the history of the St. Simonians is that they were at first merely philosophers, and did not seek to be the founders of a religion. They spoke of science and industry, but not of religious doctrines. All at once, however, it seemed to occur to them to teach a religion. Then their school became a church and their association a sect. It is evident that with them religion was not originally the end of their institution, but has been employed by them as the means of collecting a greater number of hearers.

**SIMONIDES** (si-mo'n-i-deez), a Greek monk who describes himself as a scientific palaeographer and archaeologist, and who, in the year 1863, caused a considerable sensation through Christendom by impugning the genuineness of the Codex Sinaiticus, discovered by Tischendorf. He asserted it to be a manuscript made by himself four years previously at Mount Athos. But the investigations of the learned seem to have established the falseness of the statement made by Simonides.

**SIMONY** (sim'o-ne), in law, is a contract for presenting a clergyman to a benefice; and when such presentation is made for money, gift or reward, it is void by 31 Eliz., c. 6, and by 12 Anne, stat. 2, c. 12; if any one for money or profit procures in his own name the next presentation to any living ecclesiastical, and is presented thereupon, the contract is simoniacal. The term is derived from Simon Magus, but the modern offences against which laws are directed have no resemblance to the sin of which he was guilty. The purchase on behalf of a particular clergyman of the next presentation to a benefice is a matter frequently arranged, and is not unlawful according to the statutes as they stand at the present time.

**SIMOON** (si-moon'), a hot, arid wind which often prevails in Syria, Arabia and adjacent countries. It resembles the sirocco, and it is fearfully dangerous, inasmuch as the heated sand which is carried by tempestuous winds becomes in many cases quite irresistible. Falling on the ground with the face covered until the tempest is over and avoiding as long as possible to draw breath are the only defences, as the heated air and the fine sand are fatal if breathed for any length of time.

Most commentators are of opinion that the army of Sennacherib was destroyed before Jerusalem by the instrumentality of a pestilential wind, 2 Ki. xix.; Isa. x.; xxxviii. 7.

Mr. Bruce's account of this wonderful natural phenomenon affords some very interesting particulars: "On the 16th, at half-past ten, we left El Mout. At eleven o'clock, while we contemplated with great pleasure the rugged top of Chiggré, to which we were fast approaching, and where we were to solace ourselves with plenty of good water, Idris cried out, 'Fall upon your faces, for here is the simoon.' I saw from the south-east a haze come, in color like the purple part of the rainbow, but not so compressed or thick. It did not occupy twenty yards in breadth, and was about twelve feet high from the ground. It was a kind of blush

upon the air, and it moved very rapidly, for I scarce could turn to fall upon the ground, with my head to the northward, when I felt the heat of its current plainly upon my face. We all lay flat on the ground, as if dead, till Idris told us it was blown over."

The following extract is from D'Obsonville's "Essays, etc., on the East." "I have twice had an opportunity of considering the effect of these siphons (simoons) with some attention. I shall relate simply what I have seen in the case of a merchant and two travelers who were struck during their sleep, and died on the spot. I ran to see if it was possible to afford them any succor; but they were already dead, the victims of an interior suffocating fire. There were apparent signs of the

destroyed by night. No doubt the unwarrantable pride of the king had extended also to his army (witness the arrogance of Rabshakeh), so that, being in full security, the officers and soldiers were negligent; their discipline was relaxed; the "camp-guards" were not alert, or perhaps they themselves were the first taken off; and those who slept not wrapped up, imbibed the poison plentifully. Lord Byron has immortalized this scene in one of his "Hebrew Melodies," beginning—

"The Assyrian came down like a wolf on the fold,  
And his cohorts were gleaming in purple and gold."

**SIMPSON** (sim'son), DAVID, author of the "Plea," was born in the parish of Ingleby Arncliffe, near Northallerton, in the county of York,

THE VILLAGE OF SILOAM.—See the article.

dissolution of their fluids; a kind of serous matter issued from the nostrils, mouths and ears, and in something more than an hour the whole body was in the same state. However, as, according to their custom, they [the Arabs] were diligent to pay them the last duties of humanity, I cannot affirm that the putrefaction was more or less rapid than usual in that country. As to the meteor itself, it may be examined with impunity at the distance of three or four fathoms; and the country people are only afraid of being surprised by it when they are asleep. Neither are such accidents very common, for these siphons are only seen during two or three months of the year; and as their approach is felt, the camp-guards and the people awake are always very careful to rouse those that sleep, who also have a general habit of covering their faces with their mantles." The army of Sennacherib was

October 12, 1745. His father was a respectable farmer; and as David was his only son, he intended him for the same occupation. He received his grammar learning at Seorton school; but having made up his mind to enter the ministry, he prevailed on his father to send him to Cambridge, where he entered St. John's College and prosecuted his studies during a period of three years. While here he formed an intimacy with the celebrated Robert Robinson, pastor of the Baptist church in that place, a man who took pleasure in making himself useful to young men of piety and talents destined to the work of the ministry. Simpson was successively curate of Ramsden, Buckingham and Macclesfield, at which last place he was silenced by the bishop of Chester. He had, however, enlisted a number of friends in his favor; in a little time, a new edifice was

**SISINNES** (sis-in'neez), 1 Esd. vi. 3, 7, the name of a governor of Syria and Phœnicia under the Persian rule. It answers to Tatuai in the Bible, Ezra v. 3.

**SISTER** (sis'ter). This word, like "father," "mother," "son," "daughter," is frequently used to express relationship more distant than that which it literally implies. Thus it signifies a step-or half-sister, 2 Sam. xiii. 2, a cousin, Matt. xiii. 56, also a sister in the faith, Rom. xvi. 1. Compare Matt. xii. 50, where the names of natural kindred allude to the spiritual union of Christ's faithful servants with himself.

**SISTERS OF CHARITY**, sometimes called **DAUGHTERS OF CHARITY**. This order was founded by Saint Vincent de Paul and Louisa Legras, with the approbation of Pope Clement IX., in 1669, their office being that of ministering to the poor and nursing the sick.

**SISTERS OF THE POOR, LITTLE**, a French order of nuns who labor to support the aged poor. They found homes, collect food and

the vista, the elevation of the groined stone roof, the splendor of the windows and the harmony of all the parts leave it without a parallel.

**SITNAH** (sit'nah), one of the wells which Isaac's servants dug, and for which the herdmen of Gerar strove, on account of which Isaac removed, Gen. xxvi. 21. Its exact site has not been ascertained.

**SIVA**, or **SEEVA** (se'va), is the name of one of the gods of the Hindoo triad. He represents the destructive powers of nature, since it appears that in the economy of the universe destruction prepares for the renewal of life. Hence he is considered as presiding over generation, and in the temples he is symbolized by the phallic emblem, which in Sanscrit is denominated the "Linga." Popularly, Siva is known as Mahā-dēva, or Mahadeo—i. e., the "great god." It is probable that Siva among the Hindoos and Saturn among the Greeks occupy the same place, but many faculties are attributed to Siva which Saturn did not possess. In some things he represents Jupiter, as being the mightiest of the

GENERAL VIEW OF SINAI.—See SINAI.

raiment, and minister to those who are recognized as distressed and helpless.

**SISTINE** (sis'teen) **CHAPEL, THE**, is one of the grand attractions of the Vatican, at Rome. It was named after its founder, Pope Sixtus IV., who built it in 1472. The chapel is one hundred and thirty-four feet long by forty-four feet broad. It is celebrated for its frescoes, and especially for "The Last Judgment," which was executed by Michael Angelo at the request of Clement VII. This great work of art was produced by the celebrated master when he had reached his sixtieth year. The other frescoes are by different artists. This splendid chapel has usually been contrasted with King's College Chapel, in Cambridge, which is three hundred and sixteen feet long, eighty-four feet broad, ninety feet to the summit of the battlements, one hundred and one feet to the summit of the pinnacles and one hundred and forty-six feet to the top of the corner towers. The superior size of King's College Chapel and the solemn effect of its style are obvious. The perfection of painting, and great judgment in the arrangement of the length, breadth and height of the building, are seen in the one, and the perfection of Gothic architecture is seen in the other, as the length of

gods, as having three eyes, one being in the forehead. Jupiter was called the "triphthalmos," or the three-eyed, and like Siva had a multitude of names; thus in the well-known hymn of Cleanthes he is styled "Thou many-named." In India fire and cold are both considered to be forms of Siva, because they are both active in destruction. His residence was amid the snows of Mount Kailāsa; and as an illustration of the fancy of the Hindoo mind it may be stated that on a certain occasion Pārvati, the wife of Siva, placed her hand on his forehead, whereupon the sun was forthwith eclipsed and an age of darkness covered the earth. Her hand when withdrawn was covered with the perspiration of Siva's temples, and by merely shaking off the moisture she produced the river Ganges! As a destroyer, Siva frees the world from giants, tyrants and cruel monsters. A worshiper of this god is called Saiva or Shaiva by the Hindoos.

**SIVAN** (si'van), the third Jewish month. See MONTH.

**SIXTUS** (six'tus). The name of a line of popes. The first succeeded Alexander I. in the pontifical chair in 119. Little is known of him,

save that he perished in the persecution by Adrian, in 128. The second was an Athenian, who embraced Christianity and succeeded Stephen I. He was martyred in 180, under the persecution by Valerian, for refusing to sacrifice to idols. The third was a Roman, who succeeded Celestine I. in 432. He endeavored to heal the Eastern schism between John of Antioch and Cyril of Alexandria. He built numerous churches, amongst others Santa Maria Maggiore and San Giovanni in Laterano. He died in 440. The fourth was born in 1414. He became general of the Order of Minor Friars, and was made a cardinal by Paul II., whom he succeeded in 1471. He undertook a crusade by levying tithes on all the Christian churches, and equipped a fleet against the Turks. In 1482 he took part with Venice against Ferrara, which led to a war into which Naples and Florence were drawn, and, at the instance of the emperor, excommunicated the Venetians for not agreeing to a peace. He was an intriguing and deceitful man, prodigal of the public treasure, and levied numerous imposts. He built the Sistine Chapel. His death occurred in 1484. The fifth was born in 1521, and became one of the ablest men that ever filled the pontifical chair. He was a poor shepherd boy in the marshes of Ancona, and was brought up by the Cordeliers of Ascoli. His progress in learning was astonishing, and from the first he displayed an ambition which made him secretly aspire to become pope. He was soon noted as a great preacher, became professor of theology at Sienna, general of his order at Bologna and inquisitor at Venice. He then went to Spain, after which Pius V. made him his confessor and a cardinal in 1570. During the pontificate of Gregory XIII. he withdrew from public life, affected humility, devotion and failing health, so that it was supposed he was near his end when Gregory died. The result of the profound dissimulation was his election. The moment he was in possession of the long-coveted object, he flung away his staff, performed his part of the service in a voice that surprised every one, and thenceforth ruled with a vigor and wisdom that was felt at home and throughout Europe. He suppressed brigandage, beautified the city, promoted commerce and agriculture, while he reformed the Church, established the great printing-press from which the Septuagint and Vulgate were issued, and fixed the number of cardinals at seventy. In most of the great events of Europe at that time he took part. He was zealous against the Reformation, excommunicating Henry of Navarre, the prince of Condé and Elizabeth of England. Yet he had a great admiration for that queen. It is said they exchanged portraits, and that he stated that, if he could marry, she should have been his choice. He died in 1590.

**SIZAR** (si'zar). There are funds in different colleges devoted to the partial support of students of limited means who need aid, and who take a high place at the entrance examinations. Such beneficiaries are called Sizars in Cambridge and Dublin, but in Oxford they are called Servitors. Of these many succeed during their course to "Scholarships," which are tenable for three or four years, and the means thus derived enable them to prosecute their studies with a view to a Fellowship.

**SKEFFINGTON** (skef'fing-tun), THOMAS, was one of the most munificent and active of the mediæval bishops of Bangor, in North Wales.

He was consecrated on June 17, 1509. The cathedral had been burned by Owen Glendower in 1402, and it lay in ruins until 1496, when Bishop Dean commenced the restoration, but he only erected the present choir. Pigot, who succeeded him, and who was abbot of the monastery at Chertsey, preferred his abode at that place to the neighborhood of the Welsh mountains; and Perry, who next held the see, was speedily translated to Carlisle. Skeffington was the abbot of Beaulieu, in Hampshire, and he lived there usually; but being, as Willis says, "a man of a generous spirit, and to atone for his neglect at Bangor, he became a most magnificent benefactor thereto, by building the steeple and entire body of the church, from the choir downward to the west end." He gave four bells also to be placed in the tower he had built. The cathedral of Bangor, though really larger than St. Asaph, is less cathedral-like, and it is doubtless the humblest fabric which holds the title of cathedral in England and Wales. It is in the form of a cross, but it wants elevation, and it is really not more imposing than many of the large parish churches of the kingdom. The poverty of the see and the calamities which it suffered amply account for the character of the cathedral church. The tower of Bishop Skeffington stands at the west end of the building; it is of three stories, surmounted with an embattled parapet and crocketed pinnacles at the angles. The nave is extremely simple; it has no triforium; the ceiling of the nave and the aisles is nearly flat, and the transept within is quite plain. The ceiling of the choir is flat and of plaster, with a cornice all around, which has a specially bad effect. Outside of the choir, but unconnected with it, is a building which serves for chapter-house, library, vestry and registrar's office. The cathedral extends from east to west two hundred and thirty-three feet; the nave and aisles are sixty feet broad; the transept is ninety-six feet from north to south; the nave to the highest point of the roof is only thirty-four feet; the tower is only sixty feet high. Small though this cathedral is, it has been presided over by men of great eminence. Hoadley, who was consecrated in 1715, by his sermon on the text "My kingdom is not of this world," occasioned the celebrated and protracted "Bangorian controversy." Sherlock, still later, and in modern times Dr. Bethel, were men who by scholarship and character stood in the front rank of the prelates of the Church of England.

**SKELTON** (skel'tun), JOHN, an English poet and ecclesiastic, was born toward the end of the fifteenth century. He was in holy orders, and became curate of Trompington in 1507, and also rector of Diss, in Norfolk; but the poet-satirist could not abandon his freedom of style even in the pulpit, and it is said that his language excited general censure. He seems to have directed his satirical powers chiefly against the mendicant friars and Cardinal Wolsey. He was suspended from his clerical functions by his diocesan, the bishop of Norwich. From his bold attacks upon the vices of the clergy, it is not improbable that he had imbibed some of the principles of the Reformation, although he had not the courage fully to avow them. He was bold enough, however, publicly to attack Wolsey, then in the zenith of his power. The cardinal discovered him as the author of the satires upon himself, and ordered him to be apprehended; upon which Skelton took refuge in Westminster Abbey, where he was afforded protection until his death, in 1529.

**SKELTON, PHILIP**, an able divine, born near Lisburn, Ireland, in 1707, after completing his education at Trinity College, Dublin, where he took his master's degree, became curate of Monaghan, and in 1750 obtained the living of Pettigo, in Donegal. During a time of scarcity, the charitable pastor even sold his library to supply his indigent parishioners with bread. In 1759 the bishop of Clogher presented him to the living of Devenish, in Fermanagh, and in 1766 to that of Fintona, in Tyrone, where his powerful pulpit eloquence is said to have gained over to the Church the Dissenters of his district. This worthy and pious divine died in Dublin in 1787. He published three volumes of sermons, which cannot be surpassed in language, argument and pathos; a work in two octavo volumes, entitled "Deism Revealed," an excellent production, beside tracts and fugitive pieces.

**SKENANDOH** (ske-nan'doh), an Indian chief, resided at Onecida, in the State of New

THE SUMMIT OF JEBEL MUSA.—See SINAI.

York. He was a brave and intrepid warrior in youth and an able counsellor in age. He watched the Canadian invasions with the cunning of the fox. To his vigilance the inhabitants on the Mohawk were indebted for preservation from massacre. His influence brought his tribe to our assistance in the war of the Revolution. Among the Indian tribes he was called "the white man's friend." In his youth he had been very savage and addicted to drunkenness. But through the instructions of Mr. Kirkland, a missionary, he lived a reformed man for more than sixty years. He died in Christian hope, at Onecida, March, 1816, aged one hundred and six or one hundred and ten years. He often expressed a desire to be buried near Mr. Kirkland. For several years he kept his dress for the grave prepared. He often went to Clinton to die, that his body might lie near his Christian teacher. A short time before his death, he said to a friend, "I am an aged hemlock; the winds of a hundred winters have whistled through my branches; I am dead at the top. The generation to which I belonged have run away and left me; why I live the great Good Spirit only knows. Pray to my

Jesus, that I may have patience to wait for my appointed time to die."

**SKIN**. See LEATHER. Skin of the teeth. See TOOTH.

**SKOVORODA** (sko-vo-ro'da), or **GREGORY SAVITCH** (sa'vich), was an eminent Russian ecclesiastic. He was born about 1730, near Kief, in the Ukraine. He engaged with great zeal in the attempt to bring the United Greeks into the national Church of Russia. He had been educated at Halle, and on his return to the Ukraine he engaged with all his powers in his great life-work, by appeal, argument and persuasion aiming at promoting a visible unity in the Church. He has justly been considered the most important writer who has appeared in Southern Russia. He was the author of a number of poems, of fables and a work called "Symphonon," and he translated several of the homilies of Chrysostom. He died in 1778.

**SLAVE, SLAVERY**. See SERVANT.

**SLEEP.** The word literally taken means the repose of the body, Ps. iv. 8; Matt. viii. 24. Used typically, it signifies death, Jer. li. 39, or sometimes the lethargy of sin and ignorance, Rom. xiii. 11.

**SLEIDAN** (slī'dan), JOHANN, whose family name was **PHILIPSOHN**, was born at Sleida, near Cologne, in 1506, and adopted the name Sleidan from his birthplace. He studied at some of the principal universities of Europe, and in 1535 was attached to the Cardinal du Bellay. He took part in the diets of Haguenau and Ratisbon, but as a Lutheran had to quit France in 1542; settled at Strasburg, was named historian to the League of Smalcald and professor of law, and was employed in several political negotiations. He was sent as deputy of Strasburg to the Council of Trent in 1551. In the midst of his active life he found time for much literary labor, and published many works, of which the most important is his history of the Reformation, entitled "De Statu Religionis et Reipublice, Carolo quinto Cæsare, Commentarii." It appeared in 1555, was translated into English, French, German and Italian, and is esteemed for its original information and its impartiality. Sleidan's work entitled "De Quatuor Summis Imperiis" passed through more than fifty editions. Charles V., it is said, called Sleidan and Paul Jovius his liars (*menteurs*), because the former spoke too ill of him and the latter too well. Sleidan died in 1556.

**SLIME**, Gen. xi. 3; Ex. ii. 3, asphalt or bitumen, which boils up like pitch from subterranean fountains at Hit, near Babylon, described by various travelers; also, according to the Arabs, from the bottom of the Dead Sea. Shafts are sunk, and in a semi-fluid state the bitumen exudes from crevices in the strata. It hardens in the sun, and as by itself it is brittle it must be mixed with tar in melting. It was employed for mortar by builders in the plain of Shinar, but this use of it seems to have been confined to Babylonia.

**SLING, SLINGER.** See **ARMS**.

**SLOSS, JAMES LONG** was born in 1791, at Bellaghy, county Derry, Ireland. His parents brought him to this country in 1803, and after a brief sojourn at Baltimore, where they landed, they settled at Lexington, Virginia. His parents desired to see him in the Christian ministry, but being unable to provide a proper education, he was sent to learn the business of a printer. At length, in Greenbrier county, Virginia, the Rev. Mr. McElhenny took him into his school, gave him instruction and permitted him to take charge of elementary work among the juniors. Under the care of the Rev. Moses Waddel, D.D., of Willington, South Carolina, he was prepared still further, and the Presbytery of South Carolina licensed him to preach in 1817. He was settled at St. Stephen's, in Clarke county, Alabama, whence in three years he removed to Selma, and thence he went to Somerville, in Morgan county. He spent the last eleven years of his life at Florence, in Lauderdale county, thus devoting his ministerial work almost exclusively to Alabama. He died in 1841, after a life of ceaseless toil amid many trials. He had great energy and decision, and his pulpit services were greatly appreciated, especially on sacramental occasions, when he seemed to rise to the highest flights of spiritual eloquence.

**SMALCALD.** See **ARTICLES OF SMALCALD** and **LEAGUE OF SMALCALD**.

**SMALLEY** (smaul'le), JOHN, D.D., was born in 1734, at a place called North Society, in Lebanon, Connecticut, now known as Columbia. His mother's piety greatly affected him, and he was powerfully impressed by the preaching of Whitefield. He studied at Yale College, and he had a course of theology under the Rev. Joseph Bellamy. In 1757 he was licensed to preach, and in the next year he was settled at Berlin, Connecticut. He discharged all the duties of his charge until 1808, thus laboring for more than fifty years in one place. A colleague was appointed in 1810, but Dr. Smalley continued to preach until 1813; on the 26th day of September in that year he preached for the last time. His life was protracted till June, 1820, thus outliving every person who had been engaged in his settlement. He published two volumes of sermons. On the subject of "Natural and Moral Inability" he also published two discourses, two more on "Universal Salvation," "An Election Sermon,"

From the Superb Frescoes of Michael Angelo in the Sistine Chapel, Rome.—See **SISTINE CHAPEL**.

and one on "The Perfection and Usefulness of the Divine Law."

**SMALL TITHES**, all personal and mixed tithes, also tithes of hops, flax, saffron, potatoes, and sometimes of wood.

**SMALRIDGE** (smaul'rij), GEORGE, a learned English prelate, was born at Lichfield, in 1663, and was educated at Westminster school and Christ Church, Oxford, where he became a tutor, and the associate of Aldrich and Atterbury in the controversy against Obadiah Walker, the popish master of University College. In conjunction with them he published, in 1687, "Animadversions on the Eight Theses laid down, and Inferences deduced from them." The object of Smalridge and his colleagues was to defend the supremacy of the king against papal usurpations. In 1689 he entered into holy orders, and in 1692 he was appointed minister of Tothillfields chapel. In 1693 he was collated to a prebend in the cathedral of Lichfield. In 1708 he was chosen lecturer of St. Dunstan's in the West, London, which he resigned in 1711, when he was made one of the canons of Christ Church, and succeeded Atterbury in the

deanery of Carlisle. In 1714 he was consecrated bishop of Bristol, and Queen Anne soon after appointed him lord almoner, in which capacity he for some time served George I., but refusing to sign the declaration which the archbishop of Canterbury and the bishops in and about London had drawn up against the rebellion in 1715, he was removed from that place. He died in 1719.

**SMART, CHRISTOPHER**, an English poet of some merit, but of very erratic character, born in 1722 at Shipbourne, in Kent, was educated at Cambridge and settled in London. The gaiety of his disposition rendered him an acceptable companion to the wits and authors of the day, with many of whom, particularly Pope, Johnson, Garrick and Hawkesworth, he became intimate. He wrote a poetical version of the Psalms, some original poems, odes, fables, etc. He also translated some of Pope's writings into Latin verse and Horace into English. Poverty, however, overtook him; and his distresses, aided by intemperance, made him mad. His "Song to David" was written in a mad-house, on the walls of his cell. He died, within the rules of the King's Bench prison, in 1771.

**SMEDLEY** (smed'le), EDWARD, was an eminent English clergyman. He was the son to the rector of Powderham, who for forty years had been one of the masters of the celebrated Westminster school. The son entered Trinity College, Cambridge, and distinguished himself greatly, carrying off four "Seatonian" prizes. He was chosen to a Fellowship in Sidney-Sussex College, became master of arts in 1812, and in 1820 he was made a prebendary of Lincoln Cathedral. He had held the office of editor of the "Encyclopædia Metropolitana" for several years before his death, and he contributed much of the valuable matter in that very learned repository. His history of the Reformed religion in France is an exceedingly valuable work, and so also is his "Sketches from Venetian History." He died in 1836, when only forty-seven years of age.

**SMITH.** See **HANDICRAFT, IRON**.

**SMITH, AZARIAH**, an American missionary to Turkey, born at Manlius, New York, February 16, 1817, and graduated at Yale College in 1837. He was a fine classical scholar, and in order to improve his facilities for prosecuting missionary labors he studied medicine as well as theology, and received a medical degree. In 1842 he embarked for Western Asia, early in January, 1843, arrived at Smyrna, and during two months of that year resided at Brûsa. Then he returned to Constantinople, whence he proceeded to Trebizond, where he remained five months. He spent the remainder of the time in Brûsa, being engaged for the most part, during this year, in studying the Turkish language and practicing medicine. In 1844 he visited Smyrna, Rhodes, Cyprus and Beirut, and made a tour in the interior, visiting Aleppo, Orfa, Diarbekr and Mosul. He resided at Mosul while Botta was disintombing one of the palaces of ancient Nineveh, and was also a traveling companion of Layard. During this year he made a trying and dangerous tour in the mountainous Nestorian districts of Koordistan, encountering therein much peril. He proceeded as far north as Julamerck, returning to Mosul, and thence to Alexandretta. In 1845 he made another journey of observation, which occupied him seventy-two days. Subse-

quently, when the Asiatic cholera raged there, he successfully administered to those afflicted with it. In 1848 he settled at Aintab, about seventy miles north of Aleppo. A short time subsequently he visited his native land, where he married, and embarked again for Asia, taking his wife with him. On the 3d of June, 1851, he fell a victim to fever, at the age of thirty-four years. He was the author of papers on meteorology and Syrian antiquities, published in the "American Journal of Science," which gave him a prominent position among scholars.

**SMITH, CALEB**, was born in 1723, at Brookhaven, Long Island, and after a good preliminary education he entered Yale College, in 1739, and he took his degree with honor in 1743. Having taken his second degree in 1746, Mr. Burr of Newark solicited his aid in a Latin academy, but he preferred a course in theology under the direction of the Rev. Jonathan Dickinson, at the same time aiding young men in the study of the languages at Elizabethtown. In 1747 he was licensed to preach by the Presbytery of New York, and after some difficulty in determining where to settle, as several places were anxious to obtain his ministrations, he settled at Newark Mountains (now Orange), in New Jersey. In 1750 he was made a trustee of the College of New Jersey, and after the death of President Edwards he was chosen president *pro tempore*. He was a very popular preacher, preparing for the pulpit with great care, and a valuable member in the different courts of the Church. He died on the 20th of October, 1762. His only published work was a sermon on the death of President Burr.

**SMITH, COTTON MATHER**, was born in 1731, at Sudfield, Connecticut. He was graduated at Yale in 1751. He entered on the duties of a teacher at Hatfield, Massachusetts; but his views of time and eternity became so serious that he resolved on dedicating himself to the gospel ministry, and he entered on the study of theology. During the progress of his course he devoted much of his time to the education of the Indians at Stockbridge. Being licensed to preach in 1753, he entered on his sphere of labor at Sharon, Connecticut, in which place he was settled as pastor in 1755. This field was one of exceedingly great difficulty. Vice was rampant, great differences in theological views prevailed and feeling ran high; but he was equal to the duties of the place. He served as a chaplain under General Schuyler during the Revolutionary struggle, and his exposure in the field brought on a severe fever, from the effects of which he never thoroughly recovered. In 1804 he received the aid of a colleague, and in January, 1806, he preached his last sermon and administered the communion. The following November he died, in the seventy-sixth year of his age and the fifty-second of his ministry. Three sermons only of all his writings were published.

**SMITH, DANIEL**, was born in 1769 at Philadelphia. He enjoyed few educational advantages in early life, but his zeal for learning led him by self-culture to gain a fair share of knowledge. In his youth he became pious, and he was admitted into the traveling connection of the Methodist Church in 1789. Next year he was appointed to Boston, and in 1791 he was admitted into full connection by the Conference, and appointed to Lynn, Massachusetts. He was ordained an elder in 1792, and sent to Charleston, South Carolina, where he

remained two years. In 1794 he settled as a local preacher in New York, and in that capacity he remained until his death. After settling in New York he applied himself with great assiduity to the study of Hebrew, in which language he made great progress. He continued to preach until his death, in 1815.

**SMITH, DANIEL**, was born in 1806, at Salisbury, Connecticut. He became a devoted, earnest Christian in his youth, and from the age of nineteen years he had abundant evidence of his conversion. He entered an academy under the care of the Rev. Dr. Fisk, and with the approval of his father he went to fill a vacancy in the New Haven district, at the request of the presiding elder. In 1831 he was admitted on trial, and from that time until his death, on the 23d day of June, 1852, he was one of the most devoted ministers in his denomination. His labors were chiefly devoted to Sag Harbor, Bridgeport, Connecticut, Redding, Tarrytown, Stratford, Winsted, Connecticut, Kingston and New York City, and in all these places he was greatly beloved. He was a great

From the Superb Frescoes of Michael Angelo in the Sistine Chapel, Rome.—See **SISTINE CHAPEL**.

economist of time, an earnest, plain and practical preacher, much of his life-work being devoted to the young, whom he sought to bring to Christ.

**SMITH, ELI, D.D.**, was born in 1801, near New Haven, Connecticut. He entered Yale College and graduated in 1823. He proceeded to Andover, where he finished his theological course in 1826, and in the same year he sailed as a missionary to the East. He traveled extensively with Dr. Robinson and with Mr. Dwight, and the results were published under the title of "Missionary Researches in Armenia, by Eli Smith and H. G. O. Dwight." This work is replete with information and fraught with surpassing interest. Dr. Smith contributed much to the "Biblia Sacra," and he also published "Sermons and Addresses." At the time of his death he was engaged on a translation of the Bible into Arabic, but he did not live to finish it, although he saw the greater portion of it in print before he was removed. He died at Beirut, in Syria, January 11, 1857. He was one of the most eminent of the noble men who have raised the name of American missionaries to that lofty eminence to which they have attained in all Christian lands.

**SMITH, ELIZABETH**, an accomplished female, was born in 1776, at the family seat of Burnhall, in the county of Durham, and died in 1806. She was noted for the range of her education, being a fair mistress of the Hebrew, Syriac, Arabic, Persian, Greek, Latin, Spanish, German and French languages, besides creditably proficient in mathematics and drawing, and possessing some poetical talent. Her translation of the "Book of Job" has been commended by Magee and other capable critics. Her "Fragments," "Translation of Job" and "Translation of the Life of Klopstock" have been published.

**SMITH, ETHAN**, was born in 1762, at Belchertown, Massachusetts. His father had been an officer under Sir William Johnson; in 1780 the young man entered the American Revolutionary army, and he was at West Point at the time of the treason of Arnold. He was but a short time in the service, for in 1781, becoming seriously impressed on religion, he had settled at South Hadley. He aimed at establishing himself in business, but his mind being directed to the ministry, the way was opened up for him to gain an education, and he entered Dartmouth College in 1786, and in 1790 he received his degree. As he had read theology with great diligence for ten years previously, he was at once accepted and licensed to preach. He settled as pastor of the church at Haverhill, New Hampshire, in October, 1790, where he labored for nine years; but being inadequately supported in that place, he removed to Hopkinton, New Hampshire, where he remained eighteen years, when a similar cause again obliged him to retire. He preached in the Presbyterian church of Hebron, New York, in Poulteney, Vermont, and at Hanover, Massachusetts; after which he became a city missionary in Boston, in which department of labor he continued until his death, in 1849, in the eighty-seventh year of his age. He was a very prolific writer. Many of his sermons were published, and among his larger works are "A Dissertation on the Prophecies," "A Key to the Figurative Language of the Prophecies," "A View of the Trinity, in answer to Noah Worcester's Bible News," "A View of the Hebrews," the object being to show that the aborigines of America are descended from the ten tribes of Israel.

**SMITH, HENRY**, a popular English divine, was born in 1550, at Witcock, in Leicestershire, and after studying at Oxford, entered the Church. He was then esteemed the miracle and wonder of his age for his prodigious memory and for his fluent, eloquent and practical way of preaching. His scruples, however, as to subscription and ceremonies were such that, being loath, as Fuller says, "to make a rent either in his own conscience or in the Church," he resolved not to undertake a pastoral charge, but accepted the office of lecturer of the church of St. Clement Danes, Strand, London. He appears to have been one of the most popular preachers of his age. He died about 1600.

**SMITH, HEZEKIAH, D.D.**, was born in 1737, on Long Island. Before he was nineteen years of age he became a member of the Baptist church in New York under the care of the Rev. J. Gano. After an academical education he entered Princeton College, and took his degree in 1762, passing master of arts in 1765. With a view to his constitutional vigor, he traveled extensively in the Southern provinces and formed many interesting friendships. He resided in Charleston for

some time, and he was ordained there. After preaching at stations on the Pedee River for some time, he returned to New England. After much mental anxiety he determined to settle at Haverhill as the pastor of the Baptist church which his ministry had been effectual in gathering in that place; and here he remained for forty years. The church was organized in 1765, and in the following year he was recognized as the pastor of the church. He maintained an extensive correspondence with his Southern friends, and he effected much in protracted missionary tours; his great readiness and admirable address carried him successfully through scenes in which other men would have failed. Many of these scenes were of a most trying nature, and he never failed to sustain the character of a minister in every emergency. He steadfastly adopted the side of the colonists in the Revolutionary struggle; he acted as a chaplain in the army, and on the restoration of peace he returned to his charge at Haverhill again. Along with Dr. Manning, he labored with great zeal in

pointed to the missionary church of the Holy Evangelist in New York. In 1836 he entered on the duties of his last parish, St. Peter's, and in the same year he undertook the duties of the chair of pastoral theology and pulpit eloquence. In 1837 he retired from the professorship, owing to declining health, and sailed to Europe. He returned so much improved that he was able to labor effectively among his flock for nine years, when he was obliged again, in 1848, to sail to England; but on his return, after a few months, it was apparent that his public work was ended. He died at the rectory of St. Peter's Church, on March 25, 1849, thus closing an effective ministry, in the fifty-fourth year of his age. He was an ardent and decided friend of evangelical views, and a decided opponent of any policy which seemed to open the door for the admission of any who were supposed to hold views which were in close alliance with the errors of Rome. He died in the full assurance of faith and hope, rejoicing in the precious truth that "the blood of Jesus Christ

THE MOLTEN SEA.—See SEA, THE MOLTEN.

the establishment of Brown University. He was elected one of the Fellows, and in 1797 he received his degree in divinity from that institution. He was seized with paralysis, and died on January 22, 1805, in the sixty-eighth year of his age and the forty-second of his ministry.

**SMITH, HUGH, D.D.**, was born in 1795, near Fort Hamilton, Long Island, and after an academic education he entered old Columbia College in 1809. So correct were his habits in college that he was playfully designated "Parson Hugh." He studied theology under Bishop Hobart, and in 1816 he was ordained a deacon. For a short time he preached in Savannah; but he returned to New York and became assistant in Grace Church to Dr. Bowen, who afterward was made bishop of South Carolina. In 1819 he settled in Augusta as rector of the Episcopal church in that place; and here he effected a great work in forming a large and effective church and in aiding in the establishment and consolidation of the diocese. In 1831 he returned to the North on account of his family, and he became rector of Hartford, holding the charge only two years, as he was ap-

cleanseth us from all sin." His message to his church was that he was "a sinner saved by grace;" and emphatically, when the communion was administered, he said, "Remember that I desire it not as a *vaticum*, a necessary provision for a sinner in the death-journey, but for refreshment. We do thus show forth the Lord's death till he come."

**SMITH, ISAAC**, was born in 1758, in New Kent county, Virginia. His grandfather was a minister of the Church of England, who emigrated to this country and settled in the Isle of Wight county. Isaac Smith entered the army, and was with Washington when crossing the Delaware, and he was engaged in the battles of Brandywine, Germantown, Princeton, Monmouth and Stony Point. He was discharged in 1779, and he returned to Virginia, but he was at Yorktown with the militia at the time of the surrender of Lord Cornwallis. In 1782 he became a teacher, and at this time his mind received impressions which never left him from his intercourse with brethren of the Methodist Church. In 1783 he devoted himself to God, and by the advice of Bishop Asbury he looked forward to the traveling

connection. He was admitted, and in 1785 was sent to the Tar River Circuit. Next year he was admitted into full connection and sent to Charleston, South Carolina. In 1793 he was made a presiding elder, and had the oversight of several circuits assigned to him, and three years afterward he retired to Camden, South Carolina, and into mercantile pursuits for the sake of his family. Here he remained for twenty-four years, acting at the same time as a local preacher. In 1820 he was readmitted to the Conference, from which he had retired twenty-four years before, and appointed to Columbia, and next year he was presiding elder in the Athens District, Georgia. Thus he continued to labor, visiting Mississippi, and devoting his energies to the Creek nation also. He suffered from a cancerous affection for a considerable time, and ultimately it was the cause of his death, which took place in Monroe county on the 20th day of July, 1834. He had not enjoyed a great amount of intellectual training, but he had much good sense, earnest piety, and great determination to live for God and to bring sinners to the Saviour, and his ministry was exceedingly successful.

**SMITH, JEREMIAH**, a Congregational minister of London, was born about 1653. Before his settlement in the metropolis he was pastor of a congregation at Andover, in Hampshire, from whence he removed to the Silver Street church, London. He entered into the famous Salter's Hall controversy, and sided with the subscribing ministers. In the continuation of Henry's Exposition he took an important part—the Epistles to Titus and Philemon. He died in 1723.

**SMITH, JOHN, D.D.**, an eminent antiquarian and Celtic scholar, was born at Glenorchy, in Argyleshire, in the year 1747, studied at the university of St. Andrew's, and in 1774 was appointed to the parish of Kilbrandon, Lorn, where he preached for seven years. About this time he translated into Gaelic "Allene's Alarm" and the "Catechisms of Dr. Watts." In 1781 he became minister of Campbellton. About 1783 he was associated with Dr. Stewart, minister of Lass, in translating the Scriptures into Gaelic. He also wrote a "Concise Commentary on the Whole of the Bible," the "Life of St. Columba, the Apostle of the Highlands," from the Latin, and a "New and Improved Edition of the Psalms in Gaelic." Besides his unwearied labors for the spiritual improvement of the people committed to his care, he was eager to introduce among them an improved system of husbandry. With this view he wrote many essays on the subject, and frequently obtained prizes from the Highland Society. He died in 1807.

**SMITH, JOHN**, was born in 1752, in Byfield parish, Massachusetts. He entered Dartmouth College in 1773, and in the following year he became a tutor in the college. In 1778 he was called on to decide between a pastoral charge at West Hartford, Connecticut, and the chair of languages in the college, and he chose the latter, occupying the chair until the close of his life. He acted as tutor also until 1787, and for thirty years he served as librarian. For two years he delivered lectures on systematic theology, and from 1788 until his death he acted as a trustee of the college. In addition to all these duties he preached for many years in the village of Hanover. He died in 1809, in the fifty-seventh year of his age. He was a ripe scholar, especially in languages. He prepared grammars in Latin, Greek, Hebrew and

Chaldee, and he edited Cicero de Oratore. He was one of the most industrious and effective of the great band of professors who have done so much to raise the fame of our New England colleges.

**SMITH, JOHN**, was born in 1766, at Belchertown, Massachusetts. He entered Dartmouth College in 1790, and took his degree in 1794. After a course of theology under the Rev. Dr. Emmons, he was licensed to preach, in 1796, by the Mendon Association. In 1797 he was ordained, and settled as colleague to the Rev. Abner Bayley, at Salem, New Hampshire. He labored here for twenty years, and in 1817 he was installed as pastor at Wenham, Massachusetts, but in two years he retired to take the chair of theology in the seminary at Bangor, Maine, a position which he held to the close of his life. He died in April, 1831. His published works are "A Treatise on Infant Baptism" and "Sermons," all of which were delivered on memorable occasions.

**SMITH, JOHN BLAIR**, son of the Rev. Dr. Robert and brother of the Rev. Dr. Samuel Stanhope Smith, was born in 1756, at Pequene, in Lancaster county, Pennsylvania. Very early in life he displayed a great thirst for knowledge, and about the age of fourteen years he was hopefully converted. At sixteen he was admitted to the college of New Jersey, and in 1773 he took his degree under the care of Dr. Witherspoon. There were twenty-nine in his class, of whom fourteen became ministers and three rose to be governors of States. He joined his elder brother, Samuel Stanhope Smith, who was placed at the head of a rising institution in Prince Edward county, Virginia, and by the Hanover Presbytery he was licensed to preach in 1778, and next year he was ordained by the same presbytery. At the same meeting his brother resigned the presidency of Hampden-Sidney College to accept the chair of moral philosophy at Princeton, and the younger brother was appointed in his place, and in 1780 he became successor to his brother also in the churches of Cumberland and Briery, in Prince Edward county, Virginia. His power as a preacher was not recognized at first, but on the occasion of persons coming into the bounds of his charge and leading several of his flock to another denomination, he awoke to the full display of his great power. His extensive tours of preaching led him to neglect the college, and accordingly he resigned his presidency, and ere long his own flock began to feel that they suffered from his repeated absences. The result was his removal to the Presbyterian church in Pine street, Philadelphia, where he labored until 1795, when he went to Union College, Schenectady, as president. He remained only three years in that position, and in May, 1799, he was installed again in his former charge in Philadelphia. He was greeted with great applause, and his work was greatly blessed in his ministry. His labors were not long continued, as yellow fever broke out in the city, and on the 22d day of August, 1799, he died of that fatal malady. He was one of the first victims of the disease which proved so destructive in its progress. His only published work was a sermon, entitled "The Enlargement of Christ's Kingdom the Object of a Christian's Prayers and Exertions." He had delivered it at Albany, in 1797, before the Northern Missionary Society in the State of New York.

**SMITH, JOHN COTTON, LL.D.**, a renowned Christian scholar, was born in Sharon, Connecticut, February 12, 1765. His father was the Rev. Cotton Mather Smith, and his father's grandmother was a daughter of Cotton Mather. Among the ancestors of the subject of this memoir there were no less than seven of the distinguished New England clergy. At the age of fifteen he entered Yale College, whence he graduated in 1784. On leaving college he studied law in his native village, and in 1786 was admitted to practice at the bar in Litchfield county, Connecticut. In 1793 he was first chosen to represent his native town in the General Assembly of Connecticut; and from this time his talents and integrity made him so popular that he was compelled to serve continuously in public offices, among the positions well filled by him being representative in Congress, the Supreme Bench and governor of his State. He retired from public life early in 1817, and from that time until his death, a period of almost thirty years, he resided upon his estate in his native town, wholly secluded from all participa-

tellectual qualifications might be utilized, and accordingly, in 1820, he was made principal of the Wesleyan Seminary in the city of New York. When this institution was removed to White Plains in 1826, he continued in charge of it, adding to the duties of the principalship a regular system of preaching every Lord's day. He was removed in 1832 to the professorship of languages in the Wesleyan University at Middletown, Connecticut, and he entered on his duties with an earnest determination to carry forward the establishment to a degree of eminence which would make it a blessing to the Church; but he had scarcely entered on his work ere he was removed by death. He died of pneumonia on the 27th day of December, 1832, in the thirty-eighth year of his age, deservedly regretted by all who knew him.

**SMITH, JOHN PYE, D.D., LL.D.**, an eminent Nonconformist divine, was born at Sheffield, May 25, 1774. He was educated at Rotherham College, and became first classical, and afterward

MOUNT SERBAL.—See SINAI.

tion in political affairs, and devoted to the studies and employments befitting a scholar, a gentleman and a Christian. He received literary as well as political honors. Besides his college doctorate he was elected a member of the Northern Society of Antiquaries in Copenhagen, as also of the Connecticut Historical Society and of the Massachusetts Historical Society. At successive periods he was president of the Litchfield County Foreign Missionary Society, Litchfield County Temperance Society, Connecticut State Bible Society, American Board of Commissioners for Foreign Missions, and lastly of the American Bible Society. But few men have received so many tokens of confidence and honor, and but few have done so much to deserve them. His honors still live in the affections of those who know him. He died December 7, 1845, when nearly eighty-one years of age.

**SMITH, JOHN MOTT**, was born in 1795, at Brooklyn, Long Island. After a careful training he entered Columbia College, and in 1816 he took his degree. His education and fine parts led his friends to seek a position for him in which his in-

theological, tutor in Homerton College, the oldest of the institutions for training ministers among the Independents. This post he filled with the highest efficiency for fifty years. At a later date he conjoined with this the office of pastor of the congregation meeting in the Old Gravel Pits meeting-house, and continued to discharge his pastoral duties in that congregation for about forty-seven years. The mind of Dr. Smith was singularly energetic. He was critically acquainted both with ancient and modern languages, and studied both the exact and the experimental sciences. When geology offered its somewhat startling revelations, he embraced it as a part of the communications of the Author of nature and of truth, and by his patient investigations he endeavored to show the tangible records of creation to be in harmony with the word of God. Dr. Smith engaged in public controversy on the question of the union of Church and State, and with several Unitarians on the divinity of Christ. The most elaborate of his publications is "The Scripture Testimony to the Messiah," a work of profound learning and candid criticism, which has been admitted, though the work of a dissenter,

as an authority in the English universities. He died at Guildford in 1851.

**SMITH, JOSEPH, D.D.**, was born in 1736, at Nottingham, Pennsylvania. He had not formed a resolution of entering the ministry at an early age, for he was twenty-eight years old when he graduated at Princeton, in 1764. He was licensed to preach in 1767 by the Presbytery of Newcastle, and in the following year he accepted a call from the church of Lower Brandywine, and

own request, because of the distracted state of the country. For some time he preached in the Barmens of York and in Western Pennsylvania, and in 1780 he accepted a call to the Buffalo and Cross Creek congregations. He always displayed an earnest desire to aid young men in their preparation for the ministry, and in 1785 he began a movement from which important results followed. The Rev. Thaddeus Dod had established a school at Washington in 1782, and in 1785 Mr. Smith began at Upper Buffalo to in-

**SMITH, JOSEPH**, founder of Mormonism, was born in Windsor county, Vermont, in 1805. He was the son of a farmer and worked on the farm, receiving but a scanty education. According to his own story, the angel of the Lord delivered into his hands a record engraved in Egyptian characters on plates of gold, the work of Mormon, a Jewish prophet, and containing, as interpreted by Smith, a history of ancient America from the first planting of the colony after the confusion of languages, down to the fifth century

DESTRUCTION OF THE ARMY OF SENNACHERIB.—See SIMOON, and SENNACHERIB, and SANDSTORM.

was ordained and installed as the pastor. In 1772 he declined a call from Rocky Creek and Long Cane churches in South Carolina, but about this time he began to preach in Wilmington, Delaware, and as the Rev. William McKennan was already settled in that place, a great amount of disquiet and ill-feeling was created by his course. In 1773, the presbytery having recognized a second church in Wilmington, a call to that church was presented to him, and when the congregation of Lower Brandywine and the second church were united in one charge, he accepted the call and became pastor of both churches. In 1778 the pastoral relation was dissolved at his

struct young men with a special view to the ministry. The idea was suggested to make the school itinerant, the brethren Messrs. McMillan, Dod and Smith alternating, and thus dividing the labor among them. In time the academy was fixed at Chartiers, near Canonsburg, and this school advanced in importance, and in the end developed as Jefferson College. Dr. Smith continued to labor with unabated zeal until his death. He preached on the first Sabbath of April, 1792, for the last time, as he was taken ill in the pulpit, and death removed him to his rest on the nineteenth day of the same month. He was an earnest, laborious and most unselfish man.

of the Christian era. Smith revealed to the members of his household the discovery of these plates, and obtaining gradually a great number of followers, in 1830 published "The Book of Mormon," and in the same year founded the first Mormon church, in the town of Manchester, Ontario county. His disciples now increased rapidly, and styled themselves "The Church of Jesus Christ of Latter-Day Saints." They had establishments in Ohio, Indiana, Illinois, Pennsylvania and New York. In 1839 Smith founded the city of Nauvoo, on the Mississippi, and got a charter of incorporation for it. It prospered greatly, attracted settlers from various parts of the world, had a fine temple, a

university and a regularly organized militia. By successive "revelations" Smith constituted the Church, with himself as prophet and legislator. But dissensions existed between the faithful and the unbelievers in the new city; rival newspapers carried on the war, till the mob took it out of their hands, and the governor of the State in turn out of theirs. In June, 1844, Smith was arrested and imprisoned on a charge of treason, and on the twenty-seventh of that month he was murdered by the mob, who burst into the prison. Brigham Young was chosen his successor, and the Mormons had soon after to seek a new settlement. This they found in Utah, which was recognized as one of the United States Territories in 1850.

**SMITH, JOSIAH**, was born in 1704, in Charleston, South Carolina. He was sent to Harvard, where he took his degree in 1725. He was the first person born in South Carolina who ever became a graduate of a college. In 1726 he was ordained at Boston, and he began to labor in different parts of his native State. When Mr. Whitefield, in 1740, was excluded from the Episcopal churches in Charleston, Mr. Smith opened his pulpit for him. He was stricken with palsy in 1749, and during the remainder of his life he suffered from this disease so much that his speech was much affected. His time was devoted to writing, and his friends permitted him to attempt a sermon monthly, though his articulation was so imperfect that he was almost unintelligible. In 1781 he was ordered away from Charleston, and, accompanied by the family of his son, Josiah Smith, he landed in Philadelphia, only to die in the month of October of that year. His remains were interred within the walls of the Arch Street Presbyterian Church, between those of his two intimate friends, Gilbert Tennent and Dr. Finley, late president of the College of New Jersey. His sermons were published at intervals from the year 1726 until 1765, and they were very numerous, displaying an evangelical spirit, much tenderness and marked zeal for the salvation of souls and the glory of God.

**SMITH, MILES**, a divine of the Church of England, was born in 1568. He was well skilled in Oriental languages, was one of the principal translators of the English version of the Bible now in use, and writer of the translators' preface. After performing this goodly work he was made bishop of Gloucester. He died in 1624.

**SMITH, RICHARD**, born in 1500, a Roman Catholic (or rather a vacillating) clergyman, was regius professor of divinity in Oxford. He lived under three sovereigns, and as often changed his faith. He preached the execution sermon of Latimer and Ridley. He died in 1563.

**SMITH, ROBERT, D.D.**, a Presbyterian clergyman of Pennsylvania, born in Ireland in 1723, when about seven years of age was brought to America. In 1751 he was settled at Pequea, where he continued to officiate with repute and success until his death, which occurred about the year 1785. In the "American Preacher" three of his sermons are published, entitled "The Nature of Saving Faith," "The Excellency of Saving Faith" and "Practical Uses from the Nature and Excellency of Saving Faith."

**SMITH, ROBERT, D.D.**, the first bishop of the Protestant Episcopal diocese of South Caro-

lina, a native of Norfolk, England, born in 1732, was educated at Gonville and Caius College, Cambridge, and graduated there at the age of twenty-one years. Being elected to a fellowship two years subsequently, he remained at Cambridge, was admitted by the bishop of Ely to the holy order of deacons, March 7, 1756, and to that of priests on the 21st of the following December. He was soon afterward induced to come to the United States, settled in Charleston, South Carolina, and for a time supplied St. Philip's Church, Charleston, South Carolina, and was elected rector in 1759. During many years he was one of the most laborious of the clergy of South Carolina; and his arduous duties so impaired his health that in the year 1768 he was induced to take a voyage to England.

Two years afterward he returned to Charleston with improved health, and resumed his pastoral duties. At the commencement of the Revolutionary war he was a loyal subject of Great Britain, but soon became so zealous in our country's cause that he encouraged his people by his own example to defend their liberties and homes, going to the lines as a common soldier. In 1780 he was banished from the colony of South Carolina by the British. He resided in the Middle States until the peace, having the temporary charge of St. Paul's parish, Queen Anne's county, Maryland. In May, 1783, he returned to Charleston, and the church's funds being now in a depressed state, his own resources also being inconsiderable, he added to his pastoral duties the charge of an academy. His labors in this institution were eminently successful. It was afterward incorporated as a college, in which he held the office of principal until the year 1798. But he was most eminently useful as a minister of Christ. His judicious zeal and wholesome counsels led to the organization of the diocese of South Carolina, and to its agency in the organization of the Protestant Episcopal Church in the United States. Although necessarily absent from the General Convention in 1785, he took an active part in the conventions of 1786 and 1789, was elected bishop of the diocese of South Carolina in 1795, was consecrated at Philadelphia, September 13, in the same year, and discharged his episcopal duties with unremitting zeal until his death, which occurred October 28, 1801.

**SMITH, SAMUEL**, one of the most popular writers of pious tracts in the seventeenth century, was born at Dudley, in Worcestershire, in 1588, and studied at St. Mary Hall, Oxford. He left the university without taking a degree, and obtained the living of Prittlewell, in Essex, and afterward the perpetual curacy of Cressedge and Cound, in Shropshire. On the breaking out of the rebellion he went to London, sided with the Presbyterians, and became a frequent and popular preacher. On his return to the country he was appointed assistant to the commissioners for the ejection of those they were pleased to term scandalous and ignorant ministers and schoolmasters. At the Restoration he was ejected from Cressedge. His chief works are "David's Blessed Man," "The Great Assize," "A Sheep in Christ's Fold." The date of his death is not known.

**SMITH, SAMUEL STANHOPE, D.D., LL.D.**, a distinguished clergyman of the Presbyterian Church, son of the Rev. Dr. Robert Smith, was born March 16, 1750, at Pequea, in Pennsyl-

vania. He received his preparatory education at his father's academy, in his sixteenth year entered Princeton College, took the degree of bachelor of arts in 1769, became an assistant in his father's school, and soon after tutor at Princeton. Here he remained two years, pursuing at the same time the study of theology. On being licensed to preach, he commenced the labors of a missionary in the western counties of Virginia, and was elected to preside over the newly-established college of Hampden-Sidney. In 1779 he was recalled to Princeton to fill the office of professor of moral philosophy. The ravages of the war had driven the president from the State, had greatly dispersed the students, reduced the building to a state of dilapidation, and much embarrassed the funds of

ANCIENT EGYPTIAN SEATED FIGURE.—See SCULPTURE.

the institution. Mr. Smith exerted himself strenuously to revive it, and for this purpose made considerable pecuniary sacrifices. In 1783 he accepted the additional office of professor of theology, and in 1786 that of vice-president of the college. In the latter year he was a member of a committee to draw up a system of government for the Presbyterian Church of the United States, and in 1795 he became president of the college in place of Dr. Witherspoon, who had died the preceding year. In 1812 repeated strokes of the palsy compelled him to resign his connection with the college. He died in August, 1819, in the seventieth year of his age, having been very infirm for several years. Dr. Smith was renowned for his acquaintance with ancient and modern literature, for an elegant and perspicuous style and for his eloquence as a preacher. His principal works are, "An Essay

on the Variety of Complexion in the Human Species," "Lectures on the Evidences of the Christian Religion" and "On Moral Philosophy," and "A System of Natural and Revealed Religion." Several volumes of his sermons have also been published.

SMITH, SYDNEY, A. M., an English divine, celebrated as a critic and political writer, was born

who could at once delight and instruct the crowded assemblages of wealth and fashion that resorted to the West End chapels. He was for some time the preacher at the Foundling Hospital, and lecturer on belles-lettres and on philosophy at the Royal Institution, till presented with the rectory of Foston-le-Clay, in Yorkshire, in 1806, which he exchanged for that of Combe Florey, in Somerset, in

lege, Oxford, in 1663 was appointed principal of Magdalen College school, and three years subsequently elected Fellow of that college. His learning and abilities were so universally acknowledged that he was selected to travel to the East and to visit Mount Athos for the purpose of making a collection of valuable manuscripts; but he declined the offer. He was disappointed in his hopes of

preferment, and in 1688 was deprived of his Fellowship by Giffard, the Catholic president of Magdalen; and though restored to it, he was finally removed for refusing the oaths of allegiance to William and Mary. He died in London, May 16, 1710. He published "Remarks on the Manners, Religion, etc. of the Turks," originally written in Latin, in four letters; "De Græcæ Hodiernæ Statu Epistola;" a Latin "Life of Camden;" "Lives of certain most Erudite and Illustrious Men," including Usher, Cosins, Greaves, Patrick, Young, Dee, Bainbridge and others; "Sermons;" a "Criticism of the Chaldaic Paraphrasts," and a learned work on the Druids, besides contributions to "The Philosophical Transactions."

SMITH, THOMAS, was born in 1702, at Boston. He took his degree in Harvard in 1720, with much honor, and after a course in theology he was licensed to preach in 1722. After preaching in several places, he went to Portland, then called Falmouth, and, uninviting as the place then was, he settled as pastor in 1727 over the people who were constituted a church in that place. During the discussions which prevailed in New England respecting Mr. Whitefield, he favored the ministrations of that eminent servant of God, and he received him into his pulpit. In 1764 he

received the aid of a colleague, but for twenty years afterward he continued to preach. He died May 23, 1795, having reached the ninety-fourth year of his age and the sixty-ninth of his ministry. He was a remarkable instance of the value of the long pastorates which were then characteristic of the New England churches; and there can be no doubt that less good is accomplished by a system which turns ministers into mere birds of passage, instead of permitting them to be identified with

SMITH, THOMAS, D.D., an eminent scholar and non-juring divine of the English Church, born in London in 1638 and educated at Queen's Col-

THE FLOCKS AND HERDS OF THE SIMEONITES IN THE VALLEY OF GEDER.—See SIMEON, 1.

at Woodford, in Essex, in 1769. He was educated at Winchester College, and in 1780 elected to New College, Oxford, and took holy orders. He commenced his ministry as curate of Netheravon, Wilts, but relinquished it soon after. After traveling on the Continent, he went to Edinburgh, where he remained five years, during which time he was minister of the Episcopal church there. In 1804 he settled in London, where he became in every sense of the word "a popular preacher,"

1830. He was afterward appointed to a stall in Bristol Cathedral, and was one of the canons residentiary of St. Paul's. He died in 1845. His works include the "Letters on the Subject of the Catholics," by Peter Plymley, which had extraordinary popularity at the time of their appearance.

the homes and the families in which they commence their pastoral labors.

SMITH, or SMYTH, WILLIAM, founder of Brazen-nose College, Oxford, was born in Lancashire about the middle of the fifteenth century. In 1486 he was made dean of St. Stephen's, Westminster, and was honored with a seat in the Privy Council. In 1492 he was presented with the rectory of Cheshunt, in Hertfordshire. In the following year he was consecrated bishop of Lichfield and Coventry. The first instance of his becoming a public benefactor was in rebuilding and re-endowing the hospital of St. John in Lichfield, which had been suffered to go to ruin by the negligence of the friars who occupied it. In the third year of his episcopate, he rebuilt this hospital and gave a new body of statutes for the use of the society. In 1495 he was translated to the see of Lincoln. In 1500 he was elected chancellor of the University of Oxford. In 1509 he concerted the plan of Brazen-nose College, and lived to see it completed. He died at Buckden, in 1513, and was interred in Lincoln Cathedral.

SMITH, WILLIAM, D.D., a clergyman of the Protestant Episcopal Church, was born in 1727 at Aberdeen, in Scotland. He took his degree in the University of Aberdeen in 1747, and after visiting London on the subject of the endowment of the parochial schools, he emigrated to this country and settled as a tutor in Long Island. He next came to Philadelphia to a position in the institution which afterward became the University of Pennsylvania. Before entering on his work in Philadelphia he went to England for ordination, and in May, 1754, he took charge of the institution to which he had been appointed. In 1759 he returned to England, and on the recommendation of the bishops of St. Asaph, Oxford, Salisbury and Durham and the archbishop of Canterbury the University of Oxford gave him the honorary degree of doctor of divinity. It is worthy of note that the same honor was conferred on him by his alma mater in Aberdeen, and by the University of Dublin a few years subsequently. He took an active part in forming mission stations and in supporting weak churches in and around Philadelphia. He held a somewhat undecided attitude on the subject of the Revolutionary movement. When the charter of the college was revoked by the Legislature of Pennsylvania in 1779, Dr. Smith became rector of Chester parish, Kent county, Maryland; and here he established a seminary, which in 1782 was chartered as a college, and Dr. Smith became its president. At this time a convention of the clergy of Maryland was held to organize the Episcopal churches, and the name of the "Protestant Episcopal Church" was now assumed, instead of the Church of England, as the denomination had hitherto been called. In 1789, when the charter of the University of Pennsylvania was restored, Dr. Smith accepted an invitation to return. He engaged extensively in public matters tending to the welfare of the city, and he also gave much attention to the wild lands of the State. He died at Philadelphia on the 14th day of May, 1803. He published an immense number of sermons which had been delivered on public occasions. He was a learned man, an eminent teacher, a popular and attractive preacher and an important and valuable member of society, and his memory is cherished in connection with the great university with the early history of which he had so much to do.

SMITH, WILLIAM, D.D., a clergyman of the American Episcopal Church, by birth a Scotchman, was born about the year 1752, and received his education at one of the universities of Scotland, whence he emigrated to America, as an ordained minister, in 1785. He officiated in Maryland, Rhode Island, Connecticut and New York, principally on account of an unhappy mental temperament, not remaining long in the same parish. He had the reputation of being an excellent scholar. In 1800 he opened a grammar-school in the city of New York; in 1802 he became principal of the Episcopal Academy of Connecticut, which office he held four years. Subsequently he resided mostly in New York, and spent his time in writing for the press. Among his publications were a series of "Essays on the Christian Ministry," a "Book of Chants," and a large work on "Christian Psalmody." "The Office of Institution of Ministers" into

dred years, and the city remained deserted and in ruins, until Antigonos, one of Alexander's generals, charmed with the situation, founded, about twenty stadia from the site of the old, a new Smyrna, on the southern shore of the gulf. Lysimachus completed what Antigonos had begun, and the new city became one of the most beautiful in Lower Asia. Another account makes Alexander the founder, but Alexander, in his expedition against Darius, never came to this spot, passing on rapidly from Sardis to Ephesus. Smyrna was one of the many places that laid claim to being the birthplace of Homer, and it enjoyed, perhaps, the best title of all to this distinguished honor. Under the Roman sway Smyrna continued a flourishing city, though not, as some have supposed, the capital of the province of Asia. Its schools of eloquence and philosophy were in considerable repute.

The Christian Church flourished here through

SMYRNA.—See the article.

parishes or churches, as set forth in the Book of Common Prayer, was written by Dr. Smith. His colloquial powers were extraordinary, rendering him an agreeable companion; and he frequently preached extemporaneously, being always interesting, and sometimes eloquent. He died in New York, April 6, 1821, in his sixty-ninth year.

SMYRNA (smer'na), a city of Asia Minor, on the coast of Ionia, and at the head of a bay to which it gave its name. It was said to have derived its name from an Amazon who, having conquered Ephesus, had transmitted her appellation to that city. The Ephesians afterward founded the town, which rapidly developed into a fine city, retaining the name. Strabo, who dwells at length on this point, cites several poets to prove that the name of Smyrna was once applied specifically to a spot near Ephesus, and afterward generally to the whole of its precincts. It was subsequently taken and destroyed by Alyattes, king of Lydia, and the inhabitants were scattered among the adjacent villages. They lived thus for the space of four hun-

the zeal and care of Polycarp, its first bishop, who is said to have suffered martyrdom in the stadium of the city, about one hundred and sixty-six years after the birth of our Saviour. One of the apocalyptic epistles was addressed to the Church of Smyrna, Rev. i. 11; ii. 8-11, forewarning its members of persecution, and some of the expressions are thought to refer to rites practiced by the pagan inhabitants of the city. There is also an epistle from Ignatius to the Smyrneans, and another addressed to Polycarp.

Smyrna experienced great vicissitudes under the Greek emperors. Having been occupied by Tachas, a Turkish chief, toward the close of the eleventh century, it was nearly destroyed by a Greek fleet. It was, however, restored by the emperor Comnenus, but suffered again severely from a siege which it sustained against the forces of Tamerlane. Not long after this (A.D. 1083) it fell into the hands of the Turks. The Greeks shortly after obtained possession of it anew, only again to lose it; and under Mohammed I. the city became finally attached to the Turkish em-

pire. It is now officially called *Ismir*, but by the Western nations *Smyrna*, and is the great mart of the Levant trade. Its population is estimated to exceed one hundred and twenty thousand.

**SMYTH** (smith), THOMAS, D.D., was born at Belfast, in Ireland. His education was commenced in the Royal College at that place, whence he went to the Highbury College, at London. Having removed to this country, he completed his education at Princeton, after which he was

of only the principal works which he published can be given here, as he was the author of a great number of essays and minor articles which from time to time appeared in reviews and journals. He published "Lectures on the Prelatical Doctrine of the Apostolic Succession;" an "Ecclesiastical Catechism of the Presbyterian Church;" "Presbytery and not Prelacy the Scriptural and Primitive Polity;" "The Claims of the Free Church of Scotland on American Christians;" "Ecclesiastical Republicanism;" "The History of the Westminster

**SMYTH, WILLIAM**, professor of modern history in the University of Cambridge, was born in 1764. He took his degree of master of arts in 1790, and in 1807 he was appointed to the chair of modern history, which he held for forty-two years. Most of his life was passed at Cambridge, in a constant train of quiet duties and innocent pleasures. Endowed with a fine taste and correct judgment, he delighted in nursing the flame of infant genius. He was among the first to appreciate the merits of Henry Kirk White, whom he

THE PROPHET SHEMAIAH WARNING KING REHOBAM.—See REHOBAM, and SHEMAIAH; also 2 Chr. xi.

settled, in 1832, as the pastor of the Second Presbyterian Church in Charleston, South Carolina. He has been one of the most prolific writers of the day on theological subjects, and having collected a library of more than twelve thousand volumes of a valuable character, he had abundant facilities for reference; and thus he was aided in the preparation of his numerous works. He continued during life to minister to the one charge; and when stricken with paralysis he displayed an energy of character which astonished all who knew him, as he began with letters and syllables and words, and persevered until he recovered the use of speech and was able to preach again. A list

Assembly;" "Calvin and his Enemies;" "The Name, Nature and Functions of the Ruling Elder;" "The Prelatical Rite of Confirmation Examined;" "Union to Christ and His Church;" "Solace for Bereaved Parents;" "The Unity of the Human Race;" a small volume on "Young Men's Christian Associations;" "Church Manual;" "Presbyterian Tracts;" "The Well in the Valley;" "Why do I live?" "How is the World to be converted?" "Faith the Principle of Missions and Obedience the Life of Missions." Besides these he wrote a great number of smaller works which showed his amazing power of composition and his indomitable energy. He died in 1873.

treated during his life with characteristic kindness, and after his death gave a durable expression of his friendship in the beautiful lines inscribed on the youthful poet's monument in All Saints' Church, Cambridge. Mr. Smyth was himself a poet. In 1806 he published "English Lyrics," which was favorably received; but his chief titles to fame are his "Lectures on Modern History" and "On the French Revolution," and his "Evidences of Christianity." Died at Norwich, June 26, 1849.

**SNAIL.** The "snail," so termed in our version of Lev. xi. 30, was probably a species, not exactly identified, of lizard. See LIZARD. The

original word in Ps. lviii. 8 signifies a snail, especially without the shell. It is derived from a verb meaning "to moisten;" and the name is given because of the snail's slime and moisture. The wicked shall pass away as a snail, which leaves a slimy trail—that is, seems to melt as it goes.

**SNETHAN** (sne'than), NICHOLAS, was born in 1769, at Fresh Pond, now called Glen Cove, Long Island, New York. His ancestors came from Wales. When he reached his early manhood he united with the Episcopal Church under the rector of St. Andrew's Church, Richmond, Staten Island;

odist Protestant Church was formally organized he officiated as the first pastor in Baltimore. In 1834 he became one of the editors of "The Methodist Protestant," along with his friend, the Rev. Asa Shinn, and in 1837 he was placed at the head of a manual labor ministerial college at Lawrenceburg, in Indiana. In 1838 he collected twenty-two of his sermons and prepared them for the press; and he continued laboring with untiring energy until his death, which occurred on the 30th day of May, 1845.

**SNOW.** See PALESTINE.

**SOANEN** (so-a'nen), JEAN, bishop of Si-neza, a very eminent Jansenist, the friend and disciple of Quesnel, was born in 1647. He refused to accept the bull "Unigenitus," which condemned Quesnel, and in consequence was tried, degraded and exiled to Chaise-Dieu. He died in 1740.

**SOAP.** See FULLER.

**SOCHO**, or **SOCHOH** (so'ko), different forms of Socon, which see.

**SOCINIANS** (so-sin'e-anz). The anti-Trini-

CONGREGATIONAL MEETING-HOUSE AT HINGHAM, MASSACHUSETTS.—See SHUTE, DANIEL, D.D.

but in 1791 he joined the Methodists, and after two years' experience and training he became a preacher. In 1798 he was sent to South Carolina, and in 1800 he was ordained an elder in Charleston, and he accompanied Mr. Asbury to Baltimore, where he preached for a year. In the discussions which took place respecting the limits of the episcopal power Mr. Snethan took the republican side. In 1800 he suffered severely from yellow fever in Philadelphia, and in 1801 he was sent into Virginia. He preached in East Tennessee, in Kentucky, in Maryland, and after immense toil in these services he reached New York, where he was stationed in 1804. He continued to labor with great zeal from year to year; and when the Meth-

**SNUFFERS, SNUFF-DISHES**, Ex. xxv. 38; xxxvii. 23. See CANDLESTICK.

**SO**, a king of Egypt, whom Hoshea, the last king of Israel, called to his help against the Assyrians under Shalmaneser, 2 Ki. xvii. 4. It has been questioned whether this So was the same with Sabaco (Shebek), the first king of the Ethiopian dynasty in Upper Egypt, or his son and successor Sevechus (Shebetek), the second king of the same dynasty and the immediate predecessor of Tirhakah. Winer hesitates between them, and Gesenius concludes for the latter. Sevechus reigned twelve years, according to Manetho, fourteen according to Syncellus.

tarian opinions which spread from Italy and took root principally in Poland were systematized by Faustus Socinus. In doing so he made great use of the writings of his uncle, Lælius Socinus, who had contributed much to spread these opinions, and who is generally considered the founder of the sect. These men were lawyers at Sienna, where Lælius was born in 1525. He traveled extensively in France, England, the Netherlands, Germany and Poland, and then settled at Zurich. He was intimate with the leading Reformers, and at first he propounded his views by way of doubt and inquiry. Calvin advised him to check his tendency; and while some hold that he went to Poland after the death of Servetus, others maintain that

he concealed his views, and lived in safety among those who abhorred his sentiments. In 1558 he was in Poland, where anti-Trinitarianism was now prevailing, as John Buscher, an Englishman, Gonesius, a Pole, and others openly avowed their views. In 1570 Sigismund Augustus granted liberty of conscience, and a settlement was formed in Racow, and after some time Faustus Socinus became the leader. The views of the party were embodied in the Catechism or Confession known as the "Elder" one, which was supplanted by the Racovian, prepared by Faustus. In Transylvania Socinianism gained a firm footing, but in Hungary, Austria and Holland the tenets of Socinus did not greatly prevail. The Catechism of 1574 was only a transition from the varying doctrines of the anti-Trinitarian body to the definite doctrine of Socinus. It rejected infant baptism, original sin

PERSIAN WINGED FIGURE.—See SCULPTURE.

and the atonement. In the Socinian system it was laid down as a reasonable maxim that God is of such simplicity of nature as not to admit of a distinction of Persons. It was held also that the essence of the Godhead cannot possibly be united with manhood, the Infinite with the Finite, between which there is no "proportion;" that even if the existence of a distinct Person, the Son of God, were supposed, it would be in itself impossible to form a union of two totalities; and as both Catholics and Arians teach that the Son had a perfect existence prior to the incarnation, the union of the two natures in one Person of Christ is impossible.

The Holy Ghost is held to be an energy or a power of the Godhead, and not a Person. The Socinians, as has been said, denied the atonement and the priesthood of Christ, holding that Christ is a saviour because he reveals the mercy of God, and thus shows the way of salvation. The Socinians are represented in the present day by the

Unitarians, who deny the miraculous conception of Christ, who hold that he was a mere man sent as a great teacher, a reformer and a saviour, inasmuch as he reveals the mercy of God, assures men of God's willingness to receive all who come to him, irrespective of any work of mediation, and who also established the great fact of man's immortality, and therefore the certainty of a future life.

**SOCINUS** (so-si'nus), the name of two eminent theologians. 1. **LÆLIUS** was born at Sienna, in 1525. He was of a distinguished family, was brought up to the law, but applied himself especially to the study of the Scriptures, and became a member of a society formed in the neighborhood of Vicenza for free discussion of theological questions. The denial of the doctrine of the Trinity was the principal result of these discussions; and some of the inquirers being put to death, Lælius with others fled from Italy. He wandered for four years through the principal countries of Europe, visiting Poland twice and finding many proselytes there, and spent his last years at Zürich, where he died in 1562. Lælius was an eminent scholar and the correspondent of many distinguished men, amongst them of Calvin.

2. **FAUSTUS**, usually considered the founder of the Socinian system of doctrine, was nephew of the preceding, and was born at Sienna in 1539. He received only a defective education; and having adopted the theological views of his uncle, he was obliged to exile himself for several years. On his return to Italy he entered the service of the grand-duke of Tuscany, with whom he remained twelve years. He resigned his offices at Florence in 1574, in order to devote himself seriously to theological studies, and went to Basel. Thence he visited Transylvania, and in 1579 Poland, where he was at first refused admission into the anti-Trinitarian churches. He lived some years at Cracow, retired a while into the country, became connected by marriage with some of the leading families, and after the loss of his wife by death returned to Cracow. He was there subjected, in 1598, to a disgraceful outrage—seized by a mob in his sick-room and dragged half naked along the streets, his house robbed and his papers burnt. He then retired to a village, where he spent his remaining years. The aim of Socinus as a theological teacher was to get rid of all doctrines which appeared contrary to reason. He taught the humanity of Christ, while he insisted on the divine authority of his teaching, and opposed the doctrines of the atonement, predestination and original sin, and others insisted on by the Reformers. He did not invent, but for the most part merely gave a systematic form to, the opinions which his uncle had held and which he also maintained. He died in 1604.

**SOCOH** (so'koh). 1. A town in the plain of Judah, Josh. xv. 35. It was not far from this that Goliath was slain and the Philistine host routed, 1 Sam. xvii. 1; and Socoh was one of the places fortified by Rehoboam after the revolt of the ten tribes, 2 Chr. xi. 7. It is placed by Eusebius and Jerome at ten Roman miles from Eleutheropolis, on the way toward Jerusalem. Robinson has identified it with *Shuweikeh*, in *Wady Musa*, which may hence correspond with the ancient valley of Elah, 1 Sam. xvii. 3. 2. A town of this name also existed in the hill region of Judah, Josh. xv. 48. Like the preceding, it too bears the name of *Shuweikeh*, and is about ten miles southwest of Hebron.

**SOCRATES** (sok'ra-teez), the most celebrated of all the old philosophers, was born near Athens, B. C. 469. He was the son of a sculptor, and worked at that calling for some time after his father's death, at the same time pursuing his philosophical studies, but he soon took on himself the office of teaching the people morality and philosophy. As a teacher Socrates made himself the foremost man of Athens, and perhaps of the ancient world. He wrote no book, he did not establish a school, nor constitute a system of philosophy. But he almost lived abroad and mixed with men familiarly, and in the street or any place of public resort where listeners gathered round him, he talked and questioned and discoursed, not for pay, but from the love of truth and a sense of duty. He was persuaded that he had a high religious mission to fulfill, and that a divine voice habitually interfered to restrain him from certain actions, and instead of encouraging profitless speculations upon nature, or the rhetorical charlatanry of the Sophists, he turned the thoughts of men to themselves, their actions and their duties. Yet even on these things he did not dogmatize; instead of asserting and imparting, he questioned and suggested and showed and led the way to real knowledge. He ruthlessly compelled ignorance and pretence to own themselves, and thus drew on himself the hatred of many. Not only was he held up to ridicule by Aristophanes in the "Clouds," but he was accused before the Five Hundred as a contemner of the gods and a corrupter of youth, and being condemned to death, calmly took the prescribed cup of hemlock, having, during the month's interval between his condemnation and his death, uttered discourses on mortality and immortality, which have been recorded by his disciple, Plato. His death occurred in 399 B. C.

**SOCRATES**, surnamed **SCHOLASTICUS**, an ecclesiastical historian who flourished about the middle of the fifth century. He was a native of Constantinople, and was bred for the bar. Socrates wrote an ecclesiastical history in seven books, from 306 to 439 A. D. It is an exact and judicious work, and is written with great simplicity. He has been charged with leaning to the opinions of the Novatians, and at other times with being led away by a certain Sabinius, who made a collection of the acts of councils. Both reproaches, however, seem devoid of foundation.

**SODALITY** (so-dal'i-te), an association for mutual protection or for other objects, such as church services, prayer-bands and objects of a religious nature.

**SODI** (so'di), the father of the spy selected from Zebulun, Num. xiii. 10.

**SODOM** (sod'um), the principal city of the district, destroyed on account of the wickedness of the inhabitants.

Sodom is first mentioned in describing the Canaanitish border, Gen. x. 19; it was afterward selected by Lot as a place of residence, the country around being highly fertile, well watered everywhere, "even as the garden of the Lord," Gen. xiii. 10-13. He first pitched his tent close by, and at a later period dwelt in the city. It was plundered by Chedor-lamer and his associate kings, but the captives and booty were recovered by Abram, Gen. xiv. The history of its great sinfulness and fearful ruin, with Gomorrah, Admah and Zeboim, is next related, Gen. xvi.

16-38; xix. 1-29; and ever after Sodom is mentioned but as a name of horror, a warning of the terrible vengeance of God upon sinners, Deut. xxix. 23; Isa. i. 9, 10; Jer. xxiii. 14; Lam. iv. 6; Matt. x. 15; 2 Pet. ii. 6-8. See **SEA**, **SALT**.

**SODOM, APPLE OF.** See **APPLE OF SODOM**.

**SODOM, VINE OF.** See **APPLE OF SODOM**.

**SODOMA** (sod'o-ma), Rom. ix. 29, another form of Sodom.

**SODOMITES** (sod'um-ites). This expression, as used in Scripture, does not mean inhabitants of Sodom, but such as practiced the licentious and unnatural vices which were prevalent there, "abusers of themselves with mankind." The word in the original, however, has nothing to do with Sodom, and in its natural signification indicates the reverse of what is impure—*consecrated*, Deut. xxiii. 17; 1 Ki. xiv. 24; the feminine is used in the sense of *harlot*, Gen. xxxviii. 21, 22.

**SODOMITISH SEA**, 2 Esd. v. 7, the Dead Sea.

**SOLDIER.** See **ARMY**.

**SOLDINS** (söl'dinz), so called from their leader, one Soldin, a Greek priest. They appeared about the middle of the fifth century in the kingdoms of Saba and Godolia. They altered the manner of the sacrifice of the mass; their priests offered gold, their deacons incense and their subdeacons myrrh, and this in memory of the like offerings made to the infant Jesus by the wise men. Very few authors mention the Soldins.

**SOLEMN LEAGUE AND COVENANT.** In 1643 a memorable covenant known by this name was adopted in Scotland. The difficulties which the leaders of the Reformation had to encounter led them to call in the aid of all the laity, so as to be sustained by the masses of the population uniting with them in solemn engagements. This course was doubtless suggested by the covenants frequently adopted by the children of Israel, in which they bound themselves to adhere to that religion which the Almighty had established among them. In 1580, 1581 and 1590 covenants had been entered into, but in 1638 matters had become so serious in Church and State that it was felt a crisis had arisen, and as a means to secure the best interests of the nation, and to promote the cause of religion, the well-known engagement called the "National Covenant" was entered into. It was solemnly subscribed and sworn amid prayers and with uplifted hands by the nobility, gentry, clergy and burgesses, by thousands of all classes, of both sexes and of every age. Nor was this all. Commissions were immediately despatched with copies of it throughout Scotland; and in a few weeks every district of the country, with some partial exceptions, submitted to the Covenant. The subscribers profess, and "before God, his angels and the world, solemnly declare that, with their whole heart, they agree and resolve all the days of their life constantly to adhere unto and to defend the foresaid true religion." "We promise and swear"—to use their own words—"by the name of the Lord our God, to continue in the profession and obedience of the foresaid religion; and that we shall defend the same, and resist all these contrary errors and cor-

ruptions, according to our vocation, and to the uttermost of that power that God hath put into our hands, all the days of our life." The whole of this document is usually printed along with the Scottish editions of the Westminster Confession.

The adoption of this covenant enraged Charles, and both sides, being in earnest, prepared for war. The only battle fought was gained by the Covenanters, who immediately made proposals of peace, and a treaty was concluded in June, 1639, in which it was stipulated that a *free* General Assembly should be held in August. At that meeting the proceedings were exactly of the same character as those of the former Assemblies, and the royal commissioner found that he had to sanction them. In 1641 Charles again had recourse to arms; but after a short campaign, unfavorable to the royal cause, peace was established.

When the civil war broke out in England, Parliament had recourse to the Covenanters of Scotland, who were induced to make common cause with the opponents of Charles; and thus for a third time they were found in opposition to the royal authority. In 1643 a league was formed which has been designated "The Solemn League and Covenant," and which has long been revered as a binding obligation in both divisions of the island. The main object of the league was to effect uniformity of religious doctrine and Church government in both kingdoms. Nor was this object long in being so far attained: A presbytery, as it existed in Scotland, having obtained the sanction of the famous Assembly of Divines which met in Westminster (1643-49), and having been afterward ratified by the English Parliament, was recognized as the national Church of both portions of the empire. Presbytery, however, was introduced into England rather as an experiment than a permanent institution. Besides, it was not systematically adopted, except in London and Lancashire; and it rapidly declined, having been to a considerable extent superseded by Independency.

Cromwell prohibited the tender of the Covenant or of any similar instrument. The Scotch refused to recognize the right of Charles II. to the throne until he subscribed and swore to the Covenant; but in 1661 the "Act Recissory" was passed, which declared all the Parliaments null and void which had been held since 1640; and thus all the acts which recognized the Covenant or Presbytery, and the proceedings of the Scotch with Charles II., were set aside.

From this time the influence of the Covenant declined, though it was regarded as sacred by many of the most valuable, if not the most numerous, portion of the clergy and the people—of those who would submit to no compromise, and who in consequence were the objects, during the reigns of Charles II. and his brother James II., of the most ruthless persecution. So far did some go that they did not regard any person entitled to homage as king unless he had "covenanted" or affixed his signature to the Covenant. This party has been known in history under the name of Cameronians.

**SOLFIDIANS** (sol-fid'e-anz), a designation sometimes applied to those who rest on faith alone for salvation, without any connection with works.

**SOLIS** (so'lis), **ANTONIO DE**, a Spanish author, born at Placenza, in Old Castile, in 1610, studied law at Salamanca, but devoted himself assiduously to literary pursuits. After a long and successful career as a writer, he devoted the latter

part of his life to religious duties, and took orders at the age of fifty-seven. He died in 1686. His history has been translated into various languages—into English by Townshend.

**SOLOMON** (sol'o-mon), the second child of David and Bathsheba, and, according to Josephus, the last born of David's sons. The first child of this guilty union died—"the Lord struck it;" but the second one was spared—"the Lord loved him," so that by Nathan's counsel he was called Jedidiah, "beloved by Jehovah," the child's name being composed of his father's, with the holy termination Jah, or Jehovah, added to it, "because of the Lord," 2 Sam. xii. 24, 25. His other name, Solomon, or "peaceful," was given him in memory of an earlier prophecy, which had predicted his birth and fore-pictured him as a man of rest: "his name shall be Solomon, and I will give peace and quietness unto Israel in his days," 1 Chr. xxii. 9. The name was to symbolize the contrast between his own tranquil reign and that of his father, who "had shed blood abundantly and

made great wars." The prophet who had named him "darling of Jehovah" is said by many to have superintended his early education, or to have shared the duty with Jehiel, 1 Chr. xxvii. 32. But the narrative does not warrant so broad a statement. The natural sense of the words in 2 Sam. xii. 24, 25 is, "The Lord loved him, and in token of that love he (the Lord) sent by the hand of Nathan the prophet, and he (that is, Nathan, by divine commission) called his name Jedidiah, because of the Lord." The phrase "to send by the hand of" is a well-known formula denoting a prophetic commission. Still the tradition is a probable one, that Nathan had a special charge in the early training of the prince. Prophetic tuition may, however, have been neutralized by such evil influences as are ever in operation in a harem, and upon a boy so fondly cherished by an aged father, who had, by divine guidance, destined him as his royal successor, 1 Chr. xxii. 9; xxviii. 5, 6. Among David's sons were Daniel or Chil-eab, who apparently died in early life; Amnon, whom he loved intensely, as his first-born, 2 Sam. xiii. 21, Sept.; Absalom, so remarkable for his personal appearance, "there being in all Israel none so much praised for his beauty;" and Adonijah, "a very goodly man," whom his father seems

never to have checked or questioned in his wildest freaks—"had never displeased at any time in saying, Why hast thou done so?" Amnon had been killed by Absalom—a brother's revenge for the outrage on his sister Tamar; and Absalom, now that the crown-prince was dead, so "hungred" for the royal chair that he entered into conspiracy against his doting father, and fell in the unnatural rebellion. It was probably after these domestic tragedies that David had sworn to Bathsheba that her son should succeed him, 1 Ki. i. 13. How widely this oath was known it is difficult to say; perhaps few beyond the palace were trusted with it. There is no hint that Adonijah was distinctly acquainted with it, though he might suspect the influence of a favorite wife over his father, and might find some suggestive warnings in the careful education and upbringing of Prince Solomon. At a subsequent period, and after his own attempt had so signally failed, he says to Bathsheba, "The kingdom is turned about from me and is become

Absalom, who had succeeded for a time in the same treasonable adventure, and that too when David was in the vigor of life. There seems also to have been a cabal at court, of which he astutely took advantage. The antecedents of Bathsheba must have greatly detracted from her influence; the warlike days of David were over, and the wild valor of Joab found no fitting sphere; other and rival interests may have been visibly foreboding a different régime, and men like Benaiah and Zadok were rising into importance under a form of government which, through David's age and infirmity, might be not unlike a virtual or irregular regency. Joab, the head of the army, was gained over; his relations to David had not been for a long time satisfactory; the king had chafed under his lawless violence, but durst not displace or punish him. Abiathar, the head of the Church, probably under some personal grudge, committed himself also to the new conspiracy. The revolt of two such men so long and so deeply

proress. Nathan immediately addressed Bathsheba, for Adonijah's success would at once have sealed the fate of Solomon and of his mother, who must have been specially hated by the conspirators, 1 Ki. i. 21. Bathsheba without hesitation appealed to the king, who was "very old," put him in memory of his oath, and asked him to nominate his successor with all requisite celerity and publicity. Nathan followed into the royal chamber, and inquired if Adonijah's succession had been sanctioned by the reigning sovereign. We know not what new sorrow wrung the heart of David as he heard the tidings; it would seem to him as if the curse upon his family were not yet exhausted; "the sword shall never depart from thine house" was a doom still fulfilling itself, since another son, engaging in a traitor's deeds, must meet at length a traitor's end. The king rose at once to the crisis, and took decided measures. Solomon was put on the royal mule, and he rode in procession in the midst of his guards to Gihon, and there

the holy oil was solemnly poured on his head. The sacred trumpets then sent forth their joyous peals, and the people shouted "God save King Solomon!" The scene was enlivened with music, the crowds "piped with pipes." Such was their frantic and tumultuous jubilation that "the earth rent with the sound of them," and as they returned to Jerusalem the "city rang again." The young king was then formally placed on the throne; and the old sovereign, on being informed of the completed ceremonial, "bowed himself on the bed" and offered earnest thanks for the installation of his successor, one impressive circumstance being thus feelingly described by him, "mine eyes even seeing it." The ringing acclamations of Solomon's attendants startled Adonijah's guests just as they were concluding their feast; the sound of the trumpets struck the warlike ear of Joab, and as they were wondering as to the cause of the unwonted noise, Abiathar's son Jonathan, who had before and in very different

ADONIJAH SECURING THE CO-OPERATION OF JOAB AND OTHERS IN HIS CONSPIRACY.

my brother's, for it was his from the Lord." The last declaration is apparently a reluctant acknowledgment made on a special occasion, and to enforce a peculiar plea, but there is no admission that his conspiracy was a conscious thwarting of a published divine purpose. The kingdom had been suddenly wrested from him at the moment when he was laying his grasp upon it. His exclusion of Solomon when he invited his other brothers to his inauguration shows very distinctly that, though he might not know of the oath, he certainly looked upon Solomon as his rival, and plotted to anticipate him in possession of the crown. At all events, when David was so old as to cease to be able to take an active personal part in the government, Adonijah, now about thirty-four years of age, and the king's eldest living son, became so impatient that he proceeded to invest himself with royal honors before his hour was ripe. "The son of Haggith exalted himself, saying, I will be king." He calculated on his father's indulgence, who had weakly and uniformly given way to all his whims and follies. He had some faith, too, in his own personal appearance and in his resemblance to

attached to David, and whose fidelity had been so often put to the test, shows deep disaffection among the grandees of the realm. Nor would these magnates have staked their lives and character upon such an enterprise if there had not been some prospect of success. With the commander-in-chief to defend his cause, and the high-priest to bless it, Adonijah began his royal state as Absalom had done—"prepared his chariots and horsemen, and fifty men to run before him;" held a great feast at En-rogel, invited to it "all his brethren the king's sons save Solomon," and an immense number of courtiers—"all the men of Judah, the king's servants," David's own tribe. It was a coronation festival, and their shout was, "God save King Adonijah!" On the other hand, the "mighty men," or old guards, Benaiah and Nathan, with Shimei and Rei, probably David's surviving brothers, remained firm in their allegiance. It was a critical moment, for a disputed succession would have ruined the kingdom, and the revolt of Sheba had shown that old factions had not been completely extinguished, though they had been overborne by David's fame and

ent circumstances acted the part of a spy and informer, burst upon them with the unwelcome tidings of Solomon's accession. The authority of the old king was not to be resisted; the prestige of his sanction, though he was aged and laid aside, threw immediate terror into the hearts of the plotters, who fled their several ways in confusion and dismay. Solomon's brothers, to the number of twelve, who had committed themselves to the usurper, were spared, contrary to Oriental custom on such critical occasions. Adonijah himself, on a pledge that he should not die, left the altar, "on the horns" of which he "had caught hold" for safety, and came and bowed himself before his successful brother, who dismissed him with the curt command, "Go to thine house." But his asking of Abishag at a subsequent time was resisted by Solomon. "Ask for him the kingdom also," was his interpretation of the request; and Adonijah, the victim of inordinate ambition, was put to death. May it not be probable that Adonijah had an abettor and sympathizer in Abishag, and as one element of hope had counted on her secret influence with his infirm

and dying father? Abiathar was banished to Anathoth, and the doom of Eli's house, or the line of Ithamar, was fulfilled, 1 Sam. ii. 27. Joab, now an old man of "hoary hairs"—whose enmity is his epitaph, "He had not turned after Absalom"—was killed at the very altar by the royal command, his death being declared to be a punishment for the murder of Abner and Amasa, "two men more righteous and better than he," and Shimei was, after the violation of a compact which placed him under espionage as a person of more than doubtful loyalty, also executed. Thus the men that moved in the stormy days of David, and to whom conquest and diplomacy were a passion, passed away, and a new era, the first instance of a royal succession in Israel, was inaugurated by new men, not bound in the warlike traditions of the past, but fitted to mould the future into a period of peaceful and prosperous administration. It would seem, according to 1 Chr. xxix., which omits all notice of Adonijah's conspiracy and the consequent proceedings, that afterward a more solemn inauguration of Solomon took place, in presence of David and the people; that—probably in observance of some constitutional forms—the people ratified the king's choice and "made Solomon king the second time, and anointed him unto the Lord to be the chief governor."

At his accession, Solomon was a mere youth. His father calls him also "young and tender," 1 Chr. xxix. 1. He styles himself "a little child," the phrase, however, referring as much to inexperience as to mere age: "I know not how to go out or come in." According to the implied chronology of 1 Ki. xi. 42; xiv. 21, he must have been about twenty. Josephus makes him fourteen, by saying that he reigned eighty years and lived ninety-four, the time thus assigned to his reign being double that recorded in Scripture. These large numbers must have crept into his text; all that he says at the beginning of Solomon's reign is, "That he was a mere youth in age."

The reign of Solomon began under very propitious auspices: "He loved the Lord and walked in the statutes of David his father." There was still great irregularity in the national worship; the people sacrificed on high-places—a violation of law excused on the ground that no central place of religious service had yet been built. The ark had been brought to a temporary resting-place on Mount Sion, but the old tabernacle, which had been constructed in the desert and had accompanied the tribes in all their wanderings, was at the great high-place of Gibeon—that remarkable eminence now called Neby Samwil. At this lofty and central "high-place" the young king went to worship, and offered a thousand burnt-offerings on that altar. During the night, and while his mind was elevated and solemnized by the scene and service, God appeared to him and gave him his choice of blessings; when the young monarch asked, not for life, or wealth, or victory, the gifts so coveted by monarchs, but for wisdom, "an understanding heart to judge thy people." In reply, God promised him wisdom so unusual as to excel all before him, "neither after him should arise any like unto him;" and not only so, but he was to be distinguished by riches and honor, eclipsing all his contemporaries, to be lavished on him. The sacred festival had scarcely been completed at Jerusalem when the young king's wisdom was put to the proof in the case of the two women and the child, when the royal sagacity at once, and by a sure but simple test, detected the real mother. The result

was that in consequence of this decision and its prodigious popularity "the people feared him," for they "saw that the wisdom of God was in him, to do judgment." Discord and civil broil being put down at home, for "all the sons of David submitted themselves unto Solomon," he had not much trouble from abroad.

At an early period of his reign he made "affinity with Pharaoh, king of Egypt, and took his daughter." The law in the letter of it forbade marriages with the Canaanites, and in its spirit it condemned such a union with an Egyptian princess. Yet it is to be remarked that the daughter of Pharaoh appears to have conformed to the Hebrew faith, for she is mentioned as if apart from the "strange women" who seduced Solomon into the toleration or practice of idolatry, 1 Ki. xi. 1, and there are no accounts of any Egyptian superstitions being introduced during his reign. The Egyptian queen dwelt in the city of David till a palace was reared—the presence of the ark on Sion precluded the near residence of such a foreigner, though she might have abandoned her national gods, 2 Chr. viii. 11. The marriage was one of policy, as an attempt to secure himself against invasion on his southern frontier, and to ratify an alliance with a great country with which Israel had held no intercourse since the day of Moses. This princess brought with her Geser as a dowry—a city still possessed by the old Canaanites, and taken by her father, who is supposed by Ewald to have been Psusennes, the last king of the twentieth dynasty, which had its capital in Tanis. The result of this alliance with Egypt prevented Pharaoh from helping one of Solomon's early adversaries. After the conquest of Edom under David, and the general extirpation of its male population by Joab, Hadad, "of the king's seed," escaped to Egypt, where the sovereign gave him refuge, married him to the queen's sister, and adopted her children into his own family. On hearing of the death of David and Joab, Hadad at once requested permission to return to his own country. The permission was granted, but no assistance was either given or pledged. Hadad, however, did "mischief," but no irreparable damage—maintained probably a border warfare that brought him booty without territory. But the friendship with Egypt was not of long duration. A young man named Jeroboam, "ruler over all the charge of the house of Joseph or Ephraim," in building Millo and "repairing the breaches of the city of David," had some special grievance of his tribe to complain of, and rebelled, "lifted up his hand against the king," did in an insulated and premature way what his tribe effected so conclusively at Solomon's death. Solomon "sought therefore to kill him," but he fled to Egypt, and King Shishak entertained him, for a new dynasty was on the Egyptian throne. A freebooter and outlaw of Zobah, of the name of Rezon, annoyed Solomon on his north-eastern frontier, but gained no decided advantage. Yet this hostility was so damaging to one of his commercial routes that at a later period Solomon went to Hamath-zobah and "prevailed against it," founding at the same time "Tadmor in the wilderness, and all the store-cities which he built in Hamath," 2 Chr. viii. 3, 4. With these exceptions the reign of Solomon verified his name. It was a time of peace; "he had peace on all sides round about him, and Judah and Israel dwelt safely," 1 Ki. iv. 24, 25. The arms of David had won the empire which Solomon now enjoyed. It was an empire in the Oriental sense, extending from the Euphrates to

the Mediterranean, from Thapsacus to Gaza. The outlying territories paid tribute to their suzerain; "they that dwell in the wilderness bowed before him; the kings of Tarshish and of the isles brought presents; the kings of Sheba and Seba offered gifts;" the Syrian tribes beyond Lebanon and as far as Damascus, with Moab, Ammon and Edom, the Arabian clans, the surviving aborigines, and the Philistines, did homage and paid tribute—"they brought presents, and served Solomon all the days of his life." At the same time proper measures or precautions were taken to preserve peace. Fortresses seem to have been built along the ridges of Lebanon, and on the frontiers "were

THE DYING INJUNCTIONS OF DAVID.—See 1 Ki. ii.

chariot cities and cities of horsemen." The two Beth-horons on the boundary-line of the great and uneasy tribe of Ephraim, and on the highroad between Jerusalem and the sea-coast, as well from the east as from Philistia and Egypt, were strongly fortified—became "fenced cities with walls, bars and gates," 2 Chr. viii. 5. For a similar reason the old city of Gezer, on the Philistine border, was rebuilt and garrisoned; and Hazor and Megiddo, guarding the plain of Esdraelon from Syrian or Assyrian attack, rose into great fortifications. No doubt, also, on the south, and fronting Idumæa and the desert, similar military stations were placed at intervals. Such a congeries of kingdoms has but a loose coherence, and continues united only so long as the central controlling power maintains its predominance, so that Solomon's em-

MARRIAGE OF SOLOMON AND THE DAUGHTER OF PHARAOH.—See the preceding page.

pire, made up of these heterogeneous materials, fell to pieces at his death and the revolution that so closely followed it.

By means of the geographical extent of his empire, and his treaties with foreign powers, Solomon began and carried on an extensive and lucrative commerce. His love of splendor taught him the value of wealth, and by his political and mercantile arrangements it was poured in profusion into his coffers. He coveted a grandeur which none might rival, and of which he was to be praised as sole possessor. He strove to raise himself to a pinnacle of unapproached isolation. Stately architecture, a magnificent court, a gaudily-draped and armed body-guard, an imposing palace, with its grand halls, stairs and portals, a table whose daily luxuries must have been allied to daily waste and extravagance, a harem boasting of a thousand inmates, state, show, gaud and glitter,—were to him an Oriental passion that could be gratified only by an ample revenue, such as his own dominions could not furnish, but which was reaped from trade, monopoly and imposts laid on vanquished provinces. Saul had been a king without a capital, and was still a rude chieftain after being

crowned by public acclaim; David had been a warrior, to whom his camp was a court and his sword a sceptre; but Solomon, born in the purple, had worn "soft raiment in a king's palace" from his youth, and was untaught by any of those juvenile privations through which self-denial hardens the mental fibre against inertness and repose. He was the first king who was the son of a king, and the glory of his empire was but the reflection of his own royal tastes and passions, the gratification of which was secured by the arms of his father and his own shrewd and successful policy.

A trade in horses was carried on with Egypt, which was so stocked with these animals that it could easily supply them to other nations; bands of royal traders fetched troops of horses at a fixed price (the Hebrew word rendered "fine linen," 1 Ki. x. 28, means "troops" or "gatherings"). The tariff was a low one; a horse cost one hundred and fifty shekels, and a chariot with its team six hundred shekels. The Hittite and Syrian royal vassals were also supplied from Egypt through Solomon with these equipages. Relations with Arabia were also established. Spices and gold were brought in caravans, as well in the form of merchandise as of

tribute from the kings of Arabia and the "governors" or pachas of the East; and were either consumed in the country or exported from Joppa and Phœnician ports into Europe. Other commodities may have been transported across the Persian Gulf and carried into Judea. Friendly intercourse was kept up with Tyre; its king, "Hiram, had been ever a lover of David." Solomon had also a commercial navy, and a port was selected in Ezion-geber, "which is beside Eloth, on the shore of the Red Sea." The Hebrew crews were supplemented by Tyrian "shipmen that had knowledge of the sea." This fleet sailed out into the Indian Ocean to Ophir, and brought back to Solomon four hundred and twenty talents of gold, apparently as the result of one voyage. A second fleet was in the Mediterranean, and sailed in company with Tyrian ships—the "navy of Tarshish." Another source of wealth arose from the commerce of inland Asia, as it crossed over from the countries of the Euphrates and Tigris to Tyre and the Phœnician ports. To secure this revenue Solomon built two great stations or entrepôts, Tadmor or Palmyra in the eastern desert, and Baalath or Baalbec nearer the coast. Besides these, he erected

THE COMMERCE OF SOLOMON'S REIGN.

"store-cities" along the route from Tiphzah, on the Euphrates, down to the shores of the Levant. He seems also to have had vineyards leased to keepers at Baal-hamon, which yielded him a handsome return. In this way he brought the wealth of the world into his exchequer, and Palestine vied with Phœnicia in enterprise; so that "the king made silver to be in Jerusalem as stones," nay, "silver was not anything accounted of in the days of Solomon;" "the weight of gold that came to him in one year was six hundred and sixty-six talents, beside that which chapmen and merchants brought." So eager does the king seem to have been in these commercial pursuits, so necessary to the splendor which he coveted, that he is said to have traveled to Hamath-zobah, and to have visited his new port on the Red Sea, 2 Chr. viii. 3, 17. Such national prosperity was a condition not contemplated by Moses, and was specially perilous to the freedom, simplicity and theocratic loyalty of the Jewish people. In the mean time, and under the first flush of a novel opulence in such contrast to the hardy and self-denying contentment of their fathers, who had lived as working yeomen on their farms, vineyards and pastures, the population enjoying exemption from war and soothed by the unwonted peace, unthinned by battles and dazzled by all this magnificence, we wonder not to read that "Judah and Israel were many as the sand which is by the

sea in multitude, eating and drinking and making merry;" "Judah and Israel dwelt safely, every man under his vine and under his fig tree, from Dan even to Beersheba, all the days of Solomon," 1 Ki. iv. 20, 25.

The great king was no miser; the wealth that flowed in upon him so copiously he lavished with unsparing hand. First a temple and then a palace was built. According to the book of Kings, the idea of erecting a temple was specially Solomon's own, but according to the book of Chronicles it was bequeathed to him by his father David. Not only so, but according to the same authority, David gave Solomon his son "the pattern of the house," its vessels and furniture. "All this, said David, the Lord made me understand in writing by his hand upon me, even all the works of this pattern." A sample of Solomon's correspondence with Hiram king of Tyre about the necessary preparation of materials is given by Josephus, and he adds that the documents were preserved among the Tyrian archives. Nay, according to the same authority, Hiram and Solomon exchanged riddles, a forfeit being paid for every one that could not be solved, as is recorded by the historians Dius and Menander, who translated the Tyrian annals out of the Phœnician language. Hiram promised Solomon the requisite timber, cedar trees and fir trees from Lebanon, to be sent by sea in rafts to Joppa, and

thence conveyed overland to Jerusalem. Solomon, according to bargain, was to furnish Hiram yearly with "twenty thousand measures of wheat and twenty measures of pure oil," 1 Ki. v. 1-12. Artificers, famed for their taste and skill in metals, gems, manufactures and architecture, were also provided from Tyre, among them as chief "a cunning man" named Hiram, the son of a Hebrew widow, though his father had been a Tyrian. The timber on Lebanon was cut by Solomon's own subjects, thirty thousand being enrolled for the purpose, ten thousand working at a time for a month, and the other two-thirds having two months' respite. An additional mass of seventy thousand were bearers of loads, and another body of eighty thousand were hewers of stone in the mountain-quarries and in those recently brought to light under the Temple Rock. These last laborers were chiefly "strangers," Canaanites who had been spared on conformity to the religion of their conquerors. Three thousand three hundred officers were set over this immense array of workmen. It is somewhat surprising to find Eupolemos in Eusebius, and Polyhistor in Clemens Alex., affirming that an Egyptian king named Vaphres sent eight thousand of his subjects to assist Solomon in the erection of the temple. The vast preparation of "great stones, costly stones and hewed stones," was completed in three years, 1 Ki. v.

18. The rugged surface of Moriah was leveled, its eastern and southern sides were banked and faced with an immense wall which gave a greater area to the sacred enclosure. If the image of the Psalms may be trusted, some old trees that may have grown near Araunah's threshing-floor were allowed to remain, Ps. lii. 8; xci. 13. The building commenced in the month Zif, the second month of the fourth year of Solomon's reign. The blocks of stone were all fitted together in the quarries, so that there was "neither hammer, nor axe, nor any tool of iron heard in the house." The walls were lined with cedar within and without, according to Tyrian fashion; and within, ceiling, walls and floor were overlaid with gold. After seven years' work the divine palace was finished in the month Bul or November of the

"the heaven and heaven of heavens cannot contain him." Sacrifice was offered apparently by the king, and an extemporized place of oblation in the middle of the court was also sanctified by him. The victims slain on the occasion "could not be told nor numbered for multitude;" for it was a great festival, kept by the people gathered from all quarters—"from the entering of Hamath unto the river of Egypt"—and it lasted seven days. A portion of these numerous victims was burned on the altar, and the remainder served as a banquet to the assembled crowds. Immediately afterward the Lord appeared to Solomon, as he had already done at Gibeon, assuring him that he had heard his dedicatory prayer, and had hallowed the house where "his eyes and heart would be perpetually;" but warning him

guards of Samuel, should so soon take all power into its own hands. Afterward too the sovereigns often silenced and punished the prophets, while the priesthood was taught to lean on royal patronage.

In the same year in which he founded the temple, Solomon began for himself a palace, the building of which occupied thirteen years. It was erected on a lower platform than the temple, and was founded on great blocks of "ten cubits and eight cubits," and built also of stones "sawed and hewed." It had a great court around it, with a spacious hall for receptions or for business. This hall was one hundred and fifty feet long and about seventy-five feet broad, the cedar beams of the roof being borne by four rows of cedar pillars, and its walls were paneled with the same timber.

Perhaps on account of this abundant use of cedar wood it was called "the house of the forests of Lebanon." In front of it was a pillared portico, and there was yet another, "even the porch of judgment," a smaller imitation of which was made for Pharaoh's daughter. In this hall of judgment was his grand throne of ivory overlaid with gold, with its footstool of gold; two lions guarded the "stays" or arms, and the seat was placed, as Josephus says, "on half a bull, with its head turned round;" while the six steps of ascent to this seat were each ornamented at its extremities by lions—"there was not the like made in any kingdom." Solomon also made two hundred targets, large shields of beaten gold, and three hundred smaller ones of the same metal. These were probably for his guards, and for duty near or around the palace, and when not borne on the soldiers' arms they were hung in, or rather on, the house of the forest of Lebanon—a curious custom found also at Tyre. His stables were on a grand scale—with forty thousand stalls, twelve thousand horsemen and fourteen hundred chariots—so many for state magnificence with the king, and the rest "bestowed in the cities for chariots through the country." His drinking-vessels were of gold; it is specially noted that "none were of silver." His court was distinguished for profusion and ceremony. The daily supply was thirty cors of bolted flour and sixty cors of meal, ten fatted oxen, twenty from the pastures, "a hundred sheep," with a great variety of game and fowls. This consumption, large though it appear, is greatly less than what is said to have been used at the court of Persia. The queen of Sheba was struck with the abundant and varied fare of his table, and the rich and costly equipage of his attendants. There was a sitting-place for some of his "servants;" a standing-place for others, his "ministers." The daughter of Pharaoh, as first or chief wife, had a palace for herself, but the harem was filled with "seven hundred wives, princesses, and three hundred concubines." These numbers may be, probably are, an exaggeration, and the statement in the Song may be nearer the truth, "Threescore queens, fourscore concubines and virgins without number," ch. vi. 8. Hosts of servants and maidens, eunuchs and slaves, "men-singers and women-singers," and a large orchestra with all varieties of instruments were provided for their entertainment, Eccles. ii. 7, 8. The king had also vineyards, orchards, gar-

eleventh year of Solomon's reign. Josephus, in the Pharisaic narrowness of his age, blames Solomon for making images of oxen and lions, as if such artistic ornaments had been a violation of the second commandment. The dedication took place about eleven months after, at the period of the feast of tabernacles. The ark was carried in solemn procession to the most holy place, and set down under the expanded wings of the new-made cherubim. "The cloud filled the house." Solomon, assuming the sacerdotal office, blessed the people, and "kneeling upon his knees, with his hands spread up to heaven," offered up a prayer which recognized God's covenanted relationship to the people, and his ineffable condescension in dwelling in that house set apart for him, while at the same time it asserted that he is no local divinity, but devoutly confessed his universal unbounded presence—

at the same time that the divine favor and protection were guaranteed only to national piety, and that if idolatry should be introduced, Israel should be exiled, and the temple, "this house which is high," be laid in ruins. It is to be noticed that in the grand scene of the dedication Solomon is the central figure—Nathan and Zadok are nowhere mentioned, as if they had faded out of view before the glory of the king, who absorbs the prerogative both of prophet and priest. The old Mosaic statutes did not contemplate such a monopoly, and it can only be vindicated on the ground that at this national crisis the king acted as the father or the representative of his people, like the head of the family under the original patriarchal rule, who sacrificed for, prayed for, and blessed his household. It was, however, ominous that this great office, recently created and fenced around by the jealous safe-

tion, large though it appear, is greatly less than what is said to have been used at the court of Persia. The queen of Sheba was struck with the abundant and varied fare of his table, and the rich and costly equipage of his attendants. There was a sitting-place for some of his "servants;" a standing-place for others, his "ministers." The daughter of Pharaoh, as first or chief wife, had a palace for herself, but the harem was filled with "seven hundred wives, princesses, and three hundred concubines." These numbers may be, probably are, an exaggeration, and the statement in the Song may be nearer the truth, "Threescore queens, fourscore concubines and virgins without number," ch. vi. 8. Hosts of servants and maidens, eunuchs and slaves, "men-singers and women-singers," and a large orchestra with all varieties of instruments were provided for their entertainment, Eccles. ii. 7, 8. The king had also vineyards, orchards, gar-

dens or paradises, planted with all kinds of trees for shade, blossom, or fruit, and watered from pools that sent through them a thousand murmuring streamlets. When Solomon in the morning rode out in state to those gardens at Etham, where also he pursued his observations and carried on his studies as a naturalist, he was clothed in white, sat in a magnificent chariot drawn by horses incomparable for their beauty and swiftness, and was surrounded by his guards, distinguished for their tallness, strength and symmetry, with bows in their hands and mantles of

pactly organized. The details are given us in 1 Ki. iv. 1-19; and as two sons-in-law of Solomon held high office, the description must apply to an advanced period of his reign. In order to provide victuals for the king and his household—that is, the immense body of retainers that hang upon an Eastern court—the country was divided into twelve districts, not corresponding with the tribal divisions, and with an officer over each. Each district supplied the palace for a month. The purveyor was a high officer, who levied the taxes of his department, and these were generally paid in kind. A

fortress, but Solomon made it a capital, surrounded it with a wall and strong towers, and rebuilt Millo, the great defence of the citadel. According to Josephus, he also made roads, and those which led to Jerusalem he laid down or paved with black stones. It is impossible to say what connection Solomon had with the pools which yet bear his name near Bethlehem, or with the ancient aqueduct which conveyed water from them into Jerusalem.

The preceding works ascribed to Solomon are only chief specimens of what "he desired to build in Jerusalem and Lebanon, and throughout all the

THE ARK AND UTENSILS OF THE TEMPLE—SERVICE BORNE TO THE TEMPLE.

Tyrian purple over their armor, while their long dark hair, which curled in clusters over their shoulders, was powdered every day with gold-dust, and glittered in the sunlight. Sometimes he was borne on his royal progresses in a palanquin ribbed with silver and garnished with gold; its awning of purple and its carpet of tessellated tapestry had been woven "by the daughters of Jerusalem." In such a litter he seems to have gone occasionally to some retreat on Mount Lebanon, surrounded by sixty guards "expert in war," his advance being heralded by "pillars of smoke," or clouds of incense burned before him, Ca. iii. 6-11.

As a judge between contending parties, Solomon must have been wise and just in his decisions. The economic administration of the country was com-

higher grade of officers are termed "princes," and formed a species of cabinet. Azariah, a son of Nathan, was head of the "officers," and his brother Zabud was "principal officer," and "the king's friend" or familiar counsellor; Ahishar was "over the household," and bore on his shoulder the key of the house of David; Adoniram was over "the tribute," or rather levy or serfdom—the body of men held to forced labor. Benaiah was commander-in-chief, Zadok and Abiathar were priests, Jehoshaphat was the "recorder," continued from David's reign, while Elihoreph and Ahiah were the "scribes" or secretaries of state. Some of these officers have the significant title of priest—confidential advisers.

The public works of Solomon were in keeping with his character. David chose Jerusalem as a

land of his dominion," 1 Chr. viii. 6. He left his impress on the whole country, and neglected nothing that tended to increase his wealth, display his grandeur or give fame and safety to his capital and empire. Building, as in Egypt, Assyria, Babylon and Persia, has been often a royal mania, and can be easily carried out under a despotic government which has unbounded command of wealth and labor, Eccles. ii. 9, 10. The king did everything—with perfect truth every enterprise is ascribed to him as sole and supreme director. His will was universal and unresisted law in his realm, and after Nathan's death he seems to have met with no check. His subjects were overawed by his splendor, and whatever secret murmurings there may have been, only in the case of Jero-

SOLOMON IN HIS GLORY.—See Ps. lxxv. 10.

boam does there seem to have been any open insubordination. Tribute and toil seem to have been exacted with swift compulsion to carry out his designs; yet toward the latter part of his reign the finances of the kingdom could not bear the perpetual strain which had been put upon them. The people had been dazzled for a time, and their national vanity was flattered, but they began to feel the burden. The patience of conscripts drilled to labor and "chastised with whips" was being exhausted, and the annual tribute, falling heavily on the richer provinces of the middle and north of the kingdom, grew to be resented as an oppression. No doubt there was the old jealousy of Ephraim against Judah; but the request of the tribes for an alleviation of their "burdens" was virtually assented to by the old men who had "stood before Solomon" when they advised Rehoboam to yield, for his "father had laid on them a grievous service and a heavy yoke." His answer was one of insolent imprudence, dictated by the younger men who had grown up in the midst of Solomon's despotism and had imbibed its spirit. The ten tribes were apparently planning a revolt, and they put forward as a request what they doubtless wished to be reckoned their great argument and justification. They do not complain of the harem or the idolatries, or the many other royal deviations from the national law, but of the taxation and burden. Rehoboam sent Adoniram to treat with them; but Adoniram, from his official connection with the tribute or levy, was the most unpopular man in his dominions, and the infuriated people stoned him to death, the king hurrying off lest the same fate should befall himself.

The wisdom of Solomon is specially dwelt on in Scripture—"God gave him wisdom and understanding exceeding much, and largeness of heart, even as the sand which is on the sea-shore." The term "heart" is often used for "mind," and the meaning is that Solomon was endowed with great faculties and capacities, and that his intellect was not only stored with vast and varied information, but was so active, shrewd and penetrating as to be successful in its studies and investigations. He had at once an unwearied eagerness in the pursuit of knowledge, and he had also the creative power of genius. Nature and man were his study; botany and zoology shared his attention with men and manners; and his spirit gave utterance to its thoughts and emotions in poetry. He was a sage, a poet and a naturalist—"he spake three thousand proverbs; and his songs were a thousand and five. And he spake of trees, from the cedar tree that is in Lebanon, even unto the hyssop that springeth out of the wall; he spake also of beasts, and of fowl, and of creeping things, and of fishes," 1 Ki. iv. 32, 33. The value of his zoological or botanical researches we know not. No doubt his knowledge took minute cognizance more of external peculiarity than of inner structure, but it may have had the rudiments of a science, though he may not be compared to Linnaeus or Hooker, Cuvier or Owen. He was not so absorbed in royal cares or royal state and luxury as to forget mental culture; amidst much that was weak and wrong, he was "yet acquainting his heart with wisdom," Eccles. ii. 3. The "wisdom of Egypt" was proverbial in geometry, astronomy and medicine, but Solomon outstripped it. Arabia was the home of

that sagacity that clothes itself in proverbs, and of that subtlety which created riddles and queries, but "Solomon's wisdom excelled the wisdom of all the children of the east country." There had been men of noted intelligence in his own country, such as Ethan, who had charge of the temple music in David's time; Heman, one of the famous singers and "the king's seer in the words of God;" and Chalcol and Darda; but Solomon was "wiser than all men," 1 Ki. iv. 29-31.

What Solomon spoke on natural science has been lost, with the greater part of his songs. But many of his proverbs still remain in the book so called. The Proverbs deal with the ethics of every-day life—industry, frugality, foresight, integrity, sobriety, parity, not omitting "the fear of the Lord, which is the beginning of wisdom." They show that he loved wisdom, lived for it and strove to endear it to others, and that wisdom was not only his pursuit, but his delight—his muse whom he was ever wooing. They prove him to have been a shrewd observer of men in all stations; reading their motives and predicting results—glancing at their weaknesses and detecting their hollowness—throwing into relief their more striking frailties and praising their virtues in balanced comparison—analyzing character with keenest insight and sketching the temptations incident to all conditions—painting wisdom in all phases and folly in all disguises—bearing very hard on tale-bearing, slander and wifely brawls—pronouncing moral judgments in the form of generalizations which command immediate acquiescence—uttering maxims which all ages have confirmed and warnings justified by universal verdict.

Observation had taught him much, and his own sagacity and experience enabled him to form just inferences and applications. One would think that he had lived freely and mingled familiarly with all classes; that he had rioted and vaunted with the rich and sighed and suffered with the poor; that he had entered into the bosom of the fool and sluggard and been partner of all their imbecile acts and apologies; that he had been lounging amidst the chaffings of the bazaar; that he had felt the grip of the usurer; had been at a feast where the guests spoke daggers, and at a rustic repast where love reveled with roots and "herbs." His wise sayings are so true that they are apt to be thought trite, and their clearness sometimes prevents the discernment of their depth. The style, which fits into the direct and incisive thoughts, is a species of poetry—of synonymous or antithetical parallelisms, but terse and unlabored—often a succession of utterances, each pregnant with meaning—often a series of images or parallels, each a single dash of the pencil, free, bold and not retouched.

In sacred poetry Solomon was also prolific—"one thousand and five" songs, or, according to the Septuagint, five thousand. But the greater part must have perished. Ps. lxxii. and cxxvii. are ascribed to him, and it is usually supposed that Ps. ii. and

xlv. have a close connection with his coronation and nuptials. The "Song of Songs," apart from its spiritual meaning, is a beautiful pastoral, slightly dramatic in form, but reveling in the enjoyment of external nature, in the freshness and variety of the open landscape from Lebanon to Carmel, in rare exotics with their rich blossoms and scents, and in the flowers and fountains of the royal gardens. Eighteen apocryphal psalms said to be Solomon's are found in a Greek translation.

One form which Solomon's wisdom took was that of propounding hard questions—a form in which the Oriental mind has intense delight: "The understanding of a proverb and the interpretation; the words of the wise and their dark sayings." Specimens of this kind of enigma are apparently found in the book of Proverbs. You have but to prefix a query or guess to the statement, and you have the original shape of the wise saying. What are the three things too wonderful for me, and the four that I do not know? What are the four things little upon the earth, but which are exceeding wise? etc., Prov. xxx. 18, etc. Indeed, the proverb is but another name of the parable, the form so simply and strikingly employed by Jesus.

The estimates of his knowledge have been carried to opposite extremes. Josephus, on the one hand, while admitting Solomon's great knowledge of plants and animals, says, in allusion to 1 Ki. iv. 33, that he spoke parables about them, of which

SOLOMON AND THE QUEEN OF SHEBA.—See 1 Ki. x. and 2 Chr. ix.

the lesson taken from the ant may be a sample; not that he described their nature or growth. On the other hand, the wisdom of Solomon so impressed the Eastern world that it has ascribed to him magical arts—ability to know the language of birds, and power over demons wielded by his famous signet-ring. According to Josephus, who records the impressions of his own age, demons were still expelled in his time by a form of incantation or exorcism derived from the wise king. The historian gives a circumstantial example witnessed by himself, and he describes it with apparent sincerity and exultation, in order that "Solomon's wisdom and extraordinary virtues may not be unknown to any people under the sun." Who can tell? There may have been a temptation to Solomon in the dark divining rites of the foreign religions which he allowed, or he may have had some Faust-like avidity in himself of reaching forbidden knowledge, and by another path than observation and study. The universal legends of the East may have had some germ of foundation; but what are called his "Books of Conjuration," which are still extant, are unworthy of notice. We know, however, that after Solomon's time, and through his example, "wisdom" became a favorite term in Jewish schools, and shed a peculiar coloring over their metaphysical and ethical speculations.

Judea, in Solomon's reign, was no longer filled by a people dwelling "alone, and not reckoned

among the nations." It had numerous alliances, and merchants and sailors spread abroad the fame of its king. His wisdom especially was a theme of wide and glowing report. His sayings and his studies, his judgments and his diplomacy were the great news of the day, and, as happens so often, were probably dwelt upon with curious exaggeration. The result was that there "came of all people to hear the wisdom of Solomon, from all kings of the earth which had heard of his wisdom." Not, perhaps, that they had personal interviews with him; but they saw the results of his sage policy, and they heard the earliest and most correct versions of his wonderful utterances. Nay, we are told that "all the earth sought to Solomon, to hear his wisdom, which God had put into his heart;" and, as was the custom, the crowds of yearly inquirers did not come empty-handed, but "brought every man his present—vessels of silver, and vessels of gold, and garments, and armor, and spices, horses, and mules," 1 Ki. x. 24, 25.

One of these visitors occupies a prominent place in the Hebrew annals. The queen of Sheba—probably a region in Arabia—came to "prove Solomon with hard questions." But he resolved them all, to her great astonishment; and when she saw his buildings and retinue "there was no more spirit in her." She confessed, "The half was not

told me: thy wisdom and prosperity exceedeth the fame which I heard." The sacred historian dwells with delight on the queen's grand visit to Jerusalem; on her long train of camels carrying spices of unexampled abundance, with gold and precious stones, as a present to Solomon; on her wonder and her delight at the spectacles she saw and the interviews she enjoyed. According to Josephus, the famous balsam of the country grew from what had been brought by the queen of Sheba on her memorable visit. As if that visit had formed an epoch in the ancient annals—an epoch fraught with instruction and warning to all ages and lands—the "greater than Solomon" makes impressive reference to it, as condemnatory of those who, with greater privileges imposing no such pilgrimage, yet believe not, and are not attracted to the Incarnate Wisdom, Matt. xii. 42. The legendary accounts of the queen of Sheba will be found in ch. xxvii. of the Koran, and in Sale's notes.

The splendor of Solomon's empire was passing into eclipse before his death. A sad degeneracy came over himself, of which no mention is made in Chronicles. The heart that could conceive the dedication prayer must have undergone a melancholy change. The legal fastidiousness that would not lodge Pharaoh's daughter in the close vicinity of the ark had been completely worn out. His harem was his ruin. Many of its inmates might have been forced upon him as hostages, or taken by him

from political motives, but no necessity of state can be pleaded for the array of concubines. Extreme licentiousness clothed in irresponsible power could alone gather about him so many women. Even had they been all of Hebrew blood, the example set to the nation must have been demoralizing in the extreme. His troops of horses were forbidden by law, and so was his crowded harem. "He shall not multiply horses to himself," "neither shall he multiply wives to himself, that his heart turn not away," Deut. xvii. 16, 17. His wives were selected also in open violation of Mosaic statute, for the annalist says, "Solomon loved many strange women, together with the daughter of Pharaoh, women of Moabites, Ammonites, Edomites, Zidonians and Hittites"—nations with whom such intercourse was prohibited—yet "Solomon clave to them in

Solomon had thus forfeited his throne before the revolution which wrested so much of his dominions from his house. And he had no apology: the God from whom he had turned "had appeared to him twice." Nor can his conduct be lauded as toleration. Toleration of idolatry was unknown to the Mosaic law, for its basis was the unity and spirituality of God. Strangers engaged in commerce could not be forbidden secret pagan worship, for it could not be prevented; and the very size of the empire compelled either toleration or universal proselytism or extermination. But while such an alternative shows us the critical nature of these times of commerce and enlarged dominion, the building of public temples for impure and bloody rites must be blamed as a weakness, nay condemned as a crime, in the midst of a

in these parting words, "Fear God, and keep his commandments; for this is the whole duty of man?"

After a reign of forty years of unexampled prosperity and splendor, Solomon died, and "was buried in the city of David his father." But by his exactions and his treasuries against the divine law, he had left his kingdom on the eve of revolution. A prophet had at last forewarned him of the crisis, and his own far-seeing spirit must have discerned the omens of its speed and certainty. The land, as long as it remained faithful to its divine King and Guardian, was guaranteed against invasion, at least against defeat and captivity. But the evils which had begun under Solomon went on unchecked—idolatry spread from the court through the kingdom—viler lusts lifted up their heads, and were introduced as portions of heathen ritual, and altars were found "on every high hill and under every green tree," 1 Ki. xiv. 22-24. The country, grown cowardly in and through its debasement, could not defend itself. Jehovah was no longer its shield, and the wealth of Jerusalem, glittering with gold, was a bribe too powerful to be resisted. Shishak soon came, conquered and spoiled, and brass took the place of gold, 1 Ki. xiv. 25-28.

As was natural, David's wondrous elevation to the kingdom is his own favorite point of allusion, but to Solomon the recurring memory is his succession, his being "established on the throne of his father." The character and government of David are the perpetual allusion, and the model by which successive kings are judged. Solomon's reign is not referred to again in the old Hebrew records. But his magnificence lived in the imagination of the people; and the great Teacher, when he wished to adduce an instance of personal gorgeousness, admitted on all hands to be without rival, gives utterance to the phrase, "Solomon in all his glory," and yet it was a glory outshone by the "lilies of the field."

The acts of Solomon were written in the "Book of the Acts of Solomon," according to 1 Ki. xi. 41, or "in the book of Nathan the prophet, and in the prophecy of Ahijah the Shilonite, and in the visions of Iddo the seer," according to 2 Chr. ix. 29.

It has ever been a favorite subject of discussion among commentators whether Solomon ever repented his fall and turned again to God. No mention is made in Scripture of his repentance; no word drops from the inspired penman to show that he humbled himself and sought forgiveness. The name of this most renowned Israelitish king is a warning to succeeding ages to beware of listening to the blandishments of evil.

That Solomon did repent is traditionally believed, and that the book of Ecclesiastes was composed by him after he had trod the paths of vanity and sensual indulgence, and found earthly pleasures unsatisfying. But it is an inference, a hope, rather than a certainty. Some imagine that Ecclesiastes is not from his pen. This, however, scarcely affects the inference. Had Solomon been known to have died impenitent, no future writer would have assumed to speak in his name. Though we can but hope, therefore, still we may hope that he found mercy.

**SOLOMON, BEN JOB JALLA**, an African, born at Bonda, near the river Senegal, was sent by his father, who was prince of the country, to sell slaves to an English trader, and not agreeing in price, set out to return across the Gambia,

where he was taken prisoner by another race of blacks, who sold him as a slave. He was brought to Annapolis, Maryland, and subsequently escaped; but upon making himself known he was ransomed by General Oglethorpe and others, and sent to England in 1733. He was employed in London in translating some Arabic manuscripts. He resided fourteen months in that city, and was much noticed; after being introduced at court, he returned to his native country. He had a very retentive memory, could repeat the Koran by heart at fifteen years of age, and actually wrote the whole book in England three times from recollection only. Memoirs of him were published, and he is also mentioned in Moore's Travels, as well as in Astley's Voyages.

**SOLOMON, POOLS OF.** About one hour's journey to the south of Bethlehem is a small valley which offers the traditional and probable site of one of Solomon's pleasure-grounds, where he made him "gardens and orchards and pools of water." The reservoirs at the south end of this valley are called the "Pools of Solomon." They are connected with Jerusalem by aqueducts; and there is little doubt but that the unbroken tradition is well founded which associates these pools with the name of the royal builder, and that it is to this place that Josephus alludes when he states, "There was, about fifty furlongs distant from Jerusalem, a certain place called Etham, very pleasant in fine gardens and abounding in rivulets of water; thither he (Solomon) was wont to go forth in the morning, sitting on high in his chariot." In this valley there are three enormous tanks sunk in the side of a sloping ground; they are formed one above the other. They are capable of holding an immense body of water, and they are constructed so that when the water has reached a certain height in the upper one it then flows into the one below, and so on into the third. They are lined with a thick layer of hard whitish cement, and a flight of steps leads to the bottom of each. Where the lowest cistern joins the valley of Etham a sluice was placed to draw off the water. Several springs empty themselves into these reservoirs, and at a short distance from the upper one there is a narrow chamber through which the water passes from the neighboring spring on its way to the reservoir, and tradition declares that this is the fountain sealed to which allusion is made in the fourth and fifth chapters of the Canticles. A monarch like Solomon, who had enlarged views respecting public affairs, could in no better way display his care for the inhabitants of his capital than by constructing such works, and their value in later ages is attested by the fact that in early Christian times a large square castle was built to defend these water-works.

**SOLOMON'S PORCH**, John x. 23; Acts iii. 11; v. 12, one of the colonnades or cloisters of the temple, affording shelter from the weather in winter-time. It was in the eastern side, or, as some understand, at the eastern end of the south side of the building. According to Josephus, it was an original work of Solomon, which had remained from the former temple. See TEMPLE.

**SOLOMON'S SERVANTS**, Ezra ii. 55, 58; Neh. vii. 57, 60, a certain class of the returned exiles, enumerated after the Levites and the Nethinim. They had probably some very subordinate connection with the temple-services, and may be supposed the descendants of those Canaanites whom

Solomon, carrying out his father's policy, employed as slave-laborers in his works, 1 Ki. ix. 20, 21. If performing any sacred office, they must have become proselytes to the true religion.

**SOLOMON'S SONG.** See SONG OF SOLOMON.

**SOLOMON, THE WISDOM OF.** See WISDOM OF SOLOMON.

**SOLOMON (so'lon)**, the illustrious lawgiver of Athens, and one of the seven sages of Greece, was born B. C. 592, at Salamis, of an ancient family. He devoted his attention to commerce, and visited many foreign parts, acquiring wealth and wisdom. Having secured a competence, he directed his attention to state affairs. After having enhanced the glory of his country by recovering Salamis, he refused the sovereignty of Athens, but accepted the archonship. As archon he framed a new code of laws, and obtained from the citizens an oath that they would observe them for ten years. With a view to getting himself beyond the reach of inducements to make changes in them, he departed from Greece, and visited Egypt and Cyprus, and perhaps Lydia. On his return he found the tyranny of Pisistratus established and his laws ignored, and in disgust he withdrew to Cyprus, where he died at the age of eighty.

**SOMMER (som'mer), PETER NICHOLAS**, was born in 1709, at Hamburg, in Germany. He was trained to religious duties from his childhood, and his academical training was of a high order. In 1710 a colony of Germans was sent to this country from the Palatinate, and in 1712 they were settled in the Schoharie Valley. They were Lutherans, and they clung tenaciously to their faith. In 1714 they were organized into a church, but they remained many years without a regular pastor. At length the Lutheran Consistorium in London induced the Rev. Mr. Sommer to settle among them, and he reached New York in April, 1743. He forthwith proceeded to his charge, and he remained among his flock for nearly half a century. He had to encounter many of the experiences of the early settlers who colonized the States in those trying times, and in 1768 he was suddenly deprived of his sight. Still he labored faithfully, though unable to see the light of the sun, and in about twenty years his sight was as suddenly restored. In 1788, when an aged man, he retired from his charge and removed to Sharon, in Schoharie county, to spend the residue of his days with his children and his children's children, and here he remained until his death, on the 27th day of October, 1795. He held a high place in the Lutheran Church, being an earnest, faithful minister and a most excellent man.

**SOMMIER (söm-myay')**, JOHN CLAUDE, an ecclesiastic of Lorraine, in France, published "The Dogmatic History of Religion," a very creditable work, and "The History of the Holy See," a production which, though decried in France, procured for him, from Benedict XIII., the appointment of titular bishop of Caesarea. He died in 1737, aged seventy-six.

**SON.** The term "son" in Scripture is very often extended to more distant relations than the one originally and strictly indicated by it, such as grandchildren, offspring generally, even to remote generations, and heirs of a particular person or

family, though not in the direct line of descent. The term was also very commonly used in a figurative sense to denote the possession, in a marked and characteristic manner, of some natural or moral quality, such as "Barnabas, son of consolation," as if in a manner born of it and so replenished with its grace; "son of Belial," for persons of a wanton and licentious spirit; "son of oil," for rich and fertile, Isa. v. 1, where what is in the English Bible "a very fruitful hill," is literally "the horn of the son of oil," etc.

SOLOMON'S FUNERAL.—See SOLOMON.

SOLOMON'S SELF-INDULGENCE IN LUXURY.—See ECCLES. II.

love." His seraglio "turned away his heart after other gods," and temples to them were built on the hill fronting the holy house itself—to the Sidonian Ashteroth, to "Milcom the abomination of the Ammonites, and Chemosh the abomination of Moab." "All his strange wives" were equally accommodated—the worship of their impure and bloody divinities was permitted or sanctioned. That Solomon became himself an open idolater is not distinctly stated. He still offered on the authorized altar, and burned incense three times a year, apparently taking on himself at those occasions the sacerdotal office. But his syncretistic mixture of worships is divinely condemned. The worship of Jehovah was an exclusive worship, and the magistrate was to permit none other; for idolatry was an insolent violation of the law; nay, as Jehovah was king, it was setting up a rival to his throne. The service of the true God was openly affronted by these antagonistic shrines.

people whose right to hold their territory was based on their monotheism. Besides, the licentious orgies of these divinities must have attracted many foreign women to their service, and according to Proverbs, the streets of Jerusalem were infested with "strange women," or foreign prostitutes—the inevitable curse of these commercial alliances. The kingdom was, in fact, enervated, the voice of prophecy was dumb, the army was employed but for show or to defend the trading caravans. The old enemies of Solomon, aware of this degeneracy, renewed their warfare, and with better hopes of success. Did Solomon then feel how far he had fallen, how vain was mere worldliness, and how unsatisfying were wealth, pleasure and power as the objects of human ambition? Was it on such a survey of his past life that the royal sybarite became so intensely cynical as to cry, "Vanity of vanities; all is vanity and vexation of spirit"? Yet are there not gleams of hope

**SON OF GOD.** This title is continually given to the Lord Jesus Christ, and as appropriated by him it is a full proof of his divinity, Luke i. 32; xxii. 70, 71; Rom. i. 4.

The title was applied to Adam, who had no human father, Luke iii. 38. And there is a sense in which other men, as the creatures of God's hand, and still more as received into his reconciled family by adoption, may be called God's sons, Hos. i. 10; John i. 12; Acts vii. 28, 29; Rom. viii. 14; Gal. iii. 26; 1 John iii. 1, 2. But it was evidently with a much higher meaning that our Lord is termed "The Son of God." For the

Jews rightly judged that by the assumption of this title he laid claim to equality with God, and, regarding it as blasphemy and a breach of the first commandment, they determined to put him to death, John v. 17, 18; in fact, it was on this charge that ultimately they condemned him.

The inference cannot be evaded. Our Lord claimed to be one with the Father in a way which no mere man could be, and the apostles in propa-

gent to "man," in common use in the region where Ezekiel and Daniel resided. Thus we find it perpetually occurring in the Syriac version, as for example, "The first son of man, Adam, was a living soul;" "The first son of man earthly of the earth, the second son of man the Lord, from heaven," 1 Cor. xv. 45, 47. It is, further, the phrase used in that remarkable vision in which Daniel saw One "the Son of Man," brought to the Ancient of Days and invested with a sovereignty that should include all nations and that should never be destroyed, Dan. vii. 13, 14. That this had a Messianic reference cannot be doubted. And therefore, when our Lord so designated himself, Matt. viii. 20; ix. 6, and elsewhere, he announced himself as the Messiah, the Son of God manifested in human form, revealing the mystery of the two natures in one Person. The Jews seem fully to have understood what he meant; they saw that he claimed an identity as "Son of man" with the Deity, the "Son of God," Luke xxii. 69, 70; compare John xii. 34. Stephen uses this title of Christ, Acts vii. 56. With this exception, in the Gospels and apostolic history it is applied to him only by himself.

SONG. See HYMN, MUSIC, POETRY.

SONG OF SOLOMON. The name given to this book in the title, ch. i. 1, signifies "the most excellent song," and evidently represents it as being not a collection of separate poems or idylls, as some have thought, but a single composition; and a close acquaintance with its contents confirms this testimony to its excellence and its unity.

The title also agrees with all ancient writers on the subject in ascribing this poem to Solomon; and this too is corroborated by internal evidence. The allusions to David's tower, ch. iv. 4, to Solomon's couch, or palanquin, ch. iii. 7, 9, and to his vineyard in Baal-hamon, ch. viii. 11, indicate a writer familiar with that age. Rare and precious articles of luxury are also mentioned. Objects of interest to the naturalist are often referred to; not less than twenty different names of plants and thirteen of animals being found in these few pages. An intimate acquaintance is displayed with various parts of the land from Egypt to Damascus; whilst the beauties of Tizrah, Gilead and Heshbon, and the grandeur of Lebanon and Hermon, are alluded to in language which shows that they are fully appreciated. All this is just what might naturally be expected if Solomon were the author. In addition to this, the reference to his mother, in ch. iii. 11, and a comparison of ch. vi. 8 with 1 Ki. xi. 3, seem to connect the poem with the earlier part of his reign, when Bathsheba was still living, and when his harem was less extensive than it became in his later years of unbounded indulgence.

SON OF MAN, a phrase used to signify man generally, Num. xxiii. 19; Ps. viii. 4; Heb. ii. 6. It was the ordinary designation of the prophet Ezekiel when God addressed him, Ezek. ii. 1, 3, 6, 8. It was also once given to Daniel, Dan. viii. 17. It seems to have been an Aramaic idiom, equiva-

lent to "man," in common use in the region where Ezekiel and Daniel resided. Thus we find it perpetually occurring in the Syriac version, as for example, "The first son of man, Adam, was a living soul;" "The first son of man earthly of the earth, the second son of man the Lord, from heaven," 1 Cor. xv. 45, 47. It is, further, the phrase used in that remarkable vision in which Daniel saw One "the Son of Man," brought to the Ancient of Days and invested with a sovereignty that should include all nations and that should never be destroyed, Dan. vii. 13, 14. That this had a Messianic reference cannot be doubted. And therefore, when our Lord so designated himself, Matt. viii. 20; ix. 6, and elsewhere, he announced himself as the Messiah, the Son of God manifested in human form, revealing the mystery of the two natures in one Person. The Jews seem fully to have understood what he meant; they saw that he claimed an identity as "Son of man" with the Deity, the "Son of God," Luke xxii. 69, 70; compare John xii. 34. Stephen uses this title of Christ, Acts vii. 56. With this exception, in the Gospels and apostolic history it is applied to him only by himself.

of Palestine, of lower but still of noble rank. But there is so little in it that is distinctive of any individual that it is difficult to believe it to have been composed either solely or chiefly with a view to any particular nuptial festivity. In part it resembles a pastoral, in part a drama, in part an epithalamium, or nuptial song; yet it is not properly either of these. The peculiarity of its construction and the generality of its references seem to intimate that it sprang from, and is intended to lead to, a contemplation of the subject apart from personal application and in its highest and most important bearings.

Undoubtedly, the Song of Songs may be viewed as a beautiful exhibition of the legitimate exercise of that merely human love which our Creator has implanted in our nature, and has recognized and sanctioned in the institution of marriage, which is declared to be "honorable in all." Yet, if this were the main object of the poem, it might well be expected that frequent reference would be made to those abuses of which Solomon himself affords so striking an example. We are therefore led to look for some other design.

On examining the word of God we find numerous passages in which the marriage relation is used to represent the connection between Jehovah and his chosen people. Soon after he had graciously entered into covenant with the Israelites at Sinai he speaks of the sin of forsaking his worship for that of false gods as unfaithfulness to the bonds of marriage, Ex. xxxiv. 15, 16; Deut. xxxi. 16; and he continues to use the same figure in Judges and the later books. This metaphor reappears with great amplification, and often in more pleasing forms, in the prophetic writings, Isa. liv. 5; Jer. iii. 20; Hos. ii. 2, 7. It was therefore evidently familiar to the minds of the Hebrews; so much so, indeed, that the metaphorical language is often used without any intimation that it is not to be taken literally; and some of the words relating to the violation of the marriage covenant are employed even more frequently in a figurative sense than in their literal meaning. Hence it was not improbable that the love of Jehovah to his people should be represented in a longer allegorical poem, nor was it necessary that any explanation of such a purpose should be interwoven or appended. Accordingly, the Jews have always so understood the Song of Solomon. The ancient book Zohar, the Chaldee Targum and later Jewish commentators explain it in this way. Such an application, moreover, is in perfect harmony with another inspired poem, Ps. xlv., and it is in accordance with the practice which has prevailed universally in the East, even to the present day, of expressing love to the Creator in the language of this human passion. And this mode of representation does not stop with the Old Testament. The relation of Jehovah to the Hebrew nation having been designed to foreshadow his connection with his spiritual Church, it naturally supplies the writers of the New Testament with language most appropriate to exhibit the relation between our Lord and his people. Thus, Jehovah was David's shepherd, Ps. xxiii.; Jesus is ours, John x. 11, 14. And thus also Christ is the bridegroom and the Church his bride, 2 Cor. xi. 2; Rev. xxi. 2. Accordingly, Christian commentators in every age have regarded this poem as aptly expressing the mutual love of the Saviour and his Church, and as fitly representing the closeness and perpetuity of the union which subsists between them.

Some portions of this book have been regarded as unnatural, and others have been objected to as

wanting in delicacy. These objections, however, are owing partly to defects in the translation of particular passages, and partly to ignorance or forgetfulness of the great difference which exists between Oriental customs and Oriental poetry and those of Europe.

This poem is in the form of a dialogue, the chief speakers being Solomon and his bride, with the occasional interposition of female attendants, and perhaps of other spectators. But it is not easy to mark the divisions, the point of transition from one subject to another being not always very perceptible. Some find here twelve idylls, others eight songs. Others, again, divide it into seven days, corresponding to the days of a marriage-feast. But perhaps it is best to divide it into four principal portions.

PART I. The bride desires the society of her husband, whom she seeks and finds in his rural retreat; after mutual expressions of affection she falls asleep and dreams of him, ch. i.-iii. 5. This portion of the poem was probably designed to exhibit the desire of the Church for the coming of the Lord.

PART II. introduces a grand royal marriage procession to Jerusalem, followed by the private endearments of the bridegroom and the bride, who then return to the marriage-feast, ch. iii. 6-v. 1. In this part the glory of Christ and of his Church, and his delight in his people, seem to be the subject.

PART III. darkens the picture by introducing the indifference of the bride to her husband, followed by her repentance, her anxious search, her sufferings, and at last her restoration to the happy enjoyment of his society and affection in the very place where she had found him before, ch. v. 2-viii. 4. This evidently displays in an affecting manner the declension of piety in the Church and its attendant sorrows, in contrast with the forgiving grace of the Redeemer and the happiness of restoration to his favor.

PART IV. shows us the bride, notwithstanding the opposition of her family, finally separating herself from them, and devoting herself and all she has to her husband, ch. viii. 5-14. This seems to depict the entire separation of the Church from the world, and its perfect consecration to the love and service of its Lord.

SONG OF THE THREE CHILDREN. See DANIEL, APOCRYPHAL ADDITIONS TO.

SONNA (son'na), in Mohammedan law, is, according to the Book of Definitions, the observance of religion in matters respecting which there is no positive and necessary command; also the general practice of the prophets, with some few exceptions. The Sonna, therefore, comprises the Mohammedan traditions.

SONNITES (son'nites), the orthodox Mohammedans, who rigidly adhere to the traditions, and are famous for their opposition to the several sects, especially the *Shiites*, who reject the traditions. The Turks belong to the former, the Persians to the latter sect.

SONS OF GOD, a designation given in the Old Testament to angels, Job i. 6; ii. 1; xxxviii. 7. There cannot be a doubt of the beings intended in these places, but there is considerable doubt in regard to another place where the same phrase is employed, Gen. vi. 2, 4. It is very frequently interpreted of the descendants of Seth, supposed

to be a godly race, intermarrying with the posterity of Cain, regarded as degenerate. And this notion is corroborated by the fact that the Israelites, God's chosen family, are called his children, Deut. xiv. 1. It is supposed, again, that the sons of eminent persons, to whom the name "gods" is sometimes given, Ex. xxii. 28, allied themselves with females of inferior rank. Many respectable writers are dissatisfied with both these notions. Dr. Kalisch is decided against the application of the phrase to human beings; he refers to the many wild legends which may have had their origin from this passage, but which he supposes to have obtained currency before the narrative was written, and which he seems to believe were here referred to. "The Hebrew historian," says he, "admits for one moment the existence of a superstition, in order for ever to subvert and to eradicate it."

SOOFFEES (so'f'feez), SOUFEEES, SOPHIS, or SOFIS, a sect of Persian philosophers who derive their name from the Arabic word *soof*, pure, meaning morally so—wise, pious. They are

SOPHERETH (so'fe-reth), one whose descendants, Solomon's servants, returned with Zerubbabel, Ezra ii. 55.

SOPHISTS (sof'ists). This word is derived from the Greek *sophistes*, which is again derived from *sophos*, "wise." Originally the word signified a person of talent and accomplishments, but it was afterward applied to a class of men who arose in Greece in the fifth century B. C., who became teachers of the various arts and branches of learning for hire. Hence the term came to be the designation for all who cultivate any science with a view to outward advantages, careless of the truth of what they advance, except in so far as it may contribute to those purposes. Protagoras of Abdera was the first Greek who assumed the name of *Sophist*. He flourished in Athens, 440 B. C., and had many pupils. Hippias of Elis, Prodicus of Ceos, and Enthydemus of Chios were among the early leaders of the school. The leading feature of the Sophistic doctrine was a dislike to everything fixed either in ethics or philosophy.

SOLOMON'S POOLS.—See SOLOMON, POOLS OF.

scattered over the Persian empire. Henry Martyn calls them "Mystic Latitudinarians." Their rise was nearly coincident with Mohammedanism. The Sooffeism of Persia is evidently the idealism of the Eastern and Western Worlds. They express contempt for many of the tenets of Mohammedanism, dislike its forms, pretend to communion with the Deity, indifference to all opinions, and philosophical Pyrrhonism. Mr. Martyn asked a Sooffee doctor, "What were his feelings at the prospect of death—hope, fear, or neither?" The reply was, "Neither, and that pleasure and pain were both alike."

SOOTHSAYER (sooth'say-er), Isa. ii. 6. See DIVINATION.

SOP, John xiii. 26, 27, 30, a piece of the unleavened bread dipped in the broth of bitter herbs. See MEALS, PASSOVER.

SOPATER (so'pa-ter), a Christian of Berea who accompanied St. Paul into Asia, Acts xx. 4. This name may possibly be a contracted form of Sosipater.

The *useful* was held to be the only mark by which one opinion could be preferred to another; and an absolute standard in morals was rejected, and it was maintained that that only is true which seems so to the individual, and true only as long as it seemed to be so. The maxim was relied on that "man is the measure of all things." These and similar doctrines they maintained with great subtlety and acuteness, and they found numerous disciples among those who were well prepared for the admission of tenets which swept away at once all the remnants of those prejudices which might still interpose a barrier between their passions and their gratification. Selfishness could thus easily find an apology, and injustice and rapine could conveniently produce arguments that pleased an avaricious and dishonest mind. Viewed as a link in the chain of philosophical development, the Sophists were doubtless an involuntary cause of the greater depth and soundness which subsequently prevailed in the Greek philosophy. When men saw how easy it was to demolish systems, the necessity was felt that the foundations of human knowledge should be laid much deeper down on solid principles than heretofore; and

thus they undesignedly led to the formation of a more profound and solid ethical school, which arose under the auspices of Plato and Aristotle. They were obliged to insist on the inherent distinctions of right and wrong, of the guilt of wrongdoing; and thus the doctrines of Plato and Aristotle stand out in healthful contrast with the demoralizing tenets of Heraclitus or Parmenides.

**SOPHOCLES** (sop'ō-kleez), **EVANGELINUS APOSTOLIDES**, LL.D., who has held a distinguished place in the literature of the United States, was born in 1807, at Tsangaranda, near Mount Pelion, in Greece. For several years he lived in the convent of Mount Sion, and in 1829 he was induced by the American Board of Commissioners of Foreign Missions to settle in the United States. After a preparatory course at Monson Academy, Massachusetts, he entered Amherst College, but before taking a degree he began to teach, rendering valuable aid at Amherst, Hartford and New Haven. In 1842 he became tutor in Greek at Harvard, and in 1859 adjunct Greek professor. In 1860 the sphere of his duties was greatly enlarged, as he was assigned to ancient, Byzantine and modern Greek, and in these departments he has prepared and published a great number of most valuable works, including grammars, lessons, exercises and text-books. Chief among his works is a large quarto volume on the later and Byzantine Greek, illustrative of the writings of the historians and the theologians of the Constantinopolitan empire. This great work, which takes rank with the glossaries of Ducange and Charpentier, treats of the enormous number of fifteen thousand words, and its value is recognized by all scholars.

**SOPHONIAS** (so-fo-ni'as), 2 Esd. i. 40, the same as the prophet Zephaniah.

**SORBONNE** (sor-bon'), **ROBERT DE**, founder of the celebrated college of that name at Paris, was born at Sorbon, near Rheims, in 1201. Though originally poor, he yet acquired celebrity as a preacher, and became chaplain to Louis IX. When appointed canon of Cambrai, he laid the foundation of his college in 1253. He died in 1274, and left all his property to the improvement of his college. He wrote a number of theological tracts and treatises of no permanent worth.

The college soon won no little renown, and it is said to have been the model on which the great English colleges were founded, in which there were a lodging and provisions secured for the inmates. In 1629 Cardinal Richelieu adorned the Sorbonne with several new buildings, and among them he constructed a splendid library. This great establishment exercised a mighty influence in ecclesiastical affairs, and it greatly affected the national mind, especially during the sixteenth and the seventeenth centuries, and the free-thinking skeptical wits of the age usually spoke of it as being a concentration of bigotry. That it was celebrated for the acuteness and subtlety of its disputants is attested by the caustic lines of Butler, where, in his *Hudibras*, he says:

"For he a rope of sand could twist,  
As firm as any learned Sorbonist."

**SORCERER** (sor'ser-er), **SORCERY** (sor'-cer-e), Acts viii. 9 and elsewhere. See **DIVINATION**.

**SOREK** (so'rek), the valley in which Delilah lived, Jud. xvi. 4. It was probably to the north of Eleutheropolis, not far from Zorah.

**SORTAIN** (sor'tain), **JOSEPH**, called by Bishop Copleston "my jewel of a nonconformist," was born in 1809. He was of Huguenot descent, and was induced by family traditions to enter the dissenting ministry, though not without a great struggle before he decided against the Church. He graduated at Trinity College, Dublin. He was a member of the College Historical Society, and at a time when there were in it men of great power young Sortain shone conspicuously as an eloquent orator. He accepted an offer from the trustees of Lady Huntingdon's connection to take one of their chapels in Brighton, and commenced there his ministry in 1832. Soon he became known as a most eloquent preacher and orator, and was attended by crowds. The most distinguished men in the nation testified in no measured words to the thrilling power of his pulpit eloquence, while Mr. Thackeray spoke of him as the most accomplished orator he had ever heard in his life. More than one offer was made him either to leave Brighton or to take orders and a living in the Church of England, but he declined all and finished a brilliant ministry of wellnigh thirty years where it was commenced. His death occurred in 1860.

**SORTES** (sor'teez). This is a Latin word signifying *lots*, and it has been used to designate a species of divination. A favorite author was opened, and the first passage that met the eye was used to intimate the probable issue of the case in hand. The Greeks generally used Homer for this purpose, and hence the term "Sortes Homerice" became common among them. So also among the Romans Virgil was used, and among them the phrase "Sortes Virgilianæ" was equally common. In Christian times the "sortes sanctorum" came into fashion. They were obtained by consulting the inspired writings in the manner before described. Sometimes, also, the inquirer went into a church while service was being performed, and drew a prognostication from the first words he heard. In this way St. Anthony was directed to adopt a life of solitary devotion. These practices led to much superstition. They are condemned by Augustine in his "Epistle to Januarius," but they are nevertheless mentioned with evident credulity and approbation by early ecclesiastical writers, Gregory of Tours states that the French prince Meroveus, having fled to the Basilica of St. Martin, placed separately on the saint's tomb the Psalms, the book of Kings and the Gospels; and spending three days and nights at the tomb in fasting and devotions, on the fourth day he opened these sacred books, from each of which he drew a discouraging prediction. Elections to the episcopal offices and other solemn proceedings seem to have been sometimes decided in the same manner in those ages; and even after many abuses of those days had ceased, it was long a common practice on the consecration of a bishop, after the book of the Gospels had been laid on his head, to consider the first verse which offered itself as a prognostic of his behavior and the fortunes of his episcopacy. Thus the death of Albert, bishop of Liege, was intimated by the ominous occurrence of the passage respecting the execution of John the Baptist; and that prelate was accordingly put to death by Henry VI. In the fifth century the Council of Vannes forbade the practice of the "sortes," and the anathema of that council was often repeated on later occasions, in which the consulting of the Scriptures in such a way is classed with other profane and magical modes of divination.

**SOSIGENES** (so-sig'e-neez), an Egyptian astronomer who assisted Julius Caesar in regulating the Roman calendar. The philosopher, by tolerably accurate observations, discovered that the year was three hundred and sixty-five days and six hours; and to make allowance for the odd hours, he invented the intercalation of one day in four years. The suppletion of the sixth day before the calends of March was called the intercalary day, and the year in which this took place was styled bissextile. This was the Julian year. See **YEAR**. Sosigenes was the author of a commentary upon Aristotle's book *De Celo*.

**SOSIPATER** (so-sip'a-ter). 1. A captain in the Maccabean wars, 2 Macc. xii. 19, 24. 2. A Christian from whom St. Paul sends a salutation to the church at Rome, calling him his kinsman—i. e., fellow-tribesman—Rom. xvi. 21. Some have believed him the same with Sopater.

**SOSTHENES** (sos'then-ez), a ruler of the Jewish synagogue at Corinth, Acts xviii. 17. Whether he became a Christian and was the person whom St. Paul joins in his address to the Corinthians, 1 Cor. i. 1, is uncertain.

**SOSTRATUS** (sos-tra'tus), 2 Macc. iv. 27, 29, an officer in Jerusalem under Antiochus Epiphanes.

**SOTAI** (so'ti), one whose descendants, called Solomon's servants, returned with Zerubbabel, Ezra ii. 55.

**SOTO** (so'to), **DOMINIC**, a learned Dominican, was born in 1494, at Segovia, where his father was a gardener. He studied divinity at Alcalá, as well as at Paris, entered among the Dominicans on his return to Spain, and owing to his abilities was appointed confessor to Charles V., by whom, in 1545, he was deputed to the Council of Trent. Though distinguished for his eloquence, he possessed but little ambition, refused the bishopric of Segovia, and early resigned the place of imperial confessor. He died in 1560. He wrote a "Commentary on the Epistle to the Romans," besides other works.

**SOTWELL** (so'twel), **NATHANIEL**, was an English Jesuit. His real name was Southwell. He entered the order in 1624, and became secretary to the general of the order in 1648. He undertook the task of preparing memoirs of the most eminent men in the Society of Jesus, and he carried the work down to the year 1675. Several editions of it have been published. Oudin carried his work down with much care, beginning his labors in 1733. Southwell died at Rome in 1676.

**SOUBISE** (soo-beez'), **BENJAMIN DE ROHAN**, DUKE OF, son of Renatus de Rohan by the only daughter of John de Parthenai (see the next article), distinguished himself on the side of the Protestants, and with his brother, ably defended the town of Rochelle against the troops of France. In 1621 he long maintained the independence of St. Jean d'Angely against Louis XIII., and when he surrendered, obtained honorable terms and a free pardon. The following year he took Oleron, and extended his conquests over Poitou; but a reverse of fortune obliging him to fly, he retired to England, where he died in 1640.

**SOUBISE**, **JOHN DE PARTHENAI**, LORD OF, descended from an illustrious family in Poitou, was one of the chief leaders of the Protestants. He went to France from Ferrara, where he had enjoyed the favor of the duke, was sent by the prince of Condé, his new patron, to defend Lyons, and behaved there with such bravery that the duke of Nemours was obliged to raise the siege. This great man, so much loved by the Calvinists and dreaded by the Catholics, died in 1566, aged fifty-four.

**SOUL**. See **SPIRIT**.

**SOULE** (sool), **JOSHUA**, D.D., was born in 1781, at Bristol, Maine. In 1798 he was licensed to preach, and in 1802 he was ordained an elder. In 1804 he was made presiding elder of the Maine district, and in 1808, at the General Conference at Baltimore, he prepared the plan which was then adopted for a delegated General Conference. He was appointed book agent and editor of the "Methodist Magazine" in 1816, and he declined an appointment which was made to him in 1820 to the episcopate. In 1821 the New York City station was assigned to him, and in 1822 he held a similar position in Baltimore. At length, in 1824, he was chosen again to the episcopate, and he accepted the office and was ordained. In 1842 he went as a delegate to the British Wesleyan Methodist Conference, and he visited France and several parts of the British Islands. On the division of the Church he adhered to the Southern portion, and took up his residence at Nashville, Tennessee. In 1853 he traveled extensively in California on behalf of the interests of religion, and after a life of great labor he died at Nashville, Tennessee, March 6, 1867. He was an earnest, zealous, prudent, pious and most useful man.

**SOUTH**. The Hebrews had several words of expressive derivation, as one implying dryness, another brightness (opposed to which was a region "covered"—i. e., with darkness, for the north), to indicate the south. Also, as in respect to the points of the compass a man was supposed to have his face to the east, and consequently the south was on his right, it was often designated by "the right hand," Job xxiii. 9. The south is put for countries or districts lying to the south of Palestine, such as Idumæa, parts of Arabia, the desert of Paran, etc., and more particularly that which was afterward distinguished as "the south country." Hence, though Abram leaving Egypt journeyed in a north-east direction, he is said to have gone "into the south," Gen. xiii. 1. Egypt is sometimes intended, probably in Isa. xxx. 6; Dan. xi. 5, 15, and Arabia, Matt. xii. 42. But in Ezek. xx. 46, 47, Judea seems to be meant, perhaps in reference to the position of the prophet in Babylonia.

**SOUTH**, **ROBERT**, an English divine of remarkable abilities and attainments, was born at Hackney in 1633, and educated at Christ Church, Oxford. He was ordained by one of the deprived bishops, and after the Restoration was chosen public orator of the University of Oxford. He became successively chaplain to the earl of Clarendon, prebendary of Westminster, canon of Christ Church, and rector of Islip, in Oxfordshire. In the reign of James II. he was in a great strait between his opinions respecting the divine right of kings and his hatred of popery, but though he refused to take part in any of the steps which led to the Revolution, when it was accomplished he gave in his

adhesion. In 1693 he carried on a controversy with Sherlock on the doctrine of the Trinity, when both disputants were charged with heresy for attempting to explain an indefinable mystery. He declined frequent offers of a bishopric, feeling that he was unfitted for the office by his irritable temper and proneness to bitter sarcasm. His sermons, which fill twelve octavo volumes, are among the classics of English theology, and possess the merits of earnestness and originality, clearness, good sense, lively invention and forcible expression. He died in 1716.

**SOUTHARD** (suth'ard), **SAMUEL LEWIS**, was born in 1819, at Trenton, New Jersey. He entered Princeton College, and graduated in the year 1836. He entered the ministry of the Prot-

scribed a mass of unintelligible nonsense, which she dignified by the title of prophetic inspirations, while she carried on a lucrative trade in the sale of seals, which were, under certain conditions, to be the passports to eternal salvation. At length she was attacked with a disease which gave her the outward appearance of pregnancy, and she boldly announced to the world that she was destined to be the mother of the promised Shiloh. So fully persuaded, indeed, were her deluded followers of its truth that they made the most splendid preparations for the reception of the miraculous babe that superstition and credulity could suggest; when, about the end of 1814, her death put an end to their expectations. The body of Joanna underwent an anatomical examination after her death, when she was found to have suf-

THE CEDAR-GROVES OF LEBANON.—See **SOLOMON**.

estant Episcopal Church, and became an effective author as well as an excellent preacher. Among his works are the following: "The Mystery of Godliness," arranged in the form of sermons, "Pastoral Letter to the Parishioners of Calvary Church, New York," etc. He contributed valuable papers to the different religious journals. He died in 1859.

**SOUTHCOTT** (south'kot), **JOANNA**, a self-deluded fanatic, was born in the west of England, of parents in humble life, in 1750. When about forty years of age she began to give herself out for a prophetess; and her numerous converts, who are said at one time to have amounted to at least one hundred thousand, put implicit faith in her wild and blasphemous rhapsodies. She described herself as the woman spoken of in the book of Revelation; and although in the highest illiterate, she

ferred from dropsy, but the belief in her divine mission was not eradicated from the minds of her votaries, and the sect is not even yet wholly extinct.

**SOUTHGATE** (south'gate), **HORATIO**, D.D., was born in 1812, at Portland, Maine. He entered Bowdoin College, and graduated in 1832, after which he studied theology at Andover, and entered the ministry of the Episcopal Church in 1834. He was consecrated missionary bishop for the East, including those lands which recognized the sultan of Turkey. In 1850 he resigned this position, and, rejecting the office of bishop in California, he accepted the rectorship of St. Mark's Church, Portland, Maine, and in 1852 that of the Church of the Advent in Boston. He is the author of a Tour through Armenia, a narrative of a visit to the Syrian (Jacobite) Church of

Mesopotamia, and various works bearing on parochial matters and the different services of the Church.

**SOUTH-RAMOTH**, 1 Sam. xxx. 27. See BAALATH-BEER.

**SOUTHWELL** (south'well), ROBERT, an English Jesuit and poet, was born in 1560, and is said to have descended from an ancient family either in Norfolk or Suffolk. Being sent abroad for education, he became a Jesuit at Rome in 1578. In 1585 he was appointed prefect of studies in the English college there, and not long after was sent as a missionary into England. After carrying on his mission for some time, he was, in 1592, apprehended and examined with the strictest rigor, but having evaded the questions put to him, he was imprisoned for three years, and, as he affirmed, underwent the torture ten times. He at last owned that he was a priest and a Jesuit, that he went to England to preach the doctrines of the Roman Catholic religion, and was prepared to lay down his life for it. He was tried at Westminster, and executed at Tyburn, February 21, 1595. He had a talent for poetry, and was a good prose-writer. Several editions of his writings have appeared—two in 1595, one in 1609. They include, among others, "Marie Magdalen's Funerall Teares" in 1623, "The Triumphs over Death" in 1628. Then, again, his prose works were published in 1628, and in 1656 a fine edition of his poetical works was issued under the editorial supervision of W. B. Turnbull. Critics differ as to his literary merit, but Dodd, Drake and Hallam view him with favor, and the repeated editions of these old works show that there is a power in them which is recognized.

**SOW**. See SWINE.

**SOW, SOWER, SOWING**, Lev. xix. 19. See AGRICULTURE.

**SOWER** (sow'er), CHRISTOPHER, a German Baptist minister, and for forty years an enterprising and successful printer and publisher in Philadelphia, was born in Hesse Darmstadt, Germany, September 26, 1721, and five years later his parents emigrated to the United States, settling in Germantown, then near and since part of Philadelphia. He early gave tokens of a change of heart, and after a careful training was ordained to the gospel ministry in the German branch of the Baptist Church. Meanwhile, his father had established a printing and publishing house, and the extent of his business may be inferred from the fact that he had found it expedient to establish a type foundry and a printing-ink manufac-

tory. He had issued a number of valuable works, including a quarto German Bible, the largest work as yet issued from any press in the colony, not equalled for many years subsequently. About the year 1744 he resigned his business to his son, and lived in comfortable retirement for sixteen years, dying in 1760. The son, though he maintained his ministerial relation to the church, preaching gratuitously whenever and wherever he was wanted, yet accepted, and not only continued but enlarged the business, printing many books and a weekly newspaper. In 1762 he published a second, and in 1776 a third edition of the quarto German Bible. He conducted by far the most extensive book manufactory then established in America. He kept in operation binderies, a paper-mill and ink manufactory, and a foundry for Ger-

**SOZOMEN** (so-dzo'men), an ecclesiastical historian, born, according to some, at Salamis, in the island of Cyprus, but, according to others, at Gaza or Bethulia, in Palestine. He died 450 A.D. His history extends from the year 324 to 439, and is dedicated to Theodosius the Younger. He is chargeable with several errors in the relation of facts, and has incurred censure for his commendations of Theodorus of Mopsuesta, with whom originated the heresy of two persons in Christ. His history is usually printed with that of Socrates and other early ecclesiastical historians. A work not now extant, containing a summary of the affairs of the Church from the ascension of our Saviour to the defeat of Licinius, was written before his history.

**SPAGNOLI** (spa-n'o'le), BAPTIST, superior-general of the Carmelites, born in 1444, at Mantua, distinguished himself by the sound and virtuous regulations which he attempted to introduce among the members of his order. He devoted himself to studious pursuits and wrote verses with great facility, but not always with success. His works comprise eclogues and other poems and prose miscellanies. He died March 20, 1516.

**SPAIN**. This name was anciently applied to the whole peninsula which now comprises Spain and Portugal. In the time of Paul, Spain was a Roman province, and many Jews appear to have settled there. It seems clear from Rom. xv. 24, 28, that Paul formed the design of proceeding to preach the gospel in Spain; that he ever executed this intention is necessarily denied by those who hold that the apostle sustained but one imprisonment at Rome—viz., that in which the Acts of the Apostles leave him; and even those who hold that he was released from this imprison-

ment can only conjecture that in the interval between it and the second he fulfilled his intention. There is, in fact, during the first three centuries no evidence on the subject beyond a vague intimation by Clement, which is open to different explanations; and later traditions are of small value.

**SPALATIN** (spa-la-teen'), GEORG, a German Roman Catholic priest who became one of the Reformers and an intimate friend and supporter of Luther, was born in 1484. He possessed considerable influence over Frederick, elector of Saxony, and his successor, and took part in the Diet of Spire. He exerted himself most successfully in promoting sound education in Germany. His death occurred in 1548.

**SPALDING** (spawl'ding), JOHANN JOACHIM, a celebrated Swedish divine, was born in 1714. He studied at the University of Rostock,

and afterward at Greifswald, and after various engagements as pastor settled, in 1764, at Berlin, as first pastor of St. Nicholas Church, which post he filled till 1788. The publication of the Religious Edict compelled him to retire. His sermons were esteemed very highly for their depth both of thought and feeling and their pure and elegant style, and several collections of them have been published. His work on the "Destination of Man" was reprinted many times, and his other works, "On the Value of Feeling in Christianity," "On the Utility of Preaching" and "Religion the Chief Affair of Man," passed through several editions. He died at Berlin in 1804.

**SPALDING**, MARTIN JOHN, D.D., who became archbishop of Baltimore, was born in 1810, in Marion county, Kentucky. He was educated in St. Mary's College, near Lebanon, Kentucky, and afterward in St. Joseph's College, at Bardstown, Kentucky, whence he proceeded to Rome, where he graduated in 1834. He rose through the lower orders of the clergy, and in 1848 he was raised to the episcopate as bishop of Seregone. In 1850 he was made bishop of Louisville, Kentucky, and on the death of Archbishop Kenrick in Baltimore he succeeded him in the metropolitan church. He was a voluminous writer. In 1844 he reviewed D'Aubigne's "History of the Reformation," and in the same year he published his "Early Catholic Missions of Kentucky." In 1847 his "Lectures on the Evidences of Catholicity" appeared, and in 1852 he published the "Life of Rt. Rev. B. J. Flaget." The "History of the Protestant Reformation," in two volumes, was given to the public in 1860, and from 1865 he was engaged on an edition of the Abbé Darra's "History of the Catholic Church," which, in 1866, was finished in four volumes. He died at Baltimore in 1872.

**SPALDING**, SAMUEL, was born in London in 1807. He gave promise of great intellectual powers, and in the London University, where he studied for the Dissenting ministry, he was greatly distinguished. In consequence of failing health he had recourse to a sea-voyage, and in 1834 he died at the Cape of Good Hope. He is distinguished by a remarkable work which he left behind him, and which was published in 1843, entitled "The Philosophy of Christian Morals." Few works on morals in modern times have elicited more commendatory notices than this acute treatise has done. Dr. Haven, in his "Studies in Philosophy and Morals," W. E. H. Lecky, Blakey, in his "History of the Philosophy of Mind," and the leading reviews, have all recognized the work as being one of the most important on ethical philosophy.

**SPAN**, Ex. xxviii. 16. See MEASURES.

**SPANDRIL** (span'dril), an architectural term, designating the triangular space which is formed between the extrados of an arch, a horizontal line from the apex of the arch and a perpendicular line from its springing. The term "extrados" means the exterior curve of an arch.

**SPANHEIM** (span'him), the name of a family of illustrious German divines. 1. WIEGAND, D.D., was a very learned man, who flourished in the sixteenth century, and became ecclesiastical counselor to the elector palatine. He was progenitor of

a learned race, of whom we can notice but two, a son and a grandson, 2 and 3 of this article. He died in 1620. 2. FRIEDRICH, D.D., born at Amberg, in the Upper Palatinate, in 1600, was educated under his father and at Heidelberg and Geneva. He refused a professorship at Lausanne, and in 1631 was appointed a professor of theology at Geneva, which he left in 1642 to settle at Leyden. He distinguished himself there as professor of theology, and also as a preacher in the Walloon Church. He died in May, 1649. He wrote "Catholic Disquisitions on Grace;" "Gospel Doubts," etc. 3. FRIEDRICH, D.D., son of the preceding, was born at Geneva in 1632. He studied under James Golius, and after distinguishing himself as a preacher at Utrecht, was invited by the elector palatine, in 1665, to fill the chair of theology at Heidelberg. He removed to Leyden in 1670, where he succeeded to the professorship of theology and sacred history. His laborious studies enfeebled his health, and he died of palsy in 1701. He left only one son, out of several children whom he had by three wives. His writings are very numerous, and are chiefly on theological subjects, of which the principal are "An Introduction to Sacred History and Antiquities," the substance of which Rev. George Wright republished in English under the title "Ecclesiastical Annals, from the Commencement of Scripture History to the Sixteenth Century;" "An Introduction to Sacred Geography," etc.

**SPARKE**, THOMAS, a Puritan divine, was born in Lincolnshire in 1548, and educated at Magdalen College, Oxford. He was afterward presented to the parsonage of Bletchley, in Buckinghamshire; and he was also chaplain to the bishop of Lincoln, who, in 1575, bestowed on him the archdeaconry of Stow. In 1582 he resigned his archdeaconry, and was installed into the prebend of Sutton in Mariseo, in the cathedral of Lincoln. In 1603 he was called to the conference at Hampton Court, as one of the representatives of the Puritans; but the issue of the Hampton Court Conference was, that he inclined to conformity, and afterward expressed his sentiments in "A Brotherly Persuasion to Unity and Uniformity in Judgment and Practice." He died in 1616.

**SPARROW** (spar'ro). The Hebrew word so rendered applies to small birds, generally of the sparrow genus, or similar to the sparrow, thus including, Dr. Kitto thinks, thrushes, starlings, finches, larks, etc. The common sparrow is the attendant of civilized man, and may be commonly seen, even in the modern populous cities. There are many accidental varieties and kindred species. Upwards of one hundred are said to occur in the Holy Land. The sparrow mentioned in Ps. cii. 7 is described as a solitary bird, and is thought to be a species of thrush. But Dr. Thomson, who notices the abundance of house-sparrows and field-sparrows in Palestine, says: "They are a tame, troublesome and impertinent generation, and nestle just where you don't want them. They stop up your stove- and water-pipes with their rubbish,

build in the windows and under the beams of the roof, and would stuff your hat full of stubble in half a day if they found it hanging in a place to suit them. They are extremely pertinacious in asserting their right of possession, and have not the least reverence for any place or thing. David alludes to these characteristics of the sparrow in Ps. lxxxiv., where he complains that they had appropriated even the altars of God for their nests. Concerning himself he says: 'I watch, and am as a sparrow upon the housetop,' Ps. cii. 7. When one of them has lost its mate—a matter of everyday occurrence—he will sit on the housetop alone and lament by the hour his sad bereavement. These birds are snared and caught in great numbers, but, as they are small and not much relished for food, five sparrows may still be sold for two farthings; and when we see their countless numbers, and the eagerness with which they are destroyed as a worthless nuisance, we can better appreciate the assurance that our heavenly Father, who takes care of them so that not one can fall to the ground without his notice, will surely take care of us, who are of more value than many sparrows," Matt. x. 29; Luke xii. 6, 7.

THE SPARROW.

**SPARROW**, ANTHONY, a learned prelate, was born at Depden, in Suffolk, and educated in Queen's College, Cambridge, of which he became scholar and Fellow, but was ejected in 1643, with other authorities of the college, for his loyalty and refusing to sign the Covenant. Soon afterward he accepted the rectory of Hawkedon, in Suffolk, but was again ejected for reading the common prayer. After the Restoration he returned to his living, and was made archdeacon of Sudbury and a prebendary of Ely. In 1667 he was elected master of Queen's College. In 1677 he was made bishop of Exeter, and in the following year he was translated to Norwich, where he died in 1685. He is well known for his "Rationale of the Book of Common Prayer;" "Authority of the Church;" "Confession of Sins;" and "Collection of Canons, Constitutions, etc., of the Church of England."

**SPARTA** (spar'ta), 1 Macc. xiv. 16, a celebrated city of Greece, in the Peloponnesus. In the Maccabean times a relationship was believed to subsist between the Jews and the Spartans, or Laedemonians, as they were also called; and a correspondence ensued between the two nations, 1 Macc. xii. 1-23. The first letters passed probably in the time of the high-priest Onias III.; but this is somewhat doubtful.

**SPAULDING, JOSIAH**, who was pastor of the church of Buckland, Massachusetts, and who died in 1823, deserves a place in this work because of his short "Treatise on Moral Inability," which he published in 1782, and another work on Universalism, which appeared in 1805.

These works are evidently the product of a deep and clear intellect. He closed a long pastorate in the seventy-third year of his age.

**SPEAR.** See ARMS.

**SPEARMEN** (speər'men), Acts xxiii. 23. These were probably light-armed troops.

THE HEAD OF A SPHYNX.—See SPHYNX.

**SPEECE** (speess), CONRAD, D.D., was born in 1776, in New London, Bedford county, Virginia. He was educated first at a grammar-school near New London, and subsequently at Liberty Hall. He desired to become a lawyer; but becoming decided on the subject of religion, he resolved on preaching the gospel, and he was admitted to the communion in the Presbyterian church of New Monmouth, and received under the care of the Presbytery of Lexington.

A SPHYNX, FROM A CANDELABRUM.—See SPHYNX.

In 1799 he became a tutor in Hampden-Sidney College; and having adopted Baptist views, he was immersed, but, under the instruction of the Rev. Dr. Alexander, he reconsidered the subject, and in a respectful manner retired from the Baptist communion, and in 1801 he was licensed to preach by the Presbytery of Hanover. He preached in a church in Montgomery county, Maryland, where he suffered from fever, and then he itinerated in the counties of Goochland, Fluvanna, Powhatan and Cumberland, Virginia. In 1813 he was installed pastor of Augusta Church; and here he remained for twenty-two years. This charge is invested with much interest. In its early days its members lived amidst terrors and alarms, and the church often served them as a place of refuge from the savage foe. It may be considered the venerable mother of Presbyterianism in Virginia, as it was in this place and in Tinkling Spring, which was associated with it, that the first regular pastor was settled. Here Dr. Speece spent the

greater part of his laborious, faithful life. He was eminently devoted to his work. Many of his sermons were published, and he was a regular contributor to the "Virginia Evangelical and Literary Magazine." He closed a long and useful life on February 17, 1836.

**SPEED, JOHN**, born at Farrington, Cheshire, England, in 1542, was for many years a successful tailor in London, but abandoning the needle for the pen, became an even more successful writer on history and chronology. His more important works were "The Genealogies of the Scriptures," republished with additions, with the title "A Defence of the Holy Genealogies," and "The History of Great Britain under the Conquests of the Romans, Saxons, Danes and Normans." He died in 1629.

**SPELMAN** (spel'man), SIR HENRY, who is known as one of the most eminent and profound of English antiquaries, was born in 1562. He was educated at Trinity College, in Cambridge, and in his eighteenth year entered Lincoln's Inn for the study of the law. He was returned as high sheriff of Norfolk in 1604, and James I., who often employed him on public business, invested him with the rank of knighthood. He settled in London in 1612 in order to prosecute his literary work, and here he continued to labor until his death, in 1641, having left a vast amount of varied and important matter behind him. His first work was devoted to the law as it stood in relation to the rights and sanctity of churches. His next was one of most wonderful research and learning, on the barbarous Latin, foreign, obsolete words and words of new signification which have descended from the Goths, Vandals and others, and which are found in charters and public documents. The first part of his work is the most complete. His great work on the Councils, Decrees, Laws and Constitutions touching ecclesiastical affairs in Great Britain met with a sad fate, as much of the edition was destroyed by the great fire of 1666. His "Discourse on the Ancient Government of England" appeared in 1642. He also prepared much on sacrilege, on the ancient statutes, and his posthumous works, which appeared in 1698, formed a large folio. His industry and his wonderful power of collecting and arranging materials have seldom been excelled, and hence his name continues to stand out among the other great collectors who have prepared the vast folios which swell the libraries of the Oxford and Cambridge Colleges, the British Museum and the libraries of the Temple and Lincoln's Inn, and form an essential part of all collections which aim at presenting a view of the history and progress of Great Britain.

**SPELT**, Isa. xxviii. 25, margin; Ezek. iv. 9, margin. In our version the Hebrew word is variously rendered "rye," Ex. ix. 32; Isa. xxviii. 25, "fitches," Ezek. iv. 9, the word "spelt" being in two places added in the margin. The grain meant is probably spelt, *Triticum spelta*, a variety of wheat with a smooth or bald ear.

**SPENCER** (spen'ser), ELIHU, D.D., was born in 1721, at East Haddam, Connecticut. He entered Yale College in 1742, and in September, 1746, he received his degree. By the advice of David Brainerd and Jonathan Edwards he directed his efforts to the Indians, who at that time attracted the attention of the most enlightened minds of the

Church. He studied the Indian language and spent a short time in missionary work, but Providence appeared to lead him into another sphere. In 1750, when he was in the twenty-ninth year of his age, he was called to and settled in Elizabeth-town, New Jersey; and he remained in this charge for about six years. He was chosen to be a trustee of the College of New Jersey, which was then at Newark. In 1756 he removed to Jamaica, Long Island, where he remained a couple of years, when he became a chaplain to the forces then engaged in the French war. He attracted much attention after his return from the army by a letter which was published on "The State of the Dissenting Interest in the Middle Colonies of America;" and in 1764 he was sent along with the Rev. Alexander McWhorter, of Newark, New Jersey, to visit the outlying and unsettled churches in North Carolina. On his return he spent about five years in St. George's, Delaware, and in 1769 he was settled at Trenton, New Jersey, where he remained until his death. He was an ardent patriot during the Revolutionary struggle, exceedingly impressive as a preacher, of great energy and promptitude in all duties and a most excellent, pious man. He died on the 27th day of December, 1784.

**SPENCER, ICHABOD SMITH, D.D.**, was born in 1798, at Rupert, Vermont. He had few literary advantages in early life, but eventually he succeeded in entering the academy at Salem, where he remained until 1819, when he entered Union College. At this time his attention was turned to the law. He studied medicine, law and theology. In 1825 he became principal of an academy at Canandaigua, in Western New York, and while attending to his duties in that sphere he continued the study of theology, and in 1826 he was licensed to preach by the Presbytery of Geneva. In 1828 he accepted a call from the Congregational church in Northampton, Massachusetts, and in September of that year was ordained. In 1832 he was installed in a Presbyterian church in Brooklyn, and this was his last sphere of ministerial labor. In 1836 he accepted the professorship of Biblical History in the Union Theological Seminary in the city of New York, which he held for about four years. Failing health obliged him to retire from active labor, and a trip to Savannah, to the White Sulphur Springs and to Sharon Springs failed to restore him, and he died on the 23d day of November, 1854. The value of the services of this great man may be estimated by the fact that in 1830 he was called to the presidency of the University of Alabama, in 1832 to a similar position in Hamilton College, while calls from Boston, New York, Buffalo, Cincinnati and other important places were urged on him for acceptance. Many of his sermons have been published, and his "Pastor's Sketches, written for Inquirers," is a most admirable, useful work.

**SPENCER, JOHN, D.D.**, was born in 1630, at Becton, in Kent, England. He entered Corpus Christi College, Cambridge, in 1645, and gained a Fellowship in that college in 1655. His great acquirements secured him speedy promotion in the Church, for in addition to the mastership of his college, which had been conferred on him, he was made rector of Landbeach, and archdeacon of Sudbury in 1667. In 1672 he was made a prebendary in Ely, and dean of that cathedral in 1677. He wrote a "Discourse concerning Prodigies," a "Dissertation on the Urin and the Thummim," in which he discussed the nature and the origin

of the Mosaic ritual, and several of the more obscure passages of Scripture, but valuable as this treatise was, it only prepared the way for his great work, by which he had long been known, "On the Laws of the Hebrews, in Four Books." This work was attacked by Witsius, and Warburton, as might have been expected, defended Spencer; and Archbishop Magee still later has characterized the work of Spencer as very learned, but very dangerous, inasmuch as its great object is to show that the Hebrew ritual was almost entirely borrowed from the Egyptians, and accommodated to the tastes which the Hebrews had acquired among that people. This view had previously been stated by Maimonides, a philosophizing Jew, and Sir John Marsham had laid hold of it. Shafford adduced many arguments against the views of Spencer, and Archbishop Magee holds that the criticism of Witsius really refutes Spencer, while Jones of Nayland considered the work "disgraceful to Christian divinity, dishonorable to the Church of England, and affording a very bad example to vain scholars who should succeed him." Spencer died in 1695.

**SPENCER, THOMAS**, born in Deptford, England, June 5, 1791, from childhood displayed remarkable powers of mind and most amiable disposition, and at the early age of eleven years became an earnest disciple of Christ. At thirteen he was bound apprentice to a glover, but his talents attracting the attention of his religious friends, he was placed in the Dissenting academy at Hoxton in January, 1807. Here he pursued his studies, and at the same time preached with immense popularity in the towns adjacent and various parts of the kingdom. On leaving the institution, June 27, 1811, he was ordained pastor of an Independent congregation in Liverpool, and his wonderful popularity made it necessary to erect a new chapel on a large scale for the accommodation of the vast numbers who flocked to hear him. He assisted in laying the corner-stone, and delivered an address, but just as public expectation was at its highest pitch, he was drowned, while bathing in the Mersey, August 5, 1811. The sensation produced by his sudden death was deep and widespread. His power in the pulpit lay not in the remarkable development of any one qualification, but in the exquisite combination and harmony of all.

**SPENER** (spe'ner), PHILIPP JACOB, D.D., an eminent German Protestant theologian, the founder of the Pietists, and aptly called the Protestant Fénelon, was born in Alsace in 1635. He studied at the University of Strasburg, visiting afterward several other universities, and in 1662 became public preacher at Strasburg. Two years later he obtained the degree of doctor of divinity, and removed to Frankfurt-on-the-Main, where he had the appointment of chief preacher. He distinguished himself by his religious earnestness, and especially insisted on the need of a general reform. He would have sermons less dogmatic and more practical. Spener removed to Dresden in 1686 as court preacher, and four years later to Berlin as inspector and first pastor of St. Nicholas' Church. Soon afterward his views were introduced at Halle, which became the head-quarters of Pietism. See PIETISTS and LUTHERAN CHURCH. Spener was author of numerous theological works, and also of several genealogico-historical and

heraldic works. He first introduced the study of heraldry into Germany. He died in Berlin in 1705.

**SPENSER** (spen'ser), EDMUND, one of England's best poets, was born about 1553, in London, and was admitted a sizar of Pembroke Hall, Cambridge, in 1569. In 1576 he published the "Shepherd's Calendar." He obtained, in 1586, a grant of lands in the county of Cork. Residence being the condition on which he held the property, he took up his abode at Killeolmain; and it was there that he wrote the "Faerie Queene," the peculiar stanza of which still goes by his name. The first three books were published in 1590, and inscribed to Queen Elizabeth, who conferred on him a pension of fifty pounds per annum. He was subsequently sheriff of Cork and clerk of the council of the province of Munster, in which latter capacity he drew up his View of the State of Ireland. The felicity which he had for several years enjoyed was, however, put an end to by the rebellion of Tyrone. His house was burnt, with one of his

THE GREAT SPHYNX.

This wonderful relic of Early Egypt has been stripped of the soil which so long covered its vast proportions, as shown in the engraving, and is now entirely exposed.—See SPHYNX.

children, and he was compelled to fly to England, where he died, January 16, 1598, and was buried in Westminster Abbey, near Chaucer; a monument was erected to his memory by Robert Devereux, earl of Essex. On this monument the date of his birth is given as 1510, and of his death as 1596, but Camden is sufficient authority for the dates we have given in this article. Spenser was a Christian. His writings are full of exalted morality, purity and devotion. As a poet he has been justly classed as scarcely second to any writer of ancient or modern times in either invention, judgment or true poetic inspiration.

**SPHYNX**, or **SPHINX** (sfīnx), a fabulous monster sent by Juno to ravage the territory of Thebes. It had the face of a woman, with the breast, feet and tail of a lion, and the wings of a bird. Having been taught riddles by the Muses, this Sphynx propounded one to the Thebans: "What is that which has one voice, is four-footed, two-footed, and at last three-footed?" or, as others state it, "What animal is that which goes on four feet in the morning, two at noon and three in the evening?" The Thebans were completely baffled; they could not guess the answer,

and each failure cost them one of their best citizens, the Sphynx devouring one each time. At last Creon the king—his son having fallen a victim—made proclamation offering to yield the throne and his daughter in marriage to any one who should guess the answer; and Oedipus came forward and succeeded, saying it was man, who when an infant creeps on all fours, then goes on his two feet, and finally, in the evening or at old age, requires a cane. Whereupon the Sphynx threw herself to the ground and perished. The Sphynx is not mentioned by Homer, but the legend is noticed in the Theogony. Though this legend is probably older than the time of the first intercourse with Egypt, the Theban monster bears a great resemblance to the symbolical statues placed before the temples. In the pragmatizing days it was said that the Sphynx was a female pirate who used to land at Anthedon and advance to the Phiccan Hill, whence she spread her ravages over the country. Oedipus, according to these expounders of mythology, came from Corinth with a numerous army and defeated and slew

**SPICES.** Under ALOES, BALM, FRANKINCENSE, MYRRH and other headings we have described the chief of those fragrant substances belonging to the vegetable kingdom which were prized by the Hebrews. Amongst ourselves the great consumers of spices are the cook and the confectioner; and to ordinary readers "spice" suggests pungent relishes like pepper, nutmeg, ginger. As, however, the word occurs in the English Bible, it generally denotes those aromatic woods or seeds or gums which were employed in embalming, 2 Chr. xvi. 4; Mark xvi. 1; Luke xxiii. 56; or perfumery, Ex. xxv. 6; 2 Ki. xx. 13. "Balm" grew in the deep subtropical depression of Jericho, and ladanum is found in islands of the Levant; the other gummy odors were obtained from Arabia, or through Arabia were imported from countries beyond—from Persia and India. In the temple service they were so important that the care of them was entrusted to a special set of officials. Certain of the Levites were "appointed to oversee . . . the frankincense and the spices. And some of the sons of

the *Nardostachys jatamansi*. It must have been imported from India by way of Arabia. Spikenard is also noted as the precious perfume with which Mary of Bethany anointed our Lord, Mark xiv. 3; John xii. 3. It is there coupled with an epithet, *pistikē*, occurring nowhere else, in regard to which critics have not been able to make up their minds. It has been supposed to designate the place from which the ointment came, to express its purity or genuineness, to signify that it was liquid or potable. One can only conjecture, but "liquid" is the most probable interpretation.

**SPIN, SPINNING.** The Israelitish women are mentioned, Ex. xxxv. 25, 26, as spinning materials for the tabernacle. Spinning also is alluded to by our Lord, Matt. vi. 28. The implements used are noted in Prov. xxxi. 19, whence we learn that distaff-spinning was the mode practiced by the Hebrews. And this mode is represented in ancient Egyptian monuments, there being no trace of the use of a spinning-wheel. Distaff-spinning is still common in the East.

THE AVENUE OF SPHYNXES, AT THE GREAT TEMPLE AT THEBES.

the priests made the ointment of the spices," 1 Chr. ix. 29, 30.

The spices placed around the body of our Lord included "myrrh and aloes," John xix. 39, 40. Of the "mixture" there were a hundred pounds weight—a costly token of reverential affection on the part of the rich Nicodemus. A lavish use of spices at the obsequies of the illustrious dead was also made by the later Romans; only, instead of being deposited with the body in the sepulchre, they were cast into the flames of the funeral pile.

**SPIDER** (spī'der). The word rendered "spider" in Prov. xxx. 28 denoted a species of poisonous lizard. See LIZARD. But in Job viii. 14; Isa. lix. 5 the spider is really meant. The original term is compounded of two, signifying respectively "agile" and "to weave;" it denotes, therefore, a swift weaver. The spider's web is most delicate and frail; hence the propriety of the illustration.

**SPIKENARD** (spīk'nard), a substance highly valued from ancient times for its fragrance. It is mentioned in Song Sol. i. 12; iv. 13, 14, and appears to have been procured from an Indian plant of the family of the *Valerianææ*, known as

**SPINOKES** (spinks), NATHANIEL, an eminent divine, born at Castor, Northamptonshire, in 1654, entered at Trinity College, Cambridge, and applied for a Russett scholarship at Jesus College, which he obtained after a strict examination. In 1685 he obtained the rectory of Peakirk, Northamptonshire, and was subsequently promoted to a stall at Salisbury and to the rectory of St. Mary, in that city. He, however, lost all his preferments in 1690 for refusing to take the oath, and lived afterward in some distress, and in dependence upon the contributions of other non-jurors, of whom he was elected one of the bishops. He died July 28, 1727, and was buried at St. Faith's Cemetery, on the north side of St. Paul's. He wrote various pious and devotional books, the chief of which was "The Sick Man Visited."

**SPINOZA**, or **SPINOSA** (spe-no'za), BENEDICT, a celebrated philosopher, the son of a Portuguese Jew, was born at Amsterdam in 1632. He was early remarkable for an ardent love of truth and a keen and logical intellect, and his first serious studies were the Bible and the Talmud. He made no secret of the doubts which grew up in his mind, and was exposed to much

persecution on account of them. He studied Latin and Greek, mathematics and metaphysics, and was especially attracted by the philosophy of Descartes. A large bribe was offered him if he would continue to conform outwardly to Judaism; but neither his will nor his poverty consented to such a degradation. An attempt was made to assassinate him, and he had a very narrow escape. He was at last excommunicated, and being driven from Amsterdam, lived for a time near Leyden, and afterward at The Hague. He devoted himself wholly to philosophy, earning such a livelihood as contented him by the trade of polishing glasses for optical instruments. His character was most estimable, and endeared him to his personal friends. His system of philosophy has been made odious by the vulgar accusation of atheism, which is the very reverse of the truth. To his thought God is the only Being, the only substance, infinite, eternal, before whom all things else have but a phenomenal existence; and his aim was to build up, on the knowledge of God as foundation, a system of morals by a rigorous mathematical method. With more reason, Spinoza has been called the father of modern Pantheism. The great defect of his system is the virtual suppression of individuality and the denial of free-will, all finite things, not excepting human actions, being parts of a necessary chain of sequences. He died at The Hague in 1677.

**SPIRE.** In ecclesiastical architecture the spire is the lofty pyramidal elevation which surmounts the tower, and it usually terminates in a cross or a vane to indicate the direction of the wind. The following seems to have been the origin and history of the spire. In the damp climates of Europe it was found necessary to form a porch at the door of the church; and when bells began to be used, the upper part of the porch was elevated so as to make a chamber for the bell; and thus the church-tower was developed. Then, again, the tower required a roof, and as wealth and taste and architectural skill were developed this roof was gradually elevated, and at length the forms of beauty became obvious which were developed by these lofty monuments, which could be seen from afar, and which, with the sound of the bell, intimated the situation of the house of God. Great efforts have been made by ecclesiastical architects to produce a fine effect by lofty spires—as at Chartres in France, at Freiburg in Germany, at Lincoln, Lichfield and Salisbury in England, and at Strasburg, where the tower rises to the vast and dizzy height of two hundred and forty-five feet above the street; thence the spire ascends two hundred and seventy-nine feet, the entire height being five hundred and twenty-four feet, thus making this church the loftiest building in Europe. St. Peter's at Rome is only four hundred and fifty-five feet; St. Paul's at London is only three hundred and sixty-five feet; but at Strasburg visitors can ascend to the "lantern," the floor of which is five hundred and eleven feet high. The spire of Salisbury, the loftiest in England, and the second in elevation after Strasburg, is four hundred and four feet high.

**SPIRIT** (spir'it). Although we often use this word as if it were identical with the word "soul," there is a distinction between them which is carefully marked through the whole of Scripture. The "soul" is really that which animates the body, that which distinguishes a living body from a dead body, whether of man or beast. Thus it

is the real life, as distinguished from the body, which is the instrument or organ of life; it is that which affects the material organization, but it is not the organization itself. And hence it is looked upon as the seat of the appetites, the desires and the will—of hunger, thirst, sorrow, joy, love, hatred, hope, fear and inclination. Abundant instances might be drawn from the Hebrew and Greek Old Testament of its usage in these senses. But the soul, as thus described, is the very man himself, and accordingly we find the word translated by the English words "person," "self," "creature" and "any." This is an important protest against materialism, and shows that though the Scripture is not committed to any human psychological theory, it recognizes the fact that the visible body is not the man, but is that in and by which the man lives and grows and is trained. Man was made not a living body, but a living soul. This truth runs through the whole of Scripture, but it is nowhere brought forward so prominently as in the book of Psalms. The link between the soul and body—that which makes the body one with the man—is the blood. "The blood is the life." To shed the blood is to take away the life. A bloody man is a murderer. To offer the blood to God is to signify that the life is forfeited to God because of sin. It is singular that in those passages which describe the uncleanness of contact with a dead body the Hebrew word is the word for "soul," Lev. xxi. 11; Hag. ii. 13. Perhaps this was to teach the people that the separation of the life from the organization was unnatural, that it was part of the curse, and that it was the fruit of sin.

The word "spirit" takes us into quite another region of ideas. The original signification seems to be wind or air; hence it comes to mean breath; and forasmuch as breath is a sign of life, it is sometimes used to signify life. But breathing is also a sign of emotion; quick breathing expresses kindled feelings, excited temper, stirred-up energies; and so we are led to the idea of spirit—i. e., that in a man which is the source of emotion and of energy, of feeling and of force.

Now, we never read of the "soul" of God, but we do read of his "spirit;" and the uniform testimony of the Scripture to the simplicity and spirituality of the divine Being is very remarkable. A soul is, as we have seen, the animating principle of a body; it properly implies a body; its existence apart from a body is an abnormal state of being; it would, therefore, be an unfit word to apply to God. One of the most distinct revelations in Scripture is that though God is not a soul, he is a Spirit; he is the Fountain of all true and good emotion and the Source of all power. Sometimes, certainly, the Breath or Spirit of God signifies a mighty wind; sometimes the expression is used with reference to the fact that the breath or life of man is from him; sometimes the idea of his all-pervading presence seems uppermost; but in the great majority of passages the Spirit of God is set before us as a living personal agent working in man, inspiring him—that is, breathing into him divine emotion, divine light and divine force, striving with him and making God present to him. In the Gospels Jesus Christ is set forth as the embodiment of God, and as possessing the Spirit without measure. By his death and subsequent exaltation the Spirit of God streamed forth from him into the life of all believers. Then it was that the promises of God made in the Old Testament to all nations received their first fulfillment—the seal and pledge of the complete carrying out

of God's purposes hereafter. Then it was that Jesus began to baptize with the Holy Spirit, and that Christians began to receive of his fullness, which was the fullness of God. The book of the Acts is the history of the way in which God's promises summed up in Jesus Christ were fulfilled. The Epistles explain the real nature of the fulfillment—namely, that by faith in Christ we obtain the spirit of sonship, we are made one with the Son of God and partakers of the divine nature, we are made the temples of that Spirit which is the living source of God's power and feeling. We are thus brought into true life; we receive true light, strength, love and holiness, and are prepared for the day when mortality shall be swallowed up in life—the day of the manifestation of the sons of God.

Not only is the opposition between the flesh and the spirit constantly drawn out in Scripture, the one being the instrument of sin and the other the source of godliness, but also the soul and the spirit are contrasted. Some men are only animal or carnal, having not the Spirit, Jude 19; James iii. 15; they do not live in relation to God; they do not let him inspire them with light, emotion and power; they do not live by faith in the Son of God, who loved them and gave himself for them. Others are spiritual; they walk not after the flesh, but after the Spirit, and are being conformed to the image of the Son of God. Being joined to the Lord, they are one spirit and share his life, as the body shares the life of the head, or the branches of the stem; and it is by virtue of this present union with him that when he appears they shall be made like unto him, and shall dwell with God, and he with them.

**SPIRIT, FAMILIAR,** a term applied to the spirit granted by the evil one as a servant or attendant to any person bound to him by the ties or obligations of witchcraft. The familiar spirit is called in 1 Sam. xxviii. 7 the *ob*, and in Acts xvi. 16 the "spirit of Python." These words, there can be little doubt, alike carry our thoughts to the worship of the serpent. The superstition of the Obeah among the negroes of our own time may be traced to the same source.

**SPIRIT, HOLY.** See HOLY GHOST.

**SPIRITUAL** (spir'it-u-al) **BODY**, 1 Cor. xv. 44. See RESURRECTION.

**SPIRITUAL GIFT**, Rom. i. 11. See GIFT.

**SPIRITUAL PANTHEISTS.** The followers of Hegel have been so called, inasmuch as they seek in God Spirit only, and they look on God as a Being which is evolved, and which, in the different steps of its evolution, constitutes diverse and successive orders of existences or beings. In the end the absolute Being acquires consciousness of himself and becomes an infinite personality. It may be admitted that there are many readers who after much study will fail to gather any rational or intelligent idea of the meaning of these words, and perhaps they may doubt if they convey any sense whatever, or if any follower of Hegel can understand what they mean.

**SPIT**, Num. xii. 14; Matt. xxvi. 67. To spit on any one was a mark of rude contempt.

**SPITAL** (spit'al), an hospital. The word is commonly applied in England to old institutions; frequently, but not always, to houses for lepers.

**SPOIL.** See BOOTY.

**SPONGE**, or **SPUNGE**. This is mentioned only in connection with our Lord's crucifixion, Matt. xxviii. 48. This substance is just upon the boundary of the animal and vegetable kingdoms, but is usually classed among zoophytes. The use of sponge is well known.

**SPONSOR** (spon'sor), the name given to a surety or "god-parent" in baptism, from the duties which were undertaken and the engagements entered into to train the child in the knowledge and fear of God. Parents were anciently allowed to be sponsors, but catechumens and heretics were forbidden. The propriety of admitting sponsors other than parents has been defended, on the ground that death or incapacity of parents might leave the young without proper training, while even if they lived both parties would be bound to see that the duty was discharged.

SPOONS OF ANCIENT EGYPT.—See article.

**SPOON.** There are several allusions in the Old Testament to the fact that spoons were used in the tabernacle and temple service; Ex. xxv. 29; xxxvii. 16; Num. iv. 7; 1 Ki. vii. 50; 2 Ki. xxv. 14; 2 Chr. iv. 22; xxiv. 14; Jer. lii. 18, 19. Hitherto the examples which the antiquarian treasures of Egypt have supplied are the sources which enable us to form an idea of the styles which prevailed among the Jews in these and other matters of domestic economy. Free intercourse existed between Greece or Babylon in the Mosaisic age or in the period of the Judges. It was from Egypt that the Jews received their early impressions in architecture and in most of their household usages, and the illustrations given in the text will serve to show the forms that spoons were probably made in for special and public uses among the Jews.

**SPORTS, BOOK OF**, a book or declaration drawn up by Bishop Morton, in the reign of King James I., to encourage recreation and sports on

ANCIENT SNUFFERS.—See SNUFFERS.

the Lord's day. It was to this effect: "That for his good people's recreation, his majesty's pleasure is that after the end of divine service they shall not be disturbed, letted or discouraged from any lawful recreations, such as dancing, either of men or women; archery for men; leaping, vaulting or any such harmless recreations; nor having of May-games, whitsonales or morrice-dances; or setting up of May-poles or other sports therewith used, so as the same may be had in due and convenient time, without impediment or let of divine service; and that women should have leave to carry rushes to the church for the decorating of it according to their old customs; withal prohibiting all unlawful games to be used on Sundays only,

ings, while the youth of the country were at their morrice-dances, May-games, church and clerk ales, and all such kind of reveling. The severe pressing of this declaration made sad havoc among the Puritans, as it was to be read in the churches. Many poor clergymen strained their consciences in submission to their superiors. Some, after publishing it, immediately read the fourth commandment to the people, "Remember the Sabbath-day to keep it holy;" adding, "This is the law of God; the other, the injunction of man." Some put it upon their curates, whilst great numbers absolutely refused to comply, the consequence of which was that several clergymen were actually suspended for not reading it.

EGYPTIAN SPOUSE AND ATTENDANT.—See SPOUSE, and MARRIAGE.

as bear-beating, bull-baiting, interludes, and at all times (in the meaner sort of people prohibited) bowling." Two or three provisos were annexed to the declaration which deserve notice: "1. No recusant—i. e., papist—was to have the benefit of this declaration. 2. Nor such as were not present at the whole of divine service. 3. Nor such as did not keep to their own parish churches—that is, Puritans."

This declaration was ordered to be read in all the parish churches of Lancashire, which abounded with papists; and Wilson adds that it was to have been read in all the churches of England, but that Archbishop Abbot, being at Croydon, flatly forbade its being read there. In the reign of King Charles I., Archbishop Laud induced the king to republish this declaration. The court had their balls, masquerades and plays on the Sunday even-

**SPOTSWOOD** (spots'wood), JOHN, was born in 1565, being descended from an ancient family. He was educated at Glasgow, where he distinguished himself. When James I. took possession of the English throne, he was among the number of his attendants; and the same year he was made bishop of Glasgow and privy councillor of Scotland, and in 1615 he was elevated to archbishop of St. Andrews. In 1633 he crowned Charles I. king of Scotland at Holyrood House, and in 1635 was made chancellor of the kingdom. The civil troubles obliged him to retire to England, where he died in 1639, and was buried in Westminster Abbey. He wrote a "History of the Church of Scotland," at the command of James I.

**SPOUSE.** This word occurs in almost the same form in the French, Spanish, Italian and

English languages, and it is derived from the Latin "sponsus" in the masculine and "sponsa" in the feminine genders. It designates either a man or a woman engaged or joined in wedlock. In early English there are instances where in one sentence the word "spouse" is applied to the man, and "sponsess" to the woman. In the Song of Solomon, iv. 8-12; v. 1, and in Hos. iv. 13-14, it is applied to the female. Among the Israelites and the Egyptians special care and vast wealth were applied to the adornment of the person on the occasion of marriage; and when the character of the climate of Palestine is considered, it becomes a matter of surprise how such an amount of drapery could be borne as the illustration in the text exhibits.

**SPRAGUE** (spräg), NATHANIEL, D.D., an eminent Episcopal clergyman, was born August 20, 1790, in Cheshire county, New Hampshire, and entered Dartmouth College at the age of seventeen; but in consequence of an impediment in his speech which he apprehended would incapacitate him for a public speaker, he left college at the end of two years, without graduating. He, however, devoted himself to study, and became a man of such attainments that in 1822 the same institution conferred on him an honorary degree of master of arts. Having been cured of the impediment, he studied theology, and at the age of forty-eight was made deacon, and subsequently ordained presbyter by Bishop Hopkins, of Vermont. He officiated about six years at Royalton, in that State, and then accepted the rectorship of St. Peter's Church, Drewsville, in his native State. In 1847 Hobart College, at Geneva, New York, conferred on him the degree of doctor of divinity. He died October 29, 1853, in his sixty-fourth year, highly respected by all who knew him. His valuable library he bequeathed to the parish of which he had been rector, and his estate, valued at five thousand dollars, he devised to a sister until her death, when it is to revert to the public institutions of the Protestant Episcopal Church in New Hampshire.

**SPRAGUE, WILLIAM BUELL, D.D.**, was born in 1795, at Andover, Connecticut. He was a descendant of the Spragues of Duxbury, in Massachusetts. Under the care of John Adams of Colchester, and Dr. Abbot of Coventry, he was prepared for college, and he graduated at Yale in 1815, after which he pursued his theological course for three years at Princeton. His first charge was in the First Congregational Church in West Springfield, Massachusetts, where he was associated with the Rev. Dr. Lathrop from May, 1819, until December, 1820, after which he became the sole pastor until 1829. In that year he was called to the Second Presbyterian Church of Albany, New York, where he spent the remaining years of his pastoral life. He retired from this charge in 1870 to Flushing, Long Island, having distinguished himself during his long ministry as an eloquent, graceful and most forcible gospel preacher, a faithful pastor, an influential and beloved member of society, and a writer whose productions display an industry, a capacity for accumulating and using information and a variety of talent which have never perhaps been excelled by any writer of our land. It is a matter of surprise how Dr. Sprague could have discharged the duties of an onerous charge so faithfully as he was known to do, have attended to many calls connected with ecclesiastical engagements, and yet secure the time

required to prepare the numerous works which steadily flowed from his pen. In 1821 he published "Discourses on Special Occasions," in 1822 "Letters to a Daughter," and in 1828 "Letters from Europe." Ten years afterward he produced the "Life of E. D. Griffin," and in 1845 the "Life of Timothy Dwight." He also published "Lectures on Revivals of Religion," "Hints on Christian Intercourse," "Contrast between True and False Religion," "Aids to Early Religion," "Words to a Young Man's Conscience," and in 1865 he published his "Visits to European Celebrities." But his great work has been "The Annals of the American Pulpit," in nine volumes octavo, and very deservedly it has been characterized by the "Bibliotheca Sacra" as "an honor to the American Church." It is a treasure of antiquarian, ecclesiastical and family literature, and the breadth and fine balance of Dr. Sprague's mind is shown by the manner in which he does ample justice to the preachers of all the different denominations whose biographies he records. Then, again, he has published about one hundred and sixteen pamphlets, containing memoirs of eminent men, orations and addresses, besides other works, the mere list of which would make a lengthened catalogue. He has been long known to be the possessor of the most valuable collection of autographs which have been collected by any person in our country.

**SPRAT, THOMAS**, bishop of Rochester, was born at Tallaton, Devonshire, in 1636, and educated at Wadham College, Oxford, of which he became Fellow. He wrote a number of poems of some merit, among them "The Plague of Athens." After the Restoration he took orders, was chaplain to Buckingham, and subsequently to the king. He was also actively engaged in the establishment of the Royal Society, of which he was one of the first members, and of whose labors he published a history in 1667. Having become distinguished as a writer, he rose rapidly in the Church; in 1668 he became prebendary of Westminster, subsequently minister of St. Margaret's Church, canon of Windsor, in 1683 dean of Westminster and the following year bishop of Rochester. He was appointed one of the commissioners for ecclesiastical affairs, in which office he acted with some timidity, and at last withdrew; but when it was debated whether the throne was vacant by the flight of James, he boldly became the manly advocate of his patron. He, however, submitted to the Revolution, and took the oath; but an infamous attempt was made to involve him in trouble by forging his name and by introducing into his house the plan of a pretended plot, of all which, however, he proved his innocence, and after a short confinement he was restored to the exercise of his episcopal functions. He died May 20, 1713. He wrote a "Relation of the Wicked Conspiracy of Stephen Blackhead and Robert Young," who united to rob him of his honor and of his life.

**SPRING.** See SEASON.

**SPRING, SPRINGS.** See FOUNTAIN.

**SPRING, GARDINER, D.D., LL.D.**, was the son of Samuel Spring, D.D., who was long known as the minister of Newburyport. He was born at that place on the 24th day of February, 1785. He was educated at Yale College, where he graduated in 1805. He turned his attention to law, and was admitted to the bar in 1808,

after which he engaged for a year in the study of theology at Andover, and was licensed to preach in 1809 in the Presbyterian Church. In June, 1810, he was called to and accepted the pastorate of the Brick Church in New York, and he remained in connection with this church until his death. Owing to the growth of the city, his people erected a new church on Murray Hill, to which they removed in 1861, and in the following year the Rev. W. G. T. Shedd was associated with him as colleague, but he resigned his position after eighteen months' tenure of the office, to which the Rev. J. Murray, D.D., succeeded. Few ministers of any denomination in our country have held a pastorate in the same place as long as Dr. Spring was enabled to do, and few have published as many works as have proceeded from his fertile pen, for their titles would only make a long catalogue, and a few of them can only be enumerated here: 1. "The Attraction of the Cross;" 2. "Obligations of the World to the Bible;" 3. "The Mercy-Seat;" 4. "The Power of the Pulpit;" 5. "The Contrast;" 6. "First Things;" 7. "Sermons for the People;" 8. "The Glory of Christ;" 9. "Christian Confidence;" 10. "The Church in the Wilderness;" 11. "The Bible not

BISHOP SPRAT.—See SPRAT, THOMAS.

of Man;" 12. "The Rule of Faith;" 13. "The Perseverance of the Saints;" 14. "The Doctrine of Election;" 15. "Means of Regeneration;" 16. "Essays on Christian Character;" 17. "Hints to Parents;" 18. "The Mission of Sorrow;" 19. "Native Depravity," etc. To these must be added occasional sermons and biographies. Many of his writings have been reprinted in Great Britain, and they have also been translated into French and other Continental languages. Dr. Spring was an able, lucid and most effective, graceful preacher, always commanding a great attendance on his ministry by his solid and attractive exhibitions of divine truth. Of commanding presence, much dignity, fine voice and clear utterance, with a lucid style, he was always an acceptable and impressive preacher. He closed his long life and long pastorate of sixty-three years in the same church on August 18, 1873, having entered upon his eighty-ninth year.

**SPRING, SAMUEL, D.D.**, was born in 1746, at Northbridge, Massachusetts, and educated at the college of New Jersey. He graduated in 1771 under Dr. Witherspoon. He studied theology under Dr. Witherspoon and Dr. Bellamy, and in 1774 was licensed to preach the gospel. For some time he served as a chaplain in the army, and in 1777 he was ordained to the pastorate of

the church at Newburyport, and here he remained until the close of his life. He rendered effective service in the establishment of Andover Seminary, and he was undoubtedly one of the most eminent and useful of all the ministers of his day. A very great number of his sermons were published from time to time as they were delivered on occasions of importance. He died on the 4th of March, 1819, closing a life of faithful labor, and regretted by a wide circle of admiring friends in all the evangelical bodies of our country.

**SPRINKLE** (sprin'kle), **SPRINKLING** (sprin'kling). The words are often used symbolically, reference being made to the sprinklings prescribed by the Mosaic law, Heb. ix. 13, 19, 21; 1 Pet. i. 2. See ATONEMENT, DAY OF; PURIFICATION.

**SPROAT, JAMES, D.D.**, was born in 1722, at Scituate, Massachusetts, and educated at Yale College, where he graduated in 1741. His first religious impressions were caused by hearing the celebrated Gilbert Tennent preaching in New Haven. It is a memorable incident in his history that he became successor to Tennent in Philadelphia. His first charge was in the Congregational church in Guilford, Connecticut, and here he remained for about twenty-five years, leaving it in 1768 to succeed Mr. Tennent in Philadelphia. In 1793, when yellow fever visited Philadelphia, his family was among the most afflicted in the city, as he, his wife, his eldest son and his wife, and his youngest daughter, all fell victims to it. He died on the 18th day of October, 1793, in the seventy-second year of his age. He stood among the most eminent of the preachers of his day, and his death was greatly regretted.

**SPURGEON** (spur'jun), **CHARLES HAD-DON**, who has become celebrated as a leader among the evangelical preachers of the present day, is the son of the Rev. John Spurgeon, the minister of an Independent (Congregational) church at Tollesbury, Essex, and grandson of the Rev. John Spurgeon, who was Independent minister at Stanbourne, near Halstead, in the same county. He was born in 1834, at Kelvedon, in Essex, and he received his education in Colchester and at Maidstone, in Kent. He acted for a short time as a teacher in Manchester and at Cambridge. In 1850 he united with the Baptist Church in Cambridge, and at once he began to preach, his first sermon being delivered at Teversham, and forthwith he was settled in the Baptist chapel at Waterbeach, whence in 1863 he removed to New Park Street Church, Southwark, London. It became necessary to enlarge this building, and Mr. Spurgeon occupied Exeter Hall, whence he removed in October, 1856, to the Surrey Music Hall, where he preached to fourteen thousand persons. A new "tabernacle" was commenced for him in a leading thoroughfare, which holds from five to six thousand persons, and he began to preach in it in 1861, and where he has ever since ministered to vast audiences. When his popularity became established, arrangements were made for the publication of his sermons and various lectures and addresses, and their sale in Great Britain, in the colonies and in our country has been enormous. An idea may be formed of the demand which has existed for these works from the fact that one publishing house in New York has sold about three hundred

and ten thousand volumes, and the sale still continues. He has founded a college for the training of young men for the ministry, which is supported by the funds raised in the "tabernacle," and to this institution he devotes much attention. He

practical results which the Church under this great preacher continues from year to year to exhibit are among the most effective evidences for the power of the gospel, and they show that a real, living faith in the Lord Jesus Christ must tend to holi-

In consequence of his known ability he was appointed to act at the Savoy Conference, and also to serve as a member of the Westminster Assembly. In 1662 he was ejected for nonconformity, and he took part in the controversy against Episcopalianism, being one of the authors of the celebrated work "Smectymnus." He was the author of "The Wiles of Satan," "The Wells of Salvation Opened," "The Magistrate's Duty and Dignity," together with several thanksgiving and fast sermons. He died at Hackney in 1666.

**SPY.** This word has been used in a double sense. Latimer used it in the sense of simple inquiry. Thus, "Look about with your eyes; spy what things are to be reformed in the Church of England;" and Shakespeare also makes one of his characters say, "It is my nature's plague To spy into abuse."

Again, it is applied to a person who in a concealed manner enters the army or camp or country of an enemy to ascertain the condition of affairs and to communicate the results to the proper quarter. In this case a measure of cunning and address is essential to success. In Num. xiii. 16, 17; xxi. 32; Josh. ii. 1; vi. 22; Jud. xviii. 2 and elsewhere the word is used in the form of a verb, and is applied to the work done, while in Gen. xlii. 9; Num. xxi. 1; Josh. vi. 23; Jud. i. 24; 1 Sam. xxvi. 4; Heb. xi. 31 and elsewhere it occurs as a noun, and refers to the persons who acted as emissaries in procuring intelligence. There was no doubt a considerable amount of caution required on the part of the "spies" who went forth from the camp of the Israelites to discover the character of the land

and the condition of the inhabitants. The fact that such a force was wandering about the southern border of the land and gradually approaching it must have inspired the inhabitants with apprehension, and stirred them up to use all diligence for self-preservation. See CALLEB. So, also, the danger must have been much more imminent in the case of the spies whom Joshua sent to examine

ness of heart, to benevolence and righteousness of life.

**SPURSTOW** (spur'sto), WILLIAM, D.D., was a very celebrated English divine of the seventeenth century. In 1644 he became vicar of St. James's, Hackney, and next year he was made master of Catherine Hall College, in Cambridge.

THE SPIES IN THE PROMISED LAND.—See SPT.

has also founded an extensive and admirably managed orphanage, which is also sustained by the perennial flow of contributions from the vast audiences which attend his ministry, and the work which has been effected by this agency among the destitute and miserable of the population of London has been among the most blessed of all the numerous agencies of the British metropolis. The

into the state of Jericho and the territory around it. The conquests on the east of the Jordan, the advance across the river and the attitude of the Israelitish army must have aroused all the martial spirit of the people, who saw invaders in their land, and who felt that their homes and their families were in immediate danger. In such circumstances the men who went on an enterprise so perilous must have been endued with an ardor and a caution as well as courage of no ordinary character.

**SPY-WEDNESDAY.** Wednesday in holy week, so named in Ireland in reference to the betrayal of our Lord.

**STACHYS** (sta'kis), a Christian at Rome whom Paul salutes, Rom. xvi. 9.

**STACKHOUSE** (stak'house), THOMAS, a pious divine who was curate of Finchley, and subsequently vicar of Beenharn, Berks, where he died October 11, 1752. He wrote several works, among them a "History of the Bible," a valuable work, frequently reprinted; a "System of Practical Divinity," a tract on "The Miseries of the Inferior Clergy," a "Review of the Controversy concerning Miracles," a "Complete Body of Divinity" and an "Exposition of the Apostles' Creed."

**STACTE** (stak'te), an aromatic gum or resin used for making the sacred perfume, Ex. xxx. 34. Its Hebrew name, *ndāph*, signifies a "drop," and it is so called because it flows out in drops. Stacte is a Greek word with a similar derivation. It is probably the resin of the white poplar.

**STAFFORD** (staf'ford), ANTONY, a distinguished writer, descended from a noble family, was born in Northamptonshire, received his education at Oriel College, Oxford, taking master of arts in 1623. He was a man of great learning, and died in 1641. His works are, "Niobe dissolved into Nilus, or the Age drowned by her own Tears," "Meditations and Resolutions," "Life and Death of Diogenes," "The Life of the Virgin Mary, or Female Glory," "The Pride of Honor," "Honor and Virtue Triumphant over the Grave, exemplified in the Life and Death of Henry, Lord Stafford." His "Female Glory" was peculiarly offensive to the Puritans of England.

**STAFFORD**, EDMUND, who was one of the great ecclesiastical potentates who, while holding exalted rank in the Church in England, were equally great and influential in the State. He was a kinsman of Richard II., and had great talents for business, which he perverted by supporting those measures of the king which at length drove him from the throne. He was made bishop of Exeter in 1394, and keeper of the great seal in 1396, thus being bishop and lord chancellor at the same time. Next year he opened the merciless Parliament which met in September, and he insisted on the unlimited extent of the royal power, and declared that all who resisted to any degree were deserving of the severest punishment. When Richard was deposed, he submitted to the sway of Henry IV., and in March, 1401, the office of chancellor was again assigned to him. Among the most memorable of his characteristics was his effort to promote education, and his name is associated with Oxford, inasmuch as he began with Stapledon Hall, which he aided; and having enlarged it, reformed its statutes and otherwise

improved it, he changed its name to Exeter College, a title which it still bears. He died after a short illness on the 3d of September, 1419, and was buried in the chapel of St. Mary Magdalene, which stands at the north-east angle of the choir of the cathedral. In Winkle's "Cathedrals" his death is recorded on page 111, vol. ii., as having taken place in 1395, which is evidently erroneous, as at page 118 he is stated to have been made chancellor in 1401, and 1419 is given as the year of his death. A magnificent specimen of monumental architecture was raised over his grave, under the arch which leads to St. Mary Magdalene's chapel. For purity of style, richness of elaboration and wonderful splendor this monument can scarcely be surpassed.

**STAFFORD**, WILLIAM HOWARD, VISCOUNT, the last victim of the "Popish Plot," was born in 1612. He was a son of the earl of Arundel, who married the sister of the last baron Stafford, and received the title from Charles I. on the surrender of it by the right heir. He was a Roman Catholic, and as such was excluded with other Romish peers from the House by an act of Parliament in 1678. In October of that year, on the accusation of Titus Oates, Lord Stafford was committed to the Tower. Articles of impeachment for treason were sent up by the Commons in April, 1679, but the proceedings were conducted very dilatorily, and the trial did not take place till the end of November, 1680. It lasted till December 7th, and resulted in his condemnation. The king avowed his belief in his innocence, but could do no more than remit the usual severities of execution and reduce it to simple beheading, and his right to do this was questioned. The execution took place on Tower Hill, December 29, 1680. The attainder of Lord Stafford was not reversed till 1824.

**STALL**, a seat occupied by a monk in the choir of a cathedral, or by a canon, dean or prebend in a cathedral, or by a priest in his chancel. In cathedrals the stalls are massive in their structure, ranging east and west along the choir on the north and south sides, with some seats at the entrance to the choir, and facing the communion-table or "altar."

**STANBURY** (stan'ber-e), JOHN, who was an English bishop in the reign of Henry VI., and whose life was varied by remarkable incidents, which indicated the unsettled character of the times in which he lived. He had been a very distinguished Carmelite friar at Oxford, and by Henry he was made the first provost of the new college which he had established at Eton, and the monarch shortly afterward placed him in the see of Norwich. Through the influence of the duke of Suffolk one of his own favorites was raised to the bishopric and Stanbury was displaced, but the king gave him the see of Bangor, which he held for five years. He was translated to Hereford, over which he presided for twenty-one years, and during his episcopate his great object seemed to be to exalt the papal power over the Church and the royal power over the State. In 1460 he was taken prisoner in the service and retinue of the king at the memorable battle of Northampton, and held as a prisoner for some time in Warwick Castle. After his release from Warwick he retired to the Carmelite friary at Ludlow, where he died May 31, 1474. He was a native of More-Stowe, in Devonshire, and in his

will he bequeathed a cross of silver gilt to the church in that place, in which he was baptized. He is credited with having built a chantry chapel on the north side of Hereford Cathedral, and in this chapel he was buried. Godwin and Prince give him credit for several works, a list of which is given in Leland's "Itinerary."

**STANCARISTS** (stan'kar-ists), the followers of Francis Stanecari, who was brought into notice by his controversies with Osiander, Bullinger, Melancthon and others of the Lutheran and Calvinistic Reformers. Stanecari was an Italian who had been ejected from the University of Mantua for heresy. He went to Switzerland, which he had to leave because of the dissension he created; and going to Prussia, the chair of Hebrew was given to him at Königsberg, in the year 1548. Thence he went to Cracow, in Poland, and he became an effective ally of Socinus, and his turbulence caused much trouble. The bishop imprisoned him, but he escaped and became a furious iconoclast and anti-sacerdotalist. He died in 1574.

Osiander and his followers had maintained that it was as God alone that Jesus Christ offered the atonement, for that as man he himself needed it, and therefore could not offer it for others. The Stancarists went to the opposite extreme, and attributed the atonement to our Lord's human nature alone, excluding from it altogether his divine nature. Farther than this, they held that the divine nature, in its propriety, had no existence in Christ, and that he was only called God the Word metaphorically. They held also that he had two natures, the one as Mediator, the other as the Author of mediation, and was therefore in one sense "sent," in the other "One who sent."

**STANDARD** (stand'ard). It seems probable that the Hebrews had military standards or banners under which their respective tribes or divisions were marshaled. These, if we may judge by the description of the encamping and marches in the wilderness, were of two kinds. Three tribes had a standard, *degel*, around which the tribesmen were to pitch and under which they were to march, the four respectively being called the standards of the camps of Judah, of Reuben, of Ephraim and of Dan, as those were the leading tribes of each division, Num. i. 52; ii. 2, 3, 10, 18, 25, 34; x. 14, 18, 22, 25. Whether these standards were distinguished by any insignia or devices can only be matter of conjecture; according to the rabbins the device of Judah was a lion, that for Reuben a man, for Ephraim an ox and for Dan an eagle. The "banner" of Song Sol. ii. 4 would seem to be a covering, but bannered hosts are also referred to, Song Sol. vi. 4, 10. Besides the divisional standards there was an ensign, *oth*, for each particular tribe, Num. ii. 2. Of a standard-bearer the Scripture says nothing; the passage, Isa. x. 18, where the word occurs in our version is rendered by Gesenius "as the sick man pineth away." Egyptian standards consisted of some sacred emblem; Roman standards bore an eagle on a spear. This may illustrate Deut. xxviii. 49; Matt. xxiv. 28; Luke xvii. 37, yet such application is doubtful.

**STANHOPE** (stan'hope), GEORGE, D.D., an eminently learned English divine, was born in 1660, at Hertishorn, Derbyshire, and educated at Uppingham and Eton Schools, and at King's College, Cambridge. He officiated first at the church of Quoi, near Cambridge, and in 1688 he was made vice-proctor of the university, and was preferred

to the rectory of Tewling, in Hertford, and soon after to that of Lewisham, in Kent. He was also appointed chaplain in ordinary to William and Mary, and enjoyed the same honor under Queen Anne. In 1697 he received the degree of doctor of divinity in course from Cambridge. In 1701 he preached the Boyle lectures, which were, as usual, published. In 1703 he was appointed dean of Canterbury, and exchanged Tewling for the vicarage of Deptford. At the convocation of the clergy in February, 1714, he was chosen to fill the prolocutor's chair, and he was twice afterward re-chosen. In 1717, when the fierce spirit of controversy raged in the convocation, he checked the Bangorian champion, Archdeacon Tenison, in his observations, by reading the schedule of prorogation. The archdeacon, however, not content with protesting against the proceedings of the House, entered into a controversy with the prolocutor himself. In the following year a correspondence commenced between the dean and his diocesan Bishop Atterbury on the increasing neglect of public baptisms, from which it appears that Stanhope had "long discouraged private baptisms." He

ogy, in which she was a believer. She had a pension of twelve hundred pounds from the English government, and for many years possessed considerable influence over the Turkish pachas, which, however, she entirely lost. So completely antinational were the prejudices of this very eccentric lady that, though at the time of her death she had no fewer than twenty-three domestics, not one of them was English, and her last sigh was breathed among foreigners and hirelings. Born 1766; died 1839.

**STANISLAUS** (stan'is-laws), bishop of Cracow in the eleventh century, lived in a most pious and exemplary manner, and performed duties with assiduity and devotion. He was murdered by Boleslaus, the second king of Poland, whose crimes and debaucheries he had rebuked. The tyrant first despatched his soldiers to perform the bloody task, but when they came into the presence of Stanislaus, awed by his venerable aspect, they were unable to fulfill their promise. The king, finding they had not obeyed his orders, stormed at them violently, snatched a dagger from one of them, ran furiously to the chapel, where, finding Stanislaus at the altar, he plunged the weapon to his heart.

**STANLEY** (stan'le), EDWARD, D.D., bishop of Norwich, was born in 1770. Having finished his studies at St. John's College, Cambridge, he was presented to the rectory of Alderley in 1805, and there he labored for upward of thirty years in the faithful discharge of his pastoral duties. His connection with the Whig party led to his nomination to the see of Norwich in 1837; and such was his unwearied devotion to every good and useful work, his sincerity, his disinterestedness, and his pure and active benevolence in all the relations of life, that his character truly corresponded with the apostolic portrait of a Christian bishop. Bishop Stanley also attained distinction as an author. Whilst rector of Alderley he occasionally delivered lectures on various branches of natural history, and contributed papers on the same subject to several periodicals, besides publishing various pamphlets on questions more immediately connected with his clerical office. He died September 6, 1849.

**STANLEY, JAMES, D.D.**, an eminent warden of the celebrated foundation at Manchester which eventually was recognized as the cathedral of the diocese. He came into office in 1481, and died in 1485. He was succeeded by a warden of the same name. They were among the number of the builders who aided in making the collegiate church the splendid edifice which it became. A monument in the cathedral was erected to the memory of the second James Stanley, who had become bishop of Ely; and on a brass plate beneath the feet of the figure of the prelate is the following inscription, in the spelling of the times:

"Off yir charite pray for the soule of James Stanley su'tyme bishop of Ely and Warden of this College of Manchester which decessed out of this transi'tory world the xxii day of March the yer of our Lord God mecccc and xv upon whose soul and all christen soules Jhesu hav mercy."

THE GEOMETRICAL SPIDER AND ITS WEB.—See SPIDER.

died at Bath, March 18, 1728. He was distinguished by a truly godly walk and conversation, and celebrated as a preacher, and was very influential in all affairs relating to the Church. The most celebrated of his publications are a "Paraphrase on the Epistles and Gospels," "The Truth and Excellence of the Christian Religion" (Boyle lectures), "Parsons' Christian Directory" and "The Grounds and Principles of the Christian Religion." Besides these and other very valuable original works, he won the enduring gratitude of devout Christians by making and publishing admirable translations of "De Imitatione Christi," Charon "On Wisdom," Antonius's "Meditations," Rochefoucauld's "Maxims," St. Augustine's "Meditations," Bishop Andrews's "Devotions," etc.

**STANHOPE, LADY HESTER**, a very highly accomplished, eccentric English lady, was daughter of the celebrated Earl Charles Stanhope, and niece of the great William Pitt. Soon after the death of the latter, with whom she lived, and with whose pursuits she so much sympathized as to act upon some occasions as his private secretary, she went to Syria, assumed the dress of a male native of that country, and devoted herself to astrol-

**STANLEY, JOHN**, an English musician, born in London in 1713, lost his sight when two years old, and at the age of seven devoted his attention to music with such effect that he was chosen organist of All-Hallows Church, Bread street, in his eleventh year. In 1723 he was appointed organist of St. Andrew's, Holborn; in 1734 was elected by the benchers organist of the Temple Church, and in 1779 was nominated master of the King's Band. His execution on the organ was particularly admired, and his compositions, some of which are still in use, evinced the most correct taste and the soundest judgment. He died in 1786.

**STANYHURST** (sta'ne-hurst), RICHARD, an Irish Romish divine, philosopher and poet, was born at Dublin, about the year 1546, his father being the Speaker of the Irish House of Commons. He was educated at University College, Oxford, and after studying law in London returned to Ireland, married and became a Romanist. He subsequently went abroad, and, taking orders, was appointed chaplain to Albert, archduke of Austria and governor of the Netherlands. He died at Brussels, in 1618. He was universally esteemed as a good divine, an eminent philosopher and a tolerable poet as well as historian. He wrote various works, the best known of which are "The Principles of the Catholic Religion" and "Lives of the Holy Fathers." He was maternal uncle to Archbishop Usher.

**STAPLEDON** (stā'p'l-dun), WALTER, a native of Devonshire, was educated at Oxford. His abilities recommended him to the notice of the court, by which he was advanced in the Church, becoming eventually, in 1307, bishop of Exeter and treasurer of England. He distinguished himself as a patron of learning, and founded Exeter College, Oxford. His conduct in office subsequently rendered him unpopular, and he was seized during an insurrection in London, and cruelly beheaded at Cheapside Cross in 1326.

**STAPLETON** (stā'p'l-tun), THOMAS, a learned and acute Romish controversialist, was born at Henfield, in Sussex, in 1535, and was educated at New College, Oxford. In the reign of Mary he was made prebendary of Chichester, but on the accession of Elizabeth he settled at Louvain, and there he distinguished himself by his writings against Jewell, Horne and other eminent divines of the English Church. He also visited Paris and Rome, but returned to Louvain, where he translated Bede's "Church History" into English. He then became regius professor of divinity in the new University of Douay, and canon in the church of St. Amour. He became a Jesuit, but afterward quitted the order, and returning to Louvain, was appointed regius professor of divinity, canon of St. Peter's and dean of Hilverbeck. He died in 1598.

**STAR.** See ASTRONOMY.

**STAR IN THE EAST.** One very remarkable incident of our Lord's early life is the visit of the Eastern sages to him at Bethlehem. They had seen, they said, his star, and were come to worship him. And when they had found him with his mother, they offered him gifts, gold, frankincense and myrrh, Matt. ii. 1-12. This visit would seem to have been not before the purification of Mary, else she would not, as a very

poor person, have offered only a pair of turtle-doves, Luke ii. 24. Some, laying stress on the expression of Herod's command for the slaughter of the children, "from two years old and under," place it considerably after the presentation. But Herod would be sure to take a large margin, and perhaps the star was first observed at the time of the miraculous conception. There can, however, be no certainty on points such as these.

It is a question why the sages came to connect the appearance of a star with the birth of a Jewish king. Possibly the words of Balaam's prophecy, Num. xxiv. 17, might have lingered in the Eastern mind. We are told, too, that there was at the time a special belief that some new dynasty would proceed from Judea. And it is most in accordance with the narrative that the sages received themselves some divine communication which led them, when they perceived the signal, to understand its meaning.

Opinions differ as to the nature of the appearance: was it supernatural or of an ordinary character? It is asserted that there was at or near the time a remarkable conjunction of planets. On May 20, in the year of Rome 747, Jupiter and Saturn were in conjunction in the twentieth degree of the constellation Pisces. This, it has been thought, first arrested the attention of the sages and incited them to commence their journey. The planets separated; but in a few months' time they closed again in a second and third conjunction—October 27, in the sixteenth degree of Pisces, and November 12, in the fifteenth degree. On these last two occasions to an ordinary eye they seemed to have become a single glorious star. And one of these last conjunctions, it has been thought, was that reappearance so welcomed by the sages at Jerusalem, which directed them on to Bethlehem. This view has been adopted by Dr. Alford, who thinks that a force is put on the inspired narrative if it is regarded as implying a miracle. And the fact is insisted on that, May 20, the planets would appear together "in the east" before sunrise, and that, November 12, they would be at eight in the evening on the meridian—that is, looking from Jerusalem in the direction of Bethlehem. Stress has also been laid on the supposed association of the constellation Pisces with the land of Judea.

Still later calculations have modified the dates assigned, and have shown that the conjunctions were not so close as had been imagined. And, other considerations laid aside, there is one fatal objection to this theory. The star is said to have gone before the sages "till it came and stood over where the young child was," Matt. ii. 9. Such language cannot be satisfied by a planetary conjunction or the ordinary motion of a heavenly body. It certainly therefore seems more reasonable to believe that the "star" was some luminous appearance, probably meteoric, extraordinarily appointed by the Deity for a special purpose.

**STAR, MORNING.** The Lord promises that he will bestow "the morning star," Rev. ii. 28. He is also himself "the bright and morning star," Rev. xxii. 16. So he claims, says Dr. Trevel, "all that is fairest and loveliest in creation as the faint shadow and image of his perfections. A comparison with that other passage . . . Rev. xxii. 16, conclusively proves that, when Christ promises that he will give to his faithful ones the morning-star, he promises that he will give to them himself, that he will impart to them his own glory and a share in his own royal dominion, com-

pare Rev. iii. 21, for the star . . . is evermore the symbol of royalty, Matt. ii. 2, being therefore linked with the sceptre, Num. xxiv. 17. All the glory of the world shall end in being the glory of the Church, if only this abide faithful to its Lord."

**STAR-GAZERS**, Isa. xlvii. 13. See DIVINATION.

**STARCK** (stark), JOHN AUGUSTUS, D.D., court-preacher at Darmstadt, previously professor of theology at Königsberg and of philosophy at Mittau, was born in 1741, and died in 1816. He wrote "A History of the Christian Church in the First Century," "An Attempt at a History of Arianism," and published the first volume, containing only "The Introduction to a Commentary on the Psalms." He also published one volume of a collection of "Philological and Critical Dissertations and Observations."

**STAROBRADSI** (star-o-brad'se), or OLD CEREMONIALISTS, Rus-

sian dissenters who broke off from the dominant Church in the latter half of the seventeenth century, in consequence of the numerous corrections which were introduced into the printed copies of the Church service, and which they considered to be corruptions foisted in with a view to undermine the faith. They would have nothing to do with the revised copies, with those who used them, or with any church into the service of which they were admitted; but collected all the old images and copies of the Scriptures and church-books, worshiped by themselves, rebaptized such as had been baptized after the schism, and strictly enforced non-communication, even in eating and drinking, with the innovators, or such as approved of and conformed to the use of the corrected books. In a short time the members of this separation amounted to nearly one hundred thousand; and though they have been subjected to some severe persecutions, especially one in 1764, when twenty thousand of them were banished to people the wilds of Siberia, their number has continued to increase. They have a great number of churches, besides monasteries and nunneries.

**STATAR** (sta'ter), Matt. xvii. 27, margin, a silver tetradrachm, a coin then common in the currency of Palestine. See MONEY.

**STATUTE.** See LAW.

**STATUTE, BLOODY**, or the Law of the Six Articles, a law enacted in the reign of Henry

VIII. which denounced death against all those who should deny the doctrine of transubstantiation, or maintain the necessity of receiving the sacrament in both kinds, or affirm that it was lawful for priests to marry, that vows of celibacy might be broken, that private masses were of no avail, or that auricular confession to a priest was not necessary to salvation.

**STAUDLIN** or **STAEUDLIN** (stoid'leen), KARL FRIEDRICH, D.D., professor of theology at Göttingen, was born in 1761, at Stuttgart, and died in 1826. He published a "General Church History of Great Britain;" a "History of Rationalism and Supernaturalism, and of the Theological Sciences;" "Contributions to the Philosophy and History of Religion and Morals;" a "Manual of Moral Philosophy;" a "History of the Moral Teaching of Christ," and numerous other valuable works.

**STAUGHTON** (stou'tun), WILLIAM, D.D.,

ROMAN STANDARDS.—See STANDARD.

a most accomplished pulpit orator, was born in Coventry, England, in 1770. He prosecuted his studies preparatory to the ministry in Bristol Institution. In the year 1793 he came to America and preached in Georgetown, South Carolina, for about seventeen months. He then removed to New Jersey, and spent several years in the instruction of youth and in preaching. In 1805 he became pastor of the First Baptist Church in Philadelphia. After a successful ministry of several years, he became the pastor of Tabernacle Baptist Church, which was formed in Sansom street. Here he labored with great popularity and usefulness as a preacher, as an instructor, a professor of theology and pulpit eloquence, and as the corresponding secretary of the Baptist Board of Foreign Missions till 1823, when he removed to Washington City and assumed the office of president of Columbian College. In 1827 he resigned his office and returned to Philadelphia, where he remained as a preacher till the summer of 1829, when he was elected president of the Georgetown College, Kentucky. On his way to Kentucky he was attacked at Washington City by a disease which terminated his life, December 12, 1829.

Dr. Staughton was one of the most amiable, talented, useful and pious of men. As a teacher, he was eminently successful; as a preacher, his popularity has been equaled by few. After all, the pulpit was his appropriate place; it was there he won his great reputation. Preaching Christ was his delight and his glory; at whatever point in the great circle of truth he took his position, he always directed the eye of the hearer to Christ the glorious centre. No unprofitable disquisitions were heard in his pulpit; he proclaimed the gospel as the primitive preachers proclaimed it, and, with all the arguments which the word of God supplies, he urged and besought men to repent and believe; and not in vain: many hundreds were

the Enormous Exactions of the Court of Rome," and "The History of Churches."

**STEBBING** (steb'bing), HENRY, was one of the most powerful writers on the theological questions which agitated the Church of England in the early period of the eighteenth century. In addition to the rectory of Riekinghall, in Suffolk, he was preacher of Gray's Inn, London, and chancellor of the diocese of Salisbury. He took a leading part in the celebrated Bangorian controversy, opposing Hoadly and Warburton. He wrote likewise against Woolston, Foster and Middleton, and he defended Dr. Clark's "Evidences," and in this work and his "Discourse on Gospel Revelation" he

replied with great power to Tindal's "Christianity as old as the Creation." He also wrote on Prayer and on the Lord's Supper, and in addition to sermons he published a work to which he attached great importance, entitled "Christianity Justified." He died in 1763. His son, HENRY, D.D., was born in 1716 at Riekinghall, and educated at Catherine Hall, Cambridge. He held the office of preacher at Gray's Inn after his father, to which he succeeded in 1750, and he became the author of valuable sermons and several theological works. He died in 1787.

**STEBBING**, HENRY, D.D., was born about 1800, and educated at St. John's College, Cambridge, where he graduated in 1823. He became perpetual curate of St. James's Church, Hampstead Road, London, and he also discharged the duties of chaplain to the hospital of University College. In 1857 he was appointed to the rectory of St. Mary, Somerset, London. He has been one of the most prolific writers of his age. A list of his leading works can only be given: 1. "The History of Chivalry and the Crusades;" 2. "Lives of the Italian Poets;" 3. "The History of the Christian Church;" 4. "History of the Reformation;" 5. "History of the Church from 1530 until 1833;" 6. "Essay on the Study of History;" 7. "Family History of Christ's Universal Church;" 8. "The Christian in Palestine;" 9. "The Christian Graces in the Olden Time;" 10. "Helps to the Thoughtful Reading of the Word of God;" besides other works of minor importance. He also edited "The Cabinet of Divinity," along with R. Cattermole, and fifteen volumes were issued. Still further, he wrote preliminary essays and prepared annotations

for about twenty other works which he carefully edited, thus showing a versatility, a range of knowledge and a readiness which have had few parallels in the present day.

**STEEL**. See IRON.

**STEINMETZ** (stîn'metz), ANDREW, was brought up in the Romish communion, and he became a Jesuit. Abandoning the order, he entered on the study of the law, and became a barrister of the Inner Temple, London. He has been long and extensively known as a writer; and owing to his connection with the Jesuits, several of his works have borne on the history and influence of the Jesuit order. He wrote "The Novitiate, or the Jesuit in Training," and this was followed by "The Jesuit in the Family;" after which he published a "History of the Jesuits," in three volumes, octavo—a work which displays research, but it is defective in order and arrangement. He is the author of about a dozen other works on general subjects, but his most important production has been his "History of the Jesuits."

**STENNETT** (sten'net), EDWARD, was well known as a Baptist minister in England in the middle of the seventeenth century. He was the author of the work "The Seventh Day the Sabbath of the Lord," which he wrote in reply to Russell, and which was published in 1664 in quarto. In 1685 he issued a very valuable volume, entitled "Rules for Reading Hebrew." He held a prominent place among the Dissenters of his day.

**STENNETT**, JOSEPH, was born in 1663, at Abingdon, in Berkshire. He became the pastor of a famous Seventh-Day Baptist church in London. His sermons were published at intervals from 1695 until 1713, and in 1704 he issued an answer to D. Rassen's "True Picture of the Anabaptists." His "Version of Solomon's Song" appeared in 1709; and in 1713, the year of his death, he published a "Collection of Hymns." He was very eminent as a preacher, and he held a high place among the Dissenters. His sermons are still in demand, and they are deservedly classed with the best of the Puritan literature of his age. His son, JOSEPH, was pastor of a Baptist congregation at Exeter, whence he removed to Little Wyld Street, in London. Ten of his sermons were published, and they also are well known. **SAMUEL**, D.D., who was a son of Joseph Stennett, of Little Wyld Street, was also a Baptist minister. He was born in 1727 at Exeter, and in 1758 he succeeded his father in London, laboring in that charge until his death, in 1795. He was a more voluminous writer than either of the foregoing. Twelve of his sermons were published from 1753 until 1791. A volume was published also on "Personal Religion," another on "Domestic Duties," one on "The Parable of the Sower," and another on "The Holy Scriptures." Besides these, several pamphlets and four volumes of discourses were given to the public, and his works, as now collected, with a life, fill three large volumes octavo. Bogue and Bennett have truly said of him, "In soft, tender and insinuating persuasion and influence, he was a master."

**STENO** (ste'no), NICHOLAS, a Danish anatomist, born at Copenhagen, January 10, 1638, studied under Bartholin, subsequently traveled over Germany, Holland, France and Italy, and obtained a pension from Ferdinand II., grand-

duke of Tuscany, who appointed him tutor to his son. In 1669 he renounced the Protestant religion. The desire of his sovereign, Christian V., to establish him as professor at Copenhagen proving abortive, he settled in Italy, and became an ecclesiastic. The pope, in compensation for his change of religion, appointed him apostolical vicar for Germany and titular bishop of Titopolis, in Greece. He died at Schwerin, in 1686.

**STEPHANAS** (stef'a-nas), a Christian convert at Corinth who was among the first-fruits of St. Paul's labors there, and whose household he baptized, 1 Cor. i. 16; xvi. 15-17. He seems to have been with the apostle at Ephesus when he wrote the First Epistle to the Corinthians, and is mentioned with respect and thankfulness as having rendered important service to Paul.

**STEPHEN** (ste'ven), one of the seven first deacons and the proto-martyr of the Christian Church. It appears from his name that he was a Hellenist, as it was not common for the Jews of Palestine to adopt names for their children, except from the Hebrew or Syriac, though of what country he was is unknown. The first authentic notice we find of him is in Acts vi. 5. In the distribution of the common fund that was entrusted to the apostles, Acts iv. 35-37, for the support of the poorer brethren, the Hellenistic Jews complained that a partiality was shown to the natives of Palestine, and that the poor and sick among their widows were neglected. The complaint of the Hellenists having reached the ears of the apostles, immediate directions were given by them with a view to remove the cause of it. Unwilling themselves to be called away from their proper employment of extending the bounds of the Christian community, they told the assembled multitude of believers to select seven men of their own number, in whose faith and integrity they might repose entire confidence, for the superintendence of everything connected with the relief of the poor. The proposal of the apostles met with the approbation of the brethren, who proceeded at once with the choice of the prescribed number of individuals, among whom Stephen is first mentioned; hence the title of first deacon, or first of the deacons, is given to him by Irenæus. He is distinguished in Scripture as a man "full of faith and of the Holy Ghost," Acts vi. 5. The newly-elected individuals were brought to the apostles, who ordained them to their office, and they entered upon their duties with extraordinary zeal and success. The number of the disciples was greatly increased, and many priests were among the converts. In this work Stephen greatly distinguished himself by the miracles he performed before the people and by the arguments he advanced in support of the Christian cause. From his foreign descent and education he was naturally led to address himself to the Hellenists; and in his disputations with Jews of the synagogue of the Libertines and Cyrenians, etc., he brought forward views of the Christian scheme that could not be relished by the bigots of the ancient faith. As they were unable to withstand his powers of reasoning, their malice was excited; they suborned false witnesses against him, and dragged him before the Sanhedrim as a blasphemer. The charge brought against him was that he had spoken against the law and the temple, against Moses and against God. This accusation was calculated to incite all parties in the Sanhedrim against him, compare Acts xxii. 22, and upon receiving it the predetermined purpose

of the council was not to be mistaken. Stephen saw that he was to be the victim of the blind and malignant spirit which had been exhibited by the Jews in every period of their history. But his serenity was unruffled; his confidence in the goodness of his cause and in the promised support of his heavenly Master imparted a divine tranquility to his mind; and when the judges fixed their regards upon him, the light that was within beamed forth upon his countenance, and "they saw his face as it had been the face of an angel," Acts vi. 15.

His speech is well deserving of the most diligent study, and the more it is understood, the

made against him of hostility to the Old Testament institutions, but at the same time showing that acceptance with God does not depend upon outward relations. Under the same form he illustrates the providential care exercised by the Almighty in regard to the Jewish people, along with the opposition exhibited by the Jews toward those sent to them by God. And he points the application of his whole discourse by charging his carnal-minded hearers with resisting, like their fathers, the Holy Ghost. The effect upon his auditors was terrible. Conscience-stricken, they united in wreaking their vengeance on the faithful denouncer of their guilt. They drowned his voice with their

ROMAN HALL OF JUSTICE OF EARLY TIMES.—See ROME, subhead II. THE ROMAN EMPIRE.

the seals of his ministry in the Lord. His memory is precious. The Churches of Christ at home and the distant heathen have been glad for him; and the history of the American Baptists must ever bear on one of its brightest pages the name of Staughton.

**STAVELEY** (stāv'le), THOMAS, an eminent layman of the English Church, was a native of Cussington, Leicestershire, educated at Peter House, Cambridge, subsequently studied law at the Inner Temple, and was admitted to the bar in 1654. In 1662 he succeeded his father-in-law, Oneby, as steward of the records of Leicester; but the close of his life was clouded by habitual melancholy, probably arising from too intense an application to his studies. He died in 1683. He wrote "The Romish Horseleech, or Discovery of

ties of chaplain to the hospital of University College. In 1857 he was appointed to the rectory of St. Mary, Somerset, London. He has been one of the most prolific writers of his age. A list of his leading works can only be given: 1. "The History of Chivalry and the Crusades;" 2. "Lives of the Italian Poets;" 3. "The History of the Christian Church;" 4. "History of the Reformation;" 5. "History of the Church from 1530 until 1833;" 6. "Essay on the Study of History;" 7. "Family History of Christ's Universal Church;" 8. "The Christian in Palestine;" 9. "The Christian Graces in the Olden Time;" 10. "Helps to the Thoughtful Reading of the Word of God;" besides other works of minor importance. He also edited "The Cabinet of Divinity," along with R. Cattermole, and fifteen volumes were issued. Still further, he wrote preliminary essays and prepared annotations

ANCIENT ROMAN THEATRE, RESTORED.—See ROME, subhead II., and POMPEII.

higher idea will it convey of the degree in which he possessed the qualities ascribed to him in the chapter last quoted from. Even as a composition it is curious and interesting, from the connection which may be discovered between the various parts, and from the unity given to the whole by the honesty and earnestness of the speaker. Without any formal statement of his object, Stephen obviously gives a confession of his faith, sets forth a true view of the import of his preaching in opposition to the false gloss that had been put upon it, maintains the justness of his cause and shows how well founded were his denunciations against the impenitent Jews.

He first enters upon a historical statement, involving a refutation of the charges which had been

clamorous outcries, they stopped their ears against him, they rushed on him with one accord in a tumultuous manner, they carried him forth, and without waiting for the authority of law, they stoned him to death as a blasphemer.

The frantic violence of his persecutors did not disturb the tranquillity of the martyr, and he died praying that his murderers might be forgiven, Acts vii. 60. In his prayer he showed that a new spirit had been introduced into the world, and taught the Christians that the example of their divine Master was to be followed even in circumstances that they might have conceived to be impossible. Nor was this prayer without effect. Saul of Tarsus, who consented to his death, Acts viii. 1, and kept the clothes of them that stoned him, Acts vii.

58, heard his words, mocking, doubtless, like the rest. But the prayer was heard, and to it we owe the ministry of the apostle Paul.

The only other particular connected with Stephen mentioned in Scripture is that "devout men carried him to his burial, and made great lamentation over him," Acts viii. 2. No information is given respecting the time of his death or the place of his burial. In the fifth century (415), however, the relics of the martyr were said to have been miraculously discovered by a Greek priest of the name of Lucian, and they were brought to Europe by Orosius. Evodius, bishop of Myala, wrote a small treatise concerning the miracles performed by them; and Severus, a bishop of the island of Minorca, wrote a circular letter of the conversion of the Jews in that island, and of the miracles wrought in that place by the relics which Orosius left there. These writings are contained in the works of Augustine, who gives the sanction of his authority to the incredible follies they record.

Since the fifth century, Stephen's day has been celebrated on the 26th of December. The date is

ROMAN URNS, VASES, ETC., FOUND IN EXCAVATING IN LOMBARD STREET, LONDON.—See *ROME*, subhead II.

confessed by many Roman Catholic writers to be arbitrary, and is wholly without authority.

**STEPHEN.** There were ten popes of this name, as follows: The first, whose pontificate extended from 253 to 257. He had a discussion with Cyprian, bishop of Carthage, about the baptism of the lapsed. The fact of this discussion is quoted on both sides of the controversy regarding the primacy of the holy see. The second, elected as the successor of Zacharias, on March 27, 752, but died on the 29th, not having been consecrated. The third, in whose reign, which extended from 752 to 757, the exarchate of Ravenna and the Pentapolis, which had been seized from the Byzantine emperor by Astolphus, king of the Lombards, were bestowed upon the holy see by Pepin, king of the Franks, who twice expelled the Lombards. The fourth (768-772), in whose papacy a Lateran council condemned the supporters of Constantine, a pretender to the papal chair; and in 769, at a synod in Rome, Stephen reasserted the Roman dogmas regarding the worship of images and relics. The fifth (816-817), the founder of the Greek monastery of Santa Prassede at Rome. The sixth (885-891), at Rome, in 891, crowned Guido, duke

of Spoleto, as successor to Charles the Fat in the dominion of Italy. The seventh, who was cast into prison and strangled by the supporters of Pope Formosus, whose decrees Stephen had canceled, and whose remains he had caused to be disinterred and dishonored. The eighth (929-931), supposed to have been the creature of Marosia and her husband Guido, who are suspected of causing the deaths of his two predecessors. The ninth (939-942), during whose pontificate Marosia's son Alberic was virtual ruler of Rome. Stephen was hurt in a riot, and was a cripple for the remainder of his life. The tenth (1057-1058), who, under the influence of Hildebrand, introduced various reforms tending to the consolidation and increase of the power of the Church. By some the name of Stephen II. is omitted on account of his brief pontificate, and his not being even consecrated, thus reducing the above to nine popes of the name.

**STEPHEN**, king of England, the son of Stephen, count of Blois, by Adela, fourth daughter of William the Conqueror, was born in 1104. On the death of Henry I. he immediately came over from Normandy to England and laid claim to the crown, although he had taken the oath for securing the succession to Henry's daughter, the empress Matilda. After a protracted war with Matilda, and with her son Henry Plantagenet, and their supporters, a compromise was effected, by which it was agreed that Stephen should reign during his lifetime, and that Henry should succeed him. In the following year Stephen died, aged forty-nine.

**STEPHEN I.**, king of Hungary, was born

in 979. He was the son of a Hungarian chieftain who had been converted to Christianity by his wife. Stephen was baptized by Adalbert, archbishop of Prague, and on succeeding to his father's dukedom was crowned as king, with consent of the pope, Sylvester, who gave him the title of apostolic king, which is still borne by the emperor of Austria as king of Hungary. He was most active in putting down idolatry and establishing Christianity in his territories, building churches and founding bishoprics, so that he was afterward dignified with the title and honors of a saint. He died in 1038.

**STEPHENS**, properly **ESTIENNE**, the name of a family of learned French printers who flourished from the beginning of the sixteenth to near the end of the seventeenth century. 1. The founder of the family was **HENRY**, born at Paris about 1470. He is said to have begun printing there in 1502, and he died in 1520, leaving three sons, Francis, Robert and Charles. Of the eldest, Francis, hardly anything is known except that he was partner of Simon de Colines, whose daughter he married.

2. **ROBERT**, second son of Henry, and one of

the most illustrious scholars of his age, was born at Paris in 1503. At the early age of nineteen he superintended for De Colines a new edition of the New Testament in Latin, which called forth the angry menaces of the Sorbonne, the first warning of the persecutions which harassed him through life. He appears to have begun printing on his own account about 1525 or a little later, and sent forth an immense number of Latin, Greek and Hebrew works, many of them edited and the proofs corrected by himself. In 1539 he was honored with the title of printer to the king, of Latin, Greek and Hebrew works, and he enjoyed the high esteem and steady support of Francis I., who had some new types of great beauty cast for him. Among the most noteworthy of his publications were—the "Biblia Latina," 1528, and several subsequent editions; "Biblia Hebraica," 1546; the Greek New Testament, with a Latin translation, 1550; a set of the Greek Ecclesiastical Historians, and the "Evangelical Preparation" of Eusebius, about 1544; the "Roman Antiquities" of Dionysius of Halicarnassus, etc. His most important original work was the "Latine Lingue Thesaurus," folio, 1531, and several later editions in his lifetime. The repeated attacks of the doctors of the Sorbonne, who after the death of Francis I. got the sale of his Bibles prohibited, drove this eminent scholar from France. Attached to the Reformation, he chose Geneva for his new home, and managed to escape with his family about 1551. He published an answer, both in Latin and French, to the censures of the Sorbonne, and died at Geneva in 1559. It was this Robert Stephens who introduced, in 1555, the division of the Bible into chapter and verse, since almost universally adopted. It is known, however, that he followed the system of Pagninus, whose Latin Bible appeared in 1528.

3. **CHARLES**, third son of Henry, was first a physician, and made himself known by various works, especially several on agriculture, which were collected under the title of "Prædium Rusticum," and translated by himself into French. The work passed through thirty editions in different languages. He became head of the printing establishment at Paris after his brother Robert's departure to Geneva, and was named printer to the king. He died in 1564.

4. **HENRY**, second of that name, and the most illustrious of his family, was son of Robert, and was born at Paris in 1528. He early showed extraordinary abilities, and made rapid progress in the study of the Greek and Latin languages, learning the latter by hearing it spoken in the family, and the former under the best masters. At the age of nineteen he visited Italy, and spent three years in examining the principal libraries, discovering and collating manuscripts and making the acquaintance of many learned men. He made a short visit to England in 1550, and was presented to Edward VI., then traveled in the Netherlands, and returned to Paris in 1551. He had a printing-office there before the end of 1556, but on the death of his father, in 1559, he became head of the Geneva office. His travels and costly publications involved him in money difficulties, from which he was for many years relieved by the liberality of the Fuggers, a mercantile house of Augsburg. Among his numerous publications, many of which were annotated by himself, are—the works of Æschylus, Maximus Tyrius, Diodorus Siculus, Xenophon, Herodotus, with the translation by Valla, Terence, Plato, in 3 vols. folio; Homer, and collections of the Greek lyric

poets and orators. Of his original works the greatest is his "Thesaurus Lingue Græcæ," which cost him ten years of labor and the greater part of his fortune, and first appeared, in 5 vols. folio, in 1572. It earned him the gratitude of scholars and contributed greatly to the progress of philology, but had too small a sale to pay. The cause of its failure financially may be briefly stated to be the rascality of SCAPULA, which see. A second edition was published at London, in 7 vols. folio, between 1815 and 1828, and a third at Paris, under the superintendence of Hasse and Dindorf. After the publication of his "Thesaurus," Henry Stephens traveled in France and Germany. He made a long stay at Paris some years later, and was well received by the king, Henry III. During his latter years he led a reckless, wandering life, and was frequently at Paris, his circumstances becoming more and more embarrassed. He died at the hospital of Lyons in March, 1598.

5, etc. **PAUL**, son of the last above named, was a learned man, though inferior to his father. He continued his father's business at Geneva, but did not evince the same correctness and accuracy. He died at Geneva in 1627, aged sixty, leaving a son, **ANTHONY**, the last printer of his family. Anthony turned Romanist and went from Geneva to Paris; but though he was for some time printer to the king, his inattention and prodigality caused his ruin, and he was supported during the last years of his life in a hospital, where he died in 1674, aged eighty. With him expired the glory of a family which for five generations had assiduously contributed to the advancement of literature.

**STEPHENS, JOHN LLOYD**, an American traveler, was born at Shrewsbury, New Jersey, November, 1805. At the age of thirteen he entered Columbia College, New York, where he graduated with high honor. He also received a regular education in the law. He opened a law office in the city of his adoption, and continued in the practice of his profession for about eight years, without, perhaps, any pleasure or success. During this period he took a somewhat active interest in politics, and became a favorite speaker. Owing to his public oratory, he contracted a disease of the throat which forebode an entire prostration of his health. His physician suggesting a sea voyage, he, in the autumn of 1834, embarked for Havre, visited Italy, Greece, Turkey, Russia and Germany, and then took passage for Egypt by way of Malta. He landed at Alexandria, visited Cairo, and ascended the Nile as far as Thebes, whence he returned home in the latter part of 1836. In 1837 he published his first work, entitled "Incidents of Travel in Egypt, Arabia Petrea and the Holy Land," which was followed in 1838 by "Incidents of Travel in Greece, Turkey, Russia and Poland." Of the former twenty-one thousand copies, of the latter twelve thousand copies, were sold, and both were republished in London. Soon after, Mr. Stephens was appointed by the President of the United States special ambassador to Central America. On his return to the United States he prepared a third work, entitled "Incidents of Travel in Central America, Chiapas and Yucatan," fifteen thousand copies of which have been sold. In 1852 he again visited Yucatan, and published another work, entitled "Incidents of Travel in Yucatan," nearly ten thousand copies being sold. His travels in Central America and Yucatan have been pronounced to be the richest contributions

ever made by any one man on the subject of American antiquities. He died in New York, October 10, 1852.

**STERNE** (stern), **LAURENCE**, a divine and miscellaneous writer of a very singular and original cast, was born in 1713, at Clonmel, in Ireland. He was educated at Jesus College, Cambridge; and having entered into orders, he was presented with the living of Sutton, to which were afterward added a prebend at York, the rectory of Stillington and the curacy of Coxwold. For many years he was little known beyond the vicinity of his pastoral residences, the only production of his pen being his humorous satire upon a greedy Church dignitary of York, entitled the "History of a Watch Coat." In 1759 appeared the first part of his celebrated "Tristram Shandy," which drew upon him praise and censure of every kind, and became so popular that a bookseller engaged for its completion on very lucrative terms. During the intervals of the publication of "Tristram Shandy" he published three volumes of "Sermons," with his own comic figure, from a painting by Reynolds, at the head of them. He then spent some years in traveling on the Continent, and in 1768 he composed his "Sentimental Journey," which acquired a more general reputation than even its predecessor. Having gone to London to see the latter work through the press, he was seized with a severe illness, which proved fatal March 18, 1768. That Sterne possessed true wit and the most thoroughly original humor none who have read his works can doubt, but his occasional indecencies are disgusting, and deserve the severest reprehension.

**STERNE, RICHARD**, archbishop of York, was born in Mansfield, in Nottinghamshire, in 1596, and educated at Trinity College and Benedict College, Cambridge. In 1626 he was appointed one of the university preachers, in which post he gained high reputation. In 1632 he was made president of Benedict College, and in the following year he was made master of Jesus College, to which he proved a liberal benefactor. On the breaking out of the rebellion he incurred the resentment of Cromwell for having conveyed to the king both the college plate and money, for which he was seized and carried to London; and after suffering the severest hardships in various prisons, he was ejected from all his preferments. After the Restoration, he was appointed bishop of Carlisle, and was concerned in the Savoy Conference and in the revision of the book of Common Prayer. He was subsequently translated to the archiepiscopal see of York. He died in 1683.

**STERNHOLD** (stern/hold), **THOMAS**, an English poet who, according to Wood, was born in Hampshire, and educated at Winchester School and at Oxford, which he left without taking a degree, was groom of the robes to Henry VIII., had one hundred marks left him by that king's will,

ROMAN POTTERY, FOUND IN EXCAVATING AT THE SITE OF ST. PAUL'S CROSS, LONDON.—See *ROME*, subhead II.

and continued in the same office under his successor. He was highly offended at the obscene songs which were then in vogue. He turned into English metre fifty-one of David's Psalms, to be used by the courtiers instead of lascivious sonnets. These were gradually introduced into parochial churches, and were long in repute, though the more elegant version of Tate and Brady, and that of Merriam, recommend themselves to the musical critic and have generally come into use in Episcopal churches. Of the rest of the Psalms, fifty-eight were translated by Hopkins, a contemporary poet, and the remainder by Norton and others. No other composition of his is now extant. He died in London in 1549.

ROMAN POTTERY, FOUND IN EXCAVATING AT THE RUINS OF THE GREAT FIRE, LONDON.—See *ROME*, subhead II.

**STEVENSON** (stev-en'son), **JOSEPH**, who became rector as Leighton Buzzard, was educated in University College, Durham, and he distinguished himself in early life by his great industry in different departments of literature. He published a course of lectures on the early history of his parish, and shortly afterward he edited Bede's "Ecclesiastical History." Then came an edition of the minor works of Bede, one of Gildas and of

Nennius, and subsequently the chronicle of the affairs of Richard I. In 1840 he published the Ritual of the church of Durham. This is a Latin Ritual of the ninth century, and he accompanied it with an interlinear Northumbro-Saxon translation. This was followed in the next year by a volume on the lives and deaths of eminent men in the Cathedral of Durham. Two years after, he published an Anglo-Saxon and Early English Psalter, and in 1845 he issued the life and miracles of St. Goderie, the hermit of Finchale, by Reginald, a monk of Durham. In 1851 he pro-

EGYPTIAN STEWARDS.

duced the Latin hymns of the Anglo-Saxon Church, with an interlinear Anglo-Saxon gloss; and from 1853 till 1858 he was engaged on the Church histories of England, which extended to five volumes; and in 1854 he published a very interesting work, the Gospel of Matthew from the Northumbrian Interlinear Glossary, usually known as the Lindisfarne and Rushworth Gospels. In 1859 he edited and carried through the press the Chronicle of the Monastery of Abingdon; and in 1864 he completed a very learned antiquarian work in two volumes, which contained letters and papers illustrative of the wars of the English in France during the reign of Henry IV. He has thus done much to disseminate an accurate knowledge of the condition of ecclesiastical affairs in Durham, Northumberland and the North of England generally, from the days of Bede downward, and he is as famed for his wonderful research as he has been for his remarkable industry in collecting and arranging the materials which had long been neglected, and which invest the ages on which they bear with a surpassing interest.

**STEWART** (steu'ard), an officer of trust having charge of his master's establishment and property, Gen. xv. 2; Luke xii. 42. See CUP-BEARER. Ministers of the gospel, as bearing a weighty charge, are called "stewards of the mysteries of God," 1 Cor. iv. 1, 2; and the appellation is extended to Christians generally, 1 Pet. iv. 10. On reading the parable of the unjust steward, who defrauds his principal by collusion with his debtors, Luke xvi., we ought to observe the point to which our Saviour confines his illustration—the *policy* of the conduct pursued.

**STEWART** (steu'art), CHARLES JAMES, D.D., was born in 1775. He was the fifth son of John, seventh earl of Galloway. He was educated at All Souls College, Oxford, where he be-

came a Fellow. In 1816 he attained to the honor of doctor of divinity. In 1799 he was appointed to the rectory of Orton Longueville, and in 1826 he was raised to the see of Quebec. The duties of this Colonial appointment demanded a ceaseless attention to public engagements of a missionary character, leaving him almost no time for literary work. He was a man of great learning, as his rank in All Souls College testified, but his only published work, entitled "A Short View of Eastern Townships in Lower Canada," bore on the state of his diocese. It was published in 1817. He died in London in 1837.

**STEWART, DUGALD**, an eminent Scotch philosopher, was born at Edinburgh, in 1753. He received his education at the High School of Edinburgh and at the University of Glasgow. In 1774 he was named assistant professor of mathematics with his father at Glasgow, and in 1785 he was called to the chair of moral philosophy, previously filled by Ferguson. This post he held till 1810, when failing health compelled him to resign. The rest of his life was spent in retirement and literary labor at his seat on the Frith of Forth. Stewart was very popular as a professor and lecturer, and the elegance, clearness and good sense of his lectures attracted crowds, who found no depth or speculative height or strain of logic to weary and offend them. His teaching, like his master's, was a protest against the extreme results of the sensualist philosophy. He first appeared as an author in 1792, when he published the first volume of his "Elements of the Philosophy of the Human Mind." The second did not appear till 1814, and the third followed in 1827. Among his other works are—"Philosophical Essays," which passed through several editions, "Outlines of Moral Philosophy," a "Preliminary Dissertation, for the Encyclopædia Britannica, on the Progress of Metaphysical, Ethical and Political Science," which appeared in two parts in 1815 and 1821, and had a great run for a time, and biographies of Adam Smith, Dr. Reid and Dr. Robertson. He died at Edinburgh in 1828.

**STEWART, JAMES HALDANE**, who was one of the most eminent preachers of his day in the Church of England, was born in 1775. He held the position of incumbent of St. Bride's, in Liverpool, and he became rector of the parish of Limsfield, in Surrey. His charge in Liverpool required vast labor because of its magnitude, for his public ministrations always attracted a large attendance. Nevertheless, he produced a considerable number of literary works, of which the principal are—"Thoughts on Special Prayer," which appeared in 1821, "Discourses on the Redeemer's Advent." Next followed two issues of sermons, farewell discourses at Percy Chapel, in London, where he had ministered for some time, Lectures on Ezekiel's Vision, Urgent Reasons for Prayer, and the Family which Jesus Loved. In his day, Fielding Ould, Hugh McNiele and J. Haldane Stewart were the three great preachers and men of vast influence in the Established Church of England in Liverpool. He died in 1854.

**STIGAND** (sti'gand), archbishop of Canterbury in the eleventh century, is first known to us as chaplain and minister of Emma, queen and widow first of Ethelred and then of Canute. He was consecrated bishop of the East Angles in 1043, but he was almost immediately deposed by Edward the Con-

fessor. In 1044 he was restored, and became chaplain to Edward. Stigand was translated to Winchester in 1047, and five years later was appointed to the see of Canterbury. He was probably made archbishop in the following year—1053; assisted in the consecration of Westminster Abbey in 1065, and on the death of the Confessor summoned the Witenagemot which elected Harold II. king. He crowned Harold, and after his defeat and death at the battle of Hastings anointed Edgar the Atheling, who was elected by the council assembled at London. But the Conqueror was irresistible, and Stigand, with other leading men, made formal submission to him, and was received with great outward respect. When William went to Norway in 1067, he took with him Edgar, Stigand and the chief of the Saxon nobles. Stigand, after his return to England, procured a safe retreat for the Atheling in Scotland, and went himself with his immense treasures to the famous "Camp of Refuge" in the Isle of Ely. But the camp was entered by the Normans, the heroic Hereward made his peace with William, and Stigand was put in chains (1072). He had been deposed two years previously, and spent the rest of his life in prison at Winchester, refusing to the last to give up his treasures or betray their place of concealment. Lanfranc succeeded him in the primacy.

**STIGMATA** (stig'ma-ta). This name has been used to designate certain marks resembling wounds which St. Francis and others claimed had been impressed on them in a miraculous manner. Usually the impressions have been reported to have been made on the hands, the feet and the side, as in imitation of our Lord, who was thus wounded in the crucifixion, and the claim on the part of those who held that they were thus miraculously affected was that they had thus a divine assurance that they had so far become like the Lord. See FRANCIS, SAINT.

BISHOP STILLINGFLEET.—See article.

**STILES, EZRA, D.D.**, the son of Isaac Stiles, minister of North Haven, Connecticut, was born December 15, 1727. He graduated in 1746 from Yale College, and in 1749 was chosen tutor, in which station he remained six years. After having preached occasionally, his impaired health and some temporary doubt respecting the truth of Christianity induced him to pursue the study of the law. In 1753 he took the attorney's oath at New Haven, and practiced at the bar till 1755. But having had his doubts happily removed, he resumed preaching, was ordained October 22, 1755, and became minister of the Second Congregational Church in Newport, Rhode Island. In March, 1776, the

war dispersed his congregation and induced him to remove to Dighton. He afterward preached at Portsmouth. In 1777 he was chosen president of Yale College, as successor of Mr. Clapp, and continued in this station till his death, May 12, 1795, aged sixty-seven. President Stiles was a most learned man, having, besides an excellent acquaintance with mathematics, history, etc., a thorough knowledge of the Hebrew, Greek and Latin languages, the former of which he learned when he was about forty years of age; he had made considerable progress in the Samaritan, Chaldee, Syriac and Arabic, on the Persian and Coptic he had bestowed some attention, and the French he read with great facility. He was a most impressive and eloquent preacher, and spoke with zeal and energy. In the cause of civil and religious liberty he was an enthusiast. He published many discourses on public occasions, and a "History of the Three Judges of King Charles I.—Whalley, Goffe and Dixwell," in which he discloses very fully his sentiments on civil liberty, and predicts a "republican renovation" in England. He left an unfinished "Ecclesiastical History of New England," and more than forty volumes of manuscripts.

**STILLINGFLEET** (stil'ling-fleet), EDWARD, bishop of Worcester, and a celebrated controversialist, was born at Cranbourne, in Dorsetshire, in 1635. He was educated at Cambridge, became a Fellow of St. John's College, and in 1657 rector of Sutton. Two years later he first appeared as an author and as a churchman of most liberal views in his treatise entitled "Irenicum," which, by his subsequent course and writings, he virtually retracted. He acquired great reputation by his works, and after the Restoration preferments fell fast to his lot. He was preacher at the Rolls, chaplain to the king and dean of St. Paul's. His life was almost one continuous controversy with Romanists, nonconformists, Socinians and the philosopher John Locke. He condemned the ecclesiastical commission under James II., and on the accession of William III. was raised to the see of Worcester. Among his numerous works

the most important was the "Origines Sacre, or Rational Account of the Christian Faith as to the Truth and Divine Authority of the Scriptures." He died at Westminster in 1699.

**STILLINGTON** (stil'ling-tun), ROBERT, an ecclesiastic and canonist, a strong partisan of the house of York. He became bishop of Bath and Wells, keeper of the privy seal and lord chancellor in 1467. On the death of Edward IV. he sided with Richard, duke of Gloucester, and drew up the act bastardizing the children of the late king, and assisted at the coronation of Richard. He was imprisoned by Henry VII., but pardoned. Being implicated with the supporters of Lambert Simnel, the would-be earl of Warwick and heir to the throne, in 1487, he was committed to Windsor Castle, where he died in 1491.

**STILLMAN** (stil'man), SAMUEL, D.D., a distinguished minister of Boston, was born in Philadelphia, February 27, 1737. When he was eleven years of age, his parents removed to Charleston, South Caro-

NEHEMIAH CUPBEARER TO KING DARIUS AND STEWARD OF HIS HOUSE, AND SUBSEQUENTLY THE RESIDUER OF JERUSALEM.—See NEHEMIAH.

lina, and in an academy in that city he received the rudiments of his education. Being ordained at Charleston, February, 1759, he immediately afterward settled at James's Island, but his impaired health induced him, in 1760, to remove to Bordentown, New Jersey, where he preached two years and then went to Boston. After being an assistant about a year in the Second Baptist Church, he was installed the minister of the First Church, January, 1765. Here he continued his labors, universally respected and beloved, till his death by a paralytic shock, March 13, 1807, aged sixty-nine. As a preacher of the gospel Dr. Stillman held the first rank. Embracing the peculiar doctrines of the Christian religion, he explained and enforced them with clearness, and with apostolic intrepidity and zeal.

was born at York, England. At eighteen he was admitted at St. John's College, Cambridge, and he was chosen as a scholar of that college. On leaving the university, having refused a Fellowship, he was soon settled in London, at All-Hallows, where he labored from 1594 until his death, in 1626. He was most indefatigable in his ministry, and his preaching was signally blessed. He wrote on Repentance and a "Commentary on Malachi."

**STOCK, SIMON**, general of the order of Carmelites, was by birth an Englishman, and died in 1265. He is celebrated as the institutor of the scapulary, which Romanists believe he received from the Virgin Mary in a vision, with a promise that all who wore it, or one consecrated like it, should be sure of her protection in every emergency.

**STOCKINGS**. Ecclesiastical stockings are of red color for cardinals, white for the pope, violet for bishops and black for clergy.

**STOCKS**, a wooden frame, variously constructed to confine the feet, the feet and hands, or the feet, hands and neck of a person. The last-mentioned was very severe, holding the prisoner in such an attitude that his body was bent, Jer. xx. 2, 3. The "prison-house" of 2 Chr. xvi. 10 would seem to have been a place where this instrument of punishment stood. A different word in Job xiii. 27 signifies stocks like ours, in which the feet alone were confined. And such were the "stocks" of Acts xvi. 24. But the sufferer might be tortured in these by having his legs drawn far apart.

**STOCKTON** (stok'-tun), THOMAS HEWLINGS, D.D., was born

in 1808, at Mount Holly, New Jersey. He entered the Methodist Church and became a preacher in 1829. He acted as chaplain in the House of Representatives in 1833-34, 1835-36, 1859 and 1861, and he discharged the duties of chaplain to the Senate in 1862. He was a man of fine taste and of profound thought, and an excellent preacher. A volume of his sermons appeared in 1854, and they passed through several editions. In 1862 he published a volume of poetry, and in 1865 a sermon from his pen appeared on the "Influence of the United States on Christendom." He was the author of a number of valuable tracts on "Bible Times," and he compiled a hymn-book, besides acting as the editor of "The Christian World." He died in 1868.

**STODDARD** (stod'dard), SOLOMON, was born in 1643, at Boston. He entered Harvard

College, and graduated in 1662; after which he reached a Fellowship, and he acted as librarian from 1667 till 1674. After preaching two years at Northampton, Massachusetts, he was ordained as pastor at that place in 1672, and he held this charge until his death. His name has long and deservedly held a high place among the old worthies of New England, where he spent a protracted and an honored life. In the year 1700 he published the "Doctrine of Instituted Churches," a work which bore on a question of the day in connection with the Lord's Supper. The work of Mr. Stoddard was a reply to "The Order of the Gospel," by Increase Mather. Mr. Stoddard held that the Lord's Supper should be viewed as a converting ordinance, and that all baptized persons of ordinary moral lives might lawfully approach the table. The controversy began in 1700, was conducted with great vigor, and was resumed in 1708. When age rendered him unequal to the duties of his charge, his grandson Jonathan Edwards, who at the time was a tutor in Yale College, was invited to act as his colleague, and he was ordained in 1727. He only lived two years after the settlement of his grandson, as he died in February, 1729, aged eighty-six years. He was a voluminous writer. In 1698 he published "The Trial of Assurance," in 1700 the "Doctrine of Instituted Churches," and in 1712 a "Plea for Tithes." In the same year appeared "Divine Teachings," and two years afterward "A Guide to Christ," compiled for young ministers; in 1717, a series of sermons on "The Virtue of the Blood of Christ to Cleanse from Sin;" in 1719, "The Nature of Conversion;" and in the same year, a "Treatise on Sincerity and Hypocrisy." In 1722 he treated on "Cases of Conscience," and next year a work on the "Neglect of the Church in Missions among the Indians." Omitting several replies on the controversy respecting the Lord's Supper and sermons which appeared from time to time, his last important work was "The Safety of Appearing at the Day of Judgment in the Righteousness of Christ." This was reprinted at Edinburgh in 1792. Such was the course of this great and good man, who served God in his day and generation, and who in a venerable and honored age was gathered to his fathers.

**STOICS** (sto'iks), a sect of Grecian philosophers who derived their name from *stoa*, "a porch," because Zeno their founder, in the fourth century before Christ, and succeeding leaders, used to teach in the painted porch or colonnade at Athens. In their physical doctrines they maintained two first principles, the active and the passive: the passive was matter; the active was God, who was one, though called by many names. Of him they pantheistically believed that all souls were emanations. They held the entire independence of man, the truly wise being sufficient in himself, but subject equally with the deity to inexorable fate. Each person was to live according to the nature of things in general, while as to a future life their notions varied. Some held that all souls were reabsorbed into the deity; others held the separate existence of all, or of only the good, till the general conflagration. The humbling doctrines of the cross, the preaching of Jesus and the resurrection would, it is clear, be distasteful to such philosophers, Acts xvii. 18. Epictetus and the emperor Marcus Aurelius were Stoics.

**STOLE**, a narrow band or strip worn over the neck by all priests and deacons, and varying in

material and color with the other vestments. A deacon wears it over one—the left—shoulder; a bishop's is always pendent, except at mass, when it is crossed in front. In the East the deacon's stole is marked with the words *Hagios, Hagios, Hagios*, and is called *orarium*; the priest's is made with a hole in the middle to pass over the head and fall down on either side. It is one of the most ancient vestments of the clergy, and mystically it signifies the yoke of Christ.

**STOMACHER** (stum'a-ker), Isa. iii. 24, probably a kind of wide mantle or holiday dress.

**STONE**. Rude heaps of stones were sometimes raised to preserve the memory of any noticeable event, as upon the place where Achan was executed, Josh. vii. 26, and in the pit where Absalom's corpse was cast, 2 Sam. xviii. 17. Sometimes these monuments appear to have been more

of them yet remaining—not so much beveled, as travelers often describe them, as paneled, a border around the edges being slightly depressed or cut out.

Stones had to be gathered from cultivated ground, Isa. v. 2; hence enemies tried to destroy fertile plots by casting stones thereon, 2 Ki. iii. 19, 25.

The term is often used figuratively or in symbol, as of Messiah, Ps. cxviii. 22; Matt. xxi. 42, of his Church or kingdom, Dan. ii. 34, 35, 44, 45, of believers built up into a holy temple, 1 Pet. ii. 4, 5; also to denote hardness or insensibility, 1 Sam. xxv. 37. There is a remarkable promise given to the church in Pergamos, that to him that overcame the Lord would give "a white stone, and in the stone a new name written, which no man knoweth saving he that receiveth it," Rev. ii. 17. Various interpretations of this passage have been given. Perhaps the most satisfactory is that proposed by

of "The Church Universal," and he revised it and gave it to the public in the year 1866 under the designation of "The Living Temple," a change which has perhaps been questionable, as that title seems to have been monopolized by the grand treatise of Howe. In 1853 he published "The Contrast," with several sermons and the lives of Dr. Milnor and Bishop Griswold, which had appeared in 1844 and 1848. It is evident that Dr. Stone has displayed a great amount of literary industry, as he has also acted as editor to several works in the issues of the Protestant Episcopal Evangelical Knowledge Society.

**STONE, SAMUEL**, was born at Hertford and educated at Emmanuel College, Cambridge, the great college in which many of the early lights of New England were trained. In 1633 he emigrated, along with Cotton and Hooker, to New England. He was co-pastor with Hooker at New-

PUNISHMENT BY STONING.—See STONING.

carefully constructed, as the two erections of twelve stones each, which were set up in the bed of the Jordan, and at the first encampment in Canaan, to commemorate the passage of the river, Josh. iv. 2-9. Single stones were occasionally placed as memorials, and these were sometimes anointed or consecrated. Examples are that of Jacob at Beth-el, Gen. xxviii. 18, that set by Joshua under the oak at Shechem, Josh. xxiv. 26, 27, and that which Samuel called Eben-ezer, 1 Sam. vii. 12. Heaps of stones were also made at the ratification of a covenant, as at that between Jacob and Laban, Gen. xxxi. 46-52. And a remarkable stone was sometimes a boundary mark, Josh. xv. 6. Large hewn stones were employed in the erection of the temple and other splendid structures, 1 Ki. v. 17; Mark xiii. 1, 2. The stones of an altar were not to be hewn, Ex. xx. 25. Those of the temple were cut and squared, 1 Ki. vi. 18, all prepared before they were actually built into the walls, 1 Ki. vii. 7, very probably in the quarries which may yet be seen under part of Jerusalem. These stones were of huge size, many

Dr. Trench. He regards this stone as the diamond, not dead-white but lustrous, with an allusion to Urim and Thummim, which the high-priest alone saw, and which might have the incommunicable name graven thereupon. The faithful victor who received the stone—not the name—was privileged to look upon that name; an emblem this of a full fruition of the Godhead by those who enter his glorious paradise.

**STONE, JOHN SEELY**, D.D., was born in 1795, at West Stockbridge, Massachusetts. He graduated at Union College in 1823, and entered the ministry of the Protestant Episcopal Church. He discharged the duties of the rectorship of Christ's Church, in Brooklyn, and of St. Paul's Church, in Boston, and he became a lecturer in the divinity school at Philadelphia. In 1867 he was made dean of the theological seminary at Cambridge. He is the author of "The Mysteries Opened," which appeared in 1844, and in 1867 he published "Lectures on the Christian Sabbath." He had published a work in 1846 under the title

town and Hartford, and after the death of Hooker, in 1647, he remained sole pastor until his own demise, in 1663. He was the author of "A Congregational Church is a Catholic Visible Church," which appeared in London in 1662, in quarto size. It is remarkable that a very important treatise which he left behind him in manuscript has never been printed, although its great value is known. Mather says of this "Body of Divinity:" "This rich treasure has often been transcribed by the vast pains of our candidates for the ministry, and it has made some of our most considerable divines." He also left in manuscript a "Confutation of the Antinomians."

**STONE, WILLIAM**, a patriotic, eccentric and learned American divine, was born in Guilford, Connecticut, in 1757. In the early stages of the Revolutionary war Mr. Stone left his books—all that he could not carry in his knapsack—and entered the army as a common soldier to relieve his brother, who was in ill health, and who soon afterward died. He did not leave the service until

ANCIENT STOCKS.—See STOCKS.

He possessed a pleasant and most commanding voice; and as he felt what he spoke, he was enabled to transfuse his own feelings into the hearts of his auditors. In the chamber of sickness and affliction he was always welcome among different denominations. His high Christian excellence made his name proverbial as the "good Dr. Stillman." Besides "Apostolic Preaching," in three discourses, and many occasional sermons published during his life, an octavo volume of twenty sermons was published in 1808.

**STIPENDIARY PRIESTS**, priests who officiate in charities founded and endowed for the purpose of praying and offering mass for the souls of the founders.

**STOCK, RICHARD**, master of arts, a laborious and successful divine of the English Church,

the war was closed. On the restoration of peace he resumed his studies, and resided one year as Freshman at Dartmouth College. The three subsequent years of his life were passed at Yale, where he graduated in 1786. He then studied theology, and spent most of his life in itinerant labors, which embraced all the Eastern States, except Rhode Island, Florida, the two Carolinas and Georgia; then in the eastern part of Long Island, then a short time in New Paltz, in Ulster county, New York, and in 1793 in the valley of the Susquehanna, returning in 1797 to Western New York, where the country was new and wild and the population scarce, performing year after year the self-denying labors of a devoted herald of the cross. Under the influence of such exposures life and vigor necessarily began to wane. In 1819 he located at Sodus, upon the shore of Lake Ontario, where he spent the last twenty years of his earthly pilgrimage, always, when able, performing the duties of a missionary; and when unable to do so, until within a few months of his death, he daily amused himself by reading the Greek Testament

COMMON STORK OF SYRIA.—See STORK.

and his Hebrew Bible, and the Greek and Latin classics. He died at Sodus, March 20, 1840, aged eighty-three years.

**STONE, WILLIAM MURRAY, D.D.**, bishop of the Protestant Episcopal diocese of Maryland, was born in Somerset county, of that State, about the year 1779, and received his education at Washington Academy, on the Eastern Shore. He was admitted to orders by Bishop Claggett. With the exception of a short period spent in the rectorship of the church in Chestertown, Kent county, his ministry was confined to his native parish, and his labors were crowned with much success. For fourteen years previous to 1828 he did not attend the conventions of his Church; but although he thus abstained from intermeddling in ecclesiastical politics and confined himself to the duties and interests of his own parish, his worth was well known and duly appreciated by his brethren. In 1828, after the death of Bishop Kemp, there was no unanimity of opinion in regard to his successor. Repeated but unavailing attempts were made to fill the office, each party seeming resolved to adhere to its own candidate. In 1830 a committee of conference was chosen by the con-

vention, and this committee nominated Dr. Stone, who was forthwith elected with great harmony, both of the other gentlemen withdrawing from the contest. He was consecrated October 21 of the same year in Baltimore. He had but a feeble and shattered constitution, and during his brief career in the episcopacy was twice disabled by the fracture of his limbs. Yet notwithstanding these infirmities and disabilities, he faithfully exerted his abilities in promoting the interests of the Church of which he had been made one of the overseers. During the first year of his episcopate the University of Pennsylvania conferred on him the degree of doctor of divinity. His death occurred February 26, 1833. Bishop Stone was distinguished by the meekness, the unaffected humility and the lovely simplicity of his character. His course was not marked by brilliant actions, there was nothing in the attributes of his mind to occasion bursts of admiration, but he possessed good talents which were sanctified by religion.

**STONEHOUSE** (stōn'house), SIR JAMES, an eminent physician and divine, was born at Tubney, in Berkshire, in 1716. After receiving his education at Winchester School and at St. John's College, Oxford, he studied medicine. He subsequently traveled abroad, and then settled at Coventry, whence he removed to Northampton, where his benevolence was strongly evinced in the erection of the county infirmary. Though for some years inclined to infidelity, in the defence of which he even wrote a book against revealed religion, which was three times reprinted, he eventually became a convert to the opinions of the Church of England. In proof of his sincerity, though having an extensive practice ensured by an experience of twenty years, he took orders, and obtained the office of lecturer at All Saints, Bristol. He was subsequently presented to the livings of Great and Little Cheverell, Wiltshire, where he toiled not only for the promotion of the spiritual comfort of his parishioners, but also in the composition of useful works in behalf of religion and virtue. As a preacher he was eloquent and impressive, his discourses carrying conviction to the heart and disposing the mind to more than a barren profession of Christianity. In 1791, on the extinction of the elder branch of his family, settled at Radley, Berkshire, he succeeded to the title of baronet, and died at Bristol in 1795. His works, which are very numerous, are all on religious subjects, and some of them have been recommended by the Society for the Promotion of Christian Knowledge. His "Friendly Advice to a Patient" has been frequently re-edited.

**STONES, PRECIOUS.** Many gems or precious stones are mentioned in Scripture, used as ornaments of dress or for sacred purposes, as in the high-priest's breastplate. The art of engraving upon them was known to the Hebrews. An endeavor is made, so far as possible, to identify these precious stones in the articles under their respective headings. The following are the names as they occur in our version:

Agate, Ex. xxxix. 12.  
Amethyst, Ex. xxxix. 12; Rev. xxi. 20.  
Beryl, Ex. xxxix. 13; Ezek. xxviii. 13; Rev. xxi. 20.  
Carbuncle, Ex. xxxix. 10; Ezek. xxviii. 13.  
Chalcedony, Rev. xxi. 19.  
Chrysolite, Ezek. xxviii. 13, margin; Rev. xxi. 20.  
Chrysoprase, or Chrysoprasus, Ezek. xxviii. 13, margin; Rev. xxi. 20.

Diamond, Ex. xxxix. 11.  
Emerald, Ex. xxxix. 11; Ezek. xxviii. 13; Rev. iv. 3; xxi. 18, 19.  
Jacinth, Rev. xxi. 20.  
Jasper, Ex. xxxix. 13; Ezek. xxviii. 13; Rev. iv. 3; xxi. 18, 19.  
Ligure, Ex. xxxix. 12.  
Onyx, Gen. ii. 12; Ex. xxix. 6, 13; Ezek. xxviii. 13.  
Ruby, Job xxviii. 18; Prov. iii. 15.  
Sapphire, Ex. xxxix. 11; Ezek. xxviii. 13; Rev. xxi. 19.  
Sardine, or Sardius, Ex. xxxix. 10; Ezek. xxviii. 13; Rev. iv. 3; xxi. 20.  
Sardonyx, Rev. xxi. 20.  
Topaz, Ex. xxxix. 10; Ezek. xxviii. 13; Rev. xxi. 20.  
Precious stones are figuratively introduced to express value, beauty, continuance, etc., Isa. liv. 11, 12; Lam. iv. 7.

**STONING** (stōn'ing) was the mode of capital punishment established among the Jews by Moses. It would appear from Ex. viii. 26 to have been an Egyptian custom, and there is no evidence to show that beheading was either enjoined by Moses or in accordance with Egyptian law, and it is justly observed that the cases referred to in 2 Sam. iv. 8; xx. 21, 22; 2 Ki. x. 6-8 have no more reference to the Mosaic law than the decapitation of John the Baptist by Herod. Many elements of the Mosaic legislation can be accounted for by the fact that the Jews were a nation of newly-emancipated slaves, and they had imbibed all the degenerating influences of slavery among the heathen. They were taken under the immediate divine government, and it was necessary that a race should be trained to know and acknowledge the direct authority of God. Severe as the punishment of stoning may appear to us, it is evident that no insults, no torture or horrible mutilations were permitted, as in other nations. Besides, it was possible to inflict the sentence so as to stun the sufferer at once, and secure his death in a short space of time. The character of the punishment would seem to intimate the fact that the people were wanderers in a desert among whom it was instituted, though, once established, it was handed down from generation to generation, as the widely separated deaths of Achan and Stephen testify, Josh. vii. 10-26; Acts vii. 54-60.

**STOOL OF PENANCE.** In the Middle Ages a movable stool was provided on which persons who had been guilty of notorious offences were compelled to stand before the whole congregation clothed in a white sheet, with a taper in one hand and a statement of the offence attached to the breast. In the Church of Scotland and in those Churches which have branched off from it, it used to be customary for persons who had been guilty of flagrant offences to appear in the congregation, acknowledge the offence, profess repentance and receive an admonition before restoration to communion.

**STOPFORD** (stop'ford), EDWARD, LL.D., lord bishop of Meath and a privy councillor of Ireland, was the son of the Rev. Mr. Stopford, for many years rector of Glenmore, in the county of Cork, and grandson of Dr. James Stopford, lord bishop of Cloyne. He was consecrated bishop of Meath in 1842, and sworn a privy councillor of Ireland in 1843. He was the author of "The Scripture Account of the Sabbath, compared with

His Grace the Archbishop of Dublin's Thoughts on the Sabbath," in which the antiquity of the Sabbath is maintained, its permanent obligation proved, its meaning explained, its identity with the Lord's day established, and the objections of the archbishop of Dublin, as well as those of several authors, answered. Bishop Stopford died September 17, 1850, at Ardbraccan, county of Meath.

**STOPFORD, JOSHUA**, who was rector of All Saints in York, England, became famous by his well-known treatise, entitled "Pagano-Papismus," in which he presented an exact parallel between Rome Pagan and Rome Christian in their doctrines and ceremonies. It appeared in 1675, and an edition was published in 1844. In the same year—1675—he published "Ways and Means whereby the Pope and his Agents have endeavored to Propagate their Doctrines;" and this work also made a great impression because of the sensitive and alarmed condition of public affairs, and the known desire of many in the higher ranks of life to favor the spread of the Romish Church in England. He died in 1675.

**STORAX** (sto'rax), Ecclus. xxiv. 15, perhaps the *Styrax officinale*.

**STORK.** The eating of this well-known bird was forbidden to the Hebrews, Lev. xi. 19; Dent. xiv. 18. Its habits are alluded to in Ps. civ. 17; Jer. viii. 7. The stork is migratory, arriving in Palestine in the latter part of March; it feeds on frogs, snakes, eels, etc., and has in many countries been regarded as sacred, and not to be molested. It builds its nests in cedars, pines and firs, and in towers and old ruins. In Job xxxix. 13 the word occurs in the margin of our version; but Gesenius would translate, "The wing of the ostrich exults, but are her pinions and feathers pious?"—i. e., she is not affectionate toward her young.

**STORK, THEOPHILUS, D.D.**, was born in 1815, at Salisbury, in North Carolina. He graduated, in 1835, at Pennsylvania College, and for fifteen years he was pastor of St. Matthew's and St. Mark's Lutheran churches in the city of Philadelphia. He was an admirable preacher and a greatly beloved man. In 1854 he published "The Children of the New Testament," and in the same year he edited "The Life of Martin Luther." Next appeared from his pen "Luther's Christmas Tree," and in 1856 "Jesus in the Temple," followed, in 1857, by "Home Scenes of the New Testament." In 1859 he published a "Christmas Book for Children," and while thus engaged he acted, along with Drs. Hutter and Schaeffer, as editor of the "Lutheran Home Journal," and with Dr. Kurtz as editor of the "Lutheran Observer." manifold as these engagements were, he was able nevertheless to prepare many papers for the "Evangelical Review," the "Evangelical Magazine," the "Eclectic" and the "Union Tabernacle." He died in 1873 at Philadelphia.

**STORRS, RICHARD SALTER, D.D.**, was born in 1787, at Longmeadow, Massachusetts, of which place his father was pastor. He graduated at Williams College in 1807, and in 1811 he became pastor of the First Congregational Church in Braintree, Massachusetts. He has published sermons, and he edited an edition of Willison's "Sacramental Meditations." He acted as editor of the "Boston Recorder" and co-editor of the

"Congregationalist." He died in 1819. Grandfather, father and son were called Richard Salter Storrs, and each was a doctor of divinity, and all held a high place in the pulpit of New England. The youngest of this famous trio of New England divines has been a voluminous and forcible writer, and among the most thoughtful of his works must be classed "The Constitution of the Human Soul," which he delivered as the "Graham Lecture" in 1857.

**STORY, THOMAS**, was born in 1667, in Westmoreland, in England. He was a member of the Society of Friends; and with a view to disseminate his views he visited America in 1698, where he traveled through the colonies now known as the Eastern and Middle States. He wrote extensively in exposition of his views, and in 1733 he published "A Vindication of the People called Quakers," and discourses in 1738, while two issues of sermons in 1739 and 1764 showed the zeal with which he held on his way. In 1747 was published at Newcastle-on-Tyne a journal of his life, with the reasons which led him to become a Friend, and this work, which was posthumous, contained a good account of his travels and labor to advance the gospel. He died in London in 1742.

**STOUGHTON** (stou'tn), WILLIAM, an American citizen who was born at Dorchester, Massachusetts, in 1631, his father being Colonel Israel Stoughton, a military man of repute, a large land-owner and a benefactor to Harvard College, giving it three hundred acres of land. William graduated at Harvard College in 1650, studied theology, went to England, and became a Fellow of New College, Oxford, but was ejected at the Restoration, and returned to his native land in 1662. Though he declined invitations from numerous churches to settle as pastor, he yet acquired a high reputation as an eloquent and forcible preacher. In 1668 he was appointed to deliver the Massachusetts election sermon, which was spoken of as one of the best ever delivered upon the occasion. In 1677 he went to England as an agent of the province. He also held, at different times, the office of lieutenant-governor of Massachusetts, of chief-justice of the Superior Court, and was a member of the Council. Stoughton Hall, built in 1698, was erected at his expense. He also left property for other public charitable objects. He died at Dorchester, July 7, 1701, aged seventy years.

**STOW, BARON, D.D.**, was born in 1801, at Croydon, New York, and educated at the Columbia College, District of Columbia, where he graduated in 1825. For two years he edited a religious paper called the "Columbian Star," which was published at Washington, and in 1827 he was ordained as pastor of the church at Portsmouth, New Hampshire. In 1832 he was removed to the Baldwin Street Church in Boston, and in 1848 he was transferred to the Rowe Street Church in that city, where he remained until 1867. He held a deservedly high place in the ministry of the Baptist Church. In the Baptist Missionary Union he was a leading member, and he presided over the trustees of the Newton Theological Institution.

In 1832 he issued a "Life of Harriet Dow," and in 1835 he published "The History of the Baptist Mission to India," and two years afterward he followed it up by "A History of the Danish Mission on the Coromandel Coast." Then, in 1842, his "Daily Manna" appeared, and it went through several editions, and it was followed by "The Whole Family in Heaven and Earth," and in 1859 by "The Christian Brotherhood," and in the same year he published "First Things." Other small works proceeded from his pen from time to time, and he showed great judgment by the able manner in which he edited "The Baptist Missionary Magazine," as well as by the papers which he contributed to the "Christian Review." He died at Boston in the year 1869, having displayed through life a high-toned Christian character, and being loved for his great amiability, his kindness of manner and his sincere piety.

CELEBRATED STORK'S NEST AT PERSEPOLIS.—See STORK.

**STOW, JOHN**, was born in London, in 1525. For many years he pursued the humble business of a tailor, but by the time he had reached middle life he had accumulated vast stores of antiquarian knowledge, and he determined on abandoning business and devoting his life to literature. One of the most noteworthy incidents in the history of men of learning, and one that is truly surprising, is the fact that a man like Stow, whose name now stands in the front rank of profound antiquaries, should have been permitted to pass his declining years in abject poverty. Still more wonderful is the fact that when he was nearly eighty years of age he was constituted by royal letters-patent a public beggar; and he was commended to charity on the ground of his having "compiled and published diverse necessary books and chronicles." His four great works are now considered so valuable that they are indispensable to any even moderately furnished English library. They are—1. "A Summarie of Englysh Chronicles"

(1561), of which editions have often been published. 2. "Annales; or a General Chronicle of England from Brute unto this Present Yeare of Christ" (1580), of which also many editions have appeared and additions made by continuators. 3. "A Survey of London" (1598), also repeatedly edited and revised; and 4. "The Successions of the History of England" (1638), which has been considered a fragment of a larger work. Hume has justly called him "the honest historian Stow," and his integrity and research are unquestionable. He died in the year 1605, and was buried in the church of St. Andrew Undershaft, where a monument was erected to his memory, and it still remains. He was not the first man who was neglected in life and honored after his death, and it need not be a matter of surprise that, as Maitland has recorded, the bones of the old antiquary were removed from their resting-place in 1732 to make way for those of some richer person.

MONUMENT TO JOHN STOW.—See STOW, JOHN.

**STOWELL** (sto'el), HUGH, was born in 1799, at Douglas, in the Isle of Man. He entered Oxford in 1818, becoming a student of St. Edmund's Hall, and graduating in 1822. In the following year he was ordained, and he began his ministry as curate at Shapcombe, in Gloucestershire, whence he went to Trinity Church in Huddersfield, but Manchester became the great sphere of his remarkably successful labors. In 1825 St. Stephen's Church, in the suburb (Salford) of Manchester, was given to him, which he held until the large edifice of Christ Church in Aetonsquare (Salford) was built for him, and which was raised by a special subscription in order to provide a sphere equal to his powers and great zeal. Here his labor was immense, and the results which flowed from his manifold plans, ceaseless activity and wonderful power as a preacher and organizer, attracted the attention of all who were interested in the advancement of the gospel among the teeming masses of a

vast and growing city. In 1845 he was made an honorary canon of Chester Cathedral, and subsequently he became rural dean of Salford, a position which gave him almost the powers of a diocesan from the manner in which he labored in his office. Although his life appeared to be a scene of toil in the public work of the ministry, still he succeeded in producing a great number of works, which can only be briefly enumerated here. In 1819 he published a "Life of Dr. Wilson, the eminent Bishop of Sodor and Man," and next year a "Life of Sophia Leece." Next followed "The Pleasures of Religion" and "The Voice of the Church in Holy Baptism." "The Bible Self-Evident" and "The Moderation of the Church of England" were well received. Among smaller works were "William Palmer, a Warning," "The Age we Live In" and "Hints on Ex-amination." In 1854 he published "Nehemiah, a Model for Men of Business," and in 1858 "Lectures on Christianity in the Business of Life." In 1866 his sermons on the pass-over were published; and besides these, a large number of sermons, collections of hymns and volumes of poetry appeared from year to year as he prosecuted his labors. He died at Salford, October 8, 1865, thus closing a life of great ministerial usefulness, and deservedly regretted by the leading men and worthy classes of the different evangelical denominations.

**STRABO** (stra'bo), a celebrated Greek historian and geographer, was born at Amasia, in Cappadocia, about B. C. 50, and traveled through Greece, Italy, Egypt and Asia, endeavoring to obtain the most accurate information in regard to the geography, statistics and political condition of the countries which he visited. The time of his death is unknown, but he is supposed to have died after 20 A. D. His great work, in seventeen books, contains not only a description of different countries, but the chief particulars of their history, notices of eminent men and accounts of the manners and customs of the people.

**STRADLING** (strad'ling), SIR JOHN, was an eminent English layman who flourished in the early part of the seventeenth century. He was educated at Oxford, where he gained a high reputation. His talent lay chiefly in the department

of religious poetry. His first work, which appeared in 1597, was on "Life and the True Way to escape the Fear of Death." In 1607 he published "Four Books of Epigrams," and in 1623 another poem in quarto, entitled "Beatifici Pacifici," appeared. His last work, in three hundred and two pages quarto, entitled "Divine Poems; in Seven Several Classes," was published in 1625, and copies of it have often brought extravagantly high prices. His style and manner had all the fanciful quaintness of the age.

**STRAHAN** (stra'han), WILLIAM, a native of Edinburgh who, after serving his time with a printer in his native town, went to London, and soon attained eminence in his profession. In 1770 he purchased a share of the patent place of King's printer, and in 1775 sat in Parliament for Malnesbury, and in the following Parliament for Wotton-Bassett. Having achieved distinction and opulence, he became the friend of the learned, and

was ever ready to contribute to the comfort of those whose mental exertions had aided in his elevation. Among his particular friends was Dr. Johnson. Besides some original writings of only temporary value, he edited Dr. Johnson's "Prayers and Meditations." Mr. Strahan died in 1785, aged seventy.

**STRAIN AT**, Matt. xxiii. 24. See GNAT.

**STRAKES**, Ezek. i. 18, a word used for both the tire and the nave of a wheel.

**STRANGER**. See ALIEN, HOSPITALITY.

**STRATFORD, DE** (deh strat'ford), the name of two English ecclesiastics. 1. JOHN, one of the chief counselors of Edward, three times chancellor and president of the council. He was employed in many important missions, and was made successively bishop of Winchester and archbishop of Canterbury. He was a man of great learning, an able politician and a loyal counselor, liberal to the Church and charitable to the poor. He died in 1348. 2. ROBERT, brother of the preceding, was educated at the University of Oxford, of which he became chancellor. During his brother's absence in France he held the great seal on several occasions, and on his resignation, in 1337, he was made chancellor. The king's suspicions were unjustly excited against him, and he took the seal from him and threatened to imprison him. He was bishop of Chichester—a man of resolution, courage, fidelity to his sovereign, and a benefactor to his native Stratford and its cathedral. He died in 1362.

**STRAW**. The Egyptians anciently reaped their corn close to the ear, and then cut off the straw close upon the ground. This was the straw that was chopped up and mixed with clay to make bricks more compact and tenacious. When it was refused by Pharaoh to the Israelites, they had to gather stubble, probably the short straw still left, Ex. v. 6-18. This useless stubble was often burnt, Isa. v. 24. Straw, perhaps sometimes mingled with beans, etc., was generally used in Palestine as fodder or provender, Gen. xxiv. 25; 1 Ki. iv. 28.

**STRAW**, Matt. xxv. 24, 26, an old form of strew.

**STREETS**. See CITIES.

**STRICKLAND** (strik'land), WILLIAM P., D.D., was born in 1809, at Pittsburg, Pennsylvania, and educated at the University of Ohio, situated at Athens. In 1832 he entered the ministry in the Methodist Church, and for several years he labored at Cincinnati. He acted as agent of the American Bible Society for four years, and he discharged the duties of associate editor of "The Christian Advocate and Journal." He wrote a "History of the American Bible Society," to which the Rev. N. I. Rice, D.D., prefixed an introduction, and this work has been continued down to 1856. In 1850 he published a "History of the Missions of the Methodist Episcopal Church," and in the following year the "Genius and Mission of Methodism." This was followed by a "Manual of Biblical Literature," "Light of the Temple," "The Life of Faith" and "Christianity Demonstrated by Facts." His next work was one of great interest, entitled "The Pioneer Bishop; or, the Life and Times of Bishop Asbury, with an Introduction by N.

Baugs, D.D." Among the most interesting of the numerous other works which he published is "The Backwoods Preacher; or, Autobiography of Peter Cartwright." So, also, "The Life of Jacob Gruber," and indeed all the numerous works which he has edited or annotated that bear on labor in the missionary field are fraught with the most lively interest, as they display the results of intense zeal, fearless courage and a self-sacrificing spirit in the cause of Christ.

**STRIGELIUS** (stri-ge'le-us), VICTORIUS, a native of Kaufbier, in Swabia, one of the first of Luther's disciples, taught theology and logic at Leipsic; but his disputes with Francowitz, as also his opposition to some of Luther's doctrines, rendered him unpopular, and he was deposed and imprisoned by his enemies. He was subsequently appointed professor of morality at Heidelberg, where he died June 26, 1569, aged forty-five. He wrote "Notes on the Ancient and New Testaments" and other works, now but little known.

**STRIGOLNIKS** (stre-gol'niks), a sect of Judaizing Russian Christians which sprang up in the fourteenth century and increased with great rapidity, owing to the zeal of the founders and the analogy which was found to exist between the Greek ceremonies and the temple service of the Jews. They were joined by priests and deacons of the Russian Church, and several even of the bishops favored their doctrines. The flames of persecution were repeatedly kindled against them, but they continued to exist either more publicly or in private, and at this day are concentrated in the *Seleznetchini*, who are Jews in principle, observe circumcision, the seventh-day Sabbath and part of the ceremonial law.

**STRONG, JAMES, S. T. D.**, was born in 1822, in the city of New York, and educated in Wesleyan University in that city. In 1844 he became professor of ancient languages in Troy Conference Academy, which position he held for two years, after which he entered on the duties of professor of Biblical literature in Troy University. His solid acquirements and the great range of his learning eminently fitted him for that position. In 1853 he entered, with the late John McClintock, D.D., on the laborious and most important duty of preparing a cyclopedia of an extensive range which was intended to treat of Biblical, theological and ecclesiastical literature. Besides his contributions to this work, Dr. Strong is the author of a "New Harmony and Exposition of the Gospels," a "Manual of the Gospels" and a "Harmony of the Gospels in the Greek," showing that his mental tendencies are eminently toward Biblical subjects. He has also been a frequent contributor to "The Methodist Quarterly Review" and "The Christian Advocate and Journal," and together with Mrs. Olin and O. Judd he has prepared "Lessons for every Sunday in the Year," thus displaying a versatility and range of acquirements of the highest order.

**STRONG, NATHAN, D.D.**, a Congregational clergyman of Hartford, Connecticut, born in 1748, graduated at Yale College in 1769. His father was minister in Coventry, of the same State. He was ordained in 1774, and died December 25, 1816. Dr. Strong was distinguished for learning as well as good judgment, and his superior social qualities rendered him an agreeable companion. He was editor of the "Connecticut Evangelical Magazine," 198

and had an important agency in originating the Congregational Missionary Society of Connecticut. He published "The Doctrine of Eternal Misery Reconciled with the Benevolence of God," besides numerous sermons.

**STRONG, PASCHAL NELSON**, was born in 1793, at Brookhaven, Long Island. In 1816 he became a co-pastor of the Collegiate Reformed (Dutch) Church in New York city, in which position he became very distinguished. He was eminent as a preacher and as a pastor. A fair specimen of his pulpit style may be seen from a sermon of his, entitled "The Pestilence a Punishment for Public Sins, a Sermon preached after the Cessation of the Yellow Fever, New York, 1822," 8vo. He died in 1825.

**STRONG, TITUS, D.D.**, a clergyman of the Protestant Episcopal Church, born in Brighton, Massachusetts, January 26, 1787, learned the trade of a printer, and engaged warily in politics. Subsequently he removed to Dedham, in that State, where he was employed as a teacher, and became a decided Episcopalian. Soon after, he entered as a candidate for holy orders, and March 24, 1814, was made deacon by Bishop Griswold. March 26, 1826, he was ordained presbyter. Almost from the first he labored at Greenfield, in his native State, where he remained until the close of his life, although he had repeated opportunities of removing to parishes able to give a larger salary. He ranked high for talents and exerted a powerful influence. Though dead, the effects of his influence remain. His "Candid Examination of the Protestant Episcopal Church, in two Letters," is one of the most efficient productions of its class. He also wrote and published "The Scholar's Guide," a condensed historical summary of the Bible. Besides the above, he prepared several elementary books for common schools. He was a frequent contributor to the periodical press, both in prose and poetry. He died June 11, 1855.

**STRUTHERS** (struth'ers), JOHN, a poet of Scotland, was born July 18, 1776. His father was a shoemaker, and the son pursued the same avocation. His first, and perhaps best, literary effort was "The Poor Man's Sabbath," which, published in 1804, attained a rare popularity, and has passed through numerous editions. It contains many beautiful passages. In 1806 he issued "The Peasant's Death," intended as a sequel to the Sabbath, and subsequently other meritorious poems. He also was the author of "The History of Scotland from the Union in 1707 to 1827," a work of great research and valuable for its contents. He died August 7, 1853, in his seventy-eighth year.

**STRUVIUS** (stroo've-us), BURCARD GOTTHELF, one of twenty-six sons of George Adam Struvius, was born at Weimar, and settled at Jena. He died in 1633, aged sixty-seven. He published a number of excellent works on antiquities of Rome and on history, which have passed from notice, though portions of them may be found pirated into more recent writers.

**STRYPE** (stripe), JOHN, was born on November 1, 1643, at Stepney, near London. His

early training was at St. Paul's School, whence he went to Jesus College, Cambridge, and from which he removed to Catherine Hall. He graduated in 1665, and took his master's degree four years afterward. He became perpetual curate of Theydon-Boys, in Essex, but in the same year the living of Low Leyton was given to him, and he resigned the other. He held the charge of Low Leyton

THE "ADJUTANT" STORK.—See STORK.

THE "MARABOU" STORK.—See STORK.

until his death, in 1737, when he had reached his ninety-fifth year. Strype was a most voluminous writer, among his earliest works being lives of Cranmer, Aylmer, bishop of London, Sir Thomas Smith, Sir John Cheke, Grindal, Parker and Whitgift. From 1820 until 1840 new and uni-

form editions of his historical and biographical works, in twenty-seven volumes, were published at the Oxford University Press, and they form a perfect storehouse of ecclesiastical and biographical treasures. He is known as one of the driest and most veracious collectors and recorders of facts, and he never omits the most trivial matter.

**STUART** (sten'art), GILBERT, historian and miscellaneous writer, was born at Edinburgh in 1742, and received his education in the university. He studied jurisprudence, but became an author by profession. In his twenty-second year he published a "Dissertation concerning the Antiquity of the British Constitution," for which he was complimented with the degree of LL.D. His next work was a "View of Society in Europe;" but being disappointed of the professorship of law at Edinburgh, he removed to London and became a writer in the "Monthly Review." He, however,

THE KING AND THE DRAGON.  
From a bas-relief at Persepolis.—See SCULPTURE.

returned in 1773, and commenced the "Edinburgh Magazine and Review," discontinued in 1776. He also wrote "The History of Scotland," a "History of the Reformation of Scotland," etc. Dropsy, brought on by intemperance, caused his death, in 1786.

**STUART, HENRY BENEDICT MARIA CLEMENT**, cardinal of York, younger brother of Charles Edward, the Pretender, and the last descendant of the royal line of the Stuarts, was born at Rome in 1725. When the last grand effort for the restoration of his family, in 1745, proved abortive, he took orders, and in 1747 Pope Benedict XIV. raised him to the purple. The extraordinary events arising out of the French Revolution had the effect of making the cardinal dependent on the bounty of the king of England; for having been obliged to flee to Venice when the French invaded Italy, he was indebted for his support to a pension from the English court. He died in 1807.

**STUART, MOSES, D.D.**, who may justly be considered the father of Biblical science in this

country, and who was one of the most judicious and learned of modern philologists, was born in 1780, at Wilton, Connecticut. He graduated at Yale College in 1799, and after teaching for some time he was admitted to the bar. He acted as tutor in Yale College from 1802 till 1804, and in the latter year he was licensed to preach by the New Haven Association of Ministers. In 1806 he was ordained as the successor of Dr. Dana at New Haven, and he remained in this charge until, in 1810, he was appointed to the chair of sacred literature in the theological seminary at Andover; and here he entered on his great life-work; for he discharged the duties of this situation until the year 1848, when declining health obliged him to retire. His works, which have all attested his great learning, have been very numerous, and only a brief catalogue of them can be given here: 1. A Grammar of the Hebrew Language, without Points. 2. Letters to the Rev. W. E. Channing.

This work produced a great impression on both sides of the Atlantic. 3. A Hebrew Grammar, with Points, together with a Syntax and Exercises. 4. A Dissertation on the Importance and Method of Studying the Original Languages of the Bible. 5. A Letter to Dr. Miller on the Eternal Generation of the Son of God. 6. Elements of Interpretation. 7. Discourses on the Atonement. 8. A Commentary on the Epistle to the Hebrews. 9. A Course of Hebrew Study. 10. Practical Rules for Greek Accents and Quantity. 11. Commentary on the Epistle to the Romans. 12. Essays on Several Words relating to Future Punishment. 13. Is the Mode of Baptism Prescribed in the New Testament? 14. Grammar of the New Testament Dialect. 15. Cicero on the Immortality of the Soul. He wrote on Geology, on Prophecy, on the Old Testament Canon, on the Sabellian and Athanasian methods of representing the Doctrine of the Trinity. He published commentaries on the book of Proverbs and on Ecclesiastes, many sermons, pamphlets, reviews and critical treatises not included in this catalogue, thus showing industry, a thorough knowledge and a comprehension of every subject that he took up which showed him to be the master of them all. As a commentator he was exhaustive, exceedingly fair in all his statements, untrammelled by traditions, ready to yield to evidence, of solid judgment, with

fancy and imagination under control; he was one of the great theological masters of his age. More than seventy of his students became professors in colleges, more than one went as missionaries to the heathen, and at least thirty of these were able to engage in translating the Bible into foreign tongues. He died January 4, 1852.

**STUKELY** (stenk'le), WILLIAM, a celebrated antiquary, born at Holbeck, Lincolnshire, November 7, 1687, after receiving his education in the school of his native town, was in 1703 admitted to Benet College, Cambridge, where he studied medicine and botany with great assiduity. When he had taken his degree of bachelor in medicine, he settled at Boston, and in 1717 removed to London, where he was soon after, at the recommendation of his friend Dr. Mead, elected Fellow of the Royal Society, and also one of the first members of the Antiquarian Society. In 1726 he left London to settle at Grantham, in his native county. He determined to abandon his profession for Church preferment, which his powerful friends

could command for him, and, after being ordained by Wake, the primate, in 1730 he was presented to the living of All Saints, Stamford. In 1739 he obtained the living of Somerby, near Grantham, and in 1747 he relinquished his country preferments for the rectory of St. George, Queen's Square, London. He was attacked by a stroke of the palsy February 27, 1765, and died four days subsequently, in his seventy-eighth year. The most celebrated of his works are—"An Account of the Curiosities and Antiquities in Great Britain," with copper plates; "Discourses on the Monuments of Antiquity that Relate to Sacred History;" "An Account of Stonehenge and Abury;" "History of Carausius;" and several valuable tracts on antiquities. His knowledge of Druidical history was so extensive that he was called by his friends the Arch-Druid of his age. He was the correspondent as well as the friend of the most learned and respectable persons of his time.

**STURM, CHRISTOPH CHRISTIAN**, a German divine, born at Augsburg in 1740. He is chiefly known as the author of "Reflections on the Works of God," which has been frequently reprinted in England and other countries as well as in his own. He also published "Morning Converse with God, for Every Day in the Year," several volumes of sacred poetry highly esteemed in Germany, etc. He died in 1786.

**STURM, JOHANN**, an eminent German classical scholar and theologian, was born at Sleidan (Schleiden), near Cologne, in 1507. After studying at Louvain, he settled at Paris in 1529, and established a school there, which prospered greatly; but the rigorous decrees against Protestants induced Sturm, who had long secretly held the Reformed doctrines, to quit Paris in 1538. He gladly accepted the post of rector of the new gymnasium of Strasburg, and by his zeal and abilities raised it to so high a reputation that in 1566 the emperor Maximilian constituted it a university. Sturm was its first rector. He was at the same time an active promoter of the Reformation and the steady friend of its persecuted adherents. His moderation and his leaning to the views of Calvin made him many enemies, and in 1583 he was dismissed from his office, but was allowed to receive the salary. He wrote many works, philological, theological and educational, in Latin so pure and elegant that he was named the German Cicero. He also edited the works of Cicero. His publications produced a great impression on the age, and they promoted the accurate study of Latin, owing to the purity of his classical style. He died near Strasburg, in 1589.

**STURMIUS** (stur'me-us), JAMES, a learned German, born at Strasburg in 1489, was employed in several embassies to the diets of the empire, to England and to the imperial court. By his influence he contributed greatly to the Reformation at Strasburg, and also to the erection of a college in that city. He assisted Sleidan in the compilation of the "History of the Reformation in Germany," which was honorably acknowledged by that author. He died at Strasburg, October 30, 1553.

**STYLES** (stilz), JOHN, who became eminent in the Methodist Church as a very popular preacher, was born in England, and labored at Brighton, on the south coast. He was equally well known as a popular writer, the first of his

works being published in 1797, under the title "Miranda." In 1807 he issued a work on "The Stage," which was reprinted in 1833. In the next year he produced a "Life of David Brainerd" and "Evangelical Preaching," while in 1809 he encountered the Rev. Sydney Smith by "Strictures on Two Critiques in the Edinburgh Review on Methodism and Missions." After this he published a "Family Bible, with Notes;" "The Animal Creation," a prize essay, which gained one hundred pounds to the author; "Pulpit Studies," which ran through several editions. Still further, he prepared and printed several volumes of sermons and several small works which evidenced a clearness of evangelical view, a directness of style and a power of expression which fully justified the estimate which had been formed by the public of his mental powers.

**STYLITES** (stil'ites), "pillar saints," an appellation given to a kind of solitaries who stood motionless upon the tops of pillars, raised for this exercise of their patience, and remained there for several years, amidst the admiration and applause of the stupid populace. Of these, we find several mentioned in ancient writers, and even as low as the twelfth century, when they were totally suppressed.

The founder of the order was St. Simeon Stylites, a famous anchorite in the fifth century, who first took up his abode on a column six cubits high, then on a second of twelve cubits, a third of twenty-two, a fourth of thirty-six, and on another of forty cubits, where he thus passed thirty-seven years of his life. The tops of these columns were only three feet in diameter, and were defended by a rail that reached almost to the girdle, somewhat resembling a pulpit. There was no lying down in it. The Fakirs of the East imitate this extraordinary kind of life to this day.

**SUAH** (su'ah), a chieftain of Asher, 1 Chr. vii. 36.

**SUAREZ** (swa'reth), FRANCISCO, a celebrated Spanish Jesuit, born at Granada in 1548. While studying at the University of Salamanca, he was induced to enter the order of Jesuits; and after teaching philosophy and theology at Valladolid, Rome, Alcalá and Salamanca, he was appointed first professor of divinity at the University of Coimbra, in 1597. He was a man of fervid piety, of retiring disposition, unwearied in the discharge of his professional and religious duties, and a voluminous writer. He took part in the controversy on grace and free-will between the Jesuits and the followers of Molina, and conceived a system called *Congruism*, a modified Molinism. Among his works is the celebrated "Defence of the Catholic Faith against the Errors of the Anglican Sects," which was written by command of Pope Paul V. against the oath of allegiance required by James I. It appeared in 1613, and was burnt publicly by the hangman both at London and Paris. He died at Lisbon in 1617.

**SUBAI** (soo'bi), 1 Esd. v. 30, the same as Shalmal or Shamlai, Ezra ii. 46.

**SUB-APOSTOLIC CHURCH**, a name applied to the Church during the period immediately following the time of the apostles, in which lived Ignatius, Polycarp, Justin, Hegesippus, Theophilus, Clement, Irenæus and others. It corresponds mainly with the second century.

**SUB-DEACON**. The third of the holy orders is thus called; it was not reckoned such until the thirteenth century, and is not always considered so in the Eastern Church. The sub-deacon assists the deacon at mass.

**SUB-DEAN**. 1. The dean's vicar at Westminster. 2. The vice-dean in cathedrals of the old foundation. 3. At Lincoln, York and Salisbury the sub-dean is a minor dignitary.

**SUB-INTRODUCTÆ**, women who resided with ascetics in the early Church. In consequence of recognized evils which flowed from the usage, the custom was forbidden by several councils. They were also called "Agapetæ."

**SUBLAPSARIANS** (sub'lap-sa're-anz), those who hold that God permitted the first man to fall into transgression without absolutely pre-determining his fall, or that the decree of predestination regards man as fallen, by an abuse of that freedom which Adam had, into a state in which all were to be left to necessary and unavoidable ruin who were not exempted from it by predestination. See SUPRALAPSARIANS.

**SUBSCRIPTION** (sub-skrip'sh'un) CLERICAL. Subscription to articles of religion is required of the clergy of every established church and of some churches not established. But it has been a matter of dispute whether it answers any valuable purpose as to religion, however necessary as a test to loyalty. All language is more or less ambiguous, so that it is difficult always to understand the exact sense, or the *animus imponentis*, especially when creeds have been long established. It is said, though unjustly, that the clergy of the Churches of England and Scotland seldom consider themselves as fettered by the Thirty-Nine Articles or the Confession of Faith when composing instructions for their parishes or the public at large.

**SUBURBS**. See CITIES.

**SUCCESSION** (suk-sesh'un), UNINTERRUPTED, a term made use of by the Romanists and others in reference to those bishops who are supposed to have derived their authority from the apostles, and so communicated that authority to others in a direct line or succession.

It is a very precarious and uncomfortable foundation for Christian hope (says Dr. Doddridge) which is laid in the doctrine of an *uninterrupted succession* of bishops, and which makes the validity of the administration of Christian ministers depend upon such a succession, since there is so great a darkness upon many periods of ecclesiastical history, inasmuch that it is not agreed who were the first seven bishops of the Church of Rome, though that Church was so celebrated; and Eusebius himself, from whom the greatest patrons of this doctrine have made their catalogues, expressly owns that it is no easy matter to tell who

succeeded the apostles in the government of the churches, excepting such as may be collected from St. Paul's own words. Contested elections in almost all considerable cities make it very dubious which were the true bishops; and decrees of councils, rendering all those ordinations null where any *simoniacal* contract was the foundation of them, makes it impossible to prove that there is now upon earth any one person who is a legal successor of the apostles, at least according to the principles of the Romish Church. Consequently, whatever system is built on this doctrine must be very precarious.

"I am fully satisfied," says Bishop Hoadley, "that till a consummate stupidity can be happily established and universally spread over the land, there is nothing that tends so much to destroy all due respect to the clergy as the demand of more than can be due to them; and nothing has so effectually thrown contempt upon a regular succession of the ministry as the calling no succession regular but what was uninterrupted, and the making the eternal salvation of Christians to depend upon that uninterrupted succession of which the most learned must have the least assurance, and the unlearned can have no notion but through ignorance and credulity."

**SUCCOTH** (suk'kōth), a town in the valley

EARLY PERSIAN SCULPTURE.—See SCULPTURE.

of the Jordan. It had its origin, as well as its name, in the temporary sojourn of Jacob on his way from Padanaram to Palestine. "And Jacob journeyed to Succoth, and he built him an house, and made booths (*succoth*) for his cattle; therefore the name of the place is called Succoth" ("booths"). Jacob probably remained for some time in this fertile spot, which must have reminded him of the banks of the Euphrates, Gen. xxxiii. 17. The situation is approximately indicated by the fact that Jacob was on his way from Peniel to Shechem. Peniel was apparently on the north bank of the Jabbok, Gen. xxxii. 22, 23; and it would seem that after his interview with Esau on the south bank, he turned back to avoid further intercourse with his dangerous brother; and instead of following him to Edom he recrossed the Jabbok and descended to the valley of the Jordan, where he resolved to rest for a time amid its luxuriant pastures.

The next notice of Succoth is in Joshua's description of the territory of Gad. To this tribe the middle section east of the Jordan was allotted, including the valley of the Jordan up to the Sea of Galilee. Among the towns in the valley is Succoth, Josh. xiii. 27. Nothing more can be inferred from this than that it lay on the east bank of the river.

In the narrative of Gideon's pursuit of Zeba and Zalmunna it is said: "And Gideon came to Jordan, passed over, . . . and said unto the men of Succoth,"

etc., Judg. viii. 5. The tale there recorded of the mingled cowardice and perfidy of the inhabitants, and of Gideon's terrible vengeance, is one of the most harrowing in the Bible. At that period Succoth must have been a place of importance, when it ventured to refuse the request of Gideon. Its "princes and elders," too, are said to have numbered "threescore and seventeen men."

Though the rulers were slain, the city continued to prosper, and in the days of Solomon it was well known. The sacred historian informs us that the brazen vessels of the temple were east "in the circuit of the Jordan, in the clay ground, between Succoth and Zarthan," 1 Ki. vii. 46; 2 Chr. iv. 17.

2. Succoth was a station of the Israelites in the desert, the first after their departure from Egypt: "And the children of Israel journeyed from Ramesses to Succoth," Ex. xii. 37. Probably here, too, the name may have been given to the spot from the temporary booths which some of the more delicate would naturally attempt to construct for

where else occurs. Gesenius, by the change of a radical letter, would read *Succoth-bemeth*, tents—viz., idol-tents—of high-places, an arbitrary change; and many suppose the expression to have virtually designated the impure Babylonian goddess Mylitta, in honor of whom maidens exposed themselves in a covered couch or precinct near the temple; hence, to make daughters' or maidens' booths would be much the same as to celebrate the impure worship of Mylitta. It might be so, though certainly it is a somewhat obscure mode of conveying such a sense; and others are still disposed to regard Succoth-benoth as the name of a deity. Rawlinson would identify it with *Zirbanit*, a female Babylonian deity, the fabled wife of Bel-Merodach; but it is given more as a conjecture than a well-grounded and settled opinion. The proper import of the expression in its existing connection must be regarded as still involved in doubt.

**SUCHATHITES** (sook'ath-ites), the inhabitants of some place not ascertained, 1 Chr. ii. 55.

**SUD** (sood), 1 Esd. v. 29, the same as Siah or Sia, Ezra ii. 44.

**SUD**, Bar. i. 4, a river of which nothing is known.

**SUDARIUM** (su-da're-nm). 1. The veil attached to an abbot's staff to distinguish it from a bishop's crook. It was attached to a pastoral staff sometimes, so that when held the hand need not dim the metal. 2. The cloth used for wiping the priest's fingers at the celebration of mass.

**SUDBURY** (sud'ber-e), **SIMON DE**, an English divine, was a native of Sudbury, and distinguished for his piety and learning. By the influence of the pope he was made bishop of London, and in 1375 was raised to the see of Canterbury. In 1379 he was made chancellor. Unfortunately, he became the object of popular indignation during the rising of Wat Tyler, and the king got him to resign the great seal. The people, however, broke into the Tower, seized the archbishop, dragged him to Tower Hill and barbarously murdered him, the prelate quietly remonstrating with them and giving them absolution. His death occurred in 1381.

**SUDIAS** (su'de-as), 1 Esd. v. 26, perhaps Hodaviah or Hodevah, Ezra ii. 40; Neh. vii. 43.

**SUENES** (su-e'nes), a Christian nobleman in Persia who, refusing to deny Christ, had his wife taken from him and given to one of the emperor's meanest slaves; and what added to his mortification was that he was ordered to wait upon his wife and the slave, which at length broke his heart.

**SUET**. See **FAT**.

**SUETONIUS, CAIUS TRANQUILLUS** (ki'us tran-kwil'us swe-to-ne-us), a Roman historian who lived in the first and second centuries of our era. He was the son of a Roman officer, became an advocate at Rome, and afterward secretary (*magister epistolarum*) to the emperor Hadrian. This place he lost through some familiarities, not clearly described, with the empress Sabina. Suetonius was the friend of Pliny the Younger. He wrote numerous works, of which four are extant. The most important is his "Vite Duodecim Cæ-

sarum," which contains a large mass of curious and valuable facts, and though not systematically or rhetorically composed, but chiefly anecdotic, is esteemed impartial and trustworthy. It has passed through a great number of editions, and has been translated into almost all European languages. His other extant works are notices of grammarians, rhetoricians and poets. An English translation of Suetonius is included in Bohn's "Classical Library."

**SUEZ** (swez) is the name of the isthmus which lies between the Red and the Mediterranean Seas, and which unites the African with the Asiatic Continent. It is a low-lying tract, about seventy-four miles broad, generally covered with sand and salt marshes. The surface is not entirely level, but several depressions occur, which are filled with salt marsh, there being a general depression toward the Mediterranean. Traces of the canal made by Necho and Ptolemy Philadelphus to unite the seas remain, but the canal lately made across the isthmus diverges considerably from the line of the former one. Suez is also the name of a small sea-port on the gulf or western arm of the Red Sea, and the spot where the Israelites are supposed to have crossed lies about two miles from the head of the gulf.

**SUFFRAGAN** (suff'fra-gan), a title of a provincial bishop who is under a metropolitan, so called because the latter has power to call him to his provincial synod to give his suffrage there.

**SUFFRAGE** (suff'raje). 1. A vote such as a suffragan bishop has in a provincial synod. 2. A short petition such as occurs after the creed in the morning and evening service.

**SUICER** (swit'ser), **JOHN GASPARD**, a learned German who was born at Zurich in 1620. He became professor of Greek and Hebrew in that city, and died at Heidelberg in 1705. He is best known by his lexicon, or "Ecclesiastical Thesaurus of the Greek Fathers," a work of real learning. His son Henry was also an able professor at Zurich, and subsequently at Heidelberg, where he died in 1705. Like his father, he was a profound scholar, and he is still known by his "Chronology of Switzerland," which is much esteemed.

**SUIDAS** (soo'e-das), a Greek lexicographer. When and where he was born and died is unknown, but he is supposed to have lived in the latter end of the ninth and the beginning of the tenth centuries. His "Lexicon," faulty as it is in many respects, is valuable for the fragments it contains of lost works and the information which it affords respecting ancient writers.

**SUKKIIMS** (sook'ki-yimz), an African tribe, mentioned, along with the Lubim and Cushim, as forming part of the army with which Shishak, king of Egypt, invaded the land of Judah in the time of Rehoboam, 2 Chr. xii. 3. Nothing, however, is known of them beyond the incidental notice referred to.

**SULPICIUS SEVERUS** (sul-pish'yus se-vä'rus), an ecclesiastical historian of the fifth century. He wrote the "Life of St. Martin of Tours" and an "Abridgment of Ecclesiastical History."

**SUMMER**. See **SEASONS**.

**SUMMERFIELD** (sum'mer-feld), **JOHN**, was born in 1798, at Preston, in England. In 1818 he became a local preacher among the Methodists, and in 1821 he emigrated to this country, and forthwith his fascinating power in the pulpit became widely known. His health failed, and in 1822 he sailed from New York, and on landing in England he traveled through that country and through France; and being somewhat restored, he returned to New York in 1824, but the disease which had attacked him continued its ravages, and he died in that city in 1825. He was a remarkable preacher, possessing an influence over his audience by his thrilling, emotional, brilliant and intensely-affecting appeals that placed him in the front rank of gospel preachers. The power which he wielded did not lie altogether in his voice or manner, for his manuscript sermons show that they were solid, intellectual and well-constructed performances. During his lifetime one of his sermons only was published, but in 1842 a volume of four hundred and thirty-seven pages, containing eighty-three sermons, was published, entitled "Sermons and Sketches of Sermons, by the Rev. John Summerfield, A.M., with an Introduction by Rev. Thomas E. Bond, M.D.;" and this work gives the reader an opportunity of judging of the matter by which the young orator was accustomed to hold his audience spellbound while he delivered them. They evidently show that he had a strong mental grasp of any subject which he discussed, that he was distinguished for great clearness and distinctness of thought, and that his capacity of expression arose from an admirable use of such distinctive terms as conveyed a precise meaning. To these advantages were added a flexible, melodious voice, an emotional temperament, and thus this young preacher was graciously endowed with those gifts and graces which are essential to the really fine pulpit orator.

**SUMMISTS** (sum'mists), or Latin **SUMMISTÆ** (sum-mis'tay), followers of Thomas Aquinas, the author of the "Summa Theologiæ." Before, however, the "Summa" was composed, Alexander of Hales had formed a "Summa Universæ Theologiæ," a commentary on the "Liber Sententiarum," or "Book of the Sentences," of Peter Lombard. But afterward the "Book of the Sentences" gave way to "The Sum of Theology" as the text of the schools. Cajetan, Sylvius and other Dominican commentators on the Summa of their great doctor were of this school.

**SUMNER** (sum'ner), **CHARLES RICHARD**, D.D., was born in 1790, at Kenilworth, in Warwickshire. He was educated at Eton, whence he went to Trinity College, Cambridge. He became the rector of Abingdon, in Buckinghamshire, and he held the office of librarian and historiographer to His Majesty King George IV. In 1822 he was made a prebendary of Worcester Cathedral, and in 1825 a similar dignity in Canterbury was conferred on him. Promotion rapidly flowed in on him, for he was made dean of St. Paul's and a prebendal stall was given to him. In April, 1826, he was placed in the see of Llandaff, from which in the following year he was translated to Winchester. This last preferment he held for the long period of forty-two years, resigning it only in 1869 on account of infirm health. Of his published works, which included "Charges and College Preelections," the most important are "The Ministerial Character of Christ Practically Considered," in which he has shown much learning

and solidity of judgment, and "A Vindication of John Milton from a Charge of Arianism," made by J. W. Morris. This work appeared in 1862. It would seem, however, that the volume which Mr. Lemon found in the state paper office in 1823 sets at rest all question touching Milton's Arianism, his views on marriage, the Sabbath, the nature of the Deity and the eternity of matter. Bishop Sumner died in 1874.

**SUMNER, JOHN BIRD**, D.D., was born in 1780, at Kenilworth, in Warwickshire, of which parish his father, the Rev. Robert Sumner, was vicar. He was an elder brother of Dr. Sumner, bishop of Winchester, and his grandfather, John Sumner, D.D., was provost of King's College, Cambridge. After the usual training at Eton, he passed (as Eton students usually do) to King's College, Cambridge, and in 1800 he attained the honor of Browne's medallist for excelling in Latin. Next year he carried off the Hulsean prize. In 1803 he passed as bachelor of arts, and he became master of arts in 1807. He returned as assistant master to Eton, where he became a Fellow; and

**SUN**. For the sun as a luminary, see **LIGHT**. For the worship of the sun, see **IDOLATRY**.

**SUN, STANDING STILL OF THE**. The statement in Josh. x. 12, 13, has given rise to much learned criticism, some objecting to a literal interpretation on grounds which are altogether untenable, for with the almighty Power there is nothing too great to be effected which is not contradictory or in its nature impossible. Others again hold that the passage itself clearly shows that it is a reference to a composition of an elevated or poetical character, similar in spirit to Ps. cxiv. 4, 6, where the sea is described as being frightened and the mountains as skipping as lambs. That God interposed on behalf of his people on this memorable occasion is beyond question, and that his hand was seen in the victory is not open to doubt, even if the allusion should be admitted to have a poetical character.

**SUNDAY** (sun'day), or the Lord's day, a solemn festival observed by Christians on the first day of every week in memory of our Saviour's resurrection. See **SABBATH**.

"LONDON STONE."  
This is an interesting relic of the Roman sway over Britain. It was found entirely buried under soil of many years' accumulation.

themselves on that the first night of life under the open heaven. Succoth was still within the land of Egypt, or at least within a region of habitation and cultivation; for it was not until the close of their second march that they "encamped in Etham, in the edge of the wilderness," Ex. xiii. 20; cf. Num. xxxiii. 5, 6.

**SUCCOTH-BENOTH** (be-nôth'). If the two words thus thrown together are Hebrew terms, as they seem to be, and form one designation, there can be no doubt as to their meaning, for they are comparatively common words. The only difficulty is to understand how they should have found a place in the only passage where they appear thus conjoined in Scripture. The passage is 2 Ki. xvii. 30, where notice is taken of the different gods worshiped by the several classes of persons brought from a distance to people the now desolated Samaria. Every nation, it is said, made gods for itself, "and the men of Babylon made Succoth-benoth." As the designation of a deity, neither this nor anything quite similar to it any-

SUEZ.—See article.

having entered the Church, the rectory of Mapledurham was given to him. In 1820 a canonry in Durham was conferred on him, and in 1828 he was elevated to the see of Chester, which he held for twenty years, and in 1848 he was raised to the primacy and transferred to Canterbury. Archbishop Sumner has been a voluminous and an exceedingly useful writer. The essay which obtained the Hulsean prize treated of the prophecies which are now accomplished as an evidence of the truth of the Christian religion. His "Apostolical Preaching considered in an Examination of St. Paul's Epistles" had a great circulation, and his "Treatise on the Records of the Creation, and on the Moral Attributes of the Creator in reference to the Jewish History," passed rapidly through many editions, and so also did his "Evidences of Christianity." Chief among the most popular of his works were his "Practical Expositions in the form of Lectures on the Gospels, Parables, Miracles and Epistles." From time to time he published sermons, charges and other minor works, and all his writings have been recognized as the production of an enlightened, judicious and very practical mind. He was an evangelical, earnest, pious and devoted man. He died in 1862.

It has been contended whether Sunday is a name that ought to be used by Christians. The words Sabbath and Lord's day, say some, are the only names mentioned in Scripture respecting this day. To call it Sunday is to set our wisdom before the wisdom of God, and to give that glory to a pagan idol which is due to him alone. The ancient Saxons called it by this name, because upon it they worshiped the Sun; and shall Christians keep up the memory of that which was highly displeasing to God by calling the Sabbath by that name rather than by either of those he hath appointed? It is, indeed, called Sunday only because it is customary; but this, say they, will not justify men in doing that which is contrary to the example and command of God in his word.

Others observe that although it was originally called Sunday by the heathens, yet it may very properly retain that name among Christians because it is dedicated to the honor of the true Light which lighteth every man that cometh into the world, of Him who is styled by the prophet "the Sun of righteousness," and who on this day arose from the dead. But although it was in the primitive times indifferently called the Lord's day or Sunday, yet it was never denominated the Sabbath,

a name constantly appropriated to Saturday, or the seventh day, both by sacred and ecclesiastical writers. See SABBATH.

**SUPER** (soo'per) **ALTAR**, a portable altar-stone, blessed by a bishop or other authorized person, and let into a wooden altar-frame. Such was the general construction of Anglican altars in the thirteenth and fourteenth centuries, as is proved by the documents of the time.

**SUPEREROGATION** (soo-per-er-o-gā'-sh'un), what a man does beyond his duty, or more than he is commanded to do. The Romanists stand up strenuously for works of supererogation, and maintain that the observance of evangelical counsils is such. By means hereof, a stock of merit is

**SUPERINTENDANT** (soo-per-in-tend'ant), an ecclesiastical superior in several Reformed Churches where episcopacy is not admitted, particularly among the Lutherans in Germany and the Calvinists in some other places. The superintendant is similar to a bishop, only his power is somewhat more restrained than that of diocesan bishops. He is the chief pastor, and has the direction of all the inferior pastors within his district or diocese.

**SUPERSTITION** (soo-per-stish'un). 1. Belief in things unseen without sufficient authority. 2. Religious sentiment, in which fear of the supernatural is the chief element. 3. Worship of false gods. 4. Perverted worship of the true God.

**SUPERSTITION, SUPERSTITIOUS**, Acts xvii. 22; xxv. 19. The words are not used in a bad sense, properly "demon-fearing" in the first place—i. e., carrying your religious reverence too far.

**SUPHAH** (soo'fah), Num. xxi. 14, margin. See VAHEB.

**SUPPER**. See MEALS, and LORD'S SUPPER.

**SUPRALAPSARIANS** (soo-pra-lap-sa're-anz), persons who hold that God, without any regard to the good or evil works of men, has resolved by an eternal decree, *supra lapsum*, antecedently to any knowledge of the fall of Adam, and independently of it, to save some and reject others; or, in other words, that God intended to glorify his justice in the condemnation of some, as well as his mercy in the salvation of others; and for that purpose decreed that Adam should necessarily fall.

**SUPREMACY** (soo-prem'a-se), **PAPAL**, the claim of the bishop of Rome to supremacy over all other bishops of the Church of Christ by divine right. Nothing but divine authority can warrant such a claim.

**SUPREMACY, ROYAL**, the supremacy in the Church of England, as by law established, of the temporal power in all cases purely temporal, and in all the temporal accidents of spiritual things.

**SUR**. 1. A gate at which Jehoiada stationed guards when Joash was to be placed on the throne, 2 Ki. xi. 6. The same gate is called "of the foundation," 1 Chr. xxiii. 5. It is questioned whether it was a gate of the temple or of the palace. But the connection decides that it must have been a temple-gate. The rabbins say it was the eastern gate of the court, and explain its name, because the nucleus were there commanded to depart. See Lam. iv. 15.

2. Judith ii. 28. It is not known what place is here meant.

**SURETY** (shoor'i-te), one who becomes responsible for another. Solomon gives many emphatic warnings against unadvised suretyship, Prov. vi. 1-5; xi. 15; xxii. 26, 27. In Heb. vii. 22 our Lord is said to be the "surety of a better testament." "In his person," says Dean Alford, "se-

curity and certainty is given to men that a better covenant" than that of the Mosaic dispensation "is made and sanctioned by God."

**SURPLICE** (sur'plis), a name perhaps not earlier than the thirteenth century, the vestment so called being worn over the fur pelisse of the canons and monks in northern countries. It was an enlarged alb, without apparels or girdles, and with very deep long sleeves, intended to be worn over another dress. It was probably the "subcircula" of Edgar's reign.

**SURPLICE FEES**, fees payable on ministerial offices of the Church, such as funerals or marriages, when clerical vestments were required to be worn.

**SURROGATE** (sur'ro-gate), an official substituted in the room of a bishop, chancellor or other, who grants marriage licenses and probates of wills.

**SUSA** (soo'zah), Rest of Esth. xi., or **SHUSHAN** (shoo'shan), the chief town of Susiana and capital of Persia, in which the kings of Persia had their winter residence, Dan. viii. 2; Esth. i. 2, 5. It was situated upon the Eulens or Choaspes, probably on the spot now occupied by the village Shms. Others believe the site to be that of Shuster. At Shms, which is the more likely position, there are extensive ruins, stretching perhaps twelve miles from one extremity to the other, and consisting, like the other ruins of this region, of hillocks of earth and rubbish covered with broken pieces of brick and colored tile. At the foot of these mounds is the so-called tomb of Daniel, a small building erected on the spot where the remains of that prophet are locally believed to rest. It is apparently modern; but nothing but the belief that this was the site of the prophet's sepulchre could have led to its being built in the place where it stands; and it may be added that such identifications are of far more value in these parts, where occasion for them is rare, than among the crowded "holy places" of Palestine. There is a special importance connected with this monument, inasmuch as it connects Daniel with Persia. The site of Shus is now a gloomy wilderness, infested by lions, hyenas and other beasts of prey.

**SUSANCHITES** (soo-san'kites), the inhabitants of Shushan or Susa, who had been placed as colonists in Samaria, Ezra iv. 9.

**SUSANNA** (soo-zan'na). 1. One of the women who ministered to our Lord, Luke viii. 3. 2. The heroine of an apocryphal story.

**SUSANNA, HISTORY OF**. See DANIEL, APOCRYPHAL ADDITIONS TO.

**SUSI** (su'si), father of the spy chosen from the tribe of Manasseh, Num. xiii. 11.

**SUSPENSION** (sus-pen'shun), a censure on ecclesiastical persons, during which they are forbidden to exercise their spiritual functions, or to take the profits of their benefices.

**SUTCLIFFE** (sut'klif), **MATTHEW**, an English divine, was born in Devonshire, and educated at Trinity College, Cambridge. He was admitted a civilian in 1582, but took orders and became a dean of Exeter. He founded a college at Chelsea, the Fellows of which were to be employed

in writing the annals of their times and in combating the errors of Popery and Pelagianism. Sutcliffe was himself the first Provost, but the establishment fell to decay and became at last an asylum for invalid soldiers, being part of the present Chelsea Hospital. He was an eminent controversialist, and wrote numerous tracts against the Catholic propagandists. He died in 1629.

**SUTTON** (sut't'n), **CHRISTOPHER**, was born in 1565, in Hampshire; and when only seventeen years of age, he was sent to Hart Hall, Oxford, whence he was removed to Lincoln College. He entered the Church, and in 1605 rose to be a prebendary of Westminster, and in 1618 a stall was given to him in the cathedral of Lincoln. His well-known works "Learn to Die" and "Learn to Live" had an extensive circulation, and even in modern times editions of them are called for. So, also, his "Godly Meditations on the Most Holy Sacrament of the Lord's Supper" has continued to be in demand, as seven editions of it have appeared since 1838. He was eminent as a florid and attractive preacher. He died in 1629.

**SUTTON, SIR RICHARD**, of Presbury, in Cheshire, deserves a place in this work in consequence of his munificence in promoting learning. In conjunction with William Smith, bishop of Lincoln, he founded the college of Brasenose, in Oxford, in the year 1509. Originally it was called the King's Hall and College of Brasenose, but the title became changed in process of time. The origin of the name is doubtful, some deriving it from the large brazen knocker which for ages has been on the great gateway, while others trace it to the old Saxon term "brasenhaus," or rather "brasenhaus," which would be pronounced "brosen house," the name

of a brewery, which is supposed to have been attached to little University Hall, which was founded by King Alfred, and which was one of four small college halls that occupied the site now covered

by Brasenose College. Sir Richard provided for a principal and twelve Fellows, but additional endowments have raised the number of the Fellowships to twenty, and there are seventeen scholarships added. This has long been one of the most important colleges in the university, commanding the attendance of a large number of students, and numbering among its Fellows many men of

THE MIRACLE OF THE "SUN STANDING STILL."—See SUN, STANDING STILL OF, JOSHUA, BOOK OF, and JOSH. x. 12.

SPARROWS.—See article.

laid up, of which the Church has the disposal, and which she distributes in the form of indulgences to such as may need them.

This absurd doctrine was first invented toward the close of the twelfth century, and modified and embellished by St. Thomas in the thirteenth; according to which it was pretended that there actually existed an immense treasure of merit, composed of the pious deeds and virtuous actions which the saints had performed beyond what was necessary for their own salvation, and which were, therefore, applicable to the benefit of others; that the guardian and dispenser of this precious treasure was the Roman pontiff; and that, of consequence, he was empowered to assign to such as he thought proper a portion of this inexhaustible source of merit, suitable to their respective guilt, and sufficient to deliver them from the punishment due to their crimes.

great learning, who have taken the highest places in Church and State. It is also richly endowed with about thirty Church livings to which the college has the right of "presentation."

**SUTTON, THOMAS**, was born in 1532, at Knaith, in Lincolnshire, and educated at Eton College, from which he was transferred to Cambridge. He entered Lincoln's Inn; but abandoning the study of the law, he became a merchant, and realized so much wealth that he was esteemed one of the richest men in the kingdom. His name is honorably associated with the fact that he became the founder of the renowned Charterhouse School in London, which has produced so many eminent scholars. He also founded and endowed the hospital connected with the school, an institution intended to serve as a home for the aged pupils of the school who have maintained an unblemished reputation, but who have been unfortunate in life. He died December 11, 1611.

RUINS OF SUSA, ANCIENT SHUSHAN.—See SUSA.

**SWALLOW** (swal'lo), a bird belonging to the *Hirundinidae*, an insectivorous family, in which the powers of flight are highly developed, while the feet are little adapted for progression on the ground. The *Hirundinidae* are widely diffused and are migratory, especially in latitudes where the supply of insect-food, taken on the wing, fails in the autumn. Various species frequent Syria and Palestine. The Hebrew word *derôr*, Ps. lxxxiv. 3; Prov. xxvi. 2, implies "gyration;" another, *'agûr*, Isa. xxxviii. 14; Jer. viii. 7, "twittering;" both words sufficiently appropriate. Some, however, render the last "a crane." And this is probably the true meaning.

**SWAN**, an unclean aquatic bird, Lev. xi. 18. The Hebrew term so translated is derived from a verb signifying "to respire;" it probably means the pelican, *Pelecanus onocrotalus*, receiving the name from its pouch, which it can extend by inflation.

**SWEAR, SWEARING.** See OATH.

**SWEAT, BLOODY**, Luke xxii. 44. See AGONY, BLOODY SWEAT.

**SWEDBERG** (swed'berg), JESPER, a Swedish clergyman, was born in 1653. He was professor of theology at Upsala and primate of the cathedral there, eminent as an eloquent preacher, bold in rebuking vice among court and people. He became bishop of Skara, and adorned the gospel in his life and writings. He was the father of Emanuel Swedenborg (see SWEDENBORG, EMANUEL). He was author of some sacred poems and of a Swedish grammar. He died in 1735.

**SWEDENBORG** (swe'den-borg), EMANUEL (whose family name was SWEDBERG), founder of the "New Jerusalem Church," and one of the most distinguished men of science of the eighteenth century, was born at Stockholm in 1688, and carefully educated by his father, the bishop of Skara, noticed above, in the principles of the

publication of his theological works. These are in themselves sufficiently numerous to form a life's work, and present throughout evidences of the deepest religious feeling. The style of composition marks them as works of a master-mind; they are filled with illustrations from the scientific and metaphysical lore of their author, and present, perhaps, as remarkable a combination of science and theology as is anywhere to be met with. Though it is frequently affirmed that Swedenborg labored under a delusion, his writings show no symptoms of aberration, the last, finished but a few months before his death, being singularly clear, logical and free from enthusiasm. He was always regarded as a learned and pious man, and it would appear that the story of his insanity rests for its support upon the word of a single enemy. He was never married, and his habits and mode of life were remarkable for their simplicity. The believers in his doctrines are now become a numerous body, not only in various countries of Europe, but in America, and not a few holding his views, or at least some of them, are to be met with in the various evangelical Churches. See NEW JERUSALEM CHURCH. His principal theological works are "On Heaven and Hell," "On Conjugal Love" and the "True Christian Religion." Emerson, who selected Swedenborg as the type of the mystic, remarks that "there is no such problem for criticism as his theological writings, their merits are so commanding, yet such grave deductions must be made." He died in London, in 1772.

**SWIFT, JOB, D.D.**, an American Congregational clergyman, was born in Sandwich, Massachusetts, in 1743, graduated at Yale College in 1765. About the year 1766 he was ordained at Richmond, where he resided seven years. Subsequently he officiated in the State of New York, and during the last sixteen years of his life resided at Bennington, Vermont. He died October 20, 1804, aged about sixty-one years. A volume of his sermons was published in 1805.

**SWIFT, DR. JONATHAN**, dean of St. Patrick's, a celebrated political, satirical and miscellaneous writer, was born at Dublin in 1667, and in his early life was left to the care of his uncle, who sent him first to the school of Kilkenny, and next to Trinity College, Dublin. In 1688 he lost his uncle; and being left without support, he went to England, where he waited on Sir William Temple, who received him with kindness and made

DEAN SWIFT.—See SWIFT, JONATHAN.

him his companion. During his residence with that statesman he had frequent interviews with

King William, who offered him a troop of horse, which he declined, his thoughts being directed to the Church. After some time he quarreled with his patron, and went to Ireland, where he took orders and obtained a prebend in the diocese of Connor. But he soon returned to Sir William Temple, and during the few remaining years of that statesman's life they remained together. On his death, Swift found himself benefited by a pecuniary legacy and the bequest of his papers. He

THE SWALLOW OF PALESTINE.—See SWALLOW.

next went to Ireland, and obtained the livings of Laracor and Rathbeggan, on the former of which he went to reside. During his residence there he invited to Ireland Miss Johnson, the lady whom he has celebrated by the name of Stella, and who was the daughter of Sir William Temple's steward. She was accompanied by a Mrs. Dingley, and the two ladies lived in the neighborhood when Swift was at home, and at the parsonage-house during his absence; which mysterious connection lasted till Stella's death. In 1701 he took his doctor's degree, and entered on public life as a political pamphleteer. He also published, anonymously, his humorous "Tale of a Tub" and the "Battle of the Books." On the accession of Queen Anne he visited England, where he lived during a great part of her reign, and distinguished himself as a powerful writer on the side of the Tories. But though immersed in politics, he did not neglect general literature. In 1711 he published a "Proposal for Correcting, Improving and Ascertaining the English Tongue." A bishopric in England was the grand object of his ambition; but Archbishop Sharpe, on the ground, it is said, of his "Tale of a Tub," having infused into the mind of Queen Anne suspicion of his orthodoxy, the only preferment his ministerial friends could give him was the Irish deanery of St. Patrick's, to which he was presented in 1713. He accordingly returned to Dublin, where he attended to his ecclesiastical functions and made some important reforms in the chapter of St. Patrick's. Soon after, he wrote his admirable "Gulliver's Travels;" and the next event worthy of record is the death of Stella. And now the fate which he had often apprehended overtook him; the faculties of his mind decayed, and he sank into absolute idiocy. After three years of mental suffering, he died, in 1745, having bequeathed the greatest part of his fortune to a hospital for lunatics and idiots.

**SWINDEN** (swin'den), TOBIAS, an English divine, was the author of a curious "Inquiry into the Nature and Place of Hell," which he places in

the sun. This work, first published in 1714, was reissued with an appendix in 1727, and translated into French by Bion, at Amsterdam, in 1728. The author was vicar of Caxton, in Kent, and died about the year 1720.

**SWINE**. The flesh of this animal was strictly forbidden to the Hebrews, Lev. xi. 7; Deut. xiv. 8. Perhaps the prohibition was medically advisable. But though to a conscientious Jew swine's flesh was abominable, yet it seems to have been offered in idol-worship, and the worshiper no doubt feasted on the sacrifice, Isa. lv. 4; lxvi. 3, 17. Wild hogs are now common on the Syrian hills; perhaps they were equally common in ancient times, Ps. lxxx. 13. And certainly in our Lord's day the breeding of swine was usual, Matt. vii. 6; 2 Pet. ii. 22. The permission given by him to the devils he had cast out from a man to enter a herd of swine, which speedily precipitated themselves into the water, has been much canvassed; commentaries must be consulted by those who desire a full explanation. Also, it may be observed here that it is not clear that Christ intended a punishment on those who kept the swine as transgressors of the law. The inhabitants of that region were mainly Gentile.

**SWINNOCK** (swin'nok), GEORGE, was a Puritan divine who flourished in the middle of the seventeenth century. He was vicar of Great Kymble, in Buckinghamshire, from which place he was ejected in 1662 for nonconformity. He afterward became pastor of a congregation at Maidstone, in Kent. His works were not numerous, and of them the late Dr. James Hamilton—no mean critic—justly says: "Except to a few collectors, the writings of Swinnoke are almost unknown; but we confess we have rejoiced in them as those that find great spoil. So pithy and pungent, and so practical, few books are more fitted to keep the attention awake, and few so richly reward it." He was the author of "Heaven and Hell epitomized," of which two editions were published; "The Christian Man's Calling," of which several editions were called for; and sermons. A uniform edition of his works, in five volumes, appeared in Edinburgh in 1868. He died at Maidstone in 1673.

**SWITHIN** (swith'in), SAINT, was one of the most famous of the early bishops of Winchester, of which place, or of the immediate neighborhood, he was a native. He was of a noble family, was ordained a priest by Helmesstan, bishop of Winchester, and made prior of a monastery in that city. The priory was afterward called by his name. He became preceptor to Prince Ethelwulf, who promoted him to the see of Winchester when he succeeded to the crown, on the death of his father Egbert. Swithin was consecrated A.D. 852, and his death occurred in A.D. 862. In 1093 his remains were removed from the open cemetery into the new church, and the removal, being delayed by violent rains, gave rise to the adage that whenever rain falls on his festival, the 15th of July, there will be forty days' continuance of the same. To this proverb Gay alludes in his "Trivia."

"If on St. Swithin's feast the welkin lowers,  
And every pent-house streams with hasty showers,  
Twice twenty days shall clouds their fleeces drain,  
And wash the pavement with incessant rain."

Various miracles have been attributed to him; and that he was recognized as a public benefactor is shown by the lines which occur in an old versification of the "Lives of the Saints," as given by Wharton in his "History of English Poetry."

"Seynt Swithin his bishopricke to al goodnesse drough,  
The towne also of Wynchestre he amended enough."

**SWORD** (sord). See ARMS. The word is often used typically as the ensign of power, Rom. xiii. 4, and the symbol of the divine judgments, Deut. xxxii. 41. The word of God is called "the sword of the Spirit," Eph. vi. 17.

**SYCAMINE** (sik'a-mine) **TREE** is mentioned only once in the New Testament, in Luke xvii. 6: "And the Lord said, If ye had faith as a grain of mustard-seed, ye might say unto this sycamine tree," etc. From a slight similarity in name, this tree has often been confounded with the sycamore both by ancient and modern writers. Both trees are, however, mentioned by the apostle, who must have had the technical knowledge necessary for distinguishing such things. Though the English version avoids translating the word, there can be little doubt of the mulberry tree being intended; and it is frequently so rendered. The mulberry is a tree which we might expect to find mentioned in Scripture, since it is so common in Palestine. It is constantly alluded to by old travelers, and indeed is much cultivated in the present day in consequence of its affording food for the silk-worm; and it must have been common also in early times, or the silk-worms would not have obtained suitable food when first introduced. As the mulberry tree is common, and as it is lofty and affords shade, it is well calculated for the illustration of the above passage of Luke.

**SYCAMORE** (sik'a-more) **TREE**. The tree so called in Scripture is not the sycamore of this

THE SWALLOW OF PALESTINE.—See SWALLOW.

country, which is a species of maple; it rather may be identified with the *Ficus sycamorus* or sycamore-fig. It is common both in Egypt and Syria. It is a tender tree, flourishing in sandy plains and warm valleys, but is not hardy enough for the mountain, and would be killed by a sharp frost, Ps. lxxviii. 47. It is lofty and widespreading, often planted by the wayside over which its arms extend, just adapted to the purpose for which Zaccheus selected it, Luke xix. 4. The sycamore yields several crops of figs in the year, which grow on short stems along the trunk and larger branches.

These figs are generally small and insipid, and are eaten by only the humbler classes, Amos vii. 14. It is easily propagated by planting a branch in the ground and watering it till it has struck out roots into the soil. The roots are thick and numerous, spreading deeply in the earth, and the tree itself is large and solid.

**SYCHAR, SYCHEM.** See **SHECHEM**.

SYCHAR, SYCHEM. See **SHECHEM**.

**SYCHEMITE** (si'chem-ite), Judith v. 16, an inhabitant of Sychem or Shechem.

**SYELUS** (sy-e'lus), 1 Esd. i. 8, the same as Jehiel, 2 Chr. xxxv. 8.

**SYENE** (sy-e'ne) [properly SEVENEH, supposed by Champollion to mean "opening," "key"], a town in Egypt, and twice referred to by Ezekiel as one of its boundary-lines, ch. xxix. 10; xxx. 6. In both cases the proper rendering is as now given, not as in the Authorized Version, "from the tower of Syene." The prophet is evidently pointing to the extreme limits of the land in different directions, with the view of showing the extent of the coming desolations. Migdol was at the extremity on the north-east, and Syene the same on the south. The modern name is *E'Souan*, from which certain cataracts of the Nile derive their name.

**SYKES** (sikes), ARTHUR ASHLEY, D.D., was born in 1684, in London. He rose to eminence in the Church, and became very celebrated for his controversial writings. He took a leading part in the "Bangorian" controversy, and he is known as the author of "An Essay on the Truth of the Christian Religion." This was in reply to Collins and other Deistical writers of his day. He also wrote "Credibility of Miracles," "Essay on Sacrifice," "Principles and Connection of Natural and Revealed Religion," "The Scripture Doctrine of Redemption of Man by Jesus Christ," and a "Paraphrase and Notes upon the Epistle to the Hebrews." These are all important subjects; but Sykes was not the man to do justice to some of them, and his work on the Hebrews is especially bad, as it endeavors to get rid of the two grand doctrines which permeate and give life to that Epistle—the Deity and Atonement of the Lord Jesus Christ. Sykes became prebendary of Salisbury, dean of St. Burien in Cornwall, and prebendary of Winchester, showing the principles

which prevailed in the management of Church patronage in the first half of the eighteenth century. He died in 1756.

**SYLVESTER** (sil-ves'ter), the name of three popes. The first, who reigned from 314 to 335, is said to have converted the emperor Constantine to Christianity. Deputies were sent by him to the Synod of Arles in 314, when the Donatist heresy was condemned, and also to the General Council of Nice in 325. The second was pope from 999 to 1003. He was the child of poor parents, but at an early age devoted himself to study, which he pursued for some time in Spain. In 970 he was placed by the emperor Otto I. at the head of the abbey of Bobbio, in Italy, and Otto II. made him tutor to his son and archbishop of Ravenna; he was also preceptor to Robert, son of Hugh Capet. On the death of Gregory V. he was raised to the papal throne. He is chiefly to be remembered as a patron of learning. The third was antipope in 1034. John, bishop of Sabina, was elevated to the papal chair with the designation Sylvester III., on the expulsion of Benedict IX. At the end of three months Benedict returned and displaced his rival.

**SYLVESTER, JOSHUA**, a quaint English poet, known in his day as the "silver-tongued Sylvester," was born in 1563, and died in Holland in 1618. He translated into English verse Du Barta's "Divine Weeks and Works," and wrote, amongst other pieces, a satire against tobacco, entitled "Tobacco battered and the Pipes shattered," etc.

**SYMBOL** (sim'bol). 1. A name of the creed, from being a collection of doctrinal propositions or religious watchwords or texts. 2. An emblem of some doctrine or fact.

**SYMBOLICAL** (sim-bol'i-kal) BOOKS, books which contain the Confession of Faith or creed of any religious body, such as the Confession of Augsburg, the Westminster Confession and Catechisms, or the Thirty-Nine Articles and Prayer-Book of the Protestant Episcopal Church.

**SYMBOLISM** (sim'bol-izm), the representation of truths, or of things unseen, by signs and forms of an emblematical character.

**SYME** (sime), ANDREW, D.D., a venerable clergyman of the Protestant Episcopal Church in Virginia, was a native of Scotland, and was born in September, 1754. During the latter part of the last century he located his residence in Petersburg, Virginia, where he spent the remainder of his long life, occupied in the appropriate functions of his profession, and also as a teacher. He was highly esteemed for his fidelity, and for the social affinities which always rendered him a desirable companion. He died at Petersburg, October 26, 1845, at the age of ninety-one.

**SYMEON** (sim'e-on), 2 Pet. i. 1, margin, a form of Simon, compare Acts xv. 14.

**SYMINGTON** (si'ming-tun), WILLIAM, D.D., was one of the most profound of the Scottish theologians of the present age and one of the most powerful and acceptable preachers of his day. He held the post of professor of theology in the Reformed Presbyterian Church in Scotland, and for clearness of view, accuracy of statement, consistency and fullness in the arrangement of his matter he was exceeded by no theological writer

in modern times. In addition to his sermons, which were published on both sides of the Atlantic, and which have been extensively called for, his work on "The Atonement and Intercession of Jesus Christ" has been recognized as of especial value, inasmuch as it sets out the principles which are essential to the idea of atonement, and then points out the fact that they are all inherent in and inseparable from the work of Christ. Though not large, this is a work of vast solidity. He was the author of "Messiah the Prince," which has also been published in Britain and America, and which has deservedly been in great demand by all who can appreciate profound thought. He died at Glasgow in 1862, having reached the sixty-seventh year of his age.

**SYMMACHUS** (sim'ma-kus), POPE, succeeded Anastasius II. in 498. He died in 514, and was succeeded by Hormisdas. His memory has received the honor of canonization from the Church of Rome.

**SYMME** (simz), THOMAS, was born in 1678, and educated at Harvard College, where he graduated in 1698. From 1702 until 1708 he was minister at Boxford, Massachusetts, whence he went to Bradford, in the same State. The family of Symmes was of English descent. Zechariah Symmes was born at Canterbury in 1599, was educated at Cambridge, became a lecturer in London and rector of Dunstable; but being a nonconformist, he emigrated, settled in New England and became pastor of the church in Charlestown. He returned to England; but one of his sons, also named Zechariah, who was born at Charlestown in 1638, was educated at Harvard, and became minister of Bradford, and died there in 1708. Thomas Symmes died in 1725, having written sermons and historical narratives of local incidents of interest in New England, especially bearing on the wars with the Indians.

**SYMPHONY** (sim'fo-ne), a harmony of musical notes. Sometimes the term is applied in an unscientific manner to the voluntary or interlude

SYCAMORE FIGS.—See **SYCAMORE TREE**.

on the organ between the verses of a hymn. See **DULCIMER**.

**SYMPHORORA** (sim'fo-ro'ra). A widow and her seven sons were commanded by Nerva, the Roman emperor, to sacrifice to heathen deities. Unanimously refusing, she was scourged and hung up for some time by the hair of her head, then being taken down, a large stone was fastened to her neck and she was thrown into the river, where she expired. Her sons were afterward put to death in the most shocking manner.

**SYNAGOGUE** (sin'a-gog), a name applied generally in the New Testament to the Jewish places of ordinary worship. It is a Greek word signifying "an assemblage" or gathered meeting.

We can discover little proof of the existence of such assemblies in Old Testament times. The sanctuary or the temple was the recognized place of the solemn services of the law; there alone according to the strict letter of the command were sacrifices to be offered. It is true that the history furnishes us with many exceptions apparently not disapproved by God. But yet it must be fairly conceded that of synagogue-worship in its ordinary meaning as an established regular institution we do not hear till after the exile. During the abode at Babylon, certainly, religious assemblies were held. The elders were in the habit of resorting to the prophet Ezekiel, Ezek. viii. 1; xiv. 1; xx. 1; xxxiii. 31. Such assemblies were then the more necessary, because, with the temple in ruins and the people in captivity, the sacrifices of the law could not be offered. And we may believe that the custom was carried back by the exiles when they returned into Judaea. Some have imagined that they observe traces of synagogue-worship in the books of Ezra and Nehemiah; the passages relied on, however, are not very appropriate. Possibly in 1 Macc. iii. 46 there may be a reference to a synagogue, and indisputably long before our Lord's time the system must have been matured, for we not only see it in full operation then, but we find it noticed by St. James as of old-established authority, not alone in Palestine, but wherever else the Jews were dispersed, Acts xv. 21. And thus a most effective means was provided for imbuing the Jewish mind with Scripture-knowledge and disseminating some at least of that knowledge among the Gentiles. The way of the Lord Messiah was being prepared.

The services of the synagogue consisted of three parts—prayer, reading the Scriptures and exposition of them, or preaching. 1. There is every reason to believe that forms of prayers were used in very early times, and nineteen collects still exist and are found in Jewish liturgies which are considered of great antiquity. There were originally eighteen, to which another was subsequently added. Probably some of them were in use in the time of Christ. 2. The law and the prophets were read in distinct portions, the law being divided into fifty-three or fifty-four *perashioth* or sections, and certain lessons or *haphtharoth* being appointed from the prophets. Prior to these lessons the following passages were read: Deut. vi. 4-9; xi. 13-21; Num. xv. 37-41. 3. The third part of the service was exposition, or preaching to the people. It would seem that sometimes this exposition accompanied the reading of the Scriptures, for our Lord while officiating in the synagogue at Nazareth began to speak immediately after he had read the lesson, Luke iv. 16-27. Sometimes the address was not till after the reading of the law and the prophets was finished, and the ruler had invited persons, strangers it might be, if they had any word of exhortation for the people, to give it, Acts xiii. 14, 15. A certain precedence, moreover, seems to have been allowed to the priests, whose peculiar functions were at an end on the destruction of the temple. They alone pronounced the benediction of Num. vi. 24-26.

The officers of the synagogue were the following: the "ruler," of whom in considerable places there seem to have been several—a kind of college of elders; they were to be men of age and station,

and one of their number presided over the rest, Mark v. 22; Acts xiii. 15; these rulers of course exercised the principal authority. The next in place was the angel or messenger of the congregation; he is not mentioned in Scripture, unless there be an allusion to his name in Rev. i. 20; iii. i. 7, 14; he was so termed because he was the delegate who offered the prayers in the name of the people. The reader was sometimes a stated officer, more usually called on for the time. This office our Lord exercised on the occasion already referred to at Nazareth. And there was a minister or servant, Luke iv. 20, who had duties of a lower kind; he prepared the synagogue for service, took charge of the books, etc. There were collectors of alms, and probably also several assistants, ten they are said to have been, but their functions have been much questioned. The chief seats were coveted, Matt. xxiii. 6, by the Scribes and Pharisees. It has been thought that the organization of the Christian Church, with its presiding bishop, a body of elders or presbyters and deacons, was influenced by the forms of the synagogue-establishment.

The days on which worship was performed in the synagogue were the second, fifth and seventh or Sabbath; the hours of prayer were the third, sixth and ninth, in conformity with the temple-worship. Synagogues of course varied in size. In the larger towns they were numerous. In Jerusalem there are said to have been four hundred and sixty or four hundred and eighty, some being appropriated to particular classes of persons, Acts vii. 9. It is noted in the Talmud, from a perverted exposition of Num. xiii. 27, as if the ten unfaithful spies formed a congregation, that wherever there were ten free adult Jews a synagogue ought to be erected. It was to stand in the most public part of a town, or its locality was to be indicated by a lofty pole. It was to be so constructed that the worshippers while entering and in their devotions might look toward Jerusalem. The interior arrangements were probably similar to those yet observed. It was a good work to build a synagogue, and we find it noted of a Gentile (probably a proselyte) that he loved the Jews and had built them a synagogue, Luke vii. 5. The places "where prayer was wont to be made," Acts xvi. 13, do not appear to have been synagogues, but *proscuchae*, in the open air near water, for the convenience of ablution.

A certain judicial power was exercised by the authorities in a synagogue, and the punishment of scourging was sometimes inflicted there, Matt. x. 17; Luke xii. 11, but critics are not agreed upon the powers of such tribunals. It is thought by some that the ordinary councils had their sittings in the synagogues.

A modern synagogue is divided into two parts. The floor is appropriated to the males, who sit in open seats, each having a box beneath for the prayer-book and *talith* or scarf of the occupier. The gallery, in the front of which is lattice-work, is appropriated to females, who are not considered part of the congregation. At the east end is the *heichel*, or ark. It is a large wooden chest, placed in a recess, beautified according to the means of the congregation, and screened from the general

gaze by a rich and costly veil, several of which often belong to a single synagogue. In this ark or holy repository the roll of the law is placed. The most honorable part of the floor of the building is that near the ark; and in the gallery the front seats from which the ark may be seen are considered the places of honor; the rabbi has his seat close by the ark. At the west end a lamp continually burns, a kind of representation of the Shechinah. In the centre is the *tevah* or reading-desk, a raised circular platform, but this is of modern introduction. When a new synagogue is built or an old one repaired, there is a dedication-service, but no special form is prescribed.

In the synagogue Jews wear their hats and put on the *talith* or scarf with fringes. There are three daily services, but those for the afternoon and evening are united in such a way as that one may conclude and the other commence at sunset. Practically, therefore, the services are two. The eighteen or nineteen prayers before mentioned are part of the daily worship. On Mondays and Thursdays certain penitential prayers are added, because, such is the tradition, Moses

SYCAMORE FIG TREE.—See **SYCAMORE TREE**.

ascended the mount after the idolatry of the golden calf on a Thursday and returned on a Monday. On these days pious Jews fast, and portions of the law are read. On the Sabbath there are four services, in the eve—i. e., Friday evening—in the morning, afternoon and evening, the last two on this day being kept separate. Besides the ordinary daily prayers, the law and the prophets—the specified portions before mentioned—are read, and there is what is called the *musaph* or additional prayers. The most important of the various parts of the service is that connected with the reading of the law. The roll is brought with much ceremony from the ark, and different persons are appointed for the time to take a share in the rites. The afternoon and evening services are similar to those in daily use, with some additions. There is, moreover, much cantillation or chanting, and regular melodies are introduced on various occasions.

It may be added that specified persons, such as those who have just attained the age of thirteen, the husbands of women returning thanks after child-birth, etc., are called to the reading of the law on particular Sabbaths, when they make money-offerings, but some change has of late been introduced in this system.

By the "great synagogue" is meant that coun-

cil, said to be formed after the return from captivity, which settled the Old Testament canon of Scripture. According to Jewish story, there were one hundred and twenty members under the presidency of Ezra, and they are said to have organized the ritual and made various regulations, ever after held in the highest honor. The accounts given of this body are uncertain, but there is very likely some substance of fact, and the existence of a recognized council which was succeeded in some of its functions by the Sanhedrim may fairly be admitted. Neh. viii. 13 gives some countenance to it.

**SYNCRETISTS** (sin'kret-ists), a school of writers, such as Cassander, Leibnitz, Calixtus and others, who have attempted to reconcile the distinctive doctrines of the Romish and Reformed Churches.

**SYNDIC** (sin'dik), a municipal or other officer delegated to act for a corporation or community.

**SYNERGISTS** (sin'er-gists), so called from the Greek *sunergia*, which signifies "co-operation." Hence this name was given to those in the sixteenth century who denied that God was the sole agent in the conversion of sinful man, and affirmed that man co-operated with divine grace in the accomplishment of this salutary purpose.

**SYNGE** (sinj), EDWARD, D.D., was born in 1659, at Inishonane, and was educated at Oxford during part of his collegiate course, but he removed from Christ Church to Trinity College, Dublin. He entered the ministry, and after preaching twenty years in Cork, he was made chancellor of St. Patrick's Cathedral, in Dublin, and rector of St. Werburgh's Church in that city. In 1714 he was raised to the see of Raphoe, whence in 1726 he was translated to the archbishopric of Tuam. He was exemplary, industrious, and by means of short tracts and condensed essays he aimed at popularizing the truths of the gospel; and so earnest was he in this work that a collected edition of them fills four volumes. He died in 1741; and as an illustration of the system which prevailed in the Irish Established Church in his day, it may be stated that his father was bishop of Cork, his uncle was bishop of Cloyne and two of his sons were bishops of Elphin and Killaloe.

**SYNOD** (sin'od), a formal meeting of ecclesiastical persons for the transaction of business. The name comprehends provincial assemblies of every kind, diocesan meetings as well as oecumenical and national councils. 1. *General*, where bishops, etc., meet from all nations. These were first called by the emperors, afterward by Christian princes, till in later ages the pope usurped to himself the greatest share in this business, and by his legates presided in them when called. 2. *National*, where those of one nation only come together to determine any point of doctrine or discipline. The first of this sort which we read of in England was that of Herdfoord, or Hertford, in 673, and the last was that held by Cardinal Pole in 1555. 3. *Provincial*, where those only of one province meet, now called the convocation. 4. *Diocesan*, where those of but one diocese meet, to enforce canons made by general councils or national and provincial synods, and to consult and

agree upon rules of discipline for themselves. These were not wholly laid aside till, by the act of submission, 25 Hen. VIII. c. 19, it was made unlawful for any synod to meet but by royal authority.

The term synod is also used to signify a Presbyterian church court composed of ministers and elders from the different presbyteries within its bounds, and is only subordinate to the General Assembly.

**SYNOD, ASSOCIATE**, the highest ecclesiastical court among the United Presbyterian Dissenters in Scotland, the powers of which are, in a great measure, analogous to those of the general assembly in the established kirk.

**SYNOD OF DORT.** See DORT, SYNOD OF.

**SYNOD FAST**, a synod set apart by synodical authority for humiliation and looking to God for mercy and blessing.

**SYNTYCHE** (sin'ti-ke), a female Christian named in Phil. iv. 2.

**SYRACUSE** (sir'a-keus), a very celebrated city of Sicily, consisting of five different quarters or towns united into one. It was the native place of Archimedes, who was killed when the city was taken by the Romans, 212 B. C. St. Paul was three days at Syracuse, Acts xxviii. 12, which was a convenient port for the Alexandrian cornships to touch at. There are considerable ruins of the ancient town by the modern *Siragosa*.

**SYRIA** (sir'e-a), the name of a country known to the Hebrews as ARAM, which see.

The term Syria has been very loosely employed, so as at different times to comprehend different ranges of territory. The Aram of earlier times stretched from Palestine and the Mediterranean to the Taurus on the north, and the Euphrates, or even beyond the Euphrates, on the east. The Greeks gave a much wider signification to Syria. They extended it to Egypt on the one side and to the Euxine on the other. Their ideas seem, however, to have been confused and not always consistent. In New Testament times Syria pretty nearly corresponded with the more ancient Aram.

Syria is for the most part mountainous. The lofty chains of Lebanon and Antilibanus traverse it in the south-west, running nearly parallel to the coast. Between them is the great valley of Cæle-Syria, down which flows the Litany, falling into the Mediterranean near to Tyre. But the valley is continued as far north as Antioch, for the ridge of Mount Bargylus, separated from Lebanon by a narrow space of lower ground, runs on northward for one hundred miles, and Antilibanus is similarly continued. The Orontes (*el'Asy*) flows down this part of the valley, and pours itself into the Mediterranean a little below Antioch. To the north of the longitudinal ranges is the chain of Amanus with rugged peaks, which joins the Taurus and separates Syria from Cilicia. The Syrian coast is hot and is said to be unwholesome; the most pleasant and fertile tract is the great valley, particularly the southern portion of it, or Cæle-Syria; the eastern flank of the Antilibanus is sterile, save in the district about Damascus. In the Syrian desert stretching to the east, generally dry and scarcely habitable except by a few nomad

tribes, are some verdant oases; in the most noted of these is Palmyra.

Syria, when we first hear of it in Scripture, seems to be broken up into petty states or sovereignties; these are enumerated in the article under ARAM. They were subdued by David, and continued subject to Solomon, 1 Ki. iv. 21. Afterward, however, probably in the later days of Solomon, an independent kingdom was formed at Damascus, 1 Ki. xi. 23-25. This monarchy, we may suppose, absorbed the other Syrian districts, and a succession of its kings were formidable enemies to Israel, sometimes being in alliance with the southern state of Judah, 1 Ki. xv. 18-20; 2 Ki. vi. 8-33. There were indeed occasional gleams of success to Israel in these contests, particularly in the reign of Jeroboam II., 2 Ki. xiv. 27, 28, and ultimately the king of Syria leagued with the king of Israel to overthrow Judah. But this was a fatal step. Ahaz invoked the assistance of the Assyrian monarch, and Syria sank before the might of the great king, 2 Ki. xv. 37; xvi. 5-10. Syria passed under the dominion successively of Babylon and Persia, and was afterward subdued by Alexander the Great. After his death it fell, with other territories, to one of his generals, Seleucus Nicator, who founded Antioch 300 B. C., and made it the capital of his wide dominions. A long line of kings succeeded, more or less successful in maintaining or extending their power. Of these Antiochus Epiphanes was the most cruel oppressor of the Jews; by the valor, however, of the Asmonean princes they established their independence. Syria became ultimately a Roman province 64 B. C. But under the Roman dominion were many free cities, and petty sovereignties assigned from time to time to subject princes, such as Chalcis, Abilene, Damascus. Palmyra maintained its independence till a late period. Sometimes Judæa was attached to Syria, its procurator being subordinate to the president or governor of Syria. It is at present subject to the sultan of Turkey.

**SYRIA-MAACHAH** (sir'e-a-ma'a-kah), 1 Chr. xix. 6. See ARAM, MAACHAH.

**SYRIAN CHRISTIANS** are not Nestorians. Formerly, indeed, they had bishops of that communion, but the liturgy of the present Church is derived from that of the early Church of Antioch, called *Liturgia Jacobi Apostoli*. They are usually denominated *Jacobites*, but they differ in ceremonial from the Church of that name in Syria, and indeed from any existing Church in the world. Their proper designation, and that which is sanctioned by their own use, is Syrian Christians, or the Syrian Church of Malayala. The doctrines of the Syrian Church are contained in a very few articles, and are in harmony with those, in essentials, of the Church of England.

**SYRIANS** (sir'e-anz), Gen. xxv. 20, inhabitants of Syria.

**SYRO-PHœNICIAN** (si'ro-fe-nish'yan), Mark vii. 26. There were Phœnicians of Libya or Carthaginians; in order, therefore, to distinguish those of Phœnicia itself, included in the Roman provinces of Syria, they are said to have been called Syro-Phœnicians. The woman so designated is called "of Canaan," Matt. xv. 22, because the descendants of the ancient Canaanites peopled the coasts of Tyre and Sidon.

THE TABERNACLE.—See article.

T.

**TAANACH** (ta-a'nak), a royal city of the Canaanites, Josh. xii. 21, in the territory of Issachar, but assigned to Manasseh, Jud. i. 27. Schubert, followed by Robinson, finds it in the modern Ta'annuk, now a mean hamlet on the south side of a small hill, with a summit of table-land. It lies on the south-western border of the plain of Esdraelon, four miles south of Megiddo, in connection with which it is mentioned in the triumphal song of Deborah and Barak, Jud. v. 19.

**TAANATH-SHILOH** (ta'a-nath-shi'loh), a place marking the boundary of the territory of Ephraim, Josh. xvi. 6.

**TABAOTH** (ta-ba'oth), **TABBAOTH** (tab-ba'oth), 1 Esd. v. 29; Ezra ii. 43, one whose descendants, Nethinim, returned with Zerubbabel.

**TABBATH** (tab'bath), a place mentioned Jud. vii. 22, but which has not been identified. It may be the remarkable mound called *Tubukut-Fakil*, which is in the same district in which the narrative would lead us to look for Tabbath.

**TABEAL** (ta'be-al), a person mentioned only in Isa. vii. 6. The Syrians and Israelites desired to deprive the dynasty of David of the sovereignty of Judah, and their futile purpose was to place a son of this Tabeal upon the throne.

**TABEEL** (ta'be-el), one of those officers who wrote to the Persian king against the Jews after the return from captivity, Ezra iv. 7.

**TABELLIUS** (ta-bel'le-us), 1 Esd. ii. 16, the same as Tabeel.

**TABENNISIENS** (ta-ben-nish'yenz), an order of monks of Tabenna in the Thebaïd, founded by St. Pachomius A.D. 350.

**TABERAH** (ta-be'rah), a place in the wilderness where a judgment by fire was inflicted on the Israelites for their murmuring, Num. xi. 1-3.

**TABERING** (ta'ber-ing), Neh. ii. 7, beating as on an instrument.

**TABERNACLE** (tab'er-na-k'l), the sanctuary where in the earlier times of the Hebrew theocracy the most sacred rites of their religion were performed. The command to erect a tabernacle is recorded in Ex. xxv. 8, and in that place, and in Ex. xxix. 42, 43, 45, the special purpose is declared for which it was to be made—God would there meet with Israel; for according to his covenant, he would dwell among them and be their God. And so we find the various names of it, the "tent," Ex. xxvi. 11, 12, the "tabernacle, dwelling or habitation," Ex. xxvi. 13, the "tent of meeting," Ex. xxix. 43, for so the words should be rendered, the "tent of the testimony," or "tabernacle of witness," Num. ix. 15, the "house of the Lord," Deut. xxiii. 18.

The command began by inviting the people to contribute suitable materials. They were to be offered with a willing heart; the Lord would accept only what came from a cheerful giver. These materials are described in Ex. xxv. 3-7. And the tabernacle was to be built according to the pattern prescribed by God. It was as to its general plan like an ordinary tent, which is usually divided into two compartments, the inner lighted by a lamp and closed against strangers. Such tents are longer than they are broad. And so the tabernacle was a rectangle, thirty cubits (fifty-two feet six inches, or perhaps forty-five feet) long, ten cubits in breadth and in height. The framework on these sides was perpendicular boards of shittim-wood—that is, acacia—overlaid with gold, kept together by means of transverse bars passing through golden rings, and each with two tenons, fitting into silver sockets on which they stood. The sockets have by some been supposed to taper toward a point, so that they could be driven into the ground. There were twenty boards a cubit and a half broad on each side, north and south, at the west end eight; but the two boards at the corners were probably of a different size or shape,

THE TABERNACLE COMPLETE.  
Restored according to researches of recent scholars.

else they would have projected beyond the sides. There were four coverings, the first of fine linen, blue, purple and scarlet, with cherubim embroidered on it. It was made in ten curtains, each twenty-eight cubits long and four wide, coupled together by loops and gold hooks. The second covering was of goats' hair in eleven curtains, each thirty cubits long and four wide, coupled with loops and brass or copper hooks. The third covering was of rams' skins dyed red, like our morocco leather; and the fourth of "badgers' skins," more probably a kind of seal-skin. These were to protect the tabernacle from the weather. The inner apartment, or most holy place, was a cube of ten cubits, the outer apartment twenty cubits in length and ten in breadth. They were separated by a veil of the same kind as the innermost covering, suspended on four gilded acacia pillars set in sockets of silver sockets. The east end, or entrance of the tabernacle, had also a large curtain suspended from five gilded acacia pillars set in sockets of brass or copper. In the most holy place, which the high-priest alone entered, was the ark of the covenant; in the holy place, where the priests ministered—to the north the table of shew-bread, to the south the golden candlestick, in the centre the altar of incense. Round about the tabernacle was an

open court, into which the people were admitted, one hundred cubits in length and fifty broad. It was formed by columns twenty on each side, ten at each end, raised on brazen or copper sockets. Hangings fastened to the pillars formed three sides and part of the fourth; on the east the breadth of four pillars was reserved for a central entrance, where was an embroidered curtain suspended from the four pillars. Immediately opposite the entrance was the great altar of burnt-offering, and between that and the door of the tabernacle was the laver, Ex. xxvi., xxvii., xxxviii., xl.

The tabernacle was completed in about nine months; and as the people offered most liberally, Ex. xxxvi. 5, it was a costly structure. It was erected on the first day of the first month of the second year after leaving Egypt. It was carried by the Israelites into Canaan and there set up, possibly first at Gilgal, then, when the land was subdued, at Shiloh, Josh. xviii. 1, and also at Bethel, perhaps afterward at Nob, and then at Gibcon, 1 Chr. xvi. 39; xxi. 29. And it may be, in this migratory character of the tabernacle, left sometimes without the ark, thereby showing that a definite place was not yet selected for God's abiding presence, that we have the solution of the offering of sacrifice even by prophetic men after an anomalous fashion. It was removed when the temple was built to Jerusalem, and possibly deposited in the temple, 1 Ki. viii. 4. For the regulations about its removal see Num. iv. It may be added here that David seems to have constructed another tabernacle to receive the ark when it was brought to Jerusalem, 2 Sam. vi. 17; perhaps it was this which was taken to the temple.

The typical design of the tabernacle has been variously interpreted; thus Philo regarded it as symbolical of the universe, and different expositors have seen a spiritual meaning in the intrinsic qualities of the materials and the very colors of the fabrics. But this is not to interpret soberly, though the arrangements were, doubtless, not without their signification to the worshippers in the tabernacle. Fairbairn would regard it as a type of Christ, as God manifest in the flesh and reconciling flesh to God. He appeals in corroboration to our Lord's calling his body a temple, John ii. 19, 21. But the reader will find a flood of light shed upon the purpose of the tabernacle and its utensils by a perusal of Heb. ix., x.

**TABERNACLE**. 1. A receptacle for the wafers used by the Romish priesthood in the celebration of the eucharist. In its present shape its date is perhaps as recent as the sixteenth century. An early form of it was that of a dove. About the middle of the fourteenth century it was sometimes placed in an ambry (small cupboard) above the altar, as at Nuremberg, and this led to the modern tabernacle. 2. A recess for an image. 3. The abbot's stall in the choir, thus called, no doubt, from the ornamental carving which adorned the seat and its canopy.

**TABERNACLE WORK**. Carved canopy work over a pulpit, sedilia or choir stalls, or a niche in a wall, is so called.

**TABERNACLES, THE FEAST OF**, one of the three greater festivals to be observed by Israel. It was instituted to commemorate the dwelling of the people in tents while in the desert, Lev. xxiii. 34-43. And as these feasts additionally marked the epochs of the agricultural year—at the pass-over or feast of unleavened bread the first ripe ears of corn being offered, the feast of weeks or pentecost being also the feast of harvest—so the feast of tabernacles was called also the feast of ingathering at the year's end, when all the labors of the field were consummated, Deut. xvi. 13-15. It was to be a time of holy joy, of grateful remembrance of the past, of hopeful trust for future blessings.

The feast commenced on the fifteenth of the seventh month, and was to last seven days. It was commanded that the people should dwell in booths or tents, which were anciently pitched on the terrace-like roofs of the houses, in the courts of the temple and in the streets or wide places of the city. They were to cut down boughs of various trees, and to carry (it is said) the fruit and branches in their hands, so long as the festival lasted. The particular sacrifices to be offered are detailed in Num. xxix. 1-38; and though the feast is described as of seven days, there was an eighth day added, which was to be a Sabbath of rest and a holy convocation. Also every Sabbatical year the law was to be read at the feast of tabernacles to the assembled people, Deut. xxxi. 10-13. Notices of the observance of this holy season are to be found in Neh. viii. 13-18; Hos. xii. 9; Zech. xiv. 16-19; John vii. 2, 37-39. It seems that in later days it was customary to draw water from the pool of Siloam and carry it in a golden vessel to the altar. It was there poured into a silver basin, from which it was conducted by pipes to the Kidron. To this usage our Lord may perhaps allude in the place last referred to. He has been supposed further to allude, John viii. 12, to the practice of lighting two large chandeliers in the court of the women, by the light of which they held a festal dance. But it is doubtful whether either of these customs was observed on the last—i.e., eighth—day of the feast, when it was that Christ referred to the water, John vii. 37.

On the symbolical meaning of the festival critics are not agreed. But surely, viewing the circumstances under which it was instituted, and regarding its historical and agricultural character, we can hardly be at a loss in regard to the divine purpose. It commemorated not like the pass-over a single event, but the habits of a period, the tent-residence of the nation's wilderness life. And it was celebrated at the completion of the year's labor, the joyous acknowledgment of abundant provision, when the fruits of the field had all been gathered into the garner, when, too, at this feast the temple was consecrated, 2 Chr. v. 3, where Jehovah would dwell among his people. Can we fail to see depicted here the Church's repose, the long wearisome work accomplished, the rest of her everlasting joy in a land where, a sojourner no more, she dwells in a settled habitation, and looks back to her pilgrimage-state only as contrasting with it the happy possession to

which she has been brought, where the fruits of prior toil are now completely gathered? It is in the view of what this feast presignifies that the prophet Zechariah, ch. xiv. 16, when describing the result of Jerusalem's last victory, represents all nations resorting thither to keep the feast of tabernacles—a festival in prophetic language not abrogated by the ceasing of the legal dispensation.

**TABITHA** (tab'i-thah), the Aramaic name of a Christian female dwelling at Joppa. She was also called by the Greek name Dorcas, having the same signification, and hence, possibly, was a

THE TABERNACLE AND ITS CURTAINS.

THE TABERNACLE UNCOVERED.

Hellenist. She was remarkable for her charity and good works; and having died, was miraculously restored to life by St. Peter, Acts ix. 36-42.

**TABLE**. See MEALS.

**TABLE**. 1. A tablet covered with wax on which the order of service for the week was written in cathedrals and elsewhere in the Middle Ages. 2. CREDENCE, the same as credence table. See CREDENCE. 3. HOLY, an altar. 4. OF DEGREES, a table of relationship by blood and affinity within which it is prohibited to marry. 5. OF LESSONS. Lessons in ancient times were sometimes taken from the Fathers and from the lives of the saints, as well as from Scripture. In Cardinal Quignonez' reformed Roman breviary

(1536) two lessons were appointed for ordinary days, one from the Old, the other from the New Testament, and a third from a patristic homily for the festivals. In the English Book of Common Prayer the system of daily lessons was established in 1549. In 1559 and 1661 modifications were made, and in 1871 the lessons were arranged in their present form, nearly all the lessons from the Apocrypha being excluded.

**TABLE-TALK**, LUTHER'S, an apocryphal work ascribed to the great Reformer, and pretending to give a collection of his favorite sayings, aphorisms, etc. It contains no small quantity of excellent matter and much that is amusing, but retails many absurd stories and extravagances which tend in no small degree to lower the character of Luther. If any part of it really came from his pen, it was never designed for publication.

**TABLET** (tab'let), an ornament mentioned in Ex. xxxv. 22; Num. xxxi. 50. It was probably a string of gold drops or beads worn around the neck or arm. But the "tablets" of Isa. iii. 20 are literally "receptacles of odor"—i.e., perfume-boxes or smelling-bottles. They were suspended to a lace or sash tied around the waist.

**TABLET, MURAL**, a tablet containing an inscription fixed to a wall.

**TABOR** (ta'bor). 1. A mountain on the confines of Zebulun and Naphtali standing out in the north-east border of the plain of Esdraelon. It stands out alone and eminent above the plain, with all its fine proportions from base to summit displayed at one view. It lies at the distance of two hours and a quarter south of Nazareth. According to the barometrical measurements of Schubert, the height of Tabor above the level of the sea is one thousand seven hundred and forty-eight Paris feet, and one thousand three hundred and ten Paris feet above the level of the plain at its base. Seen from the south-west, it presents a semi-globular appearance, but from the north-west it more resembles a truncated cone. By an ancient path, which winds considerably, one may ride to the summit, where is a small oblong plain, with the foundation of ancient buildings. The view of the country from this place is very beautiful and extensive. The mountain is of limestone, which is the general rock of Palestine. The sides of the mountain are mostly covered with bushes and trees, presenting a beautiful appearance and affording a fine shade. There are various tracks up its sides, often crossing one another. The crest of the mountain is table-land, of some some six or seven hundred yards in height from north to south and about half as much across; and a flat field of about an acre occurs at a level of some twenty or twenty-five feet lower than the eastern brow. There are remains of several small ruined tanks on the crest, which still catch the rain-water dripping through the crevices of the rock, and preserve it cool and pure, it is said, throughout the year. This mountain is several times mentioned in the Old Testament, Josh. xix. 12, 22; Judg. iv. 6, 12, 14, but not in the New. Its summit has, however, been usually regarded as the "high mountain

apart" where our Lord was transfigured before Peter, James and John. But the probability of this is opposed by circumstances which cannot be gainsaid. It is manifest that the transfiguration took place in a solitary place, not only from the word "apart," but from the circumstance that Peter in his bewilderment proposed to build "three tabernacles" on the spot, Matt. xvii. 1-8. But we know that a fortified town occupied the top of Tabor for at least two hundred and twenty years before and sixty years after the birth of Christ, and probably much before and long after; and the tradition itself cannot be traced back earlier than toward the end of the fourth century, previously to which we have notices of Mount Tabor without any allusion to its being regarded as the site of the transfiguration. It may further be remarked that this part of Galilee abounds with "high mountains apart," so that in removing the scene of this great event from Tabor there is no difficulty in providing other suitable sites for it.

was of an equestrian family. The place of his birth is not known. He early cultivated poetry; he became an advocate; and he is supposed also to have borne arms. He was successively quaestor, aedile and praetor, and in 97 attained the rank of consul. Pliny the Younger was his bosom friend, and Agricola was his father-in-law. He is believed to have died about A.D. 135. Of his admirable "History and Annals" a large portion is unfortunately lost. Tacitus also wrote the "Life of Agricola," the "Manners of the Germans" and a "Dialogue of Eloquence." The last of these, however, is by some attributed to Quintilian.

**TACKANASH** (tak'a-nash), JOHN, Indian minister on Martha's Vineyard, was ordained August 22, 1670, the day of the formation of the first Indian church on the island. He possessed considerable talents and was exemplary in life. Allowing himself few diversions, he studied much, and seemed to advance in piety as he became more

with the Palmyra of the Greeks and Romans, the history of which fills a brilliant page in the world's annals. In its earlier fortunes Palmyra was dependent on one or other of the great empires which rose and fell around; but under Odenathus and his martial queen Zenobia it expanded into a mighty sovereignty, rivaling and defying for a time the Roman power. In 273 A.D. the emperor Aurelian succeeded, after obstinately-contested battles, in taking the city and securing the person of Zenobia.

Palmyra is seated in an oasis of the Syrian desert midway between the Orontes and the Euphrates, about one hundred and forty miles east-north-east from Damascus. It is sheltered by hills to the west and north-west, and is well supplied with water. It has dwindled down to a mean place, now inhabited by a few Arabs; but magnificent ruins give proof of its ancient splendor. The most remarkable of these is the great temple of the sun, which was enclosed in a court one hundred and seventy-nine feet square, surrounded by a double row of columns. Sixty of the original three hundred and ninety are still standing, and of the sanctuary itself there are massive remains; of the columns which adorned it about twenty mutilated ones now exist. It is probable that of all the ruined cities of Western Asia Palmyra presents the most romantic features, if its origin, its splendor, its history and fate be considered.

**TAHAN** (ta'han). 1. A son of Ephraim, Num. xxvi. 35. 2. A descendant of Ephraim, 1 Chr. vii. 25. Perhaps the two are identical. See EPHRAIM.

**TAHANITES** (ta'han-ites), a family of Ephraim descended from Tahan, 1, Num. xxvi. 37.

**TAHAPANES** (ta-ha'pa-nee), Jer. ii. 16. See TAHAPANES.

**TAHATH** (ta'hath). 1. A Levite of the line of Kohath, 1 Chr. vi. 24, 37. 2, 3. Two descendants of Ephraim, 1 Chr. vii. 20.

**TAHATH**, one of the stations of the Israelites in the wilderness, Num. xxxiii. 26, 27.

**TAHPANES** (tah'pan-nee), or **TEHAPHNEHES** (te-haf'ne-nee), a city of Egypt. The former name is used by Jeremiah, ch. ii. 16, and the latter by Ezekiel, ch. xxx. 18. The Septuagint render it by *Taphnas*, the name of a goddess. This was doubtless *Daphne*, a strong boundary city on the Pelusiac arm of the Nile. A mound called Tel Defenneh, nearly in a direct line between the modern Zan and Pelusium, is supposed from its name and position to mark the site of Daphne. Isaiah, xxx. 4, names it in the abbreviated form Haues. It was to this place that Johanan and his party repaired, taking Jeremiah with them, after the murder of Gedaliah.

**TAHPENES** (tah'pe-nee), a queen of Egypt, consort of the Pharaoh contemporary with David. Her sister was given in marriage to Hadad, the fugitive prince of Edom, 1 Ki. xi. 19. See HADAD.

**TAHREA** (tah-re'ah), a descendant of Saul, 1 Chr. ix. 41; called Tarea in 1 Chr. viii. 35.

**TAHTIM-HODSHI** (tah'tim-hod'shi), a place or district near upon Gilead, 2 Sam. xxiv. 6.

MOUNT TABOR FROM THE NORTH.—See TABOR.

2. The name of a grove of oaks in the vicinity of Benjamin, in 1 Sam. x. 3, the topography of which chapter is usually much embarrassed by the groundless notion that Mount Tabor is meant.

3. A Levitical city in Zebulun, 1 Chr. vi. 77.

**TABORITES** (ta'bor-ites), the branch of the Hussites who followed Zisca in his wars in Bohemia. See CALIXTINS, and HUSS, JOHN.

**TABRET**. See MUSICAL INSTRUMENTS.

**TABRIMON** (tab'ri-mon), the father of Ben-hadad, king of Syria, 1 Ki. xv. 18.

**TACHES** (tash'ez), hooks to which loops were fitted, Ex. xxvi. 6, 11, 33.

**TACHMONITE** (tak'mun-ite), 2 Sam. xxiii. 8. See HACHMONITE, JASHOBEAM.

**TACITUS** (tas'i-tus), CAIUS CORNELIUS, a Latin historian, was born about A.D. 56, and

acquainted with the truths of the gospel. Of Indian preachers he was the most distinguished. In prayer he was devout and fervent; faithful in his instructions and reproofs; strict in the discipline of his church, excluding the immoral from the ordinances till they repented. So much was he respected that the English, when deprived of their own minister, attended his meeting and received the Lord's Supper from his hands. He died in the peace and hope of the Christian, January 22, 1684. His place of residence was at Nunpaug, at the east end of Martha's Vineyard.

**TADMOR** (tad'mor), a city which Solomon built in the wilderness, 1 Ki. ix. 18. According to Arabic tradition, it existed at an earlier age, and Solomon rebuilt and fortified it as a barrier-fortress. The wise monarch's eye also, no doubt, perceived the favorable position of this city for commerce. It was at a convenient distance from both the Mediterranean Sea and the Persian Gulf, and was sure to secure the advantages of caravan-traffic. Tadmor is almost universally identified

**TAIT** (tate), ARCHIBALD CAMPBELL, D.D., D.C.L., was born in 1811, at Edinburgh. After a course in the University of Glasgow, he gained a scholarship which enabled him to enter Balliol College, Oxford; and here he became a tutor, and eventually he succeeded to a Fellowship. From 1842 until 1850 he acted as head master of the celebrated school of Rugby, over which Dr. Arnold had presided. In 1850 the deanery of Carlisle was conferred on him, and six years afterward he was raised to the see of London. The wisdom and energy which he displayed in that vast charge led the government to translate him to the primacy, and he became archbishop of Canterbury on the vacancy which occurred in 1868. Notwithstanding the onerous duties of all these positions which he has filled, he has been an industrious writer. He has published sermons for the working-classes, several charges, historical sketches and valuable papers on the leading questions of the day. In 1861 he issued "The Dangers and Safeguards of Modern Theology," and in 1863 "The Word of God the Ground of Faith," while "The Harmony of Revelation and the Sciences" appeared in the following year. As a chief ruler in the Church he has endeavored to preserve a firm moderation among his brethren, his personal predilections being on the evangelical side, yet fully recognizing the zeal and worth of many who are classed among the High Church portion of the Establishment. His policy is decided against those practices which would carry the Church back to the ritual and doctrines of the Church of Rome.

**TAJ** (taj). This is the name of the celebrated edifice near Agra, in India, which justly takes rank among the most splendid buildings of the world. It has been called "the gem of India and of the world, the Koh-i-noor of architecture," and in many respects it is without a parallel. The illustrations on pages 102 and 103 will give the reader an idea of its form and character. The buildings which make up the Taj are erected on a platform about twenty feet high, and they occupy a space of about three hundred and fifty feet square. The main central building is an octagon, surmounted by an egg-shaped dome of about seventy feet in circumference, and four minarets stand at the corners of the platform, each about a hundred and fifty feet high, shooting up like columns of light into the blue sky. A peculiar feature of the Taj is its purity, for all the parts, the great platform and the minarets are of pure white marble, the only exception being a beautiful ornamented work of an exquisite flower-pattern which wreathes the doors and windows and wanders toward the dome—one huge mosaic of inlaid stones of different colors. The contrast of the colors under an Eastern sky, the gorgeousness of the interior, the richness of the screens, the beauty of the paneling and of the flowers, composed of jasper, chalcedony, cornelian and other precious stones, and the wonderful unity of the structure, both external and internal, combine to make it a wonder of the Eastern world and an unsurpassed specimen of the architectural art.

**TALAPOINS** (tal'a-po-inz), priests or friars of the Siamese and other Indian nations. They reside in convents which are square enclosures, in the centre of which stands a temple, and around it the cells of the talapoins, like so many tents in a camp. There are likewise female talapoins, who live under the same regulations as the men, and

in the same convents. They have likewise nuns, or young talapoins, who wait upon the old ones, and receive their education from them. Each convent of talapoins is under the directions of a superior, whom they call a *samvral*.

**TALBOT** (taw'l'bot), JOHN, came to the New England colonies as a chaplain on board the ship Centurion in 1702. He was accompanied by George Keith, the celebrated Quaker preacher, who was now returning as a missionary under the Society for Propagating the Gospel in Foreign Parts, and the two agreed to act together, selecting Philadelphia as the centre of their operations. Talbot continued to labor after Keith had again left for England, endeavoring with all his zeal to bring the Quakers back to the communion of the Episcopal Church. With the consent of the society in London, he chose Burlington, New Jersey, as his home, but he traveled extensively in his preaching tours. He labored with great zeal

MOUNT TABOR FROM THE SOUTH.—See TABOR.

to secure the appointment of a bishop, and he expressed his readiness to approach the queen on this subject. He was in England in 1706 and 1707, but did not succeed in his great object, and on his return he preached extensively through New England, and at length he reached his old home at Burlington, and here he had to endure all the discomforts of an inadequate support. His troubles increased because of accusations being sent to London against him on the subject of his loyalty and his omission of portions of the Book of Common Prayer, which appear to have been unfounded, as he was free from Jacobitism. During his residence in England he became acquainted with Richard Welton and Ralph Taylor, both of whom had been consecrated as nonjuring prelates, and they consecrated Talbot as bishop. This fact was not known when Talbot returned; but owing to his assuming episcopal dress and his confirming young persons at intervals, it became known, and the result was his dismissal by the society. Thus rejected in England, he nevertheless held the confidence of those by whom he was

known, and especially of those to whom he ministered, who esteemed him as an earnest, zealous and laborious man. He died in 1727. It is interesting to know that Richard Welton, who had acted in the ordination of Talbot, also came to this country after Talbot's death. He settled in Philadelphia and preached in Christ Church, but his irregular conduct led the authorities in England to seek his removal, and by a writ of the privy seal he was commanded to return; but instead of proceeding to England, he sailed to Lisbon, in Portugal, in the year 1726, where he died shortly afterward.

**TALBOT, MATTHEW**, who was a citizen of Leeds, is justly celebrated as being the author of an important work, entitled "An Analysis of the Holy Bible." It was published at Leeds in 1800, and it contains the whole of the Old and New Testaments arranged under subjects, so that the reader, by perusing a section, can have

before him in one view all the teaching of Scripture on that subject. The work is divided into thirty books, containing two hundred and eighty-five subdivisions or chapters, and four thousand one hundred and forty-four sections or subjects. The "British Critic" has very justly commended this work, which was the result of much labor, and Horne has with equal truth affirmed that it is an analysis of great rarity. It has been used as a basis of similar works in Great Britain and the United States.

**TALBOT, PETER**, who was born in 1620, was son to Sir William Talbot, and brother to the duke of Tyreonnell who became lord-lieutenant of Ireland. He became a Jesuit, and in 1669 he was made titular archbishop of Ireland. Being suspected of complicity in the "Popish Plot," he was seized in 1678 and thrown into prison—at first in the castle of Dublin and afterward in Newgate, where he died in 1680. He wrote a treatise in Latin concerning "The Nature of Faith and Heresy." In 1670 he published a work on "Re-

ligion and Government," and four years afterward he published a work in quarto entitled "Letters to the Roman Catholics in Ireland." All these works showed him to be a man of keen intellect and great determination.

**TALED** (ta'led), or more correctly **TALITH** (ta'lith), is the name of a Jewish fringed wrapper worn at morning prayers. It is generally made of a white woollen material, the wool being spun by Jews for this purpose. It has three or more blue stripes running in parallel lines across the whole garment at the right and left sides. Every married Jew must wear it at morning prayer, but a single man may do as he pleases. When putting it on, a solemn prayer is offered, and the greatest regard is had to the fringe on its border, which was regarded with great reverence, Matt. ix. 20; xiv. 36. The Pharisees, who attached importance to outward things, enlarged their fringes, believing that the larger they made

may be made of every natural endowment or providential appointment, or they may remain unoccupied through inactivity and selfishness. Time, health, vigor of body and the power of exertion and enduring fatigue—the natural and acquired abilities of the mind, skill in any lawful art or science and the capacity for close mental application—the gift of speech, and that of speaking with fluency and propriety, and in a convincing, attractive or persuasive manner—wealth, influence or authority—a man's situation in the church, the community or relative life."

**TALIONIS** (ta-li'on-is), **LEX**, a law which condemns a man to suffer punishment of the same kind and degree to the injury he has inflicted upon another.

**TALITHA CUMI** (ta-li-thah ku'mi), "dam-sel, arise," the Aramaic words uttered by our Lord when raising the ruler's daughter, Mark v. 41.

TADMOR, OR PALMYRA.—See TADMOR.

the tassels, the better did they serve God, and this superstition was rebuked by our Lord. The taled, or talith, worn at prayers, is a modified form of a larger garment which the Jews anciently wore, but which they discarded when they began to mix with other nations, as it made them conspicuous and often exposed them to persecution as belonging to the race who had crucified the Son of God. See FRINGES.

**TALENT.** The talent was a monetary term among the Jews as well as the Greeks. Talents were of different values, as there were the common talent, that of the temple, and that of the sanctuary, their weights being forty-six pounds fourteen ounces, ninety-two pounds twelve ounces, and one hundred and eighty-five pounds eight ounces. The talent is often referred to in Scripture. See MONEY, WEIGHTS.

Figuratively, the term talent signifies any gift or opportunity God gives to men for the promotion of his glory. "Everything almost," says Mr. Scott, "that we are, or possess, or meet with, may be considered as a talent; for a good or a bad use

**TALLENTS** (tal'ents), **FRANCIS**, was born in 1619 at Palsley, in Derbyshire. He entered St. Peter's College, Cambridge, whence he removed to Magdalen College in the same university. Here he gained a Fellowship, and in time he reached a senior Fellowship, and ultimately he was appointed president. He entered the Church, and for ten years held the living of St. Mary's in Shrewsbury, from which, in 1662, he was ejected for nonconformity. He was the author of a "View of Universal History to the Year A. D. 1700," and "A Short History of Schism." This work was reviewed by S. Garscome, and Tallents replied in an "Answer to S. Garscome." He died in 1708.

**TALMAI** (tal'mi). 1. One of the sons of Anak, Num. xiii. 22. 2. A king of Geshur whose daughter Maacah was David's wife and Absalom's mother, 2 Sam. iii. 3; xiii. 37.

**TALMIDE HAKAMIM** (tal'mi-de hak-a'-mim), disciples in the synagogue who studied the law. They were divided into three classes and sat in the area of the building, answering to the nave

in our churches, below the elders. They were also called "Disciples of the Wise Men."

**TALMON** (tal'mon). 1. A Levite porter, 1 Chr. ix. 17. 2. A Levite porter whose descendants returned with Zerubbabel to Jerusalem, Ezra ii. 42; Neh. vii. 45. Possibly there was only one of the name, so that in the latter case Tahmon denotes the representative of No. 1.

**TALMUD** (tal'mud), **THE**. This is a body of Jewish laws, comprising doctrines and precepts relative to religion and morals. The Talmud (the name literally signifying "doctrine") consists of two parts, viz., the *Mishna*, or text, and the *Gemara*, or commentary.

The *Mishna*, the meaning of which is "repetition," includes six books or orders, sixty-three treatises and five hundred and twenty-four chapters. Four tracts were afterward appended. It is a collection of various Jewish traditions, with expositions of Scripture-texts; these, the Jews pretend, were delivered to Moses on the mount, and were transmitted from him, through Aaron, Eleazar and Joshua, to the prophets, and by them to the men of the great synagogue, from whom they passed in succession to Simeon, Gamaliel, and ultimately to Rabbi Jehudah, surnamed Hakkodesh, "the holy." By him this digest of oral law and traditions is said to have been completed toward the close of the second century, after forty years' labor. It has been since handed down among the Jews, from generation to generation, regarded with the highest reverence, and even sometimes esteemed above the written law itself.

The *Gemara* is twofold, viz.: the *Gemara* of Jerusalem, compiled between the third and fifth centuries, and not much esteemed by the Jews, and the *Gemara* of Babylon, compiled in the fifth century. This is filled with absurd fables, but the Jews highly value it. The name *Gemara* implies "perfection," and is assumed because these commentaries are regarded as an explanation of the whole law, after which nothing more can be desired. The *Mishna*, together with the commentary compiled at Jerusalem, is called the Jerusalem Talmud; with that made at Babylon it is the Babylonian Talmud.

The *Mishna* is useful as being a digest of the traditions held by the Pharisees in our Lord's time, and Biblical critics and commentators have often drawn from it explanations of various passages in the Old Testament, and have illustrated thereby the narrative and allusions of the New.

The Talmud of Jerusalem is less esteemed than the Talmud of Babylon, formed by Rabbi Asa or Aser, who had an academy for forty years at a place called Sara, near Babylon. It is this Talmud which the Jews more frequently consult; and it is especially esteemed by those Jews who live beyond the Euphrates, from the circumstance that it was compiled at Babylon. Rabbi Asa died before it was completed, but it was finished by his disciples (some say his children) about five hundred years after Christ. With the exception of the Scriptures, these Talmuds, after the Chaldee paraphrases, are the most ancient books of doctrine possessed by the Jews.

A converted Jew in the year 1238 detected several errors in the Talmud, which he laid before Gregory IX., who required the archbishops of France and the kings of Spain and Portugal to seize and burn all such books of the Jews, and twenty cartloads of Hebrew books were accordingly burned in France alone.

means is not a guarantee for their right use. It appears also that during the times when it was fashionable at court to worship Baal the temple stood desolate, and that its repairs were neglected, see 2 Ki. xii. 6, 7. We learn that the cost of the repairs was defrayed chiefly by voluntary contribution, by offerings and by redemption-money, 2 Ki. xii. 4, 5. The original cost of the temple seems to have been chiefly defrayed by treasures collected by David for that purpose.

There was a treasury in the temple, in which much precious metal was collected for the maintenance of public worship. The gold and silver of the temple was, however, frequently applied to political purposes, 1 Ki. xv. 18; 2 Ki. xii. 18. The treasury of the temple was repeatedly plundered by foreign invaders. For instance, by Shishak, 1 Ki. xiv. 26; by Jehoash, king of Israel, 2 Ki. xiv. 14; by Nebuchadnezzar, 2 Ki. xxiv. 13; and lastly, again by Nebuchadnezzar, who, having

Darius Hystaspis, B. C. 520, that the building was resumed. It was completed in the sixth year of this king, B. C. 516, compare Ezra v. and vi., and Hag. i. 15. According to Josephus, the temple was completed in the ninth year of the reign of Darius.

The second temple was erected on the site of the former, and probably after the same plan. According to the plan of Cyrus, the new temple was sixty cubits high and sixty cubits wide. The old men who had seen the first temple were moved to tears on beholding the second, which appeared like nothing in comparison with the first, Ezra iii. 12; Hag. ii. 3. It seems, therefore, that it was not so much in dimensions that the second temple was inferior to the first as in splendor, and in being deprived of the ark of the covenant, which had been burned with the temple of Solomon. The temple of Zerubbabel had several courts and cloisters or cells. This temple was connected with the town by means of a bridge. During the wars from

TARSUS.—See article.

removed the valuable contents, caused the temple to be burned down, 2 Ki. xxv. 9, B. C. 588. The building had stood since its completion four hundred and seventeen or four hundred and eighteen years. Thus terminated what the later Jews called "the first house."

**THE SECOND TEMPLE.**—In the year B. C. 536 the Jews obtained permission from Cyrus to colonize their native land. Cyrus commanded also that the sacred utensils which had been pillaged from the first temple should be restored, and that for the restoration of the temple assistance should be granted, Ezra i. and vi. The first colony which returned under Zerubbabel and Joshua having collected the necessary means, and having also obtained the assistance of Phœnician workmen, commenced, in the second year after their return, B. C. 534, the rebuilding of the temple. The Sidonians brought rafts of cedar trees from Lebanon to Joppa. The Jews refused the co-operation of the Samaritans, who, being thereby offended, induced the king Artasasta (probably Smerdis) to prohibit the building. And it was only in the second year of

B. C. 175 to B. C. 163 it was pillaged and desecrated by Antiochus Epiphanes, who introduced into it idolatrous rites, 2 Macc. vi. 2, 5, and dedicated it to Jupiter Olympius. The temple became so desolate that it was overgrown with vegetation, 1 Macc. iv. 38. Judas Maccabeus expelled the Syrians and restored the sanctuary, B. C. 165. He repaired the building, furnished new utensils and erected fortifications against future attacks, 1 Macc. iv. 43-60; 2 Macc. i. 18. Alexander Jannæus, about B. C. 106, separated the court of the priests from the external court by a wooden railing. During the contentions among the later Maccabees, Pompey attacked the temple from the north side, caused a great massacre in its courts, but abstained from plundering the treasury, although he even entered the holy of holies, B. C. 63. Herod the Great, with the assistance of Roman troops, stormed the temple, B. C. 37; on which occasion some of the surrounding halls were destroyed or damaged.

**TEMPLE OF HEROD.**—Herod, wishing to ingratiate himself with the Church and State party, and being fond of architectural display, undertook not

merely to repair the second temple, but to raise a perfectly new structure. Josephus gives two dates for the commencement of the building, the eighteenth and the fifteenth years of Herod's reign. A great force was employed in the undertaking—one thousand wagons for conveying the stones, ten thousand skilled workmen, and one thousand priests who were acquainted with the finer kinds of work in stone and wood. In a year and a half the temple proper was ready for the priests and Levites; the courts were finished at the end of eight years; but operations continued to be carried on in the erection and fitting up of places attached to it. At the commencement of our Lord's ministry they still were so, and were not completed till the time of Agrippa II., when the works wholly ceased, and as many as eighteen thousand workmen are said to have been discharged. The area for these erections was considerably enlarged, and it was formed into terraces, the open space or court of one rising above another, and the temple itself occupying the highest. The outermost court was nearly a square, surrounded by a high wall, with a colonnade of two rows of marble pillars, and on the south side three, twenty-five feet in height, bearing up a roof of richly carved cedar, and paved with mosaic. Gentiles were allowed to enter here, as well as Jews; and the gates or entrances to it for the public were only on the west side—one to the royal city on Zion, two to what Josephus calls the suburbs of the city, and one by means of a series of steps through the valley into the other city. The east wall ran along the edge of a deep ravine, and did not admit of gates; so also the south, which had right below it the deep valley of the Tyropœon, but in which there were two concealed or subterranean passages leading to the vaults and water-reservoirs of the temple. On the north there was only one passage, also concealed, leading to the fortress of Antonia, which formed a sort of watch-tower to the temple. A court, comparatively near the temple, and of much smaller dimensions, was separated from this outer one by a breastwork or raised bank, ten cubits broad, with a trellis of stone on the top three cubits high; the bank itself on the side toward the outer court was forty cubits high, but on the interior only twenty-five, and was ascended by fourteen steps at various entrances or gates. The widest gate was on the east, which led directly into a pretty large court of one hundred and thirty-five cubits square, the court of the women, right in front of the altar of burnt-offering; there was also a gate leading into it on the north, and one on the south. On the west, and nearer the temple, were steps and a gate leading to what was called the court of the Israelites. These four gates had chambers built over them, and were each adorned with two pillars; but the east, which was called "the great gate," in the Talmud "Nicanor's gate," was larger and costlier than the others; its gates were fifty cubits high and forty broad, while the others were only twenty cubits high and fifteen broad. Fifteen steps conducted from this court up to that of the Israelites, which lay immediately in front of, and round about, both the altar and the temple. Chambers or cells stood at the four corners of this court, and were used for holding such articles as salt, wood, etc., needed for the service of the sanctuary, and both on the north and on the south sides there were three gates, with steps leading up to them. A railing of a cubit high separated this from the court of the priests, which was immediately around the altar, and along the front and sides of the temple. The altar was of stone, fifteen cubits high, and thirty long and broad.

light into the sanctuary. The windows, which are mentioned in 1 Ki. vi. 4, consisted probably of lattice-work.

The lowest story of the chambers was five cubits, the middle six and the third seven cubits wide. This difference of the width arose from the circumstance that the external walls of the temple were so thick that they were made to recede one cubit after an elevation of five feet, so that the searement in the wall of the temple gave a firm support to the beams which supported the second story, without being inserted into the wall of the sanctuary, which insertion was perhaps avoided not merely for architectural reasons, but also because it appeared to be irreverent. The third story was supported likewise by a similar searement, which afforded a still wider space for the chamber of the third story. These observations will render intelligible the following Biblical statements: "And against the wall of the house he built stories round about, both of the temple and of the oracle; and he made chambers round about; the nethermost story was five cubits broad, and the middle was six cubits broad, and the third was seven cubits broad; for without in the wall of the house he made narrowed rests (narrowings or rebatements) round about, so that the beams should not be fastened in the walls of the house. The house, when it was in building, was built of stone made ready before it was brought thither; so that there was neither hammer, nor axe, nor any tool of iron heard in the house while it was in building. The door of the middle story was in the right side of the house; and they went up with winding stairs into the middle story, and out of the middle into the third. So he built the house and finished it, and covered the house with beams and boards of cedar. And then he built chambers against all the house, five cubits high; and they rested on the house with timber of cedar," 1 Ki. vi. 7.

From this description it may be inferred that the entrance to these stories was from without; but some architects have supposed that it was from within; which arrangement seems to be against the general aim of impressing the Israelitish worshippers with sacred awe by the seclusion of their sanctuary.

In reference to the windows, it should be observed that they served chiefly for ventilation, since the light within the temple was obtained from the sacred candlesticks. It seems from the descriptions of the temple to be certain that the "oracle," or holy of holies, was an *adytum* without windows. To this fact Solomon seems to refer when he spake "The Lord said that he would dwell in the thick darkness," 1 Ki. viii. 12.

The "oracle" had perhaps no other opening besides the entrance, which was, as we may infer from the prophetic visions of Ezekiel (which probably correspond with the historic temple of Solomon), six cubits wide.

From 1 Ki. vii. 10 we learn that the private dwellings of Solomon were built of massive stone. We hence infer that the framework of the temple also consisted of the same material. The temple was, however, wainscoted with cedar wood, which was covered with gold. The boards within the temple were ornamented by beautiful carvings representing cherubim, palms and flowers. The ceiling of the temple was supported by beams of cedar wood. The wall which separated the holy from the holy of holies probably consisted not of stone, but of beams of cedar. It seems, further, that the partitions partly consisted of an *opus reticulatum*, so that the incense could spread from the

holy to the most holy. This we infer from 1 Ki. vi. 21: "So Solomon overlaid the house within with pure gold; and he made a partition by the chains of gold before the oracle; and he overlaid it with gold."

The floor of the temple was throughout of cedar, but boarded over with planks of fir, 1 Ki. vi. 15. The doors of the oracle were composed of olive tree; but the doors of the outer temple had posts of olive tree and leaves of fir, 1 Ki. vi. 31. Both doors, as well as that which led into the temple as that which led from the holy to the holy of holies, had folding leaves, which, however, seem to have been usually kept open, the aperture being closed only by a suspended curtain—a contrivance still seen at the church-doors in Italy, where the church-doors usually stand open, but the doorways can be passed only by moving aside a heavy curtain. From 2 Chr. iii. 5 it appears that the greater house was also ceiled with fir. It is stated in verse 9 "that the weight of the nails employed in the temple was fifty shekels of gold," and also that Solomon "overlaid the upper chambers with gold."

The lintel and side-posts of the oracle seem to have circumscribed a space which contained one-fifth of the whole area of the partition, and the

vision is not strictly historical, although it may serve to illustrate history. It is likely that these courts were quadrilateral. In the divisions of Ezekiel they form a square of four hundred cubits. The inner court contained toward the east the altar of burnt-offering, the brazen sea and ten brazen lavers; and it seems that the sanctuary did not stand in the centre of the inner court, but more toward the west. From these descriptions we learn that the temple of Solomon was not distinguished by magnitude, but by good architectural proportions, beauty of workmanship and costliness of materials. Many of our churches have an external form not unlike that of the temple of Solomon. In fact, this temple seems to have been the pattern of our church buildings, to which the chief addition has been the Gothic arch. Among others, the Roman Catholic church at Dresden is supposed to bear much resemblance to the temple of Solomon.

It is remarkable that after the temple was finished it was not consecrated by the high-priest, but by a layman—by the king in person, by means of extempore prayers and sacrifices. The temple remained the centre of public worship for all the Israelites only till the death of Solomon, after

SLEEPING ADONIS, THE GREEK TAMMUZ.—See article.

posts of the door of the temple one-fourth of the area of the wall in which they were placed. Thus we understand the passage 1 Ki. vi. 31-35, which also states that the door was covered with carved work overlaid with gold.

Within the holy of holies stood only the ark of the covenant; but within the holy were ten golden candlesticks and the altar of incense. See CANDLESTICK AND ALTAR OF INCENSE.

The temple was surrounded by an inner court, which in Chronicles is called the Court of the Priests, and in Jeremiah the Upper Court. This again was surrounded by a wall consisting of cedar beams placed on a stone foundation, 1 Ki. vi. 36. This enclosure, according to Josephus, was three cubits high. Besides this inner court, there is mentioned a Great Court, 2 Chr. iv. 9. It seems that this was called the Outward Court, compare Ezek. xiv. 17. This court was also more especially called the court of the Lord's house, Jer. xix. 12. These courts were surrounded by spacious buildings, which, however, according to Josephus, seem to have been partly added at a period later than that of Solomon. For instance, 2 Ki. xv. 35, Jotham is said to have built the higher gate of the house of the Lord. In Jer. xxvi. 10 and xxxvi. 10 there is mentioned a new gate, compare also Ezek. xl. 5-47; xlii. 1-14. But this prophetic

which ten tribes forsook this sanctuary. But even in the kingdom of Judah it was from time to time desecrated by altars erected to idols. For instance, "Manasseh built altars for all the host of heaven in the two courts of the house of the Lord. And he caused his son to pass through the fire, and observed times, and used enchantments, and dealt with familiar spirits and wizards; he wrought much wickedness in the sight of the Lord to provoke him to anger. And he set a graven image of the grove that he had made in the house," etc. Thus we find also that King Josiah commanded Hilkiah the high-priest, and the priests of the second order, to remove the idols of Baal and Asherah from the house of the Lord, 2 Ki. xxiii. 4, 13: "And the altars that were on the top of the upper chamber of Ahaz, which the kings of Judah had made, and the altars which Manasseh had made in the two courts of the house of the Lord, did the king beat down and brake them down from thence, and cast the dust of them into the brook Kidron." In fact, we are informed that, in spite of the better means of public devotion which the sanctuary undoubtedly afforded, the national morals declined so much that the chosen nation became worse than the idolaters whom the Lord destroyed before the children of Israel, 2 Ki. xxi. 9—a clear proof that the possession of external

is still preserved in a small town called *Teyma*, which is mentioned by several Eastern geographers.

**TEMAN** (te'man), or **TEMANI** (te'ma-ne), "on the right," a son of Eliphaz and grandson of Esau, Gen. xxxvi. 11, who became one of the dukes or chieftains of Edom, and gave his name to a district of the Edomite territory, or, inversely, took his name from it. The district itself is nowhere exactly defined, but from the import of the name it may be inferred to have formed the more southerly portion of Idumæa. It is impossible to fix the region more definitely, as the old landmarks have long since perished and the name appears to have no modern representative. But that

THE WORSHIP OF TAMMUZ.—See article.

Teman and its inhabitants once formed a powerful section of Edom is evident from the prophetic notices of it in the doom of Edom, and the special mention in some of these of understanding and wisdom as belonging to its people, Jer. xlix. 7, 8; Amos i. 12. In Job also Eliphaz the "Temanite" appears as one of the wise men of his day, eh. ii. 11; xxii. 1.

**TEMANITE.** See **TEMAN**.

**TEMENI** (te'me-ne), a descendant of Judah, 1 Chr. iv. 6.

**TEMPLAR** (tem'plar), **KNIGHTS**, an order founded at Jerusalem, A. D. 1118, by Hugh de Paganiis, Geoffrey, St. Omer and seven others, for the defence of pilgrims to the Holy Land.

Their superior was called grand master. Their chief English house was the Temple, London. The naves of their churches were round (see page 140). They went to England in the reign of Stephen. In A. D. 1312 the order, having become corrupt, was suppressed. Their habit, which was white, was assigned to them by St. Bernard, and a red cross was added, in A. D. 1146, by Eugenius III.

**TEMPLE** (tem'pl), a building dedicated to divine worship, where the presence of the Deity was expected peculiarly to manifest itself. After the Israelites had exchanged their nomadic life for a life in permanent habitations, it was becoming that they should

exchange also their movable sanctuary or tabernacle for a temple. There elapsed, however, after the conquest of Palestine, several centuries during which the sanctuary continued movable, although the nation became more and more stationary. It appears that the first who planned the erection of a stone-built sanctuary was David, who, when he was inhabiting his house of cedar, and God had given him rest from all his enemies, meditated the design of building a temple in which the ark of God might be placed, instead of being deposited "within curtains," or in a tent, as hitherto. This design was at first encouraged by the prophet Nathan, but he was afterward instructed to tell David that such a work was less appropriate for him, who had been a warrior from his youth, and had shed much blood, than for his son, who should

enjoy in prosperity and peace the rewards of his father's victories. Nevertheless, the design itself was highly approved as a token of proper feelings toward the divine King, 2 Sam. vii. 1-12. We learn, moreover, from 1 Ki. v. and 1 Chr. xxii., that David had collected materials which were afterward employed in the erection of the temple, which was commenced four years after his death, about B. C. 1012, in the second month—that is, the month of Siv, compare 1 Ki. vi. 1; 2 Chr. iii. 2—four hundred and eighty years after the exodus from Egypt. We thus learn that the Israelitish sanctuary had remained movable more than four centuries subsequent to the conquest of Canaan.

The site of the temple is clearly stated in 2 Chr. iii. 1: "Then Solomon began to build the house of the Lord at Jerusalem in Mount Moriah, where the Lord appeared unto David his father, in the

place that David had prepared in the threshing-floor of Ornan (or Araunah) the Jebusite." In Eastern countries the site of the threshing-floors is selected according to the same principles which might guide us in the selection of the site of wind-mills. We find them usually on the tops of hills which are on all sides exposed to the winds, the current of which is required in order to separate the grain from the chaff. It seems that the summit of Moriah, although large enough for the agricultural purposes of Araunah, had no level sufficient for the plans of Solomon. According to Josephus, the foundations of the temple were laid on a steep eminence, the summit of which was at first insufficient for the temple and altar. As it was surrounded by precipices, it became necessary to build up walls and buttresses in order to gain more ground by filling up the interval with earth. The hill was also fortified by a threefold wall, the lowest tier of which was in some places more than three hundred cubits high; and the depth of the foundation was not visible, because it had been necessary in some parts to dig deep into the ground in order to obtain sufficient support. The dimensions of the stones of which the walls were composed were enormous; Josephus mentions a length of forty cubits. It is, however, likely that some parts of the fortifications of Moriah were added at a later period.

The workmen and the materials employed in the erection of the temple were chiefly procured by Solomon from Hiram, king of Tyre, who was rewarded by a liberal importation of wheat. Josephus informs us that the persons employed in collecting and arranging the materials for the temple were ordered to search out the largest stones for the foundation and to prepare them for use on the mountains where they were procured, and then convey them to Jerusalem. In this part of the business Hiram's men were ordered to assist.

Josephus adds that the foundation was sunk to an astonishing depth, and composed of stones of singular magnitude and very durable. Being closely mortised into the rock with great ingenuity, they formed a basis adequate to the support of the intended structure. Josephus gives to the temple the same length and breadth as are given in 1 Kings, but mentions sixty cubits as the height. He says that the walls were composed entirely of white stone; that the walls and ceiling were wainscoted with cedar, which was covered with the purest gold; that the stones were put together with such ingenuity that the smallest interstices were not perceptible; and that the timbers were joined with iron clamps.

The temple itself and its utensils are described in 1 Ki. vi. and vii. and 2 Chr. iii. and iv. The internal dimensions of the "holy" were forty cubits long, twenty cubits wide and thirty cubits high. The holy was separated from the "holy of holies" by a partition, a large opening in which was closed by a suspended curtain. The holy of holies was on the western extremity of the entire building, and its internal dimensions formed a cube of twenty cubits. On the eastern extremity of the building stood the porch. At the entrance of this porch stood the two columns called Jachin and Boaz, which were twenty-three cubits high.

The temple was also surrounded by three "stories of chambers," each of which stories was five cubits high, so that there remained above ample space for introducing the windows, requisite more for ventilation than for the admission of

**TAYLOR, STEPHEN, D.D.**, was born in 1796, in Tyringham, Berkshire county, Massachusetts. He became seriously impressed with the importance of religion in his early years, and after a course of preparatory study at Lenox Academy, he entered Williams College, where he graduated in 1816, having greatly distinguished himself in his undergraduate course. For a year he taught in Westfield Academy, Massachusetts, and then returned to Williams College as tutor, where he displayed great talent. After two years of earnest labor in the college, he went to Andover to study theology; but the climate proving too severe, he went to Boytown Academy, in Mecklenburg county, Virginia, and on the restoration of his health he returned and completed his course under Dr. Griffin, who had become president of Williams College. He returned to Virginia, and in 1824 he was licensed by the Presbytery of Hanover, and settled as pastor of a church in Halifax county. In 1826 he was removed to Richmond as successor to the Rev. John B. Hoge, and after nine years of faithful labor he was appointed professor of ecclesiastical history in Union Theological Seminary, in Prince Edward county. He resigned his chair in 1838, and became pastor of a church in Abingdon, Virginia, and he devoted a part of his time to the training of young students in their classical and mathematical studies and instructing others in theology. In 1843 he settled as pastor of the High Street Church, Petersburg, and in 1847 he returned again to Richmond and took charge of Duval Street Church, to which he ministered until his death, in March, 1853. He was an earnest preacher, devotedly anxious to spread abroad the savor of religion, aiming even in the professor's chair to bring all his teaching to bear on the advancement of piety among his students.

**TEACH, TEACHER, TEACHING.** These words may be used with reference to the communication of religious knowledge (see **MINISTER, PREACH, PREACHER**), and as implying an ordinary instruction. See **EDUCATION, SCHOOL**.

**TEATS**, Isa. xxxii. 12, a better translation is: "they (the women) smite upon the breasts"—a sign of grief, compare Neh. ii. 7.

**TEBAH** (te'bah), one of the sons of Nahor, Abraham's brother, Gen. xxii. 24.

**TEBALIAH** (te-bal'yah), a Levite, 1 Chr. xxvi. 11.

**TEBETH** (teb'eth), Esth. ii. 16. See **MONTH**.

**TE DEUM** (te de'um), a hymn said to have been extemporized by Ambrose and Augustine at the baptism of the latter, A. D. 386. It is also attributed to Hilary of Poitiers, A. D. 355, and to Nicetus, bishop of Treves, A. D. 535, who is said to have composed it for the use of the Gallican Church. It is found in old service-books as far back as the time of the Norman conquest of England. When the Prayer Book was reviewed in the American General Convention, a few changes were made in the phraseology of the hymn and some antiquated words were removed. In the English arrangement the punctuation is "musical," but in the American it is made "grammatical."

**TEFFT** (teft), BENJAMIN, D.D., LL.D., was born in 1813, in Floyd, in the State of New York.

He entered the ministry of the Methodist Church, and after preaching in Maine and Massachusetts, he acted, from 1835 until 1839, as professor of the Maine Wesleyan Seminary. He served for three years in Asbury University, Indiana, as professor of Greek and Hebrew, whence he went as principal to the Providence Seminary, Connecticut; and from 1850 until 1853 he acted as president of Genesee College. He has been a prolific writer, and among his works are "Methodism Successful" and "The Shoulder-knot, or Sketches of the Threefold Life of Man." He acted as editor of the books which were published by the Western Methodist Book Concern for six years, and a great number of volumes passed through his hands. He has also prepared editions of Butler's "Analogy," of Whately's "Evidences of Christianity," and other works, the great value of which he has recognized, and which he aimed at circulating among the members of his own denomination and making them generally better known.

**TEHAPHNEHES** (te-haf'ne-hes), Ezek. xxx. 18. See **TAPHNEHES**.

**TEHINNAH** (te-hin'nah), a descendant of Judah, 1 Chr. iv. 12.

**TEIGNMOUTH.** See **SHORE, JOHN**.

**TEIL TREE**, Isa. vi. 13, possibly the terebinth. The original word is frequently elsewhere rendered "oak." See **OAK**.

**TEKEL** (te'kel), "weighed," Dan. v. 25, 27. See **MENE**.

**TEKOA** (te-ko'a), or **TEKOAHA** (te-ko'ah), a city of Judah, about twelve miles to the south of Jerusalem. It stood on an eminence and was visible from Bethlehem, from which it was about six miles distant, in the neighborhood of Bethhacecem. It was colonized by Ashur of the tribe of Judah, 1 Chr. ii. 24. Rehobam fortified it, 2 Chr. xi. 6, and it was here that the prophet Amos resided as a herdsman when he was visited by the prophetic word, Amos i. 1. Other notices of it may be found in 2 Sam. xiv. 2; 2 Chr. xx. 20; Jer. vi. 1, and it would seem that the neighboring wilderness bore its name.

**TEKOITES** (te-ko'ites), 2 Sam. xxiii. 26, the inhabitants of Tekoa.

**TEL-ABIB** (tel-a'bib), a place in Babylonia where some of the Jewish captives were stationed. It was by the river of Chebar, but its precise site is doubtful, Ezek. iii. 15.

**TELAH** (te'lah), a descendant of Ephraim, 1 Chr. vii. 25.

**TELAIM** (te-la'im), a place at or in which Saul numbered the people before setting out to destroy Amalek, 1 Sam. xv. 4. In all probability the same as *Telem*; but the Septuagint and Josephus read Gilgal, on what grounds is unknown.

**TELISSAR** (te-las'sar), or **THELASAR** (the'la-sar). The name apparently means "hill of

Asshur." It occurs in the letter which Sennacherib sent to Hezekiah as the name of a place conquered by the Assyrian armies—"the children of Eden which were in Thelasar." We can only approximate an identification of the place through the fact that it is mentioned along with Gozan, Haran and Rezep, in both verses quoted, and that also in Ezekiel it occurs along with Haran, Canneh, Sheba and Asshur. Telassar must have been somewhere in Western Mesopotamia, and it was, as the name implies, a sanctuary of Asshur. The name by itself might indicate any place where on some eminence the old national deity was worshiped, and accordingly the Targumists seem to understand it of Resen, Gen. x. 12.

**TELEIAN** (te-le'yan), also called **ELIUD**, succeeded Dubritius at Llandaff, in Wales. He was famed for his sanctity during life, and after his death, many churches were dedicated to his memory. This venerable man has by many been considered the first bishop of Llandaff, as Dubritius, who frequently resided at that place, had an oversight over the whole principality, and Godwin makes him archbishop of all Wales.

THE TAMARISK.—See **SHUR**.

The cathedral of Llandaff was dedicated to the memory of Teleian, though a reconstructed edifice was raised to the honor of the apostles Peter and Paul.

**TELEM** (te'lem), one of the Levite singers who had married a foreign wife, Ezra x. 24.

**TELEM**, Josh. xv. 24. See **TELAIM**.

**TEL-HARESHA** (tel-ha're-sha), or **TEL-HARSA** (tel-har'sa), a place in Babylonia from which several persons who could not prove their pedigree as Israelites went with Zerubbabel to Jerusalem, Ezra ii. 59.

**TEL-MELAH** (tel-me'lah), a place in Babylonia from which also persons of doubtful pedigree returned, Ezra ii. 59.

**TEMA** (te'ma), a son of Ishmael, the ninth in order, Gen. xxv. 15, and the founder of a tribe which, along with its territory, bore his name. Various allusions are made to the people and land of Tema in connection with other Arab tribes, as in Job vi. 19 and Isa. xxi. 14. The district lay on the northern part of Arabia Deserta, on the borders of the desert of Syria, and the name

Original Sin," the "Scripture Doctrine of Atonement," "A Paraphrase and Notes on the Epistle to the Romans," "A Scheme of Scripture Divinity," "A Hebrew-English Concordance," his principal work and the labor of his life, and a "Sketch of Moral Philosophy." He died in 1761.

**TAYLOR, JOHN**, a divine and civilian, was born at Shrewsbury in 1704. He was educated at St. John's College, Cambridge, where he obtained a Fellowship and proceeded to the degree of doctor of laws. In 1742 he became a member of Doctors' Commons, and two years after was appointed chancellor of Lincoln; but in 1751 he entered into orders, was presented to the rectory of Lawford, in Essex, and became a canon residentiary of St. Paul's. His chief works are an

THE TALED.—See article.

edition of the Greek orators and "Elements of Civil Law." His sermons were published in 1749 and 1757. He died in 1766.

**TAYLOR, JOHN**, was born in 1752, in Fauquier county, Virginia. His ancestors had emigrated from England and settled in Virginia in the year 1650, and his father passed over the Blue Ridge and near the Shenandoah River in Frederick county, Virginia. In his twentieth year he united with the Baptist Church, and he began to take part in religious services, and shortly afterward he was known as a public speaker. He was licensed to preach, and for some years, having been ordained as an itinerant, he traveled through the mountainous districts of the State, at times reaching into Kentucky. In 1786 he consented to settle as pastor of the church at Clear Creek, where he remained three years, and where he received

above one hundred persons into membership. He next settled on the Ohio River, and ministered to the Baptist church at Bullittsburg, which grew in numbers; but the place proving unfavorable for his health, he removed to a place called Corn Creek, sixty or seventy miles distant, where he began his labors with his usual zeal; but a difficulty arising about a matter of discipline, he removed to the forks of Elkhorn and became connected with the Big Spring church in Woodford county. He was called to the pastoral charge of the Black Run church, but he only agreed to preach as a supply, and here also he had great success. His strength gradually declined, owing to increasing years and his manifold labors, and he died in 1833, in the eighty-fourth year of his age. Owing to his frequent changes and his active

public life, he was not a voluminous writer. He wrote "A History of Ten Baptist Churches of which the Author has been successively a member," and here the experiences of more than fifty years are recorded. He also published a "Comment on some Parts of Scripture," in which he avows that he took the liberty of differing from other expositors.

**TAYLOR, NATHANIEL W.**, was born in 1786, at New Milford, Connecticut, of which place his grandfather was pastor from 1748 until his death, in 1800. He was educated at Yale College, where he graduated in 1807. For a short time he enjoyed special instruction from President Dwight, to whom he acted as an amanuensis, and in 1812 he was settled as pastor of the Centre Church, in New Haven, where he remained until 1822, when he was made Dwight professor of d

dactic theology in Yale College. He held this position until his death, in 1858. His theological views excited a widely-extended criticism. Since his death the sermons which he preached in Centre Church were edited by the Rev. N. Porter, D.D., and published. His "Lectures on the Moral Government of God" were published in 1859, and in the same year also his "Essays and Lectures on Select Topics in Revealed Theology" appeared.

**TAYLOR, OLIVER ALDEN**, was born in 1801, at Yarmouth, Massachusetts. He attended the Ashfield Academy for some time, and in 1820 he succeeded in becoming a beneficiary of the American Education Society. Feeling that he could now venture to enter a college, he traveled upward of five hundred miles to Meadville, Pennsylvania, where his uncle resided, and acted as president of Alleghany College. He concluded

that another place would give him the advantages which he sought, and he removed to Union College, at Schenectady. In 1823 he was received under the care of the Albany Presbytery, and he went to Andover for his theological course. Here he began the study of French and German, displaying a fine talent in mastering languages. In 1828 he was licensed to preach the gospel, and for several years he continued to preach in several places without accepting a settled charge, all the while devoting himself sedulously to literary study. In 1837 he was requested to take the place of Professor Robinson (then in Europe) at the Union Seminary in New York, but his engagements at Andover prevented him from accepting this appointment. He accepted a call to the pastorate at Manchester, and was installed in September, 1839, and here he labored with great diligence, but in 1851 his health gave way, and after visiting different places with a view to his restoration, he had to return to his home, where he died on the 18th day of September, 1851. His literary productions are scattered through a great number of journals, and they all display a remarkable acquaintance with the literature of theology. A memoir of his life was published in 1853, and in 1856 a second edition of it was called for.

**TAYLOR, RICHARD**, a Congregational divine of the seventeenth century, a man of abilities and erudition, evangelical in doctrine, and in conversation and professional labor eminent and exemplary. He was author of "The History of the Union between the Presbyterian and Congregational Dissenting Ministers in and about London." Among his other works of value are his "Discourse of Christ," "Establishment of the Law by the Gospel," "Seasonable Caution against Presumption," "Discourses on the Fall and Misery of Man," "Discourses on Several Subjects." He died at London about 1717.

**TAYLOR, ROWLAND**, one of the most learned English divines of the sixteenth century, but most illustrious in his heroic death as Protestant martyr, was chaplain to Archbishop Cranmer. He quitted Cranmer's family on being presented to the rectory of Hadleigh, in Suffolk, and devoted himself entirely to his duties as parish priest, winning the highest esteem and warmest love of his flock by his great abilities, unfeigned piety and simplicity of life. On the accession of Queen Mary he was one of the first to suffer for resistance to the attempts to restore the popish worship. Having resisted the performance of mass in his parish church, he was cited, in 1553, to appear before Gardiner, bishop of Winchester, and also lord chancellor. Refusing to yield to the persuasion of his friends, who would have had him make his escape, he went to London, had a long conference with Gardiner, which the latter closed by his strong argument, "Carry him to prison." Taylor lay in prison about a year and three-quarters, and after the revival of some old tyrannous laws was again cited before Gardiner, Bonner and other bishops, was deprived of his benefice, formally degraded from the priestly office and conducted by the sheriff from London to Hadleigh. All efforts to induce the cheerful, heroic man to recant failed; he had a most affecting farewell interview with his wife and children, received the blessings of his parishioners, and was burned at the stake on Aldham Common near Hadleigh, February 8, 1555.

year, independently of several sources, was six hundred and sixty-six talents, 1 Ki. x. 14.

When Rome became Christian the clergy were exempt from certain personal taxes, but not from those levied on property in land. The clergy were freed from military service and from contributing as the laity did for supporting the officers of the state; but land, by whomsoever held, was liable to a governmental impost.

**TAXING, THE.** See CYRENIUS, JESUS CHRIST.

**TAYLOR** (tay'lor), CHARLES COFFIN, a clergyman of the Protestant Episcopal Church, was born in Rowley, Massachusetts, February 16, 1805, and educated at Bowdoin College, where he graduated in 1833. Mr. Taylor began his theological studies at the Congregational seminary in Bangor, and was induced while there to join the Episcopalians, and at the end of two years he left that institution and completed his studies under an Episcopal clergyman at Marblehead. At Boston, in 1837, he was admitted to the order of deacon, and in 1838 to that of priesthood by Bishop Griswold. He officiated two years at Amesbury, Massachusetts, whence he removed to Lonsdale, Rhode Island, and after four years went to Michigan, where he took the highest rank for talents and moral worth, being about eight years rector of St. Andrew's Church, Ann Arbor, and the rest of his career rector of St. Luke's Church, Kalamazoo, and president of St. Mark's College at the Grand Rapids, in that State. Mr. Taylor was a man of deep thought, a solid logical reasoner, who never wandered from his premises. He was an eloquent preacher, and a most faithful and efficient pastor. In such estimation was he held by his brethren that his services were in constant requisition for performing public duties in the diocese; he was repeatedly a member of the standing committee and a delegate to the General Convention of the Church. He was seized with severe illness on a Sunday, and lived but four days thereafter, dying February 1, 1855, at the age of fifty years.

**TAYLOR, EDWARD**, was born in England in 1642. He emigrated to New England and entered Harvard College, where he graduated in 1671. He became the first minister of Westfield, Massachusetts, then called Warronoeo. None of his works have been published, but he left behind him several theological treatises, poems and sermons, besides a "Commentary on the Four Gospels." He died in 1729.

**TAYLOR, ISAAC**, Christian essayist and artist, author of "The Natural History of Enthusiasm," was the son of an Independent minister at Lavenham, Suffolk, where he was born in 1787. He commenced literary work in 1818, in conjunction with Robert Hall and John Foster. Among his earlier productions were "The Characters of Theophrastus," with illustrations by himself, and "History of the Transmission of Ancient Books to Modern Times." His "Enthusiasm," the greatest of his works, was published anonymously in 1829, but the writer was called upon in the most flattering manner to acknowledge himself and come forward as a candidate for the professorship of logic in the University of Edinburgh. He, however, failed, by a small number of votes only, to secure the chair. In his later years Isaac Taylor wrote lives of Loyola and Wesley, and

many other works which command attention as the productions of a thoughtful and polished writer. His attainments in mechanics were high, and to him are due some of the most useful inventions in calico-printing. He died in 1865.

**TAYLOR, JANE**, who became eminent as a writer for the young, was the daughter of the Rev. Isaac Taylor of Ongar, and was born September 23, 1783, in London, where her father resided in the practice of his profession as an artist. About two years after, Mr. Taylor removed to Lavenham, where she spent her youth, and where her mind early unfolded its creative powers. From her third and fourth year, in connection with her sister Anne, who was two years older, she is said to have composed little tales and songs, which they would sing together, and she especially seemed to live in a fairy-land of her own. It was the choice of her excellent parents to give their children a home education. Her father removed to Colchester in 1796, where, in her fifteenth year, she gave decided indications of personal piety. She was also one of a select society of young

TAJ AND GARDENS, NEAR AGRA, INDIA.—See TAJ; also the engraving on page 102.

friends for the reading of original essays and the promotion of intellectual improvement. Her first production which was given to the public was "The Beggar Boy." It appeared in 1804 in the "Minor's Pocket-Book," a journal to which her sister Anne had been a contributor. Then followed "The Display, or Essays in Rhyme on Morals and Manners." After her death her contributions to the "Youth's Magazine," under the signature Q. Q., were collected and published, and these essays commanded a widely-extended circulation. Then followed her papers in the "Associate Minstrels" and her "Pleasures of Taste," which also contained a sketch of her life. Her memoirs, correspondence and poetical remains have been published on both sides of the Atlantic, and they continue to be in demand, as she was perhaps quite as effective a writer for the young as Mrs. Barbauld. She died at Ongar, April 13, 1824, in the enjoyment of a sure and certain hope of a blessed immortality.

**TAYLOR, JEREMY**, bishop of Down and Connor, and one of the most illustrious divines of the seventeenth century, was born at Cambridge in 1613. He was educated at Cambridge Univer-

sity, and having taken orders, became a favorite of Archbishop Laud, through whose influence he was led to settle at Oxford, and afterward obtained a Fellowship. About 1638 he was presented by Bishop Juxon to the rectory of Uppingham, and having been named chaplain to Charles I., attended him at Oxford, and adhered to his cause through the civil war. For his services the degree of doctor of divinity was, by the king's command, conferred on him. His living was soon after sequestrated, and during the Commonwealth he suffered imprisonment several times. After living for a time in Wales, where he preached and wrote and kept a school, he removed in 1658 to Ireland. At the Restoration, having obtained the favor of Charles II., he was appointed bishop of Down and Connor, and made a member of the Irish privy-council. About the same time he was chosen vice-chancellor of Dublin University. His labors as a preacher do not appear to have been very fruitful. His real works are his books. Coleridge pronounced Jeremy Taylor the most eloquent of divines, adding, "Had I said of men, Cicero would forgive me and Demosthenes nod

assent." He was accustomed to call him Chrysostom, and counted him one of the four great geniuses of old English literature. But Taylor's gorgeous eloquence did not blind Coleridge to his faults and errors. He believed that his "great and lovely mind" was greatly perverted by the influence of Laud; so that, while he was a latitudinarian in his creed, he was "a rigorist indeed concerning the authority of the Church." In naming him as an excellent author to study, he does so not only for the sake of his noble principles, but for the habit of caution and reflection which must be formed to detect his numerous errors. Taylor's principal works are, his "Discourse of the Liberties of Prophecy," "Holy Living and Holy Dying." In addition to these are various devotional works and his wonderful sermons. This distinguished prelate died at Lisburn in 1667.

**TAYLOR, JOHN**, an eminent Unitarian divine, was born in Lancashire in 1694. He was educated at Whitehaven, and after officiating some years as pastor to a congregation at Norwich, he accepted the office of divinity tutor at the newly-founded academy of Warrington. His most important works are—the "Scripture Doctrine of

**TATTAM** (tat'tam), HENRY, D.D., Ph.D., was born in 1788, and educated in the University of Dublin and at Göttingen. Having entered the ministry, he held the rectorship of St. Cuthbert's, in Bedford, for many years. Part of the time he was also rector of Great Woodstone, in Buckinghamshire. In 1845 he was made archdeacon of Bedford, and in 1849 the living of Stanford Rivers, in Essex, was given to him. He has taken a high place as one of the most eminent Orientalists. In 1828 he published a "Grammar of the Egyptian Language," and in 1835 a "Lexicon on the Egyptian Monuments, compiled out of the Ancient Language." In 1836 he issued an edition of the "Twelve Minor Prophets" in the ancient Egyptian or Coptic or Memphitic tongue. Then followed the "Ancient Coptic Version of the Book of Job the Just," "The Apostolical Constitutions in Coptic, with an English Translation," "The Major Prophets," in the Egyptian tongue. In 1843 he published a "Defence of the Church of England against the Attacks of a Roman Catho-

MARBLE SCREEN IN THE TAJ.—See TAJ.

lic." To Dr. Tattam the world of letters is indebted for discovering the valuable Syriac manuscript (now in the British Museum) which contains the life of John of Ephesus. His great learning and numerous works led the University of Leyden to confer on him the degree of doctor in philosophy.

**TAULER** (tow'ler), JOHANN, one of the most celebrated German mystics, born about 1290. He became a monk of the Dominican order, was well versed in the scholastic philosophy, and was one of the most famous preachers and devotional writers of his day. His sermons were composed in Latin, but delivered in German, and were as free as he could make them of the dialect of philosophy. Tauler not only distinguished himself by his piety and eloquent preaching, whereby he had an extraordinary influence on the religious life of Germany, but also by the excellence of his language and style, which have entitled him to high honors as one at least of the creators of German prose literature. "His sermons contain," says Wachler, "a treasure of meditations, hints, indi-

cations, full of heartfelt piety, which still speak to the inmost longings and noblest wants of man's mind. He was the first that wrested from our German speech the fit expression for ideas of moral reason and emotion." Tauler appears to have lived and preached at Strasburg, and there he died in 1361. His tombstone is still in existence there.

**TAUSON** (tow'son), or **TAGESEN** (ta'gesen), JOHANN, styled "the Luther of Denmark," was born in 1494. He was one of the leaders of the Reformation in Denmark. Early in life he became a monk of the order of St. John of Jerusalem. Meeting with some of Luther's works at Wittenberg, he was desirous of acquainting himself further with his principles, and pursued his studies under the instruction of Melancthon. He was shortly after appointed to lecture on theology in the University of Copenhagen; but recalled to his convent by his superiors, and declaring himself a disciple of Luther, he was thrown for a time into prison. On his release he preached with zeal and boldness to the people, and procuring the esteem of Frederick I. of Denmark, was appointed his chaplain, with freedom to preach the gospel openly. Tauson discontinued the Latin service of the Church, and introduced the Danish language. Crowds came to hear him, and Lutheranism spread rapidly. In 1542 he was made bishop of Ripen. He was the author of several hymns and theological tracts. His death occurred in 1561.

**TAVERNER** (tav'ern-er), RICHARD, born in 1505, was one of the scholars invited by Wolsey to his new college at Oxford, and afterward studied law in the Inner Temple. He entered the service of Cromwell, the secretary of state, by whose influence he was made one of the clerks of the signet in 1537. He inclined to the principles of the Reformation, and undertook to edit a new translation of the English Bible, which was allowed to be read in the churches. He was thrown into the Tower at the instigation of the popish bishops, but released, and on the accession of Edward VI. he had special permission, although a layman, to preach in the king's dominions. During the reign of Mary he lived in retirement at Norbiton, near Kingston; but when Elizabeth came to the throne, he returned to his preaching. In 1569 he was appointed high-sheriff of Oxford, and is said to have preached at St. Mary's with his gold chain about his neck and his sword by his side. He wrote many religious treatises and translations. His death occurred in 1575.

**TAVERNS** (tav'erns), THE THREE, a place of entertainment for persons of a better class than those who frequented the Appii Forum. It was on the Appian road, about thirty-three Roman miles from the city, near the modern Cisterna. Two parties of brethren went to meet St. Paul, Acts xxviii. 15, when he was brought a prisoner to Rome; some proceeded as far as Appii Forum, others to The Three Taverns.

**TAXATIO ECCLESIASTICA** (tax-a'tio ec-cl'e-si-as-ti-ca), the valuation of ecclesiastical benefices made through every benefice in England, on the occasion of Pope Innocent IV. granting to Henry III. the tenth of all spirituals for three years.

**TAXES** (tax'es) of some kind must have been coeval with the origin of civilized society. The

idea of the one is involved in that of the other, since society, as every organization, implies expense, which must be raised by the abstraction of property from the individuals of which it consists, either by occasional or periodical, by self-imposed or compulsory, exactions.

Accordingly, we find a provision of income made at the very commencement of the Mosaic polity. Taxes, like all other things in that polity, had a religious origin and import. As a ransom for his soul unto the Lord, every Israelite was to pay half a shekel yearly, from twenty years old and upward, the rich not giving more, the poor not giving less, for the service of the tabernacle, Ex. xxx. 12. This half-shekel was the tribute which our Lord was asked if he paid, Matt. xvii. 24. It is called in the Greek *didrachma*. The way in which it is spoken of shows that it was an established and well-known payment—"they that received the didrachm"—in rendering which by "tribute" our translators have failed to give the force of the original. This offering was obligatory on Jews who lived in foreign countries no less than on those who lived at home, though frequently the native princes tried to divert the didrachm from the temple treasury to their own, in which effort they were more than once arrested by the Romans. From the Talmudical Tract Shekalim, the time of payment appears to have been between the 15th and the 25th of the month Adar—that is, in March. After the destruction of the temple, this didrachm was ordered by Vespasian to be paid into the Capitol, as, says Josephus, "they used to pay the same to the temple at Jerusalem." A special provision seems to have been made, under peculiar circumstances, of one-third of a shekel yearly, "for the service of the house of our God," Neh. x. 32. The Jews, at times, found the taxes they had to pay very oppressive. The ten tribes complained that they had found David's yoke heavy, and entreated Rehoboam that he would lighten it. And the stoning to death of Adoram, who "was over the tribute," shows to what an extent the question of taxes entered into the causes of the revolt of the ten tribes, 1 Ki. xii. 4, 18. When the Romans became masters of Palestine, the unhappy Jews had a double yoke to bear, while it appears from Josephus that the yoke of the native princes was anything but light.

Besides the regular half-shekel, there was a considerable income derived to the temple from tithes, firstlings, etc., 2 Ki. xii. 4. Considering the fertility of the land, we cannot account these religious imposts as heavy. If we turn to the civil constitution, we find taxes first instituted at the time of the introduction of regal power, whose exactions are forcibly described by Samuel, 1 Sam. viii. 10. They consisted partly in personal service, partly in tithe in kind. Occasionally a heavy poll-tax was imposed—"of all the mighty men of wealth, of each man fifty shekels of silver," 2 Ki. xv. 20. On other occasions an assessment was made, and a tax raised from the people of the land generally, 2 Ki. xxiii. 35. Both these last cases, however, were provisions for a special need. Presents constituted a source of abundant income, and can hardly be regarded in any other light than as a sort of self-imposed tax, 1 Sam. x. 27; 2 Chr. xvii. 5. Royal demesnes supplied resources, 1 Ki. iv. 22. There was also a transit-tax "of the merchantmen, and of the traffic of the spice-merchants, and of all the kings of Arabia, and of the governors of the country," 1 Ki. x. 15. Ships and other public property belonged to the king, 1 Ki. x. 28. The weight of gold that came to Solomon in one

9; it was, therefore, accessible by navigation, which was extensively carried on by the Phenicians and other nations in large famous ships which were models for the vessels of commerce in general, and were therefore known under the name of "vessels of Tarshish," 1 Ki. x. 22; Isa. ii. 16; the port from which they started was Joppa, on the coast of Palestine, Jonah i. 3; iv. 2, not from Ezion-geber, a port of the Gulf of Akabah. It is true that once, 2 Chr. xx. 36, "ships to go to Tarshish" are said to have been made at Ezion-geber. And it has been supposed hence that there must have been a Tarshish also in India. Keil imagines that, built on the Red Sea, the ships were to be conveyed overland to a Mediterranean port, and refers to examples of such land-carriage of ships. All these indications show that Tarshish was neither in India nor Ethiopia, nor on the African coast, as some have imagined. Neither could it have been Tarsus; thither certainly Jonah would not have fled to avoid the journey to Nineveh. Besides, Tarsus was never celebrated as Tarshish was. There can be little doubt, therefore, that Tartessus, in the South of Spain, or the surrounding district, was intended by Tarshish. And it is well known that the Phenicians had much commercial intercourse with Spain. The mention of Tarshish as derived from Javan, Gen. x. 4, corroborates this opinion. It is true that Tartessus has been sometimes represented as a Phenician colony; and Kalisch interprets Isa. xxiii. 1, 6, 10, as countenancing a Phenician origin for Tarshish, but this interpretation cannot be supported; "daughter of Tarshish" is simply Tarshish, or the inhabitants thereof, as "daughter of Zion," "daughter of Jerusalem," Isa. i. 8; xxxvii. 22. And of the close intercourse (and probably colonization) of the Greeks with Tartessus and its neighborhood there is strong evidence. The exact site of this celebrated city is unknown; it has been believed to be between the two outlets of the modern Guadalquivir. Other places on the Spanish coast have had their advocates.

**TARSUS** (tar-sus), a large and populous city of Cilicia, the capital of the Roman province of that name, situated in a fruitful plain on the river Cydnus, which flowed through the midst of it. It was a place of considerable trade, and the inhabitants, of Greek descent, applied themselves with much success to the study of philosophy, so that their city acquired great celebrity as a school of learning. Many Jews appear to have settled here; and the most distinguished citizen of Tarsus was Saul, afterward the apostle Paul, Acts ix. 11, 30; xxii. 3. Tarsus was one of those called free cities, and though under Roman dominion enjoyed the right of choosing its own magistrates, and was governed by its own laws. This freedom was granted it by Mark Antony; but it did not convey any right as a Roman colony of Roman citizenship to the natives; so that Paul was a citizen of Rome by virtue of some other franchise. In later times, indeed, Tarsus was made a Roman colony.

It still exists as *Tarsous*, with a population of about twenty thousand, but is described as filthy and ruinous.

**TARTAK** (tar'tak), the name of one of the idol-gods said to have been worshiped by the Avites, whom the king of Assyria sent, along with some other tribes, to people the desolate kingdom of Israel, 2 Ki. xvii. 31. But nothing certain has yet been brought to light respecting this deity.

**TARTAN** (tar'tan), a general of Sargon and Sennacherib, 2 Ki. xviii. 17. The word is an official title.

**TASCODROGITES** (tas-ko'drog-ites), or **ASCODROGITES**, followers of Montanus, who made profession of never speaking, and for that purpose held their fingers upon their mouths.

**TASSO** (tas'so), **TORQUATO**, the celebrated Italian poet, was born at Sorrento, in the kingdom of Naples, March 11, 1544. His father was secretary to San Severino, prince of Salerno, and shared his disgrace as well as his honor. When the prince complained to Charles V. against the viceroy of Naples, who desired to introduce the Inquisition into the kingdom, he was condemned to death, together with the secretary and his son, the future poet, who was then only nine years old. To avoid the fate to which they were doomed they fled to Rome, where the young poet wrote verses, comparing his escape to the adventures of Ascanius

salem Conquered," "Rinaldo," "Aminta," a pastoral, and "Torismond," a tragedy. His life was written by the marquis Manzo. His works have been published in various forms.

**TATE, NAHUM**, best known as the author of a metrical version of the Psalms, was born in Dublin, in 1652, and educated at Trinity College. He was appointed poet-laureate in 1690. A poem on the "Death of Queen Anne" was considered the best of his productions. He died in 1715.

**TATHAM** (ta'tham), **EDWARD**, D.D., was a native of Yorkshire, where he was born in 1749. In 1769 he entered Queen's College, Oxford, and in 1781 he rose to be a Fellow of Lincoln College, of which house he became rector. In 1792 he was made perpetual curate of Twyford, in Berkshire, and in 1829 the rectory of Whitchurch, in Shropshire, was conferred on him. He was the Bampton lecturer for the year 1789, his subject being "The Chart and Scale of Truth,

RESIDENCE OF A SAXON NOBLEMAN.—See SAXON ARCHITECTURE.

and Aeneas flying from Troy. His subsequent connection with the duke of Ferrara led to great troubles, and he was even for a time imprisoned in consequence of a mad infatuation for the sister of the duke. His great talents soon dispersed the clouds in which he had been enveloped, and his poetical works began to be regarded as the pride and glory of Italy. Sensible of his deserved reputation, the pope Clement VIII., encouraged by the entire congregation of cardinals, determined to encircle his brows with the laurel crown and to honor him with a triumph. The poet was sent for from Naples, received with all due honors at the distance of one mile from Rome, and the most magnificent preparations made for the ceremony in the Capitol. Tasso, as if persecuted by fortune to the last moment of life, was taken ill, and the preparations made for his coronation ended in his melancholy funeral procession, as he died the evening before the intended ceremony, April 15, 1595, aged fifty-one. He derives his celebrity and the palm of immortality from his "Jerusalem Delivered." Besides his great poem, which has become familiar to the English reader, Tasso wrote "Jeru-

by which to find the Cause of Error." This work has received very high commendation, as Dr. Reid has characterized it as "Essentially a system of logic formed on the principles of Lord Bacon's writings, and may be considered as a practical commentary on the 'Novum Organum.'" The style is rugged, the grasp of argument is most vigorous, and it is specially worthy of the study of all young reasoners. He also published "Twelve Discourses Introductory to the Study of Divinity" and several other minor works. He died in 1834.

**TATIAN** (ta'sh'an), called "the Assyrian," from his native country, a writer of the early Christian Church, was a scholar of Justin Martyr, and himself taught in Mesopotamia about 172. In "An Address to the Greeks" he wrote a defence of Christianity, and was the author of several other works now lost.

**TATIANISTS.** See ENCRATITES.

**TATNAI** (tat'na-i), a Persian governor in Palestine, Ezra v. 3, 6.

ings are still extant, and are full of maxims and sentiments of virtue and morality. Among others this sentence is often repeated in them: "Tao hath produced one, one hath produced two, two have produced three, and three have produced all things." The morality of this philosopher and his disciples is not unlike that of the Epicureans, consisting in a tranquillity of mind free from all vehement desires and passions. But as this tranquillity would be disturbed by the thoughts of death, they boast of a liquor that has the power of rendering them immortal. They are addicted to chemistry, alchemy and magic, and are persuaded that by the assistance of demons whom they invoke they can obtain all that they desire. The hope of avoiding death prevailed upon a great number of mandarins to study this diabolical art, and certain credulous and superstitious emperors brought it greatly into vogue.

The doctrine of this sect concerning the forma-

**TAPHATH** (ta'fath), one of Solomon's daughters, 1 Ki. iv. 11.

**TAPHNES** (ta'fnes), Judith i. 9. See **TAPHNES**.

**TAPHON** (ta'fon), 1 Macc. ix. 50, a city fortified in Maccabean times, perhaps Beth-tappuah.

**TAPPAN** (tap'pan), **DAVID**, D.D., who became Hollis professor of divinity at Harvard, was educated in that place, and graduated in 1771. He was the son of the Rev. Benjamin Tappan, of Manchester, Massachusetts, and from 1774 until 1792 he was pastor of the Third Church, in Newbury, Massachusetts. In 1792 he was appointed to the chair in the college, and he held that position until his death in 1803. He was the author of many sermons, which were published from time to time, and after his death his "Lectures on

**TARES**, dandel, the *Lolium temulentum*, Matt. xiii. 24-30, 36-40. The common Arabic name of this plant is *zowan*; it is of a noxious character, producing dizziness and sickness. Grain-growers in Palestine believe that in wet seasons and in marshy ground the wheat itself turns to tares.

**TARGET** (tar'get), 1 Sam. xvii. 6. See **ARMS**, **ARMOR**.

**TARGUMS** (tar'gums) of various parts of Holy Scripture in the Chaldaic language, rendered necessary by the disuse of the Jewish tongue after the captivity, and used in the synagogues. Eight of these are extant of different degrees of merit, the two principal ones being those of Jonathan (or rather the pseudo-Jonathan), an author who wrote a paraphrase, or rather a commentary, upon the greater and lesser prophets, about thirty years B.C., and of Onkelos upon the Pentateuch, which is considered the most valuable of all, and is referred to the first century of our era. Two others are supposed to be of considerable antiquity, but the remainder are comparatively modern. See **VERSIONS**.

**TARPELITES** (tar'pe-lites), a people from whom the Assyrian kings sent colonists to Samaria, Ezra iv. 9; possibly this may be the Tapyri on the east of Elymais.

**TARQUINIUS** (tar-kwin'e-us). 1. **PRISCUS**, the fifth king of Rome, was originally a native of Tarquinii, but settled at Rome, and by liberality and mildness so gained upon the affections of the Romans, that on the death of Ancus Martius he was elected king. He was a benevolent prince, adorned the city with stately buildings, constructed aqueducts and added dignity and consequence to the senate as well as to the judiciary. He was assassinated by the sons of Ancus Martius, B.C. 578, when in his eightieth year. 2. **SUPERBUS**, was either the son or grandson—it is not certain which—of the preceding. He gained the throne by basely murdering Servius Tullius, the reigning king, his wife, the daughter of the latter, instigating him to the brutal deed. His subsequent career was so unjust and tyrannical that it required but an outrage perpetrated by one of his sons to cause the people to dethrone him and overthrow the monarchical form of government. He was thus the last king of Rome.

**TARSHISH** (tar'shish). 1. A son of Javan, of the posterity of Japheth, Gen. x. 4. See **TARSHISH**, below. 2. One of the seven princes of Persia, Esth. i. 14.

**TARSHISH**, a city or country respecting the position of which much variety of opinion has prevailed. But the Scripture notices of it, if carefully compared, lead with tolerable certainty to its identification. Tarshish is represented as a rich country, governed by its own independent kings and able to send valuable presents, Ps. lxxii. 10, abounding especially in silver, iron, tin and lead, Jer. x. 9; a precious stone, probably the chrysolite, chiefly found in those districts, bore the name of *tarshish*, Ex. xxxviii. 20; in our version "beryl;" "it was situated near other renowned islands, and was itself washed by the waves of the sea," Isa. lx.

A RUIN AT PALMYRA.—See TADMOR.

tion of the world, according to Dr. Milne, much resembles that of the Epicureans. If they do not maintain the eternity of matter, on the other hand they do not deny it; but, in analogy with the favorite science of alchemy, they represent the first pair as drawn out of the boiling mouth of "an immense crucible" by a celestial being. The Platonic notion of an *anima mundi*, or soul of the world, is very common; and hence it is that the heavens are considered the body of this imaginary being, the mind its breath, the lights of heaven as proceeding from its eyes, the watery fluids as its spittle and tears.

**TAPER-HALLOWING** (ta'per-hal'lo-ing), a ceremony on Easter eve, when the paschal candle was blessed.

**TAPESTRY** (ta'pes-tre), Prov. vii. 16. The "coverings of tapestry" may simply mean "coverlets" as spread upon beds. Perhaps they were embroidered. See **EMBROIDER**.

Jewish Antiquities," which he delivered in Harvard, were given to the public.

**TAPPUAH** (tap'pu-ah), the name of a person among the descendants of Judah, 1 Chr. ii. 43.

**TAPPUAH**. 1. A town in the plain country of Judah, Josh. xv. 34. 2. A city on the border of Ephraim and Manasseh; the city belonged to Ephraim, the land or district named from it to Manasseh, Josh. xvi. 8; xvii. 8. This was no doubt identical with En-tappuah, Josh. xvii. 7. It is not certain which of these two places is intended in Josh. xii. 17.

**TARAH** (ta'rah), one of the stations of the Israelites in the desert, Num. xxxiii. 27, 28.

**TARALAH** (tar'al-ah), a city in Benjamin, Josh. xviii. 27.

**TAREA** (ta-re'a), 1 Chr. viii. 35. See **TAREAH**.

Pope Paul IV. and Clement VIII. also signalized themselves in destroying all the Talmudic books that could be found, and many thousand volumes of the Talmud were by their orders judicially condemned to the flames. The Talmud of Jerusalem was printed in one volume folio, and that of Babylon in twelve or fourteen volumes folio, to such an extent had the comments in that work extended in the hands of the authors.

**TALSAS** (tal'sas), 1 Esd. ix. 22, the same as Elasah, Ezra x. 22.

**TAMAH** (ta'mah), one whose descendants, Nethinim, returned with Zerubbabel, Neh. vii. 55. In Ezra ii. 53 the name is Thamah.

**TAMAR** (ta'mar), the name of three persons. 1. The daughter-in-law of Judah, whose singular history is given in Gen. xxxviii. She appears in genealogical tables as one from whom David and our Lord were descended, Ruth iv. 12, 22; Matt. i. 3, in which last text the name is spelled Thamar. 2 and 3. The sister and the daughter of Absalom, 2 Sam. xiii.; xiv. 27. One miserable incident in the sins and sorrows of the family of David throws a painful interest around the former; of the latter nothing is known, except that "she was a woman of a fair countenance," like her aunt and namesake.

**TAMAR**, a town on the south-eastern border of Palestine, Ezek. xlvii. 19. Dr. Robinson supposes that the site is marked by the ruins now called *Karnub*, about a day's journey south of el-Milh (Malatha or Moladah), on the ancient road between Hebron and Elath. But Wilton identifies it with Hazar-gaddah.

**TAMMUZ** (tam'muz). See MONTH.

**TAMMUZ**, a Syrian deity, for whom the Hebrew idolatresses were accustomed to hold an annual lamentation, Ezek. viii. 14. This idol was the same with the Phœnician Adon or Adonis, and the feast itself such as they celebrated. The feast held in honor of Tammuz was solstitial, and commenced with the new moon of July, in the month also called Tammuz; it consisted of two parts, the one consecrated to lamentation and the other to joy; in the days of grief they mourned the disappearance of the god, and in the days of gladness celebrated his discovery and return. Tammuz appears to have been a sort of incarnation of the sun, regarded principally as in a state of passion and suffering, in connection with the apparent vicissitudes in its celestial position, and with respect to the terrestrial metamorphoses produced under its influence upon vegetation in advancing to maturity. This form of idolatry and other modes of sun-worship prevailed at Jerusalem, and were even brought into the temple.

**TANACH** (ta'nac), Josh. xxi. 25. See TANACH.

**TANHUMETH** (tan'hu-meth), the father of one of the captains who joined Gedaliah, 2 Ki. xxv. 23.

**TANIS** (ta'nis), Ezek. xxx. 14, margin. See ZOAN. This name is also found in the Apocrypha, Judith i. 10.

**TANNAITES** (tan'na-ites), a school of rabbins who flourished between Ezra and Rabbi Jehudah the Holy, A. D. 120, and who are regarded as the authors of the Mishna.

**TANNER** (tan'ner), Acts ix. 43. See HAND-CRAFT.

**TANNER, THOMAS, D.D.**, was born in 1674, at Market Lavington, in Wiltshire. He

the seventeenth century. He died at Christ Church, Oxford, December 14, 1735, aged sixty-one, and was buried in the nave of that cathedral, without any funeral pomp, according to his own direction.

**TANQUELINIANS** (tan-kwe-lin'e-anz), the followers of Tanquelinus (or Tankelin), a lay preacher and founder of a sect in the twelfth century. Dr. Mosheim considers him as a Mystic. He is charged with slighting the external worship of God and the holy sacraments, with holding clandestine assemblies to propagate his opinions, and, above all, with abusing the clergy; but it must be remarked that the worship and the clergy which he censured were those of the Roman Church.

**TANSUR** (tan'sur), WILLIAM, was born in

RUINS OF TEMPLES AND OTHER STRUCTURES OF PALMYRA.—See TAMOR.

entered Queen's College, Oxford, whence he went to All Souls', and where he became a Fellow. In 1701 he was made chancellor of the diocese of Norwich. His great learning and high character caused his rapid promotion, for in addition to the rectory of Thorp and a prebendal stall at Ely, he was made a canon of Christ Church, Oxford, and in 1732 he was raised to the see of St. Asaph. His name is connected in the literature of England with the great work "Notitia Monastica," which was published after his death. It contains an account of all the abbeys, priories and houses of friars which had existed in England and Wales, as well as all the colleges and hospitals founded before the year 1540. This great antiquarian work was edited by the Rev. John Tanner, and considerable additions were made to it, and it was published in folio in 1744. Subsequent editions, with additional notes by Nasmith and Ellis, have appeared. Bishop Tanner also wrote a collection of the British and Irish writers who existed until

1699, at Dunchurch, in Warwickshire. He was engaged in various departments of business, being at times a bookseller, a stationer, a bookbinder and a teacher of music. Nearly twenty separate works are attributed to him, the greater number being on harmony, melody, musical grammars and dictionaries. He deserves a place in this work because of the fact that his name has been so long and so justly celebrated for his compositions, which have continued to hold their place in church music, and which may be found in the usual collections for choirs, where full, solid harmony is cherished. He died in 1783, at St. Neot's.

**TAO-SE** (ta-o-se'), or **TAOU-TSZE** (ta-oo-tze'), the name of a famous sect among the Chinese who owe their rise to Laou-tsze Lao Kian, or Laokium, a philosopher who lived, if we may credit his disciples, about five hundred years before Christ. He professed to restore the religion of Tao (Taou), or "reason." Some of his writ-

The site of the temple was twelve steps higher still, than the court of the priests. The side-chambers, which were of three stories, were probably somewhat larger than those in Solomon's temple; the centre building rose fully forty cubits above them; the breadth of that central part within was twenty cubits, as in Solomon's, but the height of the holy place, and also of the most holy, was sixty, thus for the sake of mere display losing the just proportions. There were also upper chambers over both, and the two main apartments were separated by a door and also a veil. The front walls were ornamented with thick plates of gold, which emitted a dazzling splendor when shone upon by the rays of the rising sun; and the top was covered with sharp spikes, to prevent the birds from roosting on it and covering it with filth.

Such, briefly, was the temple of Herod, a work of human ambition, reared at great expense, but without any proper regard to the divine symbolism which appeared in the temple of Solomon, and in that also which more immediately preceded it. It had the unspeakable honor of being visited by the Lord of glory, the true Shekinah, but they who ministered in its courts—more peculiarly "his own"—knew him not; and ere long those courts became the scenes of such unparalleled atrocities as brought down with overwhelming retribution the vengeance of Heaven. The wish of Titus to spare the building was frustrated by the madness of the people on the one side and the fury of his soldiery on the other. The temple itself and all its surrounding cloisters were burned to the ground, A. D. 70. In A. D. 136 Hadrian built on its site a temple to Jupiter Capitolinus, placing an equestrian statue of himself on the most holy place. An effort was made under the emperor Julian to rebuild the temple, but the design was frustrated by the providence of God. For many centuries the long-consecrated height has been occupied by the mosque of Omar, one of the most sacred of Mohammedan structures.

**TEMPLE** (tem'pl), **DANIEL**, was born in 1789, at Reading, Massachusetts. He learned a trade in his boyhood, but in 1810 he became awakened to an abiding sense of the value of religion, and his mind became deeply impressed with the importance of foreign missions. He commenced his academical training in Phillips Academy, at Andover, and in 1813 he entered Dartmouth College, where he graduated in 1817. Having graduated, he returned to Andover for the study of theology, and in 1820 he was licensed to preach by the Andover Association. For a year he acted as agent on behalf of the Board of Commissioners of Foreign Missions, and in 1821 he was ordained at North Bridgewater, and in January of the next year he sailed for Malta. Having lost his wife in 1827, he returned to New England, and in 1830 he again sailed to the East. He labored at Malta until 1833, when he removed to Smyrna; and here he remained until 1844, when the changes which then were made in the operations of the Board led to his return to his native land. He spent the remaining years of his life in preaching at Cleveland, Ohio, at Concord, New Hampshire, and elsewhere, serving, as far as his health enabled him, to promote the cause of foreign missions. Eventually, a weakness began to appear in his lungs, and it increased, evidently showing that his life was drawing to a close. He died in 1851, in the full enjoyment of a blessed hope, having earnestly and lovingly served God in his generation.

**TEMPLE, FREDERICK, D.D.**, was born in 1821. He entered Balliol College, Oxford, where he greatly distinguished himself, taking a "double-first" when he graduated in 1842. He became a Fellow of Balliol; and owing to his great capacity for instruction, he was appointed a college tutor. He was ordained in 1846, and in 1848 he was made principal of Kneller Hall Training College, which position he held until 1855. For two years afterward he discharged the duty of inspector of schools, and in 1857 he was made master of Rugby, chaplain-in-ordinary to the queen and chaplain to the earl of Denbigh. His great success at Rugby led to his appointment to the see of Exeter in 1869, which he held till his death, in 1873. His life was so earnestly devoted to practical services in his college, in the superintendence of scholars at Rugby, and finally, at Exeter, that little time was left for him to produce large works in theology or literature. He was a man of great attainments, as his "double-first" proved; he was a splendid scholar, an admirable executive officer, and therefore an eminently valuable practical man. Several of his sermons have been published, and his essay which appeared in the celebrated publication known as "Essays and Reviews" showed his position as an advanced thinker in the Broad Church class of English theologians.

**TEMPORALE** (tem-po-ra'lay), that part of the missal and breviary which treats of the seasons as they come round, as opposed to "sanctorale," or the part which treats of saints' days.

**TEMPORALITIES** (tem-po-ra'l'i-teez), secular possessions as distinguished from ecclesiastical rights; such revenue lands and tenements as archbishops and bishops have had annexed to their sees by the kings and others from time to time, as they are barons and lords of Parliament.

**TEMPORALTY** (tem'po-ra'l-te), the laity as opposed to the spirituality, and the secular power as opposed to the ecclesiastical power.

**TEMPT, TEMPTATION** (tem-ta'-shun). Temptation is a trial, proof or allure-ment, often for an evil purpose, as when the natural lusts of men prompt them to sin, James i. 14, or when the devil places incentives before them, whence he is called "the tempter," Matt. iv. 3. But sometimes the word is used in a good sense, as when God would prove his people's faith and obedience, in order to their purification and to crown their steadfastness with his blessing, Gen. xxii. 1, 12; Deut. viii. 2, 3, 15, 16. We are taught to pray against the evil temptations of Satan, Matt. vi. 13, by which through our natural weaknesses we are liable to fall. But the afflictions and trials to which God subjects his people are for their good. They may be painful at first, but afterward, if meekly endured and sanctified, they yield "the peaceable fruit of righteousness unto them which are exercised thereby," Heb. xii. 11. Such temptations, then, may prove the richest mercies, 1 Pet. i. 6, 7. In illustration of this it may be observed that the very purpose of God in revelation is for moral trial; and the happy result of it was never more remarkably exhibited than in the temptation of Abraham. In proportion to the severity

of it was, after its victorious endurance, the blessing bestowed, the promise being made more definite than ever before of a Redeemer to the world. See ABRAHAM.

Our first parents were overcome by the temptation which beset them in paradise, Gen. iii. The history of their fall is related with the utmost plainness and simplicity; we cannot, therefore, hesitate in receiving it as a record of facts. The exact mode in which the tempter gained access to them, the kind of communication he held, the special weight which the inducements he urged possessed, may be obscure; human language may be inadequate to represent fully the acting of a being of one kind upon one of another; so that we must not wonder if various minds of earnest men have differed in their conception of the facts

TEMPLAR.—See article.

recorded. Nor need we be solicitous to force them into precise agreement. Men may receive the same truth, and yet agree not in their aspect of it. But yet, while admitting a certain discordance of opinion in regard to circumstantialia, we are not to doubt the historical reality of the event. The sacred writers of the New Testament, who are the most fitting and authorized expounders of the Old, expressly assert it. "The serpent," says St. Paul, "beguiled Eve through his subtlety," 2 Cor. xi. 3; and again: "Adam was not deceived; but the woman being deceived, was in the transgression," 1 Tim. ii. 14.

Another mysterious event was our Lord's temptation, Matt. iv. 1-11. Some have been inclined to regard this as a mere vision, and some have supposed that, though the suggestions are represented in the narrative as external, they were really internal. Both these suppositions must be unhes-

itatingly rejected. The expressions of the Evangelists seem specially chosen to mark the objective character of the whole transaction; and it is indeed a lowering of the purity of Him in whom the Godhead was united to the manhood to believe that he was vexed with internal strugglings of evil against good. As to the nature of the temptations, the admirable words of Bishop Eliott may properly be cited: "I cannot think it an idle speculation that connects the three forms of temptation with those that brought sin into the world—the lust of the flesh, and the lust of the eye, and the pride of life. Nor can I deem it unnatural to see in them three spiritual assaults directed against the three portions of our composite nature. To the body is presented the temptation of satisfying its wants by a display of power which would have tacitly abjured its dependence on the Father and its perfect submission to his heavenly will. To the soul, the longing appetitive soul, . . . was addressed the temptation of Messianic dominion (mere material dominion would seem by no means so probable) over all the kingdoms of the world, and of accomplishing in a moment of time all for which the incense of the one Sacrifice on Calvary is still rising up on the altar of God. To

ANCIENT OPEN TEMPLE IN PHOENICIA.—See TEMPLE.

the spirit of our Redeemer, with even more frightful presumption, was addressed the temptation of using that power which belonged to him as God to vindicate his own eternal nature, and to display by one dazzling miracle the true relation in which Jesus of Nazareth stood to men and to angels and to God."

**TEN**, an absolute and perfect whole, as in the parable of the ten talents. According to an old dogmatic and fanciful division, the first five denote all graces and blessings needful for this world; the complement of the other five are the heavenly treasures, not in lieu of so much as in addition to every really good and pleasant thing in this world.

**TENCIN** (tong-sang'), **PIERRE GUERIN DE**, a French prelate and statesman, was born in 1680. Having entered the Church, he speedily became archdeacon of Sens, where, however, his further progress was checked by his joining the Jesuits and opposing the Jansenists and philosophers. At this juncture he went to Paris, where he remained until he was made, first, bishop, then cardinal and then minister of state. His lack of learning made him the laughing-stock of the philosophers, while his political blunders earned for him the ill-disguised contempt of his col-

leagues. It was well said of him that he was thought too much of before he became a minister, and too little of afterward. He died in 1758, of chagrin at his failure to settle a difficulty with Austria. Voltaire—merciless as usual—gave out that he had killed him with his epigrams. He is remotely connected with English history as having advised and assisted the Pretender's descent upon Scotland.

**TEN COMMANDMENTS.** See **LAW**, **MORAL**.

**TENEBRÆ** (ten'e-bray), the office of matins and lauds in the last three days of Holy Week, at which a triangular candlestick is used, on which are fifteen candles, one of which is extinguished after each psalm. The last one is, however, held behind the altar during the "benedictus," and is then brought back, to typify Christ's resurrection from the dead.

**TENET** (te'net), a principle which is held as true.

**TENISON** (ten'e-sun), **THOMAS**, archbishop of Canterbury, a learned and pious prelate, was born at Cottenham, in Cambridgeshire, in 1636, and graduated at Corpus Christi College, obtained the living of St. Peter Maneroft, Norwich, and was afterward presented to the vicarage of St. Martin-in-the-Fields, London, where he founded a parochial school and library. He distinguished himself so much by his zeal in favor of Protestantism, both before and after the Revolution, that in 1691 he was consecrated bishop of Lincoln, from whence he was raised to the see of Canterbury in 1694, and held the primacy with moderation, firmness and ability till his death, in 1715. He published "The Creed of Hobbes Examined," "Baconiana, or Remains of Sir F. Bacon," and various sermons.

**TENNENT** (ten'nent), **GILBERT**, who was the eldest son of the Rev. William Tennent, who founded the Log College, was born in Armagh county, Ireland, February 5, 1703. He was brought to feel the power of religion by his father while on the passage to this country. He was educated by his father, and licensed by the Presbytery of Philadelphia in May, 1725, and in the autumn of that year Yale College gave him an honorary degree in Arts. He was ordained in New Brunswick in the following year, and he entered on a ministry that for earnestness, self-denying labor and zeal in seeking the conversion of men has had few parallels. In Staten Island, Long Island, at Boston, and even as far north as Maine, he extended his missionary tours, and his sermons and appeals were everywhere felt to be of the most powerful character. He lived on most intimate terms with Whitefield, who admired him for his piety, his eloquence and amazing energy. When the Presbyterian Church divided, he was one of the most influential leaders of the "New Side." In 1744 he removed to Philadelphia and became the pastor of the Second Church, and here his views on the policy of the Church and the character of his brethren gradually but decidedly changed. He changed his mode of preaching also, lamented the divisions that had crept into the Church, and justified many whose courses

he had condemned in former years. He accompanied Davies to Great Britain to solicit aid for the College of New Jersey, and the mission was successful, for in London, Edinburgh, Belfast, Dublin and elsewhere the cause was liberally sustained. He died in 1763. Very many of his sermons were published from time to time, and they included almost all the leading heads in divinity, such as "The Divine Attributes," "The Trinity," "The Chief End of Man," "The Priestly Office of Christ," "Fasting," "Religious Zeal." His other published writings bore on the questions of the day which were agitated on the education and character of the ministry, the religious indifference of the thoughtless in the churches and the best methods of awakening men to a due concern about their souls.

Of the Tennent family there were three other brothers, sons of William Tennent of the Log College, who were eminent for their piety and zeal in the gospel ministry. **WILLIAM** was born in Antrim county, Ireland, in 1705. He was the celebrated pastor of Freehold, New Jersey, of whom even in the present days remarkable instances are mentioned of his piety and the deliverance which he experienced when in danger. **JOHN**, the third son, was born in 1707, in Armagh county, Ireland. He preceded his brother William in the church at Freehold, New Jersey, where he died in 1732. **CHARLES**, the youngest son, was born in the county of Down, Ireland, in 1711. He became the pastor of Whiteclay in the Newcastle Presbytery, and in 1763 he was removed to Buckingham (Berlin), on the Eastern Shore of Maryland, where he died in 1771. All these brethren were eminent as preachers, devout and faithful, and they were greatly blessed in their ministry.

**TENNENT, WILLIAM**, was born in Ireland in 1673, and educated in Trinity College, Dublin. He was made a deacon in 1704 by the bishop of Down, and in 1706 he was ordained a priest by the same bishop. He preached in the counties of Armagh and Down; but in consequence of doubts which arose in his mind on the subject of conformity, he was deprived of his living, and emigrated to America. In 1718 he settled at East Chester, New York, and in 1721 he took charge of Bensalem and Smithfield, in Bucks county, Pennsylvania. In 1726 he accepted a call to Neshaminy, where he established a very celebrated school, at which his sons and others were educated. This school, known as the *Log College*, became exceedingly famous; as many as eight ministers were educated in it before the close of 1739. Of these four were his sons. He received Whitefield with great joy, and aided him as far as he was able in his evangelistic labors. He took part in the discussions which ended in the disruption of the Presbyterian Church; and regarding himself as cut off from the synod by the protest of 1741, he joined the New Brunswick Presbytery. He died in 1746, having seen Samuel Blair, Rowland, McCrea, Robinson, John Blair, Samuel Finley Roan, Beatty Lawrence, Dean and his own four sons, all of whom he had trained, making honorable proof of their ministry. He was eminent for his fine scholarship. Latin was as familiar to him as his mother-tongue. He was evangelical, earnest, unworldly and most devoted, possessing, above most men, the power of attracting young men of talent toward himself and of imbuing them with his own spirit. He lived and died poor, but he lived for another world.

**TENNEY** (ten'ne), **CALEB JEWETT, D.D.**, was born in 1780, at Hollis, New Hampshire. He was of English descent, as his great-grandfather came from England and settled at Rowley, Massachusetts, so named as being the place in England which the Tenney family had left. He was educated at an academy in his native place, and thence he passed to Dartmouth College, where he displayed great firmness of character in resisting temptation, and he took a high place among his fellow-students for scholarship. The celebrated Daniel Webster was in the class with him when he graduated, in 1801. He studied theology under Dr. Spring of Newburyport and Dr. Burton of Theford, and in 1802 he was licensed to preach by the Grafton Association of New Hampshire. He was ordained in 1804, at Newport, where he remained ten years, and which he resigned because of failing health. In 1815 he consented to serve as colleague with Dr. Marsh at Wethersfield; and when Dr. Marsh died, in 1821, Dr. Hollis remained sole pastor. Owing to the loss of his voice, in 1833 he was obliged to cease preaching, but his people insisted on his remaining as pastor—a position which he held until 1840, when he obtained leave from them to retire. He exerted a great influence in ecclesiastical matters in his lifetime throughout New England. He had a prominent share in the establishment of the theological seminary at East Windsor, and he materially promoted the cause of the American Colonization Society. He died at Northampton, on September 23, 1847. He was the author of several sermons which were preached on public occasions, and which were given to the press from time to time as they were delivered.

**TENT.** The patriarchal fathers of the Israelites were dwellers in tents, and their descendants proceeded at once from tents to houses. We therefore read but little of "huts" or "booths" among them, and never as the fixed habitations of any people with whom they were conversant. Tents were invented before the deluge, and appear from the first to have been associated with the pastoral life, to which a movable habitation was necessary, Gen. iv. 20. The practice of the pastoral fathers was to pitch their tents near wells of water, and if possible under some shady tree, Gen. xviii. 4. The first tents were undoubtedly covered with skins, of which there are traces in the Pentateuch, Ex. xxvi. 14; but nearly all the tents mentioned in Scripture were, doubtless, of goats' hair, spun and woven by the women, Ex. xxxv. 26, such as are now in Western Asia used by all who dwell in tents, hence their black color, Song Sol. i. 5. Tents of linen were, and still are, only used occasionally for holiday or traveling purposes by those who do not habitually live in them. The patriarchal tents were probably such as we now see in Arabia, of an oblong shape, and eight or ten feet high in the middle. They vary in size, and have, accordingly, a greater or less number of poles to support them—from three to nine. An encampment is generally arranged circularly, forming an enclosure, within which the cattle are driven at night, and the centre of which is occupied by the tent or tents of the emir or sheikh. If he is a person of much consequence, he may have three or four tents, for himself, his wives, his servants and strangers, respectively. The first two are of the most importance; and we know that Abraham's wife had a separate tent, Gen. xxiv. 67. It is more usual, however, for one very large tent to be divided into two or more apartments by

curtains. The holy tabernacle was on this model, Ex. xxvi. 31-37.

**TENTATION** (ten-ta'shun), Ex. xvii. 7, margin, in some copies, signification same as temptation.

**TENTH DEAL**, Lev. xiv. 10. The original word signifies a tenth part, used as a measure for things dry, specially grain and meal. It was doubtless the tenth of the ephah. And so in Num. xv. 4 the Septuagint supplies "ephah;" compare Lev. v. 11; Num. v. 15.

**TENTHS**, tithes; also the tenth part of the annual value of every spiritual benefice, according to the valuation in the king's books, being that yearly portion or tribute which all ecclesiastical livings formerly paid to the crown.

**TENURE BY DIVINE SERVICE**, a tenure to which some special religious service was annexed, such as saying so many masses or other

EGYPTIAN TEMPLE.—See TEMPLE.

performance, which if neglected, the lord could seize on the emolument and distract without complaining to the visitor or person authorized to examine into and reform abuses.

**TERAH** (te'rah), the tenth descendant from Noah by the line of Shem, and father of Abram, Nahor and Haran, Gen. xi. 27. There is nothing more told us in Scripture respecting Terah besides his own parentage, and the children from him, than that at a certain period he left Ur of the Chaldees with his family, and removed to Haran with the view of going into the land of Canaan, but that without getting farther he died in Haran at the advanced age of two hundred and five years.

**TERAPHIM** (ter'a-feem), images kept in the houses and honored with a certain kind of reverence. Laban had some of them, and Rachel took these when leaving Padan-aram with her husband for Palestine, Gen. xxxi. 19, 30, 32-35. So we find that they were employed for purposes of divination among the Babylonians, Ezek. xxi. 21. It

is possible that Rachel, who was both impulsive and superstitious, imagined that some augury of the future might be obtained from them, and she must have considered them as having a tutelary power. The notion that she intended to check the idolatry of her father is groundless; instead of concealing she would in that case rather have destroyed them. These images were probably some of the strange gods of which Jacob subsequently cleansed his household, Gen. xxxv. 2, 4. But it is singular that the use of them prevailed long among the Hebrews, apparently without consciousness that it must be displeasing in God's sight as a breach of the second commandment. Thus Micah, who had them in his house, felt sure that Jehovah would bless him when he had a Levite to minister before them, Jud. xvii. 5, 13. These the Danites eagerly carried off, Jud. xviii. 14-21. It is still more perplexing to find them in David's house, 1 Sam. xix. 13, 16. And it does not seem that they were altogether put away till the thorough reformation of Josiah's days, 2 Ki.

xxiii. 24. Then, indeed, they were elated with abominable things. The word is used, 1 Sam. xv. 23, rendered in our version "idolatry," in expressing the truth that obstinacy was sinful, "iniquity and teraphim-worship." We find them also censured in Zech. x. 2; and Hosea employed the term to signify the state of Israel with no kind of worship either of the true God or of false deities, Hos. iii. 4.

We may gather that they were made of various materials, as of silver, Jud. xvii. 4, and that they resembled a human figure, sometimes of the natural size, 1 Sam. xix. 13. Perhaps they were like the Roman penates or household gods, but they originally symbolized the powers of nature. Small figures of baked clay, some with a human head and a lion's body, and others with a human body and a lynx head, have been found under the pavement of the porch of the Khorsabad palace. These were, no doubt, intended to avert evil.

**TERESH** (te'resh), one of the two chambermaids or eunuchs who conspired against Ahasuerus, Esth. ii. 21.

**TERMINISTS** (ter'min-ists), a designation of those who believe that a *terminus gratiae*, or a limit of grace, has been predestined in the life of every person which ends the time during which he can repent of sin and turn to God. This opinion was maintained by Reichenberg, a professor of theology at Leipsic at the end of the seventeenth century, and was controverted by Ittig, the author of a work on the heresiarchs of the first two centuries.

**TERRIER** (ter're-er), a record or register of land. The English Canon 87 runs thus: "The archbishops and all bishops, within their dioceses, shall procure that a true note and terrier of all the glebes, lands, meadows, gardens, orchards, houses, stocks, implements, tenements and portions of tithes lying out of their parishes, which belong to any parsonage, vicarage or rural prebend, be taken by the view of honest men in every parish, by the appointment of the bishop, whereof the minister to be one, and to be laid up in the bishop's registry, there to be for a perpetual memorial thereof."

**TER-SANCTUS** (ter-sank'tus). This is the

EGYPTIAN TEMPLE AT PHILÆ.—See TEMPLE.

usual name of the ancient hymn which is inserted in the communion service of the Episcopal Church, beginning "With angels and archangels." See TRISAGION.

**TERTIUS** (ter'sh'us), the amanuensis who wrote as St. Paul dictated the Epistle to the Romans, Rom. xvi. 22.

**TERTULLIANISTS** (ter-tul'yan-ists), a small sect formed in Carthage who followed Tertullian (A. D. 150-220) in adopting opinions infected with those of the Montanists, and who also called themselves "Spirituals," to distinguish themselves as persons of stricter life than the lax among the orthodox, whom they called "Phyllices," or carnal men.

**TERTULLIANUS** (ter-tul-le-a'nus), **QUINTUS SEPTIMIUS FLORENS**, the first and one of the most celebrated of the Latin Fathers, flourished about A. D. 190-214, in the reigns of the emperors Severus and Caracalla. He was son of a centurion in the service of the proconsul of Africa, and was born at Carthage, became an eminent rhetorician, was converted to the Christian religion either at Carthage or Rome, and obtained

the office of presbyter. After he was past middle age he embraced the doctrines of Montanus, to which his ardent, sensuous imagination and ascetic tendencies would naturally incline him. He is said to have been determined to that course by the ill-treatment he received from the Roman clergy. Whether he remained a Montanist till his death, or ultimately returned to the Roman Church, cannot be decided. He lived to a great age, and wrote a very large number of works, some of which were early lost. The most important of his extant works are "On Penitence," "On Patience" and "On Baptism." His works are of four classes—apologetical, practical, doctrinal and polemical. They are characterized by vast learning, profound and comprehensive thought, fiery imagination and passionate partisanship, leading into exaggeration and sophistry. The doctrine of the millennial reign of Christ was taught in one of the lost works of this Father.

**TERTULLUS** (ter-tul'us), an advocate employed by the Jews to accuse St. Paul, Acts xxiv. 1-9.

**TESSELLATED** (tes'sel-ā-ted) **PAVEMENT**, a pavement made of flat thin plates, generally of marble, and so arranged as to form figures of different patterns. Usually there was a central figure around which the minor and subsidiary parts were arranged, and a border surrounded the whole. When the Roman influence affected Palestine, tessellated pavements were introduced in courts and buildings of an important character, and an allusion to this is found in John xix. 13, where the word "pavement" is used to designate not the floor, but the hall. See GABBATHA.

**TESTAMENT** (test'a-ment), **OLD AND NEW**. When the books written by the apostles of Jesus Christ, or by apostolic men, came to be placed alongside the sacred books of the Hebrews, as comprising the entire Scriptural canon, it became

necessary to distinguish the two divisions by appropriate designations. A usage which already prevailed furnished the designations required. The gracious engagements into which God was pleased to enter with individuals and communities bear in the Old Testament the name of *berith*, "covenant," and to this corresponds the Greek *diatheke*, which is frequently, though not uniformly, translated "testament," in the Authorized Version. Of these covenants two stand out from all the rest as of pre-eminent importance—God's covenant with Israel mediated by Moses, and that covenant which he promised to establish through the Messiah. In the Jewish Scriptures this latter is designated the "new covenant," Jer. xxxi. 31, and this, adopted by our Lord, Matt. xxvi. 28, and familiarly used by the apostles, 2 Cor. iii. 6; Heb. ix. 15, etc., would naturally suggest the application of the phrase "the old testament" or covenant to the former. Among the Jews such expressions as "tables of the covenant" for the tablets on which the law was inscribed, Deut. ix. 9, and "book of the covenant," Ex. xxiv. 7, were in common use. From these it is an easy transition to such an expression as that of the apostle, 2 Cor. iii. 14, "the reading of the old testament," where the name appropriate to the thing contained

is used of that which contains it. There thus arose in the Greek Church the usage of the phrases "the old testament" and "the new testament" as designations of the Jewish and Christian sacred writings respectively. In the Latin Church the usage prevailed of calling these *Vetus et Novum Testamentum*. Why the word *Testamentum* was selected to represent *diatheke*, rather than *foedus* or *pactum*, may be explained by the fact that the former rather than the latter is the proper equivalent of the Greek word. Hence in the old Itala made from the Septuagint it is always used where the Greek has *diatheke*, and in the Vulgate it is used similarly in those books that remain in the old version; whereas in those which Jerome translated from the Hebrew the original is represented by *foedus* or *pactum*. The use of *testamentum*, however, does not seem to have been universally accepted till a much later period. Tertullian gives the preference to the word *instrumentum*, a term used technically to denote a writing by which anything is to be attested or proved; and this is the word he generally uses. Rufinus also uses the same word; and Augustine uses both *instrumentum* and *testamentum* in the same context. Lactantius, however, freely uses *testamentum* as a well-accredited term when he wrote.

From the Vulgate and the usage of the Latin Fathers, Luther adopted *Testament* in his translation, and this has continued to be the usage in Germany, though some scholars there prefer the term *bund*, the proper rendering of *berith* and *diatheke* as used by the sacred writers. In this country Testament has so established itself in common usage and the reverent feelings of the community that all attempts to displace it would be futile and unwise.

The Jews divided the Old Testament into three portions—the Torah or Law, comprising the Pentateuch; the Nebim or Prophets, with the subdivision into Earlier and Later; and the Chetubim or Hagiographa. From an early period the books of the New Testament were divided into two portions, the one embracing the four Gospels, the other the remaining books. The division now generally adopted is into three classes—the Historical, including the Gospels and the Acts of the Apostles, the Epistolary and the Apocalyptic.

**TESTIMONY** (tes'ti-mo-ne). Besides the ordinary meaning of this word as witness or evidence, 2 Thess. i. 10, it designates particularly the tables of stone on which were inscribed the laws or conditions of God's covenant with Israel, Ex. xxv. 16, 21. Hence the ark where these tables were deposited was called the "ark of the testimony," Ex. xxv. 22, and sometimes the "testimony" itself, Ex. xxvii. 21; xxx. 6; the tabernacle similarly was termed the "tabernacle of testimony," Ex. xxxviii. 21. Also, the whole revelation of God's will, the Scripture or a part of it, bears this name, 2 Ki. xi. 12; Isa. viii. 16, 20.

**TETA** (te'tah), 1 Esd. v. 28, the same as Hattita, Ezra ii. 42.

**TETRARCH** (te'trank), a title given to various princes under Roman supremacy. The sons of Antipater, Herod and Phasael, were constituted tetrarchs—the first in Palestine—by Mark Antony. Herod had afterward authority over all Palestine and Idumea, with the title of king. This was the sovereign misnamed "the Great." After his death his sons, Antipas and Philip, were tetrarchs—the first of Galilee and Pera, the

other of Iturea and Trachonitis, Luke iii. 1, with some other districts—while Archelaus, a third son, had the title of ethnarch. Lysanias is also mentioned as tetrarch of Abilene. The name lost after a while its significance as designating the ruler of the fourth part of a country, and was given as a title generally.

**TETRAPLA** (tet'ra-pla), the great work of Origen, so called before it contained more than three versions of the Holy Scriptures—*i. e.*, that of the Septuagint, of Agula and of Theodotion. All but a few fragments of the "Tetrapla" are lost.

**TETRAPOLITAN** (te-tra-pol'i-tan) **CONFESSION**, a Protestant confession of faith put forth in 1530 by the cities of Strasburg, Constance, Meiningen and Linden. It is also called "The Confession of the Four Cities," and the "Confession of Suevealand."

**TETZEL** (tet'zel), or **TEZEL** (tet'zel), **JOHANN**, a Dominican monk of the sixteenth century, was born at Leipsic, where he studied, and was created bachelor in theology in 1487. He entered the Dominican order two years later, and from 1502 was employed in the sale of indulgences issued by Pope Leo X. He represented them as possessing the virtue of pardoning all sins, past, present and future. Purchasers came in crowds, and Tetzel realized immense sums of money by his lying trade. He was a man of immoral character, and was once convicted of adultery and sentenced to an ignominious death. He owed his escape to the elector of Saxony. Luther first heard of him in 1516, and vowed to "knock a hole in his drum." Luther's bold attack on him and on the sale of indulgences, in the following year, was the first occasion of the great Reformation. The papal government, seeing the mischief likely to accrue from the indiscreet zeal and bigotry of Tetzel, so severely rebuked him, through the legate Miltitz, that he is said to have died of a broken heart, in 1519.

**TEUTONIC** (teu-ton'ik) **KNIGHTS**, an order founded at Jerusalem for the conquest of the Holy Land, under the Augustinian rule. It was confirmed in 1192 by Celestine III., and removed to Germany in 1226. The habit was black crosses on white garments.

**TEXTUS RECEPTUS** (tex'tus re-sep'tus). The ordinary or received Hebrew and Greek text of the Scriptures is so called. That of the Old Testament is based on the edition of Van der Hooght, Amsterdam and Utrecht, 1705. It is derived from that of Joseph Athias, Amsterdam, 1661. The Elzevirs, following Beza, who followed H. Stephens, published at Leyden, in 1663, an edition of the New Testament which may be called the "textus receptus" of that part of the Bible.

**THACHER** (tha'cher), **THOMAS**, was born in 1620, at Salisbury, in England. His father, who was a minister, proposed to send him to either Oxford or Cambridge, but he declined, and emigrated to New England, arriving in Boston in 1635. His life was preserved on the occasion of his journey from Newbury to Marblehead in consequence of a dread that if he went by boat he would be lost. He traveled by land, and the boat in which his friends sailed was wrecked by a storm. Under the care of the Rev. Charles Chauncy, of Scituate, he made great progress in the classics, and he also studied He-

brew, Arabic and Syriac. Desirous of all knowledge, he even studied medicine in addition to theology, and he was the first person who published a medical tract in the colonies. Being prepared for the ministry, he was called to and settled in the church at Weymouth, in 1644, where he labored for twenty years. After leaving Weymouth, he settled in Boston, and after some time, during which he practiced medicine, he was called to the pastorate of the Old South—then the Third—Church, in which he was installed in 1669. Here he was greatly distinguished both as a preacher and a pastor. His sermons were elaborated with great care, and he was prompt and earnest in opposing error as well as in defending truth. He bore a very decided testimony against the Quakers, regarding their system as highly dangerous and fraught with error. The only sermon of his which was printed he preached as a fast sermon in 1674. He died in 1678, aged fifty-eight years.

Two of his sons entered the ministry. Peter Thacher was born in 1651, at Salem, Massachusetts, educated at Harvard, visited England, and on his return was settled at Milton, near Boston. He was the author of a work on Unbelief, and he published several sermons. He labored at Milton forty-six years with great efficiency, dying in 1727, having been esteemed one of the most valuable ministers of his day. His son Peter, named after his father, was also educated at Harvard, and after a long ministry at Middleborough, he died in 1744.

Ralph Thacher was also a son of Thomas Thacher. He was educated for the ministry, and settled at Martha's Vineyard.

**THADDEUS** (thad-de'us), the surname of Lebbeus or Jude, Matt. x. 3. See JUDE.

**THAHASH** (tha'hash), one of the sons of Nahor, Abraham's brother.

**THAMAH** (tha'mah), Ezra ii. 53. See TAMAH.

**THAMAR** (tha'mar), Matt. i. 3. See TAMAR.

**THAMNATHA** (tham'na-thah), 1 Macc. ix. 50, Timnah, probably the present *Tibneh*.

**THANK-OFFERING**, an eucharistic sacrifice or peace-offering. See OFFERINGS.

**THARA** (tha'rah), Luke iii. 34, the same as Terah.

**THARRA** (thar'rah), Rest of Esth. xii. 1, the same as Teresh, Esth. ii. 21.

**THARSHISH** (thar'shish), a descendant of Benjamin, 1 Chr. vii. 10.

**THARSHISH**, 1 Ki. x. 22. See TARSHISH.

**THASSI** (thas'si), 1 Macc. ii. 3, the surname of Simon, son of Mattathias.

**THAYER** (thay'er), **ELIHU**, D.D., was born in 1747, at Braintree, Massachusetts. Very early in life he was brought under serious impressions; and being ardently fond of learning, he was prepared for college, and he entered Princeton in 1766, where he graduated in 1769, but his intense application weakened his constitution so much that he felt the effects of over-exertion during the remainder of his life. He enjoyed the instruction

SARACENIC TEMPLE ON MOUNT ARN.—See TEMPLE.

of the Rev. Mr. Searle of Stoneham, and the Rev. Mr. Weld of Braintree, in theology; and being licensed to preach, he was settled as pastor at Kingston, New Hampshire, in 1776. He was an excellent scholar, and he never lost his love for literature. He prepared a number of students for college, and frequently young men who had entered college, and who found that they had never been properly trained, availed themselves of his aid. He died April 3, 1812. The New Hampshire Missionary Society was organized in 1801, and he was chosen president—an office which he held until a year before his death. After his death a number of his sermons appeared in a collected form, and they showed how abundantly able he was to meet the assaults which at the time were so commonly made against revealed religion in the part of the country where he labored.

**THAYER**, **NATHANIEL**, D.D., was born in 1769, at Hampton, New Hampshire, and educated at Phillips Academy, Exeter. His father was a

minister. By his mother, who was a daughter of the Rev. John Cotton, he was descended from a family in which there had been an almost uninterrupted succession of clergymen for nearly two hundred and thirty years. After his academical education he entered Harvard, where he graduated in 1789 with great honor. He spent a short time in teaching, and then, under the care of the Rev. Dr. Osgood, he began the study of theology; but desiring a thorough course, he went to Cambridge, where he was under Dr. Tappan, the professor of divinity. When licensed to preach, he spent a short time at Wilkesbarre, Pennsylvania, and then returned to Boston to preach in the New South Church. In 1793 he was engaged to preach at Lancaster, and here he settled as colleague with the Rev. Dr. Osgood, and on his death he re-

A PORTION OF THE FOUNDATION OF SOLOMON'S TEMPLE.—See TEMPLE.  
One of the finest specimens of old-time solid masonry.

mained as the sole pastor of the church in which he spent the remainder of his life. His wisdom and tact were widely recognized; and it is noteworthy that he was a member of as many as one hundred and fifty ecclesiastical councils, so much was his prudence relied on, and in many of these assemblies he was the person appointed to draw up the papers which were to express the results of the deliberation. His vigor of body and mental strength remained to old age, but in 1840 he became debilitated, and he sought restoration by change of air and scene. He visited Saratoga, and went in the direction of Niagara, but at Rochester he departed very suddenly on June 23, in the seventy-first year of his age. His only publications were sermons, which appeared singly as they were preached, from 1795 until 1831.

**THEATRE** (the'a-ter), a place constructed for the representation of dramatic entertainments.

The theatres of the ancients were usually semicircular in form and open to the air, as the seats were ranged round in tiers one above another and the performances took place on a stage level with the lowest seats on the flat side of the building. These edifices were peculiarly fitted for public meetings, and were frequently so employed among the Greeks. Thus, when, at Ephesus, Gains and Aristarchus, the companions of St. Paul in travel, had fallen into the hands of a tumultuous mob, the people rushed "with one accord into the theatre," as the fittest place for discussing the subject thus brought before them; and the size of the building may be imagined from the fact that the assemblage is said by a figure of speech to have comprised the "whole city." The remains of this theatre are still extant, and attest its vast dimensions and its peculiarly convenient situation. Herod Agrippa I. received in the theatre at Caesarea the ambassadors from Tyre and Sidon, and made the speech so soon to be followed by a miserable death.

It does not appear that the Romans made a similar use of their theatres; they were a graver people than the Greeks, and chose to separate business and pleasure even in the edifices constructed for their respective purposes. The Greek *theatron* meant the spectacle itself as well as the place in which it was exhibited; thus in 1 Cor. iv. 9 the apostles are said to be a "spectacle" (*theatron*) to the world, and to angels, and to men; but the English word theatre does not bear this signification.

**THEBES** (theebz), a city of Egypt, and its capital during the empire called in the Bible No-Amon or No. The situation of Thebes with reference to the rest of Egypt well suited it to be the capital of the country. Though farther from the Mediterranean and Syria than Memphis, it was more secure from invasion; and if it was far from the northern trade, it commanded the chief line of commerce from the Red Sea. The actual site is perhaps the best of any ancient town of Upper Egypt. Here the valley, usually straitened by the mountains on one side if not on both, opens out into a plain which is comparatively spacious. On the west bank the mountains leave a broad band of cultivable land, on the east they recede in a semicircle. The plain between is about two miles long, and has an extreme breadth of about four miles—no large space for a great capital except in Egypt. The monuments do not arrest the attention of the traveler as he sails up the river as do the pyramids of Memphis. On the east the mass-

ive fort-like winged portal of El-Karnak and the colonnade of El-Uksur, and on the west the hills honeycombed with sepulchral grottoes, are the most remarkable objects to be seen; but being far apart, they are singly seen from the river. If viewed from the western mountain, the many monuments of Thebes give an idea of the grandeur of this ancient city, the greatest in the world for magnificence if not for size from the days of the judges to those of the kings, and in Homer's age notorious even in remote Greece as the ideal of a wealthy and powerful capital.

The old city, Thebes proper, lay on the eastern bank; opposite was the western suburb, known in the time of the Greek and Roman rule as the Memnonia. Of the houses of the city there are no traces, but they must have been near the temple of El-Karnak. The western suburb has similarly disappeared, though we know by the monuments where was its principal street. At the present time there are two villages on the eastern bank, El-Karnak and El-Uksur, the former, which is inconsiderable, near the oldest part of ancient Thebes, the latter, which is large and the most important place on the site, so as to deserve to be called a small town, lying some distance to the south on the river's bank. Opposite El-Karnak is the ruined village of El-Kurneh, of which the population mainly inhabit sepulchral grottoes.

The most remarkable of the notices of Thebes in the Bible is that in Nahum, where the prophet warns Nineveh by her rival's overthrow: "Art thou better than No-Amon, that was situate among the rivers, [that had] the waters round about it, whose rampart [was] the sea, [and] her wall [was] from the sea?" Notwithstanding her natural as well as political strength, Thebes had been sacked and the people carried captive, Nah. iii. 8-10. The description of the city applies remarkably to Thebes, which alone of all the cities of Egypt was built on both sides of the river, here twice called, as now by the modern inhabitants, the sea. The prophecy that it should "be rent asunder," Ezek. xxx. 16, probably primarily refers to its breaking up or capture, but the traveler can scarcely doubt a second and more literal sense when he looks upon its vast torn and heaped-up ruins. The other notices are in Ezek. xiv. 15 and in Jer. xlvi. 25. For the history and the monuments of Thebes, see EGYPT.

**THEBEZ** (the'bez), a town not far from Shechem, where Abimelech was killed, Judg. ix. 50. It is now called *Tubds*, and said to be a thriving place.

**THECOE** (the-ko'e), 1 Macc. ix. 33, the same as Tekoah.

**THEFT.** See DEPOSIT, THIEF.

**THELASAR** (the-la'sar), 2 Ki. xix. 12, a variation of TELASSAR, which see.

**THELERSAS** (the-ler'sas), 1 Esd. v. 36, the same as Tel-harsa, Ezra ii. 59.

**THELWALL** (thel'wal), ALGERNON SYDNEY, who labored with great zeal among the Jews, was educated at Trinity College, Cambridge, where he took a high place among the wranglers. He graduated A.B. in 1818, and A.M. in 1826. From 1819 until 1822 he officiated in the English chapel at Amsterdam, and from 1822 until 1827 he labored exclusively among the Jews. The curacy of Blackford, in Somersetshire, was given to him, and from that charge he was removed to Bedford

Chapel, Bloomsbury, London, and the curacy of St. Matthew's, Pell Street, was associated with it. In 1850 he was appointed to the chair of public reading and elocution in King's College, and he held this office until his death, in 1863, aged sixty-eight years. He prepared and published tracts for the Jews. He wrote on "The Idolatry of the Church of Rome," "The Irving Heresy," "The Relations of the Church to the World," and in 1852 he published a series of "Letters on Objections to the Church of England."

**THEMAN** (the'man), Bar. iii. 22, 23, the same as Teman.

**THEOCANUS** (the-o-ka'nus), 1 Esd. ix. 14, possibly Tikvah, Ezra x. 15.

**THEODORE** (the'o-dor), who was made archbishop of Canterbury in the seventh century, was a monk at Tarsus in his early life. He came to Rome in the year 668, and by Pope Vitalianus he was made a bishop. He contributed greatly to the awakening of an interest at Rome in the literature of the East by means of the manuscripts which he brought with him, and the pope, recognizing his learning and the importance of carrying on the mission in England, made him archbishop of Canterbury in 669. He left several works behind him, which were edited and printed in two volumes quarto in 1677 by James Pettit. Chief among them is "The Form of Discipline," which he had established, and which has been called "The Penitential."

**THEODORET** (the-od'o-ret), an ecclesiastical historian and a Father of the Church, was born at Antioch about the year 393. In 420 he was made bishop of Cyrus, in Syria, where he labored assiduously in converting a rude people and opposing the errors of the Marcionites. He was deposed by the second Council of Ephesus on the charge of favoring the views of Nestorius, who had been his fellow-pupil and was his friend. Two years later, however, he gave way to the violence of his opponents, and at the Council of Chalcedon pronounced anathema upon Nestorius and was restored to his see. He left several

ARCHBISHOP TENISON.—See TENISON, THOMAS.

valuable works, among which are an ecclesiastical history, a work on the heresies and commentaries on the Bible. He died in 457.

**THEODORIC** (the-od'o-rik) **THE GREAT** was born A. D. 455, and educated at Constantinople. He reached the throne A. D. 475, overcame Odoacer, was acknowledged as king of Italy and

was distinguished for the wisdom of his rule. He opposed the French king Clovis, and gained possession of Provence. Remorse for having put Symmachus and Boethius to death hastened his own death, in A. D. 526.

**THEODOSIUS** (the-o-do'sh'us) **THE GREAT**, emperor of the East, was a native of Spain, and was born about A. D. 346. He was raised to the throne of the Eastern provinces by the emperor Gratian, and defeating the Goths, restored peace to the empire. Theodosius was a zealous Catholic, and theological conflicts form a prominent part of the history of his reign. He was baptized by an orthodox bishop before the end of the first year of his reign, and immediately published an edict in support of the doctrine of the Trinity, branding all who did not hold it as heretics. The Arian archbishop of Constantinople was deprived, and Gregory Nazianzen was promoted to the see, and shortly after all Arian bishops and clergy were expelled from their churches. During the first fifteen years of his reign Theodosius published fifteen severe edicts against "heretics," exile, confiscation and fines for the pastors, prohibition of meetings, and a civil excommunication which disqualified them for all honorable offices. An officer was appointed to see the execution of these edicts who was called "Inquisitor of the Faith." The rites and sacrifices of paganism were finally suppressed and many of the temples were destroyed. Theodosius died at Milan in 396.

**THEODOTUS** (the-o-do'tus), 2 Macc. xiv. 19, a commissioner sent by Nicanor to Judas Maccabeus.

**THEOPASCHITES** (the-o-pask'ites), a sect of the Monophysites who held that, Christ having only one nature, and that the divine, it was therefore the divine that suffered at the crucifixion. Theopassianism was condemned in a council at Rome, A. D. 862, which decreed that the Godhead of Christ could not suffer, and that he bore the passion of the cross only in his human nature.

**THEOPHILANTHROPISTS** (the-o-fel-an'thro-pists), This name was assumed by a party of French Deists during the Reign of Terror, to indicate their adherence to a natural or theistic religion and worship which was intended to supersede Christianity, and whose characteristics were to be love of God and love of man. In England an attempt of this kind was made by a Unitarian preacher in Liverpool named Williams, a friend of Franklin. He arranged a plan for the propagation of deism, and in 1776 he published his "Liturgy on the Universal Principles of Religion and Morality." He set up a meeting-house in Cavendish Square, and Voltaire and Frederick the Great both favored his views. The scheme became known in France, and it was adopted. Daily worship was to be offered, festivals and dancing were to be observed, a perpetual fire in the temple was to symbolize the Deity and oblations of fruit and oil were to be offered, while every ninth day was to be a day of rest. In Paris no fewer than twenty churches were secured for these religionists, who drew up a few prayers from some of the French poets, while the party in London adopted parts of Milton's "Paradise Lost," Thomson's "Seasons," and they had lectures in honor of Socrates, St. Vincent de Paul, Rousseau and Washington. As religion revived, these opponents of Christianity dwindled away, and at

length, in 1801, the Revolutionary government forbade them to use the three churches which had remained in their hands. An attempt was made in 1830 to revive the system, but it was an entire failure.

TERAPHIM.—See article.

**THEOPHILUS** (the-of'i-lus), a Christian of distinction to whom St. Luke inscribed his Gospel and Apostolical Acts, Luke i. 3; Acts i. 1. Conjectures have been endless about his country and history. He was probably a Gentile, but nothing certain is known of him.

**THEOPHILUS**, the name of two early ecclesiastics. 1. Bishop of Antioch. He was a convert from paganism, was consecrated bishop of Antioch in 170, and governed that see for twelve or thirteen years. He was a vigorous opponent of heresy, and wrote a defence of the Christian faith and a treatise against Origen. He is said to have been the first who used the term Trinity to describe the three Persons of the Godhead.

2. Bishop of Alexandria, was consecrated to that see in 385, after the death of Timotheus. In the great Anthropomorphic controversy he first took the side of Origen, but soon joined the other side, and warmly condemned the views of Origen and his followers, who maintained the figurative character of the portions of Scripture which speak of the Deity as possessed of human form. His hatred to Origen was extended to Chrysostom for daring to shelter some of the Origenists who fled to Constantinople; and aided by the empress Eudoxia, he nearly succeeded in procuring his banishment. He died in 412.

**THEOPHYLACT** (the-of'e-lakt), Mark vii. 3, margin, archbishop of Acria in Bulgaria, about 1077 A. D. He zealously exerted himself to establish the Christian faith in his diocese, and wrote commentaries on many of the sacred books which have ranked him among the principal ecclesiastical writers of that age. He is cited for the explanation of ceremonial washing.

**THEOSOPHISTS** (the-os'o-fists), the generic appellation of all those mystics who allege that by an internal and supernatural illumination

they are admitted to a knowledge of the mystery of being; first on the side of nature, secondly on that of religion. The title of fire philosophers has also been accorded to these persons, and properly; for according to their own account, they are enabled, by a miraculous intuition of the properties of the so-called element of fire, to provide a solution, not only for every difficulty of physics, but also for every doubtful problem in the spiritual world. Paracelsus, a Swiss physician (A.D. 1493-1541), gave the greatest impetus to theosophy. After his death his followers and pupils, who were chiefly chemists, under the mythical name of Rosicrucians, attracted much notice in the sixteenth century, and their system, in that unsettled epoch, easily secured numerous adherents. Fludd, an Englishman, and in Germany Böhm or Böhmen (A.D. 1575-1624), became converts, and the latter set up a mystical system of his own. After Fludd in England, came William Law (A.D. 1686-1761), a divine of the English Church, who translated the works of Böhm, many

of whose opinions he adopted. It may be observed briefly that while some of their religious opinions are unsound, their morality is unexceptionable.

**THEOTOKOS** (the-ot'-o-kos), a title given to the Virgin Mary, signifying that she became, and still is, the mother of God, from the period of his incarnation.

**THERAPEUTÆ** (ther-a-peu'-tay), the Egyptian branch of the Jewish sect of the Essenes, distinguished from Essenes of Syria and Palestine by a hermit instead of a monastic life, and by a

ETRUSCAN TERRA COTTA FIGURE.

less admixture of Eastern philosophy in their doctrine. Philo Judæus refers to this sect. The notion of Ensebius, that they were Jewish Christians, is generally abandoned as inconsistent with a right understanding of Philo's description of them as disciples of Moses, as a sect of long standing, with a Jewish and not a Judæo-Christian observance of the Sabbath.

**THERAS** (the'-ras), 1 Esd. viii. 41, 61, a corruption of Ahava, Ezra viii. 15, 21, 31.

**THERESA** (the-re'sa), SAINT, reformer of the order of Carmelites, was born in Old Castile in 1515. She was remarkable almost from infancy for her fervent piety, but through a long course of years periods of ascetic devotion alternated with periods of gayety and indulgence in worldly pleasures, according as she was affected by great sorrows or was free from them. She had been placed in the convent of the Augustine order in her native town, Avila, soon after the death of her mother, in 1527, and she took the vows seven years later. After years of painful interior conflicts, she resolved to attempt the reform of her

order, which she commenced by founding, in 1562, another convent in Avila, in which a more close and rigorous observance of the rule should be enforced. The new society was called the "Barefooted Carmelites," and other houses were soon founded. She died at Avila in 1582, and was canonized by Gregory XV. in 1621. Her remains were removed to Avila in 1585, but were restored to Alba in the following year by order of the pope. The writings of St. Theresa are chiefly ascetic. Among them is her life, written by herself.

**THERMELETH** (ther-me'-leth), 1 Esd. v. 36, the same as Tel-melah, Ezra ii. 59.

**THESSALONIANS** (thess-a-lo'-ne-anz), **THE FIRST EPISTLE TO THE.** When St. Paul was obliged to quit Thessalonica, he went to Athens. Anxious to visit the Thessalonians again, he found himself unable, 1 Thess. ii. 18, and in consequence sent Timothy, 1 Thess. iii. 1, 2. When Timothy rejoined him at Corinth, Acts xviii. 1-5; 1 Thess. iii. 6, he wrote the first Epistle. The subscription therefore is in error in stating that it was addressed from Athens.

Of the genuineness of this letter there can be no reasonable doubt. It is distinctly stated by Irenæus, Clement of Alexandria and Tertullian; and its authority was never seriously questioned till of late years. The arguments produced against it have been most satisfactorily disproved. The occasion of writing is easily gathered from notices in the Epistle. St. Paul was gratified at the report he received from Timothy, 1 Thess. iii. 6-10. Nevertheless, there were some drawbacks. Opposition from the Jews as well as Gentiles, Acts xvii. 5-8; 1 Thess. ii. 14-16; iii. 2-4, had been experienced. And the Thessalonians were disquieted in regard to the Lord's appearance; they were restless, neglecting the daily duties of life, a conscientious discharge of which is the needful preparation for that day, and they imagined that believers who were already dead were somehow likely to be excluded from the full blessing of the manifestation of Christ's kingdom, 1 Thess. iv. Now, notions of this kind would materially interfere with that sober, circumspect, holy walk and conversation in which graces are more valued than gifts and victory is obtained in the spiritual conflict. The apostle therefore wrote to confirm the Thessalonians in the faith, to strengthen them against persecution, to rectify mistakes and to inculcate purity of life.

The Epistle consists of two main points. I. After an inscription, 1 Thess. i. 1, Paul celebrates the grace of God in their conversion and advancement in the faith, 1 Thess. i. 2-ii. 16, and then expresses his desire to see them and his affectionate solicitude for them, 1 Thess. ii. 17-iii. 13. II. In the hortatory part he calls to holiness and brotherly love, 1 Thess. iv. 1-12, he speaks of Christ's advent, 1 Thess. iv. 13-v. 11, and adds various admonitions, 1 Thess. v. 12-24. He then concludes with a charge that the Epistle be generally read, with greetings and a benediction, 1 Thess. v. 25-28.

This is the earliest of St. Paul's letters, and may be dated at the end of 52 or beginning of 53 A.D.

**THESSALONIANS, THE SECOND EPISTLE TO THE.** The second Epistle was written not long after the first, for Silas and Timothy were still with Paul, 2 Thess. i. 1, prob-

ably in 53 A.D., and from the same place, Corinth. The evidence for it is even yet more conclusive than for the first. It is alluded to by Polycarp, cited by Irenæus, Clement of Alexandria and Tertullian, and, indeed, has never been doubted till (very groundlessly) in the present century. This letter is supplementary to the first. That had been in some measure misapprehended, and the coming of Christ was taken to be close at hand. Moreover, an unauthorized use had been made of the apostle's name. He therefore wrote to correct the mistake, and to check the evil results which had flowed from it in disorderly conduct.

This letter comprises, besides the inscription and conclusion, three sections. I. A thanksgiving and prayer for the Thessalonians, 1 Thess. i. 3-12. II. The rectification of their mistake and the doctrine of the man of sin, 1 Thess. ii. III. Sundry admonitions (1) to prayer, with a confident expression of his hope respecting them, 1 Thess. iii. 1-5; (2) to correct the disorderly, 1 Thess. iii. 6-15. He then concludes with salutation and apostolical benediction, adding a remarkable authentication of his letters, 1 Thess. iii. 16-18.

The style of these Epistles is generally the same, and attempts to make out a diversity have failed. It is for the most part plain and quiet, save, as might be expected, in the prophetic section, 2 Thess. ii. 1-12. For the interpretation of this prophecy other works must be consulted.

EARLY TERRA-COTTA WARE.

**THESSALONICA** (thes-sa-lo-ne'-ka) was a large maritime city, the capital of the second division of Macedonia and the seat of a Roman governor, retaining, however, its old laws, which were administered by its own magistrates. From the peculiar advantages of its position it shared the commerce of the Ægean Sea with Corinth and Ephesus, and it was a place of great wealth and luxury. It retained its importance all through the Middle Ages, and is now the second city in European Turkey, with seventy thousand inhabitants, bearing the slightly varied name of Saloniki, and is situated on the present Gulf of Saloniki. A great number of Jews were living at Thessalonica in the time of the apostle Paul, and also many Christian converts, most of whom seem to have been either Jews by birth or proselytes before they embraced Christianity by the preaching of Paul. Paul visited Thessalonica on his second missionary tour in company with Silas and Timothy. His preaching in a short time brought many converts. The present town stands on the acclivity of a steep hill, rising at the north-eastern extremity of the bay. It presents an imposing appearance from the sea, with which the interior by no means corresponds.

**THEUDAS** (theu'-das), an insurgent to whom Gamaliel alludes in his prudent speech to the council at Jerusalem, Acts v. 36. Josephus mentions an outbreak under a person of this name who pretended to be a prophet, and carried forth a multitude of followers to the Jordan. He was unexpectedly attacked, taken and put to death

by the Romans. This, however, occurred 44 A.D., eleven or twelve years after Gamaliel's speech. Various conjectures have been devised to explain the discrepancy. Wieseler believes that the allusion is to one Matthias, who in the last days of Herod the Great was a noted insurgent. At the head of a band whom he had gathered, he demolished the Roman eagle which the king had set up over the great gate of the temple. They were, however, soon overpowered, and Matthias was burnt alive. Now, the Hebrew name Matthias is in Greek Theodotus, and this is equivalent to Theudas. If this explanation be not satisfactory, it must be considered that, to take the lowest ground, it is most improbable that Luke would put a false piece of history in Gamaliel's mouth, that Josephus is frequently inaccurate, as has been abundantly proved, and further it is known that various insurgents appeared within no great space of time, and several were of the same name.

**THEURGIA** (the-ur'-ja), a name for magic which is connected with religion and pretends to knowledge of the supernatural through the aid of demons.

**THICK CLAY**, Heb. ii. 6. This is often in-

A MODERN FOUNTAIN AT CAIRO.—See TESSELLATED PAVEMENT.

terpreted as signifying riches. Henderson translates, "And I had myself with many pledges," supposing that the Chaldean power is represented as a rapacious usurer, accumulating the property of others, of which he would be himself plundered. Ewald's idea is somewhat similar: "He loads himself with a burden of debts," compare Isa. xxxiii. 1.

**THIEF.** The Mosaic law prescribed that a thief should make restitution. He was to pay five oxen for an ox, and four sheep for a sheep, that he had killed and sold, or double if he had not made away with his booty. And if he was not able to do this, he might be sold for his theft. If he committed it in the night, and was guilty of what we call burglary, he might be killed with impunity by the person whose property he was plundering, Ex. xxii. 1-4. There seem, however, to have been some modifications of this law. For, on the one hand, in Solomon's time the restitution was sevenfold, Prov. vi. 31; and on the other, if a man pricked in conscience came to offer a trespass-offering for his fault, the return was to be the principal and one fifth part more, Lev. vi. 1-5. See DEPOSIT.

Some question has been made in respect to the thieves crucified with our Lord, and a discrepancy has been imagined between Matt. xxvii. 44 and Luke xxiii. 39-43. In reply it has been said that

St. Matthew spoke indefinitely, and therefore used the plural, while St. Luke more precisely employed the singular, the one never intending to deny what the other affirms. It may be so. But we may well remember that our Lord hung several hours on the cross, that his meekness of endurance must have made a deep impression, and that several portents occurred during the time. The minds of many of the spectators seem to have changed, and the howls of malice and derision with which he had been first assailed gave place to compassion and reverent awe, Luke xxiii. 48. What marvel then—save a marvel of divine grace—if he, who, crucified justly, had at first with callous heart joined his comrade and the mocking mob in reviling the great Sufferer, found by degrees the conviction growing that that Sufferer, to whom even nature bore witness, was a Saviour, and cried to him with new-born faith, "Lord, remember me"? Some have suggested that this man was comparatively innocent, perhaps a patriot who had plundered the Romans, or that he became penitent before his execution. It is enough to say that these are unfounded guesses.

**THIMNATHAH.** See TIMNAH, 1.

**THIRLWALL** (thirl'-wal), CONNOP, D.D., who was born in 1797, at Stepney, near London, was the son of the Rev. Thomas Thirlwall, of Stepney, and rector of Trinity Church, Minorities, London. He was educated at Trinity College, Cambridge, where he greatly distinguished himself, being Craven Scholar, Bell's Scholar, and having obtained a "Senior Optime" and the senior chancellor's medal, he reached a Fellowship. He was appointed examiner for the classical Tripos, and in 1825 he was called to the bar at Lincoln's Inn, but in 1828 he retired from the profession of the law, entered the ministry and became rector of Kirby-under-Dale, in Yorkshire. He served as examiner in the University of

London, and he acted as visitor of St. David's College at Lampeter. In 1840 he was made bishop of St. David's. He has been one of the most eminent writers of the age, beginning his literary career as early as his eleventh year, when he published "Essays and Poems." In 1825 he prepared a learned "Introduction to his Translation of the Essay of Schleiermacher on the Gospel of St. Luke," which entered very fully into the controversy respecting the origin of the first three Gospels. Next came his valuable "History of Greece." Since his elevation to the episcopal bench he has published several charges and works on the leading questions connected with the English Church. In addition to all this literary matter, he was one of the translators of the "History of Rome," by Niebuhr, and the extensive range of his acquirements and the accuracy of his knowledge are everywhere apparent in all his works. He is an admirable example of the high culture which obtains in the English universities, and of the type of men who reach the highest places in the English Church.

**THIRST.** See WATER.

**THIRTY-NINE ARTICLES,** articles of religion, as distinguished from mere matters of

opinion. They are based on the forty-two framed by Cranmer and Ridley in the reign of Edward IV., and approved in their Latin form by convocation in 1562. They were revised in 1571, and published in Latin and English. In 1628 an English edition was published, to which the declaration of Charles I. was prefixed. They are binding on the clergy only of the Church of England, and on the clergy of the Episcopal Churches elsewhere.

**THISBE** (this'-be), Tob. i. 2, a city of Naphtali, by some conjectured to be the birthplace of Elijah, thence called the "Tishbite."

**THISTLE** (this'-s'l), a well-known thorny

TESSELLATED PAVEMENT SURROUNDING THE FOUNTAIN IN FIRST COLUMN OF THIS PAGE.—See TESSELLATED PAVEMENT.

plant, of which several kinds are found in Palestine. The Hebrew word *dardar*, implying luxuriant growth, is the thistle growing in fields and among grain, Gen. iii. 18. "Thistle" occurs in our version in 2 Ki. xiv. 9; 2 Chr. xxv. 18; Job xxxi. 40; the original word is elsewhere rendered "thorn," "thicket." The Greek term for "thistles," Matt. vii. 16, is translated "briers" in Heb. vi. 8. See THORN.

**THOKEY** (tho'-ke), who became abbot of Gloucester in the reign of Edward II., displayed an unusual amount of regard for that unfortunate monarch. His melancholy fate is well known, but it is not as well known that Thokey carried the dead body of the murdered king from Berkeley Castle to the abbey at Gloucester, in a carriage constructed for the purpose, covered with the arms of the abbey, when the monasteries of Bris-

tol, Keynsham and Malmesbury all refused to receive the royal corpse, through fear of Mortimer and the Queen. When it arrived at Gloucester, it was received by the members of the abbey in procession, and buried with the utmost pomp on the north side of the church near the great altar; and so greatly did this act redound to the advantage of the abbey that the grants of land by Edward III. and the donations of pilgrims and devotees were so many and so profuse that several parts of the building were beautified, and eventually the whole church was re-edified. The shrine-like tomb of the monarch on the north side of the choir of the

amination of evidence which will be found in all persons who are resolved really to obey the dictates of their faith. Whosoever is minded, like most religionists who complain of the skepticism of Thomas, to follow in the common transactions of life the dictates of vulgar prudence, may easily abstain from putting his hands into the marks of the nails and into the side of the Lord, John xx. 25; but whosoever is ready to die with the Lord will be inclined to avail himself of extraordinary evidence for extraordinary facts, since nobody likes to suffer martyrdom by mistake. These remarks are directed against Winer and others, who find in

This tradition has been attacked by Von Bohlen. The ancient congregations of Christians in India who belong to the Syrian Church are called Thomas-Christians, or CHRISTIANS OF ST. THOMAS, and consider the apostle Thomas to have been their founder.

**THOMAS OF BAYEAUX**, who was chaplain to William the Conqueror, rose into power in England after the conquest. He was made archbishop of York by William, and like many of the Norman clergy he became a great church-builder. Many of the churches which had been erected in Anglo-Saxon times were built in whole or in part of wood, and they were therefore liable to be burned. This was used as a pretext in the Anglo-Norman reigns for many of the ecclesiastical structures which were raised at great cost, and which ministered to the dignity and influence of the clergy. Thomas of Bayeaux had been a canon in Normandy; and casting his lot with William, he sought to advance his fortunes in a new land. He was called the fifth founder of the cathedral of York, as fire and the Danes had destroyed the previous structures. Even the erection of Thomas of Bayeaux had but a brief existence, as a fire in 1137 destroyed it, together with St. Mary's Abbey and thirty-nine parish churches.

**THOMAS À BECKET** (tom'as à bek'et), who rose to be one of the most important archbishops of Canterbury, and whose name is associated with the struggles which prevailed in England between the civil and the ecclesiastical powers, was born in London A.D. 1117. A very romantic story prevailed respecting his parentage, in which his mother was represented as following a crusader from Palestine to London; and though she was unable to express herself in the language of Western Europe, still she discovered the object of her devotion, and her son became the celebrated metropolitan of the Church in England; but the fact is he was the son of a London tradesman. He passed the usual curriculum at Oxford, whence he went to Bologna to study the civil and canon law. His great abilities had been developed at an early age, and Theobald, the archbishop of Canterbury, aided him with all his influence, desiring that a student of such promise should be promoted and used for the advancement of the Church. On his return from Italy he was forthwith made archdeacon of Canterbury, and his ability soon became known. Henry II. reached the throne in 1154, and forthwith he placed the great seal in the hands of the rising young churchman, and thus by one step he rose to be the high chancellor of the kingdom. It was a critical time in England. The pope and the clergy were using all their power to free the priesthood from subjection to the civil authority in all matters, even of criminal offences. They desired that theft, murder, assaults and all offences committed by the clergy should not be tried in a civil court, but in the courts of the Church and before the clergy. The pope demanded that his power of investiture should be recognized in the case of all bishops, thus giving him a temporal as well as ecclesiastical power in the kingdom. These and other allied subjects were the questions of the day, and the two estates of the realm were engaged in a contest to which all their energies were directed. It was natural that by a liberal patronage the king should endeavor to attach the young, rising and splendid churchman of most brilliant parts to his side, and thus by having an ecclesiastical of na-

tive birth in a place of power, succeed in baffling the policy of the court of Rome. Accordingly, when Theobald died, in 1162, the king resolved to place à Becket in the see of Canterbury. The bishops, aware of the intimacy which had subsisted between the king and the chancellor, and dreading the effects of the royal favor, opposed the appointment, but Henry prevailed, and à Becket was consecrated. To the surprise and rage of Henry he discovered that as soon as à Becket had to decide on any point touching the great questions at issue, he opposed the civil power and took the side of the pope. Thus it appeared that his aim had all along been to reach a place of influence that would give him a commanding authority. Very seldom have two leaders been better matched. They were famed for their quickness of perception, for resolution and indomitable courage; and once having taken their sides, they had no idea of change. At length, after three years of determined strife, a council of the barons

came obvious that the real question was, whether the pope of Rome or the king of England should be the sovereign of the kingdom, and whether the land should be governed by the laws of the realm or by the canon law as interpreted by the clergy. The contest was determined in a manner which exhibits the spirit of the age, for on the 29th of December, 1170, four barons, having heard of some new aggression of à Becket, rushed into the cathedral and murdered him while he was engaged in the celebration of the evening or "vesper" service.

The pope excommunicated the murderers, and the king, who was considered as the real cause of the murder, had to do penance at the grave of Becket and to concede to the see of Rome the free exercise of its judicial functions. The cathedral was desecrated for one year, during which time divine service was not performed; the bells were fastened, the pavement turned up, the hangings and pictures removed and dirt suffered to accumulate

Wales, in the year 1280, and he greatly distinguished himself by his love of learning. He founded a college at Aberguilly for twenty-two prebendaries, thus making a large provision for the culture of learning and the support of men whose lives were to be devoted to the accumulation and dissemination of knowledge. With an earnest desire to elevate the people in Wales, he founded a second college, which he established at Llandewybrevy, and here he made provision for thirteen prebendaries, thus displaying an enlightened view of his duty and setting a bright example to the bishops of his age who looked to high office with a view to personal exaltation or the advancement of their favorites and friends.

**THOMAS DE CANTILUPE** (kan'te-lupe), who became an eminent bishop of Hereford, was a son of William, Lord Cantilupe, and Millicent, countess of Hereux. He was born, according to Fuller, either at Abergavenny Castle, in Mon-

TOMB OF THEODORIC THE GREAT NEAR RAVENNA, ITALY.—See THEODORIC THE GREAT.

cathedral is one of the most splendid specimens of monumental architecture of that age.

**THOMAS** (tom'as). The apostle Thomas, Matt. x. 3; Mark iii. 18; Luke vi. 15; Acts i. 13, has been considered a native of Galilee, like most of the other apostles, in spite of a differing tradition, John xxi. 2. He is also called Didymus, a Greek term with the same signification as his Hebrew name.

In the character of Thomas was combined great readiness to act upon his convictions, to be faithful to his faith even unto death, so that he even exhorted his fellow-disciples, on his last journey to Jerusalem, "Let us also go, that we may die with him," John xi. 16, together with that careful ex-

the character of Thomas what they consider contradictory traits, viz., inconsiderate faith and a turn for exacting the most rigorous evidence. We find that a resolute and lively faith is always necessarily combined with a sense of its importance, and with a desire to keep its objects unalloyed and free from error and superstition. Christ himself did not blame Thomas for availing himself of all possible evidence, but only pronounced those blessed who would be open to conviction even if some external form of evidence should not be within their reach.

Thomas preached the gospel in Parthia, and according to Jerome in Persia, and was buried at Edessa. According to a later tradition, Thomas went to India and suffered martyrdom there.

THE MODERN SALONIKI, ON THE SITE OF THESSALONICA.—See THESSALONICA.

was held in 1164, since known as the Council of Clarendon. In this celebrated assembly the "Constitutions of Clarendon" were drawn up. The relations of the Church and State were declared, the old usages of the nation and the supremacy of the civil estate in all matters of general government were affirmed, thus practically denying any temporal power of the pope in the kingdom. Becket was induced by the barons to sign the "constitutions;" but when the pope refused to sanction them, he retracted, refused to celebrate the offices of the Church, and he made an effort to flee from the kingdom. Eventually he succeeded in making his escape, and the anger of Henry increased against him and all his supporters. The strife prevailed for six years, but at length, in 1170, he was induced to return to England. He returned, but evidently determined to carry out his policy, for the censures which he had inflicted were not removed, and new sentences of excommunication were proclaimed; so that if possible the authority of the State was still more disregarded and the powers of the king set at naught. It be-

within the walls. The reconsecration of the church, after so memorable an event, led the way to an influx of benefactions and honors, so that his shrine became the richest in England; and as he was canonized in 1174 by Alexander III., he soon became one of the most popular of saints. Four centuries afterward, in 1538, Henry VIII. had him tried for treason, his bones dug up and burned, and the enormous wealth of jewels and treasures belonging to his shrine carried off and placed in the royal treasury. Ever since, the character of à Becket has been viewed from the standpoint of the historian, according to his decision on the great question of the supremacy of the Church in temporal and spiritual affairs, or whether the Church should hold to its province, the State to temporal matters, each acknowledging the other to be of God, and legitimately ruling in its own sphere.

**THOMAS OF BETEE** became an eminent bishop in the latter part of the thirteenth century. He was elected to the see of St. David, in South

monthshire, or Harringworth, in Northamptonshire, the two principal residences of his family. He was archdeacon of Stafford, and held the high offices of chancellor both of the University of Oxford and of the kingdom. He is described as having been eminent for the great sanctity of his character during his whole life; and his life was a scene of trouble. He had visited Rome to appeal to the pope for redress, and taking sick, he died at Civita Vecchia, on the 25th day of August, 1282. His body was divided into three parts to honor three places: the flesh was deposited in a church near Florence, the heart at Ashridge, in Buckinghamshire, and the bones in the Lady Chapel at Hereford Cathedral. His fame soon eclipsed that of St. Ethelbert. His bones were afterward removed and deposited in a splendid tomb in the eastern aisle of the north wing of the transept of the cathedral, when Edward II. came from Calais to attend the ceremony. From his time the bishops of Hereford adopted his coat-of-arms as the arms of the see. He was a great benefactor of the cathedral, and a principal part of

the greater transept was built by him. He presided over the see from 1275 until 1282.

**THOMAS, CHRISTIANS OF ST.** See **CHRISTIANS OF ST. THOMAS.**

**THOMAS, EDWARD**, was born in 1800, in St. Stephen's parish, South Carolina. He lost his father in his infancy, and under his mother's care he was carefully trained at Pineville, whence he was removed to South Carolina College, where he graduated in 1819, and afterward removed to Harvard for the sake of the advantages which were offered in that place. From Harvard he went to Yale; and having entered the theological seminary in New York, he prosecuted his studies there with great ardor, and in 1825 he was ordained a deacon by Bishop Bowen in St. Philip's Church, Charleston. For two years he acted as a missionary in the Fairchild and Greenville districts; and having in 1827 been ordained to the priesthood, he was called to the rectorship of Trinity Church, on Edisto Island. His health declined in this place, and he returned to Florida, where his strength returned, and he settled in the parish of St. John's, Berkeley county, South Carolina, where he re-

UPPER CHAPEL OF ST. THOMAS, ON OLD LONDON BRIDGE, DEDICATED TO THOMAS À BECKET.

mained until his death, in 1840. A volume of his sermons was published after his death, and both in style and matter they are admirable specimens of discourses for the sanctuary. He was a man of fine taste, fond of learning, earnest in his work and of decided piety.

**THOMAS, LITURGY OF ST.**, a liturgy used by the Christians of St. Thomas, in India. The tradition is that it is the liturgy given by St. Thomas to India, and it has also been called the Malabar liturgy. It has been much tampered with by the Romish missionaries sent to Goa in the sixteenth century.

**THOMAS DE LA WARE** (deh lah ware), who lived at the close of the fourteenth century, was the rector of the parish now known as Manchester, Lancashire, England, and he was the founder of the establishment at that place which, after centuries of change, has come to be the cathedral of Manchester. He was in holy orders in 1380, at which time he was collated to the Grindale prebend in York Cathedral, and soon after he became "parson" of Manchester. He had a license given to him to be non-resident. His elder brother, the baron of Manchester, died without issue, and Thomas, the parson, succeeded

to the title and estates when he was forty years of age. He resided at Manchester, being fond of the place, and did not avail himself of his license to live elsewhere. Seeing the decayed state of St. Mary's Church, which had been built of timber, and the inefficiency of the provision for the population of a growing place, he formed the idea of founding a new and extensive church edifice, with residences for the clergy and other establishments of an educational and ecclesiastical character; and thus the scheme was commenced which resulted in the Collegiate Church of Manchester. A warden was appointed, with whom were associated eight Fellows, two parish priests, two canons and four deacons, to whom were attached four clerks and six choristers. The first warden entered on his duties in the year 1422. The institution continued to flourish until 1535, when George Collyer, who was then the warden, refused to admit the supremacy of Henry VIII. as temporal head of the Church; whereupon Parliament dissolved the College. On the accession of Mary it was refounded. In Elizabeth's reign it was dissolved and re-established, and thus, with varying fortunes, it continued to flourish until the enormous growth of the population in Lancashire and Cheshire rendered the increase of the episcopate necessary, and in 1848 the Right Rev. James Prince Lee, D.D., was constituted the first bishop of the new see of Manchester, and the Collegiate Church was recognized as the cathedral of the diocese.

Manchester Cathedral, though a large and imposing structure, is altogether different in splendor and magnificence from the first-class churches of Lincoln, Ely, York or Canterbury, and yet there is much of its architecture that is exceedingly fine. Like the other great churches of the kingdom, being built in successive ages, it presents a great variety of styles; and the arrangement of its chapels and different parts being peculiar, the effect is not so imposing as the actual magnitude of all the parts might be supposed to produce. The interior is a forest of columns and arches; and as there are five aisles running parallel to each other, the edifice as a whole is nearly as broad as it is long. Still, the terms nave, choir and aisles are applied

to its different parts; and were it not for the effect which is produced by the heavy pews and ungainly gallery introduced to turn a large part of the building into a modern parish church, the interior effect of the whole would not be destitute of grandeur. Notwithstanding the heavy lumbering pews, the view from the west end of the nave is really imposing, as the details of the Perpendicular work are accurate and really fine. The whole work is of the Perpendicular period, and it is remarkably pure. The nave has six arches on each side, whose spandrels are richly filled with the ordinary details of the period; the string-course above the arches consists of a hollow moulding, with flowers at intervals, and crowned with a row of Tudor flowers. There is no triforium, as the edifice is wanting in height; the clerestory windows are of five lights and the usual tracery. The roof is of timber, nearly flat, divided into panels, with carved foliage at the intersections. The principal beams have their spandrels open, and the corbels which support them are angels with expanded wings. The chapter-house is octagonal, but only four of its sides have windows, which are of four lights each, with the usual tracery. The tower, which is placed at the west end of the nave, is lofty and imposing, but the site of the cathedral is bad, and, surrounded by the

traffic of one of the largest manufacturing places in the world, there is little poetry in its situation. This Collegiate institution has been presided over by several of the eminent men who from age to age have distinguished themselves at Oxford and Cambridge, and who have been raised because of their merits to the highest places in the Church.

**THOMAS, WILLIAM**, bishop of St. David's and of Worcester, was born in 1613, and educated at the public school of Carmarthen and at Oxford. He held the vicarage of Langharne, of which he was deprived during the Commonwealth, but reinstated at the Restoration, and appointed successively to several high offices in the Church. He promoted the translation of the Bible into Welsh, and was the author of "The Roman Oracles Silenced." He died in 1689.

**THOMASIUS** (to-ma'zh'us), **CHRISTIAN**, a distinguished German philosopher, was born at Leipzig in 1655. He was son of a professor of rhetoric, and commenced his public career by lecturing on law in the German language—an innovation which was strongly criticised, all university lectures having been delivered in Latin. He was a man of bold and daring opinions, which invited persecution. A host of enemies rose against the Reformer, and at last the ridiculous charge of atheism was preferred against him. He had dared to oppose the belief in ghosts and witches, and to assert that polygamy was not contrary to the law of nature, and that there was no harm in marriages between persons of different religions. To escape arrest at the instigation of the enraged theologians, he went to Berlin, where he found a protector in Frederick I. of Prussia. He established a German review and wrote a "History of Wisdom and Folly." His death occurred in 1728.

**THOMISTS** (tom'ists). This name was given to the followers of Thomas Aquinas, the most eminent of the schoolmen. He was a Dominican friar, born in A. D. 1224, and educated at Cologne and Paris. He remodeled the scholastic divinity, and was therefore called the angelic doctor and eagle of divines. His works are printed in eighteen volumes. He died in the fiftieth year of his age, and was canonized by Pope John XXII. His great theological opponent was Duns Scotus, and the Dominicans and Franciscans waged war against each other long and bitterly, the Franciscans holding that the Virgin Mary was born without the taint of original sin, and the Dominicans vehemently asserting the contrary.

**THOMOI** (to'moy), 1 Esd. v. 32, the same as Thamah, Ezra ii. 53.

**THOMPSON** (tom'sun), **CHARLES**, was born in 1748, at Amwell, New Jersey. He was a member of the first class in Brown University, at Providence, Rhode Island, where he studied under Dr. Manning, who left New Jersey to establish a college at that place. He graduated in 1769, and in the next year he settled as pastor of the church at Warren. When the Revolutionary war broke out, he held the office of chaplain in the army for three years. His church at Warren was burned, and he was taken a prisoner and confined at Newport for a month. In 1779 he accepted a call from the First Baptist Church at Swansea, which was near his former place, at Warren; and here he enjoyed the blessing of several revivals of religion. He labored for twenty-three years at Swansea, and

at length he was obliged to leave the church for want of an adequate support. He was seized with hæmorrhage of the lungs when about to settle at Charlton, in Worcester county, Massachusetts, and this attack ended in consumption, which terminated his life on the 4th day of May, 1803. He was a man of commanding presence, of fine voice and great pulpit power. He followed the goodly practice of training young men, and so bringing his knowledge and influence to bear on the formation of their character, and he held a prominent place among the great preachers of his day.

**THOMSON** (tom'sun), **ANDREW, D.D.**, was born in 1779, at Sanquhar, in Dumfriesshire. He was educated in the University of Edinburgh, and settled as parish minister of Spronston, in Roxburghshire, in 1802, where he remained until 1808, when he was removed to Perth. In 1810 he was called to the New Gray Friars' Church, in Edinburgh, which he held until 1814, when he was removed to the large new church of St. George, erected in the western part of the "New Town" of Edinburgh. In consequence of his great influence and commanding power in the pulpit, he was placed in this church, which, from the intellectual character of the people who worshiped in it, required the highest sanctified talent of Scotland. He labored in this charge until 1831, when he was suddenly removed by death. Few ministers of the gospel have ever displayed a more remarkable union of solid intellectual power, fine scholarship, splendid rhetorical ability, great zeal, undoubted piety and fearless courage tempered with wisdom. He published "Sermons on Infidelity," "Lectures on Select Portions of Scripture," "The Doctrine of Universal Pardon," "On Hearing the Word," "On Scripture History" and "Sermons and Sacramental Exhortations." His "Sacramental Catechism" is well known, and it continues deservedly to be in great demand.

He took a determined stand against the policy of the British and Foreign Bible Society for publishing the Apocrypha in the same volume with the Old and New Testaments, and he labored with great zeal to remove abuses in the system of patronage which prevailed in the Church of Scotland—a system which in the year 1874 was abolished by Parliament, with the approval of the General Assembly of the Church. He was the ardent and successful friend of education, morality and evangelical religion, and he lived to see a deep-toned piety spreading over the land.

**THOMSON, EBENEZER**, a native of Scotland, was born in 1784, and educated at the University of Edinburgh. He held the position of classical master in the academy at Ayr. His literary and antiquarian tastes were displayed by an edition which he published in 1824 of the old work "The King's Quair;" and this work was well received in Scotland. In 1841 he published another small work, entitled "German Analogies," and in 1850 it was followed by a much more important one, "Select Monuments of the Doctrine and Worship of the Catholic Church in England before the Norman Conquest." This subject required a wide and careful examination of authorities and great solidity of judgment. His next work seemed to issue, as it were, out of the materials of the last mentioned, for in 1858 he published "A Vindication of the Hymn 'Te Deum Laudamus,' with Translations," etc. He died in the manse of Forgan parish in 1861, aged seventy-seven years.

203

**THOMSON, WILLIAM, D.D.**, was born in 1819, at Whitehaven, in the North-west of England. He was educated at Shrewsbury School, whence he passed to Queen's College, Oxford, in which he was greatly distinguished. He obtained a scholarship and a Fellowship, and he afterward became a tutor in his college. He entered the ministry, being ordained in 1842. For four years he preached at Guildford and Huddesden, near Oxford, and in 1848 and 1856 he was select preacher in the university. In 1853 he was Bampton lecturer. In 1855 he was appointed to Marylebone, in London, and in the same year he was raised to be provost of Queen's College. Three years afterward he was preacher at Lincoln's Inn, and next year he became chaplain in ordinary to the queen. In 1861 he was placed in the see of Gloucester and Bristol, whence in 1862 he was translated to the archbishopric of York.

His first work was in the department of logic, entitled "An Outline of the Necessary Laws of Thought," a profoundly acute performance. His Bampton course, "The Atoning Work," was a closely-reasoned treatise. In 1861 his "Sermons" at Lincoln's Inn were published. His mental tendency was displayed still further in 1869 by his "Limits to Philosophical Inquiry." Besides these, he has published a number of sermons for the working-classes, pamphlets, reviews, and his charges are of a remarkably thoughtful and practical character. This eminent man affords an example of the fact that the men who in the universities carry off the honors, who rise to Fellowships and take the first places in their literary course, are the men who as physicians and as lawyers reach the highest places in their professions, and as clergymen attain to the foremost rank in the Church.

**THORN, THORNS.** Thorns, thistles, brambles and briars are frequently mentioned in Scripture. Rabbinical writers say that there are not fewer than twenty-two Hebrew words which indicate thorny or prickly plants and shrubs. It would be difficult, perhaps in the present state of our knowledge impossible, to identify and describe all these; and such a minute investigation would be little suitable to the character of this work. Let it be enough to illustrate some of those passages where the mention of thorns has some peculiar interest.

All travelers speak of the prickly pear as abounding in Palestine at the present day, and forming hedges wellnigh impenetrable. Dr. Bonar scrambled through such a fence on Mount Zion, and found plenty of this plant at Nablous (Shechem); he suggests, therefore, that it may have been the bramble of Jotham's parable, Jud. ix. 14, 15. He found it also abounding at Shunem and Nazareth. Jotham's bramble has been otherwise supposed to be the *Lycium Europæum*, which is common in hedges, compare Prov. xv. 19. We find mention of the "lily among thorns," Song Sol. ii. 2; and Dr. Thomson tells us that in gathering the Hühle lily he "sadly lacerated his hands." There is frequent reference to the burning of briars and thorns, which Dr. Thomson remarkably illustrates. He says that the matted thorn-bush is the fuel with which lime is burned: "And thus it was in the days of Isaiah: 'The people shall be as the burnings of lime; as thorns cut up shall they be burned in the fire,' Isa. xxxiii. 12. Those people among the rocks yonder are cutting up thorns with their mattocks and pruning-hooks, and gathering them into bundles to be

burned in these burnings of lime. It is a curious fidelity to real life that when the thorns are merely to be destroyed they are never cut up, but set on fire where they grow. They are only cut up for the limekiln."

The Christian would naturally be desirous of identifying the thorn of which the crown was plaited that was placed in mockery on the Redeemer's brow, Matt. xxvii. 29. No absolute certainty can be arrived at; still, the *Zizyphus spina Christi*, which grows to a considerable height and spreads its branches widely, has been supposed, and with much probability, the thorn in question. This plant was very suitable for the purpose, as it has many sharp thorns, and its flexible, pliant and round branches might easily be plaited in the form of a crown; and what seems to be the greatest proof is that the leaves much resemble those of ivy, as they are a very deep green. Perhaps the enemies of Christ would have a plant somewhat resembling that with which emperors and generals were used to be crowned, that there might be calumny even in the punishment.

**THORNDIKE** (thorn/dike), **HERBERT**, a learned divine, was educated at Trinity College,

LOWER CHAPEL OF ST. THOMAS.  
See under engraving on the preceding page.

Cambridge, of which he became a Fellow. In 1638 he was proctor of that university. In 1642 he was presented to the rectory of Barley, in Hertfordshire, and in 1643 he was elected master of Sidney College, Cambridge. At the breaking out of the civil war he was ejected from his living, but he was restored to it at the Restoration, but he resigned it on being made a prebendary of Westminster. He assisted Dr. Walton in his edition of the Polyglot Bible. He also wrote "A Discourse of the Right of the Church in a Christian State" and other works. He was a member of the Savoy Conference, and in the little he said completely undeceived the nonconformists, who had supposed he was of their side. There was also a suspicion that he had a little too much leaning to the Church of Rome. But that he was a man of great learning and an able Oriental scholar seems indisputable. He died in 1672, and was interred in Westminster Abbey.

**THORNWELL** (thorn'wel), **JAMES HENRY, D.D.**, was born in 1811, in Marlborough district, South Carolina. He was educated at South Carolina College and at Harvard. He also went to Europe in order to mature his mind on branches of study to which he attached great importance. For a time he turned his attention to law, but

eventually he devoted his mind exclusively to theology, and received licensure in the Presbyterian Church. His first charge was the Waxham church, and he ministered afterward to the Presbyterian church at Columbia and the Glebe Street Church in the city of Charleston. His great intellectual power and fine attainments created a great demand for his services in literary institutions, and accordingly he was elected professor of logic and belles-lettres, sacred literature and the evi-

THE HOLY BRAMBLE.—See THORN.

dences of Christianity in the South Carolina College, in which also he was chosen chaplain, and over which he was made president. In 1856 he was appointed professor of theology in the Old School theological seminary at Columbia, and he remained in this chair until his death. Dr. Thornwell was one of the leading men of his age, equally celebrated for his mental power, his manifold acquirements, his critical accuracy, his surpassing eloquence and power as a preacher and his wonderful influence as a professor in moulding the views of students under his care. He held a high place in the General Assembly, and he was recognized as a leader whose power was felt by all who knew him. He died at Charlotte, North Carolina, August 1, 1861. In 1845 he published a learned work on the Apocrypha, in reply to an essay by Bishop Lynch, in which the arguments of Romish theologians are reviewed. In 1869 his "Discourses preached in the College Chapel" were published. He was a diligent writer in the "Southern Presbyterian Review," and he allowed many of his tracts and learned essays to be printed. Since his death his life-work has been given to the public in successive volumes, as he had laid out all his strength on the "Theological Course" which he had delivered in the seminary; and the massive character of this work is admitted by all who have studied it. It discusses many of the questions which are of interest in modern times, and it will command a place in all theological libraries as a work of research, acute reasoning and great argumentative and rhetorical power.

THURBIE.—See article.

his strength on the "Theological Course" which he had delivered in the seminary; and the massive character of this work is admitted by all who have studied it. It discusses many of the questions which are of interest in modern times, and it will command a place in all theological libraries as a work of research, acute reasoning and great argumentative and rhetorical power.

**THRACIA** (thra'sh'a), 2 Mace. xii. 35, Thrace, the country between the Aegean, the Propontis and Euxine and the rivers Strymon and Danube, now Bulgaria and Roumelia.

**THRASEAS** (thra'zhe-as), 2 Mace. iii. 5, father of Apollonius, governor of Coele-Syria and Phenice.

**THREE CHAPTERS**, or **TRIA CAPITULA**. This is the title of one of those imperial attempts which were made by the authority of the State to bring about the reunion of sects in the Church. Of these the **HENOTICON** and the **ECTHESIS**, which see, are notable examples. The emperor Justinian, having in the year 542 been shocked by some of the writings of Origen, published an edict, in which nine of the chief Origenist errors were set forth and condemned, while Origen himself, though long dead, was anathematized. Among the many Origenists of the time was Theodore the Monophysite, bishop of Caesarea, in Cappadocia, who, on the publication of this edict, devised a plan by which to avenge the memory of Origen and to strengthen the position of the Monophysites. He succeeded in persuading the emperor that the accephali might be restored to the Church if the writings under the "three heads," or "chapters," which he named, were condemned, and so ceased to become stumbling-blocks by seeming to support the Nestorian heresy. These three were—1. The epistle of Theodoret against the twelve anathemas of St. Cyril. 2. The epistle of Ibas of Edessa to Maris; and 3. The works of Theodore of Mopsuestia. Justinian fell into the snare, and published the edict of the three chapters (A. D. 544), giving a profession of his own faith and anathematizing the three works referred to. The emperor's edict was subscribed by the four Eastern patriarchs, and after some time Vigilius, the bishop of Rome, assented to it, adding a saving clause to the effect that he did not condemn the Council of Chalcedon, but this assent he afterward retracted, when he had been excommunicated by a council held at Carthage; and eventually (A. D. 550) he declared the Eastern bishops to be separated from the communion of Rome. The condemnation of the three chapters, with a similar reservation respecting the Council of Chalcedon, was, however, confirmed by the fifth general council (A. D. 553), the second Council of Constantinople.

**THREE DENOMINATIONS**. In 1727 an association was formed in London of Presbyterians, Independents and Baptists, which had in view the exercise of watchfulness and the adoption of prudent means in all cases when their liberties might be assailed. The experience through which they had passed during the reigns of James II. and Anne impelled to this course, and they aimed by united action to prevent the adoption by Parliament of any measures of a persecuting character.

**THREE TAVERNS, THE**. See TAVERNS, THE THREE.

**THRESHING**. See AGRICULTURE.

**THRESHOLD** (thresh'old). The phrase of Zeph. i. 9 has been thought to allude to the Philistine superstition in consequence of the misfortune to their god Dagon, 1 Sam. v. 5. But it may

with greater probability be interpreted of the eagerness with which the servants of the great rushed out to seize the property of others and thereby increase the wealth of their masters.

**THRONE**, the ornamented seat on which royal personages gave audience on state occasions among the Hebrews, 1 Ki. ii. 19; xxii. 10. It was originally a decorated arm-chair, higher than an ordinary seat, so as to require a footstool to support the feet. Sometimes the throne was placed on a platform ascended by steps, Isa. vi. 1. Solomon made a throne of ivory overlaid with gold, which had six steps, with six lions on each side, 1 Ki. x. 18. Archelaus addressed the multitude from "an elevated seat and a throne of gold." A throne became the emblem of regal power, Gen. xli. 40; whence the phrases "to sit on the throne of his kingdom," Deut. xvii. 18—that is, to rule as a monarch—and "to sit on the throne of a person," 1 Ki. i. 13, which signifies to be his successor.

**THRONE**. 1. A bishop's stall in his cathedral church. In the ancient basilica the throne occupies the apex of the apse. 2. A seat for a bishop in any other church.

**THRUM**, Isa. xxxvii. 12, margin, the threads which tied a web to the beam of a loom; ends of weavers' threads.

**THUMMIM**. See URIM.

**THUNDER** (thun'der). The usually clear and dry atmosphere of Palestine renders thunder a comparatively rare occurrence. During the

THE COMMON THORN OF SYRIA.—See THORN.

summer and autumn months it is scarcely ever heard. Thunder-showers are mentioned in one or two places as almost unheard-of occurrences in harvest, Prov. xxvi. 1; 1 Sam. xii. 17, 18. In 1838 Robinson speaks of having witnessed thunder and lightning on the evening of the 1st of May, at Jerusalem; and in 1843 the late rains began with a thunder-shower on October 25. As a symbol of the divine power and majesty, thunder is frequently referred to in Scripture, Ex. xix. 16; Ps. xviii. 13; also of the divine indignation against sin, 1 Sam. ii. 10; 2 Sam. xxii. 14; Ps. lxxvii. 18.

But such applications of the phenomenon call for no explanation, as they were common to the Hebrews with other nations.

**THURIBLE** (thoo'ri-bel), a censer, usually made of gold or other metal, filled with lighted charcoal, on which incense is sprinkled, the perfume escaping through holes in the top. It is now swung from right to left, and not in a circle as formerly. In the middle ages it was often suspended from the roof of churches, and swung backward and forward.

**THURIFER** (thoo'ri-fer), the acolyte who carries the censer and swings it during divine service. He is also called the thuribler.

**THURSTON** (thurs'tnn), GARDINER, was born in 1721, at Newport, Rhode Island. Very early in life he experienced deep convictions of sin, and his friends expected much from him in future life. Not, however, until 1741 was he admitted to the Church by baptism; and in 1748 he was licensed to preach, and he became an assistant to the Rev. Mr. Eyres, at Newport; and thus preaching part of the time and engaging earnestly in study, he prepared himself for greater usefulness. On the death of Mr. Eyres, in 1759, he abandoned all worldly business and succeeded to the sole pas-

SOLANUM SODOMUM.—See THORN.

torate of the church, and he continued with sedulous diligence in this service until his growing infirmities led him to retire from active labor. In 1799 he demitted the chief duties of his office, and he gradually declined in strength until 1802, when, on the 23d day of May, he died.

**THWAITES** (thwaits), EDWARD, who was one of the most learned Saxon scholars of the seventeenth century, was born in 1667, and educated at Oxford, where he became a Fellow in Queen's College. Having turned his attention to the study of Saxon literature, he was made Saxon preceptor in Queen's College. In 1708 he was appointed reader in moral philosophy in the university, and in the following year he became regius professor of Greek. His publications were chiefly on subjects connected with Anglo-Saxon matters, including grammars, an edition of King Alfred's Saxon version of Boethius on consolation and philosophy, an edition of the Saxon lexicon of William Somner, and the Book of Job and the Gospel of Nicodemus in Anglo-Saxon. He died in 1711.

**THYATIRA** (thi-a-ti'rah), a city on the northern border of Lydia, about twenty-seven miles from Sardis, the seat of one of the seven Apocalyptic churches, Rev. i. 11; ii. 18. Its modern name is Ak-hissar. Strabo asserts that it was a Macedonian colony. The Roman road from Pergamus to Sardis passed through it. It was noted

for the art of dyeing, as appears from Acts xvi. 14. It still maintains its reputation for this manufacture, and large quantities of scarlet cloth are sent weekly to Smyrna. The town consists of about two thousand houses, besides two or three hundred small huts; of the former three hundred are inhabited by Greeks, thirty by Armenians and the rest by Turks. The common language of all classes is the Turkish, but in writing it the Greeks use the Greek and the Armenians the Armenian characters. There are nine mosques and one Greek church.

**THYINE** (thi'ine) **WOOD**, a costly aromatic wood mentioned among the merchandise of the mystical Babylon, Rev. xviii. 12. It was used in various ornamental carvings, sometimes inlaid with ivory. It appears to have been called *citrus* by the Romans—very likely the white cedar, *Cupressus thyoides*, which grows to the height of from sixty to eighty feet, or *Thua articulata*, also called *Callitris quadrivalvis*. The wood is of a dark color, close-grained and fragrant.

**TIARA** (ti-a'ra), the crown originally worn by the pope. Originally it was a round high cap, and John XIII. first encompassed it with a crown, being a simple circlet of gold, like that worn by early bishops. A second circlet was placed by Boniface VIII., and a third by Benedict XII., 1334-41. It was not, however, before Urban V., thirty years later, that it was habitually used. The triple crown symbolizes the ecclesiastical, the kingly and the imperial power which is claimed by the supreme pontiff over the bishops, kings and emperors of the earth. The tiara and the keys represent the dignity of the pope, the keys referring to the spiritual and the tiara to the civil dignity, for as soon as the pope dies his arms are represented with the tiara alone without the keys.

**TIBERIAS** (ti-be're-as), a town in Galilee, on the western shore of the lake or sea of Gennesaret, sometimes also called from this place the sea of Tiberias, John vi. 1, 23. There was probably a more ancient city on or near the site, for Herod Antipas cleared away the ruins of sepulchres in order to find room for the new town which he named after the emperor Tiberius. It was, from his time till that of Herod Agrippa II., the chief city of the province, and it was adorned with buildings, a royal palace and a stadium. But the population were a motley race. Herod brought in strangers and slaves. It may be that hence, as Tiberias must have been, so to speak, ceremonially unclean, our Lord never visited it. He was often in the immediate neighborhood, but we never read of his entering Tiberias. The inhabitants were occupied in fishing and the navigation of the lake. In the Jewish war Tiberias was an important military station; nor did it lose its repute after the destruction of the Jewish polity. It was the seat

for centuries of a famous academy, and to the present day it is one of the four holy cities. The

THE THISTLE OF SYRIA.—See THORN.

present city, *Tabariyeh*, stands about four miles from the southern extremity of the lake at the north-east corner of a small plain. The walls enclose an irregular parallelogram, and are strengthened by round towers, ten on the west, five on the north and eight on the south. There were also some towers along the shore. It is described as a filthy place, fearfully hot in summer, and, according to Dr. Thomson, contains about two thousand inhabitants.

**TIBERIAS, SEA OF**. This is called besides, in the New Testament, "the Sea of Galilee," Matt. iv. 18, "the sea," or "Lake of Gennesareth," Matt. xiv. 34; the Hebrew name is "Chinnereth," Num. xxxiv. 11.

This sea lies very deep among fruitful hills and mountains, from which, in the rainy season, many rivulets descend. The Jordan enters it on the north and quits it on the south, and it is said that the river passes through it without the waters mingling. Its extent has been greatly overrated. Robinson considers that its length in a straight line does not exceed eleven or twelve geographical miles, and that its breadth is from five to six

CACTUS FICUS INDICUS.—See THORN.

miles. From numerous indications it is inferred that the bed of this sea was formed by some ancient volcanic eruption which history has not recorded; the waters are very clear and sweet, and contain various kinds of excellent fish in great

abundance. It will be remembered that several of the apostles were fishermen of this sea, and that it was also the scene of several transactions in the life of Christ; it is thus frequently mentioned in the New Testament. The borders of the lake were in the time of Christ well peopled, being covered with numerous towns and villages, but now they are almost desolate.

**TIBERIUS** (ti-be'r'us), the third emperor of Rome. He is mentioned by name only by St. Luke, who fixes in the fifteenth year of his reign the commencement of the ministry of John the Baptist and of Christ, Luke iii. 1. The other passages in which he is mentioned refer to him simply as the emperor, Matt. xxii. 17; Mark xii. 14; Luke xx. 22; xxiii. 2; John xix. 12.

**TIBHATH** (tib'hath), a city of Zobah from which David, after subduing the country, brought away much brass, 1 Chr. xviii. 8. In 2 Sam. viii.

bands or bars, whereas the leopard is spotted. The tiger is possessed of great strength, and in the East is considered as the emblem of power.

**TIGLATH-PILESER** (tig'lath-pi-le'ser), the Assyrian king who subjected the kingdom of Israel in B. C. 747. He is called Tilgath-Pilneser, 1 Chr. v. 6, 26.

**TIGRANES** (ti-gra'neez). There were two eminent men of this name, and they both belonged to Armenia. The first, who was a friend of Cyrus, and who, it is said, aided him against Astyages the Mede, flourished 550 B. C. The second, who is known as Tigranes I., was king of Armenia. He began his reign 96 B. C. He invaded Syria, joined his father-in-law Mithridates in war against the Romans, was defeated by Lucullus, but eventually he was permitted to hold the kingdom of Armenia. He was noted for his ambition and tyranny. He died 55 B. C.

THYATIRA.—See article.

8, we find Beth. Perhaps it may be *Taibeh*, between Palmyra and Aleppo.

**TIBNI** (tib'ni) disputed the throne of Israel with Omri, and the civil war which was thus kindled between the two factions lasted about three years with varying success, till the death of Tibni, B. C. 929, 1 Ki. xvi. 21-23.

**TIDAL** (ti'dal), a confederate of Chedorlaomer in his marauding expedition in Syria, Gen. xiv. He is called "king of nations," meaning, probably, that he was the acknowledged head of several nomadic tribes somewhere in the neighborhood of the Euphrates, but nothing is known as to the locality.

**TIGER** (ti'ger), a rapacious animal of the feline kind. The *Felis tigris* of Linnaeus, or the "royal tiger," is found in the warmer parts of Asia, chiefly in India and the Indian islands. The tiger has no mane like the lion, the head and mouth resemble the cat, and not the dog as in the case of the lion. The color is an orange-yellow ground striped with

**TIGRIS** (ti'gris), Judith i. 6, a very noted river of the East, the Hiddekel of Scripture.

**TIKVAH** (tik'vah). 1. The father of Shallum, husband of the prophetess Huldah, 2 Ki. xxii. 14. He is called Tikvah in 2 Chr. xxxiv. 22. 2. Father of a person whom Ezra employed, Ezra x. 15.

**TIKVATH.** See **TIKVAH**, 1.

**TILENUS** (ti-le'nus), DANIEL, a learned French Protestant divine, was born at Goldberg, in Silesia, in 1563, and went to France about 1590, and was naturalized by Henry IV. He at first distinguished himself as an opponent of the tenets of Arminius, but he afterwards enlisted on the side of the Remonstrants. He had a controversy with John Cameron, divinity professor at Saumur, and he addressed a letter to the Scotch nation disapproving of the Presbyterian and commending the Episcopal form as established in England. This so pleased James I., who hated Presbyterianism, that he invited the author to England, where he

received him very graciously and offered him a pension. He died in 1653.

**TILLEMONT** (til-mong'), SEBASTIAN LE NAIN DE, an eminent Church historian, was born in Paris in 1637, and at the age of ten was sent to the famous seminary of the Port Royal, where his proficiency was very extraordinary. At the age of eighteen he began to read the Fathers, and drew up for himself an account of early ecclesiastical history, after the plan of Usher's "Annals." After receiving orders, he settled at Tillemont (whence he took his name). In 1690 he began to publish his "History of the Emperors." This was followed by his "Ecclesiastical History." Extreme accuracy of facts and dates constitutes the great merit of this work, and the want of a more methodical arrangement is its chief defect. He died in 1698.

**TILLOTSON** (til'lot-sun), JOHN, a distinguished English prelate, was born in 1630. His father, who was a strict Calvinist, brought him up in the same principles, and sent him to Clare Hall, Cambridge. At the Restoration he conformed to the Established Church, was made king's chaplain and presented to a prebend of Canterbury. When Charles II., in 1672, issued a declaration for liberty of conscience for the purpose of favoring the Roman Catholics, he preached strongly against it, but was, nevertheless, advanced to the deanery of Canterbury, and obtained a prebend at St. Paul's. He warmly promoted the exclusion bill against the duke of York, and refused to sign the address of the London clergy to the king, on his declaration that he would not consent to it. At the execution of Lord William Russell he attended him with Dr. Burnet; and though afterward decided friends to the revolution, both these divines urged that nobleman to acknowledge the unlawfulness of resistance. After the revolution he was appointed clerk of the closet, and on the deprivation of Sancroft, in 1691, he was raised to the see of Canterbury. He died in 1694. His sermons rank amongst the most popular in the English language, and were at one time regarded as a standard of finished oratory.

**TILON** (ti'lon), a descendant of Judah, 1 Chr. iv. 20.

**TIMBREL.** See **MUSICAL INSTRUMENT**.

**TIMEUS** (ti-me'us), the father of a blind man whom our Lord restored to sight, Mark x. 46.

**TIMNA** (tim'na). 1. A concubine of Eliphaz, the son of Esau, Gen. xxxvi. 12-22. 2. The chief of an Edomite tribe, Gen. xxxvi. 40.

**TIMNAH** (tim'nah). 1. One of the landmarks on the northern boundary of the district allotted to Judah, Josh. xv. 10. This is probably the same place which is called Timnath, Josh. xix. 43, and which belonged to the tribe of Dan. It is supposed to be represented by the modern *Tibneh*, a village about two miles to the west of *Ain Shems* (Bethshemesh), now deserted. 2. A town in the mountain district of Judah, Josh. xv. 57. It is not mentioned elsewhere. By some it has been confounded with the Timnath of Gen. xxxviii. 12, but this is doubtful.

**TIMNATH**, or **TIMNATHA**. 1. The place to which Judah was going up when he was met

by his daughter-in-law Tamar, Gen. xxxviii. 12. Whether this is identical with Timnah of Josh. xv. 10 remains uncertain, though the probability is that it is so. 2. The residence of Samson's wife, Josh. xiv. 1, 2, 5.

**TIMNATH-HERES** (tim'nath-he'res), the name of a city, Jud. ii. 9, called more generally—

**TIMNATH-SERAH** (tim'nath-se'rah), a city in Mount Ephraim which was given to Joshua; he built it and dwelt there, Josh. xix. 50, and there he was buried, Josh. xxiv. 30. His grave was still pointed out in the time of Eusebius, who was inclined to identify the city with Timnah, in the territory of Dan.

**TIMNITE** (tim'nite), an inhabitant of Timnah, Jud. xv. 6.

**TIMON** (ti'mon), one of the seven appointed by the apostles to administer the secular matters in the early Church, Acts vi. 5. Nothing more is certainly known of him.

**TIMOTHEUS** (ti-mo'theus). 1. 1 Cor. iv. 17. See **TIMOTHY**. 2. A captain of the Ammonites repeatedly defeated by Judas Maccabeus, 1 Macc. v. 6, 11.

**TIMOTHY** (tim'o-the) is first mentioned in Acts xvi. 1, from which it appears that he was the son of a Jewish mother and Greek father. He was early trained in the knowledge of the Scriptures by a pious mother and grandmother, 2 Tim. i. 5; iii. 14, 15. He probably heard and embraced the gospel on Paul's first visit to Lystra, see Acts xiv. 7-20, as the apostle calls him "his own son in the faith," ch. i. 2; and when he revisited that place on his next journey, he found Timothy well known and highly esteemed as a disciple, see Acts xvi. 2, 3. Although still a young man, his character and gifts were such as to lead the apostle to choose him as a companion and helper in his ministry, for which he was the better fitted at that particular juncture, as his half Jewish and half Gentile extraction made him a good link between the two, see Acts xvi. 3. Henceforth he appears to have been wholly devoted to the service of the gospel, generally in company with the apostle, but sometimes employed on distant missions or remaining behind to instruct and build up newly-planted churches. He had the benefit of the apostle's constant instruction, 2 Tim. ii. 2; iii. 14, and appears to have enjoyed in the highest degree his confidence and affection.

**TIMOTHY, FIRST EPISTLE TO.** The date of this Epistle has been a subject of much controversy. It appears to have been written upon some occasion when Paul, having gone on to Macedonia from Ephesus or some neighboring place, had left Timothy to superintend the church at Ephesus until his return, ch. i. 3; iii. 14; iv. 13. This could hardly have been on occasion of either of Paul's three journeys to Macedonia mentioned in the book of Acts; for when he took the first, he had not preached in Ephesus, and Timothy accompanied him, Acts xvi. 3; xvii. 14; when he was about to undertake the second, he sent on Timothy before him, Acts xix. 22; and on the third Timothy was again his companion, Acts xx. 3, 4. It has therefore been supposed by some that he made a journey to Macedonia at some time during his ministry of three

years at Ephesus, and that he thence sent this letter to Timothy, whom he had left to govern the church in his absence. To this view it is forcibly objected that if such a journey were made it must have been short and hurried, not such a prolonged absence as this Epistle supposes, causing a continuance of Timothy's ministry in Ephesus. And it is hardly conceivable that the false teachers referred to in this Epistle should so early—even while Paul was with the Church—have acquired so much influence. Moreover, this Epistle and the two which follow it appear to have been nearly contemporaneous; for they resemble each other in language, matter and style of composition, as well as in the description which they give of the state of the Christian Church; and they differ from all Paul's other Epistles in these points, particularly (as some think) in the allusions which they contain to a greater development of church organization, and to prevalent errors and evil practices closely resembling those

THYATIRA—A NEAR VIEW.—See article.

which are noticed in the Second Epistle of Peter and the Epistles of Jude and John.

These and other considerations lead many to the conclusion that this Epistle was written after the imprisonment at Rome, with which the book of Acts concludes, and apparently immediately after a visit to the Asiatic churches.

**TIMOTHY, SECOND EPISTLE TO.** This Epistle appears to have been written when Paul was a prisoner at Rome, and was expecting speedy martyrdom, 2 Tim. i. 8, 16; iv. 6. Some critics who think that the imprisonment with which Acts xxviii. concludes lasted until his death necessarily place this Epistle during that imprisonment. But in addition to the general considerations noticed in the preface to the First Epistle to Timothy, there are several more particularly connected with this Epistle which seem entirely to exclude such a supposition. In Acts iv. 13 the apostle desires Timothy to bring a cloak which he had left at Troas, and some books; and in ver. 20 he says, "Erastus remained at Corinth, but Trophimus have I left at Miletus sick."

Now, it is difficult to suppose these passages to have been written about the end of the period described in Acts xxviii. For it was then six years since Paul had been at Corinth, Troas and Miletus, Acts xx. 5, 6, 17; Timothy had been with him on that journey at each of these places, and had repeatedly been in his company since; and upon that occasion Trophimus did not remain at Miletus, for he was with Paul at Jerusalem at the time of his apprehension, Acts xxi. 9. It would therefore seem that the circumstances thus referred to must have occurred on some journey which the apostle took after his first imprisonment at Rome.

There are also in this Epistle other indications of a less decisive character, but tending to the same conclusion. The friends who were with him when he wrote the former epistles of his imprisonment do not appear with him now, compare 2 Tim. iv. 10, 11, with Col. iv. 10, 14; he is evidently more rigorously confined than he was before, compare 2 Tim. i. 17, 18, with Acts xxviii. 30, 31; and his

expectations of the result of his trial are very different from what they were, compare 2 Tim. iv. 6 with Phil. i. 25; ii. 24.

This Epistle was written probably soon after Paul's arrival at Rome the second time as a prisoner. Where Timothy was at the time we do not know, but it is likely that he was at Ephesus, or some other place in Asia Minor, whence the route to Rome would lie through Troas; see 2 Tim. iv. 13.

The apostle appears to have been induced to write by feeling that he was almost without friends or helpers. He was therefore anxious that Timothy should come to him speedily, bringing with him Mark, 2 Tim. i. 15; iv. 9, 10. But knowing that it was uncertain whether he should be spared to give his last instructions with his own lips, he fills his letter with fatherly exhortations applicable to Timothy's present circumstances, instructing him in the duties of his ministry, especially in that of opposing false teachers who attacked the fundamental truths of Christianity, and with pathetic tenderness and deep solemnity urging upon him boldness in Christ's cause, steadfastness under per-

seecution, and a willingness to take his share in the sufferings of the saints.

**TIN**, a well-known metal, Num. xxxi. 32. It is mentioned as one of the articles of Tyrian trade with Tarshish, procured, it may be supposed, from the Phœnician colonies in Europe, and most probably by them from the British isles. The same word occurs in Isa. i. 25, but there it must be taken to mean some base alloy of inferior metals combined with silver ore and separated from it by smelting. The "plummet," Zech. iv. 10, "stone of tin," margin, was probably an alloy of lead or tin.

**TINDAL** (tin'dal), MATTHEW, a celebrated polemical writer, was born at Beer-Ferris, in Devonshire, in 1657. He studied at Oxford, and according to the report of his enemies, led a very immoral life there. But he obtained a fellowship at All Souls' College, and graduated LL.D. For a short time he went over to the Romish commu-

**TIPSAH** (tif'sah), a large and opulent city on the western bank of the Euphrates. The name means "ford;" and the town was, in fact, situated at the lowest fording-place of the Euphrates, whence it became the point of trading communication between the natives east and west of the river. On this account, and as commanding the ford, the possession of the place was deemed of great importance by the ruling powers of the day. This circumstance explains the contentions of the kings of Syria and Egypt respecting Carehenish, which was a strong place a little lower down the river, at the junction of the Chaboras. Solomon obtained possession of Tiph-sah, 1 Ki. iv. 24, probably in connection with the series of operations adopted by him for the purpose of drawing the Eastern trade into his own dominions. Nothing remains of Tiph-sah at the present day except the name, but the site is supposed to be marked by the village of ed-Deyr. The Tiph-sah of 2 Ki. xv. 16 is usually identified

he heard of the approach of this formidable foe, was naturally anxious to secure Jerusalem; he therefore despatched forces at once to alarm Hezekiah into submission. Tirhakah was a powerful monarch, sovereign of Ethiopia and Thebais; he must be identified with the Tarakos of Manetho, the third king of the twenty-fifth dynasty of Ethiopian kings, and the Tearkon of Strabo, with whom the Ethiopian dynasty in Egypt came to an end. He is variously said to have reigned eighteen or twenty years, 714-696 B.C., or 717-696 B.C., or even longer. We are told that he penetrated as far as the Pillars of Hercules westward, and deserved to be ranked, like Sesostris, with the great conquerors of the ancient world.

**TIRHANAH** (ter-ha'nah), a son of Caleb, son of Hezron, 1 Chr. ii. 48.

**TIRIA** (tir'e-a), a descendant of Judah, 1 Chr. iv. 16.

**TIRSHATHA** (ter-sha'tha), the title of the Persian governor of Judea. It has invariably the article, and is given to Zerubbabel, Ezra ii. 63, and to Nehemiah, Neh. viii. 9; x. 1, who in Neh. xii. 26 has another title, rendered "governor" in our version.

**TIRZAH** (ter'zah), one of the five daughters of Zelophehad, who were to have their father's inheritance, but to marry only in their own tribe, Num. xxvi. 33; Josh. xvii. 3.

**TIRZAH**, a Canaanitish city the king of which was one of those destroyed by Joshua, Josh. xii. 24. It appears to have been proverbial for its beauty, Song Sol. vi. 4. Tirzah, shortly after the disruption of the kingdom, became the residence of Jeroboam and his successors, till the royal palace having been burnt by Zimri, and probably the city despoiled, Omri chose out another metropolis and built Samaria, 1 Ki. xiv. 17. We have afterward only a brief notice of Tirzah in the time of Menahem, 2 Ki. xv. 14, 16. Its site has not yet been identified, though some would fix on Tellâzah, a thriving place in the mountains north of Nablous.

**TISHBITE**. See ELIJAH.

**TISRI**. See MONTH.

**TITANS** (ti'tans), Judith xvi. 7, according to classical legend the children of Uranus (heaven) and Gaia, or Terra (earth), vanquished by the gods of Olympus.

**TITHE**. There are some instances in patriarchal history of the dedication of a tithe or tenth part of property to the Deity or to his priest. Such we find in regard to Abraham and Jacob, Gen. xiv. 20; xxviii. 22. And examples may readily be produced of similar offerings among heathen nations.

The first command given to the Israelites respecting tithes was shortly after the deliverance from Egypt, Lev. xxvii. 30-33. Here a general principle is laid down. The tenth of the cattle and of the produce of the earth was to be devoted to the Lord, and to become the property of the Levites, a tribe which had no territorial inheritance as the rest had; and a tenth of the Levites' tithe was to be devoted to the priests. Of this tithe that of cattle must be paid in kind;

that of fruits might be redeemed on addition of one-fifth to the estimated value.

As the Israelites approached the promised land more particularly legislation became necessary. Accordingly, it was prescribed that the tithes were to be carried to the place God intended to choose "to put his name there," and there to be eaten by the whole family with the Levites in rejoicing thankfulness before the Lord, Dent. xii. 5-18. If, however, the sacred place were too far distant, then the tithes and firstlings might be turned into money, and that money laid out in the chosen place for the purchase of meat and drink, in which as before the family and the Levites might participate and rejoice, Dent. xiv. 22-26. Further, every third year (the Sabbatical year would be left out of the computation) this tithe was to be laid up in a man's gates, as distinguished from the place of the sanctuary, and there it was to be shared with the poor, the stranger and the Levite, Dent. xiv. 28, 29. And as it would seem that the tithes were not collected or reckoned by any officer, but were to be carried as a glad-offering to the Lord, it was further commanded that a man bringing his basket should profess before the priest that he had truly tithed the increase with which God had blessed him, Dent. xxvi. 12-14. The institution, then, appears to have embraced two objects: there must be a grateful acknowledgment of God in the dedication of a tenth to the support of the sacred tribe who were specially engaged in holy services; and there must be another similar portion set apart for the promotion of social intercourse in a holy festival, the Levite being invited also thereto; and that this might not degenerate into a mere worldly feasting of friends, every third year the festival was to be held at home for the special benefit of the needy. Some Biblical critics, indeed, suppose that the last mentioned was an additional tithe, so that there were three every third year; it is more reasonable, however, to imagine that there were but two, as above stated.

Samuel warned the Israelites that a king would exact a tenth for his royal establishment, 1 Sam. viii. 15, 17; it has been imagined that this was the poor man's tithe; more likely the prophet meant that, whereas there had previously been but ecclesiastical offerings, there would now, in addition, be a tenth exacted for purposes of state. If it were merely a transference, not a fresh burden, Samuel's warning could have had little weight.

Through the deterioration of the people the proper offerings of the tithes were neglected. Hezekiah therefore reimposed the obligation, and the produce was under certain officers, 2 Chr. xxxi. 4-19. The prophets censure the prevalent neglect, Amos iv. 4; Mal. iii. 8-10. In New Testament times some ran into the opposite extreme, and tithed the most trifling articles, though, while they thus attended to the form, they disregarded the substance of religion, Matt. xxiii. 23; Luke xi. 42; xviii. 12.

**TITHE**. 1. OF AGISTMENT, the tithe upon the sum gained by feeding cattle, for a given price, upon common lands, which was called agistment. 2. GREAT TITHES are the tithes of corn, hay, peas, beans, tares or the fruits of the trees and orchards, as apples, pears and the like. 3. MINUTE TITHES, small tithes, such as usually belong to a vicar, as of wool, lambs, pigs, butter, cheese, herbs, seeds, eggs, honey and wax. 4. MIXED TITHES, such as arise not immediately

from the ground, but from things nourished by the ground, as by means of goods depastured thereupon or otherwise nourished with the fruits thereof, as colts, calves, lambs, chickens, milk, cheese and eggs. 5. PERSONAL TITHES, such profits as arise by the honest labor and industry of man, employing himself in some personal work, artifice or negotiation, being the tenth part of the clear gain after charges deducted.

**TITLE** (ti'tl), a condition precedent to, or a claim in favor of, ordination, such as a sphere of parochial or other spiritual work, always required by a bishop, except in certain specified cases.

**TITLE** (ti'tl), the point or fine stroke by which one letter differs from another, Matt. v. 18. Some of the Hebrew characters have a close resemblance; thus, those equivalent to our *d* and *r* are distinguished only by the shoulder of the one being rounded, while the other has a slight projection—a "title."

**TITULAR** (tit'u-lar), a term which implies that an ecclesiastical possesses only a title to a sphere of work without an actual corresponding locality, as, for instance, a "titular bishop" is one who holds the rank of a bishop but who has no special jurisdiction.

**TITUS** (ti'tus), a Christian teacher and companion and fellow-laborer of St. Paul. He was of Greek origin, but was converted by the apostle, who therefore calls him his own son in the faith, Gal. ii. 3. He was one of the persons sent by the church of Antioch to Jerusalem to consult the apostles, and it was not judged necessary that he should receive circumcision, Acts xv. 2. After a time we find him in company with St. Paul at Ephesus, whence he was sent to Corinth, 2 Cor. xii. 18, where he was well received, discharged with discretion the task confided to him, and declined to suffer the church to defray his expenses, 2 Cor. viii. 13; xii. 18. He then proceeded to Macedonia, and at Philippi rejoined his master, who had vainly been expecting him at Troas, 2 Cor. vii. 6. He was then employed by Paul in preparing the collection for the poor saints in Judea, and as an incident of this mission, became the bearer of the Second Epistle to the Corinthians, 2 Cor. viii. 16, 17, 23. On a subsequent journey Titus was left by the apostle in Crete, to establish and regulate the churches in that island, Tit. i. 5, and he was still there when he received the epistle from St. Paul which bears his name, Tit. iii. 12. He is therein desired to join the apostle at Nicopolis; and it is presumed that he did so, and afterward accompanied him in his last journey to Rome, whence he was sent into Dalmatia, 2 Tim. iv. 10. Tradition states that Titus eventually returned to Crete, and died there at an advanced age.

**TITUS, THE EPISTLE TO**. The short letter to Titus, after an inscription, ch. i. 1-4, explains why the apostle had left him in Crete, and gives him instructions for his behavior there in ordaining elders, ch. i. 5-9, in censuring the evil-disposed, ch. i. 10-16, in admonishing various classes, being himself an example to all, and enforcing his counsels with the highest sanction, ch. ii. He was also to urge obedience to constituted authorities, and holiness of life generally, from the consideration of God's infinite love in Christ, ch. iii. 1-8; foolish questions were to be avoided and heretics

rejected, ch. iii. 9-11. An invitation to join the apostle at Nicopolis, and some special directions and salutations, conclude the letter, ch. iii. 12-15. The inhabitants of Crete were noted for their avarice, fraud, mendacity and general depravity. It was no light charge, therefore, that was committed to Titus, and very precious to him would be the fatherly counsels of the apostle for his guidance among such a people.

The date of this Epistle and the place of writing have been much controverted. Some would assign it to a comparatively early period, while others with more probability suppose that it was penned nearly at the close of St. Paul's life. It very much resembles the First Epistle to Timothy, and the reasons which indicate the time of writing that will decide in regard to this letter. Perhaps we may suppose it written about 65 A. D., in Asia Minor, while the apostle was on his way to Nicopolis. Its genuineness is amply established. Besides earlier references, we have the distinct testimonies of Irenæus, Clement of Alexandria and Tertullian; and in fact, if the

TIRHAKAH.—See article.  
This is from an ancient Egyptian sculpture.

Epistles to Timothy be received, it is impossible to reject that to Titus.

**TITUS, FLAVIUS VESPASIANUS**, succeeded his father on the throne in Rome. His talents had been displayed in the sanguinary and protracted war with the Jews which ended in the destruction of Jerusalem. Before he reached the purple he was accused of having acted with undue haste and severity, and Suetonius asserts that he was avaricious and open to bribery. Once on the throne, he became a reformer in morals and in the laws. In his reign Herculaneum and Pompeii were overwhelmed (A. D. 79) by an eruption of Mount Vesuvius; and a pestilence, in which ten thousand persons died daily, afflicted the capital. He completed the famous Colosseum. See COLOSSEUM. He was seized with fever, and died A. D. 81, having reigned two years and three months. The celebrated arch which was erected at Rome to commemorate his Jewish victories still stands.

**TITUS MANLIUS**. See MANLIUS.

**TIZITE** (ti'zite), the designation of one of David's heroes, 1 Chr. xi. 45; it is not known whence derived.

THE REMAINS OF THE ANCIENT TOWN OF SYENE.—See article.

nion, but returned to the Church of England. He spent the greater part of his life in London, and was chiefly occupied in literary labor. Tindal filled a large place in the view of his contemporaries as a polemical theologian; his successive writings made a great noise, excited even a panic among certain classes, and called forth a host of angry replies. He appears to have been a reasonably learned man, careful and fair, and content to write what he meant clearly and plainly. Among his theological works are still noteworthy "The Rights of the Christian Church asserted against the Romish and all other Priests who Claim an Independent Power over it," which was burnt by order of the House of Commons, and his "Christianity as Old as the Creation, or the Gospel a Republication of the Religion of Nature," published in 1730. It was replied to by Waterland, Leland, Conybeare, James Foster, and other writers, and was defended by the author in his "Remarks on Scripture Vindicated (by Waterland) and some other late Writings." He died at London in 1733.

with the above by Jewish writers, but it seems rather to have been in the land of Israel, and not far from Tirzahi.

**TIRAS** (ti'ras), the youngest son of Japheth, Gen. x. 2. He is never again mentioned in Scripture, nor is any clue given to the direction taken by him or his progeny in the settlement of nations. Very commonly he is supposed to have been the father of the Thracian race, but the evidence for the opinion is of a very slender description, and needs not here be detailed.

**TIRATHITES** (ti'ra-th-ites), a family of scribes who dwelt at Jabez, 1 Chr. ii. 55. The word from which this designation is derived signifies a gate, but no place of the name is known.

**TIRE**. See DRESS.

**TIRHAKAH** (ter-ha'kah), a king of Cush, or Ethiopia, who marched against Sennacherib while invading Judah, 2 Ki. xix. 9. Sennacherib, when

**TOAH** (to'ah), a Levite, 1 Chr. vi. 34, but in 1 Chr. vi. 26 the name of Nahath is substituted, and in 1 Sam. i. 1 that of Tohu.

**TOB**, the place or district to which Jephthah fled when expelled by his brethren, Jud. xi. 3, 5. It was probably to the north-east of Palestine and identical with the place noted in 2 Sam. x. 6; compare 1 Macc. v. 13, where the Jews of Tobie are said to have been put to death. We can only conjecture its exact position.

**TOB-ADONIJAH** (tob-a-do-ni'jah), a Levite sent by Jehoshaphat to teach in the cities of Judah, 2 Chr. xvii. 8.

**TOBIAH** (to-bi'ah). 1. One whose descendants returned from captivity with Zerubbabel, but they could not prove their pedigree, Ezra ii. 60. 2. An Ammonite who joined with Sanballat and other enemies of the Jews in obstructing Nehemiah's purpose of rebuilding the wall of Jeru-

2. One to whom a memorial crown was to be given after the return from captivity, Zech. vi. 10, 14.

**TOBIT** (to'bit), a person who, according to the apocryphal book which bears his name, was an Israelite of the tribe of Naphtali, and was carried captive by Enemessar or Shalmaneser to Nineveh.

**TOBIT, THE BOOK OF.** It is questioned whether the account of Tobit is historically true—whether it has a basis of truth with legendary stories grafted thereupon, or whether it is altogether fabulous. But the improbabilities, the inconsistencies of the narrative, and contradictions to what authentic history proves and to what we know of geography, are so great and glaring that it is not easy to arrive at any other conclusion than that the whole is a fiction.

The object of this work is to show that a truly pious man who relies on God and is diligent in

1542; (7) The Hebrew of Paulus Fagius, of the same date, but which appeared originally at Constantinople in 1517.

The natural air of this story and the curious incidents it relates have always made it popular, and it was referred to or cited with respect by many of the early Fathers. But it was not deemed to have a place in the sacred canon. The ancient lists almost unanimously are silent or expressly exclude it. The small evidence which has been produced in its favor is very dubious. So that it was not till the Council of Trent (1546) that a solemn decree was pronounced for it, and it became authoritatively canonical in the Romish Church.

**TOCHEN** (to'ken), a village or town of the tribe of Simeon, 1 Chr. iv. 32.

**TODD, HENRY JOHN**, Church of England divine and an industrious litterateur, was born about 1763. He graduated at Oxford, entered the Church, and was for many years rector of All Hallows, Lombard street, London. During the same period he had the office of keeper of the manuscripts at Lambeth Palace, of which he prepared a catalogue. In 1820 he was presented to the rectory of Settrington, in Yorkshire, where he spent the rest of his life. He became archdeacon of Cleveland and chaplain to the queen. He edited the poetical works of Milton and Spenser, and Johnson's "Dictionary," wrote an "Account of the Deans of Canterbury," "Life of Archbishop Cranmer," and various theological and controversial pieces, and prepared a catalogue of Christ Church library, Canterbury. He died in 1845.

**TODD, JONATHAN**, was born in 1713, at New Haven, Connecticut. He was educated at Yale College, where he graduated in 1732. After a brief course in theology, he began to preach, and he was settled at East Guilford, Connecticut, in 1733, and ordained at that place on the 24th day of October in that year. During the years 1750 and 1751 his faithfulness was greatly tried by a distressing sickness, which spread among the members of his flock, great numbers of them being suddenly swept away. He was led into a very serious controversy because of the ordination of the Rev. James Dana at Wallingford. He had taken part in the ordination, and in several pamphlets he wrote with great vigor in defence of the council that ordained Mr. Dana, and in defence of the independence of the churches. He labored with great diligence until his death, dying at East Guilford, the sphere of his lifework, on February 24, 1791, in the fifty-eighth year of his ministry and the seventy-eighth year of his age. He was the author of several sermons, and of the discussions connected with the controverted ordination already referred to, and they all show him to have been a man of independent spirit and great mental power.

**TOGARMAH.** See ARMENIA.

**TOGRAI**, or **TOGHRAI** (to'gra-i), one of the most celebrated of the companions of Mohammed, was born at Ispahan, in the eleventh century, and gained great reputation as a poet. *Tograi* is the name given to the person employed by the sultan to write on all the imperial decrees and proclamations his name and titles in a peculiarly large and flourishing character, which is called, from a Persian word, the *togra*; and from

Tograi's remarkable skill in writing this, or perhaps from his celebrity as an author, he derived the title of Fakhral Cottab, or the "Glory of Writers."

**TOHU** (to'hu), 1 Sam. i. 1. See TOAH.

**TOI** (to'i), king of Hamath, 2 Sam. viii. 9, 10. He is called Tou in 1 Chr. xviii. 9, 10.

**TOLA** (to'la). 1. One of the sons of Issachar, Gen. xvi. 13. 2. A judge of the tribe of Issachar who dwelt and was buried in Shamir in Mount Ephraim. His administration lasted twenty-three years, Jud. x. 1, 2.

**TOLAD.** See EL-TOLAD.

**TOLAITES** (to'la-ites), a family of Issachar, descended from Tola, Num. xxvi. 23.

**TOLAND** (to'land), JOHN, the celebrated free-thinker and political and miscellaneous writer, was born in the county of Derry, Ireland, about 1670. His parents were Roman Catholics, but he early renounced the faith of his childhood. At the age of seventeen he went to study at Glasgow University, afterward graduated as master of arts at Edinburgh, and completed his studies at Leyden, with the intention of becoming a Dissenting minister. He became acquainted there with Leclerc and Leibnitz, and maintained a friendly correspondence with them. The first work he published was entitled "Christianity not Mysterious." It appeared in 1696, excited much ill-feeling against him, and was burnt by the hangman at Dublin. Among the numerous publications of Toland are—"Nazarenes, or Jewish, Gentile or Mohammedan Christianity," "Pantheisticon." Toland was several times employed as a political agent abroad, was concerned in the South Sea scheme, continued to write incessantly to the last, and died at Putney in 1722.

**TOLBANES** (tol'ba-nes), 1 Esd. ix. 25, identical with Telem, Ezra x. 24.

**TOLET** (to-lay'), FRANCIS, a learned cardinal, was born at Cordova, in 1532, and studied at Salamanca, where he was made professor of philosophy. He entered the society of Jesuits in 1559, and in the following year was sent to Rome, where he taught theology with great reputation. He was nominated by Pius V. to preach before him and the College of Cardinals, which office he retained under several succeeding pontiffs; and he became celebrated as one of the first pulpit orators of the age. He was employed by several of the popes in legations to Poland, Germany and the Low Countries, and was raised to the purple in 1593, by Clement VIII., being the first Jesuit who arrived at that dignity. He died in 1596. He was one of those whom Sixtus V. employed in revising his edition of the Vulgate.

**TOLETANUS** (to-le-ta'nus), RODERICUS, archbishop of Toledo, a celebrated Spanish historian, was born about 1170. After studying at Paris, he was in the service of the king of Navarre, Sancho V., and was subsequently appointed by Alfonso VIII., king of Castile, to the see of Toledo. He was a good scholar, a zealous ecclesiastic, and also a brave soldier, and distinguished himself as much by his courage in fighting the Moors as by his scholarship and elo-

quence in the Lateran Council. He was author of the following, among other, works: "History of Arabia," histories of the Huns, Vandals, etc., and Ostrogoths. Toletanus was present at the Council of Lyons assembled in 1245, and died in France in 1247.

**TOMB.** See FUNERAL.

**TOMBES** (toombz), JOHN, a learned nonconformist, was born in 1603, at Bewdley, in Worcestershire, and studied at Magdalen Hall, Oxford. He afterward became minister of Leominster, in Herefordshire, whence he removed, in the civil war, to Bristol, and next to London, where he preached in the Temple Church. Being invited to settle at his native place, he went thither; but on turning Baptist, he encountered much opposition. At the Restoration he lost his living, and went to Salisbury, where he died in 1676. His works are numerous, and mostly directed against infant baptism.

TOWN AND LAKE OF TIBERIAS.—See article.

**TOMLINE** (tom'line), GEORGE PRETYMAN, bishop of Lincoln and of Winchester, was born at Bury St. Edmund's, in Suffolk, in 1750, and educated at Pembroke Hall, Cambridge, where he was elected a Fellow in 1773. He was appointed tutor to Mr. Pitt, who made him his private secretary when the young statesman became chancellor of the exchequer. After holding several livings, he was made dean of St. Paul's and bishop of Lincoln in 1787, and translated to the see of Winchester in 1820. He wrote a work on "The Elements of Christian Theology." He died in 1827.

**TOMLINSON** (tom'lin-sun), JOSEPH SMITH, D.D., was born in 1802, in Georgetown, Kentucky. He supported himself by his own exertions while he was a student of Transylvania University; and it is a memorable fact that when Lafayette visited that institution he was the student who was chosen to present him with an address of welcome. Before he graduated he was licensed to preach in the Methodist Episcopal Church. His first position was as professor of mathematics and natural philosophy in Augusta

College; and although his health was feeble, he held this position for nearly a quarter of a century. He had been a diligent student, drinking in all kinds of knowledge, and hence, when vacancies occurred in other departments, he willingly discharged the duties required until the vacancies were filled up. In 1825 he was admitted to the traveling connection, and he was ordained as deacon and appointed elder. He had been raised to the presidency of Augusta College, and he held this post until the withdrawal of the support of the Kentucky Conference and the repeal of the charter broke up the institution. Having rejected a professorship in the Ohio Wesleyan University, at Delaware, Ohio, he accepted an appointment in the Ohio University, at Athens, though he declined the presidency owing to ill health. He also declined the presidency of the Springfield High School and of the State University of Indiana because of the conviction that his bodily and mental strength were not equal to the labor. Brain disease had long affected him,

and it intensified by degrees, and eventually, in June, 1853, he died, lamented by a widely extended circle of friends, and his death was felt to be a loss over a great extent of country.

**TOMMASI** (tom-ma'se), GIUSEPPE MARRIA, a learned cardinal, and one of the principal illustrators and expounders of the liturgy and ceremonies of the Roman Catholic Church, was born at Aliata, in Sicily, in 1649. At the age of fifteen he entered among the Teatini of Palermo, and he afterward pursued his studies at Ferrara, Modena and Rome. Cardinal Barberini, observing his particular turn to liturgical inquiries, obtained permission to carry to his own house the most ancient responsories and antiphonaries of the Roman Church preserved in the archives of the Vatican, that he might examine them at his leisure. This example was followed by others, so that almost all the libraries of Rome were opened to him. His indefatigable industry was employed on the ancient class-books of the Roman Church; the offices for Good Friday translated from Greek into Latin; a new edition of the Psalter, with the

TOWN AND LAKE OF TIBERIAS.—See article.

salem. He is called "the servant;" he perhaps had been a slave, but had risen to influence, Ezra ii. 10, 19; iv. 3, 7. He was allied to some of the chief Jews, and therefore many favored him. There was even a connection between him and Eliashib the high-priest. So that while Nehemiah was absent from Jerusalem opportunity was taken to allot Tobiah an apartment in the buildings belonging to the temple. At the governor's return this sacrilege was put an end to, the chambers purified and restored to their proper use, Ezra xiii. 4-9.

**TOBIAS** (to-bi'as). 1. Tob. i. 9, the son of Tobit, and hero of the apocryphal book so called. 2. 2 Macc. iii. 11, the father of one Hircanus, a man of note.

**TOBIE** (to'be), 1 Macc. v. 13. See TOB.

**TOBIEL** (to-bi'el), Tob. i. 1, the father of Tobit.

**TOBIJAH** (to-bi'jah). 1. A Levite whom Jehoshaphat sent forth to teach, 2 Chr. xvii. 8.

prayer and good works will secure the divine favor and be delivered out of difficulties. The author was in all probability a Jew of Palestine; and though no certainty can be arrived at as to the date of the composition, it may not unreasonably be placed before our Lord's time, perhaps about the Maccabean period, or even still earlier. And very likely the language in which this book was originally written was Hebrew. Several translations were made, some of them at an early date; and various texts, more or less differing, are now extant. Of these may be enumerated (1) Jerome's Latin, rendered as he says from the now lost Chaldee. But he probably consulted also some other text. This is the Vulgate, adopted by the Roman Catholics; Luther translated from it; (2) The Greek of the Septuagint, which some have believed to be the original; (3) A revised incomplete Greek text, printed by Tischendorf in 1846; (4) The Syriac, made from the Greek, in the London Polyglot; (5) The ante-Hieronymian Latin, published by Sabatier, of which some variations have since appeared; (6) The Hebrew text of Sebastian Munster, first printed at Basil in

ancient division of verses and arguments, as well as various other works, Latin and Italian, chiefly on subjects of public worship. He was raised, against his wish, to the dignity of cardinal by Clement XI. in 1712; and the pope's absolute commands were necessary to induce him to accept the honor. It made no alteration in his way of life, and the augmentation of his revenue was all to the benefit of the indigent. His zeal led him to undertake a general reformation of manners in Rome, both with respect to the ceremonial of society and to the excesses in female apparel. He survived, however, too short a time for the execution of his design. He died in 1713.

**TONE**, a term applied to musical intonations, distinguished as—1. Monotone, or a single note; 2. Canto fermo, plain chant, with inflections in unison; 3. Figured and harmonized melody.

**TONES, GREGORIAN.** See GREGORIAN TONES.

COIN OF TIBERIUS.—See TIBERIUS.

**TONGUE.** Besides the literal meaning of this word, Judg. vii. 5, it is sometimes personified, Isa. xlv. 23, sometimes used for speech generally, 1 John iii. 18, sometimes for a language, Acts ii. 11, or for the people speaking a language, Isa. lxvi. 18. The phrases "scourge of the tongue," Job v. 21—i. e., a slanderer—"double-tongued," 1 Tim. iii. 8—i. e., a deceiver—"the tongue of the learned," Isa. l. 4—i. e., the ability to speak wisely—are easily intelligible. The word is also used for anything resembling a tongue in shape—a "tongue of gold," Josh. vii. 21, margin; a "tongue" of the sea, Josh. xv. 2, margin—i. e., bay; a "tongue of fire," Isa. v. 24, margin; Acts ii. 3.

**TONGUES, CONFUSION OF.** The different nations of the world are at the present day yet more separated by the diversity of their speech than they are by geographical distance and position. There is a natural tendency in tongues to diverge. The habits, the wants, the productions, of one people vary from those of another; and therefore words and phrases are needed and will be formed by the one which, as unnecessary, are never even conceived by the other. Thus we see continually new words establishing themselves in our own language, keeping pace with the progress of invention: "photograph," "telegram," are familiar examples. Again, if there is a commingling of different tribes, there will be in course of time a tongue compounded of the dialects they severally spoke. Thus of modern English the Roman, Saxon and Norman ingredients may yet be distinguished.

Seeing that there is such a variety of languages in the world, it is a question whether they have been produced in the ways just indicated, or whether at any period there was a more sudden development of change. Those best qualified to form a judgment agree in reducing the almost innumerable existing dialects to a very small number of

families. Excluding certain American and African languages, the rest might be arranged in three families, called, as Max Müller and many other philologists denominate them, the Semitic, the Aryan and the Turanian families. Dr. Bunsen is very nearly of the same mind, and deduces tongues from the Semitic, the Iranian and the Turanian stocks. Moreover, he thinks that there are mutual material affinities perceptible, which seem to imply a common descent. And there are indications, too, that American and African tongues, not formally ranked under the three great families, exhibit types not altogether dissimilar, which point to one or other of them as the source. The examination, therefore, of the existing phenomena of language would seem to corroborate the Scriptural assertion that for some time after the Deluge "the whole earth was of one language and of one speech," Gen. xi. 1.

Many philologists, however, maintain that for the developments and diversities now existing a vast succession of ages, far more than the Scripture chronology allows, must have elapsed. To meet this acknowledged difficulty the Scripture alleges the supernatural interference of God, Gen. xi. 2-9. Those who object to miraculous intervention at all of course cavil at the statement; but such as see nothing incongruous in God's moral government of the world he has formed, and who deem the Scripture credible when it relates supernatural equally with ordinary events, will acknowledge the harmony of the inspired record with the results of investigation—one original tongue, an impulse of change by the divine touch, the natural ramifications of that change in the vast variety of existing tongues. And that there was time for these so far to diverge as they have done from the stock to which they belong is proved by the fact that in modern times, in our own days, a new dialect is known to establish itself in the course of a few years, or sometimes even months.

It is very clear, 1st, that human language was originally the direct gift of God to man; 2d, that at Babel he showed his sovereignty over his own gift in interfering with it that it might subserve his purposes after the flood as it had done before; 3d, that language was originally one; and 4th, as a sound and legitimate deduction from this, that the human race was from the beginning one. Kalisch agrees with this view so far as to say that "the linguistic researches of modern times have more and more confirmed the theory of one primitive Asiatic language, gradually developed into the various modifications by external agencies and influences."

It was God's purpose when the families of Noah's descendants multiplied that they should overspread the earth; and according to an old tradition, Noah was to command their migration, and to divide, as it were, the world among them. But they did not choose so to separate. In the plains of Shinar multitudes of them resolved to settle, and to establish there a proud sovereignty. Nothing was better fitted to disappoint their plans than to confound their speech; they were compelled to leave unfinished the vast tower they had commenced, around which Babylon afterward clustered, and to go forth apart, dwelling, according to their generations, in the various regions of the globe.

It is well to observe that we must not class the three families of languages according to the three sons of Noah; those of Hamitic descent are sometimes found using what are called Semitic tongues. But to discuss this part of the subject is impossible in the present work. It must suffice to say that

the confusion at Babel did not regard tribes as such, for it cannot be satisfactorily shown that the Semitic families received one form of speech, the Japhetic another, the Hamitic a third. See EARTH.

**TONGUES, GIFT OF.** A promise was given by the Lord that his disciples should in his name "speak with new tongues," Mark xvi. 17. This was first fulfilled on the day of Pentecost, when the Holy Spirit descended, and a multitude of Jews of various countries, gathered at Jerusalem to the feast, heard the apostles speak in the vernacular dialects of the different lands where these—Parthians, Medes, Elamites, etc.—resided. This wonderful event was declared to be the accomplishment of Joel's prophecy, Joel ii. 28-32; Acts ii. And subsequently others, too, received the same supernatural power, Acts x. 44-46.

It is evident that it was no inarticulate sound that was thus uttered, for the foreign Jews understood the apostles; it was not merely a mystical phraseology that was used, for each man recognized the tongue of the country in which he was born—a linguistic power was actually imparted. It is necessary to inquire whether this was permanent—whether, in fact, it was intended to enable the first preachers of the gospel, visiting the different regions of the earth, to converse with each nation they came to in languages which they had never learned.

Now, first of all, so far as we have accounts of the propagation of the gospel in Scripture, there was little need of such a faculty. The extraordinary prevalence of the Greek language through the civilized world was one of those preparations which the providence of God had ordered, and which contributed to render the time when Christ appeared so fit for the purposes of his advent. Wherever the apostles went through the Roman dominion Greek was understood, not merely by

TIBERIUS CAESAR.—See TIBERIUS.

the educated but really by the masses of men, to whom they could thus freely make known their message. And besides, there were Jews in every city, to whom they first applied themselves. Most of the Jews, no doubt, rejected the gospel; but generally there were some individuals whose hearts God touched, and who thus could be the means of explaining in the vernacular tongue of the district the teaching of the apostles and evangelists.

Again, we find no hint in Scripture of any of the first preachers using such a power for access to those to whom they spoke; rather there are indications of their sometimes being ignorant of what persons around them said. Thus, when Paul and Barnabas were at Lystra, the circumstances that occurred are not easily explained if we suppose that they could speak Lycaonian; for immediately on the healing of the cripple there was a shout, in Lycaonian, "The gods are come down to us in the likeness of men." Had the apostles understood this, they would surely have interfered at once; whereas it was not for some time, till the priest of Jupiter came forth, and oxen and garlands were brought, that they understood what was going to be done, Acts xiv. 8, 18.

Still further, the description of the speaking with tongues on the day of Pentecost does not agree with the notion that the disciples had acquired a new faculty of conversing at their pleasure in one or more languages hitherto unknown to them. It is expressly said that they spoke "as the Spirit gave them utterance," Acts ii. 4, evidently implying that they gave utterance to sounds—possibly not understood by themselves, compare 1 Cor. xiv. 3—dictated by the Holy Spirit.

Besides, such manifestations of divine power usually, if not exclusively, occurred (so far as we read) in Christian assemblies, in which men so gifted uttered words of prayer or praise. On the day of Pentecost it was not that the disciples went forth to search out foreigners; they were engaged in a private assembly in a house, and it was only at the news of something extraordinary occurring there that the crowd collected whom Peter seized the opportunity of addressing, evidently in Greek. When the supernatural gift was bestowed on the Gentiles, this also was in the house of Cornelius, where but a few were assembled, 1 Cor. x. 44-46. And St. Paul, discussing the matter, speaks of it as occurring in a Christian congregation, 1 Cor. xiv. The gift, he says, was to be repressed if there was no power of interpretation. Else it was very likely that such utterances would make plain unlearned persons believe the speakers mad. The people who did not understand on the day of Pentecost had similarly charged the apostles with drunkenness, Acts ii. 13.

Wherefore, then, it will be asked, served the gift of tongues? It may be replied that the benefit was twofold. "He," says St. Paul, "that speaketh in a tongue edifieth himself," 1 Cor. xiv. 4; his spirit holds high communion with God, as that of Paul himself did when, whether in the body or out of the body he could not tell, those charmed words fell into his opened ear which with human tongue he could not utter. So man may be brought in near appalse to the Deity; his soul may be filled with mystic power, and from his lips there may issue some lofty strain as the Spirit moves them, of the full meaning of which he is himself unaware, though he feels to his joy that he is brought into the secret place of the Most High. In some measure this was the case with the prophets. They lost not their individual consciousness, but they comprehended not all that "the Spirit of Christ" which was in them did signify," 1 Pet. i. 10-12. Then, again, the gift of tongues was a sign, an authentication of the divine mission not alone to those who exercised the gift, who felt in themselves the energy of the Holy Ghost, but to those also in whose language they uttered prayer or praise. As before said, to such as understood not the language spoken it would seem confusion, but to one who heard in his own tongue the won-

derful works of God a weighty testimony was afforded, Acts ii. 5-12. And so, as St. Paul says, "tongues are for a sign . . . to them that believe not," 1 Cor. xiv. 22.

**TONNA** (ton'na), CHARLOTTE ELIZABETH. This lady, who became one of the best known and most attractive of English writers in religious literature, was the daughter of the Rev. M. Browne of Norwich, in England. She was born in 1792. She was married to George Phelan, an officer of the English army, and after his death to L. H. J. Tonna, who filled the office of assistant director of the United Service Institution. She was a very prolific writer of tales that possess a very fascinating power, and they have commanded a great circulation, being published in the United States as well as in Great Britain. She edited "The Christian Lady's Magazine" from 1834 until her death. She died at Ramsgate on the 12th day of July, 1846.

**TONSTALL** (ton'stal), or **TUNSTALL** (tun'stall), CUTHBERT, bishop of Durham, was born in Yorkshire, in 1474. He was a student of Balliol College, Oxford, removed to Cambridge on the breaking out of the plague, and afterward went to the University of Padua, where he received the degree of doctor of laws. He held several appointments in the Church, and in 1516 became also master of the rolls. In 1522 he was made bishop of London and in the following year lord privy seal. He was engaged in important embassies with Sir Thomas More and Cardinal Wolsey, and in others in which he himself took a leading part. He endeavored to suppress Tindale's translation of the New Testament, and himself engaged with Heath, bishop of Rochester, in a revision of the English Bible. He was committed to the Tower for "misprision of treason" in 1551, released and restored to his see on the accession of Mary, but was again deprived by Elizabeth, and committed to the custody of Parker, archbishop of Canterbury, and died at Lambeth Palace, in 1559. He was tolerant, and permitted none to be put to death for religious opinions in his diocese.

**TONSURE** (ton'sure), the cutting of the hair in the form of a crown. Among the various orders of monks different tonsures prevailed; thus Roman monks anciently wore the whole upper part of the head tonsured, wearing only a small circle of hair below, and this was considered to be an imitation of St. Peter. The Greeks tonsured their whole heads, and this was held to be an observance of St. James and the other apostles. The Scots and the Britons shaved the front part from ear to ear, having no tonsure behind, and this was held to be an imitation of St. John.

**TONUS PEREGRINUS** (to'nus per-e-gri-nus), a tone borrowed from the Gallican Church, made up of the fourth, sixth, seventh and third of the Grecian tones, and hence called mixed.

**TOOTH.** The tooth is instanced as one of the particulars in which, in the public administration of justice, a retaliatory punishment was to be inflicted, Ex. xxi. 24; Lev. xxiv. 20. For the loss of a tooth, too, a bondman was to be set free, Ex. xxi. 27. Several common phrases or proverbial expressions were in use in regard to the teeth. Thus, to "gnash the teeth" implies rage, suffering or despair, Matt. viii. 12. "Cleanness of teeth" indicates famine, Amos iv. 6. The action of an acid substance on the teeth is alluded to in Ezek. xviii. 2. "To escape with the skin of the

ASIATIC TIGER.—See article.

teeth," Job xix. 20, is sometimes explained as escaping just with life. But, probably, Job, describing his emaciation, means to say that the only part of his flesh which did not adhere tightly to his bones was the integument covering the teeth.

**TOOTH ORNAMENT** (tooth or'na-ment), an ornament largely used in Early English architecture, consisting of a square four-leaved flower, the tips of the leaves meeting in a point which is raised up in a projecting manner from the surface on which the leaves are placed. French antiquaries call it *Violette*, and it often bears considerable resemblance to that flower when half expanded. It occurs in Anjou, in work of the twelfth century; in England it is rarely used

TIGRANES.—See article.

before the thirteenth, when it is so abundant as to form one of the characters of the Early English.

**TOPAZ** (to'paz), a precious stone of the class denominated hyaline corindons. It is of a brilliant yellow color, and when fine and of a large size of great value. It is mentioned in Scripture as occupying the second place in the sacerdotal breastplate of Aaron, and as forming the ninth foundation of the wall of the New Jerusalem. The cabalists considered it as a charm against poisons. The true Oriental topaz (and no other need be mentioned here) was principally found in the island of Ceylon.

**TOPHEL** (to'fel), a place to the east of the Arabah, Deut. i. 1. It is now called *Tufleh*.

**TOPHET** (to'fet), **TOPHETH** (to'feth), 2 Ki. xxiii. 10. See **GEHENNA**, **HINOM**. Tophet at the extremity of the valley of Hinnom, placed by some to the south and by others more to the east, near the mouth of the Tyropeon, was probably once a place of recreation, a part of the royal gardens; afterward it was defiled, and became an abomination.

**TOPLADY** (top'la-de), **AUGUSTUS MONTAGUE**, a zealous advocate for the Calvinism of the Church of England, was born at Farnham, in Surrey, in 1740, was educated at Westminster School and at Trinity College, Dublin, and died, vicar of Broad Henbury, in Devonshire, in 1778. Toplad was a strenuous opponent of Wesley, and brought a large share of metaphysical acuteness into the Calvinistic controversy.

**TORMAH** (tor'mah). If this be a proper name, it must be that of a place not far from Shechem, Jud. ix. 31, margin.

**TORMENTOR** (tor-men'tor). This word occurs but once in Scripture, Matt. xviii. 34, "And his lord was wroth, and delivered him to the tormentors till he should pay all that was due

COIN OF TITUS.—See TITUS.

unto him." The word signifies one who examines by torture. Torture judicially applied must be distinguished from punishment, however cruel and barbarous it may be, whether it be capital, as impalement or crucifixion, or secondary, as the putting out of the eyes, or any other kind of mutilation. For torture was not intended to act fatally, nor was it, when so denominated, inflicted as a part of a judicial sentence. It was usually employed to extort confession or evidence, as when Claudius Lysias, the chief captain, commanded Paul to be brought into the castle and "examined by scourging," Acts xxii. 24. In the text first cited it is used as the means of obtaining payment of a debt. The incident was one with which the hearers of our Lord's parables were no doubt familiar, and its introduction here shows how savage and tyrannical was the spirit of the age. It is no small mark of the mild and equitable spirit of the legislation of Moses that it did not recognize the use of torture in judicial trials.

**TORNIELLI** (tor-ne-el'e), **AGOSTINO**, a learned ecclesiastic, was born at Novara, in 1543, and entered the society of Barnabites, of which he at length became general. He wrote an "Ecclesiastical History from the Beginning of the World to the Time of Christ," in the form of annals. Besides historical matter, it clears up many obscurities in chronology, geography and topography, and is regarded as an excellent commentary on the books of the Old Testament.

**TORQUEMADA** (tor-ke-ma'da), **THOMAS DE**, the first inquisitor-general of Spain, was born about 1420. He was a monk of the order of St. Dominic, became inquisitor-general in 1483, was confirmed in his authority by Innocent VIII., who made him grand inquisitor of Spain, and gave him the title of Confessor of Sovereigns. He died in 1498. During the exercise of his power, in the course of sixteen years, it is said that no less than eight thousand eight hundred victims were committed to the flames, ninety thousand were condemned to perpetual imprisonment and other severe punishments, and above eighty thousand Jews were banished from Spain.

**TORTOISE**. See **LIZARD**.

**TOU**. See **TOT**.

**TOULMIN** (tool'min), **JOSHUA**, a dissenting minister, was born in London in 1740, and educated at St. Paul's School and at the dissenting academy in Wellelose Square. He was afterward appointed minister of a congregation at Colyton, in Devonshire, where he became a convert to the opinions of the Baptists; upon which, in 1765, he transferred himself to Taunton, in Somersetshire, where, besides having the charge of a Baptist congregation, he taught a school and wrote and published most of his works. He had not been long at Taunton before his opinions underwent a further change, and in 1804 he accepted the situation of one of the pastors of the Unitarian congregation at Birmingham, formerly presided over by Dr. Priestley; and there he remained till his death, in 1815. Among his publications are—"Dissertations on the Internal Evidences of Christianity," "Essay on Baptism" and "Historical View of the State of the Protestant Dissenters in England."

**TOURNEUX** (toor-nooh'), **NICHOLAS LE**, an eloquent French ecclesiastic, was born of poor parents, at Rouen, in 1640, and was educated in the Jesuits' College at Paris, where, in 1675, he obtained the prize at the French Academy for a discourse on "Martha and Mary." He was greatly admired for his sermons in the capital; and it is related that Louis XIV. once asking Boileau who this Le Tourneux was whom all the world was running after, the poet replied, "Sire, your Majesty knows that people always run after novelty—he is a preacher who preaches the gospel." The king then requiring him to speak his opinion seriously of the man, Boileau added, "When he ascends the pulpit, he looks so frightfully that one wishes him down again; but when he has begun to speak, the fear is that he should descend too soon." His eloquence procured him a benefice at the Sainte Chapelle and a royal pension. He died in 1689. He wrote several devotional works, according with the sentiments of the Port Royal divines, and much esteemed by the pious of that class.

**TOWER** (tow'er). The Hebrew for tower is derived from a word signifying "to be great;" it was so called from its altitude, Gen. xi. 4, 5. It generally signified the towers or citadels of fortified towns, Jud. viii. 9; sometimes a fortress itself, Prov. xviii. 10. Again, it is put for a watch-tower, 2 Ki. ix. 17, or the watch-turret of a vineyard, Isa. v. 2. The word is figuratively used, as when God is said to be "a strong tower" to his people, Ps. lxi. 3, and probably for proud, ungodly men, Isa. ii. 15.

**TOWGOOD** (tow'good), **MICAJAH**, a dissenting divine, was born at Axminster, in Devonshire, in 1700, and educated under a private tutor in Taunton. Soon after he had commenced preaching he settled with a congregation of dissenters at Moreton-Hempstead, in Devonshire. He removed to Crediton, in the same county, in 1735, and soon after published a pamphlet entitled "Highflown Episcopal and Priestly Claims freely examined." In 1739 he published "The Dissenter's Apology," in which he endeavors to vindicate a separation from the Established Church. But his principal work is "The Dissenting Gentleman's Answer to Mr. White," a clergyman of the diocese of Norwich who had written against the principles of the dissenters with great ability. In 1750 he settled at Exeter, where he published some pamphlets in defence of infant baptism. He died in 1792. In his religious sentiments he was an Arian.

**TOWN**. See **CITIES**.

**TOWN-CLERK**. The officer so called in Acts xix. 35 was keeper of the archives and public reader of decrees. He presided over popular assemblies, and put matters in them to the vote. Other functions were sometimes assigned to him. The post therefore was one of dignity and influence.

**TOWNSEND** (townz'end), **GEORGE, D.D.**, was born in 1788, at Ramsgate, and educated in Trinity College, Cambridge. In 1822 he was appointed chaplain to Bishop Barrington, and in 1825 he was made a canon in Durham Cathedral, an office which he held until his death. From 1810 until 1821 he published several small works, but in the latter year he issued a large and very valuable work, entitled "The Old Testament arranged in Historical and Chronological Order, with Copious Indexes and Notes." In 1825 he published a similar work on the New Testament, and both of these ran through several editions, as their merit was recognized as soon as they appeared. He modified these works, so that they have appeared in different forms. His "Accusations of History against the Church of Rome" had a great circulation. In 1842 he published a really playful "Life and Defence of Bishop Bunner." Next appeared "Spiritual Communion with God, or the Pentateuch and the Book of Job arranged," and this work has been much esteemed, several editions being called for. In 1847 he published "Historical Researches, or Ecclesiastical and Civil History from the Ascension of our Lord to the Death of Wycliffe." In addition to these he also wrote extensively on Church questions of the day, a "Tour in Italy, with an Account of an Interview with the Pope." This eminent clergyman and laborious writer died in 1857.

**TOWNSHEND** (town'shend), **JOHN**, founder of the Deaf and Dumb Asylum, was born in London, in 1757. He settled as minister to an Independent congregation at Kingston, in Surrey, whence, in 1784, he removed to Bermondsey, where he continued to reside during the remainder of his life. He founded, in 1792, the institution for the deaf and dumb children of indigent parents, which obtained such efficient patronage that, in 1807, a building, since much enlarged, was erected under the auspices of the duke of Gloucester. Mr. Townshend also assisted in the formation of the London Missionary So-

ciety, the Female Penitentiary, and other religious and charitable associations, besides instituting a congregational school for the gratuitous education of the children of dissenting ministers. He died in 1826.

**TOWNSON** (town'sun), **THOMAS, D.D.**, was born in 1715, at Much Lees, in Essex, England. In 1733 he entered Christ Church, Oxford, was elected a demy or scholar in Magdalene College, and he became a Fellow in 1737. Having entered the Church, he was made rector of Hatfield Peverell, in Essex, in 1746. He rose to be senior proctor in the university, and in 1749 he was appointed to the rectory of Blithfield, in Staffordshire. Two years afterward the parish of Malpas, in Cheshire, was given to him, and in 1781 he was made archdeacon of Richmond. In 1778 he published very valuable "Discourses on the Four Gospels," and in the same year he issued "A Discourse on the Evangelical Histories of the Resurrection and First Appearance of our Lord and Saviour Jesus Christ." His tracts on "The Confessional" were published, were included in his works, which appeared in 1810, and in 1828 his "Practical Discourses" were also given to the public. Dr. Townson was a learned, able, pious and diligent divine. He died in 1792.

**TRACERY** (tra'ser-e), ornamental stone-work formed in the head of a window, door or panel in Gothic architecture. It is divided into two sorts, plate-tracery and bar-tracery. The former consists of openings, as if cut through a flat plate of stone, the lines being flowing and constituting different figures, according to the style or period in which the window is erected. The latter is a sort of continuation of the mullions, apparently traced or worked in various patterns. The former is used in Decorated or Flamboyant and the latter in Perpendicular architecture. Illustrations of the former may be seen on pages 490, 672, 673, and of both styles may be seen on pages 493 and 745. See **GEOMETRICAL DECORATED TRACERY**.

**TRACHONITIS** (trak-o-ni'tis), Luke iii. 1, a region called Argob in the Old Testament. See **ARGOB**. Augustus placed the country under the authority of Herod the Great, that he might clear it of the banditti with which it was overrun. It was afterward a part of the tetrarchy of his son Philip.

**TRACTARIANS** (trak-ta're-anz), a name applied to a school of theologians in the Church of England who have adopted and endeavored to disseminate the principles contained in the celebrated "Tracts for the Times," which were published by Dr. Pusey, Dr. Newman and others at Oxford about thirty years ago.

**TRACTS FOR THE TIMES**. This is the title of a series of very memorable publications

which were commenced by members of the University of Oxford in 1833 with a view to disseminate correct "Church principles" in the country. The Rev. W. Palmer, of Worcester College, in "A Narrative of Events connected with the Publication of Tracts for the Times," says: "At the beginning of the summer of 1833 the Church in England and Ireland seemed destined to immediate desolation and ruin. We had seen in 1828 the repeal of the Test and Corporation Acts, cutting away from the Church of England one of its ancient bulwarks and evidencing a disposition to make concession to the clamor of its enemies. In the next year—the fatal year 1829—we had seen this principle fully carried out by the concession of what is called 'Roman Catholic Emancipation,' a measure which scattered to the winds public

clergy and on kindred subjects, and the time, it was felt, had arrived when decided measures should be adopted to stem the torrent, to save all that was valuable from being swept away and to spread correct views among all classes in the country. The efforts of the leaders in this movement were directed to the formation of associations of a defensive character and to the preparation and publication of tracts on the various points on which it was deemed important that the age should receive enlightenment. Among those who were prominent in this movement were Keble, Pusey, Palmer, Hurrell Froude (brother to James Anthony Froude, the historian), John Henry Newman, Perceval and H. J. Rose, and after much consultation an association was formed in the autumn of 1833 of "Friends of the Church,"

ARCH OF TITUS, ROME.—See TITUS.

principle, public morality, public confidence, and dispersed a party which, had it possessed courage to adhere to its old and popular principles and to act on them with manly energy, would have stemmed the torrent of revolution and averted the awful crisis which was at hand." The Churchmen who were thus alarmed saw dissenters and Romanists freely introduced into Parliament, and thus enabled to legislate for the English Church. They saw that dissenters had become loud and vehement for the suppression of Church rates, for the total separation of the Church and the State, and therefore securing the withdrawal from the Episcopal Church of the temporalities which for ages had been enjoyed by the clergy. Ten bishoprics had been suppressed in Ireland, and the prospect of the dismemberment of the English Church seemed to be at the door, while loose views prevailed, as these men believed, on dissent, ordination, the functions and powers of the

and a formulary was agreed on, in which "alterations in the doctrines and discipline of the Church" were disapproved of; a resolution was expressed "to maintain pure and inviolate the doctrines, the services and the discipline of the Church," and an assertion of "devoted adherence to the apostolical doctrine and polity of the Church." Opposition to latitudinarianism was thus professed as the great object of these Church defenders. The value of the press was recognized, and Mr. Palmer says: "We felt it necessary to teach the people that the duty of adhering to the Church of England rested on a basis somewhat higher than mere acts of Parliament or the patronage of the State or individual fancy. We were anxious to impress on them that the Church was more than a merely human institution; that it had privileges, sacraments, a ministry ordained by Christ; that it was a matter of the highest obligation to remain united to the Church." The

Association invited friends to write "Tracts," and undertook to circulate them, pledging, however, only an approbation of their general sentiments. Thus the publication of these celebrated "Tracts for the Times" was commenced, and before long, it was perceived that important results would follow if the principles which they avowed were adopted and acted on by the members of the Church of England. As soon as a few of the "Tracts" had appeared it became evident that their authors were propagating views which must end, if the writers were logical and consistent, in their leaving the communion of the Church of England for that of Rome. Conviction on this point became more settled as the series was enlarged, and at length, in 1841, when the celebrated "Tract 90" appeared, it was felt that if the principles of that publication should be recognized the protest of the Church of England against the assumptions and the teachings of Rome was uncalled for, and the authority of the Romish see ought at once to be admitted.

The character of the "Tracts" may be known by any intelligent reader who will study them; and the fact as to their tendency may be seen in the course of those, who in so great numbers have

ANCIENT TOWER.—See TOWER.

carried out the principles which pervade them, by deserting the Church of England and entering the Church of Rome. The subject is so extensive that an analysis of all the "Tracts" could not be presented in this work; and all that can be attempted is to present a few extracts from the pages of some of them, so as to exhibit the principles which their authors desired to disseminate in the Established Church, as well as among all classes in the country.

Thus, in Tract 78, page 2, it is asserted that "Scripture and tradition, taken together, are the joint rule of faith." In Tract 85, page 48, it is said: "Though Scripture be considered to be altogether silent as to the intermediate state, . . . there is nothing in this circumstance to disprove the CHURCH'S DOCTRINE (if there be other ground for it) that there is an intermediate state, and that it is important." In Tract 60, page 453, it is affirmed "that the Bible is in the hands of the Church, to be dealt with in such a way as the Church shall consider best for the expression of her own mind at the time, . . . may surely be considered as a catholic axiom."

On the subject of the obscurity of Scripture, it is declared, in Tract 85, page 27, that the gospel message "is but indirectly and covertly recorded in Scripture under the surface." On the absolute

necessity of bishops consecrated by succession from the apostles to the existence of a church and the administration of the sacraments, the doctrine of the "Tracts" is express and uniform, as may be seen in Nos. 1, 4, 7, 10, 17, 24, 33, 52, 54, 57, 60, 74, and Presbyterians, Independents and others, on account of their attachment to a different form of Church government, are said to "err in a fundamental doctrine," Tract 36, page 3. On the Lord's Supper, Tract 4, page 5, says that the English Episcopal Church is "the only Church in this realm which has a right to be quite sure that she has the Lord's body to give to his people;" and Tract 35, page 3, says: "A person not commissioned from the bishop may use the words of baptism, and sprinkle or bathe with water on earth, but there is no promise from Christ that such a man shall admit souls to the kingdom of heaven." In Tract 52, pages 7, 8, it is said that "in the judgment of the Church it makes no less difference than this, whether the bread and cup which he partakes of shall be to him Christ's body and blood or no. I repeat it; in the judgment of the Church, the eucharist administered without apostolical commission may to pious minds be a very edifying ceremony, but it is not that blessed thing which our Saviour meant it to be; it is not verily and indeed taking and receiving the body and blood of him our incarnate Lord. . . . Such communion as he offers in his holy supper cannot be depended on without an apostolical ministry." So also it is declared, at page 43 of Tract 90, that "they are not sacraments in any sense, unless the Church has the power of dispensing grace through rites of its own appointing, or is endued with the gift of blessing and hallowing the 'rites or ceremonies' which, according to the twentieth article, it 'hath power to decree.' BUT WE MAY WELL BELIEVE THAT THE CHURCH HAS THIS GIFT."

Thus, on all the points of doctrine concerning which the Church of England had been held to differ from that of Rome, the "Tracts" were found to speak so as to alarm the thoughtful members of the Church. On transubstantiation, the invocation of the saints, relics, images, purgatory, prayers for the dead, the celibacy of the clergy and the tenets which constitute the creed of Rome, the teaching of the "Tracts" was so pronounced, that it was not a matter of surprise when Dr. Newman and many of the kindred spirits who had been associated in the movement, were found to have carried out their principles by entering the Church of Rome. Eventually the controversy which these "Tracts" produced, and the feeling which prevailed in England when Tract No. 90 appeared, led the persons who had been the chief contributors to cease their publication; and the controversy which they originated passed on to other stages in the lapse of time, eventually appearing in the discussions on ritualism and its kindred subjects.

**TRADITION** (tra-dish'un), a delivery or handing down, Jud. vi. 13. Tradition is usually considered to imply that which was taught by oral instruction, in opposition to that which had been committed to writing. At the beginning of the gospel the Christian doctrine was taught orally, there being as yet no written documents. Consequently, St. Paul refers to "traditions" which he commands to be held fast, being as binding as any commandments delivered in any other way, 2 Thess. ii. 15; iii. 6. Instruction so conveyed through many intermediate persons was, however, liable to be corrupted. And so the Jews had really contradicted God's law by expositions which they

pretended were of equal or even superior authority. For this our Lord reproved them, Matt. xv. 1-9. They attached more importance to their traditional exposition of the law than to the law itself, calling the latter water, the tradition the wine that must be mingled with it. Their traditions were subsequently collected into the Talmud. The Christian Church has been divided on this subject. According to the Anglican confession, "Holy Scripture containeth all things necessary to salvation," Art. vi., being the sole rule of faith. The Church of Rome, on the other hand, allows a co-ordinate authority to unwritten traditions handed down in the Church from the apostles.

**TRAILL** (trale), ROBERT, a Presbyterian divine, was born at Ely, in the county of Fife, in 1642, and educated at the University of Edinburgh, whence he went to Holland, where he resumed his divinity studies and assisted in the republication of Rutherford's "Examination of Arminianism." In 1670 he went to London, where he was ordained by some Presbyterian divines. Seven years afterward, however, he was at Edinburgh, and for preaching privately was apprehended and brought before the privy council. Before them he acknowledged he had kept house-conventicles; but as to field-conventicles, which was a criminal offence, he left them to prove that, and peremptorily refused to answer upon oath any interrogatories that might affect himself. On this, he was sent to prison; but he was released by order of government in October of the same year, 1677. He then returned to England, and preached in a meeting at Cranbrook, in Kent; but he was afterward for many years pastor to a Scotch congregation in London. In 1692 he published his "Vindication of the Protestant Doctrine of Justification and of its First Preachers and Professors from the Unjust Charge of Antinomianism." In this he shows great zeal against Arminianism. He died in 1716.

**TRAJAN** (tra'jan), MARCUS ULPPIUS, Roman emperor, was born A. D. 52. He fought with Vespasian and Titus against the Jews, and distinguished himself as a soldier in Germany. He was made consul in 91, and adopted as his successor by the emperor Nerva in 97. He shortly after succeeded to the throne. In 103 he appointed Pliny the Younger, who was his intimate friend, proconsul of Bithynia; and the difficulty which Pliny felt as to the mode of dealing with the "new superstition" of the Christians led him to get information, and send to the emperor an impartial report, that he might have the benefit of his judgment. This was the occasion of the important rescript of Trajan establishing a legal mode of proceeding against the Christians, and illustrating his justice and humanity. In 104 the second Dacian war broke out, which ended in 106 with the reduction of Dacia to a Roman province. For the next eight years the empire enjoyed peace, and Trajan applied himself to the duties of government and the execution of many important works for the improvement of Rome. In 114 he set out for the East, carried on war with the Parthians, and subdued a great part of Western Asia. He then passed down the Tigris to the Persian Gulf; but being soon after seized with illness, he set out to return to Italy. He died at Selinus, in Cilicia, in 117.

**TRANSE**, a supernatural state of body and mind in which, without the loss of consciousness,

the mind is borne aloft, and scenes are vividly represented to the internal eye and divine communications made to the understanding, Num. xxiv. 4, 16; "lying" in sleep probably, "with open eyes"—i. e., of the mind—Acts x. 10; xi. 5; xxi. 17. The "deep sleep" of Adam, Gen. ii. 21, has been thought to be a trance.

**TRANSEPT** (tran'sept), the transverse portion of a cruciform church between the nave and choir, extending north and south from the central tower. In large cathedrals, such as Salisbury, Canterbury, Wells and Exeter, transepts are also carried north and south from the choir as well as from the tower. These choir-transepts are usually smaller in size than the main or tower-transepts. Chapels are often placed in transepts, and they are known as transeptal chapels.

**TRANSFIGURATION** (tranz-fig-u-ra'-

MOORISH TOWER OR MINARET.

shun). The glorious change in our Lord's appearance understood by this word is narrated by three of the Evangelists, Matt. xvii. 1-8; Mark ix. 2-8; Luke ix. 28-36. It is also referred to by one of the eye-witnesses, 2 Pet. i. 17, 18. The transfiguration occurred shortly—about a week—after Peter's remarkable confession, Matt. xvi. 16, and may fairly be supposed to have some connection with it, and with the announcement immediately after made of approaching suffering and death. The disciples could not bear to hear of events so mournful, which, if they should happen, would seem to quench all their hopes of Messiah's triumphant kingdom. They were to be taught, therefore, that while the law and the prophets paid homage to the gospel, and Moses and Elijah, the representatives of the one and the other, were seen as Messiah's servants, the communion they held with him was, even while he was radiant with heavenly splendor, in regard to his decease which he should accomplish at Jerusalem. This, the death of Jesus, was the great event to which the finger of the past was pointing, and for which

he had come into the world; and the lesson was designed to strengthen and comfort the apostles in the dark approaching hour with the assurance that he that died in weakness was yet the power of God, heaven's mighty King, to whom all creation must do reverence. After this their faith ought not to have faltered. The locality of the transfiguration is traditionally Tabor, but there was then a fortified town on its summit; and as the place last named is Cesarea Philippi, Matt. xvi. 13, it is more reasonable to believe that the scene was on one of the spurs of Hermon.

**TRANSGRESSION**, Rom. iv. 15. See SIN.

**TRANSITION** (tran-zish'un), a term applied to works executed during the progress of a change from one style to another. Thus the name is applied to the style of architecture which prevailed in England at the end of the eleventh and the beginning of the twelfth century, when the forms of the Norman began to give way to the lighter and more graceful Early English style.

The term is also applied to the style which prevailed when the Early English was passing into the more highly ornamented forms of the Decorated period; and of this style Salisbury Cathedral (A. D. 1220-1258), on page 86, is a fine example. During the reign of Richard II., when the windows of large churches became unusually great, the work in the heads of the windows assumed a tendency to uprightness, so as the better to sustain the superincumbent weight, and thus there was a transition period also between the Decorated and the fully-developed Perpendicular which was freely used from about A. D. 1399, or from the reign of Henry IV. From that time until the reign of Henry VII. nearly all the important churches in England were erected in the Perpendicular style.

**TRANSLATION OF BISHOPS.**

This term is applied to the removal of bishops from one see to another. Owing to the extent of the dioceses, the amount of labor and the great inequality of support, translations were very common in England, but of late years such arrangements have been made that only in a few of the more important sees, such as Canterbury, Winchester, London and York, are vacancies to be filled by translation.

**TRANSMIGRATION** (tranz-mi-gra'shun) OF SOULS. Among the Hindoos the belief prevails that after death the soul passes into another body according to the life that may have been led by the person while living. If the course of life may have been vile, then the soul enters one of the lower animals; if pure and good, then the transmigration is into a higher personage; and this process may go on for myriads of ages before the soul may be so disciplined and purified that it is fitted for being admitted into permanent bliss.

**TRANSUBSTANTIATION** (tran-sub-stan-she-a'shun), the conversion or change of the substance of the bread and wine in the eucharist into the body and blood of Jesus Christ which the Romish Church supposes to be wrought by the consecration of the priest. Nothing can be more contradictory to Scripture or to common sense than this doctrine. It must be evident to every one that our Lord's words, "This is my body," are

mere figurative expressions. Besides, such a transubstantiation is so opposite to the testimony of our senses as completely to undermine the whole proof of all the miracles by which God hath confirmed revelation. According to such a transubstantiation, the same body is alive and dead at once, and may be in a million of different places whole and entire at the same instant of time; accidents remain without a substance, and substance

MOORISH TOWER OR MINARET.

without accidents; and that a part of Christ's body is equal to the whole. Besides, if the language of our Lord, "This is my body," is to be taken literally, then his words, "This cup is the new testament in my blood," must be taken literally also, and the cup must then be held to be the new testament. Moreover, the idea of a bodily presence is altogether contrary to that which is presented by our Lord, as he intended the ordinance to be a commemoration in his absence, not an action while he was to be bodily present, 1 Cor. xi. 24-26.

It is vain for any Romanist to say that the change effected is miraculous, for where is the evidence of the miracle? The passage through the Red Sea and through the Jordan was cognizable by the senses; the raising of Lazarus, the turning of the water into wine at Cana, the calming of the Sea of Galilee, the feeding of the multitudes—in short, all the miracles of Christ—were cognizable by the senses; and if a miraculous change were to take place when the Romish priest consecrates the wafer in the mass, then the change would be apparent—men could see that the wafer had become a man, having bodily organs; and thus the reality of the miracle would be plain. Equally absurd is the claim that the wafer can become the body of our Lord while in appearance it remains a wafer still, for the body of our Lord had a fleshly form and a fleshly organization; neither when he sojourned in the days of his ministry in Palestine nor now could he have a body in the form of a wafer. No man who says he can work a miracle should dare to ask rational men to believe him, if he cannot give sensible evidence to

TOWER OF LONDON.

them that his claim is based on fact. If by sight, smell, touch and taste the evidences are real, then let the claim be admitted, not otherwise. Besides, on what authority must it be admitted that our Lord's words, "This is my body," must be taken literally, when his words, "I am the vine," "I am the door," or "I am the way," must be taken figuratively? Paschasius, in the ninth century, usually gets the credit of being the first to formulate the doctrine of transubstantiation distinctly, although it is known that many who had preceded him had written in a mystical and hyperbolic manner respecting the Lord's Supper; and it remained for a council in the beginning of the thirteenth century, in the papacy of Innocent III., to propound transubstantiation as an article of faith. See UNBLOODY SACRIFICE.

**TRAVERS** (trav'ez), WALTER, a learned English divine of the sixteenth century, a Fellow of Trinity College, Cambridge, and a friend of Cartwright, whom he accompanied to the Netherlands, where he was ordained. On his return to England he was appointed lecturer at the Temple, where Hooker shortly after became master, and

these two divines soon came into collision on Church government, and the controversy was at length stopped by the archbishop inhibiting Travers from preaching. He has left some publications on the subject of this memorable controversy.

**TREASURE-CITY**, Ex. i. 11. See PITHOM, RAMESES.

**TREASURY**, Luke xxi. 1. See TEMPLE.

**TREAT** (treet), SAMUEL, was born in 1647, at Milford, Connecticut. His father was governor of the State. He graduated at Harvard College in 1669, and in 1672 he settled as pastor at Eastham, in the Plymouth Colony. He was the first pastor of that place. Although a small organization had been in existence there for several years, yet the poverty of the people had hitherto prevented them from sustaining a minister. With a view to the conversion of the Indians who abounded in the district he began to study their language, and in a short time he had mastered it so fully that he was considered as proficient as Eliot himself. He labored among them with great zeal, and he had abundant success. He preached regularly once a month among them, and at other times their chiefs read the sermons which he prepared for them. He had the Confession of Faith translated into their language; he visited them, took part in their festivals, stayed in their wigwams, and by his great kindness he won their entire confidence and lasting regard. He had as many as five hundred Indians diligently attending on divine service with most commendable regularity. Four schoolhouses were established, magistrates were appointed and teachers regularly received instructions from Mr. Treat, and the effect of the combined influences was of the most blessed character. A fever, however, began to desolate the region, and Mr. Treat had been dead only about twenty-five years when it appeared that nearly all the Indians had disappeared from the township. Mr. Treat also labored at Truro, where he had great success. He died on the 18th day of March, 1717. His chief literary works were an election sermon and the Confession of Faith in the Nanset language. Several of his sermons remain in manuscript, and they show that his preaching must have been of a character calculated to alarm the careless and awaken the impenitent.

**TREE**. Both good and evil men are compared to trees, Ps. i. 3; Jude 12. Fruit trees were not to be destroyed in the siege of a city, Deut. xx. 19, 20. Tree-worship has been a form of idolatry extending over a large part of the world. Single trees were perhaps venerated for the beauty of their form, and under groves altars were erected and evil rites performed in the gloom of their shade, Isa. lvii. 5; Ezek. xx. 28; hence the prohibition against planting a grove near to the altar of God, Deut. xvi. 21. Oracular trees are mentioned in classic authors, and the Druidical reverence for oak groves is well known.

**TREE OF KNOWLEDGE, THE**. See KNOWLEDGE, THE TREE OF.

**TREE OF LIFE, THE**. See LIFE, THE TREE OF.

**TREFFRY** (tref'fre), RICHARD. There were two persons of this name, father and son,

both of whom were Wesleyan ministers in England. The elder wrote on "Christian Perfection," "The Christian Sabbath," "Treatise on Secret and Social Prayer," "A Memoir of Joseph Benson," and his "Discourses," accompanied with a biography by J. S. Stamp, were published in 1846. The younger was a very industrious author also. He wrote on "The Eternal Sonship of the Lord Jesus Christ," on "The Atonement," "Covetousness," "The Evidences of Christianity," "Infidelity" and "Memoirs of J. E. Trezisc." The work on the Sonship of Christ is written with great power, and it is especially valuable as a clear, thorough and satisfactory discussion of the subject. He died at Penzance, in 1838, in early life, being only thirty-three years of age.

**TREGELLES** (tre-gelz'), SAMUEL PRI-DEAUX, LL.D., was a native of Cornwall, being born in 1813, at Falmouth, in which place he was educated. For six years he was engaged in Wales at the iron works at Neath Abbey, and in 1835 he returned to Falmouth to engage in private tuition. Already his fame as a scholar was widely extended, and the University of St. Andrews conferred the degree of doctor of laws on him. In 1836 his first publication appeared, entitled "Passages in the Book of Revelation connected with the Old Testament Scriptures." His next work was a "Revision of the Englishman's Greek Concordance to the New Testament," after which he issued "The Englishman's Hebrew and Chaldee Concordance to the Old Testament." In 1844 he published "The Book of Revelation in Greek, Edited from Ancient Authorities, with a new English Version and Various Readings." In 1857 one of the most important works of the age appeared, on which he had labored for twenty years, entitled "The Greek New Testament, Edited from Ancient Authorities, with the Various Readings of all the Ancient Manuscripts, the Ancient Versions and Earlier Ecclesiastical Writers to Eusebius, included, together with the Latin Version of Jerome." The first part contained the Gospels of Matthew and Mark. He assisted Dr. Hartwell Horne in a new edition of his well-known "Introduction," and he published a learned work on the "Book of Daniel," a work on the "Authorship and Transmission of the Books of the New Testament," an edition of the "Canon Muratorianus," which contains the earliest catalogue of the books of the New Testament. He has deciphered, transcribed and edited the Manuscript of the Gospel of Luke found in the island of Zante by General C. Macaulay, and now in the library of the British and Foreign Bible Society. This is a work of the sixteenth century, and the "Lectonary of the Four Gospels" which accompanies it is probably of the thirteenth century. In this brief enumeration of the works of this great scholar many of his publications are omitted, and they are of such value that even one of them would have established the reputation of other men. He has been aided in his great works by the British Museum, and the British government has conferred a small pension on him in recognition of his eminent services in the field of Biblical literature.

**TREMELLIUS** (tre-mel'fus), EMMANUEL, a Hebraist and translator of the Scriptures, was the son of a Jew of Ferrara, where he was born in 1510. He was converted to the Christian faith by Cardinal Pole; and having afterward imbibed the opinions of the Reformers from conversation with some of their followers in Italy, espe-

cially with Peter Martyr at Lucca, he left that country with the latter, and for some time resided at Strasburg. Thence, in the reign of Edward VI., he passed into England, where he lived in intimacy with Archbishops Cranmer and Parker, and also taught Hebrew at Cambridge; but after the death of the king he returned to Germany and taught Hebrew in the school of Harnbach. He afterward was invited to the professorship of Hebrew in Heidelberg; and during his residence in that university he gave a Latin translation of the Syriac version of the New Testament, and joined with Francis Junius in a translation of the Old Testament from the Hebrew. He died at Sedan, in 1580. All the writings of Tremellius related to the Oriental languages. His version of the Syriac New Testament was examined by the theologians of Louvain, and thought worthy of their approbation, after some slight alterations.

**TRENT, COUNCIL OF**. This celebrated council was assembled by Pope Paul III. in 1545, at Tridentum (Trent), in the Tyrol, between Italy and Germany, and continued in twenty-five sessions, until 1563, under Julius III. and Pius IV. The ninth and following sessions were held at Bologna. The decrees are signed by two hundred and fifty-five members, and by the Romish Church it is considered an Ecumenical Council. The Christian world had been greatly excited by the proceedings of the Reformers in Germany and elsewhere; and as it was generally felt that many abuses had crept into the Church which demanded attention, this council was called to deliberate, and the proceedings have reference to many of the controverted questions of the day, embracing both doctrine and discipline. There is a degree of ambiguity in the expressions of some of the Decrees, owing to the uncertainty which the doctrines of the Reformers caused in the minds of the supporters of the Romish faith; but, on the whole, the Decrees of this Council express the general belief of Western Christians who acknowledged the supremacy of the Romish see at the time they were drawn up, and they condemn several of the more glaring abuses which had prevailed in the Church. The doctrinal parts are embodied in the Creed of Pope Pius IV., but the authority of the disciplinary enactments has been much controverted among the Romish ecclesiastics. In Germany, Poland and Italy they appear to have been freely adopted at once; in Spain with a reservation of the rights of the monarch; in France the Gallican views of the clergy prevailed for a considerable time, but the French clergy have of late years become much more Ultramontane than formerly. There can be no doubt but that, as regards the more important portions of them, which contain the rule of faith, they probably express the belief of the Roman Catholic Church at the present day; but to the Decrees of this Council must now be added the doctrine of the Immaculate Conception as declared by Pius IX. and the Infallibility of the Pope as declared by the late Vatican Council. The famous History of the Council by Father Paul (Paolo Sarpi) may be read with interest, but it needs to be studied with caution. Bungenier is more accurate, and Pallavacino represents the more Romanist view of all matters connected with this famous Council.

**TRENTAL** (tren'tal), a mass said during the thirty days from a person's death; generally the word is used to include the mass said on the thir-

tieth day from the anniversary of the death in each year.

**TRESPASS-OFFERING**. See OFFERINGS.

**TRIAD** (tri'ad). As to the mysterious triad of deities or demons who are supposed by some to have been the basis of the demoniacal worship of the Greeks, according to a passage in Proceus on the "Timæus" of Plato, "They could," he says, in accordance with his singular theory, "be no other than the three sons of Noah, who were the Baalim of the Scriptures and the 'Daimones' (demons) and 'Athanatoi' (immortals) of Greece." Others have imagined, but without sufficient grounds, that the Triad of Plato and his followers was connected with the Christian Trinity. Had the origin of the Platonic view been traced to India, it would have had some basis in fact. The Hindoo Triad differs entirely from the idea of the Christian Trinity, inasmuch as in the Christian faith it is essentially held that Father, Son and Holy Spirit have existed in the Godhead eternally; while in the Hindoo Triad, Brahma, Vishnu and Siva did not exist at one time, as Brahma is said to have given birth to them simultaneously, and to have allotted to them their several provinces of creating (Brahma), preserving (Vishnu) and destroying (Siva); and as Brahma has done his work, it will not be until the tenth avatar, or incarnation, that his services will be put into requisition, when this world is to undergo total annihilation, while the other divinities are busily engaged in their respective offices.

What are called by Cymri antiquaries the "Triads of the Welsh Bards" are poetical histories, in which the facts recorded are thrown into a kind of triplets. Thus, to take the commencement of the first Triad as an example, "Three names have been given to the isles of Britain since the beginning—Clas Merddin, Til Inys and Inys Priddin." The Triads are supposed to be of no greater antiquity than the reign of Edward I., although they probably contain fragments of old history.

**TRIAL**. The earliest account we have of judicial proceedings in Israel is that which describes Moses as sitting daily to administer justice, Ex. xviii. 13-16. At the suggestion of Jethro, sanctioned by the divine command, he afterward appointed inferior courts, Ex. xviii. 17-26; Deut. i. 9-17. There appear to have been subsequently various smaller local or provincial courts, besides the highest tribunals. A trial was generally very summary. It was held, some suppose, in the morning, Jer. xxi. 12; but the text alleged can hardly be taken as sufficient authority for this. It is likely that anciently people pleaded their own causes, 1 Ki. iii. 16-28; but in later times the Jews were familiar with the practice of hiring advocates, Acts xxiv. 1-9. The courts were public, held occasionally at the gate of a city, Deut. xxi. 19. The judges were enjoined to act with impartiality, Deut. xvi. 18, 19, and the severest censures were passed on such as received bribes or perverted justice, Isa. i. 23, 24; Luke xviii. 2-6. The matter was investigated by witnesses and the oath of the parties, the accused himself being sometimes adjured to tell the truth, Matt. xxvi. 63. In criminal cases a single witness was not

sufficient, Deut. xvii. 6; and if the witnesses could be proved to have spoken falsely, the same punishment was inflicted on them as the accused, had he been guilty, would have suffered, Deut. xix. 16-21. When the charge was brought home to the criminal, judgment and execution followed immediately, the hands of the witnesses in capital cases being the first upon him, Deut. xvii. 7; 1 Ki. xxi. 13. On some occasions, however, there might be an appeal, Deut. xvii. 8-13. Sometimes the lot was employed to discover a culprit, but not to convict him, Josh. vii. 14-18.

**TRIBE**. A distinction into families or tribes was very general among the nations of the East. And so we find that the twelve sons of Jacob were each the head of a clan or tribe in Israel. An enumeration of these twelve patriarchs and their

ROMAN TOWER IN BAVARIA.

children is given in Gen. xlvii. 8-27; and a fuller list, when each tribe had become numerous, with the families of which it was composed, may be found in Num. xxvi. 5-51. The number of tribes was indeed thirteen, because Joseph's two sons, Ephraim and Manasseh, were each made a tribe-progenitor; but as to the Levites the priesthood was assigned, and they were to have no separate territory, but towns situated locally in all the different parts of the country, there were but twelve territorial divisions, and Israel was ordinarily regarded as composed of twelve tribes, Ex. xxiv. 4; Josh. iv. 4. At the head of each tribe was a prince, Num. i. 16, 44, a regulation which continued substantially in force under the monarchy, 1 Chr. xxviii. 16-22. There were probably other inferior tribe-officers. The tribes, though forming one nation, and on great occasions acting collectively, yet exercised much independent power, and had their separate wars, Jud. i. 3, remarkable in-

stances of which occurred in the reigns of Saul and of Hezekiah, 1 Chr. iv. 41-43; v. 10, 18-22. Several of the judges, too, seem to have had their authority acknowledged only by certain tribes. When the kingdom was established, the unity of the whole was to a great extent consolidated, though we still find evidences of tribal jealousy, 2 Sam. ii. 4-9. The two leading tribes of Judah and Ephraim were especially rivals; and so necessary was it felt for the king, though of Judah, to conciliate Ephraim, that Rehoboam went to Shechem to be inaugurated, 1 Ki. xii. 1. There, however, his folly produced a decided breach—an Ephraimite monarchy was established, in opposition to that of the house of David; and while ten tribes banded together under Jeroboam, Judah and Benjamin alone, augmented by the Levites, and ultimately by portions of Simeon and Dan, continued to obey Rehoboam, 2 Chr. xi. 1, 13, 14. The breach was never healed, and the nation was

ANCIENT TOWER IN PRAGUE.

thenceforward two great bodies. Still, as before noted, the tribal divisions were kept in mind, and the brotherhood of the whole from time to time acknowledged. It was probably in reference to the twelve tribes that our Lord appointed twelve apostles, Matt. x. 1-4; and in the last book of the New Testament canon the extension of the Church and her ultimate glory are set forth by illustrations taken from the twelvefold division of Israel, Rev. vii. 4-8; xxi. 10-21.

**TRIBUNE** (trib'eun). 1. The seat of the bishop in the apse behind the altar in basilicas. 2. A pulpit or ambo. 3. A gallery in a church.

**TRIBUTE.** See TAXES.

**TRIDUUM** (tri'du-um). 1. The last three days of Lent. 2. Any three days kept in a special manner, as during a retreat or in preparation for a fast.

**TRIFORIUM** (tri-fō-re-um), the gallery or open space between the vaulting of the nave and

the roof of the aisles of a church or cathedral, usually opening on the nave by triple apertures, whence the name. The arches of the triforium stand below the clerestory windows and above the arches of the nave. See pages 128 and 1276.

**TRIMMER** (trim'mer), SARAH, well known for her useful publications for the promotion of religious education, was born at Ipswich, in 1741. She was the daughter of Joshua Kirby, writer on "Perspective," and married Mr. Trimmer in 1762. She was at that time living at Kew, her father having the appointment of clerk of the works at the palace. She did not make herself known as an authoress till 1780, when she published her "Easy Introduction to the Knowledge of Nature." Among her numerous writings was a "Sacred History," in six volumes. Besides her separate works, she conducted for a time the "Family Magazine" and the "Guardian of Education." She was also an early supporter and promoter of Sunday-schools, and some of her books were admitted in the list of the Society for Promoting Christian Knowledge. She died suddenly, while seated in her chair in her study, December 15, 1810.

**TRINE AFFUSION** (af-fu'zh'un), the application of water in baptism repeated at the name of each Person of the Trinity.

**TRINE IMMERSION** (im-mer'shun), the dipping the body thrice in water at baptism, as practiced by the Eastern Church.

**TRINITARIANS** (trin-i-ta're-anz), the name applied to those who hold the doctrine of the Trinity of Persons in the Godhead, as the term Arian is applied to those who hold that the Son is a creature, and therefore inferior to the Father, and as the name Unitarian is claimed by those who believe that Jesus had no existence until he was conceived in the womb of his mother.

**TRINITY** (trin'i-te). This word does not occur in Scripture; it has been devised by theologians to express that which the Scripture plainly teaches, that in the unity of the Godhead there are three Persons, that in the mode of his subsistence the divine Being is, in some way incomprehensible to us, three and yet one. In a book compiled by ordinary men some attempt would probably have been made to explain the mystery, at all events to define the terms of it. Scripture makes none. For human language is inadequate to such a task; or even if language were not inadequate, the human understanding could not have grasped the full knowledge of a theme so high. But it by no means follows that we are to reject a thing as fact because it is above our comprehension. Continually in ordinary life we admit that to be true which we cannot explain. It is to the fact, then, as Scripture teaches, that we must look. And as a fact the Scripture reveals the doctrine of the Trinity in two ways, first in passages in which the Father, Son and Holy Spirit are mentioned together as God, and secondly in passages which speak of each as divine. A reference to some of the former class only can be made here. It is admitted that though the Old Testament, read in the light of the New, is in perfect unison with it, yet the great doctrine there taught is the unity of God as opposed to polytheism. In the New Testament further and clearer evidence is given. See Matt. iii. 16, 17; xxviii. 19; 1 Cor. xii. 3-6; 2 Cor. xiii.

14; Eph. iv. 4-6; Tit. iii. 4-6; 1 Pet. i. 2; Jude 20, 21. These passages, carefully read and diligently pondered, are sufficient to prove that the Deity of the Father, of the Son and of the Holy Ghost is all one, the glory equal, the majesty co-eternal; such as the Father is, such is the Son, and such is the Holy Ghost; the Father is God, the Son is God and the Holy Ghost is God, and yet they are not three Gods, but one God.

**TRINITY SUNDAY**, the Sunday after Whitsunday on which the preceding festivals are summed up in a solemn recognition of the three Persons in one God. This feast began to be observed in the tenth century, but did not become general in the West for nearly five hundred years afterward. This Sunday and those which follow are reckoned and named from Pentecost in the Romish Church.

**TRINOTHEANS** (tri-no-the'anz), a sect which held that our Lord was incarnate only for the benefit of our bodies.

**TRIPARTITE** (trip'ar-tite) **HISTORY**, a Latin arrangement of the works of Socrates, Sozomen and Theodoret, made A. D. 537, by Marcus Aurelius Cassiodorus, the minister of Theodoric.

**TRIPLE** (trip'l) **CROWN**, the same as tiara.

**TRIPLYCH** (trip'lik), a picture painted on a panel which has two folding doors which are also painted.

**TRIPOD** (trip'od). This word, which is almost identical in form in Greek, Latin, Italian, Spanish and English, is used to designate such utensils as rested on three feet. The Egyptians, Greeks and Romans, as well as Etrurians, frequently adopted this mode of support, especially in the case of lights or implements of a sacred character; but the tripod was customary also in articles of domestic use.

**TRIPOLIS** (trip'o-lis), 2 Macc. xiv. 1, a Syrian city, the point of federal union for Aradus, Sidon and Tyre. It was long an important place. It is represented by the modern *Tarabulus*, but the small fishing-place *el-Myna* is probably on the site of the ancient city.

**TRIPP, JOHN**, was born in 1761, at Dartmouth, now Fairhaven, Massachusetts. An ancestor on his father's side was an associate of Roger Williams, and he aided in the government of the State of Rhode Island. For some time he engaged in the army, and also in the coasting-trade; but in 1782 he was brought into connection with the family of the Rev. Dr. West, of Dartmouth, and this association had an important influence on his future career. He began to study closely, read grammar, and acquired a knowledge of the languages and of literature generally. He had made a profession of religion and been baptized when he was about eleven years of age; and although he had desires at that time after the ministry, he declined in his feelings; but in the month of May, 1780, he received a new impulse, and he began to read with a definite object in view. After some time he tested his powers by attempting to address the church at Martha's Vineyard, where he was residing; and at length, in 1787, he accepted an invitation to preach in the Third Baptist Church in Middleborough, and in the year

following he was licensed to preach. Being thus recognized as a preacher, he accepted an offer to become the pastor of a new church at Carver, and he was ordained and settled in that place. His support was extremely limited, and he often suffered from his small income, but he held his place in Carver until necessity compelled him to remove to Middleborough, where he remained until 1797, when he was obliged because of the want of means to sustain his family to accept an invitation to Hebron, Maine. Here he had to encounter much deadness and apathy at the beginning of his ministry, but eventually he had much success; and he carried his missionary labors extensively into New Hampshire and Vermont. About 1840 his health began to decline, and he procured the aid of a colleague; and thus comforted by seeing the effects of more labors among the members of his charge, he continued his devoted services until 1847, when, in the eighty-seventh year of his age, he sunk from the effects of age, the immediate cause being the influence of a cold contracted during the previous winter. He wrote on "Baptism," on "Inspiration," and on "The Perseverance of the Saints."

**TRISAGION** (tri-sa'ge-on), the name of a hymn in an Eastern liturgy beginning "Holy God, holy and mighty, holy and immortal, have mercy upon us!" Tertullian says it was used in Africa in the second century.

**TRISCILIDÆ** (tris-sil'i-day), early heretics mentioned by Augustine who asserted that the Godhead consisted of three parts. They were the same as the Tritheite or the Tritheists. See TRITHEISM.

**TRITHEISM** (tri-the'izm), the system of certain Monophysites who, in the sixth century, held the contrary error to Sabellianism—viz., the existence of three independent substances in the Deity. Severus, Theodosius and Johannes Philiponus, in the time of the emperor Phocas, professed this heresy.

**TRIUMPH** (tri'umf). We have repeatedly accounts in Scripture history of rejoicings and triumphal processions when a victory had been obtained or some great national success achieved. The first noticeable occasion was when Abram returned from the slaughter of the Eastern kings, bringing back the plunder which they had carried from the cities of the plain, and the recovered captives. Princes went out to meet him, and grateful offerings were made, Gen. xiv. 16-24. Another example is when Israel had safely passed through the Red Sea, and their enemies the Egyptians lay dead upon the shore. Then, indeed, did Moses lead a noble song, and the people joined their voices with his; and the women took their part with timbrels and dances, in praise of him, the Lord Jehovah, who had so gloriously triumphed and given marvelous deliverance to his chosen, the seed of Jacob, Ex. xv. 1-21.

It was customary for victors to form a joyful procession, bearing with them and sometimes parading the booty they had taken and the captives they had brought, Num. xxxi. 12; 1 Sam. xxx. 16-20. The returning troops were met by those who welcomed them and celebrated their praises, Jud. xi. 34, congratulatory odes were composed, Jud. v, honors were heaped upon the general, presents given him, offerings made to the Lord, and a portion of the spoil bestowed on

friends, Num. xxxi. 48-54. It was natural that on such occasions there should be great joy, and accordingly the gladness of conquerors dividing the spoil passed into a proverb, Isa. ix. 3. Allusion seems to be made to such festal scenes in the Psalms, Ps. xxiv. 7-10; lxviii. 17, 18, the rather as the battle was the Lord's and he gave his people victory; and, moreover, the prophetic eye looked forward to the complete conquest to be obtained by Messiah over his and his Church's foes, and his glorious return to his Father's throne, compare Eph. iv. 8.

It is well known that what was emphatically termed a "triumph" was a high honor conferred by the Romans on a successful general. A particular description of the ceremonies of it must be sought in other works. Here it can be only said that there was a magnificent procession, that the spoils taken from the enemy were exhibited, that the kings and commanders captured were made to walk in chains, and that the conqueror rode in a splendid chariot, clothed in a gorgeous robe, and attended by his troops from the gate of the city to the Capitol. It was in such a way that the furniture of the temple was carried before Titus on the conquest of Jerusalem, and the figures of some of the sacred articles yet remain sculptured on his triumphal arch. To such a triumph there are allusions in the New Testament. Thus, St. Paul thanks God for leading us in triumph as participants of Christ's victory, 2 Cor. ii. 14. For, as Dr. Alfred remarks, "in our spiritual course our only true triumphs are God's triumphs over us." Also the triumph of God in Christ, when he exhibited all principalities and powers as subject to his supremacy, is spoken of, Col. ii. 15.

**TRIUNE** (tri'eun), an adjective which, applied to the divine Being, signifies three in one—i. e., three persons in one Godhead. Orthodox Christians hold that Father, Son and Holy Ghost are united and exist as one God—three in so far as their Personality is concerned, and one in so far as the Godhead is concerned. Hence three in one sense, and one in another sense, involves no contradiction; but it must ever be admitted that the finite mind can never fully comprehend the mode of the divine existence.

**TRIVIUM** (triv'e-um), a word derived from the Latin, signifying "three ways." It was the name given in the schools of the Middle Ages to the first three liberal arts—i. e., grammar, rhetoric and logic—which were studied together. The other four—i. e., arithmetic, music, geometry and astronomy—formed what was termed the *quadrivium*; and the two following mnemonic lines comprehend the whole, viz.:

"Gram. loquitur; Dia. verba docet; Rhe. verba ministrat; Mus. canit; Ar. numerat; Ge. ponderat; As. colit astra." The *quadrivium* were considered the four lesser arts, and both were held as embracing a full course of literary education with the exception of theology.

**TROAS** (tro'as), more fully **ALEXANDRIA-TROAS**, a city of Lesser Mysia, in

Asia Minor, situated on the coast some distance southward from the site of Troy, upon an eminence opposite the island of Tenedos. Paul was twice at this place, Acts xvi. 8, 9; 2 Tim. iv. 13. The

OLD TOWER IN RHODES.

name Troas, or Troad, strictly belonged to the whole district around Troy. Alexandria-Troas is represented by the present Eski-Stambul, and the

TRAJAN.—See article.

ruins are now concealed in the heart of a thick wood of oaks, with which the country abounds.

**TROGYLLIUM** (tro-gil'le-um), a town and promontory on the western coast of Asia Minor, opposite Samos, at the foot of Mount Mycale. It is mentioned in Acts xx. 15.

**TROPHIMUS** (trof'i-mus), an Ephesian Christian, who, on St. Paul's third missionary journey, having preceded him to Troas, went thence with him to Jerusalem, Acts xx. 4. It was on his account that the tumult against Paul was excited by the Jews, Acts xxi. 29. He is afterward mentioned as being left at Miletum sick, 2 Tim. iv. 20, which cannot well have occurred till after the apostle's imprisonment at Rome. Trophimus was probably one of the brethren who carried the Second Epistle to the Corinthians, 2 Cor. viii. 16-24.

**TRULLO** (trul'lo), IN. This is the title of the Council supplementary to the fifth and sixth General Councils, so called from the domed hall or chapel in which it was held. It is also called *Quinisext*.

**TRUMBULL** (trum'bul), BENJAMIN, D.D., was born in 1735, at Hebron, Connecticut. He entered Yale College, and graduated there in 1759. In 1760 he settled as pastor of the church at North Haven, Connecticut, and held this posi-

**TRUMPETS** (trum'pets), THE FEAST OF. The first day of the seventh month was appointed to be a Sabbath of rest, all servile business being suspended, and a holy convocation, accompanied by a continuous blowing of trumpets. This, therefore, was the feast of trumpets. It was the beginning of the civil year. The special sacrifices were to be a ram and seven lambs as a burnt-offering, with the appropriate meat-offering, also a kid as a sin-offering, all in addition to the regular daily and monthly sacrifices, Lev. xxiii. 23-25; Num.

TIMOTHY TAUGHT THE SCRIPTURES BY HIS MOTHER AND GRANDMOTHER.—See TIMOTHY.

**TROPISTS** (trōp'ists), critics who explain away the literal words of Scripture as mere figures of speech.

**TRUCE OF GOD.** During the disorders which prevailed in the eleventh century truces between persons who had private feuds were agreed on in France, so as to secure the worship of God and to protect those engaged in worship. The date of the first is 1027, and it was ordered by the Synod of Elne, in Roussillon.

**TRULLÆ** (trul'lay), churches built in a circular form and covered with a dome.

**TRUMPET.** See MUSICAL INSTRUMENTS.

xxix. 1-6. Ps. lxxxi. is used in the service of the day by the modern Jews. Trumpets are still blown by them the first day of the seventh month, and on the morning of each preceding day for a month, also at sunset on the day of atonement. This blowing of the trumpet is considered as a memorial of the joyous day of creation; it is a call to repentance, to remind men of the law, the prophets, the destruction of the temple, the binding of Isaac, the day of judgment and the resurrection; it is also a call to prayer for the restoration of Israel. No Jew with any sense of religion neglects attendance at this solemn rite on the first of Tisri.

**TRUSLER** (trus'ler), JOHN, a literary compiler, was born in London in 1735, was brought up as an apothecary, but entered into orders, and for a time officiated as a curate. He published abridgments of popular sermons, printed in imitation of manuscript, for the use of the pulpit; this turned out a profitable speculation, and led to his commencing business as a bookseller, by which, and the numerous compilations he produced, he realized a good fortune. He died in 1820.

**TRUTH**, the conformity of words with things. God is described pre-eminently as true, one who cannot lie, Tit. i. 2. Our Lord declares himself "the truth," John xiv. 6, and is said to be "full of grace and truth," John i. 14. Hence whatever comes from God is true, and the divine word or the gospel is called "truth," John viii. 32. So any divine revelation is characterized, Dan. x. 21. Truth is enjoined, Eph. viii. 16, as a Christian

by the Rev. Dr. Sommers. He was induced to go to Georgia for the benefit of his health, and here he was licensed to preach the gospel; but aware as he was that his literary education was imperfect, he entered the Mercer Institute for further study; and having gained his object, he set about raising funds to advance the institution, in which he was successful, and now it is known as the Mercer University. He then preached in the churches at Washington, Lumpkin and Columbus for some time, and in 1837 he became the pastor of the Baptist church at Irwinton (now Eufaula), Alabama. Two years afterward he removed to Wetumpka, Alabama, and in 1841 he went to Texas, through which great State he preached under the auspices of the Northern Baptist Missionary Society. He established a strong church in Houston; and when the yellow fever appeared in that place, he steadfastly ministered to the sick and the dying, until at length he was attacked himself. After ten

**TSIDON** (tsi'don), Gen. x. 15, margin. This spelling of the name arises from the Hebrew double consonant *tsade*, which includes *t* and *s*. See SIDON.

**TUBAL** (too'bal), a son of Japhet, and a people descended from him, Gen. x. 2; Isa. lxvi. 19; Ezek. xxvii. 13; xxxii. 26; xxxviii. 2, 3; xxxix. 1, supposed to have been settled in Asia Minor near the Euxine. See EARTH.

**TUBAL-CAIN**, son of Lamech and Zillah, to whom the invention of the art of forging metals is ascribed in Gen. iv. 22. There is consequently a great amount of interest attaching to his name, because of his connection with the arts.

**TUBIENI** (tu-bi-e'ni), 2 Macc. xii. 17, a colony of Jews settled in the places of Tobie, 1 Macc. v. 13, probably Tob.

TIMOTHY AS PAUL'S MESSENGER.—See TIMOTHY.

grace, Eph. iv. 25, and it is to be the girdle of the Christian warrior's loins, Eph. vi. 14; and they that are not truthful are excluded from the celestial city, Rev. xxi. 27. Still, we have remarkable examples of a want of truthfulness in many eminent persons, Gen. xii. 13; 1 Sam. xxi. 2, and elsewhere. Their conduct, however, must not be taken in any way to authorize or excuse insincerity. It was certainly displeasing in God's sight.

There are two Greek words *alēthes* and *alēthinos*, both often rendered "true." The latter rather implies "real," "genuine," "unfeigned," as in Luke xvi. 11.

**TRYON** (tri'on), WILLIAM MILTON, was born in 1809, in the city of New York. He lost his father when he was quite young, and he was placed under the care of a wealthy uncle in Connecticut to be educated. He returned to his mother in New York in a short time; and being brought under decided impressions of the importance of religion, he was baptized in his seventeenth year

days' sickness he died, on the 16th of November, 1847, in the thirty-ninth year of his age, having borne a reputation of singular energy and earnest piety.

**TRYPHENA** (tri-fe'na), a Christian female at Rome whom with Tryphosa St. Paul commends and salutes, Rom. xvi. 12.

**TRYPHON** (tri'fon), 1 Macc. xi. 39, 54, 56, a native of Carians, originally named Diodotus. After the death of Alexander Balas he professed to support the claim of Antiochus VI. his son to the Syrian throne, but before long he murdered Antiochus and seized the crown himself. His authority, exercised with violence, was not universally acknowledged; and at length he was expelled by Antiochus VII. and put to death, or, according to some accounts, he committed suicide, but nothing is certainly known.

**TRYPHOSA** (tri-pho'za). See TRYPHENA.

**TUBINGEN** (tū'bing-en) SCHOOL. This very daring school, which has excited considerable attention, is one of the latest forms of German rationalism, which was indirectly developed from Strauss. It was headed by Bauer (1792-1860), Schwegler and Zeller, who set themselves to mould the negative system of Strauss into a positive system by the same process of criticism. Their attention was directed chiefly to the apostolic age, and the key of their system is the idea that Christianity is not a divinely-revealed and complete truth and life, but a vital force in process of development. In working out their principle, this school relies chiefly on the Pauline epistles, especially those to the Romans, Galatians and Corinthians, which are considered to be most in accordance with the theory of an infant but growing Christianity that was feeling its way toward the light. The books of the New Testament are looked upon as the productions respectively of an early Petrine or Pauline party, most of them having only a temporary object, and such

of them being now to be regarded simply as literary monuments of a departed controversy which may illustrate history, but cannot prove or teach truth. This is the latest phase of German rationalism; but it has been so vigorously met by the works of Bunsen, Thiersch, Bleek and others that the influence of the school has not been widely extended, and, like that of German rationalism in general, it is rapidly on the wane.

**TUCKER** (tuk'er), ABRAHAM, was born in 1705, in London. He was educated at Merton College, Oxford, whence he passed for the study of law to the Inner Temple. In 1727 he bought Betchworth Castle, near Dorking, in Surrey, as a residence, and here, while acting as a country magistrate, attending to his lands and enjoying the attractions of a rural home, he produced the works which have made his name famous. His most important and best known work is "The Light of Nature pursued by Edward Search." He had previously published "Free-will, Foreknowledge and Fate, a Fragment, by Edward Search," and "Man in Quest of Himself, or a Defence of the Individu-

sions, and he yielded to the amusements of the world which led him away from spiritual things. Still, the idea dwelt in his mind that he was called to preach the gospel; but having married and removed to Tioga county, Pennsylvania, he became an object of interest because of his refusal to accompany a magistrate on a Sabbath-desecration excursion. After this he was asked by the members of two Baptist societies to begin one in his own neighborhood; which he did. But he failed in his first attempt, and another person had to go on with the service. Still, he committed himself anew to God and began the work with vigor, and thus he entered on the preaching of the gospel. He accepted a call to settle as pastor at Coventry, in Chenango county, New York, and in 1818 he was ordained in that place. Four years afterward he removed to Fredonia Church, and he remained here until 1826, when the discussion respecting Freemasonry brought him into much trouble; but eventually he succeeded in removing alienation, calming opposition and retaining his position in the Church. In 1831 he accepted a call from the First Baptist Church in Buffalo, and he labored

Arminian, but an enemy to Universalism. When Dr. Chauncey's book on the final restoration of all men appeared, he said of it: "It is plausible; it is a splendid piece of theoretic reasoning; but it has no foundation in the Scriptures." He produced a great number of sermons, which were published as they were prepared and preached. Many of these were really condensed treatises, such as the one on "The Validity of Presbyterian Ordination." At least twenty such works appeared from his pen. He died March 22, 1792, in the seventy-fourth year of his age.

**TUCKER, JOSIAH, D.D.**, was born in 1711, at Langham, in Wales, and educated at St. John's College, Oxford. He became a clergyman of the Established Church in England, was made rector of St. Stephen's Church in Bristol, and in 1755 he received a prebendal stall in Bristol Cathedral. He rose to be dean of Gloucester in 1758. He had considerable breadth of view, and he did not confine himself to theological works, as he wrote extensively on the political questions of the day. He became distinguished for the fact that he was one of the few clergymen who understood the case of the American colonists, and who argued with great power that the colonies should be set off as a separate nation, and their independence freely and heartily acknowledged. He died at Gloucester in 1799.

**TUCKER, LEVI, D.D.**, was the second son of Charles Tucker and brother to Elisha Tucker, D.D. He was born in 1804, in Broome, Schoharie county, New York. He enjoyed the benefit of a four years' course in Hamilton Literary and Theological Institution, and in 1829 he was ordained and settled in the church at Port Deposit, New York. In 1831 he accepted a call to labor in West Phila-

delphia, and here he remained for five years, and in 1836 he removed to Cleveland, Ohio. In this charge he labored for seven years. He was eminently successful here, adding great numbers to the church. In 1848 he succeeded the Rev. Dr. Stow in the Bowdoin Place, Boston; and in this place his labor so overtasked his strength that he had to seek relaxation by a visit to the South. A voyage to Europe was next suggested owing to his continued weakness, and he traveled extensively in Europe, going as far as Egypt. In 1852 he returned, but still so weak that he was only able to preach on one occasion, and on August 20, 1853, he died of prostration. During his ministry he had baptized seven hundred and eighty-four persons, and by letter and otherwise he had admitted five hundred and two members. He was an excellent, earnest preacher, but his feeble frame yielded while his mental vigor was yet in the maturity of its strength.

**TUDOR ARCH.** This is the name of the low, flat, though somewhat pointed, arch which came into use after the best specimens of the Perpendicular period; and it is so named from its prevalence in the reign of Henry VII., and from his time downward. The arch is made in divid-

ing the chord of the arch into fewer or more parts, according to the fixed height of the arch. Arches of this style are illustrated in the engraving on page 715.

**TUDOR ARCHITECTURE**, a transition style between the Perpendicular and the Elizabethan styles.

**TUDOR ROSE**, a flat flower or leaf, placed upright on its stalk, much used in Perpendicular work; it is also called the Tudor flower.

**TULLY** (tul'le), THOMAS, a learned divine and controversial writer, was born in Carlisle in 1620, and was educated at Queen's College, Oxford, of which he was chosen Fellow. In 1642 he became master of the grammar school at Tetbury, in Gloucestershire, but he returned to his college, and became an eminent tutor and preacher. He was soon after made principal of Edmund Hall. After the Restoration he was made chaplain to Charles II. He was also presented to the rectory of Griggleton, in Wiltshire, and in 1675 the king conferred upon him the deanery of Ripon. He died in 1676.

**TUNICLE** (tu'ni-k'l), a close-fitting vestment formerly worn by deacons, now worn by bishops under the dalmatic and by sub-deacons. It is made with a fringed border and narrow sleeves, and reaches below the knees; it is shorter than a dalmatic, and has closer sleeves. It is also called "subtile" and "tunic." See DALMATIC.

**TUNSTALL.** See TONSTALL.

**TURBAN** (tur'ban). See DRESS, *subhead* HEAD-DRESS.

**TURBUS** (tur'bus), WILLIAM, called also **TURBERVILLE**, lived in the reign of Henry II., and he distinguished himself by his vehemence in upholding the cause of Thomas à Becket. He held the office of prior of Norwich, and he succeeded to the see, being the third bishop who had presided over the priory and who was promoted to the episcopate.

**TURNER** (tur'ner), FRANCIS, an English divine, received his education at Winchester School, and was thence elected fellow of New College, Oxford. In 1669 he was collated to the prebend of Sneating, in the Cathedral of St. Paul's. In the following year he became master of St. John's College, Cambridge. In 1683 he was made dean of Windsor, and in the same year was promoted to the see of Rochester, from which in the following year he was translated to that of Ely. He was one of the six bishops who joined Archbishop Sancroft on May 18, 1688, in subscribing and presenting a petition to James II., setting forth their reasons why they could not comply with his commands to cause His Majesty's "Declaration for Liberty of Conscience" to be read in their churches. In consequence of this he was sent, with his brother prelates, to the Tower. However, when William and Mary were settled on the throne, he, refusing to take the oaths required by an act of Parliament of April 24, 1689, was suspended from his office and deprived of his bishopric. He died in 1700.

**TURNER, JAMES**, was born in 1759, in Bedford county, Virginia, and trained up in the principles of the Presbyterian Church. At an early age he entered the Revolutionary army, and

thus he was withheld from prosecuting his studies; but being fond of learning he resolved to prepare for the law. He had settled down on a farm, got married and entered on the usual business of country life when he heard a sermon by the Rev. Drury Lacy which penetrated his soul and became the moving power of his life. He began in earnest to read and inquire on religious matters, and at length his mind settled down on an entire conviction respecting the doctrines, forms and order of the Presbyterian Church, and he began to speak to others on the concerns of their souls. His power of address becoming known, he was ordained in 1792 as colleague with the Rev. Mr. Mitchell in the charge known as the Peak's Congregation, there being really several congregations under the one sessional authority. He spent all the years of his ministry in that place, dying in 1828, after a very successful ministry. His death was unexpected, and his removal was greatly lamented.

**TURNER, SAMUEL HULBEART, D.D.**, was born in 1790, at Philadelphia, and educated in the University of Pennsylvania. In 1811 he was ordained to the ministry of the Protestant Episcopal Church. He settled as pastor at Chesterton, Kent county, Maryland. In 1818 he was appointed superintendent of candidates for the ministry, and in the autumn of that year he was made professor of historic theology in the General (Episcopal) Seminary at New York. He held office when the institution was removed to New Haven, and also when it was settled again in New York. In 1821 he was made professor of Biblical learning and interpretation of Scripture in the newly-organized seminary, and along with this he also held the Hebrew chair until his death. He was a most voluminous writer, and his works, which show rare scholarship, would form a good denominational library. He was one of the great American divines of his age, and as a commentator on the Epistles to the Romans and the Hebrews, and as a critical writer on philology, he holds a foremost rank. He died in 1861.

**TURNER, WILLIAM, M.D.**, a celebrated divine and naturalist, was born in 1520, and educated at Cambridge, where he became a Fellow of Pembroke Hall. For his labors in the cause of the Reformation he was compelled to quit England, and he resided on the Continent, obtaining his degree of doctor at Ferrara, until the accession of Edward VI., when he returned to England; and after holding some minor offices, he became dean of Wells, which he had to resign during the reign of Mary, when his religious opinions made it necessary for him to leave England again; but he was restored by Elizabeth. He wrote several works on religion, zoology and botany, including the first herbal which was published in English. He died in 1568.

**TURPENTINE** (tur'pen-tine) **TREE**, *Ecl. xiv. 15*, the terebinth, very common in the East.

**TURTLE-DOVE** (tur't'l-duv). See DOVE.

**TURTON** (tur'tm), THOMAS, D.D., was born in 1780, and educated at Cambridge. He rose to be a Fellow and a tutor in Catharine Hall and Lucasian professor of mathematics in the university. In 1827 he was made a prebendary in Lincoln Cathedral, and in 1830 he was made dean of Peterborough, and also had a stall given

to him in that cathedral. In 1842 he became dean of Westminster, and in 1845 he was raised to the see of Ely. He was an eminently learned man. He wrote on "Natural Theology," on "The Romish Doctrine of the Eucharist," and when this work was noticed by Cardinal Wiseman, he wrote a powerful reply. He wrote on the text 1 John v. 7, and also on the "Text of the English Bible." He was an admirable specimen of the great scholarship which is produced by the system of training which exists in the English universities. He died in 1864.

**TWELFTH NIGHT**, the Epiphany, being twelve days after Christmas. It is also called Twelfth Tide.

**TWISS** (twis), WILLIAM, a very learned

EGYPTIAN TRIPOD.—See TRIPOD.

nonconformist divine, and a zealous Calvinist, descended from German ancestors, was born in 1575, at Newbury, in Berkshire, and educated at New College, Oxford, of which he became Fellow. James I. appointed him chaplain to his daughter Elizabeth, then about to proceed to the Palatinate. On his return to England soon after, he devoted himself to a learned retirement at Newbury, of which he obtained the curacy. In 1640 he was chosen one of the sub-committee to assist the committee of accommodation appointed by the House of Lords to consider the innovations introduced into the Church, and to promote a more strict reformation. In 1643 he was nominated, by an order of the Parliament, prolocutor to the Westminster Assembly of Divines. He preached before both Houses of Parliament in Henry VII.'s chapel. Fuller denominates him "a divine of great abilities, learning, piety and moderation." Not less favorably does Bishop Sanderson speak of him, even while

ANCIENT TREE-COFFIN FROM MUSEUM AT SCARBOROUGH, ENGLAND.  
The above is a good specimen of this form of sepulture. The tree was of oak, hollowed out by stone or bronze hatchets. The coffin was found in 1834. The body was perfect, and the bronze articles lay beside it in the coffin.

ality of the Human Mind or Self." His habit was to publish his works without his name, but the authorship was known, and his writings attracted a widespread attention. Referring to the "Light of Nature," Sir James Mackintosh says, "I think myself authorized to call it the most original and profound that has ever appeared on moral philosophy." Professor Wilson called it "a vast mine of thought;" Hazlitt says of it, "I do not know of any work in the shape of a philosophical treatise that contains so much good sense so agreeably expressed;" and Robert Hall, with deliberate emphasis, declared it to be "a work in which the noblest philosophy was brought down by a master-hand and placed within the reach of every man of sound understanding." He died in 1774.

**TUCKER, ELISHA, D.D.**, was born in 1794, in Rensselaerville, Albany county, New York. His father had been licensed to preach, but he was never ordained, and five out of six of his children became preachers of the gospel. The eldest son, Elisha, had few educational advantages; but owing to his own industry, he was able to become a teacher by the time he had reached the age of sixteen. In 1806 he was admitted to the Church by baptism; but he gradually lost his first impres-

here until 1836, when he removed to the Second Baptist Church of Rochester; and here also he encountered difficulties, owing to his opposition to the "new measures" which were attempted to be introduced for promoting revivals. In 1841 he took charge of the Oliver Street Baptist Church in New York, where he labored until 1848, when he was called to Chicago. Here he gave evidence of declining health, and in 1851 he desired to retire from his charge, but his people objected; and still feeling an increasing weakness, he continued at his work until his death, in 1853. He died on a visit to his son, at Cumberland, on the 29th day of December. He was earnest in labor, but, with the exception of an ordination sermon, he published nothing.

**TUCKER, JOHN, D.D.**, was born in 1719, at Amesbury, on the Merrimac. He was educated at Harvard, where he graduated in 1741, and in 1745 he settled as a colleague with the Rev. Christopher Toppan, at Newbury. Dr. Tucker lived in an age of fiery controversy, in which he bore his part. He was a serious, solid, though not brilliant preacher, and he had a keen wit which enabled him to deal effectively in repartee when assailed by opponents of the truth. He was an openly-avowed

differing greatly from some of his opinions. His writings are all controversial, and more or less directed against Arminianism, of which he was the ablest and most successful opponent of his time.

**TYCHICUS** (tik'i-kus), a Christian of Asia, possibly an Ephesian, who was St. Paul's companion in travel, Acts xx. 4. It would seem that he carried the Epistles to the Ephesian and Colossian churches, Eph. vi. 21; Col. iv. 7. Later journeys of Tychicus are mentioned, 2 Tim. iv. 12; Tit. iii. 12; and it is thought that he and Trophimus were associated with Titus in the mission to Corinth referred to in 2 Cor. viii. 16-24.

owing to the fame of Tychsen that the shah of Oude sent to the University of Rostock a copy of his splendid dictionary and grammar of the Persian language.

**TYLER** (ti'ler), BENNET, D.D., was born in 1783, at Middlebury, Connecticut, and educated at Yale College. He became pastor of the Congregational Church in South Britain, Connecticut, in 1808, a position from which he retired in 1822 to accept the presidency of Dartmouth College. In 1828 he settled in Portland, Maine, as pastor of the Second Church. In the great controversy which arose on the "new divinity" he opposed

proprietor, about the year 1477. He studied at Oxford, and afterward at Cambridge, and at both places made excellent proficiency in all the branches of study then pursued there. He obtained priest's orders in 1502, and entered the monastery at Greenwich as a friar in 1508. Some time before this he had commenced his translation of the New Testament, and had probably imbibed some of the notions which were beginning to be circulated in favor of a reformation of the Church. In 1520 he became private tutor in the family of a wealthy gentleman, in whose mansion at Little Sodbury he resided for two years. Here he came frequently into conflict with the clergy of the dis-

tament, and issued his translation of the books as they were printed. He proceeded only as far as Deuteronomy in the printing, but it is believed that he translated the whole Old Testament, and that Coverdale profited by the use of his manuscripts. In 1534 he published at Antwerp a revised edition of his translation of the New Testament, and with this concluded his labors in this department. The importation of his translation, and of some works which he had written, into England had excited against him the hostility of the anti-Reformation party there, and their bitter hatred was such that the most unwearied efforts were used to destroy him. At Antwerp, where he had resided since 1530 as chaplain to the company of English merchants, he was, in 1535, seized through the treachery of an emissary of the English chancellor, Sir Thomas More, and conveyed to Vilvorde, near Brussels, where, after a protracted imprisonment, he was burnt to death in September, 1536. A sacred interest attaches to his name. To him the most Bible-loving nations of the world are indebted for what still, in substance, supplies the version of the New Testament in ordinary use.

**TYNG** (ting), DUDLEY ATKINS, D.D., was born in 1825, in Prince George's county, Maryland, and educated in the University of Pennsylvania, where he graduated in 1843. He was son to the eminent Stephen H. Tyng, D.D., of St. George's Church, New York. He received his theological training at the seminary in Alexandria, and was ordained in 1846. His first charge was at Columbus, Ohio, from which he removed to Charlestown, Virginia. Subsequently he was transferred to Cincinnati, and in 1854 he was called to the Church of the Epiphany, in Chestnut street, Philadelphia. He retired from this church and began to form the Church of the Covenant in Philadelphia; and while he was busily engaged in this work he died very suddenly from the effects of an accident, in 1858. He was eminent as a preacher and lecturer, greatly beloved by an attached people and by the members of other churches in all the evangelical denominations. He was the author of "Our Country's Troubles," "The Children of the Kingdom" and "Vital Truth and Deadly Error."

**TYPE**. This word is immediately from the Greek, which signified originally anything produced by blows, hence *impression*, *print*, John xx. 25; *figure*, *form*, as an image, Acts vii. 43; or tropically, as the *meaning* of a letter, Acts xxiii. 25; the *purport* of a doctrine, Rom. vi. 7; also, with a more exact reference to the thing which makes the impression, *counterpart*, Rom. v. 14; and hence, generally, *pattern*, *example* to be followed or avoided, Acts vii. 44; 1 Cor. x. 6, 11; Phil. iii. 17. If, then, we take *type* as denoting a rough draught or model from which a more complete image is made, we may define a type theologically considered as the symbol of some future person or thing, the example prepared and designed to prefigure that future person or thing. What is so prefigured is commonly called the antitype.

The reality of a type depends on the truthfulness of the supposed relationship. It is not enough to discover a resemblance. The typical relation must be intended—that is, the type must be designed and prepared by God. Now, in examining this relation theologically, we have to see whether there is a sufficient basis furnished by Scripture it-

self; for if not, typical interpretation can be but an imaginary thing. That there is such a basis examination of the divine word will sufficiently show. There are a multitude of illustrations, as when the Baptist was to go before Messiah "in the spirit and power of Elias," Luke i. 17, and was actually designated as "Elias by Christ, Mark ix. 12, 13. Again, according to the lifting up of the brazen serpent was to be the elevation of Christ upon the cross, Num. xxi. 8, 9; John iii. 14, 15. So, too, Adam is termed (by way of antithesis) a figure or type of Christ, Rom. v. 14. And not to accumulate examples, through a great part of the Epistle to the Hebrews the writer expressly asserts that there was an ulterior meaning in the ritual of the old dispensation, so that it was introductory to and presignificative of the new and better covenant. Setting out from this truth, and taking always the New Testament as

principles. This, then, the real and designed connection between the Old Testament and the New, is the basis of typical interpretation.

There have been various arrangements proposed of types; perhaps they may most conveniently be classified as *ritual*, *prophetic* and *historical* types. 1. If we compare the history and economy of Moses with the New Testament, we shall see prefigurations of better things to come in the gospel. The rites and ceremonies prescribed were typical of Messiah's work and of the blessings thence obtained. This is fully established by the Epistle to the Hebrews. 2. In using the term "prophetic types" care must be taken to guard against misapprehension. A prophet may perform a symbolic action to convey more vividly the idea of what he predicts to the minds of those around him, and yet his action may not be a prophetic type. Isaiah was to walk naked and barefoot,

ANCIENT COLUMN ON THE COAST OF TYRE.—See TYRE.

the key to the full understanding of the Old, we conclude that type was connected with antitype, not by an accidental similarity of outward circumstances, but by a divinely-appointed inward relation of one to the other, involving the idea of fulfillment. The teaching by sensible objects was intended, and was calculated to make a broad impression. It is true the whole purpose of God was probably not comprehended at the time. The person who was a type, or the writer who made mention of a typical thing, might not always be aware of the fact. Still, typical persons and things, pointing surely to the future, were not without their present use; they were institutions in the existing worship, or events in the current providence of God, with a purpose to accomplish at the time apart from the prospective reference to the future. In this prospective aspect type was a kind of prophecy, distinguished indeed from ordinary prophecy, because it prefigured while prophecy predicted, but yet serving in a manner the same purpose and admitting illustration on similar

Isa. xx. 2-4, to picture out the shameful captivity of the Egyptians; but this was symbolical, "a sign and wonder," nothing more. It is, however, easy to imagine a combination of type and prophecy, and to expect that, by means of the typical action, a body and form might be supplied to the prophetic word. Now, this may occur under four different modifications. (a.) When a typical action is historically mentioned in the prophetic word; and thus the mention, being that of a prophetic circumstance, comes to possess a prophetic character. Various instances may be found, as in Ps. xli. 9 compared with John xiii. 18; Ex. xii. 46 with John xix. 36. As they originally appear, these are of an historical cast; in the one case David's personal experience of treachery, the like to which might often occur. But it was not merely a casual reproduction of these facts, and a noting of the coincidence, which we find in the gospel history. Our Lord and his apostles see here a closer connection, a prophetic element, which must find its fulfillment in the personal ex-

THE LEGEND OF TOBIT AND THE FISH.—See TOBIT, THE BOOK OF.

**TYCHSEN** (tik'sen), OLAUS GERHARD, a celebrated Orientalist, was born in 1734, at Tondern, in Schleswig, and educated at the University of Gottingen. In 1760, when the University of Rostock was transferred to Butzow, Tychsen was appointed professor extraordinary of Oriental literature; and in 1763 he obtained the ordinary professorship in the same department. In 1789 he was appointed chief librarian and keeper of the museum of Rostock, which offices he held until his death, in 1815. He promoted the study of Biblical and Oriental literature more than any man of his time. He undertook the laborious task of collecting the various readings of the Old Testament, of comparing the earliest translations with the original, and of making accurate descriptions of the most remarkable editions of the Bible. It was

Dr. Taylor's views, and held with Edwards, Belamy, Smalley and Dwight; and the result was the formation of a new church in 1833, and the establishment of a theological seminary at East Windsor, Connecticut, over which he presided until his death, in 1848. His chief works are—"History of the New Haven Theology," "Memoir of Rev. Asahel Nettleton," "A Review of Day on the Will," "A Treatise on the Sufferings of Christ," "Nettleton's Remains," "Letters to Dr. Bushnell on Christian Nurture," "The New England Revivals," "Sermons" and other controversial pamphlets.

**TYNDALE** (tin'dal), WILLIAM, one of the English Reformers, was born at Hunt's Court, Nibley, Gloucestershire, of which his father was

strict, and became known as holding the new opinions. This rendered his longer residence there unsafe, and he accordingly went to London, where he remained for a year. Bent on perfecting his translation of the New Testament, Tyndale, in the early part of 1524, crossed over to the Continent to Hamburg, where he remained for some time; afterward he went to Cologne, where he put to press his translation of the New Testament. Being interrupted in the printing, he retired to Worms, where greater liberty could be enjoyed; and there he not only completed what had been interrupted, but printed another edition. A third edition was printed at Antwerp in the year following. Of the first edition only a fragment survives, and of the second only two copies, one imperfect, are known to exist. Tyndale now proceeded to the Old Tes-

perience of Christ. The utterances concerning David and the paschal lamb, both bearing a typical relation to Messiah, so that their being descriptive in the one respect necessarily implied their being prophetic in the other. What had formerly taken place in the experience of the type must substantially renew itself in the experience of the great Antitype, whatever inferior renewals it might find besides. (b.) When something typical in the past or the present is represented in a distinct prophetic announcement as to appear again in the future, the prophetic in word being combined with the typical in act, in a prospective delineation of things to come. We have an example in Zech. vi. 12, 13, where in language taken from the literal rebuilding of the temple a like but more glorious work is predicted for the future. The building of the temple was itself typical of the incarnation, and of the raising up in Christ of that house which should be "an habitation of God through the Spirit," see John ii. 19; Eph. ii. 20—

RUINS OF ANCIENT TYRE, FROM THE NORTH-EAST.—See TYRE.

22. Another example is in Ezek. xxxiv. 23, where the future blessing on God's people is described as a return of the person and times of David. (c.) When the typical, not expressly and formally, but in its essential relations and principles, is embodied in an accompanying prediction, which foretells things corresponding in nature, but far higher in importance. This modification is similar to the preceding one, but extends beyond it. We have examples in the song of Hannah, 1 Sam. ii. 1-10, which seems to have formed in some degree the groundwork of that of the Virgin, Luke i. 46-55, and in Ps. ii. (d.) When the typical is itself future, and is partly described, partly presupposed in a prophetic word, as a ground for the delineation of other things yet more distant to which it will hold a typical relation. Examples are to be found in those prophecies which, while Babylon yet held her supremacy, depicted her fall and the deliverance of captive Judah from thralldom and the return of the banished to their own land. The deliverance accomplished from the yoke of Babylon was a fitting prelude to the main

subject of the prophecy, which, by means of the imagery hence supplied, described a greater fall and a happier rescue, and a more settled establishment of God's ransomed Church in a better land, from which they should never be cast out. 3. Historical types are the characters, actions and fortunes of some eminent persons whose history is recorded in the Old Testament, ordered by divine providence to be prefigurations of the characters, actions and fortunes of future persons who should live under the gospel dispensation. And here it is seen that "Christ is the end of the history as well as of the law of the Old Testament."

Many rules have been given for the interpretation of types. Only a few observations which appear most likely to be useful can be made here. 1. There must be a fit application of the type to the antitype. It has been already shown that more is required than mere resemblance to constitute one thing the type of another. There must have been designed resemblance. The type and

the antitype must both have been preordained as constituent parts of the same general scheme of divine Providence. It is the previous design and the preordained connection which constitute the relation of type and antitype. It is necessary to repeat and insist on this, because, obvious as the rule is, it is continually neglected, and fanciful expositors seeing types in everything have almost turned the Scripture into a book of riddles. Thus some have declared that the oak in which Absalom was caught was a type of Christ's cross, and the long war between the house of Saul and the house of David, 2 Sam. iii. 1, is said to typify the contest between the righteousness of works and that of faith. 2. There is often more in the type than in the antitype, so that we must not apply all the particulars of the one to the circumstances of the other. But be it observed that it is only in accidental particulars, not belonging to the typical relation, that this can occur. A type as such can contain no more than the antitype. But God may very well design one person or thing to be a shadow of something to come, not in every par-

ticular, but only in respect to some special feature, so that every circumstance in a type is not typical, and great care must be used in discovering the intended typical resemblance. For example, the ritual of the law generally points onward to Christ, but many things pertaining to the Levitical priests have no counterpart in Christ. The Mosaic priest was to sacrifice for his own sins, Heb. v. 3—an act in no respect applicable to Christ, Heb. vii. 27. 3. Frequently there is more in the antitype than in the type. No single type can fully express the life and actions of Christ, who far transcends all adumbration of him by earthly things. One type, therefore, may signify one particular and another type another of him. And so from the imperfection of a single type we occasionally find two conjoined, as in the appointment of the two goats, Lev. xvi. 5-28. 4. A sinful person or a sinful act must not be made a type of Christ. That which is bad in itself cannot prefigure that which is good. Neglecting this rule, some expositors have represented the adultery of David as having a typical reference to Messiah. And in the case of the relation of Jonah to Christ we must carefully observe that the point of resemblance consists not in the prophet's being in the belly of the fish, which was the punishment of disobedience, but in his coming forth alive after three days—a fact which prefigured the resurrection of Christ. 5. Much difference of opinion has prevailed on the limitation of types. By some it has been held that, unless we have the express authority of the sacred writers, we cannot conclude with certainty that any person or thing mentioned in the Old Testament is a type of Christ, however great the resemblance which may appear to exist. But this is too restricted a view. The fanciful extremes into which some interpreters have run may teach us a salutary caution, but need not require us to deny the existence of types which all reason and analogy are ready to point out. The examples furnished by Scripture may be taken as specimens rather than as exhausting the whole number of divinely-intended prefigurations. They are to establish a principle which may properly be acted on in other cases. Indeed, just as our Lord reprehended his disciples, Luke xxiv. 25, for failing to recognize largely enough the element of prophecy, so the author of the Epistle to the Hebrews blames them for not having better appreciated the typical character of Melchizedek, Heb. v. 11, 12. 6. One other caution should be added. No doctrine must be pressed as fundamental if grounded merely on typical analogy. This analogy may illustrate a teaching which is declared in plain language, but it cannot be taken as proof of anything not otherwise distinctly taught.

**TYRE** is the name of a formulary of Constans, which was disputed in the seventh century, which was condemned by Pope Martin.

**TYRANNUS** (ti-ran' nus), a person in Epheesus in whose "school" St. Paul disputed, Acts xix. 9. This might have been a private synagogue; or, more probably, Tyrannus was a Gentile sophist.

**TYRE** (tire), "rock," an ancient and celebrated maritime city of Phœnicia, about twenty miles to the south of Sidon. It was seated on an island. But there was also a city on the continent bearing the name of Palætyrus—that is, old Tyre—and questions have been raised which of

the two was the more ancient. If the name is to be taken as an indication, we must suppose that the town upon the rocky island was the original.

We find Tyre mentioned early in the sacred volume. In the division of Canaan the border of Asher is described as reaching to "the strong city Tyre," Josh. xix. 29. No attempt was, however, made by the Israelites to subdue it, and indeed for some centuries no further notice is taken of Tyre. Sidon, or Zidon, seems to have been the most important city, and the name "Zidonians" is used for the inhabitants of Phœnicia, Jud. i. 31. It is not till the reign of David that we again hear of Tyre. We then find it under the government of a king called Hiram, with whom David was in political alliance and on terms of personal friendship. From Tyre both timber and skilled workmen were obtained for the buildings erected by the Hebrew monarch, 2 Sam. vi. 11; 1 Chr. xiv. 1, and up to Tyre extended David's census, 2 Sam. xxiv. 7. The alliance was continued in the reign of Solomon. It was to Tyre that that prince applied when about to commence the temple, and to carry out his other magnificent architectural plans. He met with a ready response. Hiram replied in terms which showed him to have some knowledge of the God of Israel; and besides, it was greatly to the advantage of the Tyrian king to receive in the interchange of commerce the corn and wine and oil which were plentifully produced in Israel. Timber was cut in Lebanon and conveyed by floats to Joppa by the Tyrians, whence it could be transported overland to Jerusalem. Tyrian workmen were also furnished; and the principal architect, though son of an Israelitish woman, had a Tyrian father, and had become in Tyre skillful in all the different branches of art for which his services were required. This fact, of course, speaks strongly for the perfection to which the arts were then carried in Tyre, 1 Ki. v.; 2 Chr. ii. After Solomon's buildings were completed, he presented to the Tyrian king twenty cities in Galilee. The two monarchs met on this occasion, and the cities did not please Hiram. They were therefore restored to Solomon, who fortified them and colonized them with Israelites, 1 Ki. ix. 10-14. This did not, however, interrupt the friendship, and the Tyrian fleets, in conjunction with those of Solomon, were in the habit of making trading voyages, 1 Ki. ix. 25-28; x. 11-22. It might be that it was from this close intercourse with the Phœnicians that Solomon was led to go after the Zidonian goddess and to have Zidonian women in his harem, 1 Ki. xi. 1, 5.

We hear no more of Tyre for some time, but at length an alliance was contracted which proved of the most fatal consequence. Ahab, the king of Israel, married Jezebel, daughter of the king of Tyre. It is true that he is called "king of the Zidonians," 1 Ki. xvi. 31; but there can be no reasonable doubt that the Eth-baal there mentioned was Ithobalus, king of Tyre and Sidon, and priest of Astarte, who raised himself to the throne after murdering the king Philetos. Idol-worship was thus established in Israel, and introduced also into Judah by the marriage of Jehoram with Athaliah, Jezebel's daughter, 2 Ki. viii. 18, 26, 27. But whatever friendship there was with the Tyrians and the two Israelitish kingdoms would be ended by the revolution in Samaria which placed Jehu on the throne, and the deserved execution of Athaliah in Judah.

In later times unquestionably there was bitter enmity between the Tyrians and the Hebrews. Joel and Amos complain that the Tyrians had

made bond-slaves of and had sold away the Israelites in the time of their distress, and therefore they denounce judgment against them, Joel iii. 4-8; Amos i. 9, 10, and Isaiah afterward delivers a remarkable prophecy—"the burden of Tyre," Isa. xxiii. Various opinions have been held as to the interpretation of this prophecy. For there are three notable sieges of Tyre recorded in history, by Shalmaneser, by Nebuchadnezzar and by Alexander the Great. Some critics think that the denunciation of Isaiah referred to the first of these; more likely it was fulfilled in the second.

The first of these sieges is not mentioned in Scripture. According to Josephus, it occurred when a king named Euhæus reigned at Tyre. It must have taken place after the Assyrians had subjected the rest of Phœnicia, about 721 B.C., and it is said to have lasted five years; but though hardly pressed, the city held out against the invader. Tyre after this flourished greatly, extending her commerce and planting her colonies in distant countries. Carthage, indeed, her most

RUINS OF ANCIENT TYRE, FROM THE NORTH.—See TYRE.

noble colony, is said by Josephus to have been founded a century and a half after the building of Solomon's temple. The siege by Nebuchadnezzar was longer than the preceding one. Jeremiah predicts it, Jer. xxv. 22; xxvii. 2-6; also Ezekiel more particularly, who describes the splendor of Tyre with its peculiar privileges and its vast trade, and declares not only that Nebuchadnezzar shall come against it, but details minutely that ultimate ruin of it and desolation which modern travelers have found fulfilled, Ezek. xxvi., xxvii., xxviii. 1-19. The king of Babylon beleaguered Tyre for thirteen years, and the city which had rejoiced at the fall of Jerusalem was now herself to drink the cup of suffering. But it has been doubted whether Nebuchadnezzar actually took it. Stress is laid on the assertion of Ezekiel that he had no wages for his hard service against Tyre, Ezek. xxix. 18-20, and it is argued that this could not have been said if he had really captured the city. But it has been alleged in reply that the continental city fell, while the inhabitants placed their riches in their vessels and retreated to the island, which the conqueror could not assail; con-

sequently, his prey was but the deserted habitations. Then perhaps it was that Tyre was forgotten, Isa. xxii. 15. Yet it seems evident that Tyre must have become subject to the Babylonian king, a vassal prince being allowed to hold the government. For it afterward passed under the Persian rule, and again, by the decree of Cyrus, supplied the materials of the temple at Jerusalem, Ezra iii. 7, when other trade with the Jews sprang up, Neh. xiii. 16. The Tyrians, too, furnished their contingent to the expedition of Xerxes against Greece. In the course of Alexander's campaign, Tyre alone of the Phœnician cities resisted him. She depended on her insular position, and for seven months the great conqueror was engaged in the siege. The harbors of Tyre were blockaded, and a mighty mound was constructed which joined the island to the continent. The city was taken, and multitudes of its inhabitants were put to death or sold for slaves; and ever since Tyre has stood upon a spit of land running out into the sea, with no appearance, so far as ordinary observation

be bare "like the top of a rock, . . . a place to spread nets upon."

In our Lord's time Tyre was still a populous town, and he declared that if the mighty works which were done in Chorazin and Bethsaida had been done in Tyre and Sidon they would have repented, Matt. xi. 21, 22. Judgment was hanging over Tyre, but a worse condemnation awaited the cities which had had greater privileges. Christ visited once "the coasts of Tyre and Sidon," Matt. xv. 21, and performed there a deed of mercy, but it is not likely that he ever entered the city. Nevertheless, the gospel was received there, Acts xxi. 3-6, and Tyre became an episcopal see. Then some at least of "her merchandise and her hire" must have been "holiness to the Lord," Isa. xxiii. 18. It may be added that we have a remarkable illustration of Tyre's dependence on Palestine for corn in Acts xii. 20-22.
